4066	57843	Gas chromatography analyser IVD	Хийн хроматографийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen. Volatile components are separated in a gaseous mixture based on their partitioning differences between mobile and stationary phases as they pass through a column. As the substances exit the column they are detected and identified electronically or spectrometrically, based on their structure. The analyser is typically used for the identification of complex substances such as drugs and hormones.	A
4067	57845	High performance liquid chromatography analyser IVD	Өндөр хүчин чадалтай шингэн хроматографийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument designed for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen. Chemical components are separated by passing pressurized liquid through a narrow column to allow the various components to separate based on their chemical/physical properties while interacting with column filling. As the substances exit the column they are detected and identified electronically or spectrometrically. The device is used for the identification of complex substances such as drugs and hormones.	A
4068	57849	Mass spectrometry analyser IVD	Масс спектрометрийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative determination of the chemical composition of a clinical specimen by ionizing the specimen and separating the resulting ions according to mass using an electrical and magnetic field.	A

4069	57851	Microarray analyser IVD	Microarray анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the in vitro determination of multiple target analytes in a single clinical specimen using oligonucleotide capture molecules arranged in a consistent pattern on a slide, chip or membrane. Identification of a target sequence in the clinical specimen is by hybridization of complementary base pairs, with a detection system typically using fluorophores, fluorescent-labelled dyes and/or digital imaging techniques.	A
4070	57853	Osmometric analyser IVD	Осмометрийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative determination of the osmotic concentration of a clinical specimen (e.g., urine, serum, tears, sweat) by comparing its freezing-point depression curve, or vapour-pressure depression curve, with that of a standard solution. It is often used to assess an abnormal osmolar ratio which may indicate disease [e.g., renal disease, diabetes insipidus, secretion of abnormal levels of antidiuretic hormone (ADH)].	A
4071	57855	Spermatozoa/semen analyser IVD	Spermatozoa/үрийн шингэний анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro examination of a semen specimen to assess volume, spermatozoa concentration, motility and/or morphological characteristics.	A
4072	57857	Tissue processor IVD, manual	Эд эсийн процессор IVD, гарын авлага	A manual laboratory instrument intended to be used for the processing of clinical tissue specimens [e.g., fixation (encapsulation in paraffin wax), dehydration, infiltration] in preparation for subsequent cytological or histological examination.	A
4073	57859	Tissue processor IVD, automated/semi-automated	Эдийн процессор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the processing of clinical tissue specimens [e.g., fixation (encapsulation in paraffin wax), dehydration, infiltration] in preparation for subsequent cytological or histological examination. The device may be a single unit or modular assembly.	A

4074	57861	Urine analyser IVD, point-of-care	Шээсний анализатор IVD, тусламж үйлчилгээний цэг	A mains electricity (AC-powered) instrument intended to be used by health professionals at the point-of-care for the qualitative and/or quantitative in vitro determination of various chemical and cellular constituents of a clinical urine specimen, which typically include bilirubin, glucose, haemoglobin, ketones, nitrites, pH, protein, urobilinogen, specific gravity, blood, red cells, white cells, casts, crystals, sperm, and/or microorganisms (e.g., bacteria). The device uses technology which may include electrical impedance, conductivity, enzyme spectrophotometry, nephelometry and/or photometry.	A
4075	57862	Microplate reader IVD, automated/semi-automated	Microplate уншигч IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used to photometrically measure the optical absorbance or emission of clinical specimens in microplates containing multiple individual sample wells, with or without a separate cuvette-reading station. The device utilizes technology which may include reagent dispensing, a single or dual lightsource, bandpass filters, monochromators, photodetectors, data processing software and/or data displays to determine the qualitative and/or quantitative values of biological constituents of a clinical specimen.	A
4076	57863	Microplate reader IVD, manual	Microplate уншигч IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used to photometrically measure the optical absorbance or emission of clinical specimens in microplates containing multiple individual sample wells, with or without a separate cuvette-reading station. The device utilizes technology which may include reagent dispensing, a single or dual lightsource, bandpass filters, monochromators, photodetectors, data processing software and/or data displays to determine the qualitative and/or quantitative values of biological constituents of a clinical specimen.	A
4077	57869	Ultraviolet-visible spectrophotometer IVD	Хэт ягаан туяанд харагдах спектрофотометр IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to measure the absorption or fluorescence of a solution(s) that has been irradiated with light of a specific wavelength, in the ultraviolet or visible range, to determine the concentration of a chemical or biological marker present in a clinical specimen.	A

4078	57870	Microorganism-density nephelometer IVD	Бичил биетний нягтралын нефелометр IVD	A mains electricity (AC-powered) laboratory instrument intended to be used to determine the density of microorganism suspensions by comparing the turbidity of a solution with that of McFarland standards using a photometric detection system.	A
4079	57871	Specimen processing instrument IVD	Сорьц боловсруулах хэрэгсэл IVD	An electrically-powered instrument or platform intended to be used for the automated or semi-automated pre-analytical preparation of a clinical specimen (excluding specimens for microbial culture), which may include the sampling, diluting, and/or aliquoting of clinical specimens and/or any post-analytical processing required, including labelling, storage and/or location data.	A
4080	57878	Lipid profile analyser IVD, laboratory	Липидийн профиль анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of lipid profile analytes (cholesterol, fatty acids, lipids, lipoproteins and/or triglycerides) in a clinical specimen.	A
4081	57879	Lipid profile analyser IVD, point-of-care	Липидийн профиль анализатор IVD, тусламж үйлчилгээний цэг	An electrically-powered automated or semi-automated instrument intended to be operated by health professionals at the point-of-care for the qualitative and/or quantitative determination of lipid profile analytes (cholesterol, fatty acids, lipids, lipoproteins and/or triglycerides) in a clinical specimen.	A
4082	57882	Magnetic particle immunoassay analyser IVD	Соронзон бөөмийн дархлааны анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers, in a clinical specimen, using an immunological method that utilizes a magnetic particle detection system. Magnetic particle-labelled antigens or antibodies bind immunologically to a solid-phase (e.g., immunochromatographic test strip, microplates); the quantity of bound magnetic-labelled target analyte is proportional to the intensity of the resultant magnetic field in a measurement zone.	A

4083	57906	Faecal specimen container IVD, acid alcohol fixative	Өтгөний сорьцын сав IVD, хүчиллэг спирт тогтоогч	A covered plastic receptacle containing acid alcohol fixative solution intended to be used for the collection, and preservation and/or transport, of a faecal specimen for analysis and/or other investigation. This is a single-use device.	A
4084	57907	Faecal specimen container IVD, no additive	Өтгөний сорьцын сав IVD, нэмэлт байхгүй	A covered plastic receptacle containing no additives intended to be used for the collection, and preservation and/or transport, of a faecal specimen for culture, analysis, and/or other investigation. This is a single-use device.	A
4085	57908	Faecal specimen container IVD, polyvinyl alcohol (PVA) fixative	Өтгөний сорьцын сав IVD, поливинил спирт (PVA) тогтоогч	A covered plastic receptacle containing polyvinyl alcohol (PVA) fixative solution intended to be used for the collection, and preservation and/or transport, of a faecal specimen for analysis and/or other investigation. This is a single-use device.	A
4086	57909	Faecal specimen container IVD, Schaudinn's fixative	Өтгөний сорьцын сав IVD, Schaudinn's fixative	A covered plastic receptacle containing Schaudinn's fixative solution intended to be used for the collection, and preservation and/or transport, of a faecal specimen for analysis and/or other investigation. This is a single-use device.	A
4087	57910	Faecal specimen container IVD, fixative	Өтгөний сорьцын сав IVD, тогтоогч	A covered plastic receptacle containing a fixative solution [e.g., sodium acetate, acetic acid and/or formaldehyde (SAF), Schaudinn’s, polyvinyl alcohol (PVA) or acid alcohol] intended to be used for the collection, and preservation and/or transport, of a faecal specimen for analysis and/or other investigation [e.g., evaluation for the presence of intestinal parasites and/or their eggs (ova)]. This is a single-use device.	A
4088	57911	Faecal specimen container IVD, transport buffer/medium	Өтгөний сорьцын сав IVD, тээвэрлэлтийн буфер/дунд	A covered receptacle containing transport buffer solution or microbiological medium (e.g., Carey-Blair transport medium) intended to be used for the collection, preservation, and transport of a faecal specimen for in vitro diagnostic investigation. It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A
4089	57916	Citrate staining/testing reagent IVD	Цитрат будалт/туршилтын урвалж IVD	A citrate solution (citric acid solution) intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A

4090	57917	24-hour urine specimen container IVD, preservative	24 цагийн шээсний сорьцын сав IVD, хадгалах бодис	A capped receptacle, typically 2 to 4 litres, containing one or multiple preservatives [e.g., boric acid (H3BO3), hydrochloric acid (HCl), sodium carbonate (Na2CO3), sulphuric acid (H2SO4)] and intended to be used for the collection, and preservation and/or transport, of urine collected over a 24-hour period for analysis and/or other in vitro diagnostic investigation. This is a single-use device.	A
4091	57918	24-hour urine specimen container IVD, hydrochloric acid (HCl)	24 цагийн шээсний сорьцын сав IVD, давсны хүчил (HCl)	A capped plastic receptacle, typically 2 to 4 litres, containing hydrochloric acid (HCl) preservative and intended to be used for the collection, preservation, and transport of urine collected over a 24-hour period for analysis and/or other investigation. This is a single-use device.	A
4092	57919	24-hour urine specimen container IVD, no additive	24 цагийн шээсний сорьцын сав IVD, нэмэлт бодисгүй	A capped receptacle, typically 2 to 4 litres, with no additives and intended to be used for the collection, and preservation and/or transport, of urine collected over a 24-hour period for analysis and/or other in vitro diagnostic investigation. This is a single-use device.	A
4093	57920	24-hour urine specimen container IVD, sodium carbonate (Na2CO3)	24 цагийн шээсний сорьцын сав IVD, натрийн карбонат (Na2CO3)	A capped plastic receptacle, typically 2 to 4 litres, containing sodium carbonate (Na2CO3) preservative and intended to be used for the collection, preservation, and transport of urine collected over a 24-hour period for analysis and/or other investigation. This is a single-use device.	A
4094	57921	24-hour urine specimen container IVD, sulphuric acid (H2SO4)	24 цагийн шээсний сорьцын сав IVD, хүхрийн хүчил (H2SO4)	A capped plastic receptacle, typically 2 to 4 litres, containing sulphuric acid (H2SO4) preservative and intended to be used for the collection, preservation, and transport of urine collected over a 24-hour period for analysis and/or other investigation. This is a single-use device.	A
4095	57923	Drug-testing urine specimen container IVD	Эмийн шинжилгээний шээсний сорьцын сав IVD	A covered plastic receptacle with a temperature strip and/or tamperproof seal intended to be used for the collection, and preservation and/or transport, of a urine specimen for drug testing and/or other investigation. This is a single-use device.	A
4096	57925	General specimen microscopy slide IVD, single-use	Ерөнхий сорьцын бичил харуурын слайд IVD, нэг удаагийн	A glass or plastic microscopy slide intended to be used for the collection, and preservation and/or transport, of any type of clinical specimen or smear for analysis and/or other investigation. This is a single-use device.	A

4097	57926	General tissue specimen container IVD, formal saline	Ерөнхий эдийн сорьцын сав IVD, албан ёсны давсны уусмал	A covered plastic receptacle containing 10% formal saline preservative solution (formalin) intended to be used for the collection, and preservation and/or transport, of any type of tissue specimen (e.g., biopsy tissue) for analysis and/or other investigation. This is a single-use device.	A
4098	57927	General tissue specimen container IVD, fixative/saline	Эд эсийн ерөнхий сав IVD, бэхлэгч/давс	A covered receptacle (single- or multiple-compartment) containing a tissue fixation or preservation solution [e.g., formalin, saline] intended to be used for the collection, and preservation and/or transport, of any type of tissue specimen (e.g., biopsy tissue) collected from any body part for in vitro diagnostic investigation. It does not contain patient-contact tissue specimen sampling/excision devices. This is a single-use device.	A
4099	57939	Faecal parasite specimen concentration kit IVD	Өтгөн шимэгчийн сорьцын концентраци IVD	A collection of devices intended to be used for the concentration and recovery of eggs, larvae, and cysts of intestinal parasites (e.g., pinworms) from a faecal specimen, for microscopic analysis and/or other investigation. The kit typically includes reagents, centrifuge tubes, and filters. This is a single-use device.	A
4100	57951	Cervical cytology microscopy slide IVD	Умайн хүзүүний цитологийн бичил харуурын слайд IVD	A glass or plastic microscopy slide intended to be used for the collection, and preservation and/or transport, of a cervical cytology smear for analysis and/or other investigation. This is a single-use device.	A
4101	57952	Cytology specimen container IVD, transport buffer	Цитологийн сорьцын сав IVD, тээвэрлэлтийн буфер	A covered receptacle containing transport buffer solution intended to be used for the collection, preservation, and transport of a cytology specimen (e.g., oral, cervical, colonic) for in vitro diagnostic investigation [e.g., histopathological cervical cancer screening]. It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A

4102	58003	Liquid scintillation breath analyser IVD	Шингэн шингэний амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use liquid scintillation methodology for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is typically used to measure analytes such as ingested carbon isotopes that have been metabolized (e.g., 13C, 14C) to establish a correlation with metabolic profiles or disorders [e.g., gastrointestinal H. pylori infection]. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4103	58025	Laboratory container/microscope slide robotic transfer system IVD	Лабораторийн сав/микроскопын слайд робот дамжуулах систем IVD	An assembly of electrically-powered robotic devices, a stand-alone device, or a belt conveyor intended to be used for the automated or semi-automated transfer of assay containers (e.g., test tubes, microplates), microscope slides/slide carriers, or racks between processing stations. The system may interface with individual instruments/analysers and other equipment, transporting assay containers between stations which may include specimen pipetting, reagent dispensing, incubation, microplate washing, agitation, barcode reading and/or optical reading.	A
4104	58048	Optical laboratory instrument performance standard calibrator/control IVD, single-use	Оптик лабораторийн багажийн гүйцэтгэлийн стандарт калибратор/хяналтын IVD, нэг удаагийн	A reference standard solution or soluble substance of known optical and physical characteristics intended to be used to verify and/or optimise the performance of an optical laboratory instrument (e.g., spectrophotometer, nephelometer, microplate reader, PCR instrument, flow cytometer). Verification/optimization functions may include optical density (absorbance/scattering), fluorescent/luminescent accuracy and compensation, linearity at specified wavelengths and/or stray light interference. It may be used to verify pipetting/dispensing/aspiration/diluting functions using spectrophotometry/nephelometry to determine concentration/residual volume. Solutions may be single or short-term use.	A

4105	58049	Optical laboratory instrument performance standard calibrator/control IVD, reusable	Оптик лабораторийн багажийн гүйцэтгэлийн стандарт калибратор/хяналтын IVD, дахин ашиглах боломжтой	A solid phase or liquid reference standard of known optical and physical characteristics intended to be used to verify and/or optimise the performance of an optical laboratory instrument (e.g., spectrophotometer, nephelometer, microplate reader). It is typically presented as a solid/sealed cuvette or a multiple-well test plate and may include filters or a light source emitted at specified wavelengths. Verification/optimization functions may include optical density (absorbance/scattering), fluorescent or luminescent accuracy, linearity, repeatability and/or limit of detection readings, and optical alignment and precision of the instrument/analyser. This is a reusable device.	A
4106	58151	Evacuated urine specimen container IVD, preservative	Нүүлгэн шилжүүлсэн шээсний сорьцын сав IVD, хадгалах бодис	A covered receptacle containing a pre-measured amount of vacuum and one or multiple preservatives [e.g., mercuric oxide, boric acid (H3BO3), benzoic acid, potassium phosphate, and/or sodium phosphate] intended to be used for the collection, and preservation and/or transport, of a urine specimen for culture, analysis, and/or other in vitro diagnostic investigation. This is a single-use device.	A
4107	58158	Evacuated urine specimen container IVD, no additive	Нүүлгэн шилжүүлсэн шээсний сорьцын сав IVD, нэмэлт бодисгүй	A covered receptacle containing a pre-measured amount of vacuum with no additives, intended to be used for the collection, and preservation and/or transport, of a urine specimen for culture, analysis, and/or other in vitro diagnostic investigation. This is a single-use device.	A
4108	58169	Oral/respiratory tract specimen container IVD, no additive/medium	Амны хөндийн/амьсгалын замын сорьцын сав IVD, нэмэлт бодисгүй/дунд	An empty covered receptacle containing no additives or media intended to be used in the home and clinical settings for the collection, and preservation and/or transport, of a saliva/oral, nasal, nasopharyngeal, oropharyngeal, and/or lower respiratory tract specimen (e.g., sputum) [excluding breath specimen], for in vitro diagnostic investigation. It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A

4109	58170	Erythrocyte sedimentation rate (ESR) rack IVD, scaled measure	Эритроцитын тунадасны хурд (ESR) тавиур IVD, масштабтай хэмжүүр	A dedicated, non-sterile, rack with a build-in graduated scale ruler, with or without a programmable timer or stop-clock, intended to be used to hold erythrocyte sedimentation rate (ESR) tubes containing unmarked columns of blood in an upright and secured position, as required when performing a manual estimation of the ESR of a whole blood clinical specimen. This is a reusable device.	A
4110	58207	Buffered wash solution IVD, manual	Буферт угаах уусмал IVD, гарын авлага	A buffered wash solution intended to be used in combination with other IVDs during the manual processing, staining and/or testing of clinical laboratory specimens to neutralize/wash/rinse away excess reactants and/or to function as a wetting agent.	A
4111	58208	Buffered sample diluent IVD, manual	Буфержүүлсэн дээж шингэрүүлэгч IVD, гарын авлага	A buffered solution intended to be used for the manual (non-automated) dilution of samples, either pre-analytically or during the processing, staining and/or testing of clinical laboratory specimens.	A
4112	58209	Phosphoric acid stop solution reagent IVD	Фосфорын хүчлийг зогсоох уусмалын урвалж IVD	A dilute phosphoric acid solution intended to be used to stop enzymatic activity or further development of reactions during the final processing steps of an enzyme immunoassay method, when testing clinical laboratory specimens.	A
4113	58236	Buffered wash solution IVD	Буферт угаах уусмал IVD	A buffered wash solution intended to be used as a consumable reagent in combination with other IVDs during manual procedures or on-board an automated or semi-automated instrument for the processing, staining and/or testing of clinical laboratory specimens to neutralize/wash/rinse away excess reactants and/or to function as a wetting agent.	A
4114	58237	Buffered sample diluent IVD	Буфержүүлсэн дээж шингэрүүлэгч IVD	A buffered diluent solution intended to be used as a consumable reagent during manual procedures or on-board an automated or semi-automated instrument (e.g., haematological cell analyser) for the processing, staining and/or testing of clinical laboratory specimens (e.g., whole blood).	A
4115	58238	Sulphuric acid stop solution reagent IVD	Хүхрийн хүчлийн зогсоох уусмалын урвалж IVD	A dilute sulphuric acid solution intended to be used to stop enzymatic activity or further development of reactions during the final processing steps of an enzyme immunoassay method, when testing clinical laboratory specimens.	A

4116	58239	Chromogenic/colorimetric substrate reagent IVD	Хромоген/колориметрийн субстратын урвалж IVD	A substance or reactant that produces colour in response to a biochemical reaction and intended to be used in combination with other IVDs to test a clinical specimen, typically using an enzyme immunoassay or immunoblot method. Substrate examples include NBT, BCIP, TMB, 4CN, DAB.	A
4117	58347	Chemiluminescent substrate reagent IVD	Химилюминесцент субстратын урвалж IVD	A substance or reactant that produces a luminescent signal in response to a biochemical reaction (e.g., luminol) and intended to be used in combination with other IVDs to test a clinical specimen, typically using a chemiluminescent immunoassay method.	A
4118	58366	Complement reagent IVD	Нэмэлт урвалж IVD	A solution containing complement proteins intended to be used alone or in combination with other IVDs in the processing, staining and/or testing of clinical laboratory specimens. Typical uses may include HLA tissue typing by a complement-dependent cytotoxicity (CDC) method, or antigen-antibody based reactions by complement fixation test (CFT).	A
4119	58720	Evacuated blood collection tube transport container IVD	Нүүлгэн шилжүүлсэн цус цуглуулах хоолой тээвэрлэх сав IVD	A tube, box, carton, or carrier bag designed for the transportation of one or more evacuated blood collection tube(s) and specimen content within a healthcare facility or between medical institutions, providing protection for the tube and its content. It is typically designed with a shock-absorbing foam liner to protect the tubes from adverse conditions and minimize the risk of breakage. It is available in a variety of sizes, shapes, and materials. This is a reusable device.	A

4120	58721	Histology/cytology/microbiology image-analysis interpretive software IVD	Гистологи/цитологи/микробиологийн дүрс-шинжилгээний тайлбар програм IVD	An in vitro diagnostic interpretive software program with image analysis algorithms [e.g., artificial intelligence (AI)-based] intended to be used in a digital pathology or microbiology laboratory to assist in the analysis of clinical specimens (e.g., biopsy, blood smear, urine) and/or microbial cultures for the quantitative/qualitative detection of cell markers (e.g., hormone receptors), changes in tissue architecture and/or cell morphology/physiology [e.g., nucleus size, cytoplasmic granularity, rate of cell division], and/or infectious microorganisms associated with a disease (e.g., breast cancer, malaria, UTI). Results are also interpreted by a clinician to guide patient management.	A
4121	58775	Fluorescent immunoassay dissociation-enhancement reagent IVD	Флюресцент дархлааны шинжилгээний диссоциацийг сайжруулах урвалж IVD	A substance or reactant intended to be used when performing a time-resolved fluorescent immunoassay on a clinical specimen to enhance and/or optimise the signal by dissociating the fluorescent label from antigen or antibody bound in the solid phase and inducing the formation of highly detectable chelates in solution.	A
4122	58793	Chemiluminescent immunoassay signal generation kit IVD	Химилюминесцент дархлаа судлалын дохио үүсгэх иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to generate a chemiluminescent signal when performing an immunoassay on a clinical specimen. The kit is typically used in conjunction with luminescent-labelled antibodies or antigens of known characterization and may also include reference material to optimise and verify performance of the luminometer instrument.	A
4123	58814	Solid-phase red blood cell adherence antibody/antigen IVD	Цусны улаан эсийн хатуу фазын наалдсан эсрэгбие/эсрэгтөрөгч IVD	A microplate or test strip of protein-activated wells intended to be used in immunohaematological testing of a clinical specimen for the detection and/or identification of red blood cell antibodies or antigens, using a solid-phase red blood cell adherence method.	A
4124	58903	Polyspecific antihuman immunoglobulin lightchain IVD, antibody	Полиспецифик хүний эсрэг иммуноглобулины гэрлийн гинжин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to the light chain component of human immunoglobulin antibodies fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human immunoglobulin A (IgA), human IgG, or human IgM using an agglutination or solid-phase red blood cell adherence method.	A

4125	58904	Partial (variant) Rh(D) category VI/weak Rh(D) red cell grouping IVD, antibody	Хэсэгчилсэн (хувилбар) Rh(D) ангилал VI/сул Rh(D) улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for the presence of partial (variant) Rh(D) category VI red blood cell antigens or weak expression of the Rh(D) antigens from the rhesus system, by red blood cells that have been initially screened as Rh(D) negative, using an agglutination or solid-phase red blood cell adherence method.	A
4126	58969	Cryogenic specimen container IVD, sterile	Криоген сорьцын сав IVD, ариутгасан	A sterile container or tube intended to be used in the laboratory for the preservation, storage and/or transport of a clinical specimen at temperatures of -130˚ Celsius (-200˚ Fahrenheit) or colder, using liquid nitrogen (LN2) as the cooling agent. It is typically made of plastic, or other strong synthetic material, and has an internal or external screw thread for screw caps, and may have marking spots, colour codes and/or graduations along the side. This is a single-use device.	A
4127	58970	Centrifuge tube IVD, sterile	Центрифугийн хоолой IVD, ариутгасан	A sterile plastic tube intended to be used in the laboratory to contain a clinical specimen, reagent, or other material associated with in vitro diagnostic testing, for separation by centrifugation. It is designed to be placed in a centrifuge rotor for the procedure; it may also be placed in a rack for short-term storage of its contents. It is typically transparent to facilitate observation of its contents, frequently includes a cap (e.g., screw or press-fit), and may have graduations along the side. This is a single-use device.	A
4128	59058	Wash/cleaning solution IVD, automated/semi-automated system	Угаах/цэвэрлэх уусмал IVD, автоматжуулсан/хагас автоматжуулсан систем	A concentrated wash or cleaning solution intended to be used as a consumable reagent on-board an automated or semi-automated instrument that is used for the processing, staining and/or testing of clinical laboratory specimens.	A
4129	59059	Wash/cleaning solution IVD, manual equipment	Угаах/цэвэрлэх уусмал IVD, гарын авлагын төхөөрөмж	A wash or cleaning solution intended to be used in the preparation, decontamination and/or cleanup of equipment (e.g., glassware, weighing equipment) used for the manual processing, staining and/or testing of clinical laboratory specimens.	A

4130	59063	Red cell antibody diluent IVD, reagent	Улаан эсийн эсрэгбие шингэрүүлэгч IVD, урвалж	A substance or reactant that is an antibody-free solution intended to be used as a diluent in the immunohaematological testing of a clinical specimen for the semi-quantitative determination of a red blood cell antibody, using a serial dilution or titration technique.	A
4131	59119	Phosphate buffer/Sorenson buffer solution IVD	Фосфатын буфер/Соренсон буферийн уусмал IVD	A phosphate buffer or Sorenson buffer solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
4132	59121	Pre-eclampsia risk assessment interpretive software IVD	Эклампсийн өмнөх эрсдлийг үнэлэх тайлбарлах програм хангамж IVD	An interpretive software program intended to be used in the assessment of risk for development of pre-eclampsia during the current pregnancy. This interpretive software program typically combines patient demographics and the in vitro diagnostic (IVD) results of maternal biochemical and hormonal markers, body mass index (BMI) and blood pressure measurement to establish an individual risk score that may be used to guide patient management.	A
4133	59122	Xylene solution substitute IVD	Ксилений уусмалыг орлуулагч IVD	A xylene substitute solution which may include d-limonene and/or hydrocarbon-based solutions, intended to be used alone or in combination with other IVDs in the processing, staining and/or testing of clinical laboratory specimens.	A
4134	60012	Sperm energy status and motility testing reagent IVD	Эр бэлгийн эсийн энергийн байдал, хөдөлгөөнийг шалгах урвалж IVD	A sterile substance or reactant intended to be added to a semen specimen during a spermiogram test, in order to assess the energy status and the potential for increasing the motility rate of sperm through clinical treatment. This is a single-use device.	A
4135	60044	Chloride coulometric titration analyser IVD	Хлоридын кулометрийн титрлэлтийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative measurement of chloride in a clinical specimen (e.g., sweat, urine, serum or other body fluids) using a coulometric titration. Typically, a constant current is applied to the introduced sample to reduce chloride ions that are present in the solution and the magnitude and duration of the current prior to reaching the endpoint is used to determine the chloride concentration in relation to a reference solution.	A

4136	60090	Reverse transcription reagent kit IVD	Урвуу транскрипцийн урвалжийн иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used in the synthesis of complimentary deoxyribonucleic acid (cDNA) by reverse transcription, to facilitate the amplification of target ribonucleic acid (RNA) in a clinical specimen, using a polymerase chain reaction (PCR) technique.	A
4137	60091	Nucleic acid amplification mastermix kit IVD	Нуклейн хүчлийг олшруулах мастермикс иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used in combination with sequence-specific primers, probes and/or controls to facilitate the amplification of a target nucleic acid sequence [i.e., deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)} in a clinical specimen, using a nucleic acid amplification technique (e.g., polymerase chain reaction (PCR), loop-mediated isothermal amplification (LAMP)].	A
4138	60092	DNA amplification enzyme reagent IVD	ДНХ олшруулах ферментийн урвалж IVD	A substance or reactant intended to be used as an enzyme in a molecular assay to facilitate the amplification of target deoxyribonucleic acid (DNA) in a clinical specimen, using a polymerase chain reaction (PCR) technique.	A
4139	60094	Exogenous DNA/RNA internal control IVD, kit	Экзоген ДНХ/РНХ-ийн дотоод хяналтын IVD, иж бүрдэл	A collection of reagents and other associated materials intended to be used as an exogenous component in a molecular assay, to verify the extraction and/or amplification process applied to target deoxyribonucleic acid (DNA) and/or ribonucleic acid (RNA), and/or to verify the absence of inhibiting substances in a clinical specimen.	A
4140	60096	Bone marrow karyotype suspension reagent IVD	Ясны чөмөгний кариотип суспензийн урвалж IVD	A substance or reactant intended to be used for the suspension, preservation and storage of bone marrow and/or peripheral blood cells in a clinical specimen, in order to maintain suitability for karyotyping or chromosome evaluation.	A
4141	60120	Nucleic acid hybridization detection IVD, reagent	Нуклейн хүчлийн эрлийзжилтийг илрүүлэх IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used for the generic detection of nucleic acid (e.g., DNA, RNA) probes hybridized to their target nucleotide sequences in a clinical specimen [e.g., fluorescent in situ hybridization (FISH), chromogenic ISH (CISH)].	A

4142	60132	Thiopurine S-methyltransferase (TPMT) gene polymorphism IVD, reagent	Тиопурин S-метилтрансфераза (TPMT) генийн полиморфизм IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay, that is used to evaluate a clinical specimen to diagnose or predict thiopurine S-methyltransferase (TPMT) gene polymorphisms associated with adverse reactions to thiopurine drugs (azathioprine, 6-mercaptopurine and 6-thioguanine).	A
4143	60133	Suxamethonium sensitivity/scoline apnoea IVD, control	Суксаметониумын мэдрэмж/сколин апноэ IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to evaluate a clinical specimen to diagnose, monitor or predict scoline apnoea, the inherited genetic condition associated with sensitivity to the surgical anaesthetic suxamethonium. Suxamethonium sensitivity or scoline apnoea is associated with mutations in the butyrylcholinesterase (BCHE) gene.	A
4144	60268	Sweat conductivity analyser IVD	Хөлс дамжуулалтын анализатор IVD	A portable, electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative measurement of the electrical conductivity of a sweat specimen, as an indicator of total electrolyte concentration, by measuring the ease at which an electric current passes between two points of a conductor in a flow-through cell maintained at a precisely controlled temperature. Calibration solutions and controls are used to validate these results which are typically used to help diagnose cystic fibrosis.	A
4145	60370	Home-use/point-of-care coagulation analyser control IVD	Гэрийн хэрэглээ/эмчилгээний цэгийн коагуляцийн анализаторын хяналтын IVD	A portable, battery-powered device intended to be used by a layperson in the home or similar environment, or by health professionals at the point-of-care, to verify the performance of a coagulation analyser by electronically simulating the activity of a clinical specimen undergoing clot formation during in vitro coagulation studies. It typically consists of a tube-shaped housing containing a free rotating magnet, which is programmed to cease rotation at a pre-set interval in order to mimic the endpoint of a clotting process in a sample tube.	A

4146	60407	Electrophoresis chamber IVD	IVD электрофорезийн камер	An electrically-powered manual laboratory apparatus intended to be used for the qualitative and/or quantitative in vitro determination of various substances, especially proteins, in a clinical specimen based on their size, ionic charge and/or rate of migration through an electrically charged field.	A
4147	60528	Magnetic particle separation instrument IVD	Соронзон тоосонцор ялгах хэрэгсэл IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the automated pre-analytical extraction of specific molecules from a clinical specimen using magnetic particle separation techniques. It is a software-controlled, liquid handling robotic instrument that processes solutions using sequential immersion of magnetized rods, to attract labelled molecules, and rotation of demagnetized rods to create a new suspension/solution, and is typically used for nucleic acid isolation procedures.	A
4148	60726	Multiple blood group genotyping IVD, kit, microarray	Олон тооны цусны бүлгийн генотип IVD, иж бүрдэл, бичил массив	A collection of reagents and other associated materials intended to be used to evaluate a clinical specimen to determine the genotype for multiple blood groups using a microarray technique. The blood group systems to be genotyped may include Rhesus (CcDEe), Kell (K, k, Kp^a, Kp^b), Duffy (Fy^a, Fy^b, Fy^x), Kidd (Jk^a, Jk^b), Lewis (Le^a, Le^b), MNS (M, N, S, s, U), Xg (Xg^a), Dombrock (Do^a, Do^b), Colton (Co^a, Co^b), Cartwright (Yt^a, Yt^b), Lutheran (Lu^a, Lu^b) and/or Diego (Di^a, Di^b).	A
4149	60727	Multiple blood group genotyping IVD, control	Олон цусны бүлгийн генотип IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to evaluate a clinical specimen to determine the genotype for multiple blood groups. The blood group systems to be genotyped may include Rhesus (CcDEe), Kell (K, k, Kp^a, Kp^b), Duffy (Fy^a, Fy^b, Fy^x), Kidd (Jk^a, Jk^b), Lewis (Le^a, Le^b), MNS (M, N, S, s, U), Xg (Xg^a), Dombrock (Do^a, Do^b), Colton (Co^a, Co^b), Cartwright (Yt^a, Yt^b), Lutheran (Lu^a, Lu^b) and/or Diego (Di^a, Di^b).	A

4150	60728	Multiple blood group genotyping IVD, primer	Олон цусны бүлгийн генотип IVD, праймер	A defined piece of single-stranded nucleic acid which binds to and initiates replication of a target nucleic acid template in an assay intended to be used to evaluate a clinical specimen to determine the genotype for multiple blood groups. The blood group systems to be genotyped may include Rhesus (CcDEe), Kell (K, k, Kp^a, Kp^b), Duffy (Fy^a, Fy^b, Fy^x), Kidd (Jk^a, Jk^b), Lewis (Le^a, Le^b), MNS (M, N, S, s, U), Xg (Xg^a), Dombrock (Do^a, Do^b), Colton (Co^a, Co^b), Cartwright (Yt^a, Yt^b), Lutheran (Lu^a, Lu^b) and/or Diego (Di^a, Di^b).	A
4151	60729	Multiple blood group genotyping IVD, reagent	Олон цусны бүлгийн генотип IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to evaluate a clinical specimen to determine the genotype for multiple blood groups. The blood group systems to be genotyped may include Rhesus (CcDEe), Kell (K, k, Kp^a, Kp^b), Duffy (Fy^a, Fy^b, Fy^x), Kidd (Jk^a, Jk^b), Lewis (Le^a, Le^b), MNS (M, N, S, s, U), Xg (Xg^a), Dombrock (Do^a, Do^b), Colton (Co^a, Co^b), Cartwright (Yt^a, Yt^b), Lutheran (Lu^a, Lu^b) and/or Diego (Di^a, Di^b).	A
4152	60730	Soluble tumour necrosis factor receptor 1 (sTNFR1) IVD, kit, enzyme immunoassay (EIA)	Уусдаг хавдрын үхжилийн хүчин зүйлийн рецептор 1 (sTNFR1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble tumour necrosis factor receptor 1 (sTNFR1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	A
4153	60736	Nucleic acid sample preparation instrument IVD	Нуклейн хүчлийн дээж бэлтгэх хэрэгсэл IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the automated pre-analytical preparation of samples for downstream nucleic acid analysis. The instrument may be used to prepare various sample types through one or more pre-analytical steps which may include cell disruption, lysis, nucleic acid extraction, enzymatic digestion and/or nucleic acid purification.	A

4154	60890	Raman spectrometer IVD	Раман спектрометр IVD	A mains electricity (AC-powered) device assembly intended to be used to evaluate a clinical specimen, for screening or diagnostic purposes, that operates based on inelastic (Raman) scattering of monochromatic light to measure molecular vibrations and identify pathological changes in biomolecules (proteins, lipids, nucleic acids). It is an optical system, typically consisting of a hardware unit (e.g., diode laser, fibreoptic system, Raman probe, spectrograph, CCD detector) with integrated software.	A
4155	61032	Laboratory analyser cuvette IVD, single-use	Лабораторийн анализатор кювет IVD, нэг удаагийн	A small-volume, rectangular column designed to contain a clinical specimen, reagent, or other material for in vitro diagnostic testing procedures performed by a laboratory analyser. It is transparent to allow light to travel through the contained material and is typically made of plastic, glass or quartz with a flat base and an open top. This is a single-use device.	A
4156	61033	Laboratory analyser cuvette IVD, reusable	Лабораторийн анализатор кювет IVD, дахин ашиглах боломжтой	A small-volume, rectangular column designed to contain a clinical specimen, reagent, or other material for in vitro diagnostic testing procedures performed by a laboratory analyser. It is transparent to allow light to travel through sample and is typically made of plastic, glass or quartz with a flat base and an open top. This is a reusable device.	A
4157	61039	Fluorescent immunoassay/spectrophotometry analyser IVD, point-of-care	Флюросентийн дархлааны шинжилгээ/спектрофотометрийн анализатор IVD, тусламж үйлчилгээний цэг	A portable, electrically-powered point-of-care instrument typically used to scan an immunoassay reagent vehicle (e.g., test strip, cassette, or card) after exposure to a clinical specimen, to provide a quantitative and/or qualitative in vitro determination of cells and/or markers, chemical substances and/or biological markers in a clinical specimen. The instrument detects fluorescent markers that result from the immunological reaction between the reagents and the specimen and uses a spectrophotometric method to measure the absorbance of chemical and/or biological markers. It is mostly used for rapid in vitro diagnostic measurements at the point-of-care or in the laboratory.	A

4158	61073	Personal ovulation microscope IVD	Суперовуляци хийх хувийн микроскоп IVD	A non-sterile, hand-held eyepiece with a magnifying lens intended to be used for the visualization of crystalized patterns in a female's saliva sample, which may identify the days of ovulation, i.e., the most fertile days in the menstrual cycle, as an aid for natural conception. It is available [non-prescription] over-the-counter (OTC) for home-use and is not intended to be used as a form of contraception. This is a reusable device.	A
4159	61119	DNA anti-contamination enzyme reagent IVD	ДНХ-ийн бохирдлын эсрэг ферментийн урвалж IVD	A substance or reactant intended to be used as a hydrolyzing enzyme in a molecular assay to prevent contamination of the resulting deoxyribonucleic acid (DNA) amplicon, by preventing unintentional carry over of amplification products from a previous assay, in the analysis of a clinical laboratory specimen, using a polymerase chain reaction (PCR) technique.	A
4160	61163	Chemiluminescent immunoassay oxidizing reagent IVD	Химилюминесцент дархлаа судлалын исэлдүүлэгч урвалж IVD	A substance or reactant intended to be used as an oxidizing agent to activate the reaction which generates a chemiluminescent signal when performing an immunoassay on a clinical specimen.	A
4161	61193	Nucleic acid technique (NAT) chemiluminescent signal generation kit IVD	Нуклейн хүчлийн техник (NAT) химилюминесцент дохио үүсгэх иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to generate a chemiluminescent signal when performing an assay using a nucleic acid technique (NAT) on a clinical specimen. The kit is typically used in conjunction with luminescent-labelled nucleic acid oligonucleotide probes of known sequences and may also include reference material to optimise and verify performance of the luminometer instrument.	A
4162	61194	Nucleic acid technique (NAT) kit IVD	Нуклейн хүчлийн техник (NAT) иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to optimise an assay performed using a nucleic acid technique (NAT) on a clinical specimen. The kit typically consists of a silicone oil to minimize evaporation, buffered solutions for washing steps and reaction stop reagents.	A

4163	61199	Nucleic acid hybridization detection IVD, probe	Нуклейн хүчлийн эрлийзжилтийг илрүүлэх IVD, датчик	A defined piece(s) of nucleic acid, typically tagged with a fluorescent marker, intended to be used for the detection of a specific target nucleotide sequence at a single-gene locus or whole/partial chromosome level in a clinical specimen, in order to identify chromosomal abnormalities (e.g., aneuploidy, deletion, translocation, duplication, inversion, gene insertion). It is typically used in nucleic acid hybridization detection techniques [e.g., fluorescent in situ hybridization (FISH), chromogenic ISH (CISH)].	A
4164	61231	Cancer risk assessment interpretive software IVD	Хорт хавдрын эрсдлийг үнэлэх тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be used in the assessment of risk for developing cancer (e.g., breast, ovarian, prostate, lung, liver, gastric, pancreatic, colorectal). It uses specific algorithms to combine and correlate patient demographics, clinical observations, and the in vitro diagnostic results of the qualitative and/or quantitative detection of one or multiple cancer-specific biomarkers in a clinical specimen to establish an individual risk score that may be used to guide patient management.	A
4165	61232	Di^a positive reagent red blood cell IVD, antigen	Ди^а эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as Di^a positive. These reagent cells are positive for the Diego blood group antigen Di^a [DI001].	A
4166	61256	Anti-k (KEL002) red blood cell grouping IVD, antibody	Anti-k (KEL002) цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for k [KEL002] red blood cell antigens from the Kell system, using an agglutination method.	A
4167	61296	Microplate IVD	IVD бичил хавтан	A plate with multiple wells designed to contain small volumes of clinical specimens, reagents, or other materials for testing procedures performed by a laboratory analyser. It is typically made of sterilizable plastic material (e.g., polypropylene) and is used with manual or automated analysers. This is a single-use device.	A

4168	61302	Laboratory instrument/analyser control unit IVD	Лабораторийн багаж/анализаторын хяналтын нэгж IVD	An electrically-powered device intended to be used to control one or multiple in vitro diagnostic laboratory analyser(s)/instrument(s) used in the processing/preparation/analysis of a clinical specimen. It is designed to enable the user to input/manipulate sample data and select assays to be performed. The device consists of a combination of dedicated and off-the-shelf hardware [e.g., personal computer (PC), keyboard mouse and/or graphical user interface (GUI) touchscreen monitor] and software. It may include network components for the management and distribution of associated medical data (e.g., images, test results, patient-specific data) within or between healthcare facilities.	A
4169	61303	PCR instrument calibrator kit IVD	ПГУ-ын багажийн калибраторын иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to calibrate or verify the performance of a polymerase chain reaction (PCR) analyser to ensure its proper function prior to analysis/processing of clinical samples.	A
4170	61305	Assay adhesive sealing/fixation film IVD	Шинжилгээний наалдамхай битүүмжлэх / бэхлэх хальс IVD	A thin adhesive film intended to be used during in vitro diagnostic assays typically to seal the top of a microplate to prevent sample carryover and/or evaporation, and/or to fix test strips to a surface/chart to facilitate analysis. It is typically made of aluminium foil or plastic. This is a single-use device.	A
4171	61306	Microplate seal roller IVD	Microplate битүүмжлэх булны IVD	A manually-operated device intended to firmly apply a seal to a microplate. It consists of a cylindrical-shaped roller attached to a handle and is typically made of metal and plastic materials. This is a reusable device.	A
4172	61374	Endogenous DNA/RNA internal control IVD, kit	Эндоген ДНХ/РНХ-ийн дотоод хяналтын IVD, иж бүрдэл	A collection of reagents and other associated materials intended to be used as an endogenous component in a molecular assay, to verify the extraction and/or amplification process applied to target deoxyribonucleic acid (DNA) and/or ribonucleic acid (RNA), and/or to verify the absence of inhibiting substances in a clinical specimen.	A

4173	61487	Human infectome analysis interpretive software IVD	Хүний халдварын шинжилгээг тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be used to aid the identification of infectious microbial species [bacterial, fungal, viral] in a clinical specimen using images from microbial cultures and laboratory biochemical tests (e.g., digital profiles), or by genetic profiling via nucleic acid analysis. Results from in vitro diagnostic tests are input and the presumptive name(s), probability of possible microbial species, and/or information on genetic variants (e.g., subtype, genotype, strain) are returned.	A
4174	61614	Breath specimen container IVD	Амьсгалын сорьцын сав IVD	A container (e.g., bag, tube, collection card) intended to contain a specimen of air exhaled from a patient for subsequent in vitro determination of chemical and/or biological markers (e.g., volatile organic compounds) in the specimen to aid metabolic profiling or the diagnosis of disorders [e.g., lipid peroxidation levels, gastrointestinal H. pylori infection, coronavirus disease (COVID-19) infection]. It typically consists of carbon dioxide (CO_2) absorbing material which may be encased within the container, a port/mouthpiece or an access device (e.g., tubing) to facilitate specimen collection, and/or an adaptor for connection to an analyser. This is a single-use device.	A
4175	61643	Microbial identification mass spectrometry system IVD	Микробыг тодорхойлох масс спектрометрийн систем IVD	An assembly of mains electricity (AC-powered) devices intended to be used for the qualitative detection and identification of microbial species (bacteria, fungi) in a clinical specimen using mass spectrometry. It typically consists of a sample handling/preparation unit, a mass spectrometry instrument, and a server with software intended to analyse results and compare the produced spectra with information in a remote database to identify and report the microbial species in the specimen. The system operates with reduced technician involvement and automation of some, but not all, procedural steps.	A
4176	61649	Inoculation fluid IVD	Тарилгын шингэн IVD	A solution intended to be used to re-suspend and dilute an isolated pure microbial culture from a clinical specimen, in preparation for subsequent testing. The solution is intended to rehydrate dried biochemical and enzymatic substrates to initiate test reactions.	A

4177	61712	Microbial specimen inoculation/streaking/colony-picking instrument IVD	Бичил биетний сорьц тарих/судаллах/колони сонгох хэрэгсэл IVD	An electrically-powered instrument intended for the pre-analytical preparation of microbial samples (e.g., cultures, suspensions, MALDI-TOF targets/slides) from a clinical specimen and/or culture isolate. Its functionality includes: 1) automated/semi-automated transfer of the clinical specimen (e.g., by aspiration or inoculating loop), inoculation into/onto culture dishes/tubes/slides, and streaking of culture dishes (e.g., using magnetic beads, inoculation loops or spreaders); and/or 2) automated microbial colony picking for the preparation of samples for subsequent analytical procedures. It may also feature processing capabilities such as barcoding, storage, and/or sorting.	A
4178	61726	Multiplex analyser IVD, point-of-care	Мультиплекс анализатор IVD, тусламж үйлчилгээний цэг	A portable, mains electricity (AC-powered) instrument, which may include internal rechargeable batteries intended to be used by healthcare professionals at the point-of-care for the qualitative and/or quantitative determination of multiple chemical and/or biological markers in a single clinical specimen using an immunological method which incorporates multiple antibodies arranged on a solid surface (e.g., slide, plate, membrane) or coated onto micro-particles. It typically includes a system for the detection of bound target antigen (e.g., chemiluminescent, fluorescent, photometric, magnetic detector) together with sample processing, data processing, and data display software.	A
4179	61791	NMR spectroscopy analysis specimen preparation/calibration kit IVD	NMR спектроскопийн шинжилгээний дээж бэлтгэх/шалгалт тохируулгын хэрэгсэл IVD	A collection of reagents and other associated materials intended to be used to prepare standardized clinical specimens for nuclear magnetic resonance (NMR) spectroscopy analysis. It typically consists of organic/inorganic compounds (e.g., sodium phosphate, deuterium oxide) and can also be used for quality control and calibration of the NMR instrument.	A

4180	61826	Microscope slide coverslipper IVD	Микроскопын слайд IVD	An automated mains electricity (AC-powered) laboratory instrument intended to be used to apply a coverslip over a microscope examination slide to protect the fixed/stained specimen from mechanical forces or environmental exposure prior to microscopic examination and/or long-term storage of the slide. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4181	61864	Cell morphology analyser IVD, automated/semi-automated	Эсийн морфологийн анализатор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used to capture digital images of a clinical specimen at the microscopic level in order to view, count, record and evaluate the morphological characteristics of the cells and other biological components. It is a computerized optical unit consisting of a microscope, camera and software.	A
4182	61925	Reagent management instrument IVD	Урвалжийн удирдлагын хэрэгсэл IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for the management of reagents used in in vitro diagnostic assays. It is an automated system which stores and refrigerates reagents and, when required, reconstitutes/rehydrates reagents prior to use in an assay. It is typically linked to one or multiple laboratory analysers and transfers reagents directly to an analyser without human intervention. The system tracks all loaded reagents to identify and remove empty or expired reagent cartridges/containers. It may also be used for inventory management.	A
4183	61927	Multi-modality clinical specimen analysis system IVD	Олон төрлийн эмнэлзүйн сорьцын шинжилгээний систем IVD	An assembly of mains electricity (AC-powered) devices consisting of two or more analysers of different analytic modalities [e.g., immunoassay and photometric (clinical chemistry)] intended to be used for the qualitative and/or quantitative determination of chemical and/or biological markers (e.g., drug, hormone, microbial toxin, electrolytes) in a clinical specimen. The assembly may also include a sample preparation instrument, reagent management instrument, data processing and/or data display software. The device operates with minimal technician involvement and complete automation of all procedural steps.	A

4184	61935	Specimen stabilization reagent IVD	Сорьц тогтворжуулах урвалж IVD	A substance or reactant intended to be used alone or in combination with other IVDs to prevent degradation of sensitive analytes (e.g., hormones, proteins, peptides and/or nucleic acids) in a clinical specimen during transportation, storage or processing. A stabilizer is typically a solvent, antioxidant or an enzyme inhibitor.	A
4185	61953	Liquid chromatography/mass spectrometry (LC/MS) analysis specimen preparation/processing kit IVD	Шингэн хроматографи/масс спектрометрийн (LC/MS) шинжилгээний дээж бэлтгэх/боловсруулах хэрэгсэл IVD	A collection of reagents and other associated materials intended to be used in combination with other IVDs for the preparation or processing of a clinical specimen for subsequent liquid chromatography/mass spectrometry (LC/MS) separation and/or analysis.	A
4186	61954	Liquid chromatography/mass spectrometry analysis specimen preparation/processing reagent IVD	Шингэн хроматографи/масс спектрометрийн шинжилгээний дээж бэлтгэх/боловсруулах урвалж IVD	A substance or reactant intended to be used alone or in combination with other IVDs for the preparation or processing of a clinical specimen for subsequent liquid chromatography and/or mass spectrometry (LC/MS) separation and/or analysis.	A
4187	61957	Nucleic acid sequence analyser IVD, next-generation sequencing (NGS)	Нуклейн хүчлийн дарааллын анализатор IVD, дараагийн үеийн дараалал (NGS)	A mains electricity (AC-powered) automated laboratory instrument intended to determine the sequence of nucleotides in a nucleic acid library [pre-constructed from deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)] for genetic analysis of a clinical specimen, using a next-generation sequencing (NGS) technique. It consists of a detector (e.g., fluorescent, luminescent or electrochemical) which detects signals from incorporated nucleotides, as well as sample processing, data processing, and/or data display software. It operates with minimal technician input and complete automation of all procedural steps.	A
4188	62010	Instrument/analyser test tube rack adaptor IVD	Багаж / анализаторын туршилтын хоолойн өлгүүр адаптер IVD	A device intended to be used on-board an in vitro diagnostic laboratory instrument or analyser to allow test tubes or vials of a nonstandard size to be placed onto an instrument/analyser test tube rack. It is typically made of metal or plastic. This is a reusable device.	A

4189	62011	Instrument/analyser specimen/reagent container carrier IVD	Багаж/анализаторын сорьц/урвалжийн сав зөөгч IVD	A device intended to hold a specimen/reagent container (e.g., test tube, tissue specimen petri dish, microplate, cuvette) on-board an in vitro diagnostic laboratory instrument or analyser (e.g., PCR machine, spectrophotometric plate reader, biopsy specimen analyser, automated liquid handling station). It may be in the form of a removable tray (excludes immunoassay vehicle trays), holder, shuttle, rack/rack base, slotted case, or other format suitable to be handled and loaded into the parent device by the operator or via an automated process. This is a reusable device.	A
4190	62070	Nucleic acid sequence analyser IVD, Sanger sequencing	Нуклейн хүчлийн дарааллын анализатор IVD, Sanger дараалал	A mains electricity (AC-powered) semi-automated laboratory instrument intended to determine the sequence and fragment analysis of nucleotides in an isolated nucleic acid [deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)] sample for genetic analysis of a clinical specimen using a Sanger sequencing technique. It is used to analyse a polymerase chain reaction (PCR) product (thermal nucleic acid cycler is not included) and consists of a capillary electrophoresis instrument with a fluorescence detector, and sample processing, data processing, and/or data display software. The device operates with reduced technician involvement and automation of some procedural steps.	A
4191	62172	Laboratory waste receptacle IVD	Лабораторийн хог хаягдлын сав IVD	A non-sterile container intended to collect and contain disposable materials/devices that have been contaminated due to contact with bodily fluids/substances (e.g., blood, sputum, urine, faeces) resulting from in vitro diagnostic procedures. It is typically in the form of a sack, box, or bottle made of durable plastic impervious to microorganisms. It may be used to collect solid and/or liquid waste from a laboratory instrument or analyser. This is a single-use device intended to be disposed of with its contents.	A

4192	62173	Nucleic acid sequencing reagent kit IVD	Нуклейн хүчлийн дараалал тогтоох урвалжийн иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used on-board a nucleic acid sequencing instrument for the genetic analysis of a clinical specimen. It typically consists of buffers, primers, enzymes (e.g., DNA polymerase, DNA ligase) and deoxynucleotides (dNTPs). It does not contain analyte-specific reagents and is not intended to be used for whole genome or complementary deoxyribonucleic acid (cDNA) library construction.	A
4193	62180	Multichannel clinical chemistry analyser IVD, home-use, battery-powered	Олон сувгийн эмнэлзүйн химийн анализатор IVD, гэрийн хэрэглээ, батерейгаар ажилладаг	A portable, battery-powered instrument intended to be used by a layperson in the home or similar environment to analyse a clinical specimen for the qualitative and/or quantitative determination of multiple clinical chemistry analytes simultaneously from multiple analytical processes. Analytes measured may include electrolytes, specific proteins, lipids, and kidney, liver and/or cardiac function test analytes using two or more technologies which may include microfluidics, electrometry, spectrophotometry, fluorimetry, radiometry and/or chemiluminescence.	A
4194	62181	Multiple clinical chemistry analyser IVD, point-of-care	Олон тооны клиник химийн анализатор IVD, тусламж үйлчилгээний цэг	A portable, electrically-powered instrument intended to be used by health professionals at the point-of-care for the qualitative and/or quantitative in vitro detection of multiple clinical chemistry analytes in a clinical specimen, using one or more technology(ies) [e.g., microfluidics, electrometry, spectrophotometry, colorimetry, fluorimetry, radiometry, chemiluminescence]. Analytes detected may include electrolytes, specific proteins, clinical chemistry substrates (e.g., lipid profile), liver and/or cardiac function test analytes, and/or enzymes.	A

4195	62205	Glycated haemoglobin (HbA1c) monitoring system IVD, home-use	Гликатжуулсан гемоглобины (HbA1c) хяналтын систем IVD, гэрийн хэрэглээ	A collection of devices including a portable, battery-powered, semi-automated or automated instrument (self-testing meter), reagents, and/or other associated disposable materials (e.g., lancet) intended to be used for the quantitative measurement of glycated haemoglobin (HbA1c) in a whole blood clinical specimen; it is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. The measurement is typically based on an immunological method (e.g., immunoassay) and/or spectrophotometry, and is used to evaluate the long-term control of blood glucose concentration, primarily in persons with diabetes mellitus.	A
4196	62206	Glycated haemoglobin (HbA1c) monitoring system IVD, point-of-care	Гликатлагдсан гемоглобины (HbA1c) хяналтын систем IVD, тусламж үйлчилгээний цэг	A collection of devices including a portable, electrically-powered, semi-automated or automated instrument (meter), reagents, and/or other associated disposable materials (e.g., lancet) intended to be used exclusively at the point-of-care by medical professionals for the quantitative measurement of glycated haemoglobin (HbA1c) in a whole blood clinical specimen. The measurement is typically based on an immunological method (e.g., immunoassay) and/or spectrophotometry, and is used to evaluate the long-term control of blood glucose concentration, primarily in persons with diabetes mellitus.	A
4197	62221	Uric acid monitoring system IVD, home-use	Шээсний хүчлийн хяналтын систем IVD, гэрийн хэрэглээ	A collection of devices including a portable, battery-powered, semi-automated or automated instrument (self-testing meter), reagents, test strips, and/or other associated disposable materials intended to be used for the quantitative measurement of uric acid in a whole blood clinical specimen; it is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. It is used to monitor the effectiveness of uric acid control in various disorders (e.g., renal failure, gout, leukaemia), and in patients receiving cytotoxic chemotherapy.	A

4198	62225	Assay container IVD, single-use	Шинжилгээний сав IVD, нэг удаагийн	A reservoir (e.g., bottle, test tube, cup) intended to be used to contain volumes of reagent, buffers, biological specimens, or other materials associated with in vitro diagnostic testing procedures. It is typically made of plastic or glass and may be used on the laboratory benchtop for manual procedures, or on-board automated liquid handling instruments or analysers. This is a single-use device.	A
4199	62262	Microscope slide hybridization/denaturation incubator IVD	Микроскопын слайд гибридизаци/денатурацийн инкубатор IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for the incubation of microscope slides for the denaturation and/or hybridization of a clinical specimen as part of an in situ hybridization (ISH) and/or fluorescence in situ hybridization (FISH) protocol. It is typically a bench-top unit with the capacity to hold multiple previously-prepared slides (i.e., fixed slides with/without added reagents) and is programmable to provide an optimum environment for ISH/FISH procedures (e.g., by controlling temperature, humidity and incubation time).	A
4200	62300	Capillary blood collection pump IVD	Капилляр цус цуглуулах насос IVD	A portable, electrically-powered device designed to generate a vacuum to facilitate the aspiration of blood from a capillary puncture site (e.g., finger, heel) to a capillary blood transfer/collection tube. Blood is guided into the capillary transfer/collection tube through a disposable attachment (e.g., collection funnel) or a side extension of the transfer/collection tube. This is a reusable device.	A
4201	62338	Cell-imaging microplate reader IVD	Эсийн дүрсний микропластин уншигч IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for live cell imaging and observation of cell-based assays in microplates, and for the optical detection of analytes in a clinical specimen. The device is typically a single unit consisting of a digital microscope and a multi-modality (i.e., fluorescence, chemiluminescence, absorbance) optical reader. It may also be temperature and gas controlled (i.e., CO2 and O2) for incubation of microplates. The device operates with minimal technician involvement and complete automation of all procedural steps.	A

4202	62392	Oral/respiratory tract specimen container IVD, additive/medium	Амны хөндийн/амьсгалын замын сорьцын сав IVD, нэмэлт/дунд	A covered receptacle containing an additive and/or medium [e.g., saline, sodium azide, buffer solution, microbiological medium (e.g., Amies, Stuart, viral transport/inactivation medium)] intended to be used in the home and clinical settings for the collection, and preservation and/or transport, of a saliva/oral, nasal, nasopharyngeal, oropharyngeal, and/or lower respiratory tract specimen (e.g., sputum) [excluding breath specimen], for in vitro diagnostic investigation (e.g., COVID-19 screening). It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A
4203	62400	Endogenous DNA/RNA internal control IVD, reagent	Эндоген ДНХ/РНХ-ийн дотоод хяналтын IVD, урвалж	A substance or reactant intended to be used as an endogenous component in a molecular assay to verify the extraction and/or amplification process applied to target deoxyribonucleic acid (DNA) and/or ribonucleic acid (RNA), and/or verify the absence of inhibiting substances, in a clinical specimen.	A
4204	62413	Nephelometry/turbidimetry analyser IVD, automated/semi-automated	Нефелометр/турбидиметрийн анализатор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of light absorption and/or light scatter caused by particles (e.g., bacteria) and/or other biological components suspended in a clinical specimen using a photometric detection system. It is generally used to measure the concentration of a target analyte in solution.	A
4205	62498	PCR/NAT protease reagent IVD	ПГУ/NAT протеазын урвалж IVD	A substance or reactant intended to be used as a proteolytic enzyme (e.g., proteinase K) to digest proteins in a clinical specimen. It is used to aid in the extraction of nucleic acids for subsequent analysis using a nucleic acid technique (NAT) [e.g., polymerase chain reaction (PCR), in situ hybridization (ISH)].	A
4206	62507	Detergent solution IVD	IVD угаалгын нунтаг уусмал	A non-ionic surfactant solution (e.g., NP-40) intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A

4207	62508	Saline sodium citrate buffer IVD	Давстай натрийн цитрат буфер IVD	A salt-containing buffer intended to be used in hybridization assays to control the degree of stringency (homology between the probe and the filter bound nucleic acid) in the processing, staining, and/or testing of clinical specimens.	A
4208	62509	Molecular grade water IVD	Молекулын зэрэглэлийн ус IVD	A purified water free of nucleic acids [e.g., deoxyribonucleic acid (DNA) and ribonucleic acid (RNA)], nucleases e.g., DNAse and RNAse) and/or proteases, typically intended to be used in assays which involve the processing and/or testing of a clinical specimen using nucleic acid technique (NAT).	A
4209	62510	Formamide IVD	Формаид IVD	A formamide-based solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens. It is commonly used as a gel-stabilizer, cyoprotectant, or in hybridization assays to destabilize nucleic acid duplexes.	A
4210	62511	DNA blocking reagent IVD	ДНХ хориглогч урвалж IVD	A substance or reactant intended to be used to decrease the background noise caused by non-specific binding or hybridization, during the detection of nucleic acids in assays performed on a clinical specimen. Examples of blocking reagents may include (but are not limited to) Cot-1 DNA, tRNA and bovine serum albumin (BSA).	A
4211	62512	DAPI solution IVD	DAPI шийдэл IVD	A solution containing the fluorescent dye 4′,6-Diamidino-2-phenylindole dihydrochloride (DAPI) intended to be used as a counterstain for the visualization of deoxyribonucleic acids (DNA) in assays performed on biological tissues or clinical specimens.	A

4212	62539	Coagulation analyser IVD, home-use, line-powered	Коагуляцийн анализатор IVD, гэрийн хэрэглээ, шугамаар ажилладаг	A mains electricity (AC-powered) instrument, which may include internal rechargeable batteries, intended to be used for the qualitative and/or quantitative in vitro determination of one or multiple coagulation components involved in haemostasis in a clinical specimen [e.g., performs tests such as whole blood prothrombin time (WBPT), whole blood partial thromboplastin time (WBPTT), heparin dose response, activated clotting time (ACT)]; it is designed for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. It may include spectrophotometry, turbidimetry, nephelometry, electrometry and/or mechanical means of clot formation or end point detection.	A
4213	62540	Coagulation analyser IVD, point-of-care, line-powered	Коагуляцийн анализатор IVD, тусламж үйлчилгээний цэг, шугамаар ажилладаг	A mains electricity (AC-powered) instrument, which may include internal rechargeable batteries, intended to be used exclusively at the point-of-care by medical professionals for the qualitative and/or quantitative in vitro determination of one or multiple coagulation components involved in haemostasis in a clinical specimen [e.g., performs tests such as whole blood prothrombin time (WBPT), whole blood partial thromboplastin time (WBPTT), heparin dose response, activated clotting time (ACT)]. It may include spectrophotometry, turbidimetry, nephelometry, electrometry, electromagnetic and/or mechanical means of clot formation or end point detection.	A
4214	62541	Coagulation analyser IVD, home-use, battery-powered	Коагуляцийн анализатор IVD, гэрийн хэрэглээ, батерейгаар ажилладаг	An exclusively battery-powered instrument intended to be used for the qualitative and/or quantitative in vitro determination of one or multiple coagulation components involved in haemostasis in a clinical specimen [e.g., performs tests such as whole blood prothrombin time (WBPT), whole blood partial thromboplastin time (WBPTT), heparin dose response, activated clotting time (ACT)]; it is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. It may incorporate spectrophotometry, turbidimetry, nephelometry, electrometry, electromagnetic and/or mechanical means of clot formation or end point detection.	A

4215	62542	Coagulation analyser IVD, point-of-care, battery-powered	Коагуляцийн анализатор IVD, тусламж үйлчилгээний цэг, батерейгаар ажилладаг	An exclusively battery-powered instrument intended to be used exclusively at the point-of-care by medical professionals for the qualitative and/or quantitative in vitro determination of one or multiple coagulation components involved in haemostasis in a clinical specimen [e.g., performs tests such as whole blood prothrombin time (WBPT), whole blood partial thromboplastin time (WBPTT), heparin dose response, activated clotting time (ACT)]. It may incorporate spectrophotometry, turbidimetry, nephelometry, electrometry, electromagnetic and/or mechanical means of clot formation or end point detection.	A
4216	62550	Blood smearing manual instrument IVD	Цус түрхэх гарын авлагын багаж IVD	A manual laboratory instrument intended to be used to create a blood smear on a microscope examination slide for subsequent staining and/or microscopic analysis. The device operates with technician involvement in most procedural steps.	A
4217	62575	Microscope slide digital imaging scanner IVD	Микроскопын слайд дижитал дүрслэлийн сканнер IVD	A mains electricity (AC-powered) device designed to be used in a histopathology laboratory to scan clinical specimens on microscope slides, at a microscopic level, to produce images in a digital format. Also known as a whole slide scanner or digital pathology slide scanning system, it is a bench-top unit with slide tray slots, high-resolution cameras, a user interface, and integrated software for image creation, viewing, and management to aid the pathologist to review and interpret slide images.	A
4218	62604	Nucleic acid library construction kit IVD	Нуклейн хүчлийн номын сангийн барилгын иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used for the construction of fragmented nucleic acids [deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)] for use in genomic sequencing assays. It typically consists of buffers, primers, enzymes (e.g., DNA polymerase, DNA ligase) and deoxynucleotides (dNTPs) and is intended to be used for whole genome and/or complementary deoxyribonucleic acid (cDNA) library construction.	A

4219	62623	Nucleic acid amplification mastermix reagent IVD	Нуклейн хүчлийг олшруулах мастер хольцын урвалж IVD	A reagent intended to be used in combination with sequence-specific primers, probes and/or controls to facilitate the amplification of a target nucleic acid sequence [i.e., deoxyribonucleic acid (DNA) or ribonucleic acid (RNA)} in a clinical specimen, using a nucleic acid amplification technique (e.g., polymerase chain reaction (PCR), loop-mediated isothermal amplification (LAMP)].	A
4220	62625	Instrument/analyser test tube rack cover IVD	Багаж/анализаторын туршилтын хоолойн тавиурын таг IVD	A device intended to be used on-board an in vitro diagnostic laboratory instrument or analyser to secure test tubes placed onto an instrument/analyser test tube rack. It is typically made of plastic and is perforated to allow access to the contents of the test tubes. This is a reusable device.	A
4221	62636	Analyser light source IVD	Анализаторын гэрлийн эх үүсвэр IVD	A light source designed to be installed on an analyser for the excitation a target analyte treated with a light-excitable agent [e.g., 4′,6-Diamidino-2-phenylindole dihydrochloride (DAPI), propidium iodide (PI)] in a clinical specimen. It is typically in the form of one or multiple halogen-containing bulb(s) or light-emitting diodes (LEDs) which emit light in the visible spectrum, and which may be used with an excitation filter (not included) depending on the assay protocol.	A
4222	62643	Multiple clinical chemistry analyte monitoring system IVD, home-use	Олон тооны эмнэлзүйн химийн шинжилгээний хяналтын систем IVD, гэрийн хэрэглээ	A collection of devices including a portable, electrically-powered, semi-automated or automated instrument (self-testing meter), reagents, test strips and/or other associated materials and accessories (e.g., control solutions, lancets) intended to be used together for the quantitative measurement of multiple clinical chemistry analytes in a clinical specimen. Analytes detected may include electrolytes, specific proteins, clinical chemistry substrates (e.g., lipid profile), liver and/or cardiac function test analytes, and/or enzymes. It is intended to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care.	A

4223	62644	Multiple clinical chemistry analyte monitoring system IVD, point-of-care	Олон тооны эмнэлзүйн химийн аналитийн хяналтын систем IVD, тусламж үйлчилгээний цэг	A collection of devices that includes one or more portable, electrically-powered instruments (meter), reagents, test strips and/or other associated materials and accessories [e.g., control solutions, lancets] intended to be used together exclusively at the point-of-care by medical professionals for the quantitative measurement of more than one clinical chemistry analyte [e.g., glucose, ketones, lipid(s), and/or creatinine] in a whole blood specimen. Some types may also include measurement of haemoglobin and/or haematocrit for rapid diagnosis of anaemia and/or blood loss.	A
4224	62645	Glucose analyser IVD, home-use	Глюкозын анализатор IVD, гэрийн хэрэглээ	An electrically-powered instrument intended to be used for the quantitative in vitro measurement of glucose levels in whole blood; it is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. Measured glucose values are used to manage blood glucose levels, primarily by persons with diabetes mellitus. This analyser is typically included in a blood glucose monitoring system.	A
4225	62646	Glucose analyser IVD, point-of-care	Глюкозын анализатор IVD, тусламж үйлчилгээний цэг	An electrically-powered instrument intended to be used exclusively at the point-of-care by medical professionals for the quantitative in vitro measurement of glucose levels in whole blood. Measured glucose values are used to manage blood glucose levels, primarily by persons with diabetes mellitus. This analyser is typically included in a blood glucose monitoring system.	A
4226	62669	Clinical specimen extraction buffer IVD	Эмнэлзүйн сорьц олборлох буфер IVD	A buffered solution intended to be used for the processing and preparation of a clinical specimen, for subsequent in vitro diagnostic testing, by extraction of specific target analytes present in the clinical specimen (e.g., proteins, antigens).	A
4227	62689	Molecular grade alcohol IVD	Молекулын зэрэглэлийн спирт IVD	A molecular grade alcohol solution intended to be used for the extraction of nucleic acids (e.g., DNA and/or RNA) from cells in a clinical specimen in preparation for further analysis using a nucleic acid technique (NAT).	A

4228	62690	Molecular grade procedure oil IVD	Молекулын зэрэглэлийн процедурын тос IVD	An inert oil (e.g., silicone oil, mineral oil, immersion oil) intended to be used as a barrier/seal/partitioning agent to minimize or prevent sample carryover and/or evaporation in an in vitro diagnostic assay performed on a clinical specimen (e.g., using a microwell plate), and/or to occupy the space between a microscope slide and a microscope objective lens to remove air and enhance image resolution of the microscope.	A
4229	62691	Molecular grade buffered sample diluent IVD	Молекулын буфержүүлсэн дээж шингэрүүлэгч IVD	A molecular grade buffered solution intended to be used as a diluent for a clinical specimen, reagent and/or other substances used prior to, or during an assay using a nucleic acid technique (NAT).	A
4230	62692	Molecular grade lysis reagent IVD	Молекулын зэрэглэлийн задралын урвалж IVD	A substance or reactant containing a protein denaturant (e.g., guanidine thiocyanate) intended to be used alone or in combination with other IVDs for the extraction of nucleic acids (e.g., DNA, RNA) from cells in a clinical specimen in preparation for further analysis using a nucleic acid technique (NAT).	A
4231	62704	ABO/Rh(D)/IgG multiple blood grouping IVD, kit, agglutination	ABO/Rh(D)/IgG олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of multiple ABO system, Rh(D) [RH001] red blood cell antigens and cell-bound immunoglobulin G (IgG), using an agglutination method.	A
4232	62730	Isothermal nucleic acid amplification analyser IVD, point-of-care	Изотерм нуклейн хүчлийг олшруулах анализатор IVD, тусламж үйлчилгээний цэг	A portable, electrically-powered instrument intended to be used by health professionals at the point-of-care for the amplification of target deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) in a clinical specimen. It amplifies the target nucleic acids at a constant (isothermal) temperature, using a series of transcription and reverse transcription reactions, and detects and/or identifies the amplified product using oligonucleotide markers as it is produced (e.g., in real-time).	A
4233	62739	Glucose analyser IVD, laboratory, manual	Глюкозын анализатор IVD, лабораторийн, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the quantitative in vitro measurement of glucose levels in whole blood, serum, plasma and/or other body fluid.	A

4234	62847	Dewaxing solution IVD	Лав арилгах уусмал IVD	A substance intended to be used to remove paraffin wax from formalin-fixed, paraffin-embedded biological tissues or clinical specimens for subsequent in vitro diagnostic (IVD) testing.	A
4235	62854	McFarland standard IVD	McFarland стандарт IVD	A standard solution intended to be used as a reference in the estimation of the number of bacteria in a suspension based on the turbidity, compared to that of the McFarland standard. It consists of specified volumes of barium chloride and sulphuric acid. The standard is typically used to adjust the inoculum in microbial assays (e.g., microbial susceptibility and microbial identification) where a standardized inoculum is required.	A
4236	62861	Human immunoglobulin D (IgD) animal conjugate antibody reagent IVD	Хүний иммуноглобулин D (IgD) амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin D (IgD) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A
4237	62866	Slide-mounted-tissue dissection system IVD	Слайд суурилуулсан эдийг задлах систем IVD	An assembly of mains electricity (AC-powered) software-based devices designed to be used in the laboratory for the automated, or remotely-controlled, computer-aided dissection of microscope-slide-mounted tissue specimens under digital image guidance, allowing the user to digitally preselect the target dissection area with high precision. It consists of a high-resolution magnification unit, a robotic arm with an attached disposable milling tip, a remote control unit, and a display screen; excised tissues are suctioned into a sample tube for subsequent histopathology analysis.	A
4238	62867	Slide-mounted-tissue dissection system excision tip IVD	Слайд дээр суурилуулсан эдийг задлах системийн зүсэлтийн үзүүр IVD	A small cutting instrument designed to be mounted on the robotic arm of a digital-image-guided dissection system to excise its microscope-slide-mounted tissue specimens. It is a precision cutting mill bit which is also capable of dispensing dissecting buffer solution and aspirating the excised specimens. This is a single-use device.	A

4239	62875	Thermal cycler nucleic acid amplification analyser IVD, point-of-care	Дулааны циклер нуклейн хүчлийг олшруулах анализатор IVD, тусламж үйлчилгээний цэг	A portable, electrically-powered instrument intended to be used by health professionals at the point-of-care to amplify target deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) in a clinical specimen using heat-stable polymerase enzymes and cycles of repeated heating and cooling (i.e., thermal cycling) to replicate a product [i.e., a polymerase chain reaction (PCR)]. Amplified product is detected and/or identified using oligonucleotide markers as it is produced (i.e., in real-time) or at the end-point. The analyser may also isolate, extract and/or prepare nucleic acid from the clinical specimen and/or culture isolate prior to amplification.	A
4240	62891	Haemoglobin analyser IVD, home-use	Гемоглобины анализатор IVD, гэрийн хэрэглээ	A portable battery-powered instrument intended to be used to determine the concentration of haemoglobin in a clinical specimen, using technology which may include colorimetry, electrometry or photometry. It is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care.	A
4241	62926	Microscope slide labelling cartridge IVD	Микроскопын слайд шошгоны хайрцаг IVD	A device designed to be inserted into an automated microscope slide processing instrument (e.g., printer, stainer, or maker) to label a microscope slide for specimen identification prior to blood smearing. It is a casing, similar to a paper printer cartridge, with a printer ribbon that makes thermal contact with the slide, with heat and printed data from the processing instrument, to transfer information to the slide.	A
4242	62927	Blood smearing cassette IVD	Цус түрхэх кассет IVD	A device designed to be inserted into an automated microscope slide processing instrument (e.g., microscope slide maker) to create a blood smear on a microscope examination slide for subsequent staining and/or microscopic analysis. It is in the form of a cassette tape with a roll of spaced blades which individually make contact with a single blood drop to produce a smear. This is a reusable device intended to be discarded after all blades have been used once.	A

4243	62957	Blot processor IVD	Blot процессор IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for the processing of a prepared clinical specimen with an immobilized probe on a solid phase (e.g. blotting membrane or gel sheet) for blot assays (e.g. line assays, Western, Southern and/or Northern blot). It typically performs pre-analytical steps including (but not limited to) reagent dispensing, incubation (with or without heating), agitation and washing. The device does not include a detector and is not intended to perform qualitative and/or quantitative measurements.	A
4244	62970	Histology tissue cassette IVD, laboratory processing, single-use	Гистологийн эд эсийн кассет IVD, лабораторийн боловсруулалт, нэг удаагийн хэрэглээ	A small device intended to be used in the laboratory to support/contain clinical tissue specimens (e.g., biopsy samples) to facilitate specimen processing [e.g., fixation (encapsulation in paraffin wax), dehydration, infiltration] in preparation for subsequent cytological or histological examination, and storage. It is in the form of a plastic container, with or without a lid, with drainage holes to maximize fluid exposure during tissue submersion in a parent device into which the container is loaded. It may, in addition, include a fenestrated insert to hold and prevent the loss of a smaller specimens. This is a single-use device.	A
4245	62998	NMR spectroscopy system IVD	NMR спектроскопийн систем IVD	An automated laboratory instrument designed to use nuclear magnetic resonance (NMR) technology for the qualitative and/or quantitative determination of the chemical composition of a clinical specimen. It is a tank-like assembly in which electromagnetic radiation is applied to the clinical specimen enabling its atomic particle spin signals to be read for compound identification and quantification; a magnet, console, computer/software, display monitor, and accessory devices (e.g., tubes, tube rack) are typically included.	A
4246	63004	Line probe assay reader IVD	Шугамын датчикийн шинжилгээний уншигч IVD	A mains electricity (AC-powered) laboratory instrument designed to be used to detect and measure the intensity of bands, formed by the hybridization of target oligonucleotides to nucleic acid (e.g., DNA and RNA) derived from a clinical specimen, on a line probe assay membrane. It is an optical benchtop scanner with a tray or drawer, where strips are placed for optical imaging, and dedicated software for analysis, visualization and storage of the acquired images.	A

4247	63038	Microscope slide barrier-ink pen IVD	Микроскопын слайд саадтай бэх үзэг IVD	A hand-held pen intended to be used to circumscribe a microscope-slide-mounted tissue specimen with water-repellent ink to contain fluids (e.g., washing buffer, antibody solution, chromogenic substrates) applied to the specimen during manual processing and/or staining procedures.	A
4248	63042	Assay container IVD, reusable	Шинжилгээний сав IVD, дахин ашиглах боломжтой	A reservoir (e.g., bottle, test tube, cup) intended to be used to contain volumes of reagent, buffers, biological specimens, or other materials in preparation for in vitro diagnostic testing procedures performed in the laboratory. It is typically made of plastic or glass and may be used on the benchtop for manual procedures (e.g., rinsing of paraffin embedded tissues), or on-board automated liquid handling instruments or analysers. This is a reusable device.	A
4249	63090	Haemoglobin/hematocrit analyser IVD	Гемоглобин/гематокрит анализатор IVD	A portable, electrically-powered instrument intended to be used by a healthcare professional at the point-of-care for the quantitative in vitro measurement of haemoglobin (Hb) and hematocrit (Hct) in a whole blood specimen. It typically requires electrode test strips and/or reagents (not included) and utilizes electrometry to measure the amount of haemoglobin and haematocrit.	A
4250	63094	Cell viability solution IVD	Эсийн амьдрах чадварын шийдэл IVD	A solution containing a dye or stain [e.g. 7-amino-actinomycin D (7-AAD)] intended to be used in cell viability assays in which the binding of the dye to deoxyribonucleic acid (DNA) in cells enables differentiation between live and dead cells, in a clinical specimen.	A
4251	63101	Liquid chromatography/mass spectrometry (LC/MS) analyser IVD	Шингэн хроматографи/масс спектрометр (LC/MS) анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument designed for the qualitative and/or quantitative in vitro determination of the chemical composition of a clinical specimen. The sample is introduced in a pressurized liquid and its compounds are separated based on their chemical/physical properties while interacting with a column filling; as the substances exit the column they are ionized and the resulting ions are separated according to mass using an electromagnetic field. The device is used for identification and quantification of complex substances (e.g., drugs, hormones).	A

4252	63102	Mass spectrometry analyser vacuum pump/nitrogen generator IVD	Масс спектрометрийн анализатор вакуум насос/азотын генератор IVD	A mains electricity (AC-powered) laboratory device designed to be used with a mass spectrometer (e.g., LC/MS analyser) and which consists of: 1) a vacuum roughing pump intended to remove excess air from the mass spectrometer; and 2) a nitrogen generator intended to generate nitrogen from the surrounding air for use in the clinical specimen ionization process. It is typically contained within a cabinet to reduce the noise associated with operation.	A
4253	63186	Immunoassay reagent vehicle tray IVD, reusable	Immunoassay урвалжийн тээврийн хэрэгслийн тавиур IVD, дахин ашиглах боломжтой	A removable tray designed to be loaded with an immunoassay reagent vehicle (e.g., test strip, cassette, card), after vehicle exposure to an in vitro diagnostic clinical specimen, and inserted into an immunoassay analyser. This is a reusable device.	A
4254	63292	General specimen container IVD, preservation solution, sterile	Ерөнхий сорьцын сав IVD, хадгалах уусмал, ариутгасан	A sterile covered plastic receptacle containing a preservative (e.g., cell or nucleic acid preservation solution) intended to be used for the collection, and preservation and/or transport, of any type of clinical specimen (e.g., urine, faeces, sputum, mucous, vaginal secretions) collected from any body part for in vitro diagnostic procedures [e.g., nucleic acid technique (NAT), microbiological culture, histopathology]. This is a single-use device.	A
4255	63337	Pipette tip IVD	Пипеткийн үзүүр IVD	A device formed as a pointed cylindrical tip that is attached to the dispensing opening of a pipette, or a dispenser, and where the required volume of liquid (e.g., reagent, buffer, biological specimen) is drawn for delivery to a target receptacle during an in vitro diagnostic procedure. It is typically used for manual procedures or onboard automated liquid handling instruments or analysers. This is a single-use device.	A
4256	63348	Non-evacuated urine specimen container IVD, preservative	Нүүлгэн шилжүүлээгүй шээсний сорьцын сав IVD, хадгалах бодис	A covered receptacle containing one or multiple preservatives [e.g., mercuric oxide, boric acid (H_3BO_3), benzoic acid, potassium phosphate, and/or sodium phosphate] intended to be used for the collection, preservation, and/or transport, of a urine specimen for culture, analysis, and/or other in vitro diagnostic investigation. It may include a disposable pipette to transfer the urine specimen into a secondary container (not included). This is a single-use device.	A

4257	63375	Printer label IVD	Принтерийн шошго IVD	A thin, blank sheet of fibrous material, typically with an adhesive underside, intended to be imprinted with an image/text using a printer, and then applied to an object for identification (e.g., barcode) or information associated with an in vitro diagnostic procedure. It is typically available as a continuous roll with individual labels arranged on a waxy backing sheet for easy peeling. This is a single-use device.	A
4258	63377	Instrument/analyser cleaning agent IVD	Багаж/анализер цэвэрлэх бодис IVD	A substance (e.g., liquid, gel, foam, powder) with a neutral or alkaline pH intended to be applied to in vitro diagnostic devices (e.g., analysers, laboratory instruments, other types of laboratory devices) for pre-cleaning and/or cleaning to remove organic compounds such as blood proteins, often prior to disinfection or sterilization. It is typically loaded on-board automated or semi-automated instruments for internal cleaning. It typically includes a detergent, and some types may include an enzyme(s) to facilitate cleaning. After application, this device cannot be reused.	A
4259	63471	Lipid removal reagent IVD	Өөх тос арилгах урвалж IVD	A substance or reactant intended to be used alone or in combination with other IVDs for the removal, adsorption, absorption, or inactivation of non-specific lipids, which present in a cloudy or opaque clinical specimen, to prevent interference when performing an in vitro diagnostic procedure.	A
4260	63520	Folate receptor-mediated staining solution IVD	Фолийн хүчил рецептороор будах уусмал IVD	A solution/stain containing folic acid (folate) and methylene blue intended to be used to detect high expression of folate receptor in epithelial cells (e.g., cervical), which is typically associated with malignancy (e.g., cervical cancer).	A
4261	63529	Cryogenic tissue spray IVD	Криоген эдийн шүршигч IVD	A refrigerant (e.g., tetrafluoroethane) in a spray container intended to be used for the rapid freezing of a tissue biopsy or cytology specimen, to facilitate sectioning with a cryotome for subsequent in vitro diagnostic analysis. It is not intended to be used as a tissue fixative. After application, this device cannot be reused.	A

4262	63531	Osmotic fragility analyser IVD	Осмосын эмзэг байдлын анализатор IVD	An electrically-powered laboratory instrument intended to be used for the determination of the osmotic fragility of red blood cells in a whole blood specimen. It utilizes electrodes to compare haemolytic resistance of red blood cells placed in a hypotonic solution to a reference standard, creating an osmotic fragility curve, while simultaneously measuring the transmittance of light through the specimen. It is typically used in the investigation of red blood cell (RBC) disorders such as hereditary spherocytosis, Minkowski-Chauffard syndrome and sickle cell anaemia. The device operates with reduced technician involvement and automation of some, but not all, procedural steps.	A
4263	63609	Microbial incubator/imaging system IVD	Микробын инкубатор/ дүрслэх систем IVD	An electrically-powered device intended to provide ideal conditions for microbial growth with an incubator, and to capture digital images of the specimens contained within the incubator at specified time intervals. It consists of an incubator unit with multiple shelves, a camera and a display unit for microbial growth monitoring. The system automatically monitors and controls temperature, humidity, and gaseous conditions [e.g., carbon dioxide (CO2) and oxygen (O2) concentrations]. It may have an integrated robotic transfer arm for loading and unloading the incubator onto/from other instruments. The device may be a single unit or modular assembly.	A
4264	63615	Biopsy tissue marking dye kit IVD	Биопсийн эдийн тэмдэглэгээний будагны иж бүрдэл IVD	A coloured solution intended to be used to permanently mark the surgical margins and/or other general areas of interest on a tissue biopsy specimen; it is not intended to stain a tissue section for the visualization of intra/extracellular elements. It is one of a set, or a set of multiple colours (e.g., red, blue, black, green, violet and/or orange) which can withstand tissue processing (e.g., tissue fixation, freezing) without fading or bleeding. Applicators for precise marking or spreading of the dye onto the tissue specimen may be included.	A
4265	63616	Biopsy tissue marking dye applicator IVD	Биопсийн эдэд тэмдэглэгээ хийх будаг түрхэгч IVD	A device intended to apply marking dye on a tissue biopsy specimen. It is in the form of a stick and is typically made of wood or plastic materials. This is a single-use device.	A

4266	63707	Inoculating tool IVD, analyser/instrument	Тарилгын хэрэгсэл IVD, анализатор/хэрэгсэл	A component of an automated/semi-automated in vitro diagnostic laboratory analyser or instrument intended to be used onboard to collect, transfer and spread an inoculum from a clinical specimen and/or culture isolate onto/into a culture medium (e.g., agar or broth) for subsequent in vitro diagnostic processing and/or testing. It is typically made of sterilizable materials (e.g., plastic, metal) and consists of a shaft with a loop, wand, or swab at one or both ends. This is a reusable device.	A
4267	63732	Cytological centrifuge funnel IVD	Цитологийн центрифугийн юүлүүр IVD	A small, tapered receptacle designed to be fitted into a cytological centrifuge/sample concentrator, and intended to contain and help concentrate clinical specimen suspension cells into thin-layer preparations by depositing them directly onto a microscope slide during centrifugation for subsequent examination. It is in the form of a conical-shaped plastic receptacle; some types have a slot for inserting a microscope slide. This is a single-use device.	A
4268	63751	General specimen microscopy slide IVD, reusable	Ерөнхий сорьцын микроскопийн слайд IVD, дахин ашиглах боломжтой	A microscopy slide, typically made of glass, intended to be used for the collection, and preservation and/or transport, of any type of clinical specimen or smear for analysis and/or other investigation. This is a reusable device.	A
4269	63765	Assay container liner IVD	Шинжилгээний савны доторлогоо IVD	A device intended to be used to create a barrier between the assay container and devices used for aspirating and/or depositing (e.g., pipette), to prevent reagent carryover and spillage, during in vitro diagnostic procedures. It may be used to perforate a sealed single or multichannel assay container and create a working channel for subsequent liquid handling. It is typically made of synthetic polymer materials (e.g., plastic) as a single component, or a strip of multiple liners. This is a single-use device.	A

4270	63780	Laboratory instrument/analyser absorbent liner IVD	Лабораторийн багаж/анализаторын шингээгч давхарга IVD	A non-sterile sheet or pad made from natural materials (e.g., cotton, paper) intended to be used to absorb spilt liquids onboard a liquid-handling laboratory analyser or instrument. It is intended to create a barrier to contamination, help reduce cleaning requirements, and protect the analyser/instrument from damage (e.g., corrosion). The device is typically placed inside a tray, bin, or other specific area of the analyser/instrument where liquids are likely to spill or splash during in vitro diagnostic procedures. This is a single-use device.	A
4271	63784	Histological tissue cassette biopsy insert IVD	Гистологийн эд эсийн хуурцагны биопсийн оруулга IVD	A flexible and porous material designed to securely hold a biopsy specimen within a tissue cassette, to prevent loss of the specimen during laboratory specimen processing (e.g., fixation, dehydration, infiltration) in preparation for subsequent cytological or histological examination. The flexible and porous material (e.g., paper, synthetic polymer) is intended to allow infiltration of reagents and maximize fluid-exchange during tissue processing. It is available in various forms (e.g., sheet, bag, foam pad) and is placed in a tissue processing cassette, with the biopsy specimen wrapped or contained inside it. This is a single-use device.	A
4272	63791	Tissue embedding mould IVD, single-use	Эд эс оруулах хөгц IVD, нэг удаагийн	A plastic container of square or rectangular shape intended to be used to embed tissue specimens into an embedding medium (e.g., paraffin wax) to form a solid block, which is subsequently cut into thin sections for processing and analysis of the tissue specimen. It is typically made of synthetic polymer materials (e.g., plastic) This is a single-use device.	A
4273	63792	Tissue embedding mould IVD, reusable	Дахин ашиглах боломжтой IVD хөгцний эдийг суулгах	A metal container of square or rectangular shape intended to be used to embed tissue specimens into an embedding medium (e.g., paraffin wax) to form a solid block, which is subsequently cut into thin sections for processing and analysis of the tissue specimen. It is typically made of stainless steel. This is a reusable device.	A

4274	63801	Assay container insert tube IVD	Шинжилгээний савны оруулах хоолой IVD	A device intended to be placed inside an assay container to increase reagent stability and minimize evaporation of a reagent during storage, or onboard an analyser during an in vitro diagnostic analysis procedure. It is typically a plastic tube, open on both ends, which anchors onto the opening of the assay container and has a long stem which makes contact with the contents of the assay container. This is a single-use device.	A
4275	63806	Liquid chromatography breath analyser IVD	Шингэн хроматограф амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use liquid chromatography [e.g., high performance liquid chromatograph (HPLC)] technology for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is typically used to measure analytes such as volatile organic compounds (e.g., aldehydes) that correlate with metabolic profiles or disorders (e.g., lipid peroxidation levels). The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4276	63807	Breath specimen container adaptor IVD	Амьсгалын сорьцын савны адаптер IVD	A device designed to facilitate the connection of a breath specimen container (e.g., bag) to a breath specimen analyser to facilitate the transfer of the specimen into the analyser, for in vitro diagnostic investigation. It is in the form of a small cylinder with mating ends, typically containing an adsorption medium (e.g., silica granules) for transferring specific compounds [e.g., aldehydes]. This is a single-use device.	A
4277	63813	Tissue embedding mould holder IVD	Эд эс оруулах хөгц эзэмшигч IVD	A preformed plastic device intended to contain and hold a tissue embedding mould during an embedding procedure (e.g., in paraffin wax) to form a tissue solid block, which is subsequently cut into thin sections for processing and analysis of the tissue specimen. It may also be referred to as an embedding ring and typically has a writing surface to facilitate specimen identification. This is a single-use device.	A

4278	63838	General tissue specimen container IVD, no additive	Ерөнхий эдийн сорьцын сав IVD, нэмэлт байхгүй	A covered receptacle containing no additives intended to be used for the collection, and preservation and/or transport, of any type of tissue specimen (e.g., biopsy tissue) collected from any body part for in vitro diagnostic investigation. It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A
4279	63871	Microfilter imaging plate IVD	Бичил шүүлтүүр дүрслэлийн хавтан IVD	A plate with multiple wells, a selectively permeable microfilter membrane and an optically clear base, intended to be used for microfiltration and capture of target molecules (e.g., DNA oligonucleotides) for subsequent analysis and/or imaging during an in vitro diagnostic procedure. It is typically made of plastic material (e.g., polypropylene) and is used with manual or automated analysers. This is a single-use device.	A
4280	63925	Lewis blood group substance reagent IVD	Льюисийн цусны бүлгийн бодисын урвалж IVD	A substance or reactant containing Lewis antigens intended to be used to neutralize a whole blood and/or serum clinical specimen containing Lewis blood group system antibodies.	A
4281	63950	Microbial analyser/instrument control solution IVD	Микробын анализатор/багажийн хяналтын шийдэл IVD	A reference solution of known optical and physical characteristics intended to be used to verify the performance of an analyser and/or instrument used for the processing and/or analysis of a microbial culture. This is a single-use device.	A
4282	63989	P1 blood group substance reagent IVD	P1 цусны бүлгийн бодисын урвалж IVD	A substance or reactant containing P1 antigens intended to be used to neutralize a whole blood and/or serum clinical specimen containing antibodies to P1 antigens from the P blood group system.	A
4283	64009	Microscope slide washer IVD	Микроскопын слайд угаагч IVD	An electrically-powered laboratory instrument intended to be used for washing microscope slides by applying a flow of washing solution (e.g., washing buffer) as part of the processing steps required to perform an in vitro diagnostic assay [e.g., fluorescent immunoassay].	A

4284	64069	Mass spectrometry specimen target IVD, reusable	Масс спектрометрийн сорьцын зорилтот IVD, дахин ашиглах боломжтой	A flat plate intended to be used during in vitro diagnostic procedures for specimen preparation and analysis by mass spectrometry [e.g., matrix-assisted laser desorption/ionization (MALDI) mass spectrometry]. Also known as a MALDI plate, it is made of metal or ceramic materials with individual spots or wells onto which the specimens are dispensed; some types may have an identification barcode on the surface. This is a reusable device.	A
4285	64071	Mass spectrometry specimen target IVD, single-use	Масс спектрометрийн сорьцын зорилтот IVD, нэг удаагийн	A flat plate intended to be used during in vitro diagnostic procedures for specimen preparation and analysis by mass spectrometry [e.g., matrix-assisted laser desorption/ionization (MALDI) mass spectrometry]. Also known as a MALDI plate, it is made of ceramic materials with individual spots or wells onto which the specimens are dispensed; some types may have an identification barcode on the surface. This is a single-use device.	A
4286	64079	White blood cell differential count recorder IVD, non-powered	Цусны цагаан эсийн ялгах тоо бүртгэгч IVD, цахилгаангүй	A non-powered device intended to be used by a healthcare professional to manually record and display haematological cell counts of white blood cell populations in a clinical specimen, as observed under a microscope. It consists of multiple mechanical tally counters with a lever representing each white blood cell type (e.g., basophil, eosinophil, lympocyte) which the operator depresses to record an observed cell type. Totals for population counts are displayed on the device and used to subsequently calculate the percentages for each population.	A
4287	64080	White blood cell differential count recorder IVD, powered	Цусны цагаан эсийн дифференциал тоологч IVD, ажилладаг	An electrically-powered device intended to be used by a healthcare professional to manually record and display haematological cell counts of white blood cell populations in a clinical specimen, as observed under a microscope. It typically consists of buttons representing each white blood cell type (e.g., basophil, eosinophil, lymphocyte) which the operator depresses to record an observed cell type, and a screen to display each cell population count. It may also automatically calculate cell population percentages and allow for corrections in case of a miscount.	A

4288	64148	Microbial culture plate imaging/analysis system IVD	Микробын өсгөвөрлөх хавтангийн дүрслэл/шинжилгээний систем IVD	An electrically-powered device intended to be used for the imaging and assessment of pre-inoculated, pre-incubated microbial culture plates. It typically consists of a sample handling/preparation unit, digital camera, optical reader, transfer unit and dedicated software for image capture, processing and/or analysis. It is not intended for incubation. The system may be a single self-contained unit or modular assembly. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4289	64176	Nucleic acid amplification primer IVD	Нуклейн хүчлийг олшруулах праймер IVD	A defined piece of single-stranded nucleic acid intended to be used to initiate the amplification of a specific target nucleotide sequence at a single-gene locus or whole/partial chromosome level in a clinical specimen, using a nucleic acid amplification technique (e.g., polymerase chain reaction (PCR), loop-mediated isothermal amplification (LAMP)]. It is typically used to detect and/or identify chromosomal abnormalities (e.g., aneuploidy, deletion, translocation, duplication, inversion, gene insertion).	A
4290	64179	Agglutination assay digital imaging reader/analyser IVD	Аглютинацын шинжилгээ дижитал дүрслэл уншигч/анализер IVD	An electrically-powered laboratory instrument designed to be used to capture digital images of a clinical specimen from a dedicated specimen slide/cartridge/card and provide image analysis of an agglutination or haemagglutination assay. It is a benchtop instrument that includes a tray, slot or drawer, where the specimen is placed for optical image acquisition, and dedicated software for analysis, visualization and storage of the acquired images.	A
4291	64227	Haemoglobin/glucose-6-phosphate dehydrogenase (G6PD) analyser IVD	Гемоглобин/глюкоз-6-фосфатдегидрогеназа (G6PD) анализатор IVD	An electrically-powered instrument intended to be used for the quantitative in vitro measurement of haemoglobin and glucose-6-phosphate dehydrogenase (G6PD) activity in a whole blood specimen. It is designed to be used by a healthcare professional at the point-of-care to aid in the diagnosis of G6PD deficiency. The device typically requires test strips and/or reagents (not included) and utilizes a photometric method (e.g., reflectance) to measure haemoglobin and glucose-6-phosphate dehydrogenase (G6PD) activity.	A

4292	64231	Breast milk analyser IVD	Хөхний сүүний анализатор IVD	An electrically-powered device intended to be used for the quantitative determination of the nutritional content of a breast milk specimen, using infrared spectroscopy. The device is used to measure the concentration of fat, carbohydrate and protein, to aid healthcare professionals in the nutritional management of newborns and infants. It is a benchtop laboratory instrument with dedicated operational, data processing and/or data display software.	A
4293	64285	Dried blood spot card cutter IVD	Хатаасан цусны спот карт таслагч IVD	An electrically-powered, automated instrument intended to be used to punch through a dried blood spot (DBS) collection card to cut pieces of a specified diameter for subsequent in vitro diagnostic analysis. It typically consists of one or multiple cutters for single or simultaneous sampling, and deposits the cut dried blood spots directly into a specimen container (e.g., test tube, microplate) for further specimen preparation. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4294	64382	Creatinine monitoring system IVD, point-of-care	Креатинины хяналтын систем IVD, тусламж үйлчилгээний цэг	A collection of devices including a portable, electrically-powered instrument (meter), reagents, test strips and/or other associated materials and accessories (e.g., control solutions, lancets) intended to be used exclusively at the point-of-care by medical professionals for the quantitative measurement of creatinine singularly in a whole blood clinical specimen. Measured creatinine values are typically used to monitor kidney function in persons with diabetes mellitus or kidney disease.	A

4295	64385	Human proteomic analysis interpretive software IVD	Хүний протеомик анализын тайлбарлах програм хангамж IVD	An interpretive software program intended to provide predictive and/or diagnostic information based on patient proteomic data obtained from in vitro diagnostic (IVD) laboratory assays, to facilitate risk assessment of adverse health conditions, disease prevention, and health management. It uses specific algorithms to correlate the proteomic IVD results with a particular clinical outcome/parameter (e.g., diabetes, heart disease, percent body fat, tobacco smoke exposure, alcohol intake), and may combine patient demographics to establish an individual result or risk score that may be used to guide clinical management and patient lifestyle.	A
4296	64412	Rapid test/self-testing data interpretive/transfer/validation software IVD	Шуурхай тест/өөрийгөө шалгах өгөгдлийг тайлбарлах/шилжүүлэх/баталгаажуулах программ IVD	A software program intended to be used by a healthcare professional or patient to capture, interpret, transfer, and/or validate the results of data from an in vitro diagnostic rapid test/self-test [e.g., SARS-CoV-2 antigen/antibody self-test, influenza virus immunochromatographic rapid test (ICT), glucose rapid test] using a mobile device (e.g., smartphone, tablet). The results are transmitted to an Internet-based platform or a centralized database for assessment by a healthcare professional and/or for clinical research applications. Data may be reviewed by the patient and clinician, or not made available to the patient.	A
4297	64424	Paraffin anti-adhesion agent IVD	Парафины наалдацын эсрэг бодис IVD	A fluid substance (e.g., in a spray container) intended to be applied to the surface of laboratory working fixtures and equipment (e.g., countertop, microtome) to prevent the adherence of paraffin wax, or applied to the surface of tissue embedding moulds prior to the embedding procedure to facilitate release of the paraffin block, typically during pathology specimen preparation. After application, this device cannot be reused.	A
4298	64432	Microscope slide adhesion agent IVD	Микроскопын слайд наалддаг бодис IVD	A substance (e.g., solution) intended to enhance adhesion of a clinical tissue section specimen to a microscope slide, during pathology specimen preparation. It is typically diluted in water (e.g., water bath) for submersion of the slide prior to tissue specimen placement. After application, this device cannot be reused.	A

4299	64451	Volatile organic compound array sensor system IVD	Дэгдэмхий органик нэгдлүүдийн массив мэдрэгч систем IVD	An electrically-powered odour detection device intended to be used for the in vitro detection, quantification and/or identification of volatile organic compounds associated with specific disorders or conditions (e.g., cancers) in a clinical specimen, using an array sensor method. The device consists of an array of gas sensors which simultaneously detect changes in electrical resistance in the presence of specific volatile compounds. This system uses an interpretive application software to record and analyse the resulting data from each sensor, and to identify the specific signatures of volatile organic compounds detected.	A
4300	64515	Electrochemical breath analysis system IVD	IVD цахилгаан химийн амьсгалын шинжилгээний систем	A collection of devices intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient, using an electro-biochemical sensing method. It typically includes an electrically-powered analyser and additional consumables such as mouthpieces and electrochemical electrode sensors which may be referred to as strips or cartridges. It is used to measure analytes associated with various conditions [e.g., COVID-19 SARS-CoV-2 antigens, hydrogen peroxide (H2O2) as an indicator of inflammation and/or oxidative stress in the airways related to asthma and chronic obstructive pulmonary disorder (COPD)].	A
4301	64516	Electrochemical breath analyser IVD, point-of-care	Цахилгаан химийн амьсгалын анализатор IVD, тусламж үйлчилгээний цэг	An electrically-powered point-of-care instrument designed to use electrochemical analysis for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is used to measure analytes associated with various conditions [e.g., COVID-19 SARS-CoV-2 antigens, hydrogen peroxide (H2O2) as an indicator of inflammation and/or oxidative stress in the airways related to asthma and chronic obstructive pulmonary disorder (COPD)]. It is typically a hand-held or portable instrument, which requires additional consumables such as electrochemical electrode sensors/cartridges and mouthpieces/valves (not included).	A

4302	64539	Vaginal secretion sediment analyser IVD	Үтрээний шүүрлийн тунамал анализатор IVD	An electrically-powered laboratory instrument intended to be used to analyse sediment from a vaginal secretion specimen, to aid in the diagnosis of vaginal infections. It is a self-contained unit which performs biochemical analysis for detection of microbial enzymes and/or metabolites, and performs flow cytometry imaging of cellular components [e.g., red blood cells (RBCs), white blood cells (WBCs), microbial cells (bacteria, fungi), clue cells and/or squamous epithelial cells] using a digital camera. It utilizes dedicated software for interpretation and data display. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4303	64603	Bilirubin monitoring system IVD	Билирубин хянах систем IVD	A collection of devices including a portable, electrically-powered instrument (meter), reagents, test strips and/or other associated materials and accessories (e.g., control solutions, lancets) intended to be used exclusively at the point-of-care by medical professionals for the quantitative measurement of bilirubin singularly in a whole blood specimen. It is typically used for the rapid assessment of hyperbilirubinemia in neonates.	A
4304	64621	Carbon dioxide absorbent solution IVD	Нүүрстөрөгчийн давхар ислийн шингээгч уусмал IVD	An absorbent solution (e.g., soda lime) with a high affinity for carbon dioxide (CO2) intended to be used to remove carbon dioxide produced through reactions performed onboard an instrument/analyser, to prevent deterioration of assay reagents and/or solutions. It may contain a colour indicator to signal need for replacement. This is a single-use device.	A
4305	64642	Coagulation analyser magnetic sphere IVD	Коагуляцийн анализатор соронзон бөмбөрцөг IVD	A magnetic sphere designed to be used in an electromagnetic (EM) coagulation analyser for determination of the clotting time of a clinical specimen, typically upon addition of reagents. It functions as a sensing pendulum whose motion, induced by the analyser’s EM field and detected by its coils, is dependent on the specimen’s suspension viscosity, which correlates to clot formation. This is a single-use device.	A

4306	64652	Single-cell labelling instrument IVD	Нэг эсийн шошголох хэрэгсэл IVD	An electrically-powered device intended to be used for the individual cell capture and/or labelling of cells for subsequent cellular characterization and phenotyping. It utilizes dedicated reagents (not included) to label individual cells with a unique identifier (e.g., short DNA tag or fluorescent dye), also known as cell barcoding. The resulting product is used for subsequent nucleic acid library construction required for genome, exome, transcriptome sequencing and/or immune cell profiling. It is typically a self-contained unit with sample processing, data processing and/or data display software. It operates with minimal technician input and complete automation of all procedural steps.	A
4307	64705	Assay development analyte-specific reagent IVD	Шинжилгээний боловсруулалтын аналитийн тусгай урвалж IVD	An antibody, specific receptor protein, ligand, nucleic acid sequence (e.g., primer, probe) or similar reagent, which through specific binding or chemical reaction with an intended target, is used to identify or quantify a chemical substance in a biological specimen for the development of a laboratory developed test (LDT) or commercial in vitro diagnostic medical device (IVD). Commonly referred to as an analyte specific reagent (ASR), it is neither labelled with instructions for use nor diagnostic or performance claims.	A
4308	64783	Microbial cryotube IVD	Микробын криотруб IVD	A vial containing porous glass or synthetic polymer beads and/or a liquid cryoprotectant intended to be used for the cryopreservation, storage, and subsequent retrieval of clinical microbial isolates (e.g., bacteria, fungi) for in vitro diagnostic applications. The container enables preservation and storage of the microbial specimens at sub-zero temperatures for extended periods. This is a single-use device.	A

4309	64806	Lactate analyser IVD, point-of-care	Лактатын анализатор IVD, тусламж үйлчилгээний цэг	An electrically-powered instrument intended to be used exclusively at the point-of-care by medical professionals for the quantitative in vitro measurement of lactate in whole blood. Measured lactate values are used to assess metabolic acidosis, diabetic keto-acidosis, sepsis and dehydration, to monitor physical performance and conditioning in sports, and/or to support patient management. This analyser is typically included in a lactate monitoring system.	A
4310	64818	Microplate/tube/assay card incubator IVD	Микропласт/хоолой/шинжилгээний картын инкубатор IVD	An electrically-powered device intended to be used for the uniform heating of the contents of a microplate, test tube, and/or assay/reagent/test card, as part of an incubation step required during the in vitro diagnostic processing of a clinical specimen. It typically consists of a heat-conducting panel/unit on which the microplate/tube/card is placed, and an electronically-controlled heating element for precise temperature control. It may also be referred to as a heater and may be used as a stand-alone device or a modular component as part of a system.	A
4311	64819	Vortex mixer IVD	Vortex холигч IVD	An electrically-powered laboratory instrument intended to be used to mix small volumes of liquid or solution, or to resuspend sediment, in a container (e.g., test tube, microplate) using a vortex during the processing of a clinical specimen. It typically consists of a shaft or platform on which the specimen container is placed, and a motor to generate the force required to create the vortex within the specimen container resulting in a mixing effect. The device may have the capacity to process one or multiple containers at the same time, at variable revolutions per minute (RPM).	A

4312	64876	Specimen transfer scooping tool IVD	Сорьц дамжуулах утгуур IVD	A hand-held manual instrument intended to be used to scoop a clinical specimen or microbial isolate for transfer from a primary vessel to a secondary container (e.g., from a specimen collection receptacle to a reagent tube, or from a culture medium to a general laboratory test tube) for subsequent in vitro diagnostic analysis and/or other investigation. It is typically a slender device with a loop, rake, or ball at the distal end used to scoop and transfer the clinical specimen or microbial isolate. This is a single-use device.	A
4313	64901	Inoculum preparation tool IVD	Тарилт бэлтгэх хэрэгсэл IVD	A thin, rigid, rod-shaped, hand-held device intended to be used for the preparation of a standardized bacterial suspension, directly from culture. It is a calibrated device used to pick up a bacterial specimen from a single colony on an agar plate, and immerse it into a medium, to create a suspension which is equivalent to the McFarland Standard. This is a single-use device.	A
4314	64919	Cardiovascular interpretive screening software IVD	Зүрх судасны тайлбар скрининг IVD программ	An in vitro diagnostic interpretive software program intended to be used in the assessment of risk/probability for having a cardiovascular condition (e.g., significant coronary stenosis) or event (e.g., heart attack, ischemic stroke, unstable angina, coronary revascularization). It uses results of qualitative/quantitative clinical specimen in vitro diagnostic tests typically in combination with some of the following data: patient demographics, physical measurements, symptoms, medical history. It typically creates a risk score or probability that may be used to guide patient management.	A
4315	64923	Blood test-based differential diagnosis interpretive software IVD	Цусны шинжилгээнд суурилсан ялган оношлох тайлбарлах программ хангамж IVD	An interpretive software application intended to provide a clinician with a ranked differential diagnosis based on the in vitro diagnostic (IVD) blood test results of a patient. It typically uses artificial intelligence (AI) and deep learning techniques to correlate specific blood parameters (e.g., white blood cell count, haematocrit, glucose levels) with a clinical outcome to provide a probability score for each predicted condition (e.g., multiple myeloma, amyloidosis, iron deficiency anaemia, myeloid leukaemia); it is used in various clinical fields (e.g., cardiology, endocrinology, haematology, neurology) to help guide patient management.	A

4316	64954	Microplate suction system IVD	Microplate сорох систем IVD	An electrically-powered device assembly intended to be used to suction the substances contained in the wells of a microplate (e.g., dried blood spot specimen discs, reagents, calibrators, controls) for subsequent disposal or decontamination, following an in vitro diagnostic assay. It typically consists of a plate holder with suction nozzles, a vacuum pump connected to a control unit and a waste collection unit. It does not perform any washing functions.	A
4317	64976	Multiple blood group system IVD, kit, microarray	Олон тооны цусны бүлгийн систем IVD, иж бүрдэл, микромассив	A collection of immunoglobulins and/or antigens capable of binding to specific antigenic determinants and/or antibodies and intended to be used together in testing a clinical specimen for multiple blood group systems including, but not limited to ABO, Rh(D), Kell, Duffy, Kidd, and Lewis, using a microarray method.	A
4318	64979	Electrospray mass spectrometry spray needle IVD	Электроспрей масс спектрометр шүршигч зүү IVD	A component of an electrospray mass spectrometry analyser designed to create an electrospray from an analyte solution. It is in the form of a flow-through capillary tube, with an inlet for analyte solution introduction, and an outlet for release of the electrospray into the analyser. It is typically made of stainless steel or fused silica. This is a reusable device.	A
4319	64980	Fast protein liquid chromatography (FPLC) analyser column IVD	Хурдан уургийн шингэн хроматографи (FPLC) анализаторын багана IVD	A component of a fast protein liquid chromatography (FPLC) analyser intended to be used to separate the constituents of a clinical specimen based on their protein physical and/or chemical properties. The column is typically in the form of a narrow flow-through tube, prepacked with a column filling (e.g., gel or polymer beads). It is typically made from synthetic polymer materials (e.g., plastic) This is a single-use device.	A

4320	64981	Specimen information management system IVD	Сорьцын мэдээллийн удирдлагын систем IVD	An assembly of hardware/software devices designed to manage specimen information, traceability and workflow within a laboratory environment. It typically consists of a data capture device [e.g., barcode reader or radio-frequency identification (RFID) scanner], touchscreen for data input and/or manipulation and a specimen container holder. It is intended to capture and transfer specimen information from the original specimen container to an assay container, which is subsequently fed into an analyser. The device does not perform specimen analysis, storage or data distribution functions.	A
4321	65001	Nasopharyngeal specimen container IVD, viral inactivation medium	Хамар залгиурын сорьцын сав IVD, вирусыг идэвхгүйжүүлэх орчин	A covered plastic receptacle containing a viral inactivation medium intended to be used for the collection, and/or transport of a nasopharyngeal specimen for subsequent in vitro diagnostic testing procedures [e.g., nucleic acid technique (NAT)]; it may in addition include a nasopharyngeal swab. The medium is intended to inactivate pathogenic viruses [e.g., severe acute respiratory syndrome-associated coronavirus 2 (SARS-CoV-2), the causative agent of COVID-19] in a clinical specimen. This is a single-use device.	A
4322	65039	Diabetes patient management software IVD	Чихрийн шижинтэй өвчтөний менежментийн програм хангамж IVD	A software program with both a patient and clinician user interface intended to be used to analyse, review and evaluate data derived from a dedicated analyser (e.g., blood glucose analyser, multiple clinical chemistry analyser) for the management of diabetes. The software allows the clinician to configure patient-specific settings (e.g., insulin dosage) and the patient to generate and view reports and change and/or update analyser settings. It is not intended for diabetes screening or diagnosis. It is typically used by the patient in the home or similar environment, or by a healthcare professional in a clinical environment.	A

4323	65113	SARS-CoV-2 nucleic acid detection system IVD, point-of-care, reusable	SARS-CoV-2 нуклейн хүчил илрүүлэх систем IVD, тусламж үйлчилгээний цэг, дахин ашиглах боломжтой	A collection of devices including a portable, electrically-powered instrument, reagent cartridges and specimen collection devices (e.g., swabs, specimen containers) intended to be used exclusively at the point-of-care for the detection of nucleic acids from severe acute respiratory syndrome-associated coronavirus 2 (SARS-CoV-2) in a clinical specimen. The specimen is added to a single-use cartridge containing specific nucleic acid probes for the detection of target nucleic acid sequences in the clinical specimen, using an electrometric method. It includes dedicated software for analysis, visualization and storage of the results. This is a reusable device.	A
4324	65118	Histology/pathology tissue cutting board IVD	Гистологи/патологийн эдийг огтлох самбар IVD	A stiff, plastic device designed to be used as a surface for cutting human tissues in a histopathology laboratory for subsequent in vitro diagnostic investigation. It is typically flat and rectangular in shape, with metric/imperial measurement graduations as a visual approximation aid. This is a single-use device.	A
4325	65145	Microbial density nephelometry system IVD	Микробын нягтын нефелометрийн систем IVD	An assembly of software-operated, electrically-powered devices intended to be used to monitor microbial growth by measuring the density of a microbial suspension in comparison to the turbidity of a McFarland standard, using a nephelometry/turbidimetry detection method. It typically consists of a benchtop photometric detector, barcode scanner and a computer with the dedicated software. It is not intended to be used for microbial identification, differentiation and/or susceptibility testing. The device operates with reduced technician involvement and automation of some, but not all, procedural steps.	A
4326	65170	Viral inactivation buffer IVD	Вирусыг идэвхгүйжүүлэх буфер IVD	A buffered solution intended to be used for the inactivation of pathogenic viruses [e.g., severe acute respiratory syndrome 2 (SARS-CoV-2), the causative agent of COVID-19] in a clinical specimen, in preparation for subsequent in vitro diagnostic testing. It is intended to be used in a laboratory setting; it is not intended for specimen collection.	A

4327	65174	Pipetting system IVD	Пипеткийн систем IVD	An electrically-powered, software-operated instrument intended to be used in the laboratory to withdraw, transfer, and/or inject volumes of fluid materials, typically from one laboratory container to another, during an in vitro diagnostic procedure. The device is programmable to allow for automated single and/or multichannel fluid handling and delivery of user-specified volumes into a single container or multiple containers (e.g., microplate) simultaneously. It has no other specimen processing capabilities.	A
4328	65229	Antimicrobial susceptibility/resistance testing interpretive software IVD	Нянгийн эсрэг мэдрэмтгий/эсэргүүцлийн туршилтын тайлбарлах програм хангамж IVD	An in vitro diagnostic software program intended to be used for the interpretation of results of an in vitro diagnostic assay [e.g., minimum inhibitory concentration (MIC), mass spectrometry (MALDI-TOF)] performed on a microbial culture isolated from a clinical specimen, to determine the susceptibility, intermediate or resistance categorization of the microbial species. It is installed on an off-the-shelf computer or a web-based platform, and compares assay results (e.g., an acquired image, mass spectrum) to reference data to determine antimicrobial resistance (e.g., beta-lactamase, carbapenamase, and/or cephalosporinase activity). Results are used to guide patient treatment options.	A
4329	65242	Self-testing data clinician presentation application software IVD	Өөрийгөө турших өгөгдлийн эмчийн танилцуулга хэрэглээний програм хангамж IVD	An application software program designed as an Internet-based information system intended to be used by a healthcare professional to view the results of a self-test [e.g., immunochromatographic test (ICT)] performed by a patient. The software receives data from the patient’s mobile device (e.g., smartphone) application software, through a web portal, and presents the results to the healthcare professional for review and assessment.	A

4330	65302	Microscope slide maker/digital imaging analyser IVD	Микроскопын слайд үйлдвэрлэгч/дижитал дүрслэлийн анализатор IVD	An electronic benchtop device intended to be used in a histopathology laboratory for: 1) the automated preparation and staining of a clinical specimen (e.g., whole blood) on a microscope examination slide or slide-like cartridge; 2) microscopy digital scanning/imaging; and 3) software-assisted analysis/interpretation of the acquired images. It consists of an integrated unit with built-in motorized specimen preparation stage, digital microscope, user interface, and clinical application-specific artificial intelligence (AI)/deep learning software. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4331	65303	Blood smearing/staining cartridge IVD	Цусны түрхэц / будгийн хайрцаг IVD	A device designed to be inserted into an automated microscope slide processing instrument (e.g., microscope slide maker) to create and stain a blood smear on a microscope examination slide for subsequent microscopic analysis. It is in the form of a cartridge with pre-loaded stains onto which a blood specimen is dispensed; it may be enhanced for the detection of specific cells [e.g., malaria-infected red blood cells (RBCs)]. This is a single-use device.	A
4332	65358	Terahertz spectrometry breath analyser IVD	Терагерц спектрометрийн амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use terahertz (THz) spectrometry technology for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is typically used to detect analytes such as volatile organic compounds that correlate with metabolic profiles or disorders [e.g., coronavirus disease (COVID-19) infection]. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4333	65374	Oxidative stress analyser IVD	Исэлдэлтийн стресс анализатор IVD	A mains electricity (AC-powered) laboratory instrument intended to be used to determine oxidative status and the antioxidant reserve of a clinical specimen. The analyser uses electrochemical methods to measure the transfer of electrons when a current is applied to the clinical sample on an electrode sensor. It is typically used in the laboratory, and for rapid in vitro diagnostic measurements at the point-of-care.	A

4334	65387	Tissue specimen PET system IVD	Эд эсийн дээж PET систем IVD	An assembly of devices intended to be used to analyse the metabolic/physiologic activity of a tissue specimen, excised from a patient injected with a positron emitting radiopharmaceutical, using positron emission tomography (PET) imaging. It consists of a luminescence camera which captures the visible photon emissions from the radioactive decay of the radiopharmaceutical, a monitor to display the images for analysis, and dedicated software for the operation of the system. It is not intended to make patient contact and is typically used for tissue diagnosis purposes during surgery.	A
4335	65389	Fluid specimen concentration filter IVD	Шингэний сорьцын концентрацийн шүүлтүүр IVD	A screening receptacle intended to concentrate a fluid clinical specimen [e.g., serum, urine, cerebrospinal fluid (CSF)] by filtration prior to in vitro diagnostic investigation. It is in the form of a container (e.g., tube, multi-well reservoir) with a semi-permeable filtering membrane, whereby specimen suspension particles [e.g., tissue culture extracts, cells, antigens, antibodies, proteins, hormones, DNA, RNA, column eluates, salts] are retained in a recoverable sub-volume of the specimen after filtration (e.g., by centrifugation, or absorption). This is a single-use device.	A
4336	65408	Viral infection point-of-care holographic analyser IVD	Вирусын халдварын эмчилгээний цэгийн голограф анализатор IVD	An electro-optical device intended for the rapid detection and identification of virion/virus particles (e.g., SARS-CoV-2) in a clinical specimen using holographic microscopy and artificial intelligence (AI) software, whereby light diffraction patterns of nano-sized objects are resolved into a 3D hologram. It consists of an electrically-powered unit with integrated light-emitting diodes (LEDs), image sensor chip, software, and user interface; patient specimens (e.g., saliva swab) are loaded into the device via a disposable cartridge containing a microscope slide. This device is intended for public mass testing (e.g., at airports, schools), typically during an epidemic [e.g., COVID-19].	A

4337	65409	Viral infection point-of-care holographic analyser cartridge/swab kit IVD	Вирусын халдварын эмчилгээний цэгийн голограф анализаторын хайрцаг/арчдас IVD	A collection of devices intended for the collection/sampling of a saliva/oral specimen from a patient, and for loading the specimen into a point-of-care holographic analyser for the detection and identification of a viral infection. It consists of an oral swab and a dedicated cartridge, containing a microscope slide, into which the swab is inserted for mounting the specimen onto the slide. This is a single-use device.	A
4338	65432	Laboratory shaker IVD	Лабораторийн сэгсрэгч IVD	An electromechanical in vitro diagnostic device designed to shake/stir samples or mixtures with a rapid and forceful movement. It is used to provide a rapid mixing or to prevent substances comprised of different components from separation or sedimentation because of their different densities. It may be designed to secure single and/or multiple specimen containers (e.g., test tube, microplate) or specimen container holders during the shaking cycle; some types may have selectable agitation frequencies.	A
4339	65456	DNA damage electrophoresis kit IVD	ДНХ-ийн гэмтэл электрофорезийн иж бүрдэл IVD	A collection of reagents and other associated materials (e.g., cell lysis reagents, agarose gel preparation reagents, gel plate, electrophoresis buffer solution) intended to be used for the qualitative and/or quantitative detection of DNA [genomic] damage in a clinical specimen, using an electrophoresis method. It is commonly known as single cell gel electrophoresis or comet assay and may be used to detect organ tumour-induced DNA damage in blood cells (e.g., leukocytes) as an aid in cancer diagnosis.	A
4340	65513	Nail tissue softening solution IVD	Хумсны эдийг зөөлрүүлэх уусмал IVD	A solution [e.g., cetyltrimethylammonium chloride (CTAC)] intended to be used to soften nail tissue and prevent tissue splitting/tearing to facilitate the microtomy of nail biopsies.	A
4341	65518	Anti-H red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for H [H001] red blood cell antigens or H substance from the ABO system, using an agglutination method.	A

4342	65519	Anti-A red blood cell subtype differentiation reagent IVD	Цусны улаан эсийн дэд хэв шинжийг ялгах урвалж IVD	A substance or reactant intended to be used for the differentiation between group A [ABO001] red blood cell antigen subtypes (e.g., A1, A2, A3, Ax, Am) in a clinical specimen, using an agglutination or solid-phase red blood cell adherence method.	A
4343	65520	Genomic data storage/format conversion software IVD	Геномын өгөгдөл хадгалах/формат хөрвүүлэх програм хангамж IVD	A software program intended to process genomic sequencing data to facilitate its storage and conversion between different formats (e.g., MPEG-G, FASTQ, BAM). It performs encryption, indexing and compression to help optimize data utilization including selective access to specific portions of DNA data, transcoding from/to other file formats, information indexing, data transfer and interoperability, and genomic data protection.	A
4344	65539	Basic light microscope IVD	Үндсэн гэрлийн микроскоп IVD	A dedicated in vitro diagnostic magnification instrument designed with a standard microscope configuration [the object viewed through an ocular(s) from above] used to magnify and study specimens and small objects by transmitted visible light. It is widely used in laboratories and for research and in healthcare facilities where there is a need for such magnification. The device consists of a stand that supports the main components, an ocular body in which the eyepieces are mounted, a nosepiece to support the objectives, a specimen stage, a condenser to focus the light on the specimen, and a source of light [e.g., tungsten (W), halogen] and light port.	A
4345	65557	Histology/pathology tissue knife blade IVD	Гистологи/патологийн эдийн хутганы ир IVD	An interchangeable device with a sharp cutting edge designed to be mounted on a compatible handle (not included) to create a knife for manually cutting and/or slicing tissue specimens in a histopathology laboratory for subsequent in vitro diagnostic investigation. This is a reusable device.	A
4346	65558	Histology/pathology tissue knife handle IVD	Гистологи/патологийн эдийн хутганы бариул IVD	A hand-held device designed to accept and secure a blade (not included) to create a knife for manually cutting and/or slicing tissue specimens in a histopathology laboratory for subsequent in vitro diagnostic investigation. This is a reusable device.	A

4347	65593	SARS-CoV-2 antigen IVD, kit, rapid electrometry, clinical	SARS-CoV-2 антиген IVD, иж бүрдэл, хурдан цахилгаан хэмжилт, клиник	A cartridge/card or a collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antigens from severe acute respiratory syndrome-associated coronavirus 2 (SARS-CoV-2), the causative agent of coronavirus disease (COVID-19), in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid electrometry method. This is a rapid test commonly designed to be used with an automated electrochemical breath analyser in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	A
4348	65599	Instrument/analyser fluid dynamics integrity component IVD, reusable	Багаж/анализаторын шингэний динамикийн бүрэн бүтэн байдлын бүрэлдэхүүн хэсэг IVD, дахин ашиглах боломжтой	A non-powered component (e.g., cup, cartridge) of a laboratory instrument/analyser intended to be used prior to device operation to manage, control, and/or test the fluid dynamics integrity of the instrument/analyser by facilitating functions such as priming, vacuum leak testing, and/or solution dispensing testing. This is a reusable device.	A
4349	65600	Instrument/analyser fluid dynamics integrity component IVD, single-use	Багаж / анализаторын шингэний динамикийн бүрэн бүтэн байдлын бүрэлдэхүүн хэсэг IVD, нэг удаагийн хэрэглээ	A non-powered component (e.g., cup) of a laboratory instrument/analyser intended to be used prior to device operation to manage, control, and/or test the fluid dynamics integrity of the instrument/analyser by facilitating functions such as priming, vacuum leak testing, and/or solution dispensing testing. This is a single-use device.	A
4350	65601	Magnetic stirring rod IVD	Соронзон хутгагч саваа IVD	A magnetic cylindrical rod (e.g., bar or wire) designed to be placed inside a suspension/solution container for mixing its contents by magnetic coupling with a plate stirrer, a stirring magnet, or onboard an in vitro diagnostic instrument/analyser. This is a single-use device.	A

4351	65603	Clinical management support software IVD	Эмнэлзүйн менежментийг дэмжих програм хангамж IVD	An in vitro diagnostic application software program intended to facilitate clinical management decisions by receiving structured patient data from electronic health records and/or manually-entered information (e.g., demographics, diagnostic, laboratory results, genomic data) and returning clinical care information (e.g., reports, pedigree diagrams, reminders, post-therapy prognosis/risk score, suggested therapy/pharmaceutical dosage) to a healthcare professional responsible for patient care. Otherwise known as clinical decision support (CDS) software, it may be a locally-installed program, web-based, or mobile application. It is not primarily intended to manage diagnostic/patient images.	A
4352	65680	Histology/pathology manual tissue cutting set IVD	Гистологи/патологийн гарын авлагын эдийг огтлох IVD багц	A collection of non-powered benchtop devices designed to be used in a histopathology laboratory to stabilize a tissue specimen and facilitate guided manual cutting of tissue sections at selected thicknesses with a knife. It typically includes a flat cutting base/board, a hand-held tissue immobilization plate, graduated plates/inserts or a digital knife guide for selected-thickness tissue slices, and a knife. This is a reusable device.	A
4353	65698	Electrochemical immunoassay analyser IVD	Цахилгаан химийн дархлааны анализатор IVD	An electrically-powered point-of-care instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen, using an immunological method that utilizes an electrochemical detection system. It is designed as a portable unit with a slot for accepting a disposable rapid test cartridge/card (e.g., COVID-19 SARS-CoV-2 antigen test); it may connect wirelessly to a patient smartphone for sharing test results.	A

4354	65710	Mechanical micropipette IVD	Механик микропипетк IVD	A manually-operated in vitro diagnostic device designed to withdraw, transfer, and inject minute volumes of fluid materials (e.g., microlitres or smaller). The device is typically hand-held and operates through an internal mechanism powered by finger depressions of the user; it can have a single channel or a multichannel piston/cylinder assembly. The device transfers consistent volumes of substance into one or several receptacles simultaneously. The device may be factory pre-set to deliver a given volume, or may have user-selectable volumes within a useful volume range.	A
4355	65772	Multiple blood group antigen typing reagent IVD	Олон цусны бүлгийн эсрэгтөрөгчийг тодорхойлох урвалж IVD	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to evaluate a clinical specimen to determine or test for red blood cell antigens from multiple blood groups (i.e., not specific to any blood group antigen).	A
4356	65777	Immunohaematology antibody blocking reagent IVD	Immunohematology эсрэгбие хориглогч урвалж IVD	A substance or reactant, intended to be used during blood group testing, red cell antibody screening/identification and/or red cell phenotyping of clinical specimens, to block, neutralize and/or prevent non-specific binding or antibody binding to red blood cells and prevent false positives. It is typically in the form of a magnetic coupled anti-cell marker antibody used to block the cell marker target(s) of antibody therapy (immunotherapy), or consisting of protein(s) [e.g., bovine serum albumin (BSA) or casein] used to prevent non-specific binding or antibody binding to red blood cells and/or background noise.	A
4357	65792	Red blood cell magnetization reagent IVD	Цусны улаан эсийг соронзлох урвалж IVD	A substance or reactant consisting of magnetic particles capable of binding to red blood cells and intended to be used for the magnetization of red blood cells prior to immunohaematological testing of a clinical specimen. The magnetized red blood cells are subjected to a magnetic field for their deposition at the bottom of assay wells, replacing centrifugation.	A

4358	65793	Red blood cell magnetization/sensitization reagent IVD	Цусны улаан эсийн соронзлол/мэдрэмтгий байдлын урвалж IVD	A substance or reactant consisting of one or multiple immunoglobulins, coupled to magnetic particles and capable of binding to red blood cells, intended to be used for the magnetization and antibody sensitization of red blood cells prior to immunohaematological testing of a clinical specimen. The magnetized red blood cells are subjected to a magnetic field for their deposition at the bottom of assay wells, replacing centrifugation.	A
4359	65801	SARS-CoV-2 nucleic acid detection system IVD, home-use	SARS-CoV-2 нуклейн хүчлийг илрүүлэх систем IVD, гэрийн хэрэглээ	A collection of disposable devices including a portable, electrically-powered analyser/reader, a reagent solution vial, and specimen sampling/collection devices (e.g., upper respiratory tract swabs) intended to be used by a layperson in the home for the detection of nucleic acids from severe acute respiratory syndrome-associated coronavirus 2 (SARS-CoV-2) in a clinical specimen. The specimen is mixed with the reagent solution in a vial for the subsequent rapid detection of SARS-CoV-2 nucleic acids using a nucleic acid technique [reverse transcriptase loop mediated isothermal amplification (RT-LAMP)]. This is a single-use device.	A
4360	65802	SARS-CoV-2 nucleic acid detection system IVD, point-of-care, single-use	SARS-CoV-2 нуклейн хүчил илрүүлэх систем IVD, тусламж үйлчилгээний цэг, нэг удаагийн	A collection of disposable devices including a portable, electrically-powered analyser/reader, a reagent solution vial, and specimen sampling/collection devices (e.g., upper respiratory tract swabs) intended to be used exclusively by a healthcare professional at the point-of-care for the detection of nucleic acids from severe acute respiratory syndrome-associated coronavirus 2 (SARS-CoV-2) in a clinical specimen. The specimen is mixed with the reagent solution in a vial for the subsequent rapid detection of SARS-CoV-2 nucleic acids using a nucleic acid technique [reverse transcriptase loop mediated isothermal amplification (RT-LAMP)]. This is a single-use device.	A

4361	65816	Electrochemical breath analyser IVD, home-use	Цахилгаан химийн амьсгалын анализатор IVD, гэрийн хэрэглээ	An electrically-powered home-use instrument designed to use electrochemical analysis for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is used to measure analytes associated with various conditions [e.g., fractional exhaled nitric oxide (FeNO) for evaluating the response to asthma anti-inflammatory therapy]. It is typically a hand-held instrument on which an exchangeable breathing mouthpiece is mounted. It is intended for use by a layperson in the home or similar environment, and has connectivity features for communication of results to a healthcare professional.	A
4362	65819	Electrochemical breath analyser filter/mouthpiece IVD	Цахилгаан химийн амьсгалын анализатор шүүлтүүр/амны хөндий IVD	A device designed as a breathing mouthpiece and filter intended to be attached to an in vitro diagnostic electrochemical breath analyser to facilitate exhaled air specimen sampling and accurate measurement of target chemical and/or biological markers. It has an integrated reactive filtering material to remove potentially confounding species (e.g., ammonia, methanol) and to chemically prepare the specimen for measurement [e.g., via oxidation]; it may also be designed to remove target particles to provide a control baseline measurement. This is a single-use device.	A
4363	65835	Enzyme immunoassay (EIA) generic reagent kit IVD	Ферментийн дархлаа судлалын ерөнхий урвалжийн иж бүрдэл IVD	A collection of general reagents and other associated materials intended to be used to perform an enzyme immunoassay on clinical specimens; it is not dedicated to the detection of any one type of analyte. It typically consists of an enzyme conjugate, blocking buffer, wash buffer and a substrate solution.	A
4364	65860	Immunoassay reagent vehicle reader IVD	Immunoassay урвалж тээврийн хэрэгслийн уншигч IVD	A portable, electrically-powered device intended to be used to receive and display results and/or errors from an assay performed on an immunoassay reagent vehicle (e.g., test strip, cassette, cartridge, or card). It is a rechargeable unit with multiple slots and display screens. It does not perform liquid handling, analysis, or analyte detection.	A

4365	65871	Human genomic analysis interpretive software IVD	Хүний геномын шинжилгээ тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be used for the analysis and visualization of human genome data from in vitro diagnostic results obtained through molecular genetic testing (e.g., whole genome, targeted genome, or exome analyses). It provides predictive and/or diagnostic information (e.g., gene-drug associations, congenital and/or acquired aneuploidy status, genotype-phenotype relationships) used by a professional in the assessment of patient adverse health condition risk, disease prevention, and/or health management, or for lifestyle guidance as pertains to a patient genomic profile.	A
4366	65888	Laboratory instrument/analyser flush syringe IVD	Лабораторийн багаж/анализатор угаах тариур IVD	A hand-held manual device consisting of a barrel (cylinder) with a plunger/piston, and sometimes attached tubing, designed to be used to inject water or rinsing solution into a laboratory instrument/analyser (e.g., blood gas analyser) to flush/wash its fluid path. This is a reusable device.	A
4367	65942	Gas chromatography/mass spectrometry (GC/MS) analyser IVD	Хийн хроматографи/масс спектрометр (GC/MS) анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument designed for the qualitative and/or quantitative in vitro determination of the chemical composition of a clinical specimen. Volatile components are separated in a gaseous mixture based on their partitioning differences between mobile and stationary phases as they pass through a column; as the substances exit the column they are ionized and the resulting ions are separated according to mass using an electromagnetic field. The device is used for identification and quantification of complex substances (e.g., drugs, hormones).	A
4368	65946	Blood gas analyser inlet spacer IVD	Цусны хийн анализаторын оролтын зай IVD	A device designed to fit onto the inlet of a blood gas analyser to create distance between the inlet needle and the plunger on a blood gas syringe, to prevent silicone from being transmitted into the blood gas analyser. It is typically made of plastic and may in addition function as an adaptor for non-standard syringes. This is a reusable device.	A
4369	65954	Immunoassay instrument/analyser general performance control kit IVD	Immunoassay багаж/анализаторын ерөнхий гүйцэтгэлийн хяналтын иж бүрдэл IVD	A collection of reagents of known reactivity (negative or positive) intended to be used to verify the overall performance of an immunoassay instrument/analyser [e.g., enzyme immunoassay (EIA) analyser]. It is not specific to an analyte.	A

4370	66067	Histology/pathology tissue knife IVD	Гистологи/патологийн эдийн хутга IVD	A hand-held, one-piece device that consists of a handle with a distal blade designed for manually cutting and/or slicing tissue specimens in a histopathology laboratory for subsequent in vitro diagnostic investigation. This is a reusable device.	A
4371	66068	Test tube/reservoir cap IVD	Туршилтын хоолой/усан сангийн таг IVD	A covering intended to be used to seal the top of an in vitro diagnostic test tube or reagent reservoir to protect the contents against contamination from the external environment, and to prevent spillage and/or evaporation of contents during transportation or processing. The top of the cap may be penetrable to enable injection or aspiration of contents. This is a single-use device.	A
4372	66071	Post-transplant DNA analysis interpretive software IVD	Шилжүүлэн суулгасны дараах ДНХ-ийн шинжилгээ тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be used for the analysis of in vitro diagnostic results from the molecular testing of a solid organ or stem cell transplant recipient to monitor markers of organ injury, rejection and/or engraftment (e.g., cell-free DNA, chimeric DNA). The information provided is used by the healthcare professional to support treatment/management of the transplant recipient.	A
4373	66079	Analyser blood clot protection filter IVD	Анализаторын цусны бүлэгнэлтийн хамгаалалтын шүүлтүүр IVD	A screening device intended to be placed in a blood specimen receptacle (e.g., capillary blood collection tube) prior to loading it into an in vitro diagnostic analyser (e.g., blood gas analyser) to trap blood clots and prevent them from entering the analyser. This is a single-use device.	A
4374	66081	Immunoassay reagent vehicle tray IVD, single-use	Immunoassay урвалж тээврийн хэрэгслийн тавиур IVD, нэг удаагийн	A removable tray designed to be loaded with an immunoassay reagent vehicle (e.g., test strip, cassette, card), after vehicle exposure to an in vitro diagnostic clinical specimen, and inserted into an immunoassay analyser. This is a single-use device.	A
4375	66103	Assay stirring set IVD	Шинжилгээний хутгах багц IVD	A collection of containers (e.g., test tubes, cuvettes) and magnetic or non-magnetic stirring instruments (e.g., bars, balls) intended to be used to hold and facilitate the stirring/mixing of biological specimens, reagents, buffers, or other materials during in vitro diagnostic testing procedures (e.g., platelet aggregation study, clotting time assay) performed in the laboratory. This is a single-use device.	A

4376	66126	Human gut microbiome analysis interpretive software IVD	Хүний гэдэсний микробиомын шинжилгээний тайлбар програм IVD	An in vitro diagnostic interpretive software program intended to be used for analysis of the gut microbiome based on patient data obtained from an in vitro diagnostic (IVD) laboratory assay. It uses specific algorithms to provide an overall gut health score, assess adverse health condition risk, and determine enterotype. It might also provide lifestyle guidance information (e.g., dietary and supplement recommendations) to support improved gut health.	A
4377	66132	Laboratory instrument/analyser rinse fluid tank IVD	Лабораторийн багаж/анализаторын зайлах шингэний сав IVD	A non-powered, high-capacity container intended to store a large volume of rinsing fluid used to internally rinse an in vitro diagnostic laboratory instrument or analyser (e.g., chemiluminescent immunoassay analyser) to which it is connected. It allows continuous in-line rinse fluid replenishment and replacement without the need for disconnection from the instrument/analyser.	A
4378	66180	Laboratory microscope still camera IVD	Лабораторийн микроскоп IVD камер	An electro-optical device intended to be used to capture and generate an enlarged image of a microscopic field for the in vitro diagnostic analysis of a clinical specimen. It is designed to be attached to a laboratory microscope and utilizes the lens system for magnification of the microscope’s field. The device may be a digital or photographic camera.	A
4379	66208	Fluorescence cell counter IVD	Флюресцент эсийн тоолуур IVD	An electrically-powered device intended to count and/or measure the viability of stained cells using combined fluorescence microscopy and image analysis software. It typically consists of a camera and/or microscope, appropriate light sources, a display, user interface, and dedicated software for image capture, processing and/or analysis. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4380	66214	Avidity immunoassay chaotropic reagent IVD	Avidity immunoassay хаотроп урвалж IVD	A substance or reactant intended to be used to disrupt low-affinity antigen-antibody binding in an immunoassay, to determine the binding strength or avidity of neutralizing antibodies in a clinical specimen. It typically contains a hydrogen bond disruptor (e.g., urea or thiocynate) or a protein denaturant (e.g., diethylamine).	A

4381	66230	Gel column agglutination centrifuge IVD	Гель багана наалдуулах центрифуг IVD	An electrically-powered device intended to be used in a clinical laboratory setting for the centrifugation of gel column agglutination cards used to perform manual blood typing assays. It is a dedicated compact benchtop unit with an electric motor, a shaft, a rotor with slots specifically shaped for use with gel column cards, and speed and time controls. The device is intended to centrifuge gel column agglutination cards for the manual determination of antigens of multiple blood systems (e.g., ABO, Rh, Kell) for compatibility testing and detection of unexpected antibodies.	A
4382	66272	Capillary blood collection tube sealant IVD	Капилляр цус цуглуулах хоолойн чигжээс IVD	A synthetic wax-like substance intended to be used to seal the end of a capillary blood collection tube to protect the contents against contamination from the external environment and to prevent spillage and/or evaporation of contents during transportation or processing. This is a single-use device.	A
4383	66279	Simple carbohydrate indicator reagent IVD	Энгийн нүүрсустөрөгчийн индикатор урвалж IVD	A substance or reactant intended to be used for the presumptive detection of reducing sugars in a clinical specimen. It is a blue-coloured reagent (commonly referred to as Benedict's reagent) which results in the formation of a clear-white solution in the presence of reducing sugars.	A
4384	66282	Urine urobilinogen indicator reagent IVD	Шээсний уробилиногений индикаторын урвалж IVD	A substance or reactant intended to be used for the presumptive detection of urobilinogen in urine. It is a yellow-coloured reagent (commonly referred to as Ehrlich's reagent) which results in the formation of a pink-red solution in the presence of urobilinogen.	A
4385	66288	Pressurized incubator IVD	IVD даралтат инкубатор	An electrically-powered pressurized heating chamber intended to be used for the incubation of laboratory specimens for subsequent in vitro diagnostic procedures [e.g., heat-induced epitope retrieval (HIER) and deparaffinization for immunohistochemistry]. It is typically in the form of a pot, similar to a pressure cooker, with a lid and a removable inner liner, where samples are placed in a holder or tray for heating. It is programmable with dedicated software to control settings for temperature, pressure, and incubation time.	A

4386	66289	Histology tissue cassette lid IVD	Гистологийн эд эсийн кассет таг IVD	A device intended to be attached to and cover the top of a histology tissue cassette to prevent loss of a clinical tissue specimen (e.g., biopsy specimen) during laboratory specimen processing (e.g., fixation, dehydration, infiltration) in preparation for subsequent cytological or histological examination or storage. It is typically made of stainless steel and includes drainage holes to allow infiltration of reagents during tissue processing. This is a reusable device.	A
4387	66304	Anticoagulant absorber IVD	Антикоагулянт шингээгч IVD	A substance intended to be used to remove therapeutic anticoagulants (e.g., dabigatran, edoxaban, apixaban) from a blood or plasma specimen through absorption, for subsequent analysis of blood coagulation parameters (e.g., clotting time). It is typically in the form of activated charcoal tablets and is intended to help minimize false negative or false positive results.	A
4388	66311	Instrument/analyser disinfection agent IVD	Багаж/анализаторын халдваргүйжүүлэх бодис IVD	A substance containing a chemical agent(s) intended to be applied to in vitro diagnostic devices (e.g., analysers, laboratory instruments, other types of laboratory devices) to destroy microorganisms or inhibit their activity (disinfectant). It is typically loaded on-board automated or semi-automated instruments for internal disinfection. It may contain surfactants/cleaning agents or enzymes (e.g., protease, lipase, amylase), and may in addition be intended to decalcify equipment. The instrument/analyser is intended to be exposed to the substance for a specified period to achieve disinfection. After application, this device cannot be reused.	A

4389	66313	Biopsy specimen nanomechanical analyser IVD	Биопсийн сорьцын наномеханик анализатор IVD	An electro-optical laboratory instrument intended to use high-resolution atomic force microscopy to measure tissue physical properties for capture of the nanomechanical phenotype of a biopsy tissue specimen, providing data to help facilitate assessment of clinical pathologies and physiological states (e.g., identification of solid tumours) by a healthcare professional. It consists of an electrically-powered, software-assisted unit with a user interface screen, slots for specimen placement, and a nanoindentation scanning probe which measures tissue physical biomarkers of the specimen (e.g., reduced modulus, dissipation, adhesion).	A
4390	66314	Instrument/analyser anti-vibration platform IVD	Багаж / анализаторын чичиргээний эсрэг платформ IVD	An electrically-powered floor stand intended to be placed beneath an in vitro diagnostic instrument/analyser (e.g., biopsy specimen nanomechanical analyser) to neutralize surrounding floor and ambient vibrations during operation of the instrument/analyser.	A
4391	66315	Biopsy specimen nanomechanical analyser indentation probe IVD	Биопсийн сорьцын наномеханик анализаторын догол мөр IVD	An exchangeable component of a biopsy specimen nanomechanical analyser designed to perform indentations on a tissue biopsy specimen to measure tissue physical biomarkers (e.g., reduced modulus, dissipation, adhesion), for capture of the nanomechanical phenotype of the tissue specimen during a diagnostic assessment of clinical pathologies and physiological states (e.g., identification of solid tumours). This is a single-use device.	A
4392	66316	Biopsy specimen nanomechanical analyser indentation probe carrier IVD	Биопсийн сорьцын наномеханик анализаторын догол мөрний датчик зөөгч IVD	A holder in the form of a carrier/tray designed to hold a biopsy specimen nanomechanical analyser indentation probe to facilitate its handling and loading into the parent device. This is a reusable device.	A
4393	66355	Static cytometry analyser cuvette IVD	Статик цитометр анализатор кювет IVD	A dedicated specimen container intended to be used on-board a point-of-care staticcytometry analyser to hold a clinical specimen for in vitro diagnostic analysis at the point-of-care. It is a secondary specimen container, with a transparent lens or window to allow the laser generated by the analyser to a pass through the specimen on the detector. It may also be capped to prevent spillage. This is a single-use device.	A

4394	66356	Static cytometry analyser IVD	Статик цитометр анализатор IVD	An electrically-powered device intended to be used by healthcare professionals at the point-of-care to detect and count white blood cells based on static light scattering in a static fluid clinical specimen (e.g., peritoneal dialysis effluent). It typically consists of a laser light source, forward scatter detector, a display, user interface, and dedicated software for processing and/or analysis. It is typically a portable instrument which requires additional consumables such as single-use specimen cartridges.	A
4395	66388	Viscometer IVD	Вискозиметр IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to measure the viscosity of a fluid clinical specimen for in vitro diagnostic applications. It consists of a regulated vacuum pump which pulls the fluid through a calibrated capillary tube, to determine fluid viscosity based on the time taken to pass two predetermined points. It is also known as a viscosimeter.	A
4396	66390	Multiple-genus respiratory virus nucleic acid detection system IVD, home-use	Олон төрлийн амьсгалын замын вирусын нуклейн хүчлийг илрүүлэх систем IVD, гэрийн хэрэглээ	A collection of disposable devices including a portable, electrically-powered analyser/reader, a reagent solution vial, and specimen sampling/collection devices (e.g., upper respiratory tract swabs) intended to be used by a layperson in the home for the detection of nucleic acids from multiple virus genera associated with respiratory disease in a clinical specimen, using a nucleic acid technique [reverse transcriptase loop mediated isothermal amplification (RT-LAMP)]. Viruses intended to be detected may include respiratory syncytial virus (RSV), influenza viruses, coronaviruses, enteroviruses, rhinoviruses and/or adenoviruses. This is a single-use device.	A

4397	66391	Multiple-genus respiratory virus nucleic acid detection system IVD, point-of-care	Олон төрлийн амьсгалын замын вирусын нуклейн хүчлийг илрүүлэх систем IVD, тусламж үйлчилгээний цэг	A collection of disposable devices including a portable, electrically-powered analyser/reader, a reagent solution vial, and specimen sampling/collection devices (e.g., upper respiratory tract swabs) intended to be used exclusively by a healthcare professional at the point-of-care for the detection of nucleic acids from multiple virus genera associated with respiratory disease in a clinical specimen, using a nucleic acid technique [reverse transcriptase loop mediated isothermal amplification (RT-LAMP)]. Viruses intended to be detected may include respiratory syncytial virus (RSV), influenza viruses, coronaviruses, enteroviruses, rhinoviruses and/or adenoviruses. This is a single-use device.	A
4398	66396	Manual stirring magnet IVD	Гараар хутгах соронз IVD	A hand-held magnetic device intended to move a magnetically-coupled stirrer (not included) in a specimen container (e.g., mixing wire in a capillary blood tube) to manually stir a suspension/solution/fluid within the container. This is a single-use device.	A
4399	66400	Microplate digital imaging scanner IVD	Microplate дижитал дүрслэлийн сканнер IVD	An electrically-powered laboratory instrument intended to be used to scan a microplate containing a clinical specimen, to produce images in a digital format. It is a unit containing a tray slot and high-resolution camera(s) which is connected to an off-the-shelf computer (not included) for viewing and/or analysis of images via an external software application (not included).	A
4400	66409	Device-handling tweezers IVD	Төхөөрөмжтэй харьцах хясаа IVD	A hand-held, manual, pincer-like in vitro diagnostic device intended to be used for grasping, handling, and moving small devices/objects. It typically has a forceps-like design with two blades or arms joined at the proximal (non-working) end and a working end designed for secure grasping. This is a reusable device.	A
4401	66410	Microbial specimen nanoscopic vibration detection preparation kit IVD	Микробын сорьцын наноскопийн чичиргээ илрүүлэх бэлтгэлийн иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to prepare a microbial specimen for nanoscopic vibration analysis. The kit consists of multiple buffers used for physical preparation of the bacterial cells, cleaning the sensor, resuspension of the cells, and/or increasing specimen density to enable attachment of the bacteria to the sensor surface for subsequent analysis.	A

4402	66411	Microbial specimen nanoscopic vibration detection system IVD	Микробын сорьцын наноскоп чичиргээ илрүүлэх систем IVD	A collection of devices intended to be used to detect vibrations from living microorganisms in a clinical specimen to determine their antimicrobial susceptibility and/or resistance in response to antimicrobial exposure. It consists of an electrically-powered, software-assisted unit with a user interface screen, a light source, a specimen chamber where the sensor with the specimen is placed, and a photodiode array detector. Accessory devices supplied with the device may include single-use sensors, reagent kits, calibrators, measurement chamber stand, and sensor-handling tweezers.	A
4403	66412	Microbial specimen nanoscopic vibration detection system measurement chamber stand IVD	Микробын сорьцын наноскопийн чичиргээ илрүүлэх системийн хэмжилтийн камерын тавиур IVD	A dedicated device that is a component of a microbial specimen nanoscopic vibration system intended to be used as a holder for the measurement chamber between uses to prevent damage and/or contamination. This is a reusable device.	A
4404	66413	Microbial specimen nanoscopic vibration detection system sensor IVD	Микробын сорьцын наноскопийн чичиргээ илрүүлэх системийн мэдрэгч IVD	A device consisting of a microcantilever fixed onto a holding plate intended to be used onboard a microbial specimen nanoscopic vibration detection system to detect nanoscale motion from microorganisms in a clinical specimen, as an indicator of antimicrobial susceptibility and/or resistance. This is a single-use device.	A
4405	66429	Histology tissue cassette IVD, laboratory processing, reusable	Гистологийн эдийн кассет IVD, лабораторийн боловсруулалт, дахин ашиглах боломжтой	A small device intended to be used in the laboratory to support/contain clinical tissue specimens (e.g., biopsy samples) to facilitate specimen processing [e.g., fixation (encapsulation in paraffin wax), dehydration, infiltration] in preparation for subsequent cytological or histological examination, and storage. It is in the form of a plastic or metal container, with or without a lid, with drainage holes to maximize fluid exposure during tissue submersion in a parent device into which the container is loaded. It may, in addition, include a fenestrated insert to hold and prevent the loss of smaller specimens. This is a reusable device.	A

4406	66431	Capillary blood manual transfer/mixing tool IVD	Капилляр цусыг гараар дамжуулах/холих хэрэгсэл IVD	A manual tool intended to be used in the home by a layperson and at the point-of-care for the application and mixing of a capillary blood specimen and reagents/water on a blood typing test card (e.g., red blood cell agglutination test card). It is in the form of a small stick with a flat distal end designed to facilitate the transfer of the blood specimen from a fingertip to the test card, and its mixing with the reagents on the test card surface. This is a single-use device.	A
4407	66435	Line probe assay interpretation template IVD	Шугамын датчикийн шинжилгээний тайлбарын загвар IVD	A pre-printed card or sheet of paper intended to be used as a template to facilitate the standardized scanning of developed line probe assay strips. It is designed with multiple sections, where individual strips are fixed for scanning to create digital images of the assay test strips for subsequent software analysis, or manual interpretation by a trained technician. This device is reusable until all sections of the pre-printed card/sheet are used.	A
4408	66436	Digital imaging scanner/reader calibration card IVD	Дижитал дүрслэлийн сканнер/уншигч тохируулгын карт IVD	A pre-printed card or sheet of paper intended to be used to verify and/or optimize the performance of a digital imaging scanner/reader. It typically includes a strip consisting of different shades of grey (white to black), also known as grayscale, used to calibrate the scanner to accurately detect the intensity of scanned objects. This is a reusable device.	A
4409	66439	Exogenous DNA/RNA internal control IVD, reagent	Экзоген ДНХ/РНХ-ийн дотоод хяналтын IVD, урвалж	A substance or reactant intended to be used as an exogenous component in a molecular assay to verify the extraction and/or amplification process applied to target deoxyribonucleic acid (DNA) and/or ribonucleic acid (RNA), and/or verify the absence of inhibiting substances, in a clinical specimen.	A
4410	66491	Human immunoglobulin E (IgE) animal conjugate antibody reagent IVD	Хүний иммуноглобулин E (IgE) амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin E (IgE) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A

4411	66502	Circulating tumour cell separation system IVD	Цусны эргэлтийн хавдрын эсийг ялгах систем IVD	A collection of devices including an electrically-powered laboratory instrument, microfluidic cassette and control materials, intended to be used to separate and collect circulating tumour cells of a specified size and/or deformity from a whole blood specimen using a mechanical separation method (e.g., microfluidics). The instrument channels the blood specimen through the microfluidic cassette, where the circulating tumour cells are concentrated and contained for subsequent in vitro diagnostic analysis.	A
4412	66503	Circulating tumour cell separation system control IVD	Цусны эргэлтийн хавдрын эсийг ялгах систем нь IVD-ийг хянах	An aliquoted cell suspension intended to be used to verify the performance of a circulating tumour cell separation instrument. This is a single-use device.	A
4413	66505	Instrument/analyser capillary blood tube adaptor IVD	Багаж/анализаторын капилляр цусны хоолойн адаптер IVD	An adaptor/connector intended to be used to connect capillary blood tubes to the aspiration inlet of an instrument/analyser for subsequent in vitro diagnostic analysis of the clinical specimen. It is typically made of plastic. This is a single-use device.	A
4414	66585	Tissue specimen MRI system container IVD	Эд эсийн дээж MRI системийн сав IVD	A dedicated component of a tissue specimen MRI system intended to be used to securely hold with light vacuum a tissue specimen during the scanning process. It is typically a clamshell-like container with a transparent base (e.g., glass) and a flexible top sheet, which is suctioned to remove air, fixing the tissue specimen to the transparent base. The container is designed to directly interface with the imaging component of the tissue specimen MRI system. This is a single-use device.	A
4415	66586	Tissue specimen MRI system IVD	Эд эсийн дээж MRI систем IVD	An assembly of devices designed to produce a magnetic resonance image (MRI) of a tissue specimen (e.g., excised breast tissue) to help differentiate between normal and abnormal (neoplastic) tissue in the margin of the excised specimen. It is an electrically-powered, software-operated unit with a specimen loading chamber and a user-interface display screen for operation and visualization of the resulting images. It is not intended to make patient contact and is typically used for tissue diagnosis purposes during surgery.	A

4416	66628	Ampule opener IVD	Ампул онгойлгогч IVD	A cutting instrument intended to safely remove/break the protective, sterile seal of an ampule during in vitro diagnostic procedures. It is typically designed to protect the user from inadvertent contact with the sharp edges of the seal while being removed. It may also function as an adaptor for loading the ampule onto an analyser. This is a reusable device.	A
4417	66629	Tissue resection margin examination board IVD	Эд эс тайрах захын шинжилгээний зөвлөл IVD	A non-radiopaque surface intended to be used for the in vitro diagnostic examination of an excised tissue specimen to determine the free resection margins of a tumour. It is typically flat and rectangular in shape, with orientation markers (e.g., cranial, caudal, medial, lateral), a coordinate grid and breast schematic. It may also include dedicated fixation pins and a container for transportation. This is a single-use device.	A
4418	66688	Laboratory specimen/material barcode label IVD, reusable	Лабораторийн сорьц/материалын бар код шошго IVD, дахин ашиглах боломжтой	A label (e.g., a card or insert) featuring a barcode intended to facilitate clear and easy identification of a laboratory specimen and/or material (e.g., a clinical specimen or assay reagent/buffer in a container) for use in an in vitro diagnostic procedure. It is electronically readable using a computerized reader or scanner, either on-board or connected to an instrument or analyser. This is a reusable device.	A
4419	66692	Whole blood cell differential count recorder IVD	Цусны бүх эсийн ялгах тоо бүртгэгч IVD	An electrically-powered device intended to be used by a healthcare professional to manually record and display cell counts of whole blood cell populations in a clinical specimen, as observed under a microscope; some types may in addition be used for the enumeration of bone marrow cell populations. It typically consists of buttons representing each cell type [e.g., red blood cells (RBCs), platelets, myelocytes, basophil, eosinophil] which the operator depresses to record an observed cell type, and a screen to display each cell population count. It may also automatically calculate cell population percentages and allow for corrections in case of a miscount.	A

4420	66769	Tissue specimen digital imaging scanner IVD	Эд эсийн дижитал дүрсний сканнер IVD	An assembly of devices designed to be used by healthcare professionals at the point-of-care or in a histopathology laboratory to visualise and obtain microscopic images of morphological structures from an excised tissue specimen, using confocal fluorescence microscopy imaging. It is an electrically-powered, software-operated unit with a specimen scanning surface, a confocal fluorescence microscope, and a user-interface display screen for operation and visualization of the resulting images. It is not intended to make patient contact and allows for the direct examination of the excised tissue specimen without the need for slide preparation of tissue sections onto a microscope slide.	A
4421	66816	Platelet counter IVD	Тромбоцит тоологч IVD	An electrically-powered, automated device intended to be used by a healthcare professional at the point-of-care to count the number of thrombocytes (platelets) present in a whole blood or platelet rich plasma specimen, using an optical imaging technique. It is typically a self-contained unit consisting of a digital camera, light source, tray(s) for holding specimen/counting chamber, a display, user interface and dedicated operating software. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
4422	66825	Microscope slide digital imaging template IVD	Микроскопын слайд дижитал дүрслэлийн загвар IVD	A blank sheet (e.g., plastic) with slots intended to be used to hold and position one or more microscope slide(s) onto a digital imaging scanner to obtain images of a clinical specimen(s) for subsequent software analysis, or manual interpretation by a trained technician. This is a reusable device.	A
4423	66828	Barcode reader IVD	Бар код уншигч IVD	An electrically-powered, photoelectric device designed to read and interpret labelling barcodes on in vitro diagnostic clinical specimens, or consumables (e.g., reagents, controls, buffers, diluent). It is typically a hand-held device which is connected to a computer, or a dedicated in vitro diagnostic instrument/analyser system. This device may be capable of storing the read data and downloading it to other data systems.	A

4424	66836	Mass spectrometry analyser calibration kit IVD	Масс спектрометрийн анализаторын тохируулгын иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to calibrate or verify the performance of a mass spectrometry analyser to ensure its proper function, prior to analysis/processing of clinical samples.	A
4425	66860	Circulating tumour cell separation system channelling instrument IVD	Цусны эргэлтийн хавдрын эсийг ялгах систем суваг дамжуулах хэрэгсэл IVD	An electrically-powered, semi-automated laboratory instrument intended to be used for the separation and collection of circulating tumour cells of a specified size and/or deformity from a whole blood specimen using a mechanical separation method (e.g., microfluidics). It is a software-operated instrument with pneumatic and hydraulic components (e.g., reservoir bottles, tubes) which channels the blood specimen through a microfluidic cassette (not included), where the circulating tumour cells are concentrated and contained for subsequent in vitro diagnostic analysis.	A
4426	66862	Tissue specimen digital imaging scanner confocal dish IVD	Эдийн сорьцын дижитал дүрсний сканнер конфокаль таваг IVD	A glass or plastic dish intended to contain a tissue specimen onboard a digital imaging scanner and provide a protective surface to prevent direct contact between the specimen and the scanner during image acquisition. It is typically designed with a transparent base as the imaging interface and raised edges that can be used as handles for device manipulation. This is a single-use device.	A
4427	66869	Laboratory instrument/analyser drip collection tray IVD	Лабораторийн багаж/анализаторын дусал цуглуулах тавиур IVD	A removable device designed to be placed onboard an instrument or laboratory analyser to collect and contain small volumes of liquid (e.g., reagents, solutions) that may drip during liquid handling. It is intended to create a barrier to contamination, help reduce cleaning requirements, and protect the analyser/instrument from damage (e.g., corrosion). This is a reusable device.	A
4428	66875	Urine specimen collection/transfer container IVD	Шээсний сорьц цуглуулах/шилжүүлэх сав IVD	A non-covered receptacle intended to be used for the collection of a urine specimen at the point-of-care or optionally transferring into a secondary urine specimen container for subsequent analysis and/or other investigation in a laboratory. It is typically in the form of a bowl-shaped container, divided into sections, with a pouring spout for emptying and/or transferring the urine specimen into a secondary container. This is a single-use device.	A

4429	66878	Blood viscoelasticity analyser IVD	Цусны зуурамтгай чанар анализатор IVD	An electrically-powered laboratory instrument intended to be used for the determination of blood rheological properties (thromboelastography), namely blood viscosity and elasticity, in a whole blood specimen. Its principle of operation is based on detection of blood resistance changes upon vibrations of a resonating probe. The device is typically used in the evaluation of the functional state of haemostasis in patients with haemostatic disorders or haemorrhagic complications, or who are receiving antithrombotic or anticoagulant therapy.	A
4430	66892	Culture medium preparation instrument IVD	Соёлын тэжээл бэлтгэх хэрэгсэл IVD	An electrically-powered device intended to be used to prepare, sterilize, and dispense liquid media (e.g., agar culture media, liquid broth media, buffer solutions) into containers (e.g., tubes, petri dishes) for subsequent microbial testing procedures. It is typically a unit consisting of a large reservoir with a heating element for temperature control, and an integrated pump and tubing for transfer of the media into the containers. It is software-operated and programmable for the delivery of preselected volumes and may have printing capabilities for batch traceability. It is typically an automated device, which can also be operated manually by the technician (e.g., via a foot switch).	A
4431	66939	Laboratory water bath IVD	Лабораторийн усан ванн IVD	An electrically-powered receptacle designed for use during in vitro diagnostic procedures to contain and keep water at a controlled temperature to enable immersion of, or provide a flotation medium for, clinical specimens or clinical laboratory devices. It is primarily used for stretching and drying of histopathology paraffin wax-embedded tissue specimens prior to mounting on a microscope slide, or during preparation of microbiological media or biochemical reagents/reactions (e.g., in test tubes). It typically consists of a corrosion-resistant (e.g., stainless steel) water container and a control panel; some types incorporate illumination and gentle agitating/stirring capabilities.	A

4432	66942	Gene expression analysis interpretive software IVD	Генийн экспрессийн шинжилгээний тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be installed on a dedicated nucleic acid analyser for the interpretation of gene expression data from in vitro diagnostic results obtained through gene expression testing (e.g., mRNA quantification, in-situ hybridization). It provides predictive and/or diagnostic information (e.g., binary specimen ification, gene expression pattern/profile) used by a professional in the assessment of patient adverse health condition risk, disease prevention, and/or health management as pertains to the patient's gene expression profile.	A
4433	66949	Viscometer performance standard calibrator/control IVD	Вискозиметрийн гүйцэтгэлийн стандарт калибратор/хяналтын IVD	A reference standard solution or soluble substance of known viscosity intended to be used to establish known points of reference and verify the performance of a viscometer. Solutions may be single or short-term use.	A
4434	66950	Viscometer performance standard calibrator/control/maintenance kit IVD	Вискозиметрийн гүйцэтгэлийн стандарт калибратор/хяналт/засвар үйлчилгээний иж бүрдэл IVD	A collection of solutions or soluble substances intended to be used to establish known points of reference and verify the overall performance of a viscometer to ensure its proper function, prior to analysis/processing of a clinical specimen, and provide general maintenance of the viscometer (e.g., wash and disinfection).	A
4435	66990	Pipette tip ejection sleeve IVD	Пипеткийн үзүүрийг гадагшлуулах ханцуй IVD	A small diameter tube intended to be used as an in vitro diagnostic medical device (IVD) and placed over the shaft of a pipette to facilitate ejection of a pipette tip after use. The distal end of the sleeve pushes on the connected pipette tip to remove it. It is typically made of plastic materials. This is a reusable device.	A
4436	66998	Heated magnetic plate stirrer IVD	Халдаг соронзон хавтан хутгуур IVD	An electrically-powered laboratory instrument intended to be used to heat and mix small volumes of liquid or solution in a container using a magnetically-coupled stirring rod (not included) during the processing of a clinical specimen. It consists of a heated plate on which the solution container is placed, and a motor which generates the magnetic field required to spin the magnetic stirrer placed inside the solution container. The device has user controls to allow stirring at variable temperatures and revolutions per minute (RPM).	A

4437	67016	Analyser light filter holder IVD	Анализаторын гэрлийн шүүлтүүр эзэмшигч IVD	A preformed device designed to facilitate placement and positioning of an analyser light filter onboard the analyser. It is typically a removable device with a slot or gap in which the filter is placed prior to installation. This is a reusable device.	A
4438	67017	Analyser light filter IVD	Анализаторын гэрлийн шүүлтүүр IVD	An optical filter designed as an accessory to an analyser and that transmits and/or blocks specific light wavelengths of interest to enable visualization of a target analyte treated with a light-excitable agent [e.g., 4′,6-Diamidino-2-phenylindole dihydrochloride (DAPI), propidium iodide (PI)], in a clinical specimen, for subsequent imaging and/or analysis. This is a reusable device.	A
4439	67022	Infrared spectroscopy control slide IVD	Хэт улаан туяаны спектроскопийн хяналтын слайд IVD	A slide designed to be used as a receptacle for reference material(s) of known optical and physical characteristics to verify and/or optimize the performance of an infrared spectroscopy system. It is typically made of silicon and includes multiple wells to hold the control solutions (not included). This is a single-use device.	A
4440	67023	Infrared spectroscopy specimen slide IVD	Хэт улаан туяаны спектроскопийн сорьцын слайд IVD	A slide designed to be used as a receptacle for a liquid biopsy specimen intended for subsequent infrared spectroscopy analysis. It is typically made of silicon to allow for reflectance of infrared light. This is a single-use device.	A
4441	67024	Infrared spectroscopy system IVD	Хэт улаан туяаны спектроскопийн систем IVD	An electrically-powered laboratory device intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers (e.g., tumour markers) in a clinical specimen, using infrared spectroscopy technology. It is a software-operated device which exposes the specimen to mid-infrared light and generates an infrared spectrum, based on the biochemical composition of the specimen, which is analysed by an algorithm to provide a diagnostic result. The device operates with reduced technician involvement and automation of some, but not all, procedural steps.	A

4442	67025	Infrared spectroscopy system slide positioning unit IVD	Хэт улаан туяаны спектроскопийн системийн слайдын байрлал тогтоох нэгж IVD	An electrically-powered device used as a component of an infrared spectroscopy system to accurately position the specimen slide across the infrared beam generated by the system for analysis of the clinical specimen. It is typically software-controlled, or manually operated via controls on the unit.	A
4443	67049	Sperm morphology/viability control IVD	Спермийн морфологи/амьдрах чадварыг хянах IVD	A prepared slide with a fixed semen smear, or a high-resolution colour printed image of stained or unstained normal sperm, intended to be used as reference material in the analysis of a semen specimen, to determine sperm morphology and/or viability. This is a reusable device.	A
4444	67092	Microscope slide preparation/staining holder IVD	Микроскопын слайд бэлтгэх/будаг эзэмшигч IVD	An in vitro diagnostic device intended to be used in the laboratory to hold multiple microscope slides in an upright position during slide preparation or staining procedures. It is a stand-alone device which sits on a flat surface (e.g., laboratory bench top or shelf), or is an accessory to a laboratory instrument, and has a series of evenly-spaced slots into which the slides are individually placed. This is a reusable device.	A
4445	67100	Isolated nucleic acid quantification kit IVD	Тусгаарлагдсан нуклейн хүчлийн хэмжилтийн иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to determine the concentration of nucleic acids (e.g., DNA, RNA, oligonucleotides) previously isolated/purified from a clinical specimen, prior to subsequent analysis. It typically uses an optical-detection method (e.g., fluorometry, spectrophotometry) and consists of a nucleic acid dye [e.g., fluorescent, colorimetric], calibrators, and may also include diluent and/or buffer solutions.	A
4446	67105	Laboratory instrument/analyser reagent/solution dispensing tube IVD	Лабораторийн багаж/анализаторын урвалж/уусмал хуваарилах хоолой IVD	A length of flexible tube typically made of synthetic polymer material(s) intended to be used onboard a liquid-handling analyser/instrument to channel and dispense a liquid reagent and/or solution from the primary container into a specimen container for elution of a dried clinical specimen, for subsequent in vitro diagnostic processing and/or analysis. It is not intended to puncture the seal of the specimen container. This is a reusable device.	A

4447	67124	Cytological centrifuge funnel holder IVD	Цитологийн центрифугийн юүлүүр эзэмшигч IVD	A small clip intended to be used to hold together a microscope slide, filter, and a cytological centrifuge funnel, to facilitate specimen processing onboard a cytological centrifuge. It is typically referred to as a funnel clip and is designed with dedicated slots and a clamping mechanism for a secure hold; it is made of metal (e.g., stainless steel). This is a reusable device.	A
4448	67155	Semen specimen degradation prediction software IVD	Үрийн шингэний сорьцын доройтлыг урьдчилан таамаглах програм хангамж IVD	A software program intended to estimate fresh semen quality values (e.g., morphology, progress, motility and vitality) based on quality values obtained following a period of semen storage, by applying algorithmic models of semen degradation. It uses specific algorithms to combine and correlate patient data, specimen preservation methods, specimen storage duration and the in vitro diagnostic results of a qualitative and/or quantitative semen specimen examination to establish values representative of the specimen at the time of collection. It is an in vitro diagnostic (IVD) web-based application intended to be used by healthcare professionals in a clinical setting.	A
4449	67194	Beta radiation breath analyser IVD	Бета цацрагийн амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use ionization counting technology for the qualitative and/or quantitative in vitro detection of beta rays emitted by ingested carbon-14 isotopes, in a specimen of air exhaled from a patient. It is a self-contained, software-operated instrument which consists of a display and control panel, probes (Geiger-Müller tubes), detector, and may include controls/calibrators. This device is typically used to aid in the diagnosis of gastrointestinal Helicobacter pylori infection. The device operates with minimal technician involvement and complete automation of all procedural steps.	A

4450	67195	Capillary blood collection pump hand positioner IVD	Капилляр цус цуглуулах насосны гар байрлал тогтоогч IVD	A non-powered rigid plastic hand rest intended to be used to position and stabilize a patient's hand in a desired position during capillary blood collection using a capillary blood collection pump, for subsequent in vitro diagnostic procedures. It is structurally designed to be of a complementary shape to fit closely with a capillary blood collection pump, to maintain the correct distance between the collection pump and the patient's capillary puncture site (e.g., finger) during blood collection. It does not have hand heating capability. This is a reusable device.	A
4451	67199	Bead mill homogenizer IVD	Бөмбөлөг тээрэм нэгэн төрлийн болгогч IVD	An electrically-powered device intended to be used to grind and/or mix a sample or clinical specimen containing insoluble/non-miscible components, to create a uniform solution in preparation for subsequent in vitro diagnostic analysis. It typically utilises an inert bead matrix (e.g., glass, stainless steel, ceramic) contained in single-use tubes, which are spun at high speed by a motor, to homogenize various types of clinical specimens, either alone or after addition of reagents or other additives.	A
4452	67206	Isothermal nucleic acid amplification analyser magnet IVD	Изотерм нуклейн хүчлийн олшруулалтын анализатор соронз IVD	A magnet intended to be used onboard an isothermal nucleic acid amplification analyser to attract and separate the magnetic beads contained within an assay cartridge, from the fluid material (e.g., clinical specimen and/or reagents). The magnet is typically embedded in a plastic housing, which is designed to fit onto the analyser. This is a reusable device.	A
4453	67265	ABO/Rh multiple blood grouping IVD, kit, rapid agglutination, clinical	ABO/Rh олон цусны бүлэг IVD, иж бүрдэл, хурдан наалдуулах, эмнэлзүйн	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of multiple ABO system and Rh group red blood cell antigens within a short period, relative to standard laboratory testing procedures, using a rapid agglutination method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	A

4454	67298	Microscope slide maker/stainer upgrade kit IVD	Микроскопын слайд үйлдвэрлэгч/будагч шинэчлэх иж бүрдэл IVD	A collection of devices intended to replace or be added to the existing components of a microscope slide maker/stainer to enhance or optimise its functionality. It typically includes external housing components (e.g., covers), removable internal components (e.g., reagent trays, slide baskets), a control unit with touchscreen controls, and dedicated software.	A
4455	67320	Kidney disease progression risk assessment interpretive software IVD	Бөөрний өвчний явцын эрсдлийг үнэлэх тайлбарлах програм хангамж IVD	An in vitro diagnostic interpretive software program intended to be used in the assessment of risk of progression of chronic kidney disease (CKD). It uses specific algorithms to combine and correlate patient demographics, clinical observations, and the in vitro diagnostic results of the qualitative and/or quantitative detection of one or multiple chronic kidney disease biomarkers in a clinical specimen to establish an individual risk score that may be used to guide patient management to minimise progression to kidney failure and dialysis.	A
4456	67357	User-induced pipette IVD	Хэрэглэгчийн үүсгэсэн пипетк IVD	A manually-operated in vitro diagnostic device intended to be used to withdraw, transfer and dispense small volumes of fluid between containers. It is typically a long, thin, glass or plastic graduated tube with an open end to allow aspiration and dispensing of the fluid, and a squeezable bulb for user operation on the opposite end. This is a single-use device.	A
4457	67397	Laboratory specimen/material barcode label IVD, single-use	Лабораторийн сорьц/материалын бар код шошго IVD, нэг удаагийн	A label (e.g., a card or insert) featuring a barcode intended to facilitate clear and easy identification of a laboratory specimen and/or material (e.g., a clinical specimen or assay reagent/buffer in a container), including information about the specimen/material (e.g., dilution), for use in an in vitro diagnostic procedure. It is electronically readable using a computerized reader or scanner, either on-board or connected to an instrument or analyser. This is a single-use device.	A

4458	67515	c acid microarray probe ch	Нуклейн хүчлийн бичил массивын датчик чип IVD	A collection of oligonucleotide probes intended to be used for the simultaneous hybridization of multiple amplified nucleic acid targets from a clinical specimen, for subsequent genome or transcriptome analyses [e.g., single nucleotide polymorphisms (SNPs) genotyping, gene expression profiling]. It typically consists of multiple sequence-specific probes immobilized on a solid substrate (e.g., glass), in a microarray format, also referred to as a chip. This device does not include amplification reagents, detection enzymes or reagents for fluorescence-based signal detection. This is a single-use device.	A
4459	67516	Nucleic acid microarray reagent kit IVD	Нуклейн хүчлийн бичил массив урвалжийн иж бүрдэл IVD	A collection of reagents intended to be used to perform a complete nucleic acid microarray procedure on a clinical specimen, using a microarray probe chip. It includes reagents required for DNA/RNA amplification, enzymatic fragmentation, denaturation, hybridization, single-base extension, and fluorescent staining (e.g., enzymes, buffers, nucleotides, primers, internal/external controls, fluorescent stains); the probe chip is not included. It is used in high-throughput genome and transcriptome studies [e.g., single nucleotide polymorphisms (SNPs) genotyping, gene expression profiling] across a range of clinical areas.	A
4460	67526	Antiplatelet reagent IVD	Antiplatelet урвалж IVD	A substance intended to be used to decrease platelet function in a whole blood specimen by inhibiting platelet activation and/or aggregation in preparation for subsequent analysis. It typically contains a platelet activation and/or aggregation inhibitor (e.g., abciximab), buffers and stabilizers.	A

4461	67541	Blood/blood culture specimen transfer spike IVD, analyser/instrument	Цусны/цусны өсгөвөрийн дээжийг шилжүүлэн суулгах IVD, анализатор/хэрэгсэл	A component of an automated/semi-automated in vitro diagnostic laboratory analyser or instrument intended to be used onboard to obtain a specimen of blood, blood components (e.g., platelets), or blood culture from a specimen receptacle, and facilitate its transfer to another receptacle [e.g., evacuated blood collection tube] for subsequent analysis. It typically consists of a spike/needle for sampling the specimen through the sealed stopper of a receptacle (i.e., without opening the receptacle). It does not require user intervention. This is a single-use device.	A
4462	67542	Fluorescence light microscope IVD	Флюресцент гэрлийн микроскоп IVD	An in vitro diagnostic magnification instrument in which light (typically ultraviolet) that has been absorbed by the specimen and re-emitted at a longer wavelength is observed (as visible light) so that the specimen is visible through the eyepiece. This device is typically used in the laboratory for histopathology and microbiology, commonly in conjunction with fluorescent dyes. Appropriate filters are used to select the correct wavelength of incoming beam to excite the fluorescent compound and eliminate the unwanted incident wavelength from the fluorescent light source (i.e., the specimen).	A
4463	67566	Digital pathology image display unit IVD	Дижитал эмгэг судлалын дүрсийг харуулах нэгж IVD	An electrically-powered visual image display unit (VDU), commonly known as a screen or a monitor, with dedicated software specifically designed for displaying high-resolution digital histology/pathology images during in vitro diagnostic procedures. It is used in conjunction with an automated digital pathology scanner/microscope and is designed to display colours that are important in digital pathology (e.g., purples, pinks, magentas).	A

4464	67586	Antimicrobial susceptibility microfluidic resonant frequency sensor IVD	Нянгийн эсрэг мэдрэмтгий байдлын микрофлюидик резонансын давтамж мэдрэгч IVD	An electronic device intended to be used onboard an antimicrobial susceptibility analyser to determine the concentration and/or mass of microorganisms from a clinical specimen and/or culture isolate, for antimicrobial susceptibility profiling. The sensor is stimulated via an applied voltage to reach a resonant frequency which changes as each microorganism flows through the sensor, whereby concentration and mass parameters are calculated. This is a reusable device.	A
Дунд эрсдэлтэй эмнэлгийн хэрэгсэл					
4465	10014	Acupuncture kit	Зүү эмчилгээний иж бүрдэл	A collection of instruments and supplies used to perform acupuncture procedures. It typically includes acupuncture needles and a point detector. It is widely used in complementary therapy. This is a reusable device.	IIa
4466	10024	Adaptometer	Адаптометр	A mains electricity (AC-powered) ophthalmic device that provides a stimulating light source having various controlled intensities intended to measure the time required for retinal adaptation (regeneration of the visual purple) and the minimum light threshold.	IIa
4467	10234	Rotating pneumatic tourniquet system	Эргэдэг пневматик турник систем	An automatic-cycling device assembly designed to prevent blood flow in one limb at a time, temporarily reducing the total blood flow volume with the intention of reducing the normal workload of the heart. It typically consists of a pneumatic tourniquet cuff, a source of gas pressure used to regularly inflate the cuff, and an automatic control unit, i.e., a pressure indicator and regulator. By using a double cuff and automated valves the pressure point is regularly changed to avoid tissue damage or necrosis.	IIa

4468	10266	Ballistocardiograph	Баллистокардиограф	A device used to detect, measure and record the recoil (motion) of the human body caused by the thrust of the heart during systolic ejection of the blood and the impact of the blood colliding with the aortic arch, which causes the body to have an upward thrust, then the downward thrust of the blood descending. The patient is placed on a special table that is so delicately balanced that vibrations of the body can be sensed by a transducer that reproduces its characteristics in a ballistocardiogram (BCG). It is used in measuring the cardiac output and the force of contraction of the heart. This group of devices may reflect old technology.	IIa
4469	10396	Biofeedback system	Био санал хүсэлтийн систем	An assembly of devices intended to provide visual and/or auditory signals corresponding to the status of one or more of a patient's physiological functions, e.g., brain wave activity, muscle activity, blood pressure, skin temperature, balance, so that the patient can develop some degree of conscious control over a usually involuntarily function. This system will detect changes in the physiological functions that are outside of the normal awareness, amplify these signals, and provide this as feedback to the patient. It is used in, e.g., tension headache control, muscle relaxation, rehabilitation/training, behavioural research.	IIa
4470	10403	Ultrasound aspiration biopsy procedure kit	Хэт авианы аспирацийн биопсийн процедурын багц	A collection of sterile devices that includes a biopsy needle and other supplies used to perform an ultrasound-guided aspiration sampling of tissue. The needle tip must provide a clearly visible image during ultrasound imaging. This is a single-use device.	IIa
4471	10431	Electromagnetic blood flowmeter	Цахилгаан соронзон цусны урсгал хэмжигч	A device using electromagnetic (EM) technology to provide a method of confirming and measuring the velocity of blood flow in vessels after coronary artery bypass, organ transplant, and other vascular reconstructive surgery. It uses an invasive technique that is performed with either a catheter inserted into a vessel or with a probe that surrounds a surgically exposed vessel without penetrating the vessel wall. Also known as an EM flowmeter.	IIa

4472	10432	Ultrasonic blood flowmeter	Хэт авианы цусны урсгал хэмжигч	A device designed to use either continuous wave or pulsed Doppler ultrasound technology to measure and acoustically and/or visually indicate blood flow velocity to help assess the extent of vascular flow restrictions (e.g., clots, stenosis, or mechanical damage). Assessment may be performed invasively or non-invasively, depending on the type of measuring device connected to the unit (e.g., invasive or noninvasive probe, transducer, catheter). Clinical indications include air embolism, atherosclerosis, postphlebitic syndrome, varicose veins, and deep vein thrombosis (DVT). Some devices can also estimate left ventricular function by measuring flow through the aortic arch.	IIa
4473	10574	Cyclodialysis cannula	Циклодиализийн суваг	A sterile rigid or semi-rigid tube intended to be used during an ophthalmic surgical procedure to create a channel between the anterior chamber of the eye and the suprachoroidal space to enable excess aqueous humour to drain and reduce intraocular pressure in the treatment of glaucoma. It typically has a curved shape with a proximal Luer connection. This is a single-use device.	IIa
4474	10575	Lacrimal procedural cannula	Лакримал процедурын суваг	A hand-held, manual, rigid or semi-rigid instrument intended to be inserted into the lacrimal drainage system (the lacrimal duct) to perform various ocular irrigation or aspiration procedures (e.g., lacrimal syringing). It may also be used during placement of a lacrimal tube/stent, or in procedures for the extraction of the cortex lentis or softer parts of the lens of the eye. This is a single-use device.	IIa
4475	10615	Thermal-dilution cardiac output unit	Дулаан шингэрүүлэлтийн зүрхний гаралтын нэгж	A unit that measures the blood flow from the heart using the indicator dilution technique, in which a thermal indicator (e.g., cold saline solution or other indicator solution) is injected upstream of the heart and monitored on the downstream side by a balloon-tipped (flow-directed) catheter with a temperature probe. The measured results are reproduced by this device.	IIa

4476	10678	Catheter introducer	Катетер нэвтрүүлэгч	A sterile tubular plastic sheath designed to be percutaneously placed into a natural body space (e.g., vein, artery, ventricle, peritoneal cavity), or an artificial passageway (e.g., created by means of a catheter tunneller), and through which a catheter is subsequently inserted (by pushing) for placement. It typically has a handle (e.g., T-shaped wing grips) at the proximal end, and may have radiopaque graduated markings at the working end to make it visible on x-ray. This is a single-use device.	IIa
4477	10689	Arterial blood pressure catheter	Артерийн даралтын катетер	A sterile, thin flexible tube intended for short-term (<= 30 days) percutaneous placement within an artery for continuous blood pressure monitoring. It is typically interfaced with a parent device (e.g., external blood pressure transducer) and may be used for arterial blood sampling. The catheter is flushed between sampling procedures; it is not intended to be used for the administration of medication or fluids. Devices dedicated to catheter introduction/function (e.g., introducer needle, guidewire, adaptor) may be included. This is a single-use device.	IIa
4478	10695	Bartholin's gland catheter	Бартолины булчирхайн катетер	A short (e.g., 5 cm) plastic tube designed to form a tract from either of the two small reddish glands (Bartholin's glands), one on each side of the vaginal orifice, to the space where the urethra and the vagina open (vaginal vestibulum). It may include a balloon at the tip to ensure retention within the gland. The device is typically used for drainage in the treatment of Bartholin's gland cysts and abscesses. This is a single-use device.	IIa

4479	10696	Biliary drain	Цөсний суваг	A flexible tube intended for percutaneous placement in the abdomen to establish a channel for temporary or prolonged drainage of an obstructed biliary tract, for splinting of the bile duct during healing, or for preventing stricture of the bile duct. It is distally inserted into the common bile duct, hepatic ducts (transhepatic biliary drainage), or gallbladder (cholecystostomy drainage); disposable devices dedicated to drain introduction may be included with the device. It may be used in conjunction with a low negative pressure system and is available in various designs (e.g., silicone Y- or T-tube, catheter-like, with perforations). This is a single-use device.	IIa
4480	10718	Eustachian catheter, single-use	Eustachian катетер, нэг удаагийн	A long, flexible tube used for middle ear drainage and/or temporary equalization of the pressure on both sides of the eardrum via insufflation. The distal tip is passed along the floor of the nose and guided into the Eustachian tube; air may be blown through the device and into the middle ear. It is typically made of plastic. This is a single-use device.	IIa
4481	10730	Irrigation catheter, single-lumen	Усалгааны катетер, нэг люмен	A flexible tube used to introduce non-drug fluids (e.g., saline solution) into body cavities other than the circulatory system (e.g., ears, wounds, urethra). It consists of a single-lumen tube with end and/or side holes at the distal end; the proximal end is typically connected through a Luer-lock to a syringe or water pumping system. Dedicated devices are used for specific areas of the body (e.g., urinary tract, stomach, colon, uterus). This is a single-use device.	IIa

4482	10735	Nephrostomy catheter	Нефростоми катетер	A sterile, flexible tube intended to be inserted percutaneously into the renal pelvis to gain access to the upper urinary tract. This device consists of a large-bore (sizes from 14 to 24 Fr are typical), thin-walled tube usually with a self-retained tip; it sometimes has expanding wings on its tip. It is used to perform drainage for relief of supravesicular obstructions and may also be intended for a variety of procedures of the upper urinary tract including dilation of strictures, removal of calculi, perfusion with chemolytic agents for dissolution of renal stones, or ureteral stenting. This is a single-use device.	IIa
4483	10737	Ureteral dilatation catheter	Шээсний сувгийг тэлэх катетер	A flexible tube designed to be inserted into the ureters exclusively to increase the ureteral lumen by eliminating areas of narrowing (i.e., strictures). It is typically made of plastic and may have a special tip (e.g., olive) or an inflatable hydraulic balloon at its tip for dilating. This is a single-use device.	IIa
4484	10741	Pericardiocentesis catheter	Перикардиоцентезийн катетер	A flexible tube designed for the drainage of effusion from the pericardial sac (the pericardium). It typically consists of a thin walled, flexible, plastic [e.g., polyethylene (PE)] tube with a J-shaped distal tip perforated with multiple holes in both its convex and concave sides. It is introduced percutaneously into the pericardium, anchored in place, and connected to a water-seal drainage system. It can be left in situ for some days or weeks during the treatment of cardiac tamponade and can be used for the irrigation/instillation of drugs (e.g., antibiotics, cytotoxic agents) into the pericardium. This is a single-use device.	IIa

4485	10817	Pleural drainage system	Гялтангийн ус зайлуулах систем	An assembly of sterile devices intended to be used for the aspiration of air/fluid from the pleural cavity (potential space between the serous membranes covering the lungs) by means of suction. It includes a pleural catheter, a water seal (underwater) drainage unit, typically with three separate chambers, and typically a suction system regulator, intended to be connected to the hospital's central vacuum system; it does not include pharmaceuticals. This system is usually used to restore normal lung function following chest or mediastinal surgery (e.g., open heart surgery), or to treat conditions such as pneumothorax and/or haemothorax. This is a single-use device.	IIa
4486	10995	Contact lens thermal cleaner, line-powered	Контакт линзтэй дулаан цэвэрлэгч, шугамаар ажилладаг	A mains electricity (AC-powered) unit intended to disinfect or sterilize reusable soft contact lenses by means of heat.	IIa
4487	11052	Cricothyrotome, single-use	Крикотиротом, нэг удаагийн хэрэглээ	A sterile, hand-held, manual surgical instrument intended to be used to perform a cricothyrotomy (an incision through the skin and cricothyroid) providing airway access within seconds for immediate ventilation of the patient and necessary suction procedures. It is used to open a patient's airway in emergency interventions, e.g., accidental blockage of the upper airway tract, and prior to tracheotomy. It is made of high-grade stainless steel and plastic materials. This is a single-use device.	IIa
4488	11067	General cryosurgical system, cryogen gas, mechanical	Ерөнхий крио мэс заслын систем, криоген хий, механик	An assembly of devices designed to apply cold from a gaseous or liquid refrigerant (cryogen) [e.g., liquid nitrogen (LN2), nitrous oxide (N2O), carbon dioxide (CO2)] to malignant or abnormal benign tissue for its destruction and removal. The system typically includes a mechanical regulator to control the flow of cryogen, contained in an attached cylinder, and the probe(s) to apply the cold. The system is used across clinical specialties (e.g., general surgery, dermatology, oral surgery, gynaecology, urology, ENT, proctology, oncology) and is not dedicated to ophthalmic or cardiac use.	IIa

4489	11068	Ophthalmic cryosurgical system, mechanical	Нүдний крио мэс заслын систем, механик	An assembly of mechanical devices designed to apply cold from a gaseous or liquid refrigerant (cryogen) [e.g., liquid nitrogen (LN2), nitrous oxide (N2O), carbon dioxide (CO2)] to a target tissue for its destruction and removal during an ophthalmic surgical procedure. The system typically includes a mechanical regulator to control the flow of cryogen contained in an attached cylinder, and dedicated cryogen-cooled hand-held applicators (probes) to apply the cold to the tissue. The device is typically used to remove cataracts by the formation of an adherent ice ball in the lens, to freeze the eye and adjunct parts for surgical removal of scars, and to freeze tumours.	IIa
4490	11111	Cystometer	Цистометр	A device used to examine the bladder, providing measurement data concerning pressure and volume. This data will be used for diagnostic evaluation of the neuromuscular mechanisms of the bladder. It may also measure the amount of residual urine after the patient has passed water. The device may operate mechanically, by ultrasound techniques, or a combination of both.	IIa
4491	11159	Dental restorative gold	Шүд нөхөн сэргээх алт	A dental restorative material made from gold (Au) foil, sintered gold (Au) powder, or a combination of both, for the preparation of gold tooth fillings directly in the mouth of a patient by condensing the material with a mallet and a plugger. The material is cold welded by this process. This is a single-use device.	IIa
4492	11168	Dentifrice	Шүдний угаагч	A substance, or combination of substances, intended to be used for cleaning the accessible surfaces of the teeth by polishing. It typically includes mild abrasives, detergents, flavouring agents, and other products, and is normally supplied as a toothpaste or tooth powder intended for self-application using a toothbrush, or formulated to be applied by dental professionals using a handpiece attachment. After application, this device cannot be reused.	IIa

4493	11170	Denture cushion	Шүдний дэр	A prefabricated device intended to be used to improve the fit of a loose or ill-fitting (uncomfortable) denture. It is typically self-applied by a patient in the home and serves as a temporary measure until replacement dentures are made. After application, this device cannot be reused.	IIa
4494	11245	Microwave diathermy treatment system	Богино долгионы диатерми эмчилгээний систем	An assembly of devices designed to produce a therapeutic heat 1 to 2 cm below the skin within specific volumes of the body through the transcutaneous transmission of high frequency electromagnetic (EM) energy, typically 2,450 megahertz (MHz) [microwave], to promote tissue healing and pain relief. It is not intended to be used for surgery or to treat malignancies.	IIa
4495	11246	Short-wave diathermy treatment system generator	Богино долгионы диатерми эмчилгээний системийн генератор	A component of a short-wave therapeutic diathermy system designed to generate electromagnetic (EM) energy in the radio-frequency (RF) bands of 13 megahertz (MHz) to 27.12 MHz applied transcutaneously to provide a deep heat within specific volumes of the body. The energy generated by this device is typically conducted using electrodes placed on the patient's skin across the area to be treated; the energy is passed between the electrode poles to treat pain, muscle spasms, and joint contractures.	IIa
4496	11248	Physical therapy ultrasound system	Физик эмчилгээний хэт авиан систем	An assembly of devices designed to produce and deliver ultrasonic waves that penetrate tissues and produce both thermal and nonthermal (e.g., mechanical and cavitation) effects to treat pain (e.g., muscle, tendon, joint) and as an aid in the healing of soft-tissue injuries (e.g., ulcerations, bursitis). It typically consists of a radio-frequency (RF) generator (frequencies from one to three megahertz are typical), a cable that transmits the RF energy to the applicator, and an applicator including a piezoelectric transducer that applies the ultrasonic energy to the patient's tissues through the skin.	IIa

4497	11308	Thoracic drain	Цээжний урсац	A sterile, tube-like device that is designed to establish a channel for the removal of fluid from, or to irrigate, the thoracic cavity after thoracic or cardiac surgery. It may be straight or angled, single- or double-lumen in design and available in various sizes. This is a single-use device.	IIa
4498	11322	Dressing, burn	Наалт, түлэгнэлт	A wide, layered gauze pad used to cover and protect burned skin and to absorb exudate at burn sites.	IIa
4499	11323	Dressing, foam	Наалт, хөөс	A highly absorbent pad composed of hydrophilic foam that is used to cover heavily exudating wounds.	IIa
4500	11330	Biopsy drill bit	Биопсийн өрмийн хошуу	A shaft of metal designed to excise (cut out) a small section of bone or cartilage for microscopic examination. It is mounted into a surgical drilling device, either manual or powered, and when rotated at an appropriate speed will perform the required operation. This is a reusable device.	IIa
4501	11332	Cannulated surgical drill bit, reusable	Сувагтай мэс заслын өрмийн хошуу, дахин ашиглах боломжтой	A shaft of metal intended to be mounted into an appropriate surgical power tool (e.g., a pneumatic reamer or drilling system handpiece with appropriate torque capacity) and rotated to bore into hard/tough tissues (e.g., bone, cartilage) to clear a channel of the same dimension as the diameter of the shaft. This drill is cannulated, having a hollow centre, and is typically flexible so that it can be fed over a guiding pin that has been placed into the correct position prior to operation. This device is typically used in orthopaedic surgery for clearing of the intramedullary channel prior to the insertion of a prosthetic device. This is a reusable device.	IIa

4502	11334	Automatic cranial perforator, reusable	Автомат гавлын цоолбор, дахин ашиглах боломжтой	A metallic rotary endpiece designed to cut a hole(s) or a circular section(s) of the skull vault (calvarium) to provide access to the interior for diagnostic/therapeutic purposes or for the removal of a bone flap for brain surgery. It is available in various configurations such as: 1) two coaxial drill shafts (one rotating inside the other with the inner drill shaft extending slightly beyond the outer cutter); or 2) a single trepan bur rotating a in protective sleeve, both having a drive shank that connects to a powered handpiece and a built-in clutch mechanism that disengages with penetration of the cutter through the skull. This is a reusable device.	IIa
4503	11337	Fingernail drill bit	Хурууны өрөм	A shaft of metal designed to penetrate a fingernail or toenail to access the underlying tissue, typically to relieve pressure from a subungual haematoma (release of blood/fluid accumulated in the underlying nail bed). It is inserted into an appropriate drilling device and typically has a ball-shaped cutting head that, when rotated, cuts through the tissue of the nail. It is available with various cutting head shapes and sizes. This is a reusable device.	IIa
4504	11339	Middle ear drill bit	Дунд чихний өрмийн хошуу	A cylindrical shaft of metal with a small cutting head (e.g., twisted or helicoidal) which when rotated will bore into the tissues of the middle ear to excavate, perforate, or excise tissue (e.g., ossicles, cartilage) during a middle ear (endaural) surgical procedure. This device is typically mounted into a powered surgical drill system handpiece that provides rotation. It is available in various cutting head sizes/shapes. This is a reusable device.	IIa

4505	11387	Echoencephalograph	Эхоэнцефалограф	A graphic recorder designed to record the intensity of ultrasonic waves directed through the head of a patient and reflected backwards (echoed). It uses a transducer that transmits and receives the ultrasonic waves, reproducing the sound characteristics in a graph (echoencephalogram). An echoencephalograph is used to record the bilateral boundaries and midline structures of the skull and to assess the presence of a mass lesion in the head (e.g., a brain tumour or subdural haematoma).	IIa
4506	11389	Ophthalmic ultrasound imaging system	Нүдний хэт авиан шинжилгээний систем	An assembly of mains electricity (AC-powered) devices designed for ophthalmic imaging procedures. It includes software that supports a variety of static and real-time eye and orbital imaging applications including physical measurement and oncology related treatment. It will generate ultrasound pulses, direct them to a target area, detect the resulting ultrasound echoes, and process the resulting information producing and displaying static or dynamic two- or three-dimensional (3-D) images. This device includes ultrasound imaging systems with, e.g., A-mode, B-mode, Doppler, colour Doppler (CD), M-mode, and duplex (combination imaging, Doppler and/or colour flow) scanning capabilities.	IIa
4507	11402	Electrocardiocontourograph	Электрокардиоконтурограф	A mains electricity (AC-powered) graphic recorder in which readings are segmented and stacked sequentially atop each other, either manually or using a computer, to produce a three-dimensional appearance. This recorder may be used in measurements of blood pressure, electrocardiogram (ECG) or any other quasi-periodic wave. An electrocardiocontourograph can be used for assessing the time variation of physiological parameters.	IIa

4508	11407	Electrocardiograph, general-purpose	Зүрхний цахилгаан бичлэг, ерөнхий зориулалттай	A device that is used to detect, register, and record the electrical signals produced through the activity of the heart and to reproduce these signals, (voltage versus time) as an electrocardiogram (ECG), typically in the form of a print-out, but also on a display or in digital media for further use. The device may also include a variety of features (e.g., single or multichannel recording, data storage capabilities, interpretive capabilities, testing during passive or active participation of the patient).	IIa
4509	11413	Electrocardiograph, professional, single-channel	Зүрхний цахилгаан бичлэг, мэргэжлийн, нэг суваг	A device intended to be used by a healthcare professional in a clinical setting to acquire and process the electrical activity of the heart for digital display in the form of a graph, to assist a physician in assessing electrical cardiac physiology [electrocardiography (ECG)]. It is designed for recording the electrical signal from only one configuration of electrodes (ECG-leads) at a time (single-channel). It will either include an integrated display or be designed to transmit ECG data to an off-the-shelf device for display; ECG electrodes may be included. Data interpretation and/or data telemetry features might also be included.	IIa
4510	11467	Electroencephalograph	Электроэнцефалограф	An electrically-powered device designed for noninvasive recording of the electrical activity of the brain for display in the form of a graph [electroencephalogram (EEG)], typically to study a variety of neurological conditions, evaluate psychiatric disorders, and/or assist in localizing tumours or lesions on or near the surface of the brain. It is designed to acquire electrical signals from electrodes typically attached to the scalp and ear lobes. The results may be displayed via print-out or electronically; data interpretation and/or telemetry features may also be included.	IIa

4511	11474	Electromyograph	Электромиограф	An electrically-powered unit designed for the measurement and recording of the intrinsic electrical potential of skeletal muscle for display in the form of a graph [electromyograph (EMG)], typically for diagnosis of muscle and/or nerve disorders. It is designed to receive analogue electrical signals from EMG electrodes and process/digitize these signals for viewing, either on an integrated display or for transmission to an off-the-shelf computer.	IIa
4512	11479	Electronystagmograph	Электронистагмограф	A graphic recorder used for detecting the electrical potential caused by eye movements. This recorder includes an electrode for each eye and one on the forehead (multichannel recording) for measuring the potential from both eyes simultaneously, or repositioning of the electrodes before each test for single channel recording. Electronystagmographs are used for detecting multiple sclerosis, vestibular dysfunctions, the presence of drugs and other specific disorders characterized by involuntary eye movement (nystagmus).	IIa
4513	11480	Electrooculograph	Электрокулограф	An ophthalmic device used to record the gradual changes in the electric potential between the retina and the cornea during ocular motion in response to visual stimuli. This recorder is used with surface electrodes placed on the lateral canthi of each eye and an amplifier that boosts the bioelectrical potential. Some are compatible with a personal computer (PC) for waveform storage and analysis. It is used to help diagnosis in certain forms of retinal diseases, e.g., assessing light and dark adaptation of the eye. It may have additional capability for recording the short, fast movements of the eyes made during reading and sleep.	IIa

4514	11482	Electroretinograph	Электроретинограф	An ophthalmic device used to record the changes in electric potential on or near the surface of the cornea to a reference distal point on the body, following stimulation of the retina by light, i.e., flashes of white light. The electroretinograph (ERG) recorder is used with a primary electrode [typically gold (Au), platinum (Pt) or silver (Ag)] and a reference electrode located almost anywhere on the body, e.g., cheek or ear lobe, and an amplifier that boosts the bioelectrical potential. Some are compatible with a personal computer (PC) for waveform storage and analysis. It is used in the diagnosis of retinal degeneration, night blindness, and circulatory disturbances of the retina.	IIa
4515	11484	Electroconvulsive therapy system	Цахилгаан цочроох эмчилгээний систем	An assembly of mains electricity (AC-powered) devices designed to apply strong electrical stimuli (electric shocks) to a patient's brain to induce convulsions (fit or grand mal seizure of the brain) and loss of consciousness, typically to treat major depression, schizophrenia, or mania. The stimuli are applied through electrodes placed on the unshaved scalp or on the bare skin over the temples; they are not usually targeted toward specific areas of the brain. The system typically consists of an operator's console with controls, displays and printers, and electrodes; it may also include monitors (e.g., electrocardiograph, electroencephalograph) to display vital signs during treatment.	IIa
4516	11531	Endometrial biopsy kit	Эндометрийн биопсийн багц	A collection of sterile devices designed for the collection of a tissue sample taken from the lining of the uterus (endometrium). It typically includes an aspirating curette, a specimen container and other materials. It is used in the study of endometrial cytology (cells). This is a single-use device.	IIa
4517	11582	Enema kit	бургуй иж бүрдэл	A packaged collection of items used to deliver an injection of fluid into the rectum, facilitating evacuation of the large intestine. This is a single-use device.	IIa

4518	11585	ENT examination/treatment system	Чих хамар хоолойн үзлэг/эмчилгээний систем	An assembly of devices intended to support a patient in a supine or reclining position and provide specialized features for an ear/nose/throat (ENT) examination or treatment. It typically includes a table and/or chair and functional components such as a suction/blowing apparatus, equipment drawers, and a mirror heater.	IIa
4519	11600	Oesophageal motility analysis system	Улаан хоолойн хөдөлгөөний шинжилгээний систем	An assembly of devices designed to evaluate peristaltic motility in the oesophagus by measuring pressure on an intraluminal catheter/probe at several points (including LES); it also measures pH, respiration, and swallowing with appropriate sensors. In addition to a monitor display, computer, and software, it usually includes nonperfusion catheters to measure pressures directly and/or perfusion catheters and extracorporeal transducers to measure pressure indirectly. The system is intended to evaluate patients with dysphagia, gastro-oesophageal reflux disease (GERD), and/or noncardiac chest pain; it is also used to assess connective tissue and neuromuscular disease.	IIa
4520	11677	Enteral feeding kit, adult/paediatric, sterile	Энтерал тэжээлийн иж бүрдэл, насанд хүрэгч/хүүхэд, ариутгасан	A collection of sterile devices that includes tubing and other materials intended to administer nutrient liquids directly into the stomach, duodenum, or jejunum of an adult or paediatric (excludes infants) patient by means of gravity or an enteral pump. This is a single-use device.	IIa
4521	11700	Fibrillator	Фибриллятор	A mains electricity (AC-powered) device designed to provoke fibrillation through the application of a small electrical shock. A medium frequency sine wave is applied through electrodes placed on the surface of the heart to put it into ventricular fibrillation. It may be used during open heart surgery in order to carry out an operation on a heart in a normothermic state (around 37° Celsius), or for the correction of irregular heart beats.	IIa

4522	11704	Filiform urethral bougie	Филиформ шээсний суваг	An extremely thin, wire-like, manual surgical instrument designed for traversing and exploring urethral strictures and/or dilating the urethra, introduced directly or through an appropriately-threaded urethral catheter. The tip of the device can be bent or contoured to shapes that will facilitate the progression of the device through the stricture; the tip may be bulbous (an olive tip). It is typically made of plastic material [e.g., polyvinyl chloride (PVC)] with a threaded metal section. It may be threaded at the proximal end to enable it to connect to a filiform follower (e.g., a larger diameter bougie). This is a single-use device.	IIa
4523	11761	Fluxmeter	Флюсметр	A battery-powered instrument designed to measure the total magnetic flux and determine the magnetic flux intensity (H), and/or magnetic flux density (B), close to an instrument often to determine if the magnetic field may produce interference with the operation of the device and/or during evaluation of a location for new equipment that may be affected by magnetic fields (e.g., MRI scanners). It typically consists of an electronic unit, magnetic field detectors (e.g., induction coils, Hall-effect strips), and a display that shows the value of the magnetic flux intensity (measured in Ampere/m and/or Oersted) and/or magnetic flux density (measured in Tesla and/or Gauss).	IIa
4524	11858	Gastroscope, rigid	Гастроскоп, хатуу	An endoscope used for observation, diagnosis and treatment of the stomach. It is inserted through an artificial orifice in the gastro wall. It is of the rigid kind. The image transmission is through relayed lens optics.	IIa
4525	11884	Surgical gloves, hypoallergenic	Мэс заслын бээлий, харшил үүсгэдэггүй	A device made of a synthetic material (non-latex), (e.g., polyurethane) that acts as a protective barrier when worn on the hands of a surgeon. This device is designed to prevent an allergic reaction to the skin of the user. This is a single-use device.	IIa

4526	11973	Cardiopulmonary bypass system heat exchanger, reusable	Зүрхний уушигны эргэлтийн системийн дулаан солилцогч, дахин ашиглах боломжтой	A device consisting of a heat exchanging system intended to be used in extracorporeal circulation to warm or cool the blood or perfusion fluid flowing through the device for the purposes of cardiopulmonary bypass intervention or treatment. This device will typically be a module of a cardiopulmonary bypass system whereby it receives thermal transfer fluid at a specific temperature from a system heating/cooling unit. This is a reusable device.	IIa
4527	12009	His bundle detector	Түүний багц илрүүлэгч	A mains electricity (AC-powered) device used for detection of the normal electrical transmissions (or failures) of electrical impulses from the atrium to the ventricles through a group of highly specialized fibres in the heart known as the His bundle. It is typically designed as a specialized electrocardiographic unit that includes a pacemaker and utilizes a cardiac catheter with electrodes; the catheter is advanced into the heart and then withdrawn until a combination of atrial and ventricular activity is recorded (i.e., atrial and ventricular electrograms). It is used in the operating room (OR), during catheterization procedures and in electrophysiology (EP) conductions studies.	IIa
4528	12050	Heated respiratory humidifier	Халаалттай амьсгалын замын чийгшүүлэгч	A mains electricity (AC-powered) device designed to heat and humidify air/oxygen inspired by a patient to help maintain the mucous membranes of the respiratory tract typically during periods of prolonged respiratory support/therapy (e.g., mechanical ventilation, BPAP/CPAP therapy). The heated/humidified gases are delivered to the patient's airway and lungs via the nose/mouth or a tracheostoma in association with a parent respiratory device (e.g., ventilator, BPAP/CPAP unit). The humidifier typically includes a heating element and provisions for attaching a humidification chamber and tubing set.	IIa

4529	12103	Impedance cardiograph	Импеданс кардиограф	A device that records the variations in thoracic electrical impedance caused by the activity of the heart muscle, usually detected at the body surface. A current is passed through the body and the product of this current and the body impedance is the electrical potential difference between two sensing electrodes. The graphic representation of the variation of the impedance with time is recorded in a diagram (impedance cardiogram). It is used to study the action of the heart muscle, for diagnosis of specific cardiac abnormalities, and to reveal trends or changes in heart function, especially cardiac output. Some types may include additional measurements (e.g., pulse oximetry, blood pressure).	IIa
4530	12132	Syringe-loaded medication/vaccine injector, manual, professional	Тариуртай эм/вакцины тарилга, гарын авлага, мэргэжлийн	A hand-held, manually-powered mechanical device intended to be used in conjunction with a standard plunger syringe and needle to administer an injection of medication or vaccine to a patient intramuscularly (IM) and/or subcutaneously; it is not intended for intradermal injection. The delivered medication/vaccine is supplied from the prefilled syringe that is loaded into the injector, which is typically a spring-loaded mechanical assembly. It is intended for use by a healthcare professional when serial injections are provided (e.g., mass inoculation); it is not a hypodermic syringe. This is a reusable device.	IIa
4531	12135	Insect bite/sting kit	Шавьж хазуулсан/хатгах хэрэгсэл	A convenient collection of the necessary instruments, pharmaceuticals, and other items needed in an emergency to inject epinephrine into a victim who has sustained an insect bite or sting. This is a single-use device.	IIa

4532	12144	Hysteroscopic insufflator	Гистероскопийн инсуффлятор	A mains electricity (AC-powered) device assembly used during endoscopic procedures of the uterus (i.e., hysteroscopy) to distend (expand by pressure) the uterus by filling the uterine cavity with a pressure-limited gas [typically carbon dioxide (CO_2)] providing the operator with a space in which to carry out an examination or surgical intervention. Electronics assist in monitoring the pressure and maintaining the gas-filled space by compensating for gas leakage. This device may also be referred to as a gas distention system.	IIa
4533	12155	Intrauterine haemostatic balloon catheter	Умайн доторх цус тогтоогч бөмбөлөг катетер	A sterile, flexible tube with an inflatable balloon at its distal end intended to be inserted into the uterus and distended with a medium (e.g., sterile water, medical air or other appropriate gas) to reduce postpartum bleeding with pressure. It may have an additional balloon inflated in the upper vagina to seal the uterine cavity. Devices associated with balloon inflation may be included. This is a single-use device.	IIa
4534	12159	Burette intravenous administration set	Бюретта судсаар тарих багц	A collection of sterile devices designed to conduct fluids from an intravenous (IV) fluid container to a patient's venous system, that includes a calibrated burette for fluid volume measurement. The collection also typically includes tubing, connectors, clamps, and injection ports. It may be used for gravitational intravenous administration or with an infusion pump. This is a single-use device.	IIa
4535	12161	Intravenous catheterization kit	Судсаар хийх катетержуулалтын хэрэгсэл	A collection of sterile devices designed for the passage of catheters into veins. This is a single-use device.	IIa
4536	12170	Intravenous administration tubing extension set	Судсаар тарих хоолойн өргөтгөлийн багц	A collection of tubing and connectors intended to establish an extension of tubing where the standard length of the tubing in an intravenous (IV) administration set is insufficient. This is a single-use device.	IIa

4537	12291	Rigid optical laparoscope	Хатуу оптик лапароскоп	An endoscope with a rigid inserted portionangulus iridocornealis for the visual examination and treatment of the abdominal/retroperitoneal cavity and its organs. It is inserted through an incision made in the abdominal wall (routinely just below the umbilicus) during laparoscopy. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. The abdominal wall is distended, typically using a gas, providing the space to allow the surgeon to view and/or operate on the exposed organs. This reusable device is commonly used to evaluate/treat abdominal or pelvic pain, ectopic pregnancy, ovarian cysts, appendicitis, and perform female sterilization.	IIa
4538	12294	Laryngostroboscope	Ларингостробоскоп	A device that is intended to allow the observation of glottic action during phonation (speech) in the examination of voice disorders. The device operates by focusing a stroboscopic light through a lens for direct or mirror reflected viewing of glottic action. It can contain a microphone that captures the acoustic signals from the glottic area and may or may not contact the patient.	IIa
4539	12301	Colonic lavage system, powered-flow	Бүдүүн гэдэс угаах систем, цахилгаанаар ажилладаг	A device assembly designed for automated or semi-automated irrigation, washing, and evacuation of debris from the colon. It typically consists of a mains electricity (AC-powered) electromechanical unit that includes a pump for infusion of non-medicated fluids (e.g., saline), an extractor (frequently using vacuum), and controls for the temperature and the rate of infusion (e.g., using a nozzle) and withdrawal of the liquid; the system is coupled to dedicated handpieces and/or to disposable nozzles/catheters introduced through the rectum. It is intended to be used by a healthcare provider in a clinical setting to remove damaged tissue and/or debris (e.g., faeces, foreign objects).	IIa

4540	12391	Wearable multiple physiological parameter recorder, reusable	Зүүж болох олон физиологийн үзүүлэлт бичигч, дахин ашиглах боломжтой	An electrically-powered wearable device (e.g., wristband, watch, finger probe, head-worn sensor) designed to continuously or intermittently measure and record multiple physiological parameters [e.g., heart rate, respiration rate, electrocardiogram (ECG), haemoglobin oxygen saturation (Sp02), routine body movement] using one or more technologies [e.g., photoplethysmography (PPG), reflectance pulse oximetry, electrocardiography, accelerometry). The data is typically transferred to a smart device or central database for analysis, which might include evaluation of lifestyle factors (e.g., energy expenditure, activity level, sleep patterns). This is a reusable device.	IIa
4541	12404	Lumbar puncture kit	Бүсэлхий нурууны хатгалт иж бүрдэл	A collection of devices intended for transient percutaneous access to the subarachnoid (intrathecal) or epidural space of the lumbar spinal column to obtain a sample of cerebrospinal fluid (CSF). Typical components include a spinal needle and collection tubes for the CSF; a drainage catheter is not included. This is a single-use device.	IIa
4542	12463	Breast pump support kit, single-use	Хөхний шахуургыг дэмжих хэрэгсэл, нэг удаагийн хэрэглээ	A collection of items intended to be used in conjunction with a manual or electric breast pump (not included) to assist mothers in extracting milk from the breast for collection and/or feeding an infant. It typically includes various items such as funnel-like breast shields, tubing, connectors, and milk collection containers (e.g., bottle, cup). This is a single-use device.	IIa
4543	12516	Magnetic metal detector	Соронзон металл илрүүлэгч	A device designed to use the fluxmeter principle to detect the presence of metal in patients, such as metal fragments in wounds requiring removal or metallic implants prior to a magnetic resonance imaging (MRI) examination.	IIa
4544	12518	Photographic metal detector	Гэрэл зургийн металл илрүүлэгч	A device designed to use visible light to detect the presence of exposed metal in patients, such as metal fragments in wounds requiring removal.	IIa

4545	12519	Ultrasound metal detector	Хэт авианы металл илрүүлэгч	A device designed to use ultrasound to detect the presence of metal in patients, such as metal fragments in wounds requiring removal or metallic implants prior to a magnetic resonance imaging (MRI) examination.	IIa
4546	12524	Metreurynter	Метрюринтер	An inflatable device in the form of a bag or a balloon that can be used to assist in certain gynaecological/obstetrical procedures. Such uses can include: 1) a procedure to induce an abortion where the device is inserted into the lower uterine cavity, inflated with, e.g., saline, and then slowly extracted from the uterus causing dilation of the cervical os; or 2) a procedure called cul-de-sac packing which is a gasless laparoscopic cystectomy during pregnancy which involves the ballooning of this device in the cul-de-sac, also called the rectouterine pouch (pouch of Douglas), providing the surgeon with the necessary visualization of the cyst to be removed. This is a single-use device.	IIa
4547	12554	Aerosol tent, adult	Аэрозоль майхан, насанд хүрэгчид	A flexible enclosure designed for the top of a bed that is used to cover the head/torso of an adult patient to provide an aerosolized environment of breathing gases/vapours, e.g., a suspension of medicated liquid or solid particles, for medication therapy. It is typically used for the treatment of breathing disorders (e.g., asthma). It typically consists of a metal frame covered with transparent plastic, and wide bore tubing connected to the aerosol source. It is used to avoid direct attachment of the patient to a nasal cannula, face mask or endotracheal (ET) tube. This is a reusable device.	IIa

4548	12557	Oxygen administration face tent	Хүчилтөрөгчийн удирдлагын нүүрний майхан	A flexible, tent-like, enclosure designed to rest against the chin of the patient while remaining away from the face to provide a semi-enclosed environment of enriched oxygen (O2) to increase the patient's O2 uptake. It is connected to a high-flow O2 source and/or humidifier through wide bore tubing. It typically consists of a small rigid plastic device that is contoured around the chin and attached with head straps for stabilization. It is typically used for patients that are adverse to oxygen delivery devices such as a nasal cannula or face mask, usually due to facial surgery or trauma. This is not an O2 face mask. This is a single-use device.	IIa
4549	12662	Respiration monitor	Амьсгалын хяналт	A mains electricity (AC-powered) bedside device designed to measure and display a non-ambulatory patient's respiratory functions. Measurements include concentration of respiratory gas components [e.g., carbon dioxide (CO2), oxygen (O2)] and/or continuous monitoring of the inspiration/expiration cycle including respiration rate, air volume, and cessation of	IIa
4550	12692	Myograph	Миограф	A mains electricity (AC-powered) device designed for determining and recording the different phases of the intensity or velocity of a muscular contraction. It includes a sensor for detecting the displacement and/or force related to the muscle contraction and reproducing them in a graph (myogram). A myograph is used in the evaluation of muscles in several	IIa
4551	12716	Benchtop nebulizer, heated	Вандан мананцар үүсгэгч, халаалттай	An assembly of devices intended to be used in the home and clinical settings to generate warmed aerosolized medication/fluids (e.g., pharmacological drugs, medical cannabis) for inhalation by a patient, typically to treat/manage a respiratory disorder [e.g., chronic obstructive pulmonary disease (COPD), cystic fibrosis (CF)] or various other	IIa
4552	12732	Airway needle	Амьсгалын замын зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument typically used to pierce the throat through to the trachea to establish airway patency. It is especially used to perform cricothyroidotomy in emergency cases of respiratory obstruction. It is typically used by emergency medical services (EMS). This is a single-use device.	IIa

4553	12734	Biopsy needle, general-purpose, single-use	Биопсийн зүү, ерөнхий зориулалттай, нэг удаагийн	A slender, sharply-pointed metal tube dedicated for taking biopsy specimens. It is manufactured in various diameters, with a distal tip that may be configured in various geometric forms (e.g., straight or curved) used to obtain a tissue sample for analysis. This is a single-use device.	IIa
4554	12739	Cholangiography needle	Холангиографийн зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument intended to be used to deliver contrast media to the biliary tract for cholangiographic procedures. This is a single-use device.	IIa
4555	12740	Dental syringe needle, single-use	Шүдний тариурын зүү, нэг удаагийн хэрэглээ	A sterile, sharp bevel-edged, hollow tubular metal instrument with an integral hub, typically intended to be attached to a dental cartridge syringe for the injection of local anaesthetics. This is a single-use device.	IIa
4556	12741	Haemodialysis needle	Гемодиализын зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument used to remove and return a patient's blood during a haemodialysis procedure. Commonly known as a dialysis needle. This is a single-use device.	IIa
4557	12745	Hypodermic-needle, single-use	Гиподермик зүү, нэг удаагийн хэрэглээ	A sterile, sharp bevel-edged, hollow tubular metal instrument intended to be used in conjunction with syringes, secondary medication sets, or phlebotomy equipment (e.g., blood collection adapters or holders) to administer fluids/medications/drugs to a patient and/or to withdraw (aspirate) fluids from a patient. This is a single-use device.	IIa
4558	12747	Intra-arterial needle	Артерийн дотоод зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to puncture an artery. The needle may be heparinized to prevent blood clotting. This is a single-use device.	IIa

4559	12750	Spring-loaded pneumoperitoneum needle, single-use	Пүрштэй пневмоперитонеум зүү, нэг удаагийн хэрэглээ	A slender, sharply-pointed metal tube designed to introduce or remove gas from the peritoneal cavity as a therapeutic or surgical/radiological procedural method. It is often inserted into the peritoneal cavity for the purpose of insufflation [e.g., with carbon dioxide (CO2)] to establish pneumoperitoneum prior to abdominal endoscopy. It is equipped with a spring-loaded, round-tipped obturator that extends from the tube when the device does not encounter resistance (i.e., when the cavity has been reached) to prevent damage from the sharp point. This is a single-use device.	IIa
4560	12779	Infant feeding bottle, reusable	Нярай хүүхдийн сав, дахин ашиглах боломжтой	An empty glass or plastic container typically with a relatively narrow neck and removable nipple, used to feed (nurse) infants, typically with milk, but other fluids may also be provided using this device. This is a reusable device.	IIa
4561	12799	Cardiointegraph	Кардиоинтеграф	A type of electrocardiograph (ECG) intended for the early detection of coronary disease while the patient is at rest. It measures the electrical impulses generated by the patient during the course of a conventional electrocardiogram (ECG) and through a series of integrations and normalizations, displays these signals in a different visual format known as a cardiointegram (CIG). A CIG provides the examining physician with a method for identifying patients with apparently normal ECG's who may actually have coronary heart disease.	IIa
4562	12855	Oxygen administration kit, sterile	Хүчилтөрөгчийн хэрэглээний хэрэгсэл, ариутгасан	A collection of sterile devices designed for oxygen (O2) delivery that may include a mask, a nasal cannula, oxygen tubing, and connectors. This is a single-use device.	IIa

4563	12861	Laboratory instrument gas monitor/regulator	Лабораторийн багажийн хийн хяналт/зохицуулагч	A mains electricity (AC-powered) device designed to continuously measure and control the concentration of a gas(es) [e.g., oxygen (O2), carbon dioxide (CO2)] in an enclosed atmosphere, mainly in laboratory equipment (e.g., cell culture incubators, plate readers, imaging devices). It is an electronic unit which includes a gas percentage display, valves, gas sensors, controls, ports for connection to gas cylinders, and alarms triggered by out-of-range gas concentrations.	IIa
4564	12893	Oxygen administration tent, adult	Хүчилтөрөгчийн удирдлагын майхан, насанд хүрэгчид	A flexible enclosure designed for the top of a bed that is used to cover the head/torso of an adult patient to provide an enriched oxygen (O2) environment to increase the patient's O2 uptake. It is connected to an O2 source and may be used concurrently with increased humidification and temperature control. It typically consists of a metal frame covered with transparent plastic, tubing, and may have built-in humidification. It is used for the treatment of breathing and other cardiopulmonary disorders, and for patients who are adverse to oxygen delivery devices such as a nasal cannula, face mask or endotracheal (ET) tube. This is a reusable device.	IIa
4565	13017	Phonocardiograph	Фонокардиограф	A device for recording heart sounds at the body surface through the heart's actions which cause vibrations that are transmitted through organs and tissue to the body surface. These are detected by microphones, processed in an electroacoustic transducer, and give sound characteristics in a phonocardiogram. This is used to assess the low frequency sounds (atrial and ventricular gallops), and high frequency sounds (mitral regurgitation and ventricular septal defect). Some also record subsonic frequencies (a few Hertz) considered as vibrations, typically recorded by an apexcardiograph. This method may also be integrated in other electrocardiograph (ECG) devices.	IIa

4566	13056	Limb plethysmograph	Хөлний плетисмограф	A graphic recorder designed for determining and registering volume variations in the extremities (legs/toes and/or arms/fingers) as modified by the circulation of blood through them. It typically consists of flow and/or volume sensors and transducers attached to an electronic unit, which processes the data and displays the results. It may operate using one of several methods including venous occlusion (pneumatic), photoelectric, electrical impedance, or strain gauge. The device is typically used in peripheral vascular diagnostic investigations [e.g., for deep vein thrombosis (DVT) or arterial occlusive disease].	IIa
4567	13085	Polygraph	Полиграф	A multichannel physiologic graphic recorder designed for the simultaneous recording of a number of different physiologic parameters, e.g., electrocardiogram (ECG), blood pressure, electroencephalogram (EEG), temperature or respiration. This device is frequently used for testing the truth of a person's statements (i.e., used as a "lie detector").	IIa
4568	13187	Dental pulp analysis system	Шүдний целлюлозын шинжилгээний систем	An assembly of devices designed to evaluate the pulpal vitality of teeth by electrically stimulating the nerve tissue of the pulp. The electric current needed to obtain a patient response to the stimulus is a measure of the condition of the dental pulp. The system typically includes a high frequency electronic oscillator, cables, and electrodes to apply the electrical signal; a display may be included. The system is used for determination of pulp necrosis, pulpitis, and involvement of teeth that approximate lesions (i.e., teeth that are next to diseased tissue).	IIa
4569	13201	Cardiac output dye dilution pump	Зүрхний гаралтын будаг шингэлэх насос	An electrically-powered device intended to produce pressure and draw blood through a densitometer to compute dye dilution curves, in conjunction with other devices (e.g., cardiac output unit for dye dilution or suitable x-ray equipment), for cardiac output determination.	IIa

4570	13209	Enteral feeding pump	Enteral тэжээлийн насос	A mains electricity (AC-powered) device designed to create pressure to accurately control the rates of flow of nutrient fluids directly into the stomach, duodenum, or jejunum, via enteral tubing, in patients who are unable or unwilling to consume adequate nutrients.	IIa
4571	13215	Bedside infusion pump, single-channel	Орны дэргэдэх дусаах насос, нэг суваг	An electrically-powered, non-ambulatory (bedside) device designed to facilitate the accurate and consistent administration of a single drug/solution which can be delivered via intravenous, subcutaneous, arterial, epidural, and intracavital routes using a dedicated infusion set; it is not dedicated to a specific treatment type. It is used to supply higher pressures than those provided by gravity infusion sets or infusion controllers (e.g., typical flow range of 1 to 999 ml/hour) and delivers solutions from a standard infusion bag or bottle of fluid. It is intended primarily for use at the bedside but typically has internal batteries that enable operation, e.g., during transportation.	IIa
4572	13235	Pupillograph	Пиллометр	A mains electricity (AC-powered) graphic recorder used for recording the response of the pupil to reflected light. It is used for ophthalmic diagnostic purposes.	IIa
4573	13236	Pupillometer, electrically-powered	Пиллометр, цахилгаанаар ажилладаг	An electrically-powered ophthalmic instrument intended to be used for measuring the width or diameter of the pupil. The patient will, e.g., view into this device and the operator will see the pupil and its shape.	IIa
4574	13279	Radiotherapy Units	Радио эмчилгээний нэгж	Instruments that emit beams of photon or particle energy, e.g. x-rays, gamma rays, electrons or other charged particles, to treat individuals with various forms of cancers. The energy of the beam of radiation, expressed in kilovolts or megavolts, determines both the depth of penetration into the body tissues and the energy of the electrons produced by secondary ionization within the tissues.	IIa
4575	13318	Regional-perfusion heat exchanger	Бүс нутгийн-перфузийн дулаан солилцогч	A specialized device designed for warming blood by transfer of heat across a membrane typically when perfusing extremities or organs other than the heart.	IIa

4576	13366	Pulmonary resuscitator, pneumatic, reusable	Уушигны сэхээн амьдруулах, пневматик, дахин ашиглах боломжтой	A device designed to provide or assist ventilation in a patient who is apnoeic or exhibits inadequate respiration through automatic pneumatic-driven pressure cycle functions. It is connected to a source of compressed oxygen (O2); either ambient air or medical air via oxygen/air terminal units or gas cylinder(s) is also used. It typically includes gas supply tubing, a gas control modulator, gas connector(s), safety valves, and a flex connector to connect to a face mask or endotracheal (ET) tube. It is used in ambulances, intensive care units (ICU), during internal patient transfer, accident and emergency (A&E), and mass casualty incidents (MCI). This is a reusable device.	IIa
4577	13391	Thoracic retractor, self-retaining	Цээжний ретрактор, өөрөө хадгалдаг	A self-locking, multi-pivoted, surgical instrument used for drawing aside the margins of a thoracic incision to permit examination or surgical intervention within the thoracic cavity. It will typically have two interchangeable, pivoted, broad and curved blades (self-adjusting their angle as the instrument is opened) at the distal end and a screw mechanism at the proximal end that, when rotated, forces the two legs of the instrument apart, also maintaining its set position once it has been set. It is made of high-grade stainless steel and comes in various designs and sizes for adult and paediatric patients. This is a reusable device.	IIa
4578	13425	Bone cutting router	Яс зүсэх чиглүүлэгч	A manual or powered machine, with a vertical cutting head, used in surgery to shape or cut a pattern into bone. This is a reusable device.	IIa
4579	13472	Scarifier	Зүсэгч	A hand-held manual surgical instrument consisting of many sharp points or cutting blades intended to be used to produce many small, superficial scratches or punctures in the skin, as for the introduction of smallpox vaccine. This is a reusable device.	IIa

4580	13488	Intraocular scissors, conventional-hinge, reusable	Дотор судасны хайч, ердийн нугастай, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument intended to be used to cut intraocular tissue of the anterior segment (e.g., iris). It comprises two pivoted blades which cut with a shearing action directly adjacent to the handles (i.e., not a probe-like device). It is typically metallic, may have ring handles or spring handles, and is available with various blade designs and sizes. This is a reusable device intended to be sterilized prior to use.	IIa
4581	13538	Respiratory oxygen sensor	Амьсгалын хүчилтөрөгчийн мэдрэгч	A device designed to detect the presence and determine the concentration of oxygen (O2) by paramagnetic, electrochemical, or other technique. The device is typically used as a component of an oxygen monitor or a patient monitoring device/system that determines the percentage of O2 in medical gases used in an enclosed atmosphere (e.g., an anaesthesia or ventilator circuit, oxygen tent, oxygen therapy device/system tubing) inspired by a patient. This is a reusable device.	IIa
4582	13671	Sphygmograph	Сфигмограф	A device that functions as a graphic printer of the waveform of the arterial pulse. This instrument usually includes a lever, the short end of which rests on the radial artery at the wrist, its long end being provided with a stylet which records (usually on a moving paper) the excursions of the pulse. The waveform typically consists of a curve having a sudden rise, followed by a sudden fall, after which there is a gradual descend marked by a number of secondary elevations. This group of devices may reflect old technology.	IIa

4583	13680	Diagnostic spirometer, professional	Оношлогооны спирометр, мэргэжлийн	An electrically-powered device designed exclusively for professional use to measure several or all respiratory gas volume and flow parameters for evaluation of basic pulmonary function [e.g., vital capacity (VC), peak expiratory flow (PEF), forced expiratory volume (FEV), and forced expiratory flow (FEF)]; it may also perform pulse oximetry. It is an instrument with a mouthpiece which connects to a computerized unit (e.g., analysis system, graph recorder, tablet). The measurements data are compared to standardized values or the patient's former values to help diagnosis and monitoring of chronic pulmonary disorders such as asthma, emphysema, or bronchitis, and potentially heart disorders.	IIa
4584	13705	Sponge, x-ray detectable	Хөвөн, рентген зураг илрүүлэх боломжтой	A steile device containing x-ray detectable elements that is applied to a surgical incision, other skin wound, or internal structures to control bleeding, absorb fluid, or protect organs from abrasion, drying, or contamination. This is a single-use device.	IIa
4585	13754	Electronic acoustic stethoscope	Цахим акустик чагнуур	An external, hand-held, electronic listening device designed to be used by a healthcare professional for real-time detection and amplification of body sounds (e.g., heart, blood vessels, lungs) that may be difficult to perceive when using a mechanical stethoscope; it is not designed for electrocardiography (ECG). It is typically designed to be connected to a computing device, which may operate interpretive software sometimes provided with the stethoscope, for recording and/or displaying the results in the form of a graph [phonocardiogram (PCG)].	IIa
4586	13756	Ultrasound stethoscope	Хэт авианы чагнуур	A device used with a hand-held ultrasound scanner for audible detection of blood flow. It typically contains earpieces and is attached to the ultrasound equipment for obtaining blood pressure and evaluating arterial blood flow in patients with compromised circulation.	IIa

4587	13763	Acupuncture electrical stimulation system	Зүү эмчилгээний цахилгаан өдөөх систем	An electrically-powered unit designed to be used specifically to apply electrical stimuli to acupuncture sites (electroacupuncture). It is an external low-intensity, low frequency pulse (usually 1 to 100 pulses per second), multimode generator intended to connect to acupuncture electrodes. The electrodes may be placed either on the skin, or through acupuncture needles that penetrate the skin at the acupuncture points. Some may use a probe to detect the acupuncture sites using visual or audio signals.	IIa
4588	13846	Secretion suction kit	Нууц сорох хэрэгсэл	A collection of items intended for suctioning secretions from a patient; typically included are sterile gloves, a suction catheter, and a container for collecting the secretions. This is a single-use device.	IIa
4589	13892	Suture kit, medicated	Оёдлын иж бүрдэл, эмтэй	A collection of sterile instruments, dressings, and pharmaceuticals necessary to perform a suturing procedure. It typically includes a disinfectant, needles and various threads (sutures used to join the edges of a wound or incision by stitching), drapes, swabs, needle holder, and other single-use disposable devices. This device may be used in a wide variety of clinical settings and some types may be used for the removal of sutures. This is a single-use device.	IIa
4590	13990	Temperature telemetric monitoring system	Температурын телеметрийн хяналтын систем	An assembly of devices designed to continuously measure and wirelessly transmit a patient's core and/or skin temperature to a receiving location (e.g., central station, bedside monitor) for viewing. It typically consists of a portable radio transmitter and skin, tympanic, rectal, oesophageal, and/or ingestible temperature sensors that are attached to the patient; and a bedside or central station receiver which detects the radio waves and displays and/or processes the temperature values using computing capabilities. The device is used mainly to evaluate the physiologic status of persons under or after severe physical stress and/or effort.	IIa

4591	14034	Continuous electronic patient thermometer, battery-powered	Батерейгаар ажилладаг тасралтгүй электрон өвчтөний термометр	A battery-powered, electronic instrument designed to continuously measure (monitor) a patient's body temperature (e.g., during the administration of general anaesthesia, treatment of hypothermia and hyperthermia). It comprises an electronic unit and an attached probe that detects and converts the changes in temperature into variations of an electric characteristic, e.g., resistance or voltage. These variations of the electric characteristic are processed in the electronic circuits and continuously displayed as temperature readings. This is a reusable device.	IIa
4592	14035	Intermittent electronic patient thermometer	Өвчтөний электрон термометрийн тасалдал	A hand-held, battery-powered, electronic instrument designed to measure a patient's body temperature. It may comprise an electronic unit with an attached probe or be a single unit (shaped like an ordinary hand-held capillary thermometer) that detects and converts the changes in temperature into variations of some electrical characteristic, e.g., resistance or voltage. These variations of the electrical characteristics are processed in the electronic circuits and in turn displayed, for a short period, as temperature readings. Thereafter the display will automatically turn off or go into standby mode. This is a reusable device.	IIa
4593	14069	Tonoscope	Тоноскоп	A deviced designed to be used to render sound visible by registering the vibrations on a screen. This device is used for examining the head or brain by means of sound.	IIa

4594	14074	Surgical pneumatic tourniquet system	Мэс заслын пневматик турник систем	A device assembly intended to occlude the blood flow and to obtain a bloodless field during limb surgery or amputation. It typically consists of a pneumatic tourniquet cuff, a source of gas pressure used to inflate the cuff, and a control unit, i.e., a pressure indicator and regulator. By using a double cuff and a manual switching or automatic valve, the pressure point is regularly changed to avoid tissue damage or necrosis. The device will also typically include a timer or elapsed-time meter. It may also be used in combination with intravenous local anaesthesia to limit the area affected by the anaesthesia.	IIa
4595	14089	Tracheostomy tube cannula, single-use	Трахеостомийн хоолойн суваг, нэг удаагийн хэрэглээ	A sterile, hollow, cylindrical, curved device designed as an internal, independent component of a metal or plastic tracheostomy tube. It is made of plastic and has precise dimensions allowing it to fit exactly into the outer tube and function as the inner cannula for tracheostomy tubes that have this kind of function. It is removed once or more times daily to facilitate the removal of phlegm, slime, and contamination build-up, thereby preventing blockage and infection of the stoma and eliminates the traumatic removal of the tracheostomy tube. This is a single-use device.	IIa
4596	14099	Tracheostomy kit, single-use	Трахеостомийн иж бүрдэл, нэг удаагийн хэрэглээ	A collection of sterile surgical instruments, dressings/swabs, syringe, dilators, tracheostomy tubes and other items intended to be used to create a percutaneous opening in the trachea (tracheotomy) for the insertion of a tracheostomy tube to relieve upper airway obstruction and to facilitate ventilation. This is a single-use device.	IIa

4597	14105	Static powered traction system	Статик хөдөлгүүртэй зүтгүүрийн систем	An assembly of devices designed to apply continuous traction forces from a motor through harnesses typically attached to the cervical or lumbar vertebrae. It usually consists of a mains electricity (AC-powered) motor with a control unit to generate and regulate the mechanical forces, and a cord (e.g., braided nylon) clamped to harnesses to transmit the force. Adjustable spreader bars attached to the control unit may be used to vary the angle at which the cord applies traction. The assembly may be table/wall-mounted for horizontal cervical and lumbar traction, or vertical cervical traction. It is used to widen intervertebral spaces to treat prolapsed intervertebral disks and other disorders.	IIa
4598	14106	Intermittent powered traction system	Завсарлагаанаар ажилладаг зүтгүүрийн систем	An assembly of devices designed to apply and relieve pre-set traction forces from a motor through harnesses typically attached to the cervical or lumbar vertebrae. It usually consists of a mains electricity (AC-powered) motor with a control unit to generate and regulate various intermittent mechanical forces (regular, progressive/regressive, cyclic), and a cord clamped to harnesses to transmit the force. Adjustable spreader bars attached to the control unit may be used to vary the angle at which the cord applies traction. The assembly may be table/wall-mounted for horizontal cervical and lumbar traction, or vertical cervical traction. It is used primarily to widen intervertebral spaces.	IIa
4599	14119	Invasive-pressure external transducer, reusable	Инвазив даралтын гадаад хувиргагч, дахин ашиглах боломжтой	A noninvasive, non-luminal, electronic device designed to be connected to an appropriate invasive luminal device (e.g., catheter, cannula, tube, needle), to detect pressures (e.g., blood, gastrointestinal, urinary pressures) within the lumen and transmit them as electrical signals to an appropriate monitoring device. It consists of a pressure transducer and a connection cable and may be designed to be used with a pressure transducer dome. This is a reusable device.	IIa

4600	14221	Nasogastric feeding tube	Хамрын ходоодны тэжээлийн гуурс	A sterile, thin, flexible, hollow cylinder intended to access the stomach of a patient through the nose and nasopharynx primarily for enteral feeding and the administration of medications, either by gravity or with a pump; it may also be used for aspiration of gastric contents (e.g., gastric secretions). It is typically a single-lumen, rubber or plastic tube of various diameters (typically smaller than those of nasogastric tubes intended primarily for decompression) with circular markings that serve as insertion guides. It is frequently used for very ill or comatose patients. This is a single-use device.	IIa
4601	14285	Ureterotome	Уретеротом	A device passed through the biopsy port of a dedicated endoscope designed to allow the surgeon to make a controlled incision in the ureter. It is a long, thin instrument with a sharp knife-like blade at the distal end. This is a reusable device.	IIa
4602	14301	Urological irrigation set	Урологийн усалгааны багц	A collection of sterile items intended to be used for the infusion of fluids used to flush the urethra and bladder. It typically includes tubing, connectors, a syringe, a roller clamp and other items used for flushing or continuous irrigation in procedures such as a cystoscopy or transurethral resection (TUR). This is a single-use device.	IIa
4603	14307	Urodynamic measurement system	Уродинамик хэмжилтийн систем	An assembly of devices used for advanced diagnosis/study of the bladder. It is used to identify the cause of abnormal voiding, including incontinence and is useful for the diagnosis of, e.g., neurogenic bladder diseases, stress incontinence, urinary path obstruction or spastic sphincters. A diagnostic urodynamic evaluation consists of uroflowmetry (measurement of urinary flow rate), urethral pressure profilometry (measurement of urethral pressure), gas or water cystometry (measurement of bladder capacity and response), and electromyogram (EMG) recording (the measurement of sphincter and other muscle activity). Long-term recording may also be analysed.	IIa

4604	14323	Vaginometer	Вагинометр	An instrument designed for measuring the length and diameter of the vagina.	IIa
4605	14352	Ventilator filter	Агааржуулагч шүүлтүүр	A screening device intended to be used to prevent particulates and microorganisms from entering the gas delivery lines of a ventilator. It is typically housed in plastic and constructed of paper, fibrous material, or copper (Cu) threads. This is a single-use device.	IIa
4606	14457	Wire ligature	Утасны холбоос	A sterile, thin metal cord intended to be tied tightly around a blood vessel, the pedicle of a tumour, or other structure in order to constrict it. This is a single-use device.	IIa
4607	14475	X-ray film dryer	Рентген хальс хатаагч	A device designed to dry x-ray film after it has been developed, fixed, and washed. It can be a freestanding unit, e.g., a cabinet, or it can be incorporated into an automatic x-ray film processing system.	IIa
4608	15015	Oxygen breath analyser	Хүчилтөрөгчийн амьсгалын анализатор	A mains electricity (AC-powered) laboratory instrument designed for intermittent/periodic measurements of oxygen (O2) content in a breath and/or respiratory gas specimen. It usually requires manual aspiration of a quantity of gas into a sampling chamber and may operate according to one of several basic principles (e.g., paramagnetism, polarography). The device is used in pulmonary function tests and for measurements in critically ill patients, such as infants in incubators and patients breathing air with supplemental oxygen.	IIa
4609	15028	Cricothyrotomy kit, reusable	Крикотиротомийн иж бүрдэл, дахин ашиглах боломжтой	A collection of various instruments, dressings, and other items intended to be used to perform a cricothyrotomy (an incision through the skin and cricothyroid) providing airway access within seconds allowing for immediate ventilation of the patient and necessary suction procedures. It is used to open a patient's airway in emergency interventions, e.g., accidental blockage to the upper airway tract, and prior to tracheostomy. This is a reusable device.	IIa

4610	15036	Gastroduodenal motility analysis system	Ходоод гэдэсний замын хөдөлгөөний шинжилгээний систем	An assembly of devices designed to evaluate peristaltic motility in the stomach and/or small intestines (usually the duodenum) by measuring pressure on an intragastric catheter/probe at several points. It typically includes a monitor display, computer, software, pressure catheter/probe, and a pH electrode to measure the acidity of the stomach contents. The system is intended to evaluate several diseases of the stomach and small intestines including the prediction of gastric and/or duodenal ulcers.	IIa
4611	15048	Intraocular pressure-reducing system	Нүдний дотоод даралт бууруулах систем	An assembly of manually-operated devices designed to reduce the intraocular pressure (IOP), i.e., internal pressure of the eye fluids, by applying a controlled, external, mechanical compression to the surface of the eye in preparation for ophthalmic surgery. It typically consists of a headband with an attached inflatable bellows that applies pressure, an air pump (e.g., a squeeze bulb), a pressure indicator (e.g., a manometer), and tubing. It is typically used prior to surgery to induce a temporary reduction of the IOP creating a condition known as "soft surgical eye", which helps in the prevention of haemorrhaging thus reducing the risk of a surgical procedure. This is a reusable device.	IIa
4612	15057	Flexible fibreoptic sigmoidoscope	Уян хатан шилэн сигмоидоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the sigmoid colon (the distal S-shaped part of the large intestine leading to the rectum). It is inserted through the anus during the procedure called a sigmoidoscopy or a proctosigmoidoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine the structures and lining of the sigmoid colon and for indications of altered bowel habit, colonic cancer, polyps. This is a reusable device.	IIa

4613	15074	Rigid optical bronchoscope	Хатуу оптик бронхоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the trachea, primary bronchi, and upper regions of the lungs. It is inserted through the mouth during the procedure called bronchoscopy. The inserted portion has an internal lumen sufficiently large to permit free respiration of the patient. The anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. It is used to diagnose lung infections, pneumonia, lung cancer, and allows physicians to view the upper regions of the lungs and take biopsies and samples of secretions. This is a reusable device.	IIa
4614	15085	Laparotomy sponge	Лапаротомийн хөвөн	A device intended to be used inside the body during a laparotomy to control bleeding, absorb fluid, and protect organs from abrasion. This is a single-use device.	IIa
4615	15115	Blood bank centrifuge	Цусны банкны центрифуг	An electrically-powered device intended to be used in a blood donor facility to process large volumes of blood using centrifugal force, usually to separate red blood cells or platelets from plasma for subsequent patient infusion, storage, or further processing. It is typically a large stationary structure with an electric motor, a shaft, a tachometer, and speed and time controls; it also includes a rotor for mounting one of several interchangeable heads with slots to fit sample holders (tubes/bags). It may additionally have refrigeration capabilities to perform temperature-sensitive procedures.	IIa

4616	15117	Low-speed floor centrifuge, refrigerated	Бага хурдтай шалны центрифуг, хөргөгчинд	A freestanding mains electricity (AC-powered) device used mainly in the clinical laboratory to process through low-speed centrifugal force (typically up to 10,000 rpm) a large volume of clinical specimens (e.g., body fluids, reagents) at cool temperatures. It is typically a large stationary structure with an electric motor, a shaft, a tachometer, and speed and time controls; it also includes a rotor for mounting one of several interchangeable heads with slots to fit tubes and other sample holders, and a compressor to keep the rotor chamber cool. The device helps to control the temperature in temperature-sensitive laboratory assays such as some enzyme and complement tests.	IIa
4617	15128	Sweat-induction iontophoresis system	Хөлс индукцийн ионтофорезын систем	An assembly of devices designed to induce sweating by the transdermal introduction of water-soluble electrolytic substances, typically containing pilocarpine, into the sweat glands using an electric stimulus (iontophoresis). It typically consists of a generator that supplies variable low-voltage electricity via two connected electrodes. After stimulus application a sweat sample is collected from the area where the positive electrode was located. The chloride and/or sodium concentration of this sweat sample is then analysed, primarily to help diagnose cystic fibrosis (CF). Devices associated with sweat collection/containment may be included.	IIa
4618	15137	Gastro-oesophageal pH/electrical impedance catheter	Ходоод-улаан хоолойн pH/цахилгаан эсэргүүцэл катетер	A flexible tube with an electrical conductor at its distal end intended to be inserted into the oesophagus and stomach to measure pH and/or bioimpedance, for the evaluation of gastro-oesophageal reflux disease (GERD), gastric ulcers, or other gastrointestinal conditions. It is made of synthetic polymers and metal materials and is intended to be proximally connected to an appropriate external gastric pH measuring/monitoring device. This is a single-use device.	IIa

4619	15169	Laboratory refractometer	Лабораторийн рефрактометр	A mains electricity (AC-powered) laboratory instrument used to measure refraction index (light deflection) of a solution to determine the concentration of the solutes in certain laboratory samples. It is generally designed to compensate for effects of different temperatures. A refractometer used in the clinic is usually precalibrated for total solids, this is expressed either as concentration of protein or as specific gravity.	IIa
4620	15193	Ultrahigh-speed floor centrifuge	Хэт өндөр хурдтай шалны центрифуг	A freestanding mains electricity (AC-powered) device used mainly in the clinical laboratory to process through ultrahigh-speed centrifugal force (typically up to 100,000 rpm) relatively small volumes of special suspensions. It is typically a large stationary structure with an electric motor, a shaft, a tachometer, and speed and time controls; it also includes a rotor for mounting one of several interchangeable heads with slots to fit tubes and other sample holders, and a compressor to keep the rotor chamber cool at the heat-generating high	IIa
4621	15275	Bone awl, reusable	Дахин ашиглах боломжтой ясны хуяг	A spike-like, manual, orthopaedic surgical instrument intended to bore holes in bone. It is a straight or slightly curve rod-like instrument with a sharp, trocar-like point at the distal end and a T-shaped handle at the proximal end, typically made of metallic and/or synthetic material. This is a reusable device.	IIa
4622	15283	Laboratory syringe filter	Лабораторийн тариурын шүүлтүүр	A sterile device used in combination with certain kinds of laboratory syringes to provide filtration of a sample typically for biological molecule isolation (ultrafiltration), removal of particulates, or for the moving phase of a chromatograph (microfiltration). This device typically consists of a membrane sealed within a housing with inlet and outlet connectors. This is a single-use device.	IIa

4623	15286	Angiographic syringe	Ангиографийн тариур	A sterile, manually-operated device consisting of a barrel (cylinder) with plunger intended to be used for the administration of a contrast medium into the heart, great vessels, and coronary arteries to study the heart and vessels under x-ray photography. It may in addition be intended for introduction of other fluids (e.g., saline). It is not intended to be used with a contrast medium injection system. This is a single-use device.	IIa
4624	15290	Rigid optical nephroscope	Хатуу оптик нефроскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the kidney. It is inserted percutaneously into the renal pelvis during nephroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the internal structures of the kidney and may be used in the removal of renal calculi. This is a reusable device.	IIa
4625	15316	Arthrogram kit	Артрограмм хэрэгсэл	A collection of instruments, pharmaceuticals, equipment and various supplies intended to be used to visualize a joint by radiographic study after injection of a contrast medium into the joint space. This is a reusable device after the appropriate cleaning/sterilization of the instruments/reusable products and the consumable/pharmaceutical products have been replenished.	IIa
4626	15630	Vaginoscope	Вагиноскоп	A hand-held endoscope intended to be used for the examination of the vagina, usually in children, typically when searching for foreign bodies or sources of bleeding. It typically includes an optical vaginal speculum and magnification device. This is a reusable device.	IIa

4627	15679	Tine test needle	Туршилтын зүү	A sterile device intended to be used to test a patient for previous exposure to tuberculosis-causing bacteria that consists of four to six short needles (tines) coated with tuberculosis (TB) antigens (tuberculin) embedded into a plastic handle. The tines are pressed (pricked) into the patient's skin (usually the inner side of the forearm), forcing the antigen under the skin. The test is evaluated by measuring the size of the largest papule after a period of 48 to 72 hours; a negative test is the absence of papules. This is a single-use device.	IIa
4628	15808	Evacuated intravenous fluid container	Нүүлгэн шилжүүлсэн судсаар хийх шингэний сав	A receptacle with a relative vacuum in its interior designed to be filled with intravenous (IV) fluids. It is typically an empty, pre-sealed container (e.g., glass bottles) with appropriate shape and size (usually in a range from 250 to 2000 ml) for IV solutions. It is mainly intended to facilitate filling by intravenous fluid compounders; it is typically used in clinical pharmacies and/or other healthcare departments and facilities. This is a single-use device.	IIa
4629	15881	Neonatal/paediatric vascular clamp	Нярайн/хүүхдийн судасны хавчаар	A hand-held manual surgical instrument designed to compress a blood vessel (a vein or an artery) during neonatal/paediatric surgery for haemostasis (arrest or prevention of bleeding). It typically has a self-retaining, scissors-like design with ring handles and very delicate blades at the working end. It is made of high-grade stainless steel and may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and the blades at the working end can have a wide variety of designs (e.g., curved, angled, semicircular) specific to different applications (e.g., for small vessels, anastomoses, aorta). This is a reusable device.	IIa

4630	16020	Donor-organ preservation system oxygenator	Донор-эрхтэн хадгалах системийн хүчилтөрөгчийн бодис	A sterile device designed to perfuse organs intended for transplantation to facilitate their preservation. It typically includes a pump for continuous delivery of the perfusate, an oxygenated solution that also removes carbon dioxide, through the organ to maintain its ion-pump activity and metabolism. The oxygenator is usually intended to prolong organ viability before transplantation; it is typically used in organs preserved under low-temperature conditions. This is a single-use device.	IIa
4631	16033	Endolymphatic shunt	Эндолимфийн шунт	A sterile tube or sheet surgically implanted in the membranous labyrinth of the inner ear to drain excess endolymphatic fluid typically as treatment for Meniere's disease, an inner ear disorder. The device permits unrestricted flow of the fluid from the distended end of the endolymphatic system into the mastoid cavity where resorption occurs. It is typically made of silicone. This is a single-use device.	IIa
4632	16065	Ophthalmic conformer	Нүдний конформатор	An ophthalmic device, typically constructed from moulded plastic, that is intended to be inserted temporarily between the eyeball and eyelid to maintain space in the orbital cavity and prevent closure or adhesions during the healing process following eye surgery. This is a single-use device.	IIa
4633	16069	Iridocapsular-fixation intraocular lens	Iridocapsular бэхэлгээний нүдний дотоод линз	An optical device, generally referred to as an intraocular lens (IOL), designed to be permanently implanted and fixed to both the iris and the posterior capsule as a substitute for the natural eye lens. It typically consists of a graduated plastic lens (i.e., having non-uniform light transmissivity for therapeutic purposes) with one or more fixing attachments frequently consisting of two loops. It is implanted following natural lens removal, usually after cataract surgery when implantation in the bag is not possible due to inadequate capsular support. Disposable devices associated with implantation may be included with the lens.	IIa

4634	16070	Iris-fixation intraocular lens	Цахилдаг бэхэлгээний нүдний дотоод линз	An optical device, generally referred to as an intraocular lens (IOL), designed to be permanently implanted and fixed to the iris as a substitute for the natural eye lens. It typically consists of a graduated plastic lens (i.e., having non-uniform light transmissivity for therapeutic purposes) with one or more fixing attachments frequently consisting of two loops. It is implanted following natural lens removal, usually after cataract surgery when implantation in the bag is not possible due to inadequate capsular support. Disposable devices associated with implantation may be included with the lens.	IIa
4635	16073	Symblepharon ring, synthetic	Symblepharon бөгж, синтетик	An implantable device formed as a circular band used to help prevent the eyelid from adhering to the eyeball. It is used occasionally in the case of, e.g., glaucoma, to keep raw surfaces separated. The device is made of synthetic material, e.g., polytetrafluoroethylene (PTFE), commonly known as Teflon, a polymer, or copolymer material.	IIa
4636	16080	Sacculotomy tack	Саккулотоми наалт	A stainless steel, pointed, device that is implanted into the inner ear and used to repetitively rupture the utricular membrane as the membrane expands under endolymphatic pressure. It is typically applied during ear/nose/throat (ENT) surgery as a surgical option to relieve the symptoms of, e.g., vertigo, Meniere's disease. This device is also known as a Cody tack.	IIa
4637	16166	Transcutaneous bilirubinometer	Арьсны билирубинометр	A noninvasive, battery-powered, hand-held, portable instrument intended to measure transcutaneous bilirubin (TcB) levels, in order to predict total serum bilirubin (TSB) levels in a neonate. It directs a light beam into the newborn’s skin, usually on the forehead, sternum or ear, and measures the intensity of multiple wavelengths (typically 2 or more) that are reflected from the newborns subcutaneous tissue. These optical signals are processed (typically by a photocell and microprocessor) to give a TcB and/or TSB value. It is used mainly for screening hyperbilirubinemia.	IIa

4638	16172	Ethylene oxide/steam sterilizer	Этилен исэл/уурын ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from medical devices and related products using a combination of steam and ethylene oxide (ETO) gas; it is used for products non-sensitive to high temperature, water, or steam. It is typically a freestanding unit including a large treatment chamber (for bulk sterilization) with shelves where the devices to be sterilized are placed, usually after cleaning of gross debris and then packed; a means to introduce the steam (typically from an external boiler) and/or the ETO gas into the chamber; and controls to regulate the time and/or temperature of the procedure.	IIa
4639	16173	Automatic-inflation electronic sphygmomanometer, non-portable	Автомат инфляцитай электрон даралт хэмжигч, зөөврийн бус	An electrically-powered device designed to noninvasively measure blood pressure using a self-contained software program that regulates automatic arm-cuff inflation and measurement cycles. It typically displays current heart rate and mean arterial pressure in addition to systolic and diastolic blood pressures; it may have memory to store blood pressure values and may sound an alarm if blood pressure exceeds pre-set limits. This device is not designed to be portable and is typically used bedside.	IIa
4640	16182	Dental cavity liner	Шүдний хөндийн доторлогоо	A substance intended to be applied to the interior of a prepared cavity before insertion of restorative material, such as amalgam, to protect the pulp of a tooth from chemical irritation. The device is typically a thin layer of zinc oxide (ZnO) and eugenol (C10H12O2), or calcium hydroxide (Ca(OH)2). After application, this device cannot be reused.	IIa
4641	16184	Dental polishing cup, reusable	Шүд өнгөлөх аяга, дахин ашиглах боломжтой	A rotational device, typically made from rubber material, that is used to apply polishing agents during dental prophylaxis (cleaning). Commonly known as a prophylaxis cup it is held in a dental handpiece, which rotates the cup at high speeds as the polishing agent is applied to the surface of the teeth. This is a reusable device.	IIa

4642	16196	Dental material cartridge-plunging applicator, single-component	Шүдний материалын хайрцаг шумбагч түрхэгч, нэг бүрэлдэхүүн хэсэг	A hand-held manual device intended to dispense a single-component dental material (not included) from a cartridge directly into the mouth; it is not intended to dispense more than one component simultaneously. It is typically a pistol-like device with a cartridge-plunging mechanism. This is a reusable device after appropriate cleaning.	IIa
4643	16204	Orthodontic wire	Ортодонт утас	A thread or slender rod of metal (e.g., stainless steel, precious metal) incorporated into an orthodontic appliance, typically as part of an orthodontic appliance system. It is available in various dimensions and grades, and is used to exert pressure on teeth in order to alter their position. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	IIa
4644	16227	Endocervical aspirator	Умайн хүзүүний аспиратор	A collection of devices designed to remove superficial tissue from the mucous membrane lining the cervical canal (endometrium) through manually-powered suction. It typically includes a slender endocervical curette, a syringe, a bulb, and a pipette. The device is used in obstetrics, gynaecology, surgery, oncology, histology, fertility studies, and cancer screening (cervical carcinoma); it is also used after colposcopy and to aid fertility by removing the mucus plug from the cervix.	IIa
4645	16266	Medication transfer needle, filtering	Эмийн шилжүүлгийн зүү, шүүлтүүр	A slender, rigid, sharp or blunt tube intended to be attached to a syringe and typically used in the pharmacy to aspirate and transfer fluid medication from a vial/ampule to another container for medication preparation or other purposes. It includes an integral filter (e.g., a microporous stainless steel filter) intended to retain micro-particles from the drug as it flows through the needle to reduce the risk of particle contamination of the patient medication; it does not include a back-pressure venting feature. This is a single-use device.	IIa

4646	16305	Pulmonary function long-term ambulatory recorder	Уушигны үйл ажиллагааны урт хугацааны амбулаторийн бичигч	An automated, battery-powered, device for long-term (typically 24-hours or longer) registration of certain pulmonary functions, e.g., respiration rate, which can provide trend information for use in a diagnosis. The patient is connected to and wears the device while he or she performs normal daily activities. The recorded measurements (data) can be down-loaded to an appropriate analyser at a medical facility for analysis.	IIa
4647	16330	Ultrasound pachymeter	Хэт авианы пахиметр	A mains electricity (AC-powered), ophthalmic device designed to use ultrasound to measure the thickness of the cornea, and may in addition be designed to measure axial length and anterior chamber depth. A small ultrasound probe(s) that is connected to this device is placed directly onto the cornea to make the measurements which are recorded and displayed by the pachymeter. The data is used to evaluate refractive eye surgery [e.g., laser assisted in situ keratomileusis (LASIK) treatment], evaluate ocular measurements for calculating intraocular lens power, monitor epithelium regrowth, and for other ophthalmic measurement evaluations.	IIa
4648	16335	Anaerobic chamber	Агааргүй камер	An airtight chamber filled with a mixture of oxygen-free gases designed to allow laboratory personnel to culture specimens, observe growth, perform subsequent testing, and incubate cultures under anaerobic conditions. It is typically in the form of a framework covered with a thick, transparent, flexible polyvinyl chloride (PVC) with glove boxes (i.e., sleeve-like ports placed in the sides of the chamber that terminate in thick gloves) which allow the operators to operate and manipulate the object placed in the chamber without compromising it atmosphere.	IIa

4649	16347	Keratoscope, powered	Кератоскоп, хөдөлгүүртэй	An electrically-powered ophthalmic device intended for qualitative assessment of the curvature of the anterior surface of the cornea, typically to detect astigmatism during ophthalmic surgery; it is not a keratometer. It may be designed as a hand-held instrument or to be mounted on a device (e.g., on an ophthalmic surgical microscope) and emits concentric rings of light onto the corneal surface (similar to a Placido disk) whereby the distorted reflection of the light rings on the cornea of the patient is indicative of astigmatism. This is a reusable device.	IIa
4650	16355	Endodontic apex locator	Эндодонтын оройг тогтоогч	A dental instrument, using electricity, designed to locate the top of the root canal during endodontic procedures. This is a reusable device.	IIa
4651	16367	Dental amalgam	Шүдний амальгам	A dental restorative material used primarily to fill tooth cavities, prepared by mixing liquid mercury (Hg) with an alloy of fine particles, composed mainly of silver (Ag), tin (Sn) and copper (Cu). The amalgam may be in either powder or tablet form, or in capsules, with portions of alloy and mercury predosed by the manufacturer. After application, this device cannot be reused.	IIa
4652	16399	Bronchoscopic aspiration tube, flexible	Гуурсан хоолойн аспирацийн хоолой, уян хатан	A flexible luminal device intended to be used in combination with a compatible bronchoscope for aspiration of materials (e.g., mucous, phlegm) from the respiratory tract and the bronchi of the lungs during bronchoscopy. It is typically in the form of a plastic tube. This is a reusable device.	IIa
4653	16413	Corneal bur, rust ring removal, reusable	Эвэрлэг бүрхэвч, зэв цагираг арилгах, дахин ашиглах боломжтой	A small shaft made of a hard metal (e.g., steel) with fluting or cutting planes designed for gentle removal ("brushing") of rust stains (rust rings) from the cornea after the extraction of a ferrous foreign object. It is attached to the tip of a special slow-rotation powered ophthalmic handpiece. This is a reusable device.	IIa
4654	16414	Ophthalmic tonometer calibrator	Нүдний тонометрийн калибратор	A test instrument used to calibrate an ophthalmic tonometer to insure that it is measuring the intraocular pressure (IOP) accurately. This can be a simple mechanical device or an electronic measuring device.	IIa

4655	16419	Ophthalmic camera	Нүдний камер	A photographic camera that is designed for ophthalmic use to capture and record images (photographs or digital) of the eye, e.g., the interior (fundus or retina) or the exterior (the iris or malformations) or when used in conjunction with fluoroscopic studies, the associated blood vessels, to provide diagnostic data as well as document the pathology. It may be a photographic film or a digital camera and can be used in conjunction with other ophthalmic devices, e.g., attached to a fundus camera.	IIa
4656	16429	ERCP catheter, non-balloon, non-electrical, single-use	ERCP катетер, бөмбөлөг биш, цахилгаангүй, нэг удаагийн	A non-electrical flexible tube inserted through a flexible endoscope, after its placement in the duodenum via the oral cavity, for the endoscopic cannulation of the gastrointestinal ductal system (i.e., the pancreatic, hepatic, and/or common bile ducts) during endoscopic retrograde cholangiopancreatography (ERCP). It is typically a single-lumen device made of radiopaque plastic materials with incremental markings at the distal tip, used to deliver a contrast medium to the ducts for their radiographic visualization; it does not incorporate a balloon. This is a single-use device.	IIa
4657	16432	Nasopharyngeal catheter	Хамар залгиурын катетер	A flexible tube intended to be used to access the nasopharyngeal cavity for suction or delivery of medication. This is a single-use device.	IIa
4658	16461	General-purpose donor-organ preservation/transport system	Ерөнхий зориулалтын донор-эрхтэн хадгалах/тээврийн систем	A non-dedicated system designed to support and maintain any donated organ (e.g., heart, kidney, liver) during transport from the donor to the receiving hospital where the organ will be transplanted into the recipient. This system will provide technical support functions to keep the organ in as near-physiologic state as possible.	IIa

4659	16462	Surgical countersink, reusable	Мэс заслын тоолуур, дахин ашиглах боломжтой	A rotary surgical instrument designed to enlarge the diameter of the proximal portion of a hole drilled in bone. It is a shaft of metal with a cutting head, available in various configurations, that is rotated at low speeds typically by a drilling system. The device is typically used to recess the head of a screw/bolt within bone (enable it to lie flush with or below the bone surface) or to help accommodate the implantation of a device in bone. This is a reusable device.	IIa
4660	16507	Cardiotocography telephone transmitter/receiver system	Кардиотокографийн утасны дамжуулагч/хүлээн авагчийн систем	An assembly of devices designed to transmit and receive foetal heart rate/uterine contraction signals through telephone lines or the Internet. It typically includes at the transmitting site an electronic device (e.g., a modem) that modifies signals from a medical device such as an electrocardiograph (ECG) monitor or recorder for transmission through telephone lines; at the receiving end a receiver processes the incoming signal and provides an output signal for display, recording, and/or for further transmission and processing by healthcare information systems. The system is typically used to send signals from patient homes, doctor’s offices, and/or remote locations to healthcare facilities.	IIa
4661	16522	Cardiokymograph	Кардиокимограф	A cardiograph used for recording the heart wall motion, (primarily the anterior left ventricular motion) in an amplitude versus time graph (cardiokymogram). This recorder uses a transducer, e.g., a flat coil, strapped to the chest as part of a high frequency low power oscillator. Motion within the electromagnetic (EM) field changes the electric parameters, e.g., capacitance, producing a change in the frequency of the oscillator. A cardiokymograph is very focal and can detect motion only with a vectorial component perpendicular to and directly under its coil. This cardiograph is intended for noninvasive detection of regional ischemic contractions.	IIa

4662	16533	Freezing chamber	Хөлдөөх камер	A mains electricity (AC-powered) chamber used to preserve and store materials at temperatures below the freezing point of water. It will typically consist of solid glass/steel/aluminium doors, thermostatic expansion valves, compressors, temperature controls, alarms for overtemperature, ducted air distribution system, rapid temperature recovery/accelerated freezing system, heating element to maintain a balanced environment, liquid nitrogen (LN2) injection with distribution fans. It will be used in laboratories, blood banks, haematology and pathology departments. It may be used for storage of volatile materials and/or be explosion-proof against high ambient temperatures.	IIa
4663	16534	Cryobiological storage container	Криобиологийн хадгалах сав	A super-insulated vessel designed to store cryobiological specimens (frozen tissues/organs), typically with the use of liquid nitrogen (LN2), for an indefinite period. The device is typically designed to store multiple specimens.	IIa
4664	16591	X-ray sheet film changing system	Рентген хуудасны хальс солих систем	An assembly of devices designed to transport single sheets of film of a specific size from a loading/supply magazine through a pair of intensifying screens, where an x-ray exposure is initiated, to a receiving bin at a fast rate (e.g., several films per second). It typically has five major components: a mounting stand, a film changer, a supply magazine, a receiving magazine, and a program selector. The operating cycle of the system typically consists of a transport period (i.e., when the film is in motion) and a stationary period (i.e., when the film is held still for exposure). The system is typically used in procedures such as angiography and cardiac catheterization.	IIa

4665	16592	X-ray roll film changing system	Рентген хальс солих систем	An assembly of devices designed to transport roll films of a specific size from a loading/supply magazine through an x-ray exposure area to a receiving magazine, in a manner very similar to the path of film through a movie projector. The system typically has five major components: mounting stand, changer, supply magazine, receiving magazine, and program selector. The operating cycle of the system is comprised of a transport period, when the film is in motion, and a stationary period when the film is held still for exposure.	IIa
4666	16610	Fluid transfer set	Шингэн шилжүүлэх багц	A collection of sterile devices and supplies designed to transfer fluids (e.g., drugs, vaccines, solutions) between a first container(s) [e.g., a vial(s)] and a second container [e.g., an intravenous (IV) bag]. It is available in a variety of configurations and typically includes tubes, connectors, spike(s), syringes, and caps according to the fluid to be transferred (e.g., blood, medicine), the procedure to be performed, and/or the physical characteristics of the containers involved in the fluid transfer. Dedicated devices are available to perform procedures such as IV solution transfer or peritoneal dialysate transfer. This is a single-use device.	IIa
4667	16631	Non-absorbing intravenous administration set	Шингээдэггүй судсаар тарих багц	A collection of sterile devices designed for the intravenous (IV) administration of solutions and manufactured with low-absorption plastics to avoid partial absorption of the components of the infused solutions. It typically consists of plastic tubes made of or lined with non absorbing plastics [e.g., polyethylene (PE), Teflon], to avoid solution contact with polyvinyl chloride (PVC) components; it also includes a check valve, a roller clamp, a Y-site connector, and Luer adaptors. The set is mainly used in high-flow infusion pumps for administration of solutions containing products (e.g., nitroglycerin) that are absorbed by PVC materials. This is a single-use device.	IIa

4668	16649	Intravenous administration set, basic	Судсаар тарих багц, үндсэн	A collection of devices, typically sterile, designed to conduct fluids from an intravenous (IV) fluid container to a patient's venous system. It typically includes tubing, connectors, chambers, clamps, and needles or injection ports. It is typically used for gravitational intravenous administration. This is a single-use device.	IIa
4669	16658	Dental impression material adhesive	Шүдний даралтын материалын цавуу	A liquid material specifically made to give adhesion of an impression material to the impression tray. After application, this device cannot be reused.	IIa
4670	16668	Carbide dental bur, reusable	Дахин ашиглах боломжтой карбид шүдний шар	A rotary cutting device made of high-grade steel, the working end of which is made from, or coated with, tungsten carbide, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, e.g., teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a reusable device.	IIa
4671	16669	Steel dental bur, reusable	Дахин ашиглах боломжтой ган шүдний шар	A rotary cutting device made from high-grade carbon steel with the working end typically formed with cutting planes, e.g., spiralled flutes, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials intended for use in the fabrication of dental devices. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a reusable device.	IIa
4672	16670	Diamond dental bur, reusable	Дахин ашиглах боломжтой алмаазан шүдний шар	A rotary cutting device made of high-grade steel with the working end coated with particles of diamond, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials intended for use in the fabrication of dental devices. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a reusable device.	IIa

4673	16692	Prophylactic unit, dental	Урьдчилан сэргийлэх тасаг, шүдний	Dental equipment designed to dislodge plaque, calculus, and stain from teeth. It typically consist of an electronic unit including a generator that may operate at sonic (6 kHz is typical) or ultrasonic frequencies (in the range from 25 to 42 kHz) and that usually provides also a water spray, a probe which includes interchangeable specialized tips usually named as universal, periodontal, and sickle (for fine debridement and/or sensitive teeth), a switch, and a cable to connect the handpiece to the generator. It is intended for preventive dentistry; they are used for prophylactic periodontal, pedodontic, and orthodontic procedures.	IIa
4674	16703	Ethoxy benzoic acid dental cement	Этокси бензойн хүчил шүдний цемент	A non-sterile, non-aqueous substance intended for professional use as a dental cement (e.g., luting agent, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between ethoxy benzoic acid (EBA) and zinc oxide (ZnO). It typically includes some additional fillers/components. After application, this device cannot be reused.	IIa
4675	16704	Glass ionomer dental cement	Шилэн иономер шүдний цемент	A non-sterile substance intended for professional use as a dental cement (e.g., luting agent, liner, base, pulp-capping material) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between an aluminosilicate glass powder and an aqueous solution of a polyalkenoic acid. It typically includes some additional fillers, and may include setting substances that are in the minority (e.g., resin, metal). After application, this device cannot be reused.	IIa
4676	16705	Zinc polycarboxylate dental cement	Цайрын поликарбоксилат шүдний цемент	A non-sterile substance intended for professional use as a dental cement (e.g., luting agent, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between zinc oxide (ZnO) and aqueous solutions of polycarboxylic acid (e.g., polyacrylic acid). It typically includes some additional fillers/components. After application, this device cannot be reused.	IIa

4677	16708	Silicophosphate dental cement	Силикофосфатын шүдний цемент	A non-sterile substance intended for professional use as a dental cement (e.g., luting agent, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between a powder of acid soluble aluminosilicate glass and metal oxides [principally zinc oxide (ZnO)] and an aqueous solution of phosphoric acid (which may contain metal ions). After application, this device cannot be reused.	IIa
4678	16709	Zinc eugenol dental cement	Цайрын эвгенол шүдний цемент	A non-aqueous substance containing eugenol (C10H12O2) compounds capable of reacting with zinc oxide (ZnO), e.g., accelerators, gums, resins and inert inorganic fillers (e.g., for the root canal), suitable for use in restorative dentistry as temporary restoration and base, and as a cavity liner. After application, this device cannot be reused.	IIa
4679	16710	Zinc phosphate dental cement	Цайрын фосфатын шүдний цемент	A non-sterile substance intended for professional use as a dental cement (e.g., luting agent, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between an oxide powder [the principal constituent of which is zinc oxide (ZnO)] and an aqueous solution of phosphoric acid. It typically includes some additional fillers/components. After application, this device cannot be reused.	IIa
4680	16725	Self-cured dental restorative composite resin	Өөрөө эдгээх шүдийг нөхөн сэргээх нийлмэл давирхай	A dental restorative material consisting of a blend of glass or ceramic particles dispersed in a synthetic, self-polymerizable, organic resin matrix that is typically used to fill dental cavities or restore damaged dental tissue. It is typically a two-paste system (self-cured when put together) consisting basically of a dimethacrylate resin [(e.g., a bisphenol A and glycidylmethacrylate (BIS-GMA)]; the filler is usually made of glass, quartz, or ceramic. Typically, one paste contains an accelerator and the other a catalyst which polymerize a solid resin. This single-use product should match the colour of the original teeth for aesthetic reasons.	IIa

4681	16727	Dental prosthesis restorative material, unfilled resin	Шүдний протезийг нөхөн сэргээх материал, дүүргэгдээгүй давирхай	A material designed to repair dental prostheses that consists of an unfilled polymeric resin. The material works as a bonding agent to provide a strong and long-lasting attachment to the segments of a broken or cracked prosthesis; it typically consists of a single or two-component polymeric (e.g., acrylic) resin that usually becomes a solid polymer when treated with light and/or heat. The material is used in a dentist's office or dental laboratory to repair fixed dental prostheses and/or partial or total dentures.	IIa
4682	16728	Denture base resin	Шүдний суурь давирхай	A polymer-based dental material used for the fabrication of a denture base (the portion of a complete or removable partial denture which rests on the oral mucosa and retains the artificial teeth). This is a single-use device.	IIa
4683	16729	Denture base resin, heat-cured	Шүдний суурь давирхай, халуунаар хатаасан	A resin that requires heat for polymerization intended to be used in the dental laboratory to manufacture a complete or partial denture base (the portion of a denture that rests on the oral mucosa and retains the artificial teeth). It usually consists of an acrylic monomer of methyl methacrylate (typically supplied as a powder) that becomes a polymer (polymethylmethacrylate or PMMA) when mixed with a catalyst such as benzoylperoxide (typically supplied as a liquid). Reinforcing fillers may be included in the resin to increase its strength and/or durability. This is a single-use device.	IIa
4684	16730	Dental appliance fabrication material, resin	Шүдний аппарат үйлдвэрлэх материал, давирхай	A resin intended to be used in the dental laboratory to manufacture a patient-worn dental prosthesis or appliance (e.g., denture base, occlusal splint/night guard), that either: 1) polymerizes under heat (heat-cured), light (light-cured), and/or after a period of time (self-cured); or 2) can be shaped by a dental mill [e.g., based on computer-aided design/computer-aided manufacturing (CAD/CAM) technology]. It may in addition be intended to fabricate non-patient-worn devices (e.g., drilling templates using 3-D printing). After application, this material cannot be refabricated.	IIa

4685	16737	Denture base resin kit, heat-cured	Шүдний суурь давирхайн иж бүрдэл, халуунаар хатаасан	A collection of resins and other devices and/or materials intended to be used in the dental laboratory to manufacture a complete or partial denture base (the portion of a denture that rests on the oral mucosa and retains the artificial teeth) using resins that polymerize with heat. It usually includes the resin monomer (typically an acrylic monomer of methyl methacrylate) and a catalyst intended for polymerization of the monomer; it also includes other products such as pigments, plasticizers, and/or devices (e.g., flasks, clamps). This is a single-use device.	IIa
4686	16784	Radioaerosol administration set	Радиоаэрозолийн хэрэглээний багц	A collection of devices used to quickly deliver radioaerosol to a patient for ventilatory pulmonary scintigraphy. It is used with an aerosol pump/nebulizer or a compressed air line to generate the radioactive aerosol, and a lead (Pb) protective container to hold the radioactive solution during the inhalation procedure. It typically consists of one or several one-way valves to direct the flow of aerosol to the patient, transport tubing to carry the aerosol to the patient, a mouthpiece, and a bacteria filter to trap any exhaled aerosol. This is a single-use device.	IIa
4687	16798	Nasoenteral tube	Nasoenteral хоолой	A sterile, thin, flexible, hollow cylinder designed to access the small intestines (duodenum or jejunum) through the nose and nasopharynx for examination (e.g., of intestinal contents), treatment (e.g., decompression, short-term feeding), or other purposes. It is a single- or dual-lumen, rubber or plastic tube (nasoduodenal or nasojejunal tube) that is smaller and longer than a nasogastric tube and may have a small weight or magnet at the distal tip to facilitate placement. It is frequently used for very ill or comatose patients. Some types are used to remove air and liquids from the stomach by connection to intermittent suction units and/or for enteral feeding. This is a single-use device.	IIa
4688	16802	Syringe scale magnifier	Тариурын масштабын томруулагч	A device placed over the barrel of a syringe to magnify the scale gradations displayed upon the syringe to assist the user in reading them. This is a reusable device.	IIa

4689	16803	Ventilator IMV supplemental circuit, single-use	Агааржуулагч IMV нэмэлт хэлхээ, нэг удаагийн	A device designed to provide mandatory breathes to ventilator patients to supplement the spontaneous respiratory rate. It is typically constructed of plastics and consists of tubing and one-way valves. It will be used as an accessory on older ventilators without built-in intermittent mandatory ventilation (IMV) functions. This is a single-use device.	IIa
4690	16828	Inoculating-loop sterilizer	Тарилт хийх гогцоо ариутгагч	A mains electricity (AC-powered) device designed for total elimination of microorganisms from clinical laboratory inoculating loops and/or needles. It typically consists of a dedicated tabletop unit with a small open chamber (e.g., an open cone or cylinder) to accommodate the needle or loop, and a source of heat (e.g., infrared lamp, electric heaters) that provides a temperature high enough to incinerate microorganisms in a few seconds.	IIa
4691	16833	Bone marrow biopsy procedure kit	Ясны чөмөгний биопсийн процедурын багц	A packaged collection of sterile equipment that includes a disposable biopsy needle and other supplies used to perform a histologic specimen aspiration during a bone marrow biopsy. This is a single-use device.	IIa
4692	16834	Renal biopsy procedure kit	Бөөрний биопсийн процедурын багц	A collection of sterile devices designed to perform in vivo sampling of kidney tissue. It typically includes a biopsy needle and other supplies required for this procedure. This is a single-use device.	IIa
4693	16835	Soft-tissue biopsy procedure kit, non-medicated	Зөөлөн эдийн биопсийн процедурын хэрэгсэл, эмийн бус	A collection of sterile devices designed to perform a non-specific soft tissue biopsy. It includes the biopsy needle used for this procedure; it does not include a pharmaceutical. This is a single-use device.	IIa

4694	16845	Blood/fluid warming set	Цус/шингэн дулаацуулах багц	A sterile device(s) used in conjunction with a blood/fluid warmer to heat banked blood, blood products, and intravenous (IV) fluids to a controlled temperature appropriate for rapid infusion into a patient. It typically consists of: 1) a coiled tubing; or 2) a pouch or pouches; or 3) a flexible cassette; clamps and a bubble trap may be included. Heat is provided by a blood/fluid warmer used as an in-line heat exchanging device for infused blood/fluid products. The set is typically used in the operating room (OR) or in accident and emergency (A&E) situations when rapid infusion of several units of blood/fluid is necessary. This is a single-use device.	IIa
4695	16849	Laparoscopic insufflator	Дурангийн инсуффлятор	A mains electricity (AC-powered) device designed to distend the peritoneal cavity by filling it with a pressure-limited gas [typically carbon dioxide (CO2)] providing the operator with a space (pneumoperitoneum) in which to perform an examination or surgical intervention. Electronics assist in monitoring the pressure and maintaining the gas-filled space by compensating for gas leakage. Other surgical instruments may be introduced into the peritoneal cavity through other laparoscopic ports. This device may also be referred to as a gas distention system.	IIa
4696	16858	Catheter injection port	Катетер тарилгын порт	A device intended to be placed on the Luer end of a catheter or intravenous (IV) tubing as a site of injection of substances into the in situ catheter/tubing. It is also intended to be used as a heparin lock by keeping the heparin flush solution in the catheter. This is a single-use device.	IIa
4697	16873	Foetal blood sampling kit, scalp	Ургийн цусны дээж авах иж бүрдэл, хуйх	A collection of sterile devices designed intended to collect blood from the foetal scalp during labour or obstetric endoscopic procedures. It typically includes instruments to pierce the scalp and obtain the blood sample such as a syringe/handle, needles/blade, a plastic cone, tubing, and possibly supplies such as swabs and disinfectant solutions. This is a single-use device.	IIa

4698	16903	Laser blood flowmeter	Лазер цусны урсгал хэмжигч	A device using laser technology to provide a method of confirming and measuring the velocity of blood flow providing help in locating and the assessment of the extent of vascular flow restrictions, e.g., clots, stenosis or mechanical damage. This can be done, either invasively or noninvasively, depending on the type of measuring device (e.g., probe) connected to the unit.	IIa
4699	16950	Chemical-precipitation silver recovery system	Химийн-хур тунадасны мөнгө олж авах систем	An assembly of devices designed to recover soluble silver (Ag) complexes typically from solutions used during radiographic (x-ray) film processing in healthcare facilities. The device includes a container in which the solution is placed and a precipitant (e.g., trisodium salt) to separate the silver from the solution; the precipitant causes the silver to settle in a very short period. The retrieved silver is typically returned to a manufacturer for handling.	IIa
4700	16951	Electrolytic-plating-cell silver recovery system	Электролитийн бүрэх эсийн мөнгө сэргээх систем	An assembly of devices designed to recover soluble silver (Ag) complexes typically from solutions used during radiographic (x-ray) film processing in healthcare facilities. It recovers silver by an electrolytic process of electroplating silver onto a plating cell; the electrolytic plating cell acts as the cathode in the electrolytic process which may be performed in the fixing tank or in a separate tank to facilitate collection of the used fixer. Silver is removed from the fixing solution when a controlled, direct electric current passes between the electrodes, causing the silver to plate onto the cathode. The retrieved silver is typically returned to a manufacturer for handling.	IIa

4701	16952	Metallic-replacement-cartridge silver recovery system	Металл солих хайрцагны мөнгө сэргээх систем	An assembly of devices designed to recover soluble silver (Ag) complexes typically from solutions used during radiographic (x-ray) film processing in healthcare facilities. It recovers silver from solutions by a process in which a sealed cartridge filled with iron (usually steel wool) undergoes an oxidation-reduction reaction with silver (e.g., silver thiosulfate) solutions to produce ferrous ions and metallic silver. Usually two cartridges are placed in series so that a secondary cartridge will collect the silver that a first one may pass. The retrieved silver is typically returned to a manufacturer for handling.	IIa
4702	16992	Peritoneal dialysis catheterization kit	Хэвлийн диализийн катетержуулалтын иж бүрдэл	A collection of sterile devices designed to insert a peritoneal dialysis catheter intended to infuse a solution (dialysate) into the peritoneal cavity for dialysis. It typically includes scalpels, scissors, dilators, tunnelers, needles and trocars; supplies such as sponges, medicines, drapes, and sutures; and usually a peritoneal dialysis catheter that is frequently tunnelled for long-	IIa
4703	17123	Cell disrupter	Эсийн тасалдуулагч	A mains electricity (AC-powered) device used in the laboratory to split the cell membrane in order to render its contents accessible. It will typically achieve this by using high voltage current or ultrasonic shock waves to create the disruption.	IIa
4704	17131	Orthopaedic surgery tissue debris collector, single-use	Ортопедийн мэс заслын эд эсийн хог хаягдал цуглуулагч, нэг удаагийн	A container designed to collect bone, cartilage, or adjacent soft-tissue debris/fragments (e.g., extracted by shaving or drilling procedures) during orthopaedic surgery (e.g., autograft transplantation). This is a single-use device.	IIa
4705	17141	Exhaled-air pulmonary resuscitator	Амьсгалаар амьсгалах уушигны сэхээн амьдруулах аппарат	A device designed to provide respiratory support to patients whose airway is open but whose breathing is weak or absent; it is used by a healthcare provider to exhale their breath into the patient. The device typically consists of a mouthpiece, a non-rebreathing valve and/or filter, and a mask. The non-rebreathing or one-way valve is designed to prevent fluid, droplet, or exhaled air contact flowing back from the patient to the healthcare provider.	IIa

4706	17145	Rigid optical cystoscope	Хатуу оптик цистоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the bladder and the urinary tract. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during cystoscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. It is used to examine/diagnose incontinence, the inability to pass urine (retention), recurrent urinary tract infections, to remove tissue samples/stones/small tumours from the bladder, and for removal of the prostate. This is a reusable device.	IIa
4707	17147	Laser radiometer	Лазер радиометр	An instrument designed to measure the radiant flux (radiant power) of a laser beam in different ranges of the electromagnetic spectrum (e.g., infrared, visible, ultraviolet, or a combination) within a given power range, accuracy, and resolution. It typically includes a pre-filter intended to remove light wavelength which is not in the intended spectral range; a primary detector consisting of a temperature-stabilized, solid-state [e.g., selenium (Se) or indium-gallium-arsenide] diode used to detect radiation; electronic circuits including an amplifier; an electric meter; a power source (e.g., a battery); and a display showing the results either in analogue or digital format.	IIa
4708	17148	Pulse oximeter, line-powered	Пульс оксиметр, шугамаар ажилладаг	A mains electricity (AC-powered) photoelectric device intended for the continuous transcutaneous measurement and display of haemoglobin oxygen saturation (SpO2). The signals, typically produced by light-emitting diodes (LEDs) and a receiving detector in a probe, or directly built-in, are used to make the measurements using the principle of spectrophotometry. The oximeter displays the SpO2 values and may calculate/display other parameters, e.g., pulse rate, electrocardiogram (ECG). The device is typically used bedside.	IIa

4709	17149	Electrolytic sterilizer	Электролит ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from smaller medical devices and related products using electrolysis. It operates by electrolyzing a water-based solution containing a very low concentration of a chemical that becomes a disinfectant, such as a sodium chloride solution that becomes an effective amount of sodium hypochlorite as a disinfectant after the electrolysis. It typically includes a sterilization container; an electric power source; electrodes placed at both sides of the container; a sterilization solution; and a means to dispose the solution after use.	IIa
4710	17167	Ion-exchange-cartridge silver recovery system	Ион солилцооны хайрцагны мөнгө сэргээх систем	An assembly of devices designed to recover soluble silver (Ag) complexes typically from solutions used during radiographic (x-ray) film processing in healthcare facilities. It recovers silver from solutions by the substitution of ions in the solution for other ions bound to a large polymer molecule. The solution is passed through a packed resin cartridge (or column) where the	IIa
4711	17169	Demand valve	Эрэлтийн хавхлага	A non-sterile device that is used to regulate the therapeutic gas flow to a patient in response to the patient's breathing effort. It is used, e.g., in ventilator breathing circuits, resuscitation devices and in "on demand" analgesia devices. This is a reusable device.	IIa
4712	17170	Resuscitator face mask, reusable	Сэхээн амьдруулах нүүрний маск, дахин ашиглах боломжтой	A flexible, form-shaped device that is placed over a patient's nose and mouth to direct ambient air, or medical oxygen (O2) and air, from a resuscitator to the upper airway and lungs. It is typically made of non-conductive sterilizable materials (e.g., silicone) that will create a gastight seal against the face. It will typically include a 15 mm and/or 22 mm connector and is available in a range of sizes (baby to adult). It will be directly attached to the resuscitator and held in place on the patient's face by the operator. This device is intended for use with a breathing resuscitator but may be used for the delivery of anaesthesia gases. This is a reusable device.	IIa

4713	17177	Low-speed floor centrifuge, nonrefrigerated	Бага хурдтай шалны центрифуг, хөргөгчгүй	A freestanding mains electricity (AC-powered) device used mainly in the clinical laboratory to process through low-speed centrifugal force (typically up to 10,000 rpm) a large volume of clinical specimens (e.g., body fluids, reagents) at ambient temperature. It is typically a large stationary structure with an electric motor, a shaft, a tachometer, and speed and time controls; it also includes a rotor for mounting one of several interchangeable heads with slots to fit tubes and other sample holders. The device is mainly intended for non-temperature sensitive procedures.	IIa
4714	17180	Subcutaneous infusion/injection port needle	Арьсан доорх дусаах/тарих портын зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument intended to be attached to a syringe and designed for the therapeutic injection or infusion of medicinal substances directly beneath the skin layer. This is a single-use device.	IIa
4715	17189	Gastric lavage system	Ходоод угаах систем	A device assembly designed for automated or semi-automated irrigation, washing, and evacuation of debris (e.g., toxic substances) from the stomach. It typically consists of a mains electricity (AC-powered) electromechanical unit that includes a pump for infusion of non-medicated liquid (e.g., saline); an extractor (frequently using vacuum) and controls for liquid temperature/pressure and rate of liquid infusion/withdrawal; and bags for the irrigation solution and waste. Most systems can deliver charcoal to the stomach for absorption of toxic substances; they are mainly used in emergency departments and for cleaning/evacuation of the stomach before some endoscopic and/or surgical procedures.	IIa
4716	17190	Ultrasonic cardiac output unit	Хэт авианы зүрхний гаралтын нэгж	A unit that measures the blood flow from the heart using the ultrasonic Doppler effect. The measured results are reproduced by this device.	IIa

4717	17193	Laser beam guide, standard, single-use	Лазер туяаны хөтөч, стандарт, нэг удаагийн	A sterile, laser-dedicated, probe-like device designed to be used to direct and localize the transmission of laser output energy to the operative site. It is typically made of fibreoptic materials and is flexible in its design permitting ease of movement and guidance by the surgeon/operator. It will typically be attached to a laser delivery unit, the arm connected directly to the laser's output connection that provides the necessary extension to bring the laser output nearer the target site vicinity. This is a single-use device.	IIa
4718	17217	Vestibulo-ocular function chair	Vestibulo-нүдний үйл ажиллагааны сандал	A mains electricity (AC-powered) dedicated chair used in the assessment of vestibulo-ocular reflex during head movement through the evaluation of rhythmic movement (nystagmus) and/or deviation of the eyes in response to the stimulation of the vestibular system by angular acceleration or deceleration. This device is motor-driven which provides the precisely controlled rotation (direction, velocity, acceleration) of the chair. It is typically a component of a system that includes other devices, e.g., projectors, video cameras, and computing capabilities.	IIa
4719	17219	Ethylene oxide monitor	Этилен ислийн монитор	A mains electricity (AC-powered) environmental monitoring device designed to continuously or periodically measure and display the atmospheric concentration of ethylene oxide (ETO), typically in the vicinity of an ethylene oxide sterilizer (e.g., in a hospital sterilizing room). It typically includes an ethylene oxide sensor (e.g., solid-state), a control unit, and a display; it may also include alarms activated at pre-set concentrations (e.g., 10, 20 ppm), recording capabilities, and/or a transmitter for remote central monitoring.	IIa

4720	17227	Ethylene oxide emission control system	Этилен ислийн ялгаралтыг хянах систем	An assembly of devices designed for the removal and/or neutralization of ethylene oxide (ETO) vapours. It may use one of several techniques, including hydrolysis procedures to convert ETO into less hazardous products or other chemical reactions that remove ETO from the air. Ethylene oxide emission control is performed mainly around sterilizers that use ETO and in other areas of healthcare facilities using ETO for sterilization.	IIa
4721	17228	Computerized rhinomanometer	Компьютержсэн риномanометр	An electronic device designed to calculate nasal resistance by measuring nasal airflow and the air pressure producing that flow within a patient's nasal passages, e.g., for the calculation of the nasal patency during ear/nose/throat (ENT) assessment/treatment. It is used to quantify the amount of nasal obstruction/congestion and is a computer-based device with dedicated software for data calculation, presentation (display), and storage purposes. This device will typically be line-powered (AC-powered) or powered via a connected computer and include or interface with a printer for hard copies of the graphical data presentation.	IIa
4722	17242	Posturography system	Постурографийн систем	An assembly of devices designed to test a patient's sensory, voluntary, and/or reflexive motor control of balance and mobility providing biofeedback for rehabilitation of balance problems. The patient is placed on a dedicated platform equipped with built-in sensors, transducer and/or force plates that register movement when he/she adjusts his/her centre of gravity (COG) alignment according to the doctor's instructions, or, the platform provokes destabilizing perturbations and the output is recorded to a computer where they are graphically reproduced. This device is used, e.g., for motor control test (MCT), posture studies, balance, mobility training, and/or sense of equilibrium studies.	IIa

4723	17442	Penile tumescence long-term ambulatory recorder transducer	Бэлэг эрхтний хавдар үүсэх урт хугацааны амбулаторийн бичлэгийн хувиргагч	A device intended to be used together with a parent device (e.g., a penile tumescence long-term trend recorder) to detect the swelling of the penis and provide the electronic signals of the physiological changes which are processesed and displayed as measurements by the parent device. This is a reusable device.	IIa
4724	17459	Intravenous solution compounder	Судсаар тарих уусмалын хольц	A device that is typically exclusively used in the clinical pharmacy or a manufacturing plant for the production of intravenous (IV) fluids. These fluids will typically be distributed using the appropriate containers.	IIa
4725	17467	Polytetrafluoroethylene suture	Политетрафторэтилен оёдол	A sterile, single-strand (monofilament), synthetic, non-bioabsorbable thread made of expanded polytetrafluoroethylene (ePTFE) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached needle intended to be disposed of after single use. The thread, used most frequently in cardiovascular surgery, provides temporary wound support until the wound sufficiently heals to withstand normal stress. This is a single-use device.	IIa
4726	17495	Electrocochleograph	Электрокохлеограф	A graphic recorder used for measuring electrical potentials (i.e., cochlear microphonics, summating potentials, and action potentials of the eighth cranial nerve) in response to acoustic stimuli measured by an electrode in the external acoustic canal or applied to the promontory or the round window through the tympanic membrane.	IIa
4727	17496	Impedance cardiac output unit	Импеданс зүрхний гаралтын нэгж	A device used to quantify cardiac output from measurements of the thoracic impedance changes associated with cardiac activity. It typically consists of electrodes appropriate to measure the thoracic impedance and an electronic unit that processes the data and displays the cardiac output values. This device only measures in real time and does not record data.	IIa

4728	17501	Intravenous line connector	Судсаар хийх шугамын холбогч	A device that is inserted into the compatible connecting Y-piece on an intravenous (IV) line to allow delivery of medication. This is a single-use device.	IIa
4729	17502	Radiation therapy beam block CAD/CAM system	Цацрагийн эмчилгээний цацраг блок CAD/CAM систем	An assembly of software-based devices designed for automated computer-aided design (CAD) and computer-aided manufacturing (CAM) of radiation therapy beam blocks used to configure the radiation field. This software based unit includes the devices used to make the forms (dies) in which the blocks are cast, or the devices used to directly cut out the blocks of ingots (milling machine) when they are automatically steered by the computer-aided design/computer-aided manufacturing (CAD/CAM) processing unit. The metal used to produce the blocks is a special alloy giving the same screening effect as lead, e.g., Roses's metal.	IIa
4730	17532	Radiation therapy treatment record/verify system computer	Цацрагийн эмчилгээний эмчилгээний бүртгэл / системийн компьютерийг шалгах	A device that is a dedicated micro or minicomputer (not an off-the-shelf product) that is designed to be a component of a radiation therapy treatment record/verify system used to monitor linear accelerator parameters to verify proper radiotherapy treatments and provide a permanent record.	IIa
4731	17579	Transtelephonic defibrillation system	Транстелефон дефибрилляцийн систем	An assembly of devices that allows electrocardiographic diagnosis and defibrillator control by physicians remote from their patients by means of a telephone connection. It typically consists of a portable external defibrillator that is equipped with an electrocardiograph, a microphone, a battery, and a mobile telephone (typically cellular); also included is a base station that consists of a control panel and an electrocardiogram (ECG) display with recording facilities.	IIa

4732	17591	Pulmonary resuscitator, manual, reusable	Уушигны сэхээн амьдруулах, гарын авлага, дахин ашиглах боломжтой	A hand-operated device designed to provide or assist ventilation in patients who are apnoeic or exhibit inadequate respiration. It typically employs ambient air and includes a large flexible chamber that is hand-ventilated, a gas reservoir, tubing, and a connector for attachment to a mask or endotracheal (ET) tube; oxygen (O2) from an O2 source may also be connected when necessary. It is used by emergency medical services (EMS) in ambulances, intensive care units (ICU), during internal patient transfer, accident and emergency (A&E), mass casualty incidents (MCI), and is generally placed strategically throughout a hospital. This is a reusable device.	IIa
4733	17605	Autotransfusion system blood component processing set	Цус сэлбэх системийн цусны бүрэлдэхүүн хэсгийг боловсруулах багц	A collection of noninvasive devices that typically includes tubing, containers (e.g., bags or bowls for treatment, reinfusion, waste disposal) and filters intended to be used to process (filter/wash) blood components (e.g., red or white blood cells, platelets) in conjunction with a dedicated pump (not included) as part of an autotransfusion procedure; it is not dedicated to suction and/or anticoagulation. This is a single-use device.	IIa
4734	17609	Denture reliner, hard	Шүдний шүдний наалт, хатуу	A denture relining material intended to be applied by a dentist or dental laboratory technician as a permanent coating or lining on the base or tissue-contact surface of a denture and which sets to a hard state. Denture relining is defined as a process of providing a new fitting surface to a denture. After application, this device cannot be reused.	IIa
4735	17610	Denture reliner, soft, professional	Шүдний налуу, зөөлөн, мэргэжлийн	A denture relining material used in dentistry by a dentist or dental laboratory technician that is applied as a permanent coating or lining on the base or tissue-contacting surface of a denture and which sets to a soft, plastic condition. Denture relining is defined as a process of providing a new fitting surface to a denture (ISO 1942-2, def 2.111). After application, this device cannot be reused.	IIa

4736	17643	Extracorporeal membrane oxygenator	Биеийн гаднах мембраны хүчилтөрөгч	A device designed for the extracorporeal diffusion of oxygen into blood across a gas-permeable membrane during a cardiopulmonary bypass or extracorporeal membrane oxygenation procedure. It includes a membrane that separates a thin layer of blood from the oxygenating gas; oxygen diffuses from the gas compartment into the blood, while carbon dioxide diffuses from the blood through the membrane and is flushed out of the oxygenator by the oxygen flow. The device may include an integrated heat exchanger, arterial filter, or cardiotomy/venous reservoir. This is a single-use device.	IIa
4737	17651	Mercury vacuum cleaner	Мөнгөн ус тоос сорогч	A vacuum cleaner specially designed for recovering liquid mercury (Hg) and mercury compound spills. This device has appropriate filters to absorb mercury vapours.	IIa
4738	17660	Tattoo ink injector	Шивээсний инжектор	A hand-held mains electricity (AC-powered) device intended to accept a tattoo needle to percutaneously inject tattoo ink between the layers of the skin. It is intended to be used to tattoo the body with cosmetic decorations and adornments to replace colour in the skin, typically for patients affected by pigment deficiencies (e.g., to cover scars and burns, provide artificial eyebrows, give natural appearance to the nipples after breast reconstructive surgery, or to enhance eyes and lips). This is a reusable device.	IIa
4739	17662	Flexible video bronchoscope, reusable	Уян хатан видео бронхоскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for endoscopic procedures of the airways and tracheobronchial tree (i.e., bronchoscopy). It typically consists of a handle portion and an insertion tube which includes working channels and a distal camera from which anatomical images are transmitted and displayed on a monitor (video bronchoscopy). It is typically intended for flexible optical intubation, airway inspection, and may be used to assist in other diagnostic or therapeutic procedures [e.g., bronchoalveolar lavage (BAL)]. This is a reusable device.	IIa

4740	17663	Flexible video gastroscope, reusable	Уян хатан видео гастроскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and/or treatment of the oesophagus and/or stomach. It is inserted through the mouth and images are transmitted by a video system with an image sensor chip at the distal end of the endoscope and images displayed on a monitor; it may also be used to obtain biopsies or perform other procedures. This is a reusable device.	IIa
4741	17664	Flexible video sigmoidoscope, reusable	Уян хатан видео сигмоидоскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the sigmoid colon (the distal S-shaped part of the large intestine leading to the rectum), typically in relation to altered bowel habit, colonic cancer, or polyps. It is inserted through the anus during sigmoidoscopy or proctosigmoidoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This is a reusable device.	IIa
4742	17701	Vascular port administration set	Судасны портын удирдлагын багц	A collection of devices designed to conduct fluids from an intravenous (IV) fluid container to a patient's venous system via a previously implanted injection/infusion port. It typically includes a noncoring needle designed with a lateral hole (side-hole), tubing, connectors, chambers, clamps and may include an injection placement aid. This is a single-use device.	IIa
4743	17715	Endotracheal tube laser beam-blocking wrap	Эндотрахеаль хоолойн лазер туяаг хориглох боолт	A synthetic surgical sponge and adhesive-backed metal foil intended to be used to surround an endotracheal (ET) tube or other type of tracheal tube to protect it against typical surgical levels of laser energy. This is a single-use device.	IIa

4744	17727	Joint laxity analyser, line-powered	Хамтарсан сулралын анализатор, шугамаар ажилладаг	A mains electricity (AC-powered) device used to measure the functioning of normal or abnormal joints (e.g., a knee) in order to evaluate the slackness and/or displacement in the motion of the joint (i.e., the joint laxity), usually by measuring ranges of motion, acceleration, or forces exerted upon the joint. It may be employed in the assessment of other characteristics of the joint, e.g., stability and/or anterior/posterior tibial displacement. This device is typically used for reconstructive surgery to evaluate and control joint laxity and stability of the knee and the length of the reconstructed ligaments.	IIa
4745	17735	Arthroscopic suturing unit	Артроскопийн оёдлын хэсэг	A manually-operated, surgical device intended to be used in combination with a compatible arthroscope to mechanically approximate the edges of an internal wound or incision, including muscle tears, with sutures during arthroscopy. A suture punch mechanism places the number of sutures desired by the surgeon at the site of the lesion. This is a reusable device intended to be sterilized prior to use.	IIa
4746	17745	Gastrointestinal motility manometric catheter, non-electronic	Ходоод гэдэсний хөдөлгөөнт манометр катетер, электрон бус	A non-electrical flexible tube intended to be inserted through the nose or rectum into the gastrointestinal (GI) tract for measuring pressure to assess peristaltic motility in the GI tract (e.g., oesophagus, stomach) or rectal musculature and anal sphincter functions, typically in the evaluation of GI disorders [e.g., gastro-oesophageal reflux disease (GERD), faecal incontinence]. It functions via infusion of water (water-perfused catheter) or insufflation of air/gas (air-charged catheter) into the catheter, whereby pressure signals are conducted to proximally-connected external pressure transducers in/connected to a dedicated analysis system. This is a single-use device.	IIa

4747	17781	Rectosphincteric balloon	Ректосфинктерийн бөмбөлөг	A hollow rubber structure, expandable with either liquid or air, used in conjunction with a manometer to assess anorectal function (anorectal manometry), typically to evaluate the rectosphincteric reflex upon balloon dilation. The device is typically used in the investigation of lower bowel disorders such as faecal incontinence or Hirschsprung's disease (HD). This is a single-use device.	IIa
4748	17785	Endoscopic ligature loop	Дурангийн холболтын гогцоо	A device intended to be used to constrict a protruding tissue (e.g., a varix or a polyp) to prevent or control bleeding (haemostasis) following tissue removal or to induce tissue necrosis, during an endoscopic procedure. It is applied using a dedicated endoscopic ligator. This is a single-use device.	IIa
4749	17789	Gastrostomy T fastener	Gastrostomy T бэхэлгээ	A device intended to be inserted into the stomach percutaneously to appose the anterior gastric wall to the anterior abdominal wall, typically to facilitate the insertion of a percutaneous gastrostomy tube or for procedures requiring stabilization/fixation of hollow gastrointestinal (GI) structures. It consists of a metal T-bar, usually with an attached plastic suture. It is typically positioned within a longitudinal side slot in a needle; the needle with the suture is introduced into the gastric lumen and the T-bar is then moved into the lumen, the suture is pulled back against the stomach wall and a cotton pledget anchors it outside the abdominal wall. This is a single-use device.	IIa
4750	17825	Scalp vein intravenous administration set	Толгойн венийн судсаар тарих багц	A collection of sterile devices designed to conduct fluids from an intravenous (IV) fluid container into a patient's scalp vein. It typically includes tubing, connectors, chambers, clamps, and specialized needles to access scalp veins. The device is normally intended for use on paediatric patients, especially infants. This is a single-use device.	IIa

4751	17827	Bronchial balloon catheter	Гуурсан хоолойн бөмбөлөг катетер	A sterile flexible tube designed with a balloon at or near the distal tip that may be introduced directly (usually under fluoroscopic guidance) or through a bronchoscope so that its distal tip reaches the bronchi, permitting the inflation of the balloon after introduction. The device is typically used to treat benign stenosis and strictures of the airway and/or to control pulmonary bleeding (i.e., hemoptysis). This is a single-use device.	IIa
4752	17840	Tracheostomy tube, T	Трахеостомийн хоолой, T	A device inserted into the artificial opening made in the throat during a tracheotomy, to secure the airway. The device is used as a tracheal stent and/or a tracheostomal appliance in patients with subglottic stenosis. It is a hollow, flexible, T-shaped device, typically made of plastic materials and is a single-use device.	IIa
4753	17865	Jet ventilator, manually-operated	Гараар ажилладаг тийрэлтэт агааржуулагч	A hand-held, manually-operated device used for ventilation in emergency situations where there is a complete or partial obstruction of the airways, or when using a rigid bronchoscope. A mixture of air and oxygen (O2) is jet ventilated (rapidly pumped in a series of small amounts) via a dedicated jet ventilation tracheal tube. This device can be driven by compressed air.	IIa
4754	17887	Infrared patient thermometer, ear	Хэт улаан туяаны өвчтөний термометр, чих	A hand-held, battery-powered, electronic instrument designed to measure the temperature of a patient's ear canal. In most cases it is intended to estimate the internal (core) temperature of the body by measurement of infrared radiation from within the auditory canal. It may claim to measure directly the infrared emissions from the tympanic membrane. An infrared ear thermometer usually displays values corrected by an offset of actual patient oral/rectal temperatures. This is a reusable device.	IIa

4755	17888	Infrared patient thermometer, skin	Хэт улаан туяаны өвчтөний термометр, арьс	A hand-held, electrically-powered instrument designed to estimate the temperature of a site on the skin (e.g., axilla, forehead) by measurement of body infrared emissions at this particular point. It provides a method to determine temperature patterns or variations on the surface of the skin (e.g., due to differences in perfusion). This device may be used in the home. This is a reusable device.	IIa
4756	17908	Physical therapy ultrasound/neuromuscular stimulation system	Физик эмчилгээний хэт авиан/мэдрэл-булчингийн өдөөлтийн систем	An assembly of devices that includes a neuromuscular electrical stimulator as an integral part of a therapeutic ultrasound system intended for the simultaneous delivery of ultrasound and electrical energies for physical therapy, typically to help prevent scar tissue formation in healing tissues and to help reduce muscle spasms and pain; it may in addition be capable of delivering either energy alone. The system is designed to produce a rhythmic contraction/release of injured muscles to promote the removal of metabolic by-products while applying ultrasound treatments.	IIa
4757	17935	High-frequency ventilation endotracheal tube	Өндөр давтамжийн агааржуулалтын дотоод хоолой	A hollow cylinder that is inserted into the trachea to ventilate a patient during high-frequency (percussive) ventilation. It is a thin device usually employed without a cuff to allow rapid ventilation gas escape around the tube and is used in cases of severe damage/constriction to the airways and when the employment of a normal type endotracheal (ET) tube is not possible or adequate. This is a single-use device.	IIa
4758	17979	Solvent recycling system	Уусгагчийг дахин боловсруулах систем	An assembly of devices designed to reclaim a solvent, typically alcohol, that has been used in, e.g., hospital/institution processes. The recovered product will meet the specifications for recycling. This system may be a freestanding unit or may be incorporated as a component of, e.g., a larger laboratory system.	IIa

4759	17987	Sperm filtration system	Эр бэлгийн эсийг шүүх систем	An assembly of devices incorporating filters that separate motile sperm from nonmotile sperm and seminal fluid/plasma for use in intrauterine insemination and other forms of assisted reproduction techniques. In some systems, the semen is filtered through a mechanical matrix filter. This is a single-use device.	IIa
4760	18004	Donor-organ/tissue/cell preservation solution	Донор-эрхтэн/эд/эсийг хадгалах шийдэл	A solution intended to be used for the flushing, transport, storage and preservation of donor cells, tissues and/or organs (e.g., stem cells, skin, amniotic membrane, cardiovascular tissue, bone, tendon, kidney, liver, heart, pancreas) intended for transplantation. The solution contains a mixture of chemicals/ingredients intended to maintain cell/tissue/organ viability until implantation in the recipient; some types may be combined with blood. After application, this device cannot be reused.	IIa
4761	18009	Intraosseous infusion kit	Яс дотор дусаах иж бүрдэл	A collection of sterile devices designed to perform an intraosseous (IO) infusion (i.e., an infusion directly into the bone's medullary cavity for the purpose of administering emergency medications and other fluids). It typically consists of a needle (possibly of a special design), an inserting handle, a scalpel, an infusion set, swabs and sutures. This device is used as an alternate to the preferred intravenous (IV) route when this cannot be established in a timely manner, typically during cardiac arrest, patients with respiratory failure or in shock, and when peripheral IV infusion is very difficult. This is a single-use device.	IIa
4762	18013	Thermocycling laboratory incubator	Термоциклийн лабораторийн инкубатор	A mains electricity (AC-powered) incubator used for performing heating and cooling sequences of test samples. The unit is self-contained and has a chamber to hold the samples. Materials such as water, aluminium (Al) blocks, or conductive fluids, can be used for heating and cooling the medium. Temperature cycling can be used in, e.g., cell culture studies, deoxyribonucleic acid (DNA) sequencing or gene manipulation.	IIa

4763	18026	Phlebotomy kit	Флеботоми иж бүрдэл	A collection of devices and supplies used in the practice of collecting blood samples. It typically consists of test tubes, racks, needles, bandages, gauze pads, and a sharps container. This is a single-use device.	IIa
4764	18038	Corneal topography system	Эвэрлэгийн топографийн систем	An assembly of ophthalmic devices used to measure the curvature and concentricity of the anterior corneal surface. It typically consists of a line-powered videokeratoscope using Placido imaging (involves disk with concentric white and black rings), and application software for installation in an included computer workstation, or external computer, for image processing and analysis. This device will be used to evaluate the need for refractive eye surgery, e.g., laser assisted in situ keratomileusis (LASIK) treatment.	IIa
4765	18066	Intravenous line connector, needleless	Судсаар хийх шугамын холбогч, зүүгүй	A sterile device designed to allow access to an intravenous infusion set or catheter port using a needleless mechanism. It may consist of one of several different configurations including devices using a pre-pierced septum and a blunt cannula; valve connectors; or capped Luer connectors with a manual clamp. The device is intended to eliminate the use of needles for intravenous administration of medications. This is a single-use device.	IIa
4766	18067	Intravenous line recessed-needle connector	Судсаар хийх нүхтэй зүү холбогч	A sterile device designed to allow access to either the Y-site of an intravenous (IV) line or an injection adaptor on the infusion catheter. Typically, a needle located inside a plastic housing can be inserted into a standard septum and a Luer fitting located at the opposite end allows the connection of a syringe or infusion set. A manual or automated mechanism moves the housing to protect the operator from the needle once the infusion is finished. The device is intended to eliminate an exposed needle after administration of medications. This is a single-use device.	IIa

4767	18069	Needleless medication/vaccine injector, mechanical	Зүүгүй эм/вакцины тарилга, механик	A hand-held, mechanically-powered (e.g., spring-powered) device designed to inject medication (especially a local anaesthetic, vaccine or medication) transcutaneously into the human body. It is a manually-operated, needleless device that can have various configurations according to application. It will typically be a pistol-shaped plunger driven instrument with single or multi-pointed holed barrels through which the medication/vaccine is driven under high pressure. The delivered medication/vaccine will typically be supplied in prefilled containers. This device is not a hypodermic syringe. This is a reusable device.	IIa
4768	18089	Scanning electron microscope	Сканнердах электрон микроскоп	A device designed to provide topographical images of specimen surfaces for understanding the structures. A scanning electron microscope (SEM) consists of an electron gun and vacuum chamber, an electromagnetic imaging (lens) system, a scanning system, a specimen chamber, secondary/backscatter detectors, a viewing chamber/fluorescent screen, and photographic systems. The imaging system provides an electron beam with a fine focal spot that is deflected horizontally and vertically; the energy exchange between the beam and the sample results in electromagnetic radiation that is detected to produce an image. Its clinical uses provide information on haematologic disorders and biological surfaces.	IIa
4769	18090	Transmission electron microscope	Дамжуулах электрон микроскоп	A device designed to operate like a light microscope, except it uses an electron beam instead of light to magnify the image, allowing much greater magnification and resolution. A transmission electron microscope (TEM) consists of an electron gun and vacuum chamber, an electromagnetic condenser and imaging lens systems, a specimen chamber, a viewing chamber and fluorescent screen, and photographic and vacuum systems. Tissue samples must be fixed, processed, embedded, sectioned, mounted, and usually coated	IIa

4770	18091	Scanning/transmission electron microscope	Сканнердах/дамжуулах электрон микроскоп	A device designed as a combination of a transmission electron microscope (TEM) and scanning electron microscope (SEM) in one instrument. It consists of an electron gun and vacuum chamber, an electromagnetic condenser/imaging (lens) systems, a specimen chamber, a viewing chamber/fluorescent screen, photographic/vacuum systems, and a scanning system. Tissue samples must be prepared according to the technique to be performed (transmission or scanning), including fixation, embedding, and sectioning; additional preparation for scanning microscopy may be needed (e.g., gold (Au) coating of samples). Its clinical uses include visualization of tissue, cells and structures, and haematologic disorders.	IIa
4771	18106	Simulator, invasive blood pressure	Симулятор, инвазив цусны даралт	An instrument that is used to test/calibrate invasive blood pressure patient monitoring devices. It mimics the electrical output generated from the blood pressure transducer. Alternatively, it may mimic a pressure source for testing/calibrating blood pressure transducer/monitor systems.	IIa
4772	18116	Patient-administration information system	Өвчтөн захиргааны мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support patient administration services. Data typically include patient demographic information with patient admission, discharge, and outpatient-contact information. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	IIa

4773	18133	Intravascular membrane oxygenator	Судасны мембраны хүчилтөрөгчийн бодис	A device designed for intravascular diffusion of oxygen into the blood across an implantable (vena cava) gas-permeable membrane, used mainly as a temporary treatment for failing lungs in adults with respiratory distress syndrome. It includes a hollow-fibre multilayered membrane made of microporous plastic that separates a thin layer of blood from the oxygenating gas; oxygen diffuses across the membrane into the blood by a vacuum pump controlled by a flowmeter while carbon dioxide diffuses from the blood through the membrane. Inlet and outlet gas tubes exit a small skin incision for inflow of oxygen and outflow of carbon dioxide. This is a single-use device.	IIa
4774	18154	Bone growth ultrasonic stimulator	Ясны өсөлтийн хэт авианы өдөөгч	A mains electricity (AC-powered) device designed to accelerate bone formation (osteogenesis) through the application of ultrasound energy. It typically consists of a pulsed low-intensity ultrasound generator that includes a transducer probe and a retaining and alignment fixture for the probe. The device is typically used to promote healing of nonunion fractures; it is also used to speed the healing of fresh fractures.	IIa
4775	18169	Parenteral-nutrition management software	Парентерал хоол тэжээлийн менежментийн програм хангамж	A software program intended to facilitate the management of the ordering, calculation, and preparation of customizable parenteral nutrition dosages for individual patients, according to physician prescriptions. It is used in conjunction with filling and compounding machines in hospital pharmacies and compounding centres to enable the automated and systematic production of parenteral nutrition dosages.	IIa

4776	18746	Intrauterine imaging medium catheter	Умайн доторх дүрслэлийн дунд катетер	A flexible tube designed for the intrauterine injection of an opaque tracer medium, to facilitate radiography of the fallopian tubes/uterus (salpingography/ hysterosalpingography), and/or a saline solution, to enhance transvaginal ultrasonography (TVUS) [saline infused sonography (SIS)/ hysterosonography]. It is typically a dual-lumen tube, with a non-latex inflatable cuff (balloon), pad or cap near the distal tip intended to seal the cervix, and may include devices dedicated to catheter function (e.g., stylet, syringe). This is a single-use device.	IIa
4777	19033	Invasive blood pressure transducer simulator	Инвазив цусны даралт хувиргагч симулятор	An instrument designed to mimic the electrical output of an invasive blood pressure transducer (e.g., central venous pressure, intra-arterial pressure) to test invasive blood pressure monitors, excluding the monitor transducer. It includes an electronic generator that simulates the electrical output of the transducer, typically equivalent to a wide range of pressure variation (e.g., from -50 to +300 mm Hg); either static pressures or time-varying (i.e., dynamic) pressures can be simulated. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	IIa
4778	21087	Forced-air laboratory oven	Албадан агаартай лабораторийн зуух	A mains electricity (AC-powered) device with a heating chamber designed to provide fan-assisted convection to ensure a homogenous temperature profile in the chamber. It is used for laboratory procedures that involve drying, heating, and sterilizing objects. It typically operates at temperatures from 10° Celsius above ambient temperature to 250/300° Celsius. It is available in a variety of designs and chamber sizes, and the chamber is typically lined with corrosion-proof materials (e.g., stainless steel). The device is thermally insulated, has manual or microprocessor-operated controls, heating elements, and time and temperature sensors.	IIa

4779	22073	Cryogenic laboratory freezer, liquid nitrogen	Криоген лабораторийн хөлдөөгч, шингэн азот	An electrically-powered laboratory appliance designed for extended cell/tissue (e.g., ovum, embryo, bone, cornea) storage, at temperatures below the point when most all biological activity ceases, using liquid nitrogen (LN2) as the cooling and storage agent. LN2 storage provides a temperature of -180° Celsius (-292° Fahrenheit) or colder. The device typically consists of a chamber with two vessels separated by a vacuum space; automatic temperature controls; an external container to replenish the cryogenic fluid; a pressure-relief device, alarm, recorder; and a pressure-control valve. Cells/tissues are immersed in the liquid nitrogen using appropriate sealed containers.	IIa
4780	22074	Cryogenic laboratory freezer, vapour-phase nitrogen	Криоген лабораторийн хөлдөөгч, уурын фазын азот	An electrically-powered laboratory appliance designed for extended cell/tissue (e.g., ovum, embryo, bone, cornea) storage, at temperatures below the point where most all biological activity ceases, using liquid nitrogen (LN2) as the cooling agent and vapour-stage nitrogen for storage [storage temperature of -140° Celsius (-220° Fahrenheit)]. The device typically consists of a chamber with two vessels separated by a vacuum space; automatic temperature controls; an external container to replenish the cryogenic fluid; a pressure-relief device, alarm, recorder; and a pressure-control valve. Cells/tissues are immersed in the vapour atmosphere above the LN2 in appropriate containers.	IIa

4781	22724	Side-notch biopsy gun, reusable	Хажуу талын биопсийн буу, дахин ашиглах боломжтой	A hand-operated surgical instrument designed for the automatic extraction of a small tissue sample from an anatomic structure of the body (i.e., a biopsy), while causing minimal surrounding tissue damage, for pathological examination/testing. It has a spring-loaded mechanism intended for transcutaneous insertion of its distal needle-like portion. It typically has a trocar-like distal tip with a side-notch cutter; when activated, a sharp, sliding cannula slices a segment of tissue. It is typically used to obtain samples of soft tissue from the kidneys, prostate, pancreas, liver, and breast, often performed under image guidance. This is a reusable device intended to be sterilized prior to use.	IIa
4782	22725	End-cut biopsy gun, reusable	Төгсгөлийн биопсийн буу, дахин ашиглах боломжтой	A hand-operated surgical instrument designed for the automatic extraction of a core tissue sample from an anatomic structure of the body (i.e., a biopsy), while causing minimal surrounding tissue damage, for pathological examination/testing. It has a spring-loaded mechanism intended for transcutaneous insertion of its distal needle-like portion. The open cylindrical needle that allows a full-width tissue sample to be obtained over the entire length of the biopsy when activated. It is typically used to obtain samples of soft tissue from the kidneys, prostate, pancreas, liver, and breast, often performed under image guidance. This is a reusable device intended to be sterilized prior to use.	IIa

4783	22726	End-cut biopsy gun handpiece/needle	Төгсгөлийн зүсэгдсэн биопсийн бууны гар утас/зүү	A hand-operated, non-electronic, surgical instrument designed for the automatic extraction of a core tissue sample from an anatomical structure (a biopsy), while causing minimal surrounding tissue damage, for tissue pathological examination/testing. It consists of both: 1) a handpiece with a spring-loaded mechanism and release trigger; and 2) a percutaneous, open, cylindrical biopsy needle that allows a full-width tissue sample to be obtained over the entire length of the biopsy when activated. It is typically used to obtain samples of soft tissue from the kidneys, prostate, pancreas, liver, and breast, often performed under image guidance. This is a single-use device.	IIa
4784	30066	Video cassette tape	Видео кассет соронзон хальс	A device that contains a magnetic tape (band) upon which video information is recorded and stored for viewing or documentation. The tape spools on integrated spools which are activated by the recording/playing device utilized. The device is reusable (re-recordable) and is for general-purpose use.	IIa
4785	30082	Air-conduction hearing aid, wearable case	Агаар дамжуулагч сонсголын аппарат, өмсдөг гэр	A battery-powered acoustic device intended to compensate for impaired hearing by transmitting amplified sound waves to the eardrum through air. It typically consists of a microphone, an amplifier, and a speaker (receiver) contained in a case worn on the body (e.g., in a pocket or on a belt). The microphone receives sound waves and converts them into electrical signals which are increased by the amplifier and sent as sound waves, by the speaker, to the eardrum through an earmould connected to the case by a cord. Because it's relatively large size permits high amplification, this device has been used for profound hearing loss; it has largely been replaced with behind-the-ear (BTE) devices.	IIa
4786	30889	Needle, injection, single-use	Зүү, тарилга, нэг удаагийн	A slender, sharply-pointed metal tube used to penetrate the skin to deliver or withdraw fluids to or from a patient. This is a single-use device.	IIa

4787	30899	Tinnitus masker	Чихний шуугианыг дарагч	An electronic device intended to generate noise of sufficient intensity and bandwidth to mask tinnitus (a ringing in the ear or internal head noises). Because the device is able to mask internal noises, it is also used as an aid in hearing external noises and speech.	IIa
4788	30905	Warming infant bed, adjustable	Нялхсын дулаацах ор, тохируулгатай	A mains electricity (AC-powered) bed specifically designed for a newborn, sick, or premature baby that requires additional heating provided by a heating pad system. It is typically ergonomically designed for the attending/nursing staff or parents and the motorized mechanism is used to electrically adjust the height and possibly tilt the bed to provide better access to the baby. It may be equipped with features such as shelves, drawers, a canopy, and is typically used in the maternity department.	IIa
4789	31249	Tracheobronchial suction/insufflation catheter	Гуурсан хоолойн гуурсан хоолойн сорох/инсуфляцийн катетер	A flexible tube designed for periodic tracheal and pharyngeal mucus aspiration and inflation of the lungs with a flow of gas from its distal tip. These catheters consist of either dual- or single lumen tubes; dual-lumen catheters allow simultaneous suction and insufflation, and single lumen catheters allow alternating suction and insufflation. This is a single-use device.	IIa
4790	31253	Medical device air compressor	Эмнэлгийн төхөөрөмжийн агаарын компрессор	A mains electricity (AC-powered) device designed to create compressed air and supply it directly to gas-powered or compressed air dependent devices (e.g., ventilators or other respiratory devices, laboratory equipment). It may also provide medical air depending upon the filtering systems employed.	IIa

4791	31262	Indirect calorimeter, battery-powered	Шууд бус калориметр, батерейгаар ажилладаг	A battery-powered device intended to measure oxygen consumption (VO2) to estimate a patient's resting metabolic rate (RMR). It includes a mouthpiece into which the user breathes and will typically have a display for results, and possibly a connection for transfer of data for further analysis. It may be used in a wide variety of healthcare settings or in the home to obtain accurate measurements used in weight-management, nutritional, or other medically-supervised programs.	IIa
4792	31268	Transcranial electrical stimulation system, pulsed-current	Transcranial цахилгаан өдөөх систем, импульсийн гүйдэл	A noninvasive assembly of electrically-powered devices designed to apply weak, pulsed (not continuous) electrical stimuli to a patient's brain to treat one or more psychiatric disorders which may include anxiety, depression, insomnia, and/or addiction; it may also be intended to induce a state resembling that of chemically-induced anaesthesia. It usually includes an electrical pulse generator with controls to vary the pulse rate, pulse width, and voltage or current, with the current applied via leads and appropriate scalp electrodes. It is intended to be operated by a healthcare professional in a clinical setting.	IIa
4793	31279	Gas flow transducer	Хийн урсгалын хувиргагч	A device that is used to convert a gas flow rate into an electrical signal for subsequent display or processing at a parent device (e.g., an electronic anaesthesia workstation or ventilator). This is a reusable device.	IIa
4794	31281	Gas volume-measuring device tester	Хийн эзэлхүүнийг хэмжих төхөөрөмж шалгагч	A device designed to deliver a known gas volume against which the accuracy of a gas volume measuring instrument can be compared for its calibration.	IIa
4795	31282	Gas pressure-measuring device tester	Хийн даралт хэмжих төхөөрөмж шалгагч	A device designed to generate a known gas pressure against which the accuracy of a gas pressure measuring instrument can be compared for its calibration. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	IIa

4796	31286	Breathing circuit condensate trap, reusable	Амьсгалын хэлхээний конденсат баригч, дахин ашиглах боломжтой	A non-sterile device intended to be integrated within a breathing circuit (e.g., ventilator breathing circuit) to collect the condensate which accumulates typically during heated humidification. It includes a fluid collection container with input and output connections, and may have an automatic seal to prevent the leak of fluid when removed from the circuit; it does not include a moisture filter. This is a reusable device.	IIa
4797	31293	Gas pressure transducer, differential	Хийн даралт хувиргагч, дифференциал	A differential pressure transducer is a two-chambered device intended for medical purposes that is often used during pulmonary function testing. It generates an electrical signal that is proportional to the difference in gas pressures in the two chambers. The measurements are subsequently displayed/processed at a parent device.	IIa
4798	31300	Spirometer, peak flow	Спирометр, оргил урсгал	A device used to measure a patient's maximum ventilatory flow rate (maximum expired air per time unit) for comparison to normal values or the patient's former values. This identifies conditions, e.g., asthma, emphysema or bronchitis. This device is commonly known as a peak expiratory flow (PEF) meter.	IIa
4799	31318	Airway pressure monitor, powered	Амьсгалын замын даралт хэмжигч, цахилгаантай	A mains electricity (AC-powered) device designed to continuously measure and display the pressure values, positive and/or negative, in the upper airway (e.g., the maximal averaged inspiratory and expiratory static mouth pressure, and/or negative pressure generated by the patient during inspiration), typically in the assessment of patients with compromised pulmonary function and to determine the appropriateness of discontinuing mechanical ventilation. It typically includes a pressure indicator and a built-in alarm to signal pressure levels that exceed specific limits. It may contain batteries for independent operation when line-power is not available.	IIa

4800	31319	Cerebrospinal fluid manometer, line-powered	Тархи нугасны шингэний манометр, шугамаар ажилладаг	A mains electricity (AC-powered) device designed to measure the cerebrospinal fluid (CSF) pressure in a patient using an appropriate pressure/electrical transducer. It is an electronic instrument that connects with a dedicated CSF access device (catheter, cannulae, needle) inserted into the subarachnoid (intrathecal) space of the lumbar section of the spinal column; CSF pressure is typically digitally displayed on a monitor. Connectors, tubing, and CSF access devices are typically included. The device is intended to be used to determine variations in CSF pressure for the purposes of diagnosing, assessing trauma, or to evaluate some other clinical condition (e.g., tumours).	IIa
4801	31329	Tracheobronchial tube	Tracheobronchial хоолой	A double lumen cylinder that is inserted into the trachea and used for anaesthesia administration or pulmonary function testing/ventilation. It has a central (tracheal) cuff and an endobronchial cuff that restricts ventilation to the one lung, if desired. This is a single-use device.	IIa
4802	31336	Arterial blood sampling kit	Артерийн цусны дээж авах иж бүрдэл	A collection of sterile devices intended to obtain an arterial blood specimen directly from a patient, usually for the determination of blood gas concentration. It typically includes a needle, heparinized syringe, sterile gauze/swab, bandage, rubber band, stopper, and patient identification label. This is a single-use device.	IIa
4803	31664	Coronary artery guide catheter	Титэм артерийн чиглүүлэгч катетер	A sterile flexible tube inserted into a coronary artery to provide a pathway through which other medical instruments, such as balloon catheters, guidewires, or other therapeutic devices, can be introduced. It is typically made of plastic materials and has a hub at the proximal end; it may be segmented or layered. It is typically coated internally with polytetrafluoroethylene (PTFE) or other suitable substances to enhance lubricity. This is a single-use device.	IIa

4804	31665	Catheter-balloon repair kit	Катетер-бөмбөлөг засах хэрэгсэл	A packaged collection of items that includes glue and a balloon used to repair or replace the balloon of a catheter. This is a single-use device.	IIa
4805	31668	Peripheral vascular catheter, antimicrobial	Захын судасны катетер, нянгийн эсрэг үйлчилгээтэй	A sterile, thin, flexible tube, coated with an antimicrobial agent to prevent infection, intended to be inserted into the peripheral vasculature of a patient to enable short-term (< 30 days) intravascular access; it is not intended to be advanced to the central vasculature. It typically includes dedicated accessories to facilitate catheter introduction/placement and function (e.g., connectors, injection ports, stylet and/or wings for fixation). It may be used for blood sampling, monitoring of blood pressure, to administer fluids, medication and/or for the injection of contrast media. This is a single-use device.	IIa
4806	31670	Catheter stylet	Катетер стилет	A metal wire or flexible rod, typically with a plastic knob at the proximal end, that is inserted into the lumen of a catheter or cannula to provide internal reinforcement to increase the stiffness enough to facilitate manipulation and introduction into the body for various procedures. It is available in various lengths, diameters, and degrees of rigidity. Some types can include small passive magnets that generate a magnetic field which is detectable by an external catheter stylet magnet detector. This is a single-use device.	IIa
4807	31685	Cardiopulmonary bypass system blood gas monitor, in-line	Зүрхний уушигны эргэлтийн системийн цусны хийн хяналт, шугаманд	A mains electricity (AC-powered) device that is a module of a cardiopulmonary bypass system and that is used to measure and monitor the level of gases in the circulating blood. It will be used together with an appropriate sensor. The measurement of these gases may be achieved using other devices which are not intended to be part of the heart-lung bypass system, in which case this generic device group will not be applicable.	IIa

4808	31692	Invasive blood pressure monitor	Цусны даралт хэмжих инвазив	A mains electricity (AC-powered) device that measures, processes, and displays blood pressure detected inside a blood vessel (intravascular). It may produce visible and/or audible signals/alarms when adverse conditions are registered.	IIa
4809	31710	Cardiotomy reservoir	Кардиотомийн нөөц	A device intended to be integrated within an extracorporeal circuit to collect, store, and filter blood typically during a cardiopulmonary bypass procedure; it does not include additional functional components such as an oxygenator. It is typically a hardshell or soft, bag-like container with connectors designed to trap micro-particles and air bubbles for a period of time (e.g., 6 hours) and hold a reserve supply of blood; some types may also defoam. This is a single-use device.	IIa
4810	31718	Cardiopulmonary bypass system centrifugal pump	Зүрхний уушигны эргэлтийн систем төвөөс зугтах насос	A device intended to be connected to a drive unit (not included) to circulate blood through the extracorporeal circuit of a non-roller type cardiopulmonary bypass system, via a centrifugal force mechanism, for gas exchange and reinfusion; it may in addition be used in extracorporeal support systems for ventricular support/circulatory assistance. It includes flow channels and a rotor driven by the system’s drive unit. This is a single-use device.	IIa
4811	31720	Extraluminal vascular occluder, reusable	Гэрлийн гаднах судасны бөглөрөл, дахин ашиглах боломжтой	A device intended to be used to mechanically stop or interrupt the flow of blood in veins or arteries temporarily during vascular surgery and emergency trauma surgery. It is typically designed with a ring having a small portion left open so that it can be slipped over the blood vessel to be occluded, or it can have semicircular pivoted arms that can be opened and placed over the vessel with a latch to lock the arms once in place. The inner surface of this ring is lined with a soft-plastic balloon, or pair of balloons, inflated via a connecting tube using a standard syringe. This device facilitates occlusion with minimal trauma to the wall of the blood vessel. This is a reusable device.	IIa

4812	31730	Biopsy needle, general-purpose, reusable	Биопсийн зүү, ерөнхий зориулалттай, дахин ашиглах боломжтой	A slender, sharply-pointed metal tube dedicated for taking biopsy specimens. It is manufactured in various diameters, with a distal tip that may be configured in various geometric forms (e.g., straight or curved) used to obtain a tissue sample for analysis. This is a reusable device.	IIa
4813	31736	Indicator injector	Заагч инжектор	A device designed to pump accurately one or more bolus injections of an indicator solution, e.g., cooled saline, into the blood stream. It will typically be used for passing the indicator solution through the heart for assessing blood flow through the heart. This device may be used in conjunction with a densitometer or a thermodilution device to determine cardiac output. This is a reusable device.	IIa
4814	31750	Orthodontic bracket adhesive	Ортодонт хаалт наалдамхай	A bonding compound, e.g., polymethylmethacrylate (PMMA), used specifically to cement an orthodontic bracket to the surface of a tooth. After application, this device cannot be reused.	IIa
4815	31754	Orthodontic space maintainer	Ортодонт орон зай засварлагч	A dental prosthetic replacement for prematurely lost deciduous teeth intended to prevent closure of the space before eruption of the permanent successors. It is often an urgent necessity in the buccal segment to prevent impaction of the permanent teeth and other complications.	IIa
4816	31759	Orthodontic tube	Ортодонт хоолой	A device used in orthodontics to attach a wire(s) or headgear to orthodontic bands bonded to the teeth. It is typically welded to an orthodontic band or bonded to a tooth. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	IIa
4817	31783	Temporary dental crown/bridge	Шүдний түр зуурын титэм/гүүр	A prosthetic dental device intended to temporarily replace the top of a tooth or a group of teeth until a permanent restoration is fabricated. The device is typically made of plastic material [e.g., polymethylmethacrylate (PMMA)].	IIa

4818	31788	Denture reliner, soft, home-use	Хиймэл шүдний налуу, зөөлөн, гэрийн хэрэглээ	A denture relining material such as plastic resin intended to be self-applied at home as a permanent coating or lining on the base or tissue-contact surface of a denture for improved fitting, and which sets to a soft, plastic state. It will enable the user to make a permanent adjustment without professional assistance. Denture relining is defined as a process of providing a new fitting surface to a denture. After application, this device cannot be reused.	IIa
4819	31793	Boiling water sterilizer	Буцалж буй ус ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from medical/dental devices and related products using boiling water as the sterilizing agent. It typically consists of a container intended to be filled with water, in which devices are submerged, and an apparatus to boil the water for a specific period. The device is almost exclusively used in remote areas, at home (e.g., for baby bottle sterilization), and/or in emergency situations.	IIa
4820	31797	Orthodontic spring	Ортодонт хавар	A dental device in the shape of a coil intended to be placed around an archwire, a rod, in a bracket, on hooks, pins, and/or between teeth, to apply force (e.g., rotational, uprighting, horizontal) as part of an orthodontic force-producing appliance system. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	IIa
4821	31806	Tooth-bleaching acceleration unit	Шүд цайруулах хурдасгах төхөөрөмж	A heat and/or light source intended to increase the oxidative effect of tooth bleachers (e.g., oxygen peroxide, carbamide peroxide, hydrogen peroxide) during tooth whitening dental procedures. It typically consists of a dedicated electromagnetic energy source (e.g., xenon lamp, LED), which may operate within a specific wavelength range, a laser, or an electric powered heater. The device is typically used during procedures in dental offices.	IIa

4822	31823	Dental drilling system attachment	Шүдний өрөмдлөгийн системийн хавсралт	A device, e.g., a straight, contra-angle or right-angle attachment, that is connected to a drill handpiece to achieve a specific function such as accessing intraoral areas that are difficult to reach when cleaning teeth, or preparing dental cavities for restorations (e.g., fillings) or preparing teeth for crowns and bridges. This is a reusable device.	IIa
4823	31824	X-ray film processor thermostat	Рентген хальсны процессорын термостат	A device that is a component of an x-ray film processor and that automatically regulates the temperature of the processor.	IIa
4824	31828	Dental x-ray system beam alignment device	Шүдний рентген системийн цацрагийг тохируулах төхөөрөмж	A mechanical device that is used to support and position dental x-ray film and to serve as a guide for proper physical alignment of the x-ray tube with the positioned dental x-ray film during dental x-ray imaging procedures. Depending on the device design, it can be used as a guide for either intraoral or extraoral dental x-ray systems.	IIa
4825	31833	Dental abrasive point, reusable	Шүдний зүлгүүрийн цэг, дахин ашиглах боломжтой	A rotary endpiece designed to be attached to a dental power tool handpiece to produce an abrasive rotation typically for polishing and smoothing natural or restorative dental materials (e.g., crown) during a dental procedure. Also referred to as a polisher, it is available in various forms (e.g., conical), sizes, and materials [e.g., silicone, rubber, metal, diamond, silicon carbide, aluminium oxide]. This is a reusable device.	IIa
4826	31836	Denture clasp mould	Шүдний тэврэлт хөгц	A prefabricated dental device intended to serve as a matrix or cavity for the casting of a metallic denture clasp. It is manufactured to meet a standard specification for adaptation or direct insertion into the patient's mouth.	IIa

4827	31846	Dental implantation depth/angle gauge, reusable	Шүд суулгах гүн/өнцгийн хэмжигч, дахин ашиглах боломжтой	A device designed to be used during the planning and post-osteotomy stages of a dental implantation procedure, prior to surgical implant placement/fixation, to measure/determine various lengths (e.g., drill depth of the osteotomy cavity, mucosal height, distance between implants/teeth for determining the mesiodistal position of the implant) and/or angles [e.g., direction of the perforation in relation to the antagonist arch], typically to help select an appropriate final prosthetic abutment to be installed. It is typically graduated and may be a hand-held instrument or a stand-alone device placed intraorally; some types are intended for use during x-ray imaging. This is a reusable device.	IIa
4828	31868	Dental laboratory mandrel	Шүдний лабораторийн мандал	A round shaft of substantial dimensions designed to be used in the dental laboratory to hold (locked into place) a rotating device, e.g., a grinding or polishing wheel, abrasive disk, circular saw, or a disk, stone or cup used for grinding or polishing; connectors and rotating endpieces may be included with the device. The mandrel will be placed into a laboratory dental handpiece or lathe that will rotate at high speed. This is a reusable device.	IIa
4829	31872	Natural gutta-percha	Байгалийн гуттаперча	A dental material made from coagulated sap of certain tropical trees intended to fill the root canal of a tooth. This material is softened by heat and inserted into the root canal, where it hardens as it cools. After application, this device cannot be reused.	IIa
4830	31876	Endodontic enlarger, reusable	Эндодонт томруулагч, дахин ашиглах боломжтой	A manual dental instrument designed to be used to access the root canal and to enlarge the opening of the coronal portion of the root canal. This is a reusable device.	IIa

4831	31878	Manual endodontic file/rasp, reusable	Гарын авлагын эндодонт файл/расп, дахин ашиглах боломжтой	A hand-held manual dental instrument designed to debride and enlarge the root canal and smooth its walls by a cutting or abrasive action when moved in a longitudinal direction. It is made of metal [e.g., stainless steel, nickel-titanium alloy (Nitinol)] and its working end has a polygonal cross-section with edges. It may also be referred to as an endodontic reamer. This is a reusable device.	IIa
4832	31885	Rotary dental scaler	Эргэдэг шүдний хэмжигч	An abrasive device intended to be attached to a powered dental handpiece that provides rotation and is used to remove calculus deposits and other accretions from tooth surfaces during dental cleaning and periodontal (gum) therapy. This is a reusable device.	IIa
4833	31939	Audiometric-evaluation noise system	Аудиометрийн дуу чимээний үнэлгээний систем	An assembly of devices that typically includes an electronic generator, an amplifier, and an earphone used to introduce a masking noise into the non-test ear during an audiometric evaluation. The device minimizes the non-test ear's sensing of test tones and signals generated for the ear being tested.	IIa
4834	31952	Stomal appliance sizer	Ходоодны төхөөрөмжийн хэмжээс	A sterile device used by an ostomate to measure their stomal opening for the purpose of selecting a stomal appliance with a matching size opening. Appliance is the common generic name given to any of the various devices designed to be attached over the stoma enabling the collection of body waste. This is a single-use device.	IIa
4835	31973	Ureteral catheter adaptor	Шээсний сувгийн катетер адаптер	A small, sterile, connecting device that makes possible a mechanical union between a ureteral catheter and an external device (e.g., irrigation/vacuum unit, syringe) that otherwise do not match (e.g., because they are from different manufacturers). It enables infusion, drainage, or other procedures performed through the lumen of the catheter. This is a single-use device.	IIa

4836	32019	Flexible video cystourethroscope	Уян хатан видео цистоуретроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. It is used for biopsy, removal of small stones, treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa
4837	32020	Gastrointestinal endotherapy clip applier, single-use	Ходоод гэдэсний дурангийн хавчаар түрхэгч, нэг удаагийн хэрэглээ	A sterile endotherapy device used in combination with a compatible flexible endoscope for the application of haemostatic clips to the mucosal lining of the gastrointestinal (GI) tract for endoscopic marking, haemostasis, tissue approximation, closure of luminal perforations, and/or for treating mucosal/submucosal defects during an endoscopic procedure. It typically consists of an insertion sheath, a mechanism at the distal end for applying the clips, an interchangeable cassette containing the surgical clips and a control handle at the proximal end for firing the clips into the target tissue. This is a single-use device.	IIa
4838	32022	Urethral dilatation catheter, non-medicated	Шээсний сувгийг тэлэх катетер, эмийн бус	A sterile, flexible or semi-flexible tube intended to be inserted into the urethra to open or increase the diameter of a constricted or irregular urethral passage. The device is typically made of plastic and silicone materials and is available in a variety of designs whereby: 1) it may have a larger diameter than that of a normal urethra; 2) it may have an attached inflatable balloon; or 3) the leading end of the device may be moulded into an extremely slender or thread-shaped form in order to facilitate passage of a larger, following portion; it does not elute a drug. This is a single-use device.	IIa

4839	32023	Hyperthermia system tissue cooling unit	Гипертерми системийн эдийг хөргөх төхөөрөмж	A device that is typically a component of a hyperthermia system intended to be used to cool the tissue, organs, and vasculature surrounding a treatment area to protect these from inadvertent thermal damage. This unit supplies the temperature-regulated water through a dedicated catheter which is inserted into the body or body cavity, e.g., the rectum, through which the water is circulated to achieve the required cooling effect during the actual hyperthermia treatment.	IIa
4840	32030	Urethral catheterization kit	Шээсний сувгийг катетержуулах хэрэгсэл	A collection of various devices and supplies necessary to perform a urethral catheterization (i.e., introduction of a catheter into the urinary tract through the urethra). This is a single-use device.	IIa
4841	32031	Indwelling urethral catheterization kit, adult	Шээсний сувгийн катетержуулалтын иж бүрдэл, насанд хүрэгчид	A collection of devices that includes an indwelling urethral catheter which incorporates a balloon (commonly known as a Foley catheter), and devices associated with catheter introduction/function (e.g., gloves, lubricating gel, drapes), intended for urinary drainage from the bladder of an adult or paediatric patient. The catheter will be applied by trained staff and may be coated with an antibiotic to help prevent catheter-associated urinary tract infection (CAUTI). This is a single-use device.	IIa
4842	32035	Ureteral transilluminator, single-use	Шээсний сувгийн трансиллюминатор, нэг удаагийн хэрэглээ	A flexible tube containing a fibreoptic bundle that emits light throughout its length, intended to be inserted into the ureter for (trans)illumination to facilitate visualization of the ureter. It is used to aid dissection during laparoscopic and/or open abdominal surgery; sometimes it is referred to as illuminating catheter. This is a single-use device.	IIa
4843	32053	Endoscopic measuring device, viewed-object, reusable	Дурангийн хэмжих хэрэгсэл, үзсэн объект, дахин ашиглах боломжтой	A dedicated device used in conjunction with an endoscope and its direct application in order to measure the size of an object being viewed during endoscopy. It consists of a flexible metal coil or a plastic tube whose distal end is graduated. It is typically used during gastroenterological or urological examinations. This is a reusable device.	IIa

4844	32058	Tube, single lumen, mercury balloon	Хоолой, нэг люмен, мөнгөн усны бөмбөлөг	A hollow device used in the gastrointestinal tract for instilling/withdrawing fluids, splinting, or suppressing bleeding. This is a single-use device.	IIa
4845	32081	Oesophageal-gastrointestinal motility monitoring system	Улаан хоолой-ходоод гэдэсний гүрвэлзэх хөдөлгөөнийг хянах систем	An assembly of devices intended to monitor the gastrointestinal system and/or oesophageal tract for the purpose of producing data that will be used in a diagnosis. It will typically measure, e.g., peristaltic activity, pressure levels or acidity levels in the stomach or oesophagus. Measurements of timed sequence of peristaltic/oesophageal contractions in conjunction with the patient's swallowing and respiration may also be registered. The device will typically include a monitor display, computer, software and dedicated measuring probes.	IIa
4846	32083	Nephroscopic surgical procedure kit, non-medicated, reusable	Нефроскопийн мэс заслын иж бүрдэл, эмийн бус, дахин ашиглах боломжтой	A collection of various surgical and endoscopic instruments, dressings and the necessary materials used to perform a nephroscopic surgical procedure. It does not contain pharmaceuticals. This is a reusable device.	IIa
4847	32095	Gastro-urological hook	Ходоодны урологийн дэгээ	A hand-held, shaft-like, manual surgical instrument designed to fix or apply traction to various anatomical structures in gastro-urological (GU) surgical procedures. The device tapers towards the distal end to form a hook or multiple hooks used in the procedure. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	IIa
4848	32109	Haemodialysis system transducer protector	Гемодиализийн системийн хувиргагч хамгаалагч	A sterile device designed to protect a haemodialysis system pressure monitor and to help maintain the sterility of the blood tubing fluid pathway. It is typically attached between the blood tubing set and the pressure monitor and typically consists of plastic housing that contains a hydrophobic filter with a reference pore size (e.g., 1 to 2 microns) that helps prevent cross-contamination by viruses, bacteria, and particulate matter while preventing the flow of fluids to the pressure monitor. This is a single-use device.	IIa

4849	32110	Haemodialysis dialysate tubing, single-use	Гемодиализийн диализатын хоолой, нэг удаагийн	A sterile length of flexible tube, typically made of synthetic polymer material(s), intended to deliver haemodialysis dialysate and/or haemodialysis dialysate components (water, haemodialysis concentrate) to and/or from a haemodialysis machine/system. This is a single-use device.	IIa
4850	32111	Fistula needle, single-use	Фистул зүү, нэг удаагийн	A sterile, sharp bevel-edged, hollow tubular metal instrument used to drain a fistula. This is a single-use device.	IIa
4851	32123	Haemodialysis system dialysate flowmeter	Гемодиализийн системийн диализатын урсгал хэмжигч	An electrically-powered integral unit of a haemodialysis system that measures the flow of dialysate within the system to ensure that it is appropriate.	IIa
4852	32126	Haemodialysis system dialysate level detector	Гемодиализийн системийн диализатын түвшинг илрүүлэгч	An electrically-powered integral unit of a haemodialysis system that detects the level of dialysate in the system and sounds an alarm if it is inappropriate.	IIa
4853	32127	Haemodialysis system blood level detector	Гемодиализийн системийн цусны түвшин мэдрэгч	An electrically-powered integral unit of a haemodialysis system designed to indicate when the blood level falls below acceptable levels either in the arterial or venous chamber of the extracorporeal blood circuit of a haemodialysis system. The device typically includes optical detection or non-contact ultrasonic sensors; it usually triggers alarms and activates automated mechanisms to turn off the blood flow when an abnormal fluid level occurs.	IIa
4854	32128	Haemodialysis system blood leak detector	Гемодиализийн системийн цус алдалт мэдрэгч	An electrically-powered integral unit of a haemodialysis system that detects blood leaks in the effluent side of the dialysate within the system and sounds an alarm if there is blood detected on this non-blood side.	IIa

4855	32130	Hazardous fluid syringe	Аюултай шингэний тариур	A sterile device intended to be used to promote the safe (leak-free) handling of fluids and medications that are potentially hazardous or cytotoxic, such as those used for chemotherapy, radioactive isotopes, or blood products. It consists of a calibrated barrel (cylinder) connected to a needle-free port (valve), and a moveable plunger used to aspirate and expel the fluid into and out of the cylinder. It is typically made of plastic and silicone materials and used for drug/fluid preparation, for their administration to the patient, and for waste handling of the expended device. This is a single-use device.	IIa
4856	32131	Parallel-plate haemodialysis dialyser, disposable-insert	Зэрэгцээ хавтантай гемодиализийн диализатор, нэг удаагийн оруулга	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities from the blood of a patient suffering from sudden failure or chronic malfunction of the kidneys. The device typically consists of sheets of a semi-permeable membrane that are placed as disposable (single-use) inserts between permanent (reusable) support plates to form parallel layers; the blood and dialysate circulate in separate alternating compartments. The impurities and fluids in the blood are moved across the membranes to the dialysate under a pressure gradient (diffusion and ultrafiltration) for removal.	IIa
4857	32142	Haemodialysis start/stop set	Гемодиализ эхлэх / зогсоох багц	A collection of instruments and associated items used for the start and/or stop procedures (also known as ON and OFF procedures) for a patient undergoing haemodialysis. It typically includes items such as syringes, needles, dressings, swabs, forceps, and protective wear for the healthcare provider such as gloves, face mask, and a gown. This device is used for the connection session and/or the disconnection session where the patient is connected/disconnected to the haemodialysis system. It does not include pharmaceuticals and typically does not include catheters. This is a single-use device.	IIa

4858	32144	Haemodialysis system dialyser holder	Гемодиализийн системийн диализатор эзэмшигч	A device used together with certain types of a haemodialysis system that is used to hold dialysers in order to attach the blood lines from the dialyser to the system. The device is typically made of plastic or stainless steel.	IIa
4859	32156	Haemodialysis system dialysate temperature alarm	Гемодиализын системийн диализийн температурын дохиолол	An electrically-powered integral component of a haemodialysis system designed to initiate alarms (sound, visual or both) if the dialysate temperature in the dialysate delivery circuit is not within pre-established limits (usually 34 to 42° Celsius). The device may also trigger the diversion of the dialysate (using a bypass line) from the dialyser if a problem occurs.	IIa
4860	32158	Tracheobronchial suction/insufflation catheter, dual-lumen	Гуурсан хоолойн гуурсан хоолойн сорох/инсуфляцийн катетер, хос люмен	A sterile flexible tube designed for periodic tracheal and pharyngeal mucus aspiration and inflation of the lungs with a flow of gas from its distal tip. It consists of a dual-lumen tube which allows simultaneous suction and insufflation. This is a single-use device.	IIa
4861	32172	Intravenous line stopcock	Судсаар хийх шугамын хавхлага	A sterile valve that is typically a component of an intravenous (IV) administration set and designed to be manually-operated by healthcare staff to regulate the flow of intravenous solution delivered to a patient. This is a single-use device.	IIa
4862	32193	Oxygen administration hood, paediatric	Хүчилтөрөгчийн удирдлагын бүрээс, хүүхдийн	A device consisting of a rigid/semi-rigid transparent plastic shell that forms an enclosure over an infant's whole body, or the head only, in order to provide an enriched environment of oxygen (O2) to increase the patient's O2 uptake. It is connected to an O2 source and may be used concurrently with increased humidification and temperature control. It is designed to be used for patients adverse to oxygen delivery devices such as a nasal cannula or face mask. This device may include the tubing, a diffuser (to disperse the flow of incoming O2), O2 concentration and humidity sensors. This is a reusable device.	IIa

4863	32202	Aerosol delivery tubing	Аэрозоль дамжуулах хоолой	A non-sterile length of flexible tube, typically large bore (e.g., 22 mm), used in conjunction with an oxygen mask, endotracheal (ET) tube, humidifier, or nebulizer, intended for the delivery of aerosolized humidification, typically oxygen enriched. It is typically supplied in standard coil lengths and is cut by clinical staff to usable lengths. This is a single-use device.	IIa
4864	32253	Flexible fibreoptic pancreatoscope	Уян хатан шилэн панкреатоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment in the pancreas. It is usually introduced through the working channel of a duodenoscope and inserted through the Vater's papilla. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
4865	32327	Prosthesis skin-adherent patch	Протезийн арьсанд наалдсан нөхөөс	A silicone-based device intended to adhere an external aesthetic restoration prosthesis (e.g., artificial nose, breast prosthesis) to the skin surface. This is a single-use device.	IIa
4866	32330	Irrigation catheter, multiple-lumen	Усалгааны катетер, олон люмен	A flexible tube used to introduce non-drug fluids (e.g., saline solution) into body cavities other than the circulatory system (e.g., ears, wounds, urethra). It consists of a multiple-lumen tube with end and/or side holes at the distal end; the proximal end is typically connected through a Luer-lock to a syringe or water pumping system. This is a single-use device.	IIa
4867	32331	Indwelling urethral drainage/irrigation catheter	Байнгын шээсний суваг/усалгааны катетер	A sterile, flexible tube, typically with two lumens, designed to be inserted through the urethra and into the urinary bladder where it dwells to provide continuous irrigation and/or drainage of the bladder. It is typically inserted by a healthcare professional and may have a bent tip (coude) to facilitate negotiation of the prostatic curve in men. This is a single-use device.	IIa

4868	32337	Abdominal paracentesis needle, single-use	Хэвлийн парацентезийн зүү, нэг удаагийн хэрэглээ	A sterile, sharp bevel-edged, hollow tubular metal instrument used to perform therapeutic or diagnostic aspiration of fluids/air from the abdominal cavity. It may be used for the placement/operation of a paracentesis catheter or used directly without a catheter. It is typically made of high-grade stainless steel and may have an attached stopcock to control the aspiration process. The device is commonly used to remove ascites fluid from the peritoneal cavity. This is a single-use device.	IIa
4869	32338	Fascial tissue dilator, reusable	Нүүрний эдийг тэлэгч, дахин ашиглах боломжтой	A surgical instrument used for stretching or enlarging the fascial tissue covering a cavity, tract, or opening typically prior to the introduction of a catheter during an invasive diagnostic or surgical procedure (e.g., femoral artery catheterization). It is a rod-like device with a long, slender, hollow or solid body and a rounded nose at its distal end, that is available in a variety of sizes and made of metal (e.g., stainless steel). It is typically used for the dilatation of fascial tissue around peripheral vasculature, puncture sites, and various ducts. This is a reusable device.	IIa
4870	32339	Catheter connector, general-purpose	Катетер холбогч, ерөнхий зориулалттай	A sterile device used to connect a catheter to another object (e.g., a receptacle) or to insert an irrigation or drainage catheter into the body. This is a single-use device.	IIa
4871	32354	Rigid endoscopic biopsy needle, single-use	Хатуу дурангийн биопсийн зүү, нэг удаагийн	A sterile rigid device intended to be used to obtain tissue specimens, for histopathological examination, during various endoscopic procedures (e.g., bronchoscopy, gastroscopy). It is typically constructed of a rigid metal tube whose distal end is equipped with a biopsy needle which is operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the compatible endoscope. This is a single-use device.	IIa

4872	32374	Gauze, non-absorbable, non-medicated	Самбай, шингэхгүй, эмгүй	A non-absorbable device composed of cotton or cellulose, with an x-ray detectable element, used inside the body or on surgical incisions to control bleeding, absorb fluid, or protect organs from abrasion, drying, or contamination. This is a single-use device.	IIa
4873	32376	Gauze, absorbable	Самбай, шингээх чадвартай	A light open-meshed sponge composed of oxidized cellulose that is used during surgery and that is intended to be absorbed by the body. This is a single-use device.	IIa
4874	32383	Surgical drill system motor, air-powered	Мэс заслын өрмийн системийн мотор, агаараар ажилладаг	A compact engine used in orthopaedic surgery that connects to a variety of attachments in order to achieve a number of drilling/cutting/inserting procedures. The device may be cannulated to allow for use of a guidewire and may be of the micro or macro design. Although designed to be powered by compressed air the device may be driven, when appropriate, with other pressurized gases as the power source, e.g., compressed nitrogen (N2). This is a reusable device.	IIa
4875	32390	Fluted surgical drill bit, reusable	Мэс заслын өрмийн хошуу, дахин ашиглах боломжтой	A shaft of metal with an obtuse, V-shaped cutting edge designed to be rotated to bore into bone to create a hole of the same dimension as the diameter of the shaft. This device, commonly called a "twist drill", has a cylindrical design with a double-edged cutting head that is formed from two spiralled flutes that extend the length of the insertion part of the drill. At the proximal end, it is usually inserted into a surgical power tool or a surgical hand drill/brace. This is a reusable device.	IIa
4876	32521	Multiple physiological signal amplifier	Олон физиологийн дохио өсгөгч	An electronic device that increases current, voltage, or power to adjust the signal level and impedance between two or more medical devices transmitting physiological signals; or the device has the capability of being used for more than a single application, such as electroencephalography (EEG), evoked potential, polysomnography (sleep analysis) and general polygraphy.	IIa

4877	32544	Mediastinal drainage catheter, non-antimicrobial	Дунд хэсгийн ус зайлуулах катетер, нянгийн эсрэг бодисгүй	A tube designed to establish a channel for the removal of fluid or purulent material from the mediastinum (the central compartment of the thoracic cavity); it is not coated with an antimicrobial agent. It is typically used in conjunction with, or as a component of, a drainage system that uses a low negative pressure through the drain lumen. It is typically made of silicone, available in various designs, shapes, and sizes, and may include disposable devices dedicated to catheter introduction; it does not include any fluid collection bags/containers. This is a single-use device.	IIa
4878	32567	Neurosurgical suturing needle	Мэдрэлийн мэс заслын оёдлын зүү	A cylindrical shaped, solid instrument of various diameters, whose distal tip may be configured in various geometrical forms, used to insert and pull suture material through tissue of neurological structures, e.g., the dura mater. The suture serves to unite two tissue surfaces. This is a reusable device.	IIa
4879	32579	Spinal endoscopic-access system	Нурууны дурангийн хандалтын систем	An assembly of devices used to gain access to the spine by dilation of the overlying tissues for the placement and support of an endoscope. It typically includes the endoscope, a light source, a fibreoptic light cable, a camera control unit, a camera, and cannulae (portals). It is used for posterior or anterior access and visualization of a surgical area of the cervical, thoracic, or lumbar spine, allowing the surgeon to perform a procedure such as, a discectomy, nucleotomy, spinal fusion, spinal decompression, foraminotomy, or insertion of spinal implants. This is a reusable device.	IIa

4880	32592	Tuberculin/allergy syringe/needle, safety	Туберкулин/харшлын тариур/зүү, аюулгүй байдал	A sterile device consisting of a calibrated barrel (cylinder) with plunger, with an attached needle (sometimes shielded), intended to be used to administer a precise, low-dosage injection of tuberculin and/or sensitivity test allergen to a patient subcutaneously. The syringe is typically made of plastic and silicone materials and will have plunger anti-sticking properties allowing smooth plunger movement. It can be used by healthcare personnel or patients. After use, the needle can be fully retracted into the barrel, providing protection against needle sticks and rendering the device unusable. This is a single-use device.	IIa
4881	32594	Intrauterine curette, manual	Intrauterine curette, гарын авлага	A heavy, hand-held, surgical instrument with an open ring-shaped or fenestrated tip at the distal end of a long shaft that is used to scrape the lining of the uterus for the removal of tissue during a gynaecological procedure, typically for the removal of an early or non-viable embryo/foetus. The device is typically made of high-grade stainless steel and can be either rigid or malleable (bendable), and have a sharp or blunt scraping tip which is available in various shapes and sizes; it has a handle at the proximal end. This is a reusable device.	IIa
4882	32600	Gynaecological cerclage needle	Эмэгтэйчүүдийн умайн хүзүүний зүү	A cylindrically shaped, solid instrument of various diameters, whose distal tip may be configured in various geometrical forms, used to draw various kinds of suture material around the cervical os. This is a reusable device.	IIa
4883	32617	Laparoscope system, reusable	Лапароскопийн систем, дахин ашиглах боломжтой	An assembly of laparoscopes and their accessories used for the visual examination and treatment of the abdominal/retroperitoneal cavity and its organs (laparoscopy). The insertion is typically through an incision(s) made in the abdominal wall (routinely just below the umbilicus or in the near vicinity). This system is mostly used for gynaecological procedures involving the evaluation/treatment of abdominal or pelvic pain, ectopic pregnancy, ovarian cysts, appendicitis, or for female sterilization. This is a reusable device.	IIa

4884	32631	Transcervical amnioscope	Умайн хүзүүний амниоскоп	An endoscope with a rigid inserted portion intended for the visual examination of the foetus while in the amnion (the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid). It is inserted via the vagina, through the maternal uterine cervix and into the amniotic cavity. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the foetus for external malformations, to obtain foetal blood or tissue samples, and for the observation of the colour and volume of amniotic fluid. This is a reusable device.	IIa
4885	32655	Intrauterine cannula, single-use	Умайн хөндийн суваг, нэг удаагийн хэрэглээ	A sterile, semi-rigid or rigid, plastic or, less frequently metal, tube designed for insertion into the uterus. It is frequently connected directly or through an external tube or catheter to an irrigator and/or aspirator for irrigation, infusion, or withdrawal of substances. It may also provide a port through which instruments and/or probes are passed to perform a variety of gynaecologic/obstetric diagnostic, therapeutic, and surgical procedures. This is a single-use device.	IIa
4886	32662	Foetal blood sampling knife, reusable	Ургийн цусны дээж авах хутга, дахин ашиглах боломжтой	A manual instrument with a short blade intended to be used to obtain foetal blood transcervically through an endoscope by puncturing foetal skin, after which blood is drawn into a heparinized tube (not included). This is a reusable device.	IIa

4887	32678	Fallopian tube occlusion insert	Фаллопийн хоолойн бөглөрөлийн оруулга	A small, sterile, implantable device that is implanted into the uterine end of the fallopian tubes (one device in each tube) to function as a contraceptive through the obstruction of the natural fallopian tube passage. It typically consists of a micro insert with a stainless steel inner coil, a nickel-titanium alloy (Nitinol) "elastic" outer coil, and polyethylene (PE) fibres loaded into a delivery device. Upon placement and delivery, during a hysteroscopy, the device expands and anchors to the varied diameters and shapes of the fallopian tube and results in tubal occlusion by the PE fibres eliciting a tissue in-growth, this preventing the passage of ova.	IIa
4888	32685	Amniocentesis kit, medicated, reusable	Амниоцентезийн иж бүрдэл, эмтэй, дахин ашиглах боломжтой	A collection of devices and materials designed to aspirate and contain a sample of amniotic fluid from the amniotic sac, via a transabdominal approach, for analysis. Components typically include a needle with stylet and syringe, specimen containers/medium, drapes, dressings, and pharmaceuticals. The device is typically used at 16-18 weeks gestation for antepartum diagnosis of certain congenital abnormalities (e.g., Down syndrome, spina bifida), or anytime after 24-weeks gestation to assess foetal maturity. This is a reusable device.	IIa
4889	32706	Nystagmus inducing tape	Нистагмусыг өдөөдөг тууз	An ophthalmic device that is a long, narrow strip of fabric or other flexible material on which a series of objects are printed. The device is intended to be moved across a patient's field of vision to elicit optokinetic nystagmus (abnormal and irregular eye movements) and to test for blindness.	IIa

4890	32708	Fornixscope	Fornixscope	A non-sterile, manually-operated, ophthalmic device intended to provide indirect access and viewing of the upper conjunctival fornix and inner surface of the eyelid as an alternative to eyelid eversion. It is typically a self-supporting, lightweight ring, approximately 5 cm in diameter, which loosely supports at its lower edge a first surface mirror (FS mirror), also known as a front surface mirror, with a soft plastic edge that rest against the lower eyelid. From its upper edge it supports a spring-mounted clip used to engage the skin of the upper eyelid so that it pulls back and holds open the eyelid to aid in the examination of the conjunctiva. This is a reusable device.	IIa
4891	32724	Corneal trephine system, pneumatic	Эвэрлэгийн трефиний систем, пневматик	A pneumatically-powered assembly of devices typically used to remove circular sections of the cornea (corneal buttons) and/or scleral tissue from a patient to prepare for graft implantation, or to obtain corneal/scleral grafts from cadaveric donors. It typically consists of a rotary surgical handpiece containing a motor (engine) driven by compressed gas [surgical-grade air or nitrogen (N2)] and a cylindrical or crown saw trephine insert, typically with an extremely sharp or fine saw-toothed, bevelled cutting edge. This system may include a speed control unit.	IIa
4892	32727	Pupillometer, manual	Сурагч хэмжигч, гарын авлага	A manually-operated ophthalmic instrument intended to be used for measuring the width or diameter of the pupil. Evaluation of the pupil is done by manually assessing the size of the pupil to parameters on this device, e.g., holes or scaled measurements.	IIa
4893	32734	Keratoscope, battery-powered	Кератоскоп, батерейгаар ажилладаг	A battery-powered diagnostic ophthalmic instrument, typically hand-held, used in ophthalmic work for examining the corneal topography. The device consists of a specially designed round plate, with a concentric bore and concentric white and black rings (Placido disk). In case of astigmatism the mirror-image of the rings gives a distorted picture of the cornea of the patient being examined.	IIa

4894	32740	Euthyscope, line-powered	Эвтископ, шугамаар ажилладаг	A mains electricity (AC-powered), modified ophthalmoscope (a perforated mirror device used to inspect the interior of the eye) that projects a bright light encompassing an arc of approximately 30 degrees on the fundus of the eye. The centre of the light bundle is blocked by a black disk covering the fovea (the central depression of the macular retina where only cones are present and blood vessels are lacking). It is used in the treatment of amblyopia otherwise known as lazy eye (dimness of vision without apparent disease of the eye). The current is run through a transformer for reduction to low-voltage.	IIa
4895	32741	Ophthalmic distometer	Нүдний дистометр	An ophthalmic instrument designed to measure the distance between the cornea and a spectacle or trial lens (vertex distance). It typically measures distances over a range of 7 to 23 mm from behind the trial lens to the closed eyelid. The vertex distance is used to adjust the effective power of the lens during refractive measuring tests, especially when it is above plus or minus 5 dioptres (e.g., aphakic eyes). A conversion chart is typically used to calculate the correction necessary to the lens power.	IIa
4896	32750	Keratome, battery-powered	Кератом, батерейгаар ажилладаг	A battery-powered ophthalmic surgical instrument intended to shave tissue from sections of the cornea for a lamellar (partial thickness) transplant. This device will typically have a special blade mounted to it for the cutting process.	IIa

4897	32754	Ocular hook/spatula/manipulator, reusable	Нүдний дэгээ/хусуур/манипулятор, дахин ашиглах боломжтой	A hand-held, blunt, manual ophthalmic surgical instrument intended for manipulation/retraction of intraocular structures, lens nucleus splitting/manipulation, removal of foreign bodies in the eye, corneal manipulation (e.g., LASIK flap lifting), and/or in situ intraocular lens (IOL) manipulation; it is neither intended to cut tissue nor hook muscles. It may be of single- or double-ended design with a working end(s) designed as a hook, spatula, or other manipulator (often Y-shaped); it is not a curette, loop, trabeculotome, spoon, or inner limiting membrane (ILM) scraper. This is a reusable device intended to be sterilized prior to use.	IIa
4898	32755	Eye enucleation snare	Нүдний энуклеяцийн урхи	A manual ophthalmic instrument used in surgical procedures of the eye, typically for enucleation of the eyeball. It typically consists of a cannula-like tube with two stationary and one sliding finger rings designed to position and tighten a loop of thin, flexible wire (the snare) around the posterior aspect of the eyeball to be removed. This is a reusable device.	IIa
4899	32763	Ophthalmic suturing needle	Нүдний оёдлын зүү	A cylindrical shaped, solid instrument of various diameters, whose distal tip may be configured in various geometrical forms, used to insert and pull suture material through ophthalmic tissue. The suture serves to unite two tissue surfaces. This is a reusable device.	IIa
4900	32765	Keratome, line-powered	Кератом, шугамаар ажилладаг	A mains electricity (AC-powered) ophthalmic surgical instrument intended to shave tissue from sections of the cornea for a lamellar (partial thickness) transplant. This device will typically have a special blade mounted to it for the cutting process.	IIa
4901	32766	Orbital sphere implant introducer	Орбитын бөмбөрцөг суулгацыг нэвтрүүлэх төхөөрөмж	A hand-held manual ophthalmic instrument designed to hold and insert an orbital sphere implant into the orbital cavity (eye socket). It typically has a body made of high-grade stainless steel with a piston used to forward the implant, which is held and positioned by the size-adjustable head of the device. This is a reusable device.	IIa

4902	32778	Surgical binoculars, single-use	Мэс заслын дуран, нэг удаагийн	A pair of sterile lenses intended to be mounted onto a surgeon's spectacles to function as small telescope and provide a magnified image of the visual field during patient examination or surgical intervention. Also known as a surgical loupe, it may be mounted onto the spectacle frames and positioned in front of the spectacle lenses or attached directly onto each of the spectacle lenses. It may also be connected to an external light source or a head-worn light for visual field illumination. This is a single-use device.	IIa
4903	32803	Contact lens, vision corrective, tinted, reusable	Контакт линз, хараа засах, будсан, дахин ашиглах боломжтой	An ophthalmic lens made of glass or plastic materials that is a corrective vision device that is applied directly to the front surface of the eye, and which is designed to attenuate radiation by absorption or reflection, usually incorporating a prescription. This is a reusable device.	IIa
4904	32812	Corneal bur system, line-powered	Эвэрлэг бүрхэвчийн систем, шугамаар ажилладаг	An assembly of devices designed for abrasion of the cornea and other eye tissues. It typically consists of a small, mains electricity (AC-powered) rotatory handpiece with a motor, and a small shaft made of a hard metal such as steel (i.e., a bur) that may include a diamond sphere at its tip. The system is used in procedures such as the gentle removal ("brushing") of rust stains (rust rings) from the cornea after the extraction of a ferrous foreign object, abrasion of the cornea to polish corneal scratches or the pterygium bed after surgical removal, and/or abrasion of lid margin lesions. This is a reusable device.	IIa
4905	32814	Ophthalmic clip	Нүдний клип	A sterile device typically made of a malleable metal (e.g., tantalum), intended to be implanted permanently or temporarily to bring together the edges of a wound, to aid in healing or to prevent bleeding from small blood vessels in the eye.	IIa

4906	32820	Corneal trephine system, battery-powered	Эвэрлэгийн трефиний систем, зайгаар ажилладаг	A battery-powered assembly of devices typically used to remove circular sections of the cornea (corneal buttons) and/or scleral tissue from a patient to prepare for graft implantation, or to obtain corneal/scleral grafts from cadaveric donors. It is typically comprised of a rotary surgical handpiece containing a motor (engine) and a cylindrical or crown saw trephine insert, typically with an extremely sharp or fine saw-toothed, bevelled cutting edge. This is a reusable device.	IIa
4907	32821	Corneal trephine system, line-powered	Эвэрлэгийн трефиний систем, шугамаар ажилладаг	A mains electricity (AC-powered) assembly of devices typically used to remove circular sections of the cornea (corneal buttons) and/or scleral tissue from a patient to prepare for graft implantation, or to obtain corneal/scleral grafts from cadaveric donors. It is typically comprised of a rotary surgical handpiece containing a motor (engine) and a cylindrical or crown saw trephine insert, typically with an extremely sharp or fine saw-toothed, bevelled cutting edge. This system may include a speed control unit.	IIa
4908	32848	Acetabular orthopaedic reamer	Ацетабуляр ортопедийн зүсэгч	An orthopaedic surgical instrument designed to cut and resurface with precision the acetabulum for the acceptance of the acetabular component of a hip joint prosthesis. The device is designed with a hemispherical shell with an abrasive outer surface as the cutting head that is attached to a shaft for manual or powered rotation. It is typically made of a high-grade stainless steel alloy and is available in various sizes. This is a reusable device.	IIa

4909	32864	Wire/ligature passer, reusable	Утас / холбогч дамжуулагч, дахин ашиглах боломжтой	A hand-held, manual surgical instrument designed for passing a length of a flexible material/device, typically a wire, ligature, or orthopaedic graft gauge, through a surgical site by creating a pathway through tissue and facilitating the introduction and handling of the material/device. It may also be referred to as a carrier and is typically in the form of a shaft with a distal clasp, grasping arm, or cannulated hook to hold the material being passed through the tissue. This is a reusable device.	IIa
4910	32936	Fixative, Richardson glycol	Фиксатор, Ричардсон гликол	An agent containing Richardson glycol employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for diagnostic applications.	IIa
4911	32937	Fixative, Orth's solution	Fixative, Orth-ийн шийдэл	An agent containing Muller's fluid and formaldehyde employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	IIa
4912	32939	Fixative, Helly	Засварлагч, Хелли	An agent containing mercuric chloride employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	IIa

4913	32951	Endotherapy trocar, reprocessed	Endotherapy trocar, дахин боловсруулсан	A device used to create a pathway for the insertion of an endoscope and accessory instruments during minimally-invasive surgery, particularly in abdominal, gynaecological, urological, and thoracic procedures. It is typically designed as an integrated assembly, with or without a handle, that includes a bladeless, blunt, or dilating tip that gently moves aside internal viscera. It has a self-sealing port to minimize gas leakage during instrument insertion/withdrawal. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
4914	32975	Tonsil suction cannula	Гүйлсэн булчирхайд сорох суваг	A long metal tube that is attached to a suction system and manipulated by the surgeon for the evacuation (suctioning) of blood, fluids, and other tissue debris from the surgical site during a tonsillectomy or other oral and laryngeal surgical procedures. This is a dedicated device that typically attaches to a dedicated handpiece and a suction system. Its distal end will typically be curved to facilitate its application within the oral cavity and throat and may include multiple apertures to negate the problem of the suction being to aggressive (i.e., the tip grabbing at the tissue). This is a reusable device.	IIa
4915	33069	Brachytherapy injection needle	Брахитерапийн тарилгын зүү	A sharp bevel-edged, hollow tubular metal instrument that is used to inject radionuclide into a body cavity or tissue as a source of nuclear radiation for cancer therapy (brachytherapy). The device may be pre-sterilized and preloaded, and may have a tip enhanced for ultrasound-guided implantation. This is a single-use device.	IIa

4916	33110	Radionuclide system collimator, high-energy	Радионуклидын системийн коллиматор, өндөр энергитэй	A diaphragm or system of diaphragms of absorbing material that can be a component of a radionuclide system and that is used for the purpose of defining the limitation and direction of high-energy ionizing radiation. This device is for energies higher than 1 mega (million) electronvolts (MeV) and is typically used on Cobalt teletherapy machines.	IIa
4917	33148	Body fluorescence scanning system	Биеийн флюресцент сканнерийн систем	An assembly of devices intended to measure the induced fluorescent radiation in the body after exposure to certain x-ray energies or low energy gamma rays. It may include signal analysis and display equipment, patient and equipment supports, and component parts.	IIa
4918	33172	Infusion catheter	Судсаар хийх катетер	A thin, flexible tube used for the injection or infusion of a solution into a vein, subcutaneous tissue, or other body tissue. It may have more than one lumen. This is a single-use device.	IIa
4919	33196	Neon gas analyser	Неон хийн анализатор	A mains electricity (AC-powered) instrument intended to measure the concentration of neon in a gas mixture exhaled by a patient. The device may measure using techniques such as mass spectrometry or thermal conductivity.	IIa
4920	33197	Argon gas analyser	Аргон хийн анализатор	A mains electricity (AC-powered) instrument intended to measure the concentration (partial pressure) of argon (Ar) in a gas mixture sample to aid in determining a patient's ventilatory status. The device may use techniques such as mass spectrometry or thermal conductivity.	IIa

4921	33201	Laryngeal biopsy forceps	Хоолойн биопсийн хямсаа	A flexible instrument intended to perform through a compatible nasopharyngoscope to obtain laryngeal specimens during a transnasal flexible laryngoscopy (TFL) for histopathological examination. It is typically constructed of a flexible metal coil or plastic tube whose distal end is equipped with a pair of scissors-like cups with a serrated cutting edge around their rim which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body through the working channel of a flexible nasopharyngoscope. This is a single-use device.	IIa
4922	33202	Bronchoscopic biopsy curette, rigid	Бронхоскопийн биопси курет, хатуу	A rigid device intended to be used through a rigid bronchoscope to obtain specimens of the bronchi for histological/pathological diagnosis during bronchoscopy. It is a type of biopsy forceps usually made of high-grade stainless steel, with a distal end that terminates into sharply-pointed scoop/receptacle for securing the biopsy. This is a reusable device.	IIa
4923	33203	Oral cavity fluid measuring instrument	Амны хөндийн шингэнийг хэмжих хэрэгсэл	A mains electricity (AC-powered) instrument designed to collect and measure very small volumes of liquid in the oral cavity mainly to diagnose gingivitis and periodontitis in the first stages by measuring gingival crevicular fluid (GCF) and periodontal pocket fluid (PPF). It typically consists of a computerized electronic unit and appropriate single-use liquid collectors (e.g., dedicated paper strips) to take the samples. Some devices can also measure minor salivary gland and oral mucosa secretion and/or saliva flow.	IIa

4924	33384	Ocular plethysmograph	Нүдний плетисмограф	A graphic recorder designed for evaluating blood volume changes within the eyes. The obtained data can be used in calculating the ophthalmic artery pressure. It includes pulse sensors (e.g., vacuum or air-filled eyecups) and transducers attached to an electronic unit. It is used in the detection and evaluation of stenosis and occlusion of the carotid arteries in stroke prevention programs, and in assessing other diseases related with the blood flow conditions within the internal carotid arteries.	IIa
4925	33385	Nerve guide, synthetic polymer, non-bioabsorbable	Мэдрэлийн чиглүүлэгч, синтетик полимер, био шингэдэггүй	An implantable device made of non-bioabsorbable synthetic polymer materials [e.g., silicone rubber] intended to be used 1) to create a tunnel through which a discontinuous peripheral nerve can regenerate to bridge the proximal and distal nerve ends, 2) to encase a nerve for protection to aid in repair [e.g., to prevent ingrowth of scar tissue], or 3) for capping the end of an amputated nerve to prevent the formation of a neuroma. It is also known as a nerve sheath, nerve cuff, nerve protector, nerve conduit, nerve wrap, or nerve cap.	IIa
4926	33391	Rigid optical mammary ductoscope	Хөхний хатуу оптик дутоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the mammary duct. It is inserted into a natural orifice of the breast nipple either directly or indirectly during the procedure. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine pathological changes within the mammary duct. This is a reusable device.	IIa

4927	33392	Flexible fibreoptic mediastinoscope	Уян хатан шилэн медиастиноскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the mediastinum (the intrapleural space located behind the sternum). It is inserted into the body through an artificial orifice created by an incision made during mediastinoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine structures such as lymph nodes during a staging evaluation of lung cancer, or to establish the diagnosis of a tumour that is localized to the mediastinum. This is a reusable device.	IIa
4928	33403	Pleurocentesis/paracentesis kit	Плероцентез/парацентезийн иж бүрдэл	A collection of sterile surgical devices intended for acute (i.e., non-indwelling) therapeutic or diagnostic aspiration of fluids or air from the pleural and/or peritoneal cavities. It includes a dedicated needle, syringe, and appropriate support devices (e.g., dressings, drapes); it does not include a drainage catheter and does not contain pharmaceuticals. This is a single-use device.	IIa
4929	33404	Tympanostomy tube inserter, reusable	Тимпаностомийн хоолой суулгагч, дахин ашиглах боломжтой	A hand-held device intended to direct the insertion and placement of a tympanostomy tube (otherwise known as a myringotomy tube, grommet or an aural vent tube) through the external ear canal during ear/nose/throat (ENT) surgery. A tympanostomy tube is a device used to provide drainage from the middle ear through the tympanic membrane; the inserter is removed once the tube has been inserted. This is a reusable device.	IIa
4930	33455	Tonsil suturing needle	Гүйлсэн булчирхайд оёх зүү	A cylindrical shaped, solid instrument of various diameters, whose distal tip may be configured in various geometrical forms, used to insert and pull suture material through tissue in the tonsillar region. The suture serves to unite two tissue surfaces. This is a reusable device.	IIa
4931	33479	Kidney donor-organ preservation/transport system	Бөөрний донор-эрхтэн хадгалах, тээвэрлэх систем	A dedicated system designed to support and maintain a donated kidney organ during transport from the donor to the receiver hospital where the organ will be transplanted into the recipient. This system will provide technical support functions to keep the organ in as near-physiologic state as possible.	IIa

4932	33511	Intracerebral aneurysm repair substance	Тархины доторх аневризмыг засах бодис	An implantable adhesive substance (e.g., a glue or a resin) intended to be used in the repair of an intracerebral aneurysm by means of obliterative adhesion of the sac. It is typically used when conservative management, removal, or obliteration by aneursym clip is not clinically indicated.	IIa
4933	33522	Intraoperative procedure bag	Хагалгааны үеийн уут	A sterile flexible container used to temporarily isolate a patient body part/organ during a surgical procedure, typically to segregate it from the surgical site. The device may be used to: 1) cover a dirty body part (e.g., hand/foot) to prevent cross-contamination with the surgical site; 2) cover a clean body part (e.g., hand/foot) while performing surgery on another site (e.g., leg/knee); 3) retain organs during abdominal surgery; or 4) keep organs (e.g., intestines) moist during surgery. It is typically made of a soft, strong, clear plastic film with a seamless bottom and draw strings at the opening to create a seal around the chosen body part/organ. This is a single-use device.	IIa
4934	33526	Hearing aid master	Сонсголын аппаратын мастер	An audio frequency electronic device intended to simulate a hearing aid. It usually has the means for precise and known adjustments to its acoustic characteristics, e.g., gain, maximum acoustic output or frequency response. The device is used to select and adjust acoustic characteristics to determine either the best response for an individual or to assess the effects of specific characteristics for experimental purposes. The device is not intended to be worn by an individual as a permanent aid, rather to select and adjust a person's wearable hearing aid.	IIa

4935	33579	Surgical irrigation/aspiration pump, reusable	Мэс заслын усалгаа/аспирацийн насос, дахин ашиглах боломжтой	An electrically-powered device, which may include noninvasive accessories, intended to both irrigate and aspirate (i.e., capable of both functions) body cavities and wounds typically during an endoscopic and/or orthopaedic surgical procedure, usually to facilitate observation. It is intended to remove tissues/fluids/debris through suction, and to irrigate the surgical site with a sterile fluid (e.g., saline); it is not intended to administer parenteral fluids or drugs. The device may include collection containers or tubing; it does not include patient contact devices (e.g., handpiece/tip, catheter). This is a reusable device.	IIa
4936	33627	Peritoneal dialysis system dialysate filter	Хэвлийн диализийн системийн диализатын шүүлтүүр	A microporous device used to capture contamination particles of the dialysate before its instillation into the peritoneal cavity. This is a single-use device.	IIa
4937	33658	Implant battery charger	Суулгацын зай цэнэглэгч	An electronic device intended to be used to wirelessly recharge the batteries of an active implantable device in situ. It is not intended to program or extract data from (read) the implanted device.	IIa
4938	33689	Bronchoscopic aspiration tube, rigid	Бронхоскопийн сорох хоолой, хатуу	A rigid luminal device intended to be used in combination with a compatible bronchoscope for aspiration of materials (e.g., mucous, phlegm) from the respiratory tract and the bronchi of the lungs during bronchoscopy. It is typically in the form of a metal or plastic tube. This is a reusable device.	IIa
4939	33727	Uterine contraction monitor, internal	Умайн агшилтын хяналт, дотоод	A mains electricity (AC-powered) device designed for the continuous measurement and display of intrauterine and amniotic fluid pressure changes. It typically consists of a measuring and display unit and a catheter placed transcervically. It is intended mainly to determine the intensity, duration, and frequency of uterine contractions during labour.	IIa

4940	33737	Corneal staining strip	Эвэрлэгийг будсан тууз	A small absorbent strip, made of filter paper or similar material, which is impregnated with a small amount of a chemical (e.g., fluorescein sodium, lissamine green) intended to be applied to the cornea to function as a dye for ophthalmic examinations of the anterior segment of the eye. It is typically used to stain the cornea when fitting contact lenses, to disclose corneal injury (e.g., to enhance superficial abrasions for examination), in applanation tonometry, or evaluation of dry eye syndrome. This is a single-use device.	IIa
4941	33791	Blanket/pad infant phototherapy unit	Нялхсын гэрлийн эмчилгээний хэсэг	A device designed to emit a blue light in the visible wavelength of around 425-475 nm to treat neonatal jaundice (or hyperbilirubinemia). It consists of a light source that connects to a blanket-like wrap or pad which emits the light and covers or encloses the neonate's body. Exposure to this device will alter the bilirubin through photo oxidation and configurational and structural isomerization allowing the body function to dispose of it naturally. It is intended for use in the home and a clinical setting.	IIa
4942	33799	Haemodialysis catheterization kit, single-use	Гемодиализийн катетержуулалтын иж бүрдэл, нэг удаагийн хэрэглээ	A collection of sterile devices designed to provide access to a patient's blood for haemodialysis or other chronic uses. It typically includes a tube and needle (co-axial flow) designed for this purpose. This is a single-use device.	IIa
4943	33806	Intestinal splint	Гэдэсний чигжээс	A sterile rigid or flexible device intended to be implanted within the abdomen to stabilize a portion of the intestine, or to stabilize and protect an injured portion of the intestine. The device is often used to prevent bowel obstruction after surgery.	IIa
4944	33833	Fixative, formalin	Тогтворжуулагч, формалин	An agent containing formalin employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	IIa

4945	33834	Fixative, alcohol	Тогтворжуулагч, архи	An agent containing alcohol employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	IIa
4946	33843	Polysomnograph	Полисомнограф	A mains electricity (AC-powered) device designed to record physiological signals from a sleeping patient to assess sleep disorders (e.g., insomnia, snoring or sleep apnoea). The device is typically computerized and usually records an electrocardiogram (ECG), electroencephalogram (EEG), chest wall motion, airflow at both the nose and the mouth, eye movements, haemoglobin oxygen saturation (SpO2) and electromyogram (EMG). Parameters may be added or omitted depending on the study being performed. The device includes multiple electrodes/sensors placed on the patient in specific areas as well as amplifiers and filters for recording.	IIa
4947	33854	Mechanical atherectomy system generator, electrical output	Механик атерэктомийн системийн генератор, цахилгаан гаралт	A mains electricity (AC-powered) component of a mechanical atherectomy system designed to generate a high frequency electrical current that is converted via a separate transducer, typically within a handpiece, into vibrational energy for the fragmentation of a chronic partial occlusion (CPO) or chronic total occlusion (CTO) of both coronary and peripheral arteries during an atherectomy procedure. The device may be operated via a foot-switch and may include an integrated suction/aspiration system.	IIa

4948	33873	Skin-closing tension device	Арьсыг чангалах төхөөрөмж	A sterile device designed to apply continuous tension to an area of skin to stretch it to achieve a surplus of full thickness skin and subcutaneous tissue for the closure of a wound where the margins are too far apart for suturing, or prior to the surgical excision of a skin defect, or for the implantation of a prosthesis to provide additional skin for coverage; it may additionally be used for offloading sutures in closed wounds. It is typically available as automatic self-closing skin hooks, or a tension line inserted through skin hooks at the wound margins for constant or adjustable tension application. It may be used as an alternative to skin grafting. This is a single-use device.	IIa
4949	33910	Computed tomography contrast medium injection system, line-powered	Компьютерийн томографийн тодосгогч бодисын тарилгын систем, шугамаар ажилладаг	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for computed tomography (CT) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using CT scanning). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for CT studies. The system may synchronize media delivery with the x-ray generator during CT scanning.	IIa
4950	33911	Cannula, uterine, manipulation/injection	Суваг, умай, манипуляци / тарилга	A rigid plastic or metal tube-shaped surgical instrument that is inserted through the cervix into the uterus by means of a trocar providing rigidity. After insertion the trocar is withdrawn leaving a channel for the manipulation and/or insertion of instruments for manipulating tissue within the uterus. This is a single-use device.	IIa

4951	33953	Hearing aid, face-plate	Сонсголын аппарат, нүүрний хавтан	A device used to help provide hearing sensation to a hearing impaired person by transmitting amplified sound pressure waves and transmit the signal to the external ear through the medium of air. The device typically consists of an amplifier, controls, and battery holder (a microphone and earphone may be integral or separate), which is then fitted into a casing or shell made from an impression of an individual's ear. The function and design are substantially equivalent to existing conventional in-the-ear (ITE) or in-the-canal (ITC) hearing aids available through commercial distribution.	IIa
4952	33984	Bone marrow collection/transfusion set	Ясны чөмөг цуглуулах/цус сэлбэх багц	A sterile collection of instruments, pharmaceuticals, and other items intended for use in combination to collect and/or deliver bone marrow. This is a single-use device.	IIa
4953	33993	Hearing aid, bone-conduction	Сонсголын аппарат, ясны дамжуулалт	A wearable sound-amplifying device that is intended to compensate for impaired hearing and that operates through bone-conduction methods via a bone vibrator. The device may be incorporated into spectacles or a headband.	IIa
4954	33995	Dental caries detector, optical induced fluorescence	Шүд цоорох илрүүлэгч, оптик флюресцент	A mains electricity (AC-powered) device designed to determine the changes in the fluorescence of teeth enamel and dentine due to mineral loss, mainly for the diagnosis of early stage dental caries and/or to monitor the progress of caries. It consists of a light source (typically a laser) that elicits fluorescence in teeth, and a unit that quantifies the altered fluorescence of the carious tooth tissue.	IIa
4955	34006	Bone reconstruction material, dental	Ясны нөхөн сэргээх материал, шүдний	An absorbable or non-absorbable biomaterial used in dental procedures to fill a bony cavity (packing) or to increase the volume of a bone (augmentation).	IIa

4956	34010	Flexible fibreoptic angioscope, reusable	Уян хатан шилэн ангиоскоп, дахин ашиглах боломжтой	An endoscope with a very thin, flexible inserted portion intended for the visual examination and treatment of the lumen and patency of blood vessels (especially to evaluate the patency of veins or arteries). It is inserted into the body through an artificial orifice created by an incision made during the procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle (e.g., a fused silica flexible rod that provides sharper images and greater strength than individual strands). It is typically used for visualization of the coronary artery, an arterial bypass procedure with a saphenous vein, or a valvulotomy. This is a reusable device.	IIa
4957	34013	Visual-reinforcement audiometer	Харааны арматурын аудиометр	An electroacoustic device used to evaluate the hearing of young children. Appropriate responses to test signals are rewarded by the automatic presentation of pictures that are attractive to the child.	IIa
4958	34035	Lacrimal dilator, single-use	Лакримал өргөсгөгч, нэг удаагийн хэрэглээ	A sterile, hand-held, manual, ophthalmic surgical instrument used for enlarging the lacrimal canal (the lacrimal duct) during an ophthalmic procedure. This is a single-use device.	IIa
4959	34036	Orthopaedic cement extraction system	Ортопедийн цемент олборлох систем	An assembly of devices designed for the removal of orthopaedic cement from a site of previous application during an orthopaedic surgical procedure to replace a previously cemented prosthesis. This system will incorporate devices such as suction tubes, vacuum traps, and a vacuum source for the suction/aspiration of the cement/bone fragments from the site. This is a reusable device.	IIa
4960	34037	Posture monitor	Биеийн байдлыг хянах	A mains electricity (AC-powered) device designed to locate, display and record the position of each of several contiguous vertebra in a continuous region of the spine. It may also be used in conjunction with posture training of the patient.	IIa

4961	34040	Foetal Doppler system	Ургийн доплер систем	A portable, hand-held, battery-powered device assembly consisting of a measuring and display unit and an attached probe or interchangeable probes designed to noninvasively detect foetal heart beats using ultrasound/Doppler technology. The heart beats are typically conveyed audibly via the measuring/display unit and attached probe which is applied to the surface of the pregnant woman's abdomen. The device aids in determining foetal viability.	IIa
4962	34077	Cannula, uterine, insemination	Суваг, умай, үр тогтоох	A semi-rigid or rigid tube that is used to insert sperm into the uterus during an intrauterine insemination procedure. This is a single-use device.	IIa
4963	34078	Endoscopic suturing unit, reusable	Дурангийн оёдлын хэсэг, дахин ашиглах боломжтой	A manually-operated device intended to be used in combination with a compatible flexible endoscope (e.g., gastroscope, laparoscope) to mechanically approximate the edges of an internal wound or incision with sutures, typically during a gastrointestinal (GI) procedure. It is typically loaded with a needle/suture assembly and attached to the working end, or inserted through the working channel, of the endoscope. The device will also knot and cut the sutures as they are stitched; some types may also carry and/or knot a ligature. This is a reusable device intended to be sterilized prior to use.	IIa
4964	34096	Indwelling urethral drainage balloon catheter, antimicrobial	Шээсний сувийг зайлуулах баллон катетер, нянгийн эсрэг үйлчилгээтэй	A flexible tube with an inflatable balloon on its distal tip intended to be inserted through the urethra and retained in the urinary bladder of an adult or paediatric patient to function as an indwelling therapeutic device for urinary drainage. It is used for a variety of conditions causing urinary retention (e.g., postoperative, obstruction). Commonly known as a Foley catheter, it is inserted by trained staff and may have a bent tip (coude) to facilitate insertion. It is also coated with an antibiotic or antimicrobial agent to help prevent catheter-associated urinary tract infection (CAUTI). This is a single-use device.	IIa

4965	34115	ST-segment electrocardiographic monitor	ST сегментийн электрокардиографийн монитор	A mains electricity (AC-powered) bedside device designed to continuously detect, measure, and display a patient's electrocardiogram (ECG), and provide analysis of the ECG's ST segment, through leads and sensors attached to the patient; it may also measure and display other physiological parameters. ST-segment analysis may facilitate ischemia detection. The device is typically equipped with audible and/or visual alarms that are triggered when the patient's parameters drop below or exceed pre-set limits.	IIa
4966	34137	Oesophageal endoscopic ligator, reusable	Улаан хоолойн дурангийн холбогч, дахин ашиглах боломжтой	A device used in combination with a compatible flexible endoscope for the deployment of a rubber band to oesophageal varices during an endoscopic procedure which will create a haemostasis or necrosis of the varix. It is available in various designs and typically consists of a multiple band ligating unit that fits over the distal end of the endoscope with rubber latex ligating bands premounted on a band carrier, and controls that run along the outside of the endoscope terminating in a control handle at the proximal end that is used to deploy the bands as required. In some instances, this type of device could be used to treat haemorrhoids in the colon. This is a reusable device.	IIa
4967	34142	Pressure relief valve, single-use	Даралт бууруулах хавхлага, нэг удаагийн	A non-sterile device used to regulate the maximum pressure level in a circuit or system (typically containing gas) where it is essential not to exceed a pre-set maximum pressure. Should this pressure level be exceeded, this device will automatically open and vent the excess pressure from the circuit/system ensuring that an excessive pressure level is not sustained, thereby preventing damage to the patient or a parent device. It is typically used in anaesthesia machines and ventilators forming part of the breathing/gas delivery circuit/system, but may be applied to other functions. This is a single-use device.	IIa

4968	34174	ENT transilluminator	ENT трансиллюминатор	A hand-held instrument intended to be used to illuminate sinus tissue during an ear/nose/throat (ENT) procedure to render the tissue translucent for examination. It is connected through a light cable, that may or may not be part of the device, to a light source that generates the light. Its exterior is typically made of high-grade stainless steel; it has a fibreoptic bundle core that conducts the light to the target site. This is a reusable device.	IIa
4969	34175	Acupuncture needle, single-use	Зүү эмчилгээний зүү, нэг удаагийн	A sterile, long, slender, sharply-pointed instrument used to stimulate peripheral nerves in order to produce surgical anaesthesia, relieve pain, and to promote other therapeutic effects. It is widely used in complementary therapy. This is a single-use device.	IIa
4970	34178	Invasive breast implant sizer, fixed, single-use	Инвазив хөхний суулгац хэмжээс, суурин, нэг удаагийн	A device intended to be placed intraoperatively in a surgically-prepared mammary pocket to provide a volume measurement for the appropriate selection of a breast implant (mammary prosthesis). The device consists of a balloon-like elastomer shell that is either filled to an optimal volume via tubing and port, or is prefilled with a fixed amount of silicone gel, which is placed in the pocket and then removed. The sizer may vary in shape, profile, and volume. This is a single-use device.	IIa
4971	34214	Female-incontinence urethral pad	Эмэгтэй хүний шээсний сүвний хөвөн	An external device designed to occlude the opening of the urethra in a woman to prevent or decrease episodes of incontinence (involuntary loss of urine) that are typically associated with stress. It is typically a small pad that is coated on one side with an adhesive (e.g., a biocompatible polymer) which is applied to the urethral opening to create a seal. This is a single-use device.	IIa

4972	34217	Cannula, uterine, intrafallopian	Суваг, умай, интрафаллоп	A semi-rigid or rigid plastic or metal tube shaped surgical instrument that is inserted through the cervix, across the uterus, into a fallopian tube by means of a trocar providing rigidity. After insertion the trocar is withdrawn leaving a channel for the manipulation and/or insertion of instruments for manipulating tissue within the fallopian tube. This is a single-use device.	IIa
4973	34317	X-ray intensifying screen	Рентген туяаг эрчимжүүлэх дэлгэц	A device typically considered to be a component of an x-ray film cassette used in diagnostic x-ray applications. It is typically used in pairs with double side emulsion x-ray film. It consists of a backing material, e.g., cardboard, plastic or metal; a reflecting layer of material, e.g., titanium dioxide; an active layer of light-emitting phosphor, e.g., calcium tungstate, barium sulfate, or rare earth material; and a protective layer, typically a plastic coating used to reduce static electricity and allow cleaning. It is used to reduce the x-ray dose to the patient and to allow for shorter exposure times to reduce motion artefact on exposed film.	IIa
4974	34433	Bidirectional-anaesthesia breathing circuit	Хоёр чиглэлтэй-мэдээ алдуулах амьсгалын хэлхээ	A non-sterile assembly of devices including breathing tubes designed to conduct medical gases from the fresh gas supply outlet of an anaesthesia unit/workstation to the patient, whereby the flow of anaesthesia gases through a carbon dioxide (CO_2) absorber, placed between a reservoir bag and a patient connector port, is bidirectional. This is a reusable device.	IIa
4975	34476	Ultraviolet phototherapy carbon arc lamp	Хэт ягаан туяаны эмчилгээний нүүрстөрөгчийн нуман гэрэл	A mains electricity (AC-powered) device with special carbon rods intended to be used to generate an ultraviolet (UV) light which can be used for the treatment of skin disorders; a form of sunlight therapy. This device may reflect old technology.	IIa

4976	34479	Short-wave diathermy treatment system electrode	Богино долгионы диатерми эмчилгээний системийн электрод	An electrical conductor that is a component of a short-wave diathermy treatment system and designed for the transfer of electromagnetic (EM) energy in the radio-frequency (RF) bands of 13 megahertz (MHz) to 27.12 MHz from the system's generator to the patient. It is placed on the patient's skin for the transcutaneous transfer of energy from the generator to provide a deep heat within specific volumes of the body. This is a reusable device.	IIa
4977	34497	Acupuncture point detector	Зүү эмчилгээний цэг илрүүлэгч	An electronic probe used to precisely locate an acupuncture point on a patient's body. It is used in complementary medicine therapy either independently or with a device intended to apply stimuli to acupuncture sites (e.g., an electrical stimulator). It may include visual or audio signals to indicate the acupuncture point. This is a reusable device.	IIa
4978	34583	Lumbar puncture needle	Бүсэлхий нурууны хатгалт зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument with stylet intended to be used to penetrate the spine for the purpose of obtaining spinal fluid for diagnostic examination. This is a single-use device.	IIa
4979	34598	Suture, absorbable	Оёдол, шингээх чадвартай	A fine thread or cord-like absorbable material that is used to make a repair to or close a wound.	IIa
4980	34601	Silk suture, non-sterile	Торгоны оёдол, ариутгагдаагүй	A non-sterile, single-strand (monofilament), natural, non-bioabsorbable thread made from raw silk spun by silkworms intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it must be sterilized before use and may include an attached needle intended to be disposed of after single use. It provides temporary wound support until the wound sufficiently heals to withstand normal stress. Although classified as a "non-bioabsorbable" material, it is typically digested by proteolysis after an extended period of time. This is a single-use device.	IIa
4981	34602	Suture, plastic	Оёдол, хуванцар	A sterile thread made from plastic that is used to join the edges of a wound or incision by stitching. It comes in a variety of lengths and may be supplied with a needle. This is a single-use device.	IIa

4982	34608	Aneurysm suturing needle	Аневризмыг оёх зүү	A sharply-pointed metal instrument designed with a handle and used to ligate blood vessels, especially the base of aneurysms. This is a reusable device.	IIa
4983	34671	Air-conduction hearing aid, behind-the-ear	Агаар дамжуулагч сонсголын аппарат, чихний ард	A battery-powered acoustic device intended to compensate for impaired hearing by transmitting amplified sound waves to the eardrum through air. It typically consists of a microphone, an amplifier, and a speaker (receiver) contained in a case worn behind-the-ear (BTE). The microphone receives sound waves and converts them into electrical signals which are increased by the amplifier and sent as sound waves, by the speaker, to the eardrum through an earmould that fits inside the outer ear or a tube in the ear canal. The device is used for mild to profound hearing loss; most types are programmable to enable computerized adjustments for a patient's hearing loss and related factors.	IIa
4984	34673	Hearing aid, spectacle	Сонсголын аппарат, нүдний шил	A wearable sound-amplifying device that is intended to compensate for impaired hearing and that operates through air- or bone-conduction methods. The device typically consists of a microphone, amplifier and earphone or bone vibrator, powered by a low-voltage battery, and housed in the side arm or arms of a pair of spectacles.	IIa
4985	34700	Dental laboratory drilling system handpiece	Шүдний лабораторийн өрөмдлөгийн системийн гар утас	A hand-held device that includes a chuck for attaching drills, burs, grind wheels, and similar rotating devices used in the dental laboratory. The device is typically remote from the power source (e.g., a dental laboratory drill motor) and is connected to this by a flexible drive system, which may be a Bowden cable. This is a reusable device.	IIa

4986	34771	Dental unfilled resin sealant/coating	Шүдний дүүргэгдээгүй давирхайн чигжээс/бүрээс	A non-sterile, resin-based dental material intended for professional use as a sealant, coating, and/or glazing material during dental restoration (e.g., pit/fissure sealing and/or restorative composite resin sealing/coating), whereby the majority of the setting reaction is based on the self-, light-, or dual-cured polymerization of an unfilled resin; it does not include any significant inorganic filler materials and is therefore not classed as a composite resin. It may be preloaded into an applicator. After application, this device cannot be reused.	IIa
4987	34782	Dentine bonding agent/set	Дентин холбогч бодис/иж бүрдэл	A material(s) primarily intended to be used as a bonding-promoting substance between dentine and a dental composite filling, restorative, or luting material; it may also be used as an enamel bonding material. It includes a resin-based bonding agent and may also include a primer, etching solution or curing activator, within the same formulation, or as part of a set. It is not a primer, etching solution and/or activator sold in the absence of a bonding agent; composite resin is not included. After application, this device cannot be reused.	IIa
4988	34784	Aluminosilicate dental cement	Алюминосиликат шүдний цемент	A substance based on the reaction between an aluminosilicate glass powder and an aqueous solution of phosphoric acid, which may contain metal ions, used for the aesthetic restoration of anterior teeth. After application, this device cannot be reused.	IIa
4989	34791	Root canal obturating point	Үндэс сувгийн бөглөрөх цэг	A metallic or polymeric based point or cone suitable for use in the obturation of the dental root-canal, but not for support of a coronal restoration.	IIa
4990	34799	Composite dental impression material	Шүдний нийлмэл материал	A thermoplastic material designed to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. It is composed of a mixture of natural resins, fillers, and lubricants. This is a single-use device.	IIa

4991	34800	Gypsum dental impression material	Шүдний гипсэн материал	A dental material made of gypsum (typically plaster), based on calcium sulfate hemihydrate, designed to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. After application, this device cannot be reused.	IIa
4992	34811	Polymer-based dental model material	Полимер дээр суурилсан шүдний загварын материал	A variety of dental materials dedicated for modelling and for use during production of dental restorations. It is based on various kinds of polymers. After application, this device cannot be reused.	IIa
4993	34837	Transabdominal amnioscope	Хэвлийн хөндийн амниоскоп	An endoscope with a rigid inserted portion intended for the visual examination of the foetus while in the amnion (the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid). It is inserted into the body through an artificial orifice created by an incision made in the maternal abdominal wall through to the amniotic cavity. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the foetus for external malformations, to obtain foetal blood or tissue samples, and for the observation of the colour and volume of amniotic fluid. This is a reusable device.	IIa
4994	34845	Intrathecal anaesthesia set, non-medicated	Intrathecal мэдээ алдуулалтын багц, эмийн бус	A collection of devices intended for the administration of an analgesic or anaesthetic agent (not included) to the intrathecal space for the management of pain (known as spinal block, subarachnoid block, or intradural block). It includes a spinal needle and a syringe, with additional devices utilized for the procedure (e.g., dressings). It is not intended for epidural anaesthesia. This is a single-use device.	IIa

4995	34848	Metal/carbide ENT bur, single-use	Металл/карбид чих хамар хоолойн шар, нэг удаагийн	A small rotary shaft of hard metal (e.g., steel) or carbide, with fluting or cutting planes of various shapes at the working end, designed for incising or removing cartilage and/or bone from the ear, nose, or throat during an ear/nose/throat (ENT) procedure. It is usually power-driven by a rotary handpiece or other powered device. It is typically used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a single-use device.	IIa
4996	34855	Flexible fibreoptic arterioscope, reusable	Уян хатан шилэн артериоскоп, дахин ашиглах боломжтой	An endoscope with a very thin, flexible inserted portion intended for the visual examination and some treatment of coronary arteries, peripheral vessels, and intracardiac structures. It is inserted into the body through a surgically-created orifice during arterioscopy. Anatomical images are transmitted to the user through a fibreoptic bundle (e.g., a fused silica flexible rod that provides sharper images and greater strength). This device is intended to be used to examine arteries and arterial circulation; blood flow is normally blocked in the arteries by a balloon while a clear liquid is infused to flush away residual blood to provide a clear view. This is a reusable device.	IIa
4997	34856	Rigid optical arthroscope, reusable	Хатуу оптик артроскоп, дахин ашиглах боломжтой	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the interior of a joint (e.g., knee, shoulder, elbow). It is inserted into the body through an artificial orifice created by an incision made during arthroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine structural damage to a joint, often from sports injuries. The arthroscope eyepiece is normally interfaced with a video camera. This is a reusable device.	IIa

4998	34875	Behavioural therapy electrical stimulation system	Зан үйлийн эмчилгээний цахилгаан өдөөх систем	An assembly of devices designed to apply harmless but unpleasant electrical impulses to a patient (e.g., in the arm or leg) to modify undesirable behavioural characteristics (e.g., self injurious behaviour). It is typically used for aversion therapy sessions conducted by a therapist and/or in clinical programs at home. Some assemblies include an annoying sound stimulus for sound or sound/electric aversion conditioning. The system is often used in the treatment of obsessive/compulsive behaviour and drug abuse.	IIa
4999	34877	Breathing circuit bag, single-use	Амьсгалын хэлхээний уут, нэг удаагийн	A non-sterile elastomeric reservoir sac intended to store breathing gas during the respiratory cycle. The breathing bag may be on the inspiratory or expiratory limb of a breathing circuit depending on the breathing circuit design. It may also function as a maximum pressure limiting device during spontaneous or manually assisted ventilation. It may be made of conductive or non-conductive material and is typically used in anaesthesia or ventilator breathing circuits. This is a single-use device.	IIa
5000	34879	Dental prosthesis/orthodontic appliance cleaning brush	Шүдний протез/ортодонтийн хэрэгсэл цэвэрлэх сойз	A hand-held instrument comprised of a proximal handle and distal bristles intended to be used to manually clean a removable dental prosthesis (e.g., denture) and/or orthodontic appliance (e.g., retainer, aligner). It is intended to be used in the home and healthcare facility. This is a reusable device.	IIa
5001	34883	Airway device cleaning utensil, noninvasive, reusable	Амьсгалын замын төхөөрөмжийг цэвэрлэх хэрэгсэл, инвазив бус, дахин ашиглах боломжтой	A hand-held device intended to be used to clean an ex situ non-endoscopic airway device [e.g., endotracheal (ET) tube, tracheoesophageal speech valve, laryngeal airway], once it has been removed from the patient, to remove organic matter (e.g., phlegm). It is in the form of a flexible or rigid handle with distal soft or stiff bristles, fibres or spines, or a swab; it may be used in the home or healthcare facility. This is a reusable device.	IIa

5002	34884	Sleep apnoea nasal mask, reprocessed	Унтах апноэ хамрын маск, дахин боловсруулсан	A sterile, flexible, form-shaped device designed to be placed over a user's nose and mouth (due to compulsive mouth breathing) to interface with a sleep apnoea positive airway pressure unit for the delivery of direct ambient air, or medical oxygen (O2) and air, for continuous positive airway pressure higher pressure (CPAP) or bi-level positive airway pressure (BiPAP) ventilation therapy to improve/enhance the sleep of a person experiencing sleep apnoea. It is usually made of plastic and/or silicone. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
5003	34898	Epidural cannula	Эпидураль суваг	A sterile semi-rigid or rigid tube designed for placement in the epidural space usually to deliver anaesthetic or analgesic agents. It can be used for relief of labour pains as well as for surgical intervention below the waist. This is a single-use device.	IIa
5004	34899	Cannula, eye	Суваг, нүд	A small tube used to drain the eye of fluid, and sometimes to aspirate the eye, during ophthalmological procedures. This is a single-use device.	IIa
5005	34901	Phacoemulsification system handpiece tip, reusable	Факоэмульсжуулах системийн гарны үзүүр, дахин ашиглах боломжтой	A device that is attached to a dedicated handpiece for insertion into the eye to deliver energy (e.g., ultrasonic, piezoelectric), provided from a system generator, to perform phacoemulsification (a procedure for the liquefying and removal of the opaque lens nucleus in cataract surgery). It may facilitate, via the handpiece, the irrigation/suction needed for the removal of debris. This is a reusable device.	IIa

5006	34903	Paranasal sinus cannula	Хамрын синусын суваг	A sterile, semi-rigid or rigid plastic or metal tube that is inserted through a nostril until the distal tip reaches into one of the nasal sinuses during a ear/nose/throat (ENT) procedure. It is connected directly or through an external tube or catheter to an irrigation and/or suction system for irrigation, infusion, or withdrawal of substances. It is usually used together with a stylet for ease of insertion; when in place the stylet is withdrawn leaving an open channel for the escape or instillation of fluid. It may also be used as a port through which instruments and/or probes can be passed to perform a variety of diagnostic, treatment, or surgical procedures. This is a single-use device.	IIa
5007	34905	Cardiopulmonary bypass/extracorporeal membrane oxygenation cannula, drainage	Зүрхний уушигны гуурсан хоолой/биеийн гаднах мембраны хүчилтөрөгчийн суваг, ус зайлуулах суваг	A semi-rigid or rigid tube intended to be surgically inserted into the right atrium or large vein to serve as a channel for the extracorporeal transport of deoxygenated blood from a patient during cardiopulmonary bypass and/or extracorporeal membrane oxygenation; in some settings it may be referred to as a venous cannula. It is typically inserted using a compatible trocar blade which may be included. This is a single-use device.	IIa
5008	34907	Trolley washer-disinfector (thermal)	Угаагч ариутгагчийн тэргэнцэр (дулааны)	An electrically-powered unit designed to accept, cleanse (wash) and disinfect a trolley (cart) using heat.	IIa
5009	34917	Indwelling urethral drainage balloon catheter, non-antimicrobial	Шээсний сүвийг зайлуулах баллон катетер, нянгийн эсрэг үйлчилгээтэй	A flexible tube with an inflatable balloon at its distal tip intended to be inserted through the urethra and retained in the urinary bladder, or prostatic bed, of an adult or paediatric patient to function as an indwelling therapeutic device for urinary drainage; it might also be designed for infusion of fluids (irrigation). It may have a bent tip (coude) to facilitate insertion, and some types may be provided with a guidewire to facilitate difficult insertion (e.g., in cases of enlarged prostate); it does not include an antimicrobial agent(s). Most types are commonly known as a Foley catheter; it is intended to be introduced by a healthcare professional. This is a single-use device.	IIa

5010	34922	Haemodialysis catheter, single-needle	Гемодиализийн катетер, нэг зүү	A flexible tube with a double lumen used in conjunction with a single-needle. The device is used to perform haemodialysis through a single venipuncture site. This is a single-use device.	IIa
5011	34923	Suction system catheter, general-purpose	Сорох системийн катетер, ерөнхий зориулалттай	A sterile flexible tube used in the removal of fluids from the body via a natural body orifice, surgical incision, or wound. It is typically designed to be attached to a collection canister or bottle where a vacuum is created by a suction system via an intermediate tubing. This is a single-use device.	IIa
5012	34924	Suprapubic drainage catheter	Супрапубик ус зайлуулах катетер	A flexible/semi-rigid tube intended to be inserted through a suprapubic (above the pubic arch) incision directly into the bladder of a patient for the drainage of urine; it may also allow for infusion of fluid (e.g., medication, saline). It typically consists of a straight or angled, single-lumen tube with holes/tips at the distal end (e.g., malecot or pigtail design). The proximal end remains external to the patient and has a connector for connection to a urine collection device. It may include a stiffening device to assist in its insertion; however, it does not include non-dedicated supportive devices (i.e., not a kit). This is a single-use device.	IIa
5013	34926	Ureteral catheter	Шээсний сувгийн катетер	A flexible tube designed for introduction into the ureters through a cystoscope, ureteroscope or nephroscope. It is typically a 3 to 12 Fr radiopaque tube with one of several tip configurations (e.g., straight, bent, olive). It may have a single or double-lumen and graduated markings. The device is used for ureter dilation, bypass of partial obstructions, urinary tract irrigation/drainage during surgery (e.g., injection of contrast agent, anaesthetic agent and/or antiretropulsion gel), stone removal, retrograde urography, guidewire placement, and/or brush biopsy. This is a single-use device.	IIa

5014	34929	Urinary incontinence penis sheath/port, single-use	Шээс ялгаруулахгүй байх шодойн бүрээс/порт, нэг удаагийн	A device intended to be worn on or over the penis by an incontinent patient to channel urine from the penis, via a tube, into a collection bag. It consists of a penis-worn sheath (e.g., condom-catheter) or adhesive port (e.g., glans penis attachment), and may include a portion of tubing; the bag is not included. This device provides an alternative to inserting a catheter through the urethra, especially when difficulty is encountered in insertion or retention. It may be used to treat urinary incontinence or for non-ambulatory patients. This is a single-use device.	IIa
5015	34930	Single-administration urethral drainage/irrigation catheter	Нэг удаагийн шээсний суваг/усалгааны катетер	A sterile, flexible tube, typically with two lumens, designed to be inserted through the urethra and into the urinary bladder to provide one episode of irrigation and/or drainage of the bladder. It is typically inserted by a healthcare professional. This is a single-use device.	IIa
5016	34931	Venous pressure monitor, invasive detection	Венийн даралт хянах, инвазив илрүүлэх	An electrically-powered device designed for continuous or intermittent measurement, display, and recording of a patient's direct central or peripheral venous pressure, or the difference between central and peripheral venous pressure, by means of an indwelling catheter and a pressure manometer.	IIa
5017	34938	Orthopaedic chisel blade	Ортопедийн цүүц ир	A device that is an interchangeable component of an orthopaedic chisel and functions as the cutting blade which is attached and locked to a dedicated handle. Together, they become a single-blade surgical instrument, bevelled on one side, intended to cut or contour bone. The distal end (the cutting or shaping edge) is sharp, flat or curved [(concave) - also known as a hollow blade] in design and is typically made of high-grade stainless steel. This is a reusable device.	IIa

5018	34939	Flexible fibreoptic choledochoscope	Уян хатан шилэн холедокоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the choledoc, better known as the common bile duct (CBD). It is inserted into the body through an artificial orifice created by an incision in the abdomen (laparoscopic technique), or introduced via a flexible duodenoscope during choledochoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine structures of the CBD and for the removal of stones. This is a reusable device.	IIa
5019	34945	Circumcision kit, single-use	Хөвч хөндөх иж бүрдэл, нэг удаагийн хэрэглээ	A collection of sterile devices designed to perform a circumcision procedure. It typically includes a disinfectant, circumcision clamp, scissors, and a scalpel. This is a single-use device.	IIa
5020	34965	Hygroscopic cervical dilator	Гигроскопийн умайн хүзүүг тэлэгч	A sterile plug of expansible material intended to dilate the uterine cervix by gradually swelling to several times its original diameter through the absorption of moisture from the cervix over a period of several hours (typically <24 hours). It is made of synthetic polymer and/or plant-derived materials and typically has features (e.g., attached cord, handle) intended to assist anchoring, locating, and easy removal. The device is typically used to dilate the cervical canal for uterine curettage, labour induction, midterm abortions, intrauterine device (IUD) placement and removal, and radium placement. This is a single-use device.	IIa

5021	34966	Flexible fibreoptic colonoscope	Уян хатан шилэн колоноскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the entire colon [lower gastrointestinal (GI) tract]. It is inserted through the anus during colonoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine the lining of the colon or to evaluate altered bowel habits, colonic cancer, polyps, diverticular disease, occult or frank blood in stools, or unexplained anaemia. This is a reusable device.	IIa
5022	34972	Cardiac mapping system computer	Зүрхний зураглалын системийн компьютер	A dedicated computer with software that is a component of a cardiac mapping system and is used to process and store electronic information/data for the interpretation of cardiac physiological parameters received from the output of connected measuring devices [e.g., body surface or intracardiac electrocardiograph (ECG) sensors/transducers]. The measurements can be compared to pre-established diagnostic criteria for parameters such as cardiac blood flow, electrical conduction, or heart chamber geometry. The device may display real-time cardiac maps in various formats (e.g., electrical propagation maps, electrical potential maps, and cardiac chamber geometry maps).	IIa
5023	34973	Insulin syringe/needle, safety	Инсулин тариур/зүү, аюулгүй байдал	A sterile device consisting of a calibrated barrel (cylinder) with plunger intended to be used to administer an injection of insulin to a patient subcutaneously; it includes an attached needle with a safety mechanism, such as cylinder/flap shielding or retraction into the barrel or sleeve after use, providing protection against needle sticks and rendering the device unusable. The syringe is typically made of plastic and silicone materials and will have plunger anti-sticking properties (internally precoated with compatible substances) allowing smooth plunger movement. It can be used by healthcare personnel or patients. This is a single-use device.	IIa

5024	34975	Cricothyrotome, reusable	Крикотиротом, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used to perform a cricothyrotomy (an incision through the skin and cricothyroid) providing airway access within seconds for immediate ventilation of the patient and necessary suction procedures. It is used to open a patient's airway in emergency interventions, e.g., accidental blockage of the upper airway tract, and prior to tracheotomy. It is made of high-grade stainless steel and plastic materials. This is a reusable device.	IIa
5025	34976	Preformed dental crown, temporary	Урьдчилан бэлтгэсэн шүдний титэм, түр зуурын	A prefabricated tooth crown, usually made of stainless steel, aluminium (Al) or resin, that is designed to be fitted over a damaged or prepared tooth of a baby/child (primary tooth) or post-pubescent/adult patient (permanent tooth) to serve as a temporary device, typically until the natural tooth falls out or until the fitting of a permanent crown (not included). This device is commonly used during prosthodontic treatment or other restorative work required as a result of traumatic injury.	IIa
5026	34979	Rigid optical culdoscope	Хатуу оптик кульдоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the female peritoneal cavity and organs. It is inserted into the body through a small incision made in the posterior vaginal fornix into the cul-de-sac, also called the rectouterine pouch (pouch of Douglas), during culdoscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is used to examine structures of the uterus, ovaries, fallopian tubes, pelvis, and pelvic cavity when the physician is viewing the area from just behind the uterus. This is a reusable device.	IIa
5027	34988	Birthing/delivery kit	Төрөх/төрөх иж бүрдэл	A collection of sterile devices designed for the procedures associated with the birthing and delivery of a newborn. It contains the necessary instruments, dressings, and pharmaceuticals necessary for this procedure. This is a single-use device.	IIa

5028	34993	Haemodialysis dialysate central supply system	Гемодиализийн диализатын төвлөрсөн хангамжийн систем	An assembly of devices intended to supply large-scale haemodialysis dialysate (concentrate and/or ready-to-use solution) to medical facility haemodialysis systems for preparation/mixing and/or direct use. The system is typically built into the facility and consists of a pump(s) which applies positive pressure at a pre-set rate to supply the solution, storage tank(s), connection pipe(s), pressure and/or quantity sensor(s), and a control panel.	IIa
5029	34996	Corneal marking pad	Эвэрлэгийн тэмдэглэгээний дэвсгэр	A sterile device used with a refractive or a tactile corneal marking instrument to mark corneal tissue, typically in preparation for ophthalmic surgery. It is typically available as a pre-inked gentian violet marking pad, and is used to ink the working end of a corneal marking instrument prior to the transfer of the instrument marking pattern to the anterior of the eye. This is a single-use device.	IIa
5030	34999	Haemodialysis blood tubing set, single-use	Гемодиализын цусны гуурсан хоолойн багц, нэг удаагийн	A collection of tubing segments and associated devices (e.g., connectors, clamps) intended to be used to transfer blood between a patient's vascular access device and a haemodialyser during haemodialysis; it is sometimes referred to as haemodialysis blood lines. This is a single-use device.	IIa
5031	35000	Peritoneal dialysis system tubing set	Хэвлийн диализийн системийн гуурсан хоолойн багц	A sterile set intended for the administration of peritoneal dialysis. It will typically consist of tubing, an optional reservoir bag, and appropriate connectors. It may include a peritoneal dialysis filter to trap and remove contaminating particles. This is a single-use device.	IIa
5032	35011	Directoscope	Директоскоп	An endoscope with a rigid inserted portion that is used for the visual examination and treatment of the larynx. It is inserted into the body through the mouth and anatomical images are transmitted to the user by the device through relayed lens optics. This is a reusable device.	IIa

5033	35020	Flexible fibreoptic duodenoscope	Уян хатан шилэн дуоденоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the duodenum (the first part of the small intestine). It is inserted into the body through the mouth during duodenoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine structures and mucous membranes of the duodenum, for conditions like ulcers, polyps and cancers. This is a reusable device.	IIa
5034	35038	Foetal scalp electrode, spiral	Ургийн толгойн электрод, спираль	A sterile electrical conductor designed to transmit electric signals from the foetal scalp to an intrapartum monitor. The device is a spiralled (either single- or double-helix) metallic electrode with a sharp tip that is directly inserted into the foetal scalp with a screwing action; and an adaptor cable that may include a transducer. The electrode penetrates into the scalp up to 2.5 mm (0.1 inch); it is usually inserted with a dedicated applicator that may be included. The electrode is typically used to monitor a foetal physiologic signal (e.g., heart rate) during labour (intrapartum) after rupture of the amniotic sac. This is a single-use device.	IIa
5035	35046	Injured-tissue electrical stimulation system	Гэмтсэн эдийг цахилгаан өдөөх систем	An assembly of devices designed to externally apply electrical stimuli (usually direct current) to injured tissues, typically to promote healing. The system typically consists of leads with electrodes and a pulse generator. It is intended for the treatment of chronic wounds and ulcers.	IIa
5036	35050	Gravity enema set	Гравитацийн бургуй багц	A collection of devices intended to be used to deliver an injection of fluid (e.g., saline solution) into the rectum to facilitate evacuation of the large intestine. It includes a fluid reservoir (e.g., enema bag) which acts as a gravity-flow chamber, and typically includes enema tube(s) and enema tip; it may be prefilled with a non-medicated enema solution and may be available preassembled. This is a single-use device.	IIa

5037	35067	Foetal heart detector, phono	Ургийн зүрхний мэдрэгч, фоно	A device intended to enable audible detection of the foetal heart through the use of phonocardiography.	IIa
5038	35068	Foetal heart detector, ultrasonic	Ургийн зүрхний мэдрэгч, хэт авианы аппарат	A device intended to enable audible detection of the foetal heart through the use of ultrasound.	IIa
5039	35071	Blood transfusion filter	Цус сэлбэх шүүлтүүр	A microporous device intended to be inserted, e.g., into a blood transfusion line, to remove debris from blood being infused into a patient. When used for arterial blood the device may also be used to trap gaseous (air) bubbles. This is a single-use device.	IIa
5040	35072	Intravenous line filter	Судсан дотуурх шугаман шүүлтүүр	A sterile device designed to remove microorganisms and particulate matter from solutions in an infusion/intravenous (IV) line; it can also be used to remove air. This is a single-use device.	IIa
5041	35087	Flexible fibreoptic gastroduodenoscope	Уян хатан шилэн гастродуоденоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the upper gastrointestinal (GI) tract [oesophagus, stomach, and duodenum (the first part of the small intestine), including the pancreas and the bile duct]. It is inserted into the body through the mouth during gastroduodenoscopy. Anatomical images are transmitted to the user by the device which can be end-viewing (looking forward) or side-viewing (looking to one side) through a fibreoptic bundle and it is used for the cannulation of the pancreas and bile duct. This is a reusable device.	IIa

5042	35088	Flexible fibreoptic gastroscope	Уян хатан шилэн гастроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the oesophagus and the stomach. It is inserted into the body through the mouth during gastroscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used in the evaluation or treatment of unusual abdominal pain, bleeding, cancer, chronic heartburn, polyps, gastritis, ulcers, or hiatal hernia. Physicians may also use the device to obtain biopsies or perform other procedures. This is a reusable device.	IIa
5043	35095	Surgical drill guide, reusable	Мэс заслын өрмийн гарын авлага, дахин ашиглах боломжтой	A manual surgical device designed to simultaneously place, angle, and guide a rotating surgical drill on hard tissue (e.g., bone); some types are also intended for guiding bone-coring instruments (e.g., keel punch). It is designed in a tubular form or with guiding holes and may have serrations at its distal end to enable firm placement on hard tissue surfaces (it is not bored into the tissue); it can have a handle or be held by another device (e.g., orthopaedic jig), and typically allows protection of the surrounding soft tissue during surgery. It is typically made of metal and may have graduations along its length; it is not custom-made for a specific patient. This is a reusable device.	IIa
5044	35098	Anaesthetic agent gas monitor, single	Мэдээ алдуулах бодис хийн хяналт, дан	A mains electricity (AC-powered) instrument designed for the continuous sampling, measuring, and display of the concentration of one gaseous anaesthetic agent (e.g., halothane, desflurane, ethrane, or isoflurane) typically in an anaesthetic unit/workstation outlet to ensure that appropriate agent levels are administered to a patient, or in ambient air. Methods to determine gas concentration include infrared (IR) spectrometry, ultraviolet (UV) absorption, interferometry, and ultrasound.	IIa

5045	35100	Extracorporeal bubble oxygenator	Биеийн гаднах бөмбөлгийн хүчилтөрөгч үүсгэгч	A device designed to perform gas exchange by bubbling oxygen from tanks or from a central hospital supply through a column of blood. It typically includes a defoamer to break up the bubbles caused by the oxygenation process, and an arterial reservoir that collects defoamed blood; a gas flowmeter and a filtering system are usually placed in the oxygen line. This oxygenator is mostly used in short-term procedures as lengthy operation of the device could increase the risk of gas emboli, blood damage, and protein denaturization. This is a single-use device.	IIa
5046	35101	Cardiopulmonary bypass system pulsatile pressure generator	Зүрхний уушигны эргэлтийн системийн импульсийн даралт үүсгэгч	An electronic device that powers and regulates the pulsatile pressure of the roller pumps of a heart-lung (cardiopulmonary) bypass system so that they simulate the natural action of the heart.	IIa
5047	35102	Surgical helmet system	Мэс заслын хамгаалалтын систем	A system intended for the purpose of protecting healthcare workers and patients from cross-infection during surgery. It is typically composed of a helmet frame with a face shield, a loose fitting disposable hood or gown draped around this, inflow and exhaust fans and filters, and a power supply, e.g., a battery pack to drive the internal ventilation.	IIa
5048	35115	Hypobaric chamber	Гипобарик камер	A mains electricity (AC-powered) enclosure in which the atmospheric pressure can be reduced to a level lower than normal atmospheric pressure for a variety of therapeutic purposes.	IIa
5049	35118	Incision/drainage kit	Зүсэлт/ус зайлуулах хэрэгсэл	A non-dedicated collection of sterile devices designed to create an opening in the body and place a drain. It typically includes a scalpel and tubes used for this purpose. This is a single-use device.	IIa

5050	35127	Intravenous administration bag/bottle	Судсан дотуурх тарих уут/шил	An empty pouch or bottle made of plastic or glass intended to contain a fluid (e.g., saline, medication) for intravenous (IV) administration; some types may in addition be intended for enteral feeding applications. It may be composed of one or more chambers and might be provided with a short length of tubing; however, it does not include other associated items (e.g., clamp, spike) [i.e., not an IV administration set] and is not intended to be directly connected to the IV catheter. This is a single-use device.	IIa
5051	35131	Amputation knife	Ампутацийн хутга	A hand-held manual surgical instrument with a handle and a heavy single-edged or double-edged blade, of various shapes and sizes, used in surgery for the amputation of a limb. It is typically a one-piece instrument made of high-grade stainless steel. This is a reusable device.	IIa
5052	35133	Commissurotomy knife	Комиссуротоми хутга	A manual surgical instrument intended to divide an anatomic commissure [a fibrous band or ring (strands of fibres that join one anatomical structure to another)] during a surgical intervention. It is typically designed as a one-piece instrument with a sharp, single-edged, straight or scythe-like (the internal radius of the curve has the cutting edge) cutting blade at the distal end, and a long slender shaft ending in a handle at the proximal end. It is typically made of high-grade stainless steel and is usually used to cut heart valve tissue (e.g., to relieve valve stenosis in a valve repair procedure). This is a reusable device.	IIa
5053	35134	Dermatome blade, single-use	Дерматом ир, нэг удаагийн хэрэглээ	A surgical cutting device that is designed to be mounted onto a dermatome handle/handpiece (not included) and used to provide the cutting edge for the harvesting of skin grafts or excision of small skin lesions. It is available in various sizes. This is a single-use device.	IIa

5054	35137	Keratome blade, reusable	Кератом ир, дахин ашиглах боломжтой	A surgical cutting device with a very sharp edge that is designed to be mounted into a keratome and is used to shave tissue from sections of the cornea. This is a reusable device.	IIa
5055	35149	Ultraviolet phototherapy unit, professional	Хэт ягаан туяа эмчилгээний аппарат, мэргэжлийн	A mains electricity (AC-powered) device with special lamps that emit ultraviolet B (UVB), or UVB and ultraviolet A (UVA) radiation intended to be used by a healthcare professional to treat a variety of dermatological disorders (e.g., psoriasis). The device is typically designed as a flat surface for lying with an overhead lamp(s), or as a chamber/cabinet, in which the patient stands, with interior walls lined with ultraviolet (UV) light tubes to allow full-body exposure and an even distribution of UV radiation. The device intended use may include psoralen + UVA therapy (oral administration of psoralen and subsequent exposure to UVA) (PUVA).	IIa
5056	35150	Ultraviolet ambient disinfection light	Хэт ягаан туяаны орчны халдваргүйжүүлэх гэрэл	An electrically-powered light source designed to destroy bacteria and viruses in the air and/or on surfaces by emission of ultraviolet radiation into the surrounding environment. It is a mounted, or self-standing device, consisting of a tubular bulb or a unit containing the light source, and may include automatic motion sensors or timers, but does not include a user control unit or radiometers. This is a reusable device.	IIa
5057	35152	Lavage unit, ENT	Угаах хэсэг, чих хамар хоолойн	An electrically-powered device that is specifically designed for use in ear/nose/throat (ENT) treatment to clean the site of intervention for the purpose of removing, e.g., necrotic, infected, or foreign materials. It will typically operate using a pulsatile jet of sterile fluid, e.g., saline, which is used to clean the site. This is a reusable device.	IIa

5058	35156	Percutaneous radio-frequency ablation system generator	Арьсан доорх радио давтамжийн абляцийн системийн генератор	An electrically-powered, noninvasive device designed to generate radio-frequency (RF) electrical current used to create heat via a percutaneously (through the skin) introduced electrode(s) in a precise location, at a controlled temperature, for focal ablation of non-cardiac tissues (e.g., non-cardiac nerves, tumours, precancerous tissue); it may be intended for coagulation however it is not intended for electrosurgical cutting. The generator connects via a delivery cable to an electrosurgical ablation probe/catheter (not included) to transmit the RF electrical current to the operative site; it might additionally be intended to heat an electrode tip (electrocautery).	IIa
5059	35158	Endoscopic light source unit, line-powered	Дурангийн гэрлийн эх үүсвэрийн нэгж, шугамаар ажилладаг	A mains electricity (AC-powered) unit designed to produce light of high intensity, often called cold light, for viewing surgical fields and body cavities during endoscopy (e.g., used with an arthroscope, cystoscope, laparoscope, gastroscope); it may have additional non-endoscopic lighting applications. It is designed as a bench-top unit with controls and a source of bright light [e.g., using a xenon (Xe) light bulb] that is channelled to the endoscope via a light cable to illuminate the site of observation/intervention while minimizing tissue heating.	IIa
5060	35162	Electrocardiographic ambulatory recorder	Электрокардиографийн амбулаторийн бичигч	An electrically-powered, noninvasive device designed to be worn by a patient during daily activities for 24-hour recording of the electrocardiographic signals of the heart, for the diagnosis of cardiac disorders (e.g., arrhythmias). The recorded measurements can be downloaded and analysed at a medical facility, typically using a computer with a dedicated software. Otherwise known as a Holter monitor, the device typically incorporates display and controls, and may include surface electrodes, lead wires and accessories intended for attachment/removal (e.g., wipes, adhesive remover).	IIa

5061	35163	Electroencephalographic ambulatory recorder	Электроэнцефалографийн амбулаторийн бичигч	A portable electrically-powered device designed for recording of electroencephalographic signals in ambulatory patients for periods usually from 24 to 72 hours to assess a variety of neurological conditions (e.g., epilepsy) and psychiatric disorders; it is not intended for inpatient monitoring. It is a small unit designed to be worn by the patient with an appropriate signal amplifier, and intended to be used with a set of scalp electrodes that are placed on the cranium of the patient. The resulting electroencephalogram (EEG) data is analysed after the recording period using an appropriate computer/software.	IIa
5062	35164	Oxygen long-term ambulatory recorder	Хүчилтөрөгчийн урт хугацааны амбулаторийн бичигч	An automated, battery-powered, device for long-term (typically 24-hours or longer) registering of the partial pressure of oxygen (pO2) in blood which can provide trend information for use in a diagnosis. This device typically acquires data from a connection to another device that is monitoring data, e.g., a patient monitor or a pulse oximeter. The recorded data can be down-loaded to an appropriate analyser at a medical facility for analysis.	IIa
5063	35170	Dental mandrel	Шүдний мандал	A slender, round, metal shaft designed to be used chairside to hold (locked into place) a rotating dental device, e.g., a grinding wheel, abrasive disk, circular saw, or a disk, stone or cup used for grinding or polishing. The mandrel will be placed into a dental handpiece that will rotate at high speed. This is a reusable device.	IIa
5064	35178	Tracheostomy mask, oxygen	Трахеостомийн маск, хүчилтөрөгч	A device designed to deliver oxygen or a mixture of oxygen and air to a patient who has a tracheostomy airway. It is connected to an oxygen/medical air source with tubing and is constructed of plastic. The device can be used over a tracheal tube or stoma. This is a single-use device.	IIa

5065	35179	Tracheostomy mask, aerosol	Трахеостомийн маск, аэрозол	A device designed to deliver air, oxygen, or a mixture of the two gases with aerosolized water particles to a patient who has a tracheostomy airway. It is typically connected to an oxygen source and nebulizer with wide bore tubing and is constructed of plastic. The device can be used over a tracheostomy tube or a stoma and is secured with a strap. This is a single-use device.	IIa
5066	35194	Respiratory apnoea monitoring system	Амьсгалын замын апноэ хяналтын систем	An assembly of devices designed to detect the cessation of breathing (apnoea) in infants and adults who are at risk of respiratory failure to alert a parent or attendant of the life-threatening episode(s). It alarms primarily upon the cessation of breathing timed from the last detected breath, and may also include indirect methods of apnoea detection such as monitoring of heart rate and other physiological parameters associated with respiration. It may print-out this data. It will typically include a mains electricity (AC-powered) monitoring unit with software, patient leads, and possibly a recorder to record, display, or print data on a patient's breathing condition.	IIa
5067	35195	Electrocardiographic monitor	Электрокардиографийн монитор	A mains electricity (AC-powered) bedside device designed to continuously detect, measure, and display a patient's electrocardiogram (ECG) through leads and sensors attached to the patient; it also typically displays heart rate. The device is typically equipped with audible and/or visual alarms that are triggered when the patient's parameters drop below or exceed pre-set limits.	IIa

5068	35196	Electroencephalographic monitoring system, stationary	Электроэнцефалографийн хяналтын систем, суурин	A mains electricity (AC-powered) device assembly designed to continuously measure the electrical signals produced by a patient's brain and display/record them as an electroencephalogram (EEG) to evaluate brain function. It may be capable of monitoring various other physiological parameters such as electromyogram (EMG), respiration wave forms, blood pressure, ocular motility, and/or haemoglobin oxygen saturation (SpO2) and carbon dioxide (CO2) in relation to EEG. It includes a control unit, electrodes, and components (e.g., amplifier, cables, probes); it is a stationary device and commonly used at the patient's bedside, in an intensive care unit (ICU), or in a dedicated EEG monitoring room.	IIa
5069	35197	Bedside heart rate monitor	Орны дэргэдэх зүрхний цохилт хэмжигч	A mains electricity (AC-powered) bedside device designed to continuously detect, measure, and display the number of heart beats per minute (BPM) through leads and sensors attached to a patient. The device is typically equipped with audible and/or visual alarms that are triggered when the patient's heart rate drops below or exceeds pre-set limits.	IIa
5070	35199	Myelography kit	Миелографийн хэрэгсэл	A collection of devices designed for injecting contrast medium into the subarachnoid (intrathecal) space (usually of the lumbar spine) for the purposes of visualizing the spinal canal by radiographic study. It is also referred to as myelogram tray and typically includes a needle, syringe, tubing, contrast medium, and other consumable items. This is a single-use device.	IIa

5071	35200	Rigid myeloscope	Хатуу миелоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the spinal cord. It is inserted into the body through an artificial orifice created by an incision made during myeloscopy (also known as spinal endoscopy). Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This device is commonly used to examine structures such as the dura mater spinalis, connective tissue, spinal nerve fibres, and to treat intractable low back pain. This is a reusable device.	IIa
5072	35201	Nasal oxygen cannula, basic	Хамрын хүчилтөрөгчийн суваг, үндсэн	A semi-rigid tube with nasal prongs designed to be inserted into the nostrils of a patient, and held in place with a headstrap, to administer oxygen (O2). It is commonly known as "nasal prongs". This is a single-use device.	IIa
5073	35202	Nasal oxygen cannula, CPAP	Хамрын хүчилтөрөгчийн суваг, CPAP	A semi-rigid tube with nasal prongs designed to be inserted into the nostrils of a patient, and held in place with a headstrap, to deliver oxygen (O2) to the patient and provide continuous positive airway pressure (CPAP) from the devices to which it is connected. This is a single-use device.	IIa
5074	35204	Flexible fibreoptic nasopharyngoscope	Уян оптик хамрын дуран	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the nasopharynx (the upper part of the throat behind the nose). It is inserted through a nostril during ear/nose/throat (ENT) procedures. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
5075	35205	Rigid optical nasopharyngoscope	Хатуу оптик хамрын дуран	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the nasopharynx (the upper part of the throat behind the nose). It is inserted through a nostril during ear/nose/throat (ENT) procedures. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This is a reusable device.	IIa

5076	35211	Scalp vein needle	Хуйхны судлын зүү	A very slender, sterile, sharp bevel-edged, hollow tubular metal instrument designed for use on the veins of the scalp or other small veins, especially in paediatric patients. This is a single-use device.	IIa
5077	35217	Orthopaedic cement, non-antimicrobial	Ортопедийн цемент, нянгийн эсрэг үйлчилгээтэй	A substance designed to be used in arthroplastic and/or osteosynthetic procedures for the fixation of polymer or metallic implants to the living bone. It may also be intended for use as a filler in the case of bone pathologies (e.g., to stabilize and reinforce vertebral body structures in vertebroplasty and kyphoplasty). It is typically made from methylmethacrylate, polymethylmethacrylate (PMMA), esters of methacrylic acid or copolymers containing polymethylmethacrylate and polystyrene. This device does not contain an antimicrobial agent. After application, this device cannot be reused.	IIa
5078	35235	Percussor, chest, powered	Цохиур, цээж, хөдөлгүүртэй	A powered device that is intended to transmit vibration through a patient's chest wall to aid in freeing mucus deposits in the lung in order to improve bronchial drainage. It may be powered by electricity or compressed gas.	IIa
5079	35239	Overhead infant phototherapy unit	Толгой дээрх нярайн гэрэл зургийн эмчилгээний хэсэг	A mains electricity (AC-powered) device designed to emit a blue light in the visible wavelength of around 425-475 nm to treat neonatal jaundice (hyperbilirubinemia). It consists of an overhead lamp consisting of several, daylight, cool white, blue, or special blue fluorescent light tubes and a Plexiglas shield placed between the phototherapy lights and the newborn to filter out ultraviolet (UV) radiation. Exposure to this device will alter the bilirubin through photo-oxidation, and configurational and structural isomerization, allowing the body to dispose of it naturally. It will typically have a built-in timer, but some may have a separate timer unit connected.	IIa

5080	35247	Pressure measuring instrument, general-purpose	Даралт хэмжих хэрэгсэл, ерөнхий зориулалтын	An instrument, typically electronic but which can also be mechanical, used to measure and establish the degree of positive and/or negative pressure found in other devices or equipment. It is used for technical purposes over a wide or close range. The measurement can be displayed in either single or convertible/optional units, e.g., mmHg, cmH2O or H2O.	IIa
5081	35257	Vascular booties	Судасны гутал	A sterile cover, used in pairs, fitted onto the distal working end (the jaws) of artery forceps, vascular clamps, or similar surgical instruments, to provide improved grip for delicate sutures. It is typically tube-like with a closed, rounded tip and composed of radiopaque silicone materials. It is available in various sizes and may be straight or curved. The pair of devices may also be known as "jaw covers" (shods). This is a single-use device.	IIa
5082	35287	Bone punch, reusable	Ясны цоолтуур, дахин ашиглах боломжтой	A hand-held manual surgical instrument with a cutting/biting action used to cut small cross-sectional pieces of bone typically for biopsy or fixation procedures during a surgical intervention. It is typically designed with a long, thin, two-part sliding shaft (the upper part sliding along the lower part) which is joined to sprung (self-opening), pivoted, pistol grip handles. The working end terminates with a sharp, angled, cutting jaw that closes over an endpiece when the handles are squeezed together cutting through the bone. It is available in various sizes and designs (e.g., it can have upward or downward located jaws) and is made of high-grade stainless steel. This is a reusable device.	IIa

5083	35319	Saw blade, surgical	Хөрөөний ир, мэс заслын	A flat metal surgical instrument, usually of a high-grade stainless steel quality, with a serrated edge designed for attachment to a surgical saw and capable (via rotation, oscillation, reciprocation, or other action) of cutting tissue/bone when a downward pressure is applied. This blade can be of various designs to meet the variety of cutting requirements and to fit the various cutting devices, e.g., rotary saw, reciprocating "jig" saws and manual hand saws.	IIa
5084	35356	Suction cannula, single-use	Сорох суваг, нэг удаагийн	A sterile, rigid or semi-rigid, hand-held plastic tube designed as a conduit for the evacuation (suctioning) of blood, fluids, and other tissue debris directly from the surgical site during a surgical procedure (e.g., open- or plastic surgery). Also known as a suction tube, it is typically a general-purpose device to which the suction system tubing is connected proximally; some types may be attached to a dedicated handpiece that typically have a valve. Dedicated cannula specifically intended for a particular procedure (e.g., bronchial, dental, eye, uterine, oral, and liposuction) are also available. This is a single-use device.	IIa
5085	35369	Baroreceptor electrical stimulation system	Барорецепторын цахилгаан өдөөх систем	An assembly of devices intended to apply electrical stimuli to baroreceptors, within the carotid sinus, as therapy for hypertension; it may additionally be intended to stimulate baroreceptors outside of the carotid sinus and to be used as therapy for other disorders (e.g., heart failure, chronic kidney disease) in the absence of hypertension. It includes an implantable assembly [i.e., pulse generator and electrode(s)/lead(s)], an external programmer intended to communicate with the pulse generator wirelessly, and may include other supportive devices (e.g., computer, software, disposable implantation devices).	IIa

5086	35372	Analgesic transcutaneous electrical nerve stimulation system	Өвдөлт намдаах арьсан доорх цахилгаан мэдрэлийн өдөөлтийн систем	An assembly of electrically-powered devices designed to reduce the perception of pain by electrically stimulating peripheral nerves across the skin [transcutaneous electrical nerve stimulation (TENS)]. It includes an external current generator and skin-surface electrodes. It typically includes several predetermined stimulation options and is often worn on a belt or carried in a pocket of the user. It is intended for use in the home and healthcare facility to treat pain from surgery, trauma, musculoskeletal problems/arthritis, bursitis, dental problems, and may be used in physical therapy and during labour/delivery.	IIa
5087	35375	Stopcock	Хаалт	A general-purpose valve that is used to regulate the direction of a liquid or a gas flow. It is typically constructed of a durable material, e.g., plastic and/or metal, and may be used for a variety of general-purpose uses. This is a single-use device.	IIa
5088	35383	Suture, stainless steel	Оёдол, зэвэрдэггүй ган	A sterile wire made from stainless steel that is used to join the edges of a wound or incision by stitching and can be used for transosseous suturing (e.g., for sternum repair). It comes in a variety of lengths, may be monofilament or multifilament, and may be supplied with a needle. This is a single-use device.	IIa
5089	35384	Syringe/needle adaptor	Тариур/зүү адаптер	A sterile device intended to connect a syringe or a needle to tubing, a stopcock, a vial, or other device primarily for the transfer of the contents from one item to another, typically for the extraction of medication from a rubber stoppered vial into a syringe for subsequent application to a patient. Also known as a dispensing pin, vial adaptor, or syringe access device, it is available with or without a Luer-lock, it may incorporate a microfilter to minimize the potential of aerosolization, and some types may fit (be attachable to) the vial. This is a single-use device.	IIa

5090	35387	Anaesthesia Luer syringe	Мэдээ алдуулах Luer тариур	A device consisting of a calibrated barrel (cylinder) with plunger intended to be used to administer (infuse) anaesthetic drugs. At the distal end of the barrel is a male Luer connector (typically a Luer-lock type) for the attachment of the female connector (hub) of a hypodermic needle, administration set or dental syringe cannula. It is typically made of plastic and silicone materials and may have anti-stick properties (internally precoated with compatible substances) that allow the plunger to move smoothly. This is a single-use device.	IIa
5091	35389	Insulin syringe	Инсулин тариур	A device with a small barrel with plunger, calibrated in units of insulin, used with a needle to administer (infuse) insulin subcutaneously. This is a device that can be used by healthcare personnel or the public. This is a single-use device.	IIa
5092	35398	Rigid optical thoracoscope	Хатуу оптик торакоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the thoracic cavity. It is inserted through an incision made in the chest into the intercostal cavity. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This is a reusable device.	IIa
5093	35399	Ophthalmic tonometer, line-powered	Нүдний тонометр, шугамаар ажилладаг	An ophthalmic, line-powered, measuring instrument used for determining the intraocular pressure (IOP) by exerting an external force against the eye which provides a reading of the resistance of the tunica of the eye to deformation (the extent of corneal indentation) which is expressed in millimetre(s) of mercury (mmHg). It typically has no contact with the eye and can use various techniques, e.g., the air-puff tonometer records deflections of the cornea from a puff of pressurized air; the applanation tonometer records the indentation pressure in thousands of a second. It is used for the diagnosis of glaucoma, designed for table top use and may provide the data on a screen and/or a print-out.	IIa

5094	35402	Artificial airway stylet, reusable	Хиймэл амьсгалын замын загвар, дахин ашиглах боломжтой	A long stiffening wire/rod designed for insertion within the lumen of an artificial airway tube (e.g., endotracheal tube, bronchial tube) to stiffen and/or maintain the shape of the tube to facilitate introduction (intubation). It is designed to be slightly shorter than the tube to avoid damage to the airway during passage, and is withdrawn after intubation has been completed. This is a reusable device.	IIa
5095	35405	Blood transfusion set, exchange	Цус сэлбэх багц, солилцоо	A sterile, intravascular administration set intended to be used to remove a diseased infant's blood and replace it with fresh donor blood or plasma. The device typically includes a needle or catheter, tubing, a flow regulator, a drip chamber, an infusion line filter, a stopcock, connectors between parts of the set, a side tube with a cap to serve as an injection site, and a hollow spike to penetrate and connect the tubing to an intravenous (IV) bag or other infusion fluid container. This is a single-use device.	IIa
5096	35406	Standard treadmill, mechanical	Стандарт гүйлтийн зам, механик	A manually-powered mechanical device designed to facilitate in-place walking, jogging, or running to promote muscle redevelopment, to restore motion to joints, and to promote weight loss and cardiovascular fitness. It consists of an endless, continuous track (e.g., a shock-absorbing rubber belt rotating on rollers) that rotates as the result of friction from the moving patient's feet, and typically front and side-mounted rails to allow patients to steady themselves while in motion.	IIa
5097	35408	Tropometers	Тропометр	A device or instrument used to measure the degree of twist or torsion that can be exerted by a part of the body, e.g., the movement of an eyeball or the shaft of a long bone. This is a reusable device. This generic device group may reflect old technology.	IIa

5098	35412	Gastro-urological irrigation kit, reusable	Ходоод-уурологийн усалгааны хэрэгсэл, дахин ашиглах боломжтой	A collection of items used to cleanse or flush a cavity or canal with sterile water or other fluid during a gastroenterological/urological (GU) procedure. It typically consists of flexible or semi-rigid tubing used for instilling fluids into, withdrawing fluids from, splinting, or suppressing bleeding of the alimentary/urinary tracts. This is a reusable device.	IIa
5099	35413	General laboratory container, reusable	Ерөнхий лабораторийн сав, дахин ашиглах боломжтой	A container (e.g., test tube, bottle, cup, assay tray with large wells) intended to be used as a non-dedicated receptacle to hold consumable laboratory substances (e.g., reagents, buffers), biological specimens, and other materials associated with in the laboratory; it is not intended for in vitro diagnostic procedures. It is designed to withstand an extremely high-temperature environment (e.g., autoclaving) to enable repeated sterilization. It is typically made of high-temperature-resistant plastic or glass and may be used on the benchtop for manual procedures, or on-board automated liquid handling instruments or analysers (e.g., tissue culture). This is a reusable device.	IIa
5100	35415	Nasogastric decompression tube	Насогастрикийн даралт бууруулах хоолой	A sterile, thin, flexible, hollow, single- or double-lumen cylinder intended to access the stomach of a patient through the nose and nasopharynx primarily to reduce the pressure within the gastrointestinal tract, typically aided by connection to an intermittent suction system, that may follow presurgical or postsurgical intestinal occlusion. It may also be used for the delivery of fluids (for irrigation, enteral feeding, and medication administration) typically for the period that gastric decompression is required. This device may be referred to as a nasogastric sump tube or a gastrointestinal decompression tube. This is a single-use device.	IIa

5101	35416	Oesophageal varices haemostatic tube	Улаан хоолойн венийн цус тогтоогч хоолой	A flexible, hollow cylinder with an inflatable balloon(s) and aspiration port(s) intended to be non-surgically inserted into the oesophagus and stomach, through the nose or mouth, to tampon bleeding oesophageal varices. The device is also known as a Sengstaken, Blakemore, Linton or Minnesota tube. This is a single-use device.	IIa
5102	35421	Ultrasonic water bath detergent	Хэт авианы усан ванны угаалгын нунтаг	A non-sterile dedicated agent used in an ultrasonic bath for the cleansing of objects placed in this unit. It may exert cleansing (oil-dissolving) and antimicrobial effect through a surface action that depends on possessing both hydrophilic and hydrophobic properties. After application, this device cannot be reused.	IIa
5103	35423	Rigid optical urethroscope	Хатуу оптик уретроскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the urethra (the muscular tube that leaves the urinary bladder for the excretion of urine). It is inserted through the external urethral orifice during urethroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the mucous membrane and to treat lesions of the urethra. This is a reusable device.	IIa
5104	35424	Surgical utensil washer/disinfector	Мэс заслын сав суулга угаагч/ариутгагч	A mains electricity (AC-powered) unit designed to wash (remove dirt/stains), decontaminate (remove organic debris), and disinfect (destroy microorganisms) reusable surgical instruments, bowls, anaesthesia equipment components, and some surgical footwear. Most instruments, especially those used invasively or in a sterile field will require sterilization after this process. It is typically located in rooms and central supply departments designed to handle soiled instruments/utensils. It typically includes internal baskets/racks in which the utensils are placed to ensure circulation of the heated water/detergents to all surfaces.	IIa

5105	35425	Non-rebreathing valve, reusable	Дахин амьсгалахгүй хавхлага, дахин ашиглах боломжтой	A non-sterile device that is a one-way valve used to direct the flow of breathing gases and prevent the patient rebreathing the exhaled gases. It is typically used in a breathing system or between an oxygen mask and its reservoir bag. The device may be of various designs and will typically include unidirectional valves made of, e.g., silicone, rubber, metal, mica, sheets or discs that open and close for each inspiration/expiration. This is a reusable device.	IIa
5106	35426	Airway pressure alarm	Амьсгалын замын даралтын дохиолол	A battery-powered warning device that monitors a patient's upper airway pressure during assisted mechanical ventilation; it typically being connected to the breathing circuit. In the event of either the pressure not rising above a minimum threshold within a maximum time span or exceeding a pre-set maximum level, the device will signal a warning.	IIa
5107	35438	X-ray film processor quality control monitor	Рентген хальсны процессорын чанарын хяналтын монитор	A device that may be a component of an automatic x-ray film processor and that is used to monitor x-ray film processing conditions, e.g., film speed, fog levels, replenishment rates or temperature.	IIa
5108	35439	Orthodontic clasp, metal, preformed	Ортодонт тэврэлт, металл, урьдчилан бэлтгэсэн	A prefabricated dental device made of wrought metal alloy intended to retain and stabilize a removable orthodontic appliance to stationary teeth. It is manufactured to meet a standard specification for adaptation or direct insertion into the patient's mouth. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	IIa

5109	35441	Cardiopulmonary bypass system blood tubing set	Зүрхний уушигны эргэлтийн системийн цусны гуурсан хоолойн багц	A collection of sterile devices including tubing and typically clamps, filters, connectors, and stopcocks, used in a circuit for a cardiopulmonary bypass procedure. The tubing is typically polymeric and may be heparin coated. It is typically used in the blood pump head of a cardiopulmonary bypass system. The tubing, when used in a roller type pump, will be cyclically compressed by the blood pump to cause the blood to flow through the heart-lung bypass system. This is a single-use device.	IIa
5110	35446	Skull clamp	Гавлын хавчаар	A U-shaped surgical device intended to hold the head and neck in a particular fixed position during surgical procedures. It is connected to the skull with screws or pins (not included), typically on each side of the forehead, whilst the other end is fixed to an operating table or chair. Commonly known as a Mayfield skull clamp, it is made of metal materials (non-radiolucent) and may have adjustable joints (either incorporated or separate) for positioning/stabilization; it is not intended for applying traction forces to the cervical spine. This is a reusable device.	IIa
5111	35447	Cardiopulmonary stress exercise monitoring system computer	Зүрх судасны стресс дасгалын хяналтын системийн компьютер	A dedicated computer with a specific software package installed intended to be used to interpret the various physiological parameters and waveforms generated during stress exercise testing of a patient while connected to a stress exercise monitoring system. These signals are provided by appropriate interfaced stress testing devices (e.g., an ergometer) using predefined pattern recognition techniques. The registered signals are compared to pre-established diagnostic criteria.	IIa

5112	35457	Benchtop nebulizer, non-heated	Вандан мананцар үүсгэгч, халаалтгүй	An assembly of devices intended to be used in the home and clinical settings to generate non-heated aerosolized medication/fluids for inhalation by a patient, typically to treat/manage a respiratory disorder [e.g., chronic obstructive pulmonary disease (COPD), cystic fibrosis (CF)]. It may be a benchtop or trolley-mounted assembly and includes an electrically-powered generator (ultrasonic and/or compressor jet type), a reservoir, and a nebulizing chamber where the nebulization of the medicine usually occurs. Disposable devices (e.g., tubing, mask, mouthpiece) are attached to the device for inhalation.	IIa
5113	35459	Flexible video sinoscope	Уян хатан видео синоскоп	An endoscope intended for the visual examination and treatment of the paranasal sinuses during an ear/nose/throat (ENT) intervention. It is inserted through a naris. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This is a reusable device.	IIa
5114	35460	Ultrasound imaging system synchronizer	Хэт авианы дүрслэлийн системийн синхрончлогч	A physiological monitoring unit used as a component of a diagnostic ultrasound imaging system that produces a signal which enables image formation or data collection to be synchronized with a specific measurable physiological parameter, e.g., the beginning of a patient's respiratory or cardiac cycle. It is primarily used for the purpose of artifact reduction or enhancement of signal-to-noise ratios in various real-time or dynamic ultrasound imaging applications. It is sometimes referred to as a gated imaging accessory or trigger.	IIa

5115	35461	Flexible fibreoptic bronchoscope	Уян хатан шилэн бронхоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the trachea, bronchi, and lungs. It is inserted through the mouth or nose during bronchoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to diagnose lung infections, pneumonia, or lung cancer, and allows physicians to view the insides of the lungs and take biopsies and samples of secretions. This is a reusable device.	IIa
5116	35462	Flexible video laryngoscope	Уян хатан видео ларингоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the larynx. It is inserted into the body through the mouth during laryngoscopy. Anatomical images are transmitted to the user by a video system at the distal end of the endoscope with the images showing on a monitor. This device is commonly used to evaluate or operate on laryngeal strictures, foreign bodies, or neoplasms; it is not intended for intubation of an artificial airway. This is a reusable device.	IIa
5117	35463	Patient-worn bone growth electromagnetic stimulator	Өвчтөний өмсдөг ясны өсөлтийн цахилгаан соронзон өдөөгч	A battery-powered, body-worn device designed to apply an electrical stimulus directly to bone to promote bone formation (i.e., osteogenesis). It is intended to generate an electromagnetic (EM) field (and its associated induced voltage effects) around a fracture or fusion site; it is not intended to apply an electric current directly to the body. The device is used as an alternative to bone grafting for non-union fractures (a condition in which the ends of a fractured bone fail to unite), and as a spinal fusion adjunct in treating degenerative vertebral diseases. It is also known as an osteogenesis stimulator.	IIa

5118	35472	Amniotome, single-use	Амниотом, нэг удаагийн хэрэглээ	A surgical instrument used to cut/rupture the amniotic membrane (i.e., the amnion - the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid) to assist in childbirth, without causing injury to the mother or foetus. It is long and shaft-like, and terminates in a sharp hook or protected blade used to rupture the membrane. It is typically made of disposable plastic materials, and may be curved to follow the natural contours of the birthing canal into which it is inserted. Amniotic membrane rupture may also be performed using an amniotic perforator or forceps and/or a trocar. This is a single-use device.	IIa
5119	35482	Aerobic laboratory incubator	Аэробикийн лабораторийн инкубатор	A mains electricity (AC-powered) device heated by electrical currents passing through a heating block containing simple resistors (usually coils of nickel-chromium wire) for the purpose of growing microorganisms and cells that require oxygen (O2) for growth. Aerobic incubators are typically used for serology and crystallization studies, tissue culture work, paraffin wax embedding and in vitro fertilization (IVF).	IIa
5120	35486	Blood refrigerator	Цусны хөргөгч	An electrically-powered device intended to be used to store and/or transport whole blood and blood components (e.g., blood cells, plasma) while keeping them cold (temperatures from 1° to 6° Celsius). It may include handles and/or wheels for transportation, internal shelving for storage and easy location of blood containers (e.g., bags); a corrosion-resistant (typically stainless steel) interior to minimize the risk of adulteration, contamination, and/or corrosion of contents; and sensors, controls, monitors, chart recorders (week-long recordings are typical), and alarms (over temperature, under temperature, and power failure).	IIa

5121	35496	Amniocentesis kit, medicated, single-use	Амниоцентезийн иж бүрдэл, эмийн, нэг удаагийн хэрэглээ	A collection of sterile devices designed to aspirate and contain a sample of amniotic fluid from the amniotic sac, via a transabdominal approach, for analysis. Components typically include a needle with stylet and syringe, specimen containers/medium, drapes, dressings, and pharmaceuticals. The device is typically used at 16-18 weeks gestation for antepartum diagnosis of certain congenital abnormalities (e.g., Down syndrome, spina bifida), or anytime after 24-weeks gestation to assess foetal maturity. This is a single-use device.	IIa
5122	35502	Flexible fibreoptic nephroscope	Уян хатан шилэн нефроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the kidney. It is inserted percutaneously into the renal pelvis during nephroscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine the internal structures of the kidney and may be used in the removal of renal calculus. This is a reusable device.	IIa
5123	35510	Closed-wound drainage kit, postcraniotomy	Хаалттай шархны ус зайлуулах хэрэгсэл, посткраниотоми	A collection of sterile devices designed to remove fluids, in a controlled manner, from the brain after surgery. It will typically include a plastic sac (the receptacle or reservoir), drains/catheters, connectors. This is a single-use device.	IIa
5124	35530	Heat/moisture exchanger, single-use	Дулаан/чийг солилцуур, нэг удаагийн	A one-piece, canister-like device that connects in-line with a patient's artificial airway [e.g., an endotracheal (ET) tube], to capture the patient's exhaled heat and moisture so that they can be used to heat and humidify therapeutic gases inspired by the patient; it does not include a microbial filter. Commonly known as a heat & moisture exchanger (HME) or an "artificial nose", it is used when the patient is subjected to extended periods of breathing dry gases such as during anaesthesia or intensive care ventilation. This is a single-use device.	IIa

5125	35544	Flexible video mammary ductoscope	Уян хатан видео хөхний дутоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the mammary duct. It is inserted into a natural orifice of the breast nipple either directly or indirectly during the procedure. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This device is commonly used to examine pathological changes within the mammary duct. This is a reusable device.	IIa
5126	35559	Bone file/rasp, manual, reusable	Ясны файл/расп, гарын авлага, дахин ашиглах боломжтой	A hand-held manual surgical instrument with a surface(s) of coarse and/or fine grooves or teeth designed to scrape and smooth the surface of bone during a surgical procedure. The device is typically a one-piece instrument with grooves/teeth along all or part of its working end(s). It is available in a variety of sizes and working end designs, including straight and curved ends and often double-ended with a central handle. It is not dedicated for use at a specific anatomy (e.g., sinus, ear) and it is made of metal [e.g., stainless steel, titanium (Ti)]. This is a reusable device.	IIa
5127	35567	Surgical personnel scrub preparation kit	Мэс заслын ажилтнуудын скраб бэлтгэх иж бүрдэл	A collection of devices designed for preoperative preparation of surgical personnel, e.g., scrubbing the fingers, hands and forearms, prior to gloving and donning surgical apparel. This is a single-use device.	IIa
5128	35568	Rigid lumbarscope	Хатуу lumbarscope	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the lumbar region of the spine (region between the lowest ribs and the hipbones). It is inserted into the body through an artificial orifice created by an incision made during lumbarscopy. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This device is commonly used to examine structures such as nerve roots and surrounding tissue. This is a reusable device.	IIa

5129	35573	Clinical periodontal dressing	Эмнэлзүйн шүдний боолт	A dental material intended to be used during periodontal procedures to facilitate periodontal tissue healing by providing mechanical, chemical, and/or thermal protection to wounded tissue after surgery or disease, and/or by functioning as a barrier for the prevention of bacterial infiltration in a periodontal pocket after root surface debridement (RSD) and/or planing and root scaling. Some types may adhere to teeth and gums and be used to secure medications, temporary prostheses, and loose teeth. It is available in various forms (e.g., gel in a syringe, fluid in a dispenser with mixing nozzle, substance mixed chairside into a pliable paste). After application, this device cannot be reused.	IIa
5130	35581	Alarm, medical gas supply system	Сэрүүлэг, эмнэлгийн хийн хангамжийн систем	A warning device used to notify users through an audible and/or visual output signal that the pre-set flow or pressure limits have been exceeded in a monitored pipeline of a medical gas central system, cylinder, or anaesthesia system.	IIa
5131	35596	Vascular clamp, reusable	Судасны хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to directly compress a blood vessel (vein or artery) to create a temporary haemostasis (arrest or prevention of bleeding). It typically has a self-retaining, scissors-like design with ring handles; the working end has blades of various designs (e.g., curved, angled, semicircular) specific for different applications. It is available in various sizes, is typically made of high-grade stainless steel, and may utilize inserts made of various materials (e.g., carbide, silicone). This is a reusable device.	IIa

5132	35616	Endoscopic video imaging system	Дурангийн дүрс бичлэгийн систем	An assembly of mains electricity (AC-powered) devices designed to obtain, transmit, and display video images during an endoscopic procedure. It typically consists of one or more video endoscopes, an endoscopic camera, camera control unit, light source with light cables, video recorder, imaging units with perhaps a colour compensation device, a distention unit, and a visual display unit (VDU), all of which is typically placed/mounted onto a trolley (cart) that can be moved to different examination/treatment rooms.	IIa
5133	35618	X-ray tube housing assembly, diagnostic	Рентген хоолойн орон сууцны угсралт, оношлогоо	A metallic (e.g., steel, aluminium alloy) case that houses an x-ray tube to provide appropriate limits for x-ray leakage and adequate insulation to avoid electric risks during a diagnostic x-ray procedure. It includes sheet lead surrounds at appropriate locations to shield unwanted x-ray radiation and collimators near the aperture; it is usually filled with oil to prevent electrical arcs from the high-voltage components of the x-ray tube. The housing also includes attachment points, cooling means, high-voltage cables, and supports for the tube and cable receptacles. It may be an independent unit mounted in a tube support, or under a fluoroscopic table as a component of a radiographic system.	IIa
5134	35619	Auditory cranial bone vibrator	Сонсголын гавлын ясны чичиргээ	An electromechanical transducer intended to produce the sensation of hearing by vibrating the cranial bones. It can be used as an output device with an audiometer to measure bone-conduction hearing thresholds, and thus serve as an adjunct to air-conduction testing with conventional earphones. Comparison of the results enables the clinician to distinguish hearing loss attributable to the external or middle ear (conductive loss) from the inner ear (sensory loss). In addition, this device may be used to provide output for a hearing aid for patients who cannot wear an earmould.	IIa

5135	35620	Arthroscopic drainage cannula	Артроскопийн ус зайлуулах суваг	A sterile rigid or semi-rigid tube that is inserted into a joint following arthroscopic surgery to drain fluid. This is a single-use device.	IIa
5136	35626	Electroencephalography telemetric monitoring system	Электроэнцефалографийн телеметрийн хяналтын систем	An assembly of devices designed to continuously measure and wirelessly transmit electroencephalographic (EEG) signals from a patient to a receiving location (e.g., central station, bedside monitor) for viewing. It typically consists of a portable transmitter with antenna and attached sensors (e.g., leads and electrodes) that are connected to the patient, as well as a receiver typically incorporated into a central station or bedside monitor that receives, consolidates, and displays the information. The system is typically used for ambulatory patients who require continuous monitoring (e.g., patients in step-down care areas).	IIa
5137	35632	Electrosurgical system monitor/alarm	Цахилгаан мэс заслын системийн хяналт / дохиолол	A device designed to detect an interruption in dispersive cable continuity between an electrosurgical system generator and the dispersive (return) electrode, potentially due to current leakage. This device functions as a special form of patient circuit safety monitor and will give an alarm when a pre-set safety limit is exceeded. This is a stand-alone device; its function is typically built into modern electrosurgical units.	IIa
5138	35637	Flexible fibreoptic rhinoscope	Уян хатан шилэн риноскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the nasal cavity. It is inserted into the body through a nostril during rhinoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa

5139	35641	Bladder/bowel-evacuation implantable electrical stimulation system	Давсаг/гэдэсний нүүлгэн шилжүүлэлтийн суулгацын цахилгаан өдөөх систем	An assembly of devices used to empty the urinary bladder and/or the bowels by applying electrical stimuli typically to the cone-shaped end of the spinal cord (conus medularis). It consists of an implanted receiver with electrodes placed around the sacral spinal nerve roots, and an external transmitter for sending the stimulating pulses transcutaneously to the implanted receiver. Some systems can tune the controller to activate erection in men by stimulating a particular pair of nerve roots. This system is used in paraplegic patients with complete spinal cord transection who are unable to empty their bladder and/or bowels by voluntary reflex means or by the use of catheters.	IIa
5140	35655	Anterior-chamber intraocular lens, pseudophakic	Урд камерын нүдний дотоод линз, псевдофакик	An optical device, generally referred to as an intraocular lens (IOL), intended to be implanted permanently in the region of the eye posterior of the cornea and anterior of the iris (anterior chamber) to replace the natural lens (crystalline lens), typically because it has been clouded by a cataract. The device is typically made of a synthetic polymer; disposable devices associated with implantation (e.g., IOL injector) may be included with the lens.	IIa
5141	35658	Posterior-chamber intraocular lens, pseudophakic	Арын камерын нүдний дотоод линз, псевдофакик	An optical device, generally referred to as an intraocular lens (IOL), intended to be implanted permanently in the posterior chamber of the eye (ring-like space filled with aqueous humor between the iris, the crystalline lens, and the ciliary body) to replace the natural lens (crystalline lens), typically because it has been clouded by a cataract. The device is made of a synthetic material (e.g., plastic, hydrogel). Included may be a sterile, single-use, IOL injector into which this device is preloaded and ready for insertion into the eye. Disposable devices associated with implantation (e.g., IOL injector) may be included with the lens.	IIa

5142	35673	Bronchial cannula	Гуурсан хоолойн суваг	A sterile semi-rigid or rigid plastic or metal tube-shaped surgical instrument that is inserted into the lumen of the bronchus by means of a trocar blade providing rigidity. After insertion the trocar blade is withdrawn leaving a channel for suction or irrigation or the insertion of a catheter or surgical device. This device is single-use.	IIa
5143	35692	Rigid endoscope obturator	Хатуу дурангийн бөглөөс	An endoscopic device that is a component of a rigid endoscope assembly that has a distally rounded, solid, head or end that is placed into the sheath of a rigid endoscope in order to fill out the sheath's lumen (open end), thereby assisting its insertion into the body and protecting against damage to the patient. This is a reusable device.	IIa
5144	35695	Gastro-oesophageal antireflux prosthesis	Ходоод-улаан хоолойн рефлюксийн эсрэг протез	An implantable device introduced into the gastro-oesophageal sphincter to reduce a sliding hiatal hernia, preventing the reflux of gastric contents into the oesophagus. It typically consists of a toroidal, C-shaped elastomer ring filled with a silicone gel that includes a polyester tie to secure the ring around the gastro-oesophageal junction; it is intended for surgical implantation under the diaphragm to hold the lower oesophagus in place as an alternative to traditional surgical fixation of the stomach (i.e., gastropexy) or fundoplication. This group of devices may reflect old technology.	IIa
5145	35698	Dental cavity varnish	Шүдний хөндийн паалан	A liquid substance used in dentistry consisting of one or more resins in an organic solvent, used for the protection of pulpal tissue and to provide a marginal seal to newly placed amalgam restorations. After application, this device cannot be reused.	IIa

5146	35704	Blood plasma freezer	Цусны плазм хөлдөөгч	An electrically-powered device intended to be used to store and/or transport blood plasma while keeping it frozen (temperatures of or below -18° Celsius). It typically includes internal shelving for storage and easy location of plasma containers (e.g., bags); a corrosion-resistant (typically stainless steel) interior to minimize the risk of adulteration, contamination, and/or corrosion of contents; forced-air circulation and automatic defrost capability; and sensors, controls, monitors, chart recorders (week-long recordings are typical), and alarms (over temperature, under temperature, and power failure).	IIa
5147	35719	Radiology picture archiving and communication system	Радиологийн зургийн архив, харилцаа холбооны систем	A computer-based image storage/retrieval system intended to acquire and manage digital images used in radiology [e.g., CT, digital radiography, nuclear medicine, ultrasound, or magnetic resonance imaging (MRI)]. A picture archiving and communication system (PACS) consists of an image acquisition system, host computer, image archiving, and display stations connected by a network. It may have more than one display monitor to provide multi-image display. It will facilitate image transmission to any part of the hospital or for telemedicine without the need for physical copying/transport and provides direct access to stored images for medical personnel.	IIa

5148	35723	Nerve-locating system	Мэдрэлийн байршлыг тогтоох систем	An multicomponent assembly of electrically-powered devices designed to locate a nerve by applying an electrical stimulus with a probe and observing muscle responses. Once the pathways are located, their transmission capabilities can be assessed by comparing observed muscle responses with the expected maximum contractions. The system includes an electrical pulse generator, appropriate electrodes, sensors to detect muscle response (e.g., a strain gauge), and audible and/or visual indicators; it does not display electromyography (EMG) readings. It is used during the diagnosis and assessment of nerve function and to locate nerves during surgery to reduce the incidence of accidental injury.	IIa
5149	35724	Facial nerve-locating system	Нүүрний мэдрэлийг тодорхойлох систем	An assembly of devices designed to locate a facial nerve by applying an electrical stimulus with a probe and comparing muscle responses as the probe is moved. It typically includes an electrical pulse generator, appropriate electrodes, sensors to detect muscle response (e.g., a strain gauge, electrical sensors), and audible and/or visual indicators. The system generates rectangular- and possibly triangular-waveform currents to stimulate nerve fibres and produce muscular contraction. It is used during diagnosis and assessment of nerve function, to locate nerves during surgery reducing the chance of accidental injury, and to monitor the progress of nerve regeneration after surgery.	IIa
5150	35725	Gait-enhancement electrical stimulation system, external	Гадны алхалтыг сайжруулах цахилгаан өдөөх систем	An assembly of devices that applies electrical stimuli to the lower extremity nerves (e.g., peroneal or femoral) or muscles (e.g., those that cause ankle dorsiflexion), to cause the muscles in the leg to contract, thus improving the gait in a patient suffering from partial paralysis of the lower extremities or other neuromuscular disorders. It typically includes electrodes and an external pulse generator (EPG), and may be incorporated into an external prosthesis.	IIa

5151	35726	Somatosensory electrical stimulation system	Соматосенсорын цахилгаан өдөөх систем	An assembly of devices used to apply precisely timed and repeatable electrical stimuli to the peripheral nerves, typically for evoked potential and other research procedures (e.g., functional mapping in epilepsy). It is usually a multichannel external stimulation system, consisting of external surface electrodes or invasive (i.e., needle) electrodes, and a pulse generator. It may be used as a component of more complex devices such as somatosensory evoked-potential recording systems.	IIa
5152	35747	Evoked-potential audiometer	Сэрэмжлэгдэх боломжит аудиометр	An electroacoustic instrument designed to evaluate the activity of the auditory pathway of the brain in response to an acoustic signal [auditory brainstem response (ABR)] it provides at the ear (e.g., clicks delivered through an earphone), without need of patient cooperation. The signal, detected via the device's scalp electrodes and possibly a reference electrode on the ear lobe, is measured using computer averaging and signal processing techniques. This device is typically used to assess the function of the auditory pathways and to differentiate coma due to metabolic factors from structural damage.	IIa
5153	35784	Endodontic broach, serrated, reusable	Эндодонтын энгэрийн, шүдтэй, дахин ашиглах боломжтой	A hand-held, manual, dental, cutting instrument with a slender, tapered, serrated/barbed tip intended to be used for shaping and enlarging holes in root canal tissue, particularly dentine, or for extirpating pulp. This is a reusable device.	IIa
5154	35789	Suprapubic cannula/trocar, single-use	Suprapubic cannula/trocar, нэг удаагийн	A sterile tubular device designed for percutaneous insertion into the bladder or renal pelvis through the suprapubic region. It typically consists of a semi-rigid plastic tube that includes a trocar in its lumen to assist in the insertion and provide rigidity. The trocar is withdrawn after insertion, leaving a hollow channel that is used for the drainage of urine, and/or for the insertion of a catheter or other appropriate device. This is a single-use device.	IIa

5155	35790	Nasal haemostatic cannula	Хамрын гемостатик хоолой	A sterile, curved tube containing a stylet to which a spring is attached and which is used for plugging the posterior nares to control nosebleeds. This is a single-use device.	IIa
5156	35795	Anaesthesia conduction catheter	Мэдээ алдуулах дамжуулагч катетер	A flexible tube intended to be percutaneously introduced for the repeated or continuous injection of local anaesthetics for preoperative, intraoperative, or postoperative regional anaesthesia and/or pain management; it may be placed in the epidural space, into or around surgical wound sites, and near peripheral nerves. It may include devices dedicated to catheter introduction/function (e.g., needle, sheath); it is not coated with an antimicrobial agent. This device is typically used during surgical or diagnostic procedures or for the temporary relief of chronic pain in the limbs, pelvis, abdomen, or lumbar spine. This is a single-use device intended to be used in a sterile condition.	IIa
5157	35801	Ophthalmic clamp	Нүдний хавчаар	An ophthalmic surgical instrument used to atraumatically, grasp, join, compress, or support eye tissue and/or a surrounding structure. This is a reusable device.	IIa
5158	35807	Dental abrasive disk, reusable	Шүдний зүлгүүрийн диск, дахин ашиглах боломжтой	A dental instrument consisting of a circular flat or slightly conical sheet carrying or containing an abrasive, intended to perform a circular and/or oscillatory motion for polishing and finishing a cavity preparation and/or for cutting or polishing dental restorations. It is designed to be fixed at its centre to a mandrel and intended to be used with a dental power tool handpiece (e.g., straight or contra-angle). This is a reusable device.	IIa
5159	35809	Orthopaedic cement dispenser	Ортопедийн цементийн диспенсер	A syringe-like device intended for use in placing orthopaedic bone cement into surgical sites. Cement dispensers may be manually-operated or mounted in a powered unit that drives the piston down the syringe barrel. This is a single-use device.	IIa

5160	35824	Closed-wound drainage kit	Хаалттай шархны ус зайлуулах иж бүрдэл	A collection of devices designed to remove fluids or purulent material from a closed-wound in a controlled manner. It includes a container (the receptacle or reservoir), drains/catheters, connectors, a grasping device and possibly a trocar for placing the drains/catheters into the site. The reservoir will usually be provided with graduated markers along its side to facilitate the approximate measurement of the collected fluids. This is a single-use device.	IIa
5161	35831	X-ray film changing system	Рентген хальс солих систем	An automatic x-ray film changer is typically a component of a diagnostic x-ray system. It is designed to transport either cassettes, single sheets of x-ray film, or rolled film of a specific size from a supply magazine, through a pair of intensifying screens where an x-ray exposure is initiated, and afterwards transport the cassette or film into a receiving bin. It may be electromechanically or software-controlled. Typical major components of automatic sheet or roll film changers may include components such as cassette holders, mounting stands, control panels, change mechanisms, supply magazines, receiving magazines or controls program selectors.	IIa
5162	35833	Electric infusion pump administration set, single-use	Цахилгаан дусаах насосны удирдлагын багц, нэг удаагийн	A collection of sterile devices (e.g., plastic tubing, check valve, roller clamp, Y-site connector, Luer, needle/catheter) intended to be used in combination with an electrically-powered infusion pump for the intravenous (IV), subcutaneous, intramuscular, or epidural administration of medication. This is a single-use device.	IIa
5163	35838	Ambulatory insulin infusion pump reservoir	Амбулаторийн инсулины дуслын автомат шахуургын сав	An insulin-filled receptacle (e.g., a cartridge similar to a syringe) intended to be used together with a body-worn insulin pump for the delivery of patient-controlled amounts of insulin to an ambulatory diabetic. This is a single-use device.	IIa

5164	35857	Dental casting non-noble alloy	Шүдний цутгамал, эрхэм бус хайлш	A material composed primarily of non-noble metals [e.g., includes alloys such as cobalt-chrome (Co-Cr), nickel-chromium, titanium (Ti)] intended for use in the fabrication of a dental cast [i.e., a positive copy of a part of the oral anatomy made in an impression (mould), such as a dental crown] or dental restorations and appliances (e.g., porcelain-fused-to-metal crowns and bridge restorations). It is typically available in the form of small ingots or bars that are melted and poured into an impression. After application, this device cannot be reused.	IIa
5165	35858	Dental casting noble alloy	Шүдний цутгах эрхэм хайлш	A material composed primarily of noble metals [e.g., gold (Au), palladium (Pd), platinum (Pt), or silver (Ag)] intended for use in the fabrication of a dental cast [i.e., a positive copy of a part of the oral anatomy made in an impression (mould), such as a dental crown] or dental restorations and appliances (e.g., porcelain-fused-to-metal crowns and bridge restorations). It is typically available in the form of small ingots or bars that are melted and poured into an impression. After application, this device cannot be reused.	IIa
5166	35860	Dental impression material syringe, reusable	Шүдний тариур, дахин ашиглах боломжтой	A non-sterile, hand-held manual dental instrument consisting of a barrel (cylinder) with plunger intended to be used to inject impression material into an impression tray or directly into a patient's mouth. This is a reusable device.	IIa
5167	35863	Alginate dental impression material	Шүдний импрессийн материал Алгинат	A material containing alginate as an essential gel-forming ingredient, which, after mixing with water, reaches a consistency suitable for taking impressions of a patient's teeth and gums, or other oral anatomy. The material is placed on an impression tray and inserted into the mouth. This is a single-use device.	IIa

5168	35865	Polysulfide dental impression material	Шүдний полисульфид импрессийн материал	An elastomeric, polysulfide-based material capable of reacting to form a rubber-like substance used to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. This is a single-use device.	IIa
5169	35870	Dental composite resin	Шүдний нийлмэл давирхай	A non-sterile substance intended for professional use as a dental cement, luting agent, liner, base, pulp-capping material, pit/fissure sealant, and/or direct dental restorative material, whereby the majority of the setting reaction is based on the self-, light-, or dual-cured polymerization of a dimethacrylate resin [e.g., polymethylmethacrylate (PMMA), polyurethane, or bisphenol-A-diglycidylether methacrylate (Bis-GMA)]; it includes some additional fillers/components (e.g., glass-based, quartz, or ceramic). It may be preloaded into a syringe, and dedicated disposable devices associated with application may be included. After application, this device cannot be reused.	IIa
5170	35873	Sternum saw	Өчүүний яс харсан	A dedicated surgical saw used to open the chest by cutting through the breastbone (sternum) in order to provide access for heart and/or lung surgery. It is designed with a short reciprocating vertical blade that is shielded by a steering guide to prevent the end of the blade from causing damage to the underlying body parts/organs. It is typically gas-powered or battery-powered.	IIa
5171	35875	Dental filling material, polymer-based	Шүдний дүүргэгч материал, полимер суурьтай	A polymer-based dental filling and restorative material supplied in a form suitable for mechanical mixing, hand mixing, and/or external energy activation (e.g., light curing), and intended for use primarily for the direct or indirect restoration of cavities in the teeth. The device may also be painted on the tooth surface to cover discolorations (facings). This is a single-use device.	IIa

5172	35876	Dental material kit, composite restorative	Шүдний материалын иж бүрдэл, нийлмэл сэргээгч	A packaged collection of dental polymer-based filling and restorative materials supplied in a form suitable for mechanical mixing, hand mixing, or external energy activation, and intended for use primarily for the direct or indirect restoration of cavities in the teeth. This is a single-use device.	IIa
5173	35877	Dental repair kit, ceramic	Шүдний засварын иж бүрдэл, керамик	A packaged collection of devices used for the repair of fractured porcelain veneers. This kit is used by a dentist and may include etching gel or liquid, bonding material, silanization liquid, a polymer-based restorative material (composite) and several other devices. This is a single-use device.	IIa
5174	35884	Skin stapler/staple, non-bioabsorbable	Арьс үдэгч/үдээс, био шингэдэггүй	A hand-held manual, surgical instrument preloaded with non-bioabsorbable skin staples designed to apply the staples to approximate the free skin edges of an incision or wound. The staples (which may be clip-like) are made of metal [e.g., stainless steel or titanium (Ti)] and intended to be removed once the wound has sufficiently healed. This is a single-use device.	IIa
5175	35886	Body aspiration needle, single-use	Биеийн сорох зүү, нэг удаагийн	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to remove fluid from a body cavity or to obtain a biopsy specimen from a patient through aspiration; it is not dedicated to a particular part of the anatomy. The device is typically longer than a hypodermic needle and usually has a wider hub. It is not intended for administration of pharmaceuticals. This is a single-use device.	IIa

5176	35907	Vitreous/aqueous humour replacement medium, intraoperative	Шилэн/усан шингэнийг орлуулах орчин, мэс заслын үед	A nonimplantable artificial fluid, semifluid, or viscoelastic substance intended to be used to replace the vitreous or aqueous humour within the eye to help facilitate the performance of ophthalmic surgery (e.g., to maintain the shape of the eyeball during the intervention, preserve tissue integrity, protect from surgical trauma, and/or to function as a tamponade during retinal reattachment). It may be supplied in a prefilled sterile syringe or other container. This is a single-use device.	IIa
5177	35909	Dental casting investment material	Шүдний цутгамал хөрөнгө оруулалтын материал	A material consisting mainly of a suitable allotrope of silica (to give a desired thermal expansion) and a bonding material, used in the dental laboratory to form the mould for dental castings. The bonding material may be either gypsum, phosphates, or silicates. After application, this device cannot be reused.	IIa
5178	35917	Surgical/emergency suction cannula, non-illuminating, single-use	Мэс заслын/яаралтай сорох суваг, гэрэлтүүлдэггүй, нэг удаагийн	An atraumatic, invasive, hand-operated, single-lumen, rigid/semi-rigid tube designed as a conduit for aspiration of body cavities, wounds, or surgical sites to facilitate observation and/or to clear an airway obstruction. It is not dedicated to dental, intrauterine, or liposuction procedures, and is neither an ophthalmic nor an intravascular device; it is not designed for surgical irrigation. Sometimes referred to as a suction tube or tip, it may incorporate a handle with side valve(s)/hole(s), and may be provided with a stylet, sheath, and/or connection tubing; it does not include a light source or fibreoptic bundle. This is a single-use device.	IIa
5179	35927	Invasive-pressure external transducer, single-use	Инвазив даралтын гадаад хувиргагч, нэг удаагийн	A sterile, noninvasive, non-luminal, electronic device designed to be connected to an appropriate invasive luminal device (e.g., catheter, cannula, tube, needle), to detect pressures (e.g., blood, gastrointestinal, urinary pressures) within the lumen and transmit them as electrical signals to an appropriate monitoring device. It consists of a pressure transducer and a connection cable and may be designed to be used with a pressure transducer dome. This is a single-use device.	IIa

5180	35928	Radiography digital imaging scanner	Дижитал дүрслэлийн рентген сканнер	A laser or light-based optical unit designed to convert medical images originally captured on x-ray film or phosphor storage plate (PSP) into a digital format. Examples of this device include devices employing video frame grabbers, and scanners which use lasers or charge-coupled devices. Depending on the design, the digitized images can then be digitally transferred from location to location, archived, or used with other digital image processing, analysis or recording systems.	IIa
5181	35929	Agar steam sterilizer	Агар уурын ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from agar and other culture media using pressurized steam (i.e., moist heat) as the sterilizing agent. It typically includes a pressurized treatment chamber with electric heaters, a water circulation system for rapid cooling, and a compressor. The device is used in the clinical laboratory for culture media that do not contain compounds affected by heat.	IIa
5182	35941	Assisted reproduction needle, reprocessed	Тусламжтай нөхөн үржихүйн зүү, дахин боловсруулсан	A sterile, sharp bevel-edged, hollow tubular metal instrument used for in vitro fertilization (IVF), gamete intrafallopian transfer (GIFT), or other assisted reproduction procedures to obtain gametes from the body or introduce gametes, zygote(s), preembryo(s) and/or embryo(s) into the body. The device may have a single or double lumen and may include a needle guide, such as those used with ultrasound. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5183	35944	Peritoneal dialysis catheter adaptor, single-use	Хэвлийн диализийн катетер адаптер, нэг удаагийн хэрэглээ	A connecting device, often in two pieces, intended to be used to join a peritoneal dialysis catheter to the dialysate line during treatment. It is typically made of plastic or metal and may be used when the devices to be connected are from different manufacturers and not compatible, enabling them to mate, and/or within a mechanical connection system. This is a single-use device.	IIa
5184	35955	Transdermal medication patch	Арьсаар дамждаг эмчилгээний наалт	A medication-impregnated device designed as a skin patch that is fixed to the skin, typically with a pressure-sensitive adhesive, for dermal absorption of the medication (e.g., pain relief local anaesthetic agent). This is a single-use device.	IIa
5185	35960	Heparin lock flush syringe, reprocessed	Гепарин цоож угаах тариур, дахин боловсруулсан	A sterile device consisting of a barrel (cylinder) with plunger, prefilled with a sterile heparin solution, intended to be used to flush indwelling intravenous access devices (IVAD), typically intravenous (IV) catheters and tubing, to maintain their patency in order to significantly reduce blood reflux during short- to long-term vascular access. The device typically includes a capped Luer connector. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5186	35980	Flexible fibreoptic cystoscope	Уян хатан шилэн цистоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urinary tract. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during cystoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine/diagnose incontinence, the inability to pass urine (retention), recurrent urinary tract infections, and to remove tissue samples/stones/small tumours from the bladder. This is a reusable device.	IIa
5187	35986	Continuous ambulatory peritoneal dialysis (CAPD) transfer set	Тасралтгүй амбулаторийн хэвлийн диализ (CAPD) шилжүүлэх багц	A collection of items that includes tubing, connectors, and clamps, intended to be used in continuous ambulatory peritoneal dialysis (CAPD) where dialysing solution is introduced into and removed from the peritoneal cavity. This is a single-use device.	IIa
5188	35994	Lavage unit, gastric/colonic	Ходоод, бүдүүн гэдэс угаах төхөөрөмж	A device that is specially designed to wash out the stomach or colon, to remove irritating contents, poisons, and/or to clean the cavity before and during an operation. It will typically operate using a pulsatile jet or stream of sterile fluid, e.g., saline. This is a reusable device.	IIa
5189	36003	Arthroscopic irrigation/insufflation system	Артроскопийн усалгаа/инсуфляцийн систем	A mains electricity (AC-powered) device assembly designed to provide controlled distention and irrigation (expansion by pressure and continual flushing) of the tissue and space around a joint where arthroscopy is being performed (e.g., the knee or shoulder joint). This is achieved by filling the cavity with a sterile fluid that is pumped into the wound by the system's pump(s) and distends the tissue around the site to improve visualization and enlarge the surgical field. Suction may also be applied by the system to assist in the removal of the surgically-resected bone, cartilage, and other tissue/debris from the site.	IIa

5190	36022	Bioelectrical body composition analyser	Биеийн бүтцийн био цахилгаан анализатор	An electronic device designed to estimate body composition (i.e., percent body fat, lean, bone, and/or hydration) with regards to bioelectrical impedance analysis (BIA) and often personal characteristics (e.g., age, gender, height, weight). It may be in the form of a unit with electrodes applied to the surface of the patient's body, or a scale(s) placed on the floor and upon which the patient stands to measure total body weight. Both types perform BIA by passing a low electrical current through the body; personal characteristics may be manually entered. Data are analysed to provide measurements that may include body mass index (BMI), fat/muscle/bone mass, and total body water percent.	IIa
5191	36023	Endoscopic irrigation/aspiration pump	Дурангийн усалгаа/сорох насос	A mains electricity (AC-powered) device intended to generate positive and/or negative pressures, to irrigate and/or aspirate a body cavity or lumen with sterile fluid (e.g., saline water) through an endoscope typically to facilitate observation of a site with an endoscope (e.g., during arthroscopy), and/or to keep clear the working channel of an endoscope or lumen of a catheter.	IIa

5192	36033	Sleep apnoea nasal mask, reusable	Нойрны апноэ хамрын маск, дахин ашиглах боломжтой	A flexible, form-shaped device designed to be placed over a user's nose to interface with a sleep apnoea positive airway pressure unit for the delivery of direct ambient air, or medical oxygen (O2) and air, for continuous positive airway pressure higher pressure (CPAP) or bi-level positive airway pressure (BiPAP) ventilation therapy to improve/enhance the sleep of a person experiencing sleep apnoea. It is typically made of plastic and/or silicone materials that create an airtight seal around the patient's nose. It is available in various designs and sizes and stabilized with a headstrap. This is a reusable device.	IIa
5193	36047	Ultrasonic dental scaling/debridement system	Хэт авианы шүдний масштабыг арилгах / цэвэрлэх систем	An assembly of mains electricity (AC-powered) devices intended to apply ultrasonic oscillations to: 1) mechanically fragment and dislodge gross debris in the dental pulp canal during an endodontic procedure; and/or 2) remove accretions from tooth surfaces during dental cleaning/periodontal therapy. The system typically consists of a generator with controls (e.g., foot-switch) that produces and controls high frequency electric current, and may provide fluid irrigation; a handpiece used to convert the energy to ultrasonic oscillations; and a tip(s) intended to apply the oscillations to the procedure site; tip selection typically affects the intended application (endodontic vs periodontal).	IIa

5194	36050	Perineal orifice incontinence-control electrical stimulation system probe, reusable	Перинийнүхний шээсний тасалдлыг хянах цахилгаан өдөөх системийн мэдрэгч, дахин ашиглах боломжтой	An invasive electrical conductor which is a component of a perineal orifice incontinence-control electrical stimulator intended for the treatment of urinary and/or faecal incontinence through the intravaginal/intra-anal application of electrical stimuli to the muscles of the pelvic floor. It connects to an external pulse generator (not included) and is in the form of a cylinder-like probe with surface electrodes for insertion into the vagina and/or anus whereby therapy involves induction of Kegel-like contractions. It is intended for use in both the home (self-treatment) and healthcare facility. This is a reusable device.	IIa
5195	36070	Radio-frequency atherectomy system	Радио давтамжийн атерэктомийн систем	An assembly of devices designed to improve blood flow in the coronary arteries of the heart by eliminating areas of total occlusion or narrowed passage due to atherosclerotic disease. The assembly typically includes a catheter and a control unit that produces radio-frequency (RF) energy transmitted to the tip of the catheter where it is converted into heat to vaporize or disintegrate the obstructing materials to re-establish blood flow and permit placement of interventional devices (e.g., balloon angioplasty catheter, stent).	IIa
5196	36071	Tracheostomy tube speech valve	Трахеостомийн хоолойн ярианы хавхлаг	A device designed to be attached to a tracheostomy tube to eliminate the necessity of finger occlusion during speech, enabling the tracheostomized patient to speak easily and more clearly. It is typically intended to be regularly attached and removed by the patient (e.g., before and after sleeping). It may be made of metal [e.g., silver (Ag)] or plastic materials, and some types may have a sideport for connection to an oxygen supply. This is a single-patient device that may be reapplied over a period of time before being discarded.	IIa

5197	36080	Cardiopulmonary bypass system filter, priming solution	Зүрхний уушигны системийн шүүлтүүр, праймерын уусмал	A porous, sterile device intended to be used to filter the nonhaemic priming solution used in the heart-lung bypass extracorporeal circuit to remove particulates or other debris from the circuit prior to the initiation of the cardiopulmonary bypass surgery procedure. This is a single-use device.	IIa
5198	36081	Nerve-function monitor	Мэдрэлийн үйл ажиллагааны хяналт	A mains electricity (AC-powered) bedside device designed to continuously assess the adequacy of the nerve function of a non-ambulatory patient who requires monitoring (e.g., as a result of trauma, anaesthesia, intervention, evaluation). It typically monitors evoked potential (EP), electromyography (EMG), electroencephalography (EEG) and/or neuromuscular block response. It typically consists of electrodes applied to the patient intended to acquire the neural electrical signal, and a computerized unit to process and display the information; stimulation systems for nerve block and evoked potential evaluation are separate requirements.	IIa
5199	36082	Medical/surgical string	Эмнэлгийн/мэс заслын утас	A sterile slender cord or thick thread, medical grade, designed to temporarily lift vessels, hold tracheostomy tubes in place, or assist in stabilizing various organs, medical instrumentation and accessories. This is a single-use device.	IIa
5200	36107	Liposuction system cannula, single-use	Өөх соруулах системийн суваг, нэг удаагийн	A rigid tube that functions as a component of a lipectomy suction system and designed specifically for percutaneous insertion into body fat deposits for the aspiration of fat during liposuction/lipoplasty. The device may also be used to infiltrate the operative site with a solution during the procedure, which is then aspirated. This is a single-use device.	IIa
5201	36108	Aqueous/vitreous humour replacement medium kit	Усан/шилэн шингэнийг орлуулах дунд иж бүрдэл	A collection of sterile devices, including a fluid or semifluid substance, used in combination to replace the fluid of the eye. This is a single-use device.	IIa

5202	36112	Flexible video duodenoscope, reusable	Уян хатан видео дуоденоскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the duodenum (the first part of the small intestine). It is inserted into the body through the mouth during duodenoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This device is commonly used to examine structures and mucous membranes of the duodenum for conditions like ulcers, polyps, and cancer. This is a reusable device.	IIa
5203	36114	Endotracheal tube laser beam-blocking tape	Endotracheal хоолойн лазер туяаг хориглох соронзон хальс	A non-medical adhesive strip made of metal intended to be used to wrap an endotracheal (ET) tube or other type of tracheal tube as a means of protection against laser energy. This is a single-use device.	IIa
5204	36116	Flexible fibreoptic sinoscope	Уян хатан шилэн синоскоп	An endoscope intended for the visual examination and treatment of the paranasal sinuses during an ear/nose/throat (ENT) intervention. It is inserted through a naris. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
5205	36117	Flexible video colonoscope, reusable	Уян хатан видео колоноскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the entire colon [lower gastrointestinal (GI) tract]. It is inserted through the anus during colonoscopy. Anatomical images are transmitted to a monitor for viewing by a video system with an image sensor chip at the distal end of the endoscope. This device is commonly used to examine the lining of the colon or to evaluate altered bowel habits, colonic cancer, polyps, diverticular disease, occult or frank blood in stools, or unexplained anaemia. This is a reusable device.	IIa

5206	36125	Urine-sampling urethral catheter	Шээсний дээж авах шээсний сувгийн катетер	A sterile flexible tube inserted into the bladder, via the urethra, to obtain a sample of urine that has not been contaminated by urethral passage. The distal end can have various tip designs, and the proximal end may terminate in a soft connecting piece to connect to a urine specimen collection container. The device is applied by a healthcare provider to the patient, is typically made of polyvinyl chloride (PVC), and may or may not be coated with a lubricating substance. This is a single-use device.	IIa
5207	36126	Surgical clip applier, single-use	Мэс заслын хавчаар түрхэгч, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument designed to apply small atraumatic clips for the ligation of blood vessels, or similar tubular anatomy, mainly to stop and/or prevent bleeding (i.e., haemostasis) during an open-surgery procedure. The device is typically a metallic, forceps-like instrument with flat, curved ends to hold and deliver the clips; it may be preloaded with clips and include a mechanism for single or multiple insertions of clips. This is a single-use device that is discarded after a single surgical procedure.	IIa
5208	36135	Trial joint prosthesis	Туршилтын хамтарсан протез	A copy of a final prosthetic implant or component (e.g., acetabular or femoral component of a hip prosthesis) used to validate the proper size of the permanent prosthesis required by the patient, to determine its appropriate position, and/or to verify that the implant site has been cut to the proper dimensions. This trial device is used in orthopaedic joint replacement and is specific to the replaced joint (e.g., hip, knee, shoulder, ankle, elbow). It can be made of metal or plastic. This is a reusable device.	IIa
5209	36191	Epidural needle	Эпидураль зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument used to deliver anaesthetic or analgesic agents to the epidural space. The device may be used to introduce a dedicated catheter into the epidural space for continuous anaesthetic administration. This is a single-use device.	IIa

5210	36193	Dental anaesthesia system	Шүдний мэдээ алдуулалтын систем	An assembly of devices used for the administration of a proportional mixture of oxygen (O2) and nitrous oxide (N2O) or medical air during dental surgical treatment. The main components are typically a fresh gas delivery system (rotameters), an antihypoxia protection mechanism, and a simple breathing system.	IIa
5211	36215	Phacoemulsification system handpiece tip, single-use	Факоэмульсжуулах системийн гарны үзүүр, нэг удаагийн	A device that is attached to a dedicated handpiece for insertion into the eye to deliver energy (e.g., ultrasonic, piezoelectric), provided from a system generator, to perform phacoemulsification (a procedure for the liquefying and removal of the opaque lens nucleus in cataract surgery). It may facilitate, via the handpiece, the irrigation/suction needed for the removal of debris. This is a single-use device.	IIa
5212	36224	Arthroscopic shaver system, electrically-powered	Үе мөчний сахлын систем, цахилгаанаар ажилладаг	A dedicated assembly of electrically-powered devices designed for bone and soft-tissue resection during arthroscopic surgery on a joint (e.g., a knee, shoulder, or ankle). It typically consists of a power supply/control unit with operational display and dedicated software, intended to provide optimal parameters for the procedure, and a rotatory handpiece(s) that can operate a variety of burs and blades (either straight or curved) or other rotatory instruments. An irrigation system may be included. Common procedures include cartilage debridement (e.g., meniscus repair or meniscectomy) and removal of the inflamed inner lining of the joint (synovectomy). This is a reusable device.	IIa

5213	36225	Scanning laser optical microscope	Сканнердах лазер оптик микроскоп	A microscope designed to obtain high-magnification cross-sectional [three-dimensional (3-D)] images by scanning the sample with the focused point of laser light, restricting the illumination to a tiny, targeted section of the specimen while eliminating out-of-focus light (confocal microscopy). The image data is detected, amplified, and usually digitized and displayed on a high resolution (typically 1024 x 1024 pixel) monitor. The data can be stored, e.g., in a computer. This microscope can be mounted on conventional or specially designed light microscopes, e.g., upright or inverted stage, and is mostly used for cell and molecular biology examinations, e.g., cells, cell cultures or tissue.	IIa
5214	36231	Oxygen administration transtracheal catheter	Хүчилтөрөгчийн хэрэглээний транстрахеаль катетер	A flexible tube intended to be introduced across the tracheal wall to provide supplementary oxygen (O2) to the respiratory tract of a person who is unable to breathe through the nose or mouth because of obstruction. This is a single-use device.	IIa
5215	36238	Dermatological copper vapour laser system	Арьс судлалын зэсийн уурын лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite copper vapour to emit a high-power laser beam intended for the treatment of cutaneous vascular lesions (e.g., port wine stains, telangiectasia) and other diseases of the skin. It typically includes a light source, delivery/positioning device(s), and controls/foot-switch.	IIa
5216	36249	Orthopaedic bur, reusable	Ортопедийн бур, дахин ашиглах боломжтой	A rotary cutting device consisting of a shaft of high-grade steel and a cutting head of hard metal/material with fluting or cutting planes of various shapes at the working end and which is designed to fit into an appropriate powered handpiece that provides the rotation allowing the user to excavate/shape bone tissue during small and large bone surgery (e.g., maxillofacial, spinal, or orthopaedic). This is a reusable device intended to be sterilized prior to use.	IIa

5217	36259	Shoulder glenoid fossa prosthesis, prefabricated	Мөрний гленоид фосса протез, угсармал	An implantable, prefabricated component of a total shoulder prosthesis (glenoid component) designed to replace or repair the glenoid fossa; it is not a custom-made device. It is cup-like in shape and typically made of polyethylene (PE), but may be made of metal or a combination of PE and metal; it may include fixation devices (e.g., screws) for attachment to the scapula.	IIa
5218	36283	Flexible video laparoscope	Уян хатан видео лапароскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the abdominal/retroperitoneal cavity and its organs. It is inserted through an incision made in the abdominal wall (routinely just below the umbilicus) during laparoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. The abdominal wall is distended providing space to allow the surgeon to directly view and/or operate on the exposed organs. It is used to evaluate/treat abdominal or pelvic pain, ectopic pregnancy, and ovarian cysts. This is a reusable device.	IIa
5219	36298	Flexible fibreoptic enteroscope	Уян хатан шилэн энтероскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the small intestine (the duodenum, jejunum, and ileum). It is inserted into the body through the mouth or the anus during enteroscopy. It may be of a push-type, introduced by guidance under direct vision, or of a sonde type which has an inflatable balloon that pulls the device through the length of the intestine by peristalsis. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is typically used to examine strictures, Crohn's disease, or take biopsies of the small intestines. This is a reusable device.	IIa

5220	36299	Flexible video enteroscope	Уян хатан видео энтероскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the small intestine (duodenum, jejunum, and ileum). It is inserted into the body through the mouth or the anus during enteroscopy typically to examine strictures, assess Crohn's's disease, or take biopsies. It may be designed to be manually inserted or may be designed with features to assist/power insertion (e.g., push/pull double-balloons, powered spiralling motor). Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This is a reusable device.	IIa
5221	36373	Cardiopulmonary bypass system mounting unit	Зүрхний уушигны эргэлтийн системийг суурилуулах төхөөрөмж	A platform upon which modular devices of a cardiopulmonary bypass system (e.g., the blood pumps) are mounted to form the complete system. It typically includes electronics and control panels (e.g., microprocessors to control pump speed), and the main connection to the source of line power. It serves as the basic workstation for the operator to monitor and control the system's functions.	IIa
5222	36374	Cardiopulmonary bypass system temperature control unit	Зүрхний уушигны эргэлтийн системийн температурын хяналтын нэгж	An electronic device that is a module of a cardiopulmonary bypass system and that is used to measure and display the temperatures of the different temperature probes that are connected into the total system in order to monitor the fluid and blood temperatures at various points. It may also control the temperature levels, e.g., the temperature level of the fluid entering and leaving the heat exchanger.	IIa

5223	36386	Automated ophthalmic refractometer	Автомат нүдний рефрактометр	An electrically-powered, ophthalmic device designed to be used by a healthcare professional to objectively measure the refractive error of the eye (the inaccuracies of focusing light upon the retina) by measuring how light is changed when it enters the patient's eye(s). The device emits light into the eye and detects the light reflection which is measured for sphere, cylinder, axis and/or high order aberration measurements, typically measured in dioptres (the reciprocal of the focal length of the lens expressed in metres). Also known as an aberrometer, the device uses this information to automatically calculate the lens prescription needed to correct the patient's vision.	IIa
5224	36624	Flexible fibreoptic culdoscope	Уян хатан шилэн кабелийн кульдоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the female peritoneal cavity and organs. It is inserted into the body through a small incision made in the posterior vaginal fornix into the cul-de-sac, also called the rectouterine pouch (pouch of Douglas), during culdoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine structures of the uterus, ovaries, fallopian tubes, pelvis, pelvic cavity when the physician is viewing the area from just behind the uterus. This is a reusable device.	IIa
5225	36626	Flexible video choledochoscope	Уян хатан видео холедокоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the choledoc, better known as the common bile duct (CBD). It is inserted into the body through an artificial orifice created by an incision in the abdomen (laparoscopic technique) or introduced via a flexible duodenoscope during the procedure called choledochoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end and the images showing on a monitor. This device is commonly used to examine structures of the CBD and for the removal of stones. This is a reusable device.	IIa

5226	36628	Rigid optical hysteroscope	Хатуу оптик гистероскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the canal of the cervix and the uterine cavity (uterus). It is inserted through the vagina during hysteroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. Distention of the uterus with, e.g., carbon dioxide(CO_2) gas may be used to improve viewing. This device is typically used to evaluate/treat fibroids (myomas), polyps, or causes of severe cramping (dysmenorrhea), heavy menstrual periods (menorrhagia), and bleeding between periods (metrorrhagia). This is a reusable device.	IIa
5227	36631	Flexible fibreoptic oesophagoscope	Уян хатан шилэн улаан хоолойн дурангийн дуран	An endoscope with a flexible inserted portion intended the visual examination and treatment of the oesophagus. It is inserted into the body through the mouth. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine abnormalities in the tissue structure and mucous lining. This is a reusable device.	IIa
5228	36632	Flexible fibreoptic cystourethroscope	Уян хатан шилэн цистоуретроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for biopsy, removal of concretions (small stones), treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa

5229	36632	Flexible fibreoptic cystourethroscope	Уян хатан шилэн цистоуретроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for biopsy, removal of concretions (small stones), treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa
5230	36632	Flexible fibreoptic cystourethroscope	Уян хатан шилэн цистоуретроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for biopsy, removal of concretions (small stones), treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa

5231	36632	Flexible fibreoptic cystourethroscope	Уян хатан шилэн цистоуретроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for biopsy, removal of concretions (small stones), treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa
5232	36640	Flexible fibreoptic ureteroscope	Уян хатан шилэн ureteroscope	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the ureter (the upper urinary tract that connects the kidney to the bladder). It is inserted through the external urethral orifice and bladder during ureteroscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for biopsies, endoscopic lithotripsy, treatment of upper urinary tract malignancies, incising strictures, and repairing ureteropelvic junction obstructions. This is a reusable device.	IIa
5233	36645	Flexible fibreoptic laryngoscope	Уян хатан шилэн ларингоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the larynx. It is inserted into the body through the mouth during laryngoscopy. Anatomical images are transmitted through a fibreoptic bundle to the user for direct visualization (i.e., non-video). This device is commonly used to evaluate or operate on laryngeal strictures, foreign bodies, or neoplasms; it is not intended for intubation of an artificial airway. This is a reusable device.	IIa

5234	36647	Rigid optical antroscope	Хатуу оптик антроскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of a cavity, particularly the pathological changes in the area of the maxillary sinus. It is inserted into the front of the head through an artificial orifice created by an incision made during antroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the structures of the maxillary antrum. This is a reusable device.	IIa
5235	36652	Rigid optical cystourethroscope	Хатуу оптик цистоуретроскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the bladder and the urethra, including the prostate region. It is inserted into the urethra (the tube that carries urine from the bladder to the outside of the body) through the natural urinary orifice during an endourologic procedure. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used for biopsy, removal of concretions (small stones), treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa
5236	36653	Rigid optical oesophagoscope	Хатуу оптик улаан хоолойн дуран	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the oesophagus. It is inserted into the body through the mouth. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine abnormalities in the tissue structure and mucous lining of the oesophagus. This is a reusable device.	IIa

5237	36654	Rigid optical ureteroscope	Хатуу оптик ureteroscope	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the ureter, (the upper urinary tract that connects the kidney to the bladder). It is inserted through the external urethral orifice and bladder during ureteroscopy. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used for biopsies, endoscopic lithotripsy, treatment of upper urinary tract malignancies, incising strictures, and repairing ureteropelvic junction obstructions. This is a reusable device.	IIa
5238	36667	Nuclear medicine system detector head	Цөмийн анагаах ухааны системийн илрүүлэгч толгой	A device that is a component of a nuclear medicine imaging system typically designed as a round or rectangular housing for the detector assemblies, e.g., the crystal(s), photomultiplier tubes and related electronics of a diagnostic nuclear medicine systems, e.g., a gamma camera, a single photon emission computed tomography (SPECT) or a planar positron emission tomography (PET) system. It is typically designed so that various collimators can be affixed to the face of the detector head depending on the imaging application and the energy of the radionuclide being used in the procedure.	IIa
5239	36667	Nuclear medicine system detector head	Цөмийн анагаах ухааны системийн илрүүлэгч толгой	A device that is a component of a nuclear medicine imaging system typically designed as a round or rectangular housing for the detector assemblies, e.g., the crystal(s), photomultiplier tubes and related electronics of a diagnostic nuclear medicine systems, e.g., a gamma camera, a single photon emission computed tomography (SPECT) or a planar positron emission tomography (PET) system. It is typically designed so that various collimators can be affixed to the face of the detector head depending on the imaging application and the energy of the radionuclide being used in the procedure.	IIa

5240	36706	Flexible fibreoptic intubation laryngoscope	Уян шилэн интубацийн ларингоскоп	An endoscope with a flexible inserted portion intended for the visual examination of the upper airway and to assist the entry and positioning of a special airway tube [a long thin version of an endotracheal (ET) tube] to secure an open airway in the case of difficult and non-difficult intubation procedures. The inserted portion is very long and thin to facilitate entry and the intubation procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
5241	36708	Rigid optical pharyngoscope	Хатуу оптик фарингоскоп	An endoscope with a rigid inserted portion intended for the observation, diagnosis, and treatment of the pharynx. The image transmission is through relayed lens optics. This is a reusable device.	IIa
5242	36709	Flexible fibreoptic pharyngoscope	Уян хатан шилэн фарингоскоп	An endoscope intended for observation, diagnosis, and treatment of the pharynx. Its insertion portion is flexible and conforms to body cavities. It is typically used during ear/nose/throat (ENT) treatment and inserted through the nose. The image transmission is through a fibreoptic bundle. This is a reusable device.	IIa
5243	36717	Impedance audiometer	Эсэргүүцлийн аудиометр	An electronic instrument used to evaluate the functional condition of the middle ear by changing the air pressure in the external auditory canal to measure and graph the mobility characteristics of the tympanic membrane. It identifies abnormalities in tympanic membrane mobility due to stiffness, flaccidity, or the presence of fluid in the middle ear cavity. The device is also used to measure the acoustic reflex threshold from contractions of the stapedial muscle, to monitor healing of tympanic membrane grafts or stapedectomies, or to monitor follow up treatment for inflammation of the middle ear.	IIa

5244	36750	Endoscopic insufflator	Дурангийн инсуфлятор	A mains electricity (AC-powered) device that blows filtered air through an endoscope in order to prevent dew/mist accumulating at the lens, and/or, in order to enlarge the space directly forward of the distal end in order to obtain a better field of view for the operator.	IIa
5245	36758	Localized cutaneous/musculoskeletal cryotherapy unit	Орон нутгийн арьс/булчингийн крио эмчилгээний хэсэг	An electrically-powered unit intended to create a stream of cold air/vapour (e.g., liquid nitrogen) for application to the skin surface for various localized therapeutic applications such as relief of underlying musculoskeletal symptoms (e.g., pain, spasm, inflammation, bruising), reduction of dermal pain/inflammation, and/or reduction of thermal skin damage during dermatological laser treatments. In addition to the main unit it may include a hose and spray-producing nozzle.	IIa
5246	36772	Fallopian tube insufflator	Фаллопийн хоолойн инсуффлятор	A mains electricity (AC-powered) device designed to insufflate the Fallopian tubes (the oviducts between the ovaries and the uterus/womb) with a gas [typically carbon dioxide (CO_2)] to maintain tubal patency for a procedure, or a fluid (a dye) typically to test for tubal patency.	IIa
5247	36775	Skin laser scanner	Арьсны лазер сканнер	An electromechanical device intended to enable a laser beam, produced by an appropriate laser, to be scanned uniformly over a broad field of skin, typically for the removal of skin lesions (e.g., birthmarks, pigmentations) and tattoos. A laser beam is typically so intensely focused that only a tiny area can be treated at a time; large areas of skin must be treated using a scanner which sweeps the beam back and forth over the total target area.	IIa

5248	36865	Arthroscopic shaver system handpiece, pneumatic	Үе мөчний сахлын системийн гар, пневматик	A handle with attached cutting blade that is a component of a pneumatically-powered shaver system designed for soft and bone tissue resection during arthroscopic surgery on a joint, e.g., a knee, shoulder, or ankle. It is typically connected to and regulated by a dedicated control unit. It may facilitate additional functions of the system (e.g., irrigation/suction) and is used in combination with appropriate endoscopic devices. This is a reusable device.	IIa
5249	36903	Auditory canal endoscope	Сонсголын сувгийн дурангийн дуран	An endoscope with a short, rigid inserted portion intended for the visual examination and treatment of the external auditory canal (the canal from the ear opening to the tympanic membrane or the eardrum). It is inserted into the canal through the opening of the ear during an ear/nose/throat (ENT) procedure. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. This device is used for close examinations of anomalies in the structures of the external auditory canal. This is a reusable device.	IIa
5250	36904	Rigid optical intracranial/spinal endoscope, reusable	Хатуу оптик гавлын дотоод/нугасны дуран, дахин ашиглах боломжтой	An endoscope with a rigid distal portion intended for the visual examination and treatment of the brain (e.g., ventricles, hydrocephalus) and/or spine and contents [e.g., vertebrae, intervertebral discs, spinal cord (myeloscopy)]; it is not dedicated for use in the epidural space (i.e., not a dedicated epiduroscope). Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle; it does not include video imaging capability, however, might be used with a separate video camera for optional video image viewing. This is a reusable device.	IIa

5251	36906	Nasal endoscope	Хамрын дурангийн дуран	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the nasal cavity. It is inserted into the body through the nostrils during an ear/nose/throat (ENT) intervention. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle. It is commonly used during the removal of the adenoids (glandular tissue in the nasopharynx, also known as the pharyngeal tonsils). This is a reusable device.	IIa
5252	36970	Noninvasive vascular ultrasound system probe	Инвазив бус судасны хэт авианы системийн датчик	A hand-operated component of a noninvasive vascular ultrasound system intended to be placed on the surface of a patient's body to measure the flow of blood in the underlying vasculature using ultrasonic/Doppler/transit time technology. It may include single or multiple element transducer configurations that convert electric voltages into an ultrasound beam reproducing movement and flow graphically, typically with sound. The device is available in various frequency capacities (e.g., 4, 5, or 8 MHz). It may also be used to detect the foetal heartbeat. This is a reusable device.	IIa
5253	36982	Ophthalmic ultrasound imaging transducer	Нүдний хэт авианы дүрс хувиргагч	An ultrasound imaging transducer that is a hand-held device moved over the intact surface of a patient's eye during imaging applications involving the examination of the lens. It may include single or multiple element transducer assembly configurations that convert electric voltages into an ultrasound beam. Typically used with coupling gels to ensure adequate contact with the patient's eye it steers, focuses and detects the ultrasound beam and resulting echoes mechanically or electronically. This group of devices typically includes ultrasound imaging transducers used with A-mode scanning capabilities. This is a reusable device.	IIa

5254	36990	BiPAP unit	BiPAP нэгж	A device designed to deliver a constant flow of oxygen/air to a patient, and provide the delivery of a maximum and a minimum airway pressure to the lungs during spontaneous breathing, commonly known as bi-level positive airway pressure (BiPAP). It is a form of advanced continuous positive airway pressure (CPAP) treatment. This function may be found in advanced ventilators, but in the case of this GMDN code, it is a separate device that can be used independently for dedicated treatment settings.	IIa
5255	37021	Anaesthesia breathing circuit, reusable	Мэдээ алдуулах амьсгалын хэлхээ, дахин ашиглах боломжтой	An assembly of devices designed to conduct medical gases from an anaesthesia unit/workstation to a patient artificial airway/anaesthesia mask (not included) during general anaesthesia. It includes breathing tubes and a Y-piece connector, typically with a ventilator/ventilation bag and appropriate connectors, and may include a carbon dioxide (CO_2) absorber, a one-way directional valve, or adjustable pressure limiting (APL) valve. This is a reusable device.	IIa
5256	37022	Carbon dioxide absorber, reusable	Нүүрстөрөгчийн давхар исэл шингээгч, дахин ашиглах боломжтой	A non-sterile, refillable container (e.g., a canister) intended to be placed in an anaesthesia unit/workstation breathing circuit for the removal of carbon dioxide (CO_2) exhaled by the patient. It is filled with an appropriate carbon dioxide absorbent (e.g., granules of treated soda lime), directly or via a single-use absorbent cartridge, to chemically remove CO_2. A drain may be included to channel water accumulated from expired-gas moisture or other source. This is a reusable device.	IIa

5257	37025	Pressure relief valve, reusable	Даралт бууруулах хавхлага, дахин ашиглах боломжтой	A non-sterile device used to regulate the maximum pressure level in a circuit or system (typically containing gas) where it is essential not to exceed a pre-set maximum pressure. Should this pressure level be exceeded, this device will automatically open and vent the excess pressure from the circuit/system ensuring that an excessive pressure level is not sustained, thereby preventing damage to the patient or a parent device. It is typically used in anaesthesia machines and ventilators forming part of the breathing/gas delivery circuit/system, but may be applied to other functions. This is a reusable device.	IIa
5258	37038	Ventilator converter	Агааржуулагч хувиргагч	A device intended to be used to couple together any type of powered ventilator to any kind of breathing circuit system, making them compatible for use. By using this device it is then possible to use alternative combinations of ventilator and breathing circuit from different manufacturers. This will assist, e.g., a hospital to be flexible in the choice of breathing circuit or system and allowing for the introduction to new kinds whilst the ventilators may remain the same. This is a reusable device.	IIa
5259	37068	Pulmonary function valve	Уушигны үйл ажиллагааны хавхлаг	A non-sterile, dedicated valve intended to be used with a parent device for the measurement/analysis of a patient's pulmonary function. It is typically used to control inspired/expired gas directional flow and assist in the inhalation and distribution of test gases. This is a reusable device.	IIa
5260	37069	Ophthalmic insufflator	Нүдний инсуффлятор	A mains electricity (AC-powered) ophthalmic device intended to be used during ophthalmic surgery for the introduction of small amounts of air (pressure range 20-30 mm Hg) into the eyeball in order to supplement the eye's own fluid with air to press the retina into its correct position, or to displace fluid that has moved behind it.	IIa

5261	37084	Rigid endoscope telescope	Хатуу дурангийн дуран	An optical device designed to provide the illumination and image transmission capabilities of a rigid endoscope. It typically includes a set of lenses (e.g., thin and rod-shaped lenses) and/or a fibreoptic bunch, and is introduced though the sheath of the endoscope (e.g., a rigid cystoscope or resectoscope). The endoscopic telescope is connected proximally to a light source, and the returning image is directly observed or scanned with a video camera. Dedicated types are available for direct, lateral, and oblique views. It is used for examination of body cavities following natural tracts (e.g., urinary, gastrointestinal) or surgical cavities (e.g., laparoscopic). This is a reusable device.	IIa
5262	37093	Accelerator system heat exchanger	Хурдасгуурын системийн дулаан солилцуур	A device that is a component of an accelerator system and used as a counter-flow water cooler (a device specifically designed to exchange heat) to cool the accelerator system.	IIa
5263	37111	Flexible fibreoptic ureterorenoscope	Уян хатан шилэн ureterorenoscope	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the ureter and the renal pelvis. It is inserted through the external urethral orifice during a urological procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for the removal or crushing of stones, pyelitis, and renal failure. This is a reusable device.	IIa
5264	37112	Rigid optical ureterorenoscope	Хатуу оптик ureterorenoscope	An endoscope with a rigid or semi-rigid inserted portion intended for the visual examination and treatment of the ureter and the renal pelvis; some types may have a flexible tip at the distal end of the inserted portion. It is inserted through the external urethral orifice during a urological procedure whereby anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device is typically used for the crushing or removal of stones and evaluation of pyelitis or renal failure. This is a reusable device.	IIa

5265	37148	Laparoscopic access cannula, reusable	Дурангийн хандалтын суваг, дахин ашиглах боломжтой	A single-lumen surgical device intended to be percutaneously inserted through the abdominal wall to create an access port for a laparoscope/laparoscopic instrument during laparoscopy. The cannula is often provided with a shut-off valve for gas/fluid supply, and other sealing devices (e.g., dedicated seals/rings, caps, valves), to prevent insufflation gas leakage whilst allowing entry of instruments. It may include a sharp or blunt trocar blade to assist introduction and/or puncture the abdominal wall; if the trocar is included it may be referred to as a trocar or trocar assembly. It is available in a variety of dimensions and/or designs. This is a reusable device.	IIa
5266	37149	Laparoscopic dilation guide rod	Дурангийн тэлэлтийн чиглүүлэгч саваа	A compact metal rod intended to be used during expansion of a laparoscopic access port (e.g., from 10 to 20 mm) by facilitating: 1) removal of an existing access cannula; and 2) introduction of a dilator/cannula assembly. It is inserted into the existing access cannula, keeping the opening airtight whilst the smaller access cannula is removed; a special dilator assembled with a larger access cannula is fed back over the guide rod. This is a reusable device.	IIa
5267	37151	Laparoscopic access cannula dilator	Дурангийн сувгийн өргөтгөгч	A hollow dilator with a tapered distal end intended to enable the gentle insertion of a larger laparoscopic access cannula, necessary when significantly increasing the working access port's lumen, e.g., from 10 to 20 mm diameter. It is commonly used in minimally-invasive laparoscopic procedures. The dilator is entered over a guide rod, forcing a larger opening as the skin is pressed aside, thereby reducing the possible degree of damage. This is a reusable device.	IIa

5268	37152	Flexible fibreoptic hysteroscope	Уян хатан шилэн гистероскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the canal of the cervix and the uterine cavity (uterus). It is inserted through the vagina during hysteroscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. Distention of the uterus with either liquid or carbon dioxide (CO_2) gas may be used to improve viewing. This device is commonly used to evaluate/treat fibroids (myomas), polyps, or causes of severe cramping (dysmenorrhea), heavy menstrual periods (menorrhagia) and bleeding between periods (metrorrhagia). This is a reusable device.	IIa
5269	37182	TEM/TEO rectoscope, optical	TEM/TEO ректоскоп, оптик	An endoscope with a rigid inserted portion intended for surgical treatment of the lower part of the bowel during transanal endoscopic microsurgery (TEM) or transanal endoscopic operations (TEO). It is inserted into the body through the anus; an obturator may be inserted into its lumen to assist the insertion. Anatomical images are transmitted to the user by the device through the inserted optical viewing telescope. It also has facilities to introduce gas to distend the field of view while allowing the insertion of dedicated surgical instruments via gastight ports. This is a reusable device.	IIa
5270	37223	Flexible ultrasound duodenoscope	Уян хатан хэт авиан duodenoscope	An endoscope with a flexible inserted portion, combined with an ultrasound probe, intended for the visual examination and treatment of the duodenum (the first part of the small intestine). It is inserted into the body through the mouth during duodenoscopy. Anatomical images are transmitted to the user by the device through either a fibreoptic bundle or a video	IIa

5271	37243	Manual blood lancing device, reusable	Дахин ашиглах боломжтой гар аргаар цус хайлуулах төхөөрөмж	A hand-held manual instrument intended to be used for controlled skin puncture to obtain a capillary blood specimen (e.g., performed by a diabetic patient) typically at the fingertip or ear lobe. It is used with a sterile, disposable lancet tip, and has a manually-powered mechanism (e.g., spring-loaded) which enables the tip to puncture to a predetermined depth and blood subsequently to be squeezed out of the puncture site. This is a reusable device.	IIa
5272	37244	Blood lancet, reusable	Цусны ланцет, дахин ашиглах боломжтой	A hand-held, sharply-pointed, non-mechanical, scalpel-like instrument intended to be used by a healthcare provider to manually puncture the skin of a patient to obtain a small blood specimen or drain a cyst or boil. This is a reusable device.	IIa
5273	37257	Pressure transducer dome, single-use	Даралт хувиргагч бөмбөгөр, нэг удаагийн	A sterile plastic housing that connects together with an external pressure transducer (not included),, forming a measuring compartment. The transducer is influenced by the pressure of the medium, e.g., blood directly from a patient, that is channelled into the compartment, thereby creating the signals. This is a single-use device.	IIa
5274	37258	Tocodynamometer probe	Токодинамометрийн датчик	A pressure transducer intended to be placed on the abdomen of a labouring woman to convert uterine birthing contractions to electrical signals; the signals are typically displayed by a cardiotocograph (CTG). This is a reusable device.	IIa
5275	37280	Eyeball prosthesis lubricant	Нүдний алимны протезийн тосолгооны материал	A material intended to be used for cleaning and lubricating an artificial eye. It is intended for use in the home or healthcare facility. After application, this device cannot be reused.	IIa
5276	37303	Corneal smoothing agent	Эвэрлэгийг зөөлрүүлэгч бодис	A substance intended to be applied to the corneal surface to fill in irregularities and smooth corneal surfaces during ophthalmic laser photoablation procedures. After application, this device cannot be reused.	IIa

5277	37312	Pressure transducer dome, reusable	Даралт хувиргагч, дахин ашиглах боломжтой	A non-sterile plastic housing that connects together with an external pressure transducer (not included), forming a measuring compartment. The transducer is influenced by the pressure of the medium, e.g., blood directly from a patient, that is channelled into the compartment, thereby creating the signals. This is a reusable device.	IIa
5278	37357	Hazardous gas safety valve	Аюултай хийн аюулгүйн хавхлага	A device intended to be used to automatically stop the flow of a hazardous gas from a gas line when there is a potential or imminent danger due to its free flow into the environment. This device will typically be used in the home of a person with a disability or other premises where it is necessary to safeguard against emergency situations.	IIa
5279	37362	Drip wearable urinal	Дусал зүүж болох шээсний уут	A non-sterile urine drainage device designed for men to contain a moderate leakage consisting of a front piece with an integrated tubular sheath that fits fully over the penis and into which dribbling urine is collected. It is typically held in place with groin and waist straps; the scrotum is not contained within this device. The sheath functions as the reservoir for the collection of the urine which can be drained by opening a sealing cap at its distal end, or alternatively it can be connected to a drainage bag. This device provides an alternative to inserting a catheter or wearing incontinence pads and is used to treat male urinary incontinence. This is a reusable device.	IIa

5280	37363	Rigid video rectoscope	Хатуу видео ректоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the rectum and anus [typically during transanal endoscopic microsurgery (TEM) or transanal endoscopic operations (TEO)]. It is inserted into the body through the anus during rectoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. It may facilitate gas introduction to distend the field of view while allowing the insertion of surgical instruments. This is a reusable device.	IIa
5281	37390	Endoscopic suturing unit, single-use	Дурангийн оёдлын хэсэг, нэг удаагийн	A sterile, manually-operated device intended to be used in combination with a compatible flexible endoscope (e.g., gastroscope, laparoscope) to mechanically approximate the edges of an internal wound or incision with sutures, typically during a gastrointestinal (GI) procedure. It is typically loaded with a needle/suture assembly and attached to the working end, or inserted through the working channel, of the endoscope. The device will also knot and cut the sutures as they are stitched; some types may also carry and/or knot a ligature. This is a single-use device.	IIa
5282	37434	Dental suction system cannula, single-use	Шүдний сорох системийн суваг, нэг удаагийн	A semi-rigid or rigid hollow tubular component of a dental suction system designed to be inserted into the oral cavity for the aspiration and removal of blood, pus, saliva, debris, and water during a dental or oral procedure. It is typically made of disposable plastic materials. This is a single-use device.	IIa
5283	37445	Manual scalpel blade, single-use	Гар мэс заслын хутганы ир, нэг удаагийн	An interchangeable device designed to mount a compatible handle and function as the cutting edge of a scalpel. It is made of high-grade stainless steel alloy and is used as a surgical instrument to cut and dissect tissues. Safety mechanisms (e.g., a retractable protective guard made of plastic) may be included. This is a single-use device.	IIa

5284	37458	Scalp haemostasis clip, single-use	Хуйхны цус тогтоогч хавчаар, нэг удаагийн хэрэглээ	A small, manually-operated and applied surgical device used to stop bleeding from the scalp during surgery on the cranium. It is usually applied to the scalp using the fingers or a dedicated pair of scalp clip forceps, and consists of two blades that are joined at a midpoint. It is typically made of plastic materials. This is a single-use device.	IIa
5285	37466	Manual blood lancet, single-use	Гарын авлагын цусны ланцет, нэг удаагийн хэрэглээ	A small, sterile, sharply-pointed instrument (needle-like) designed to be used by healthcare provider to manually puncture the skin to obtain a small blood specimen or drain a cyst or boil. This is a single-use device.	IIa
5286	37469	Artificial airway stylet, single-use	Амьсгалын замын хиймэл загвар, нэг удаагийн	A long stiffening wire/rod designed for insertion within the lumen of an artificial airway tube (e.g., endotracheal tube, bronchial tube) to stiffen and/or maintain the shape of the tube to facilitate introduction (intubation). It is designed to be slightly shorter than the tube to avoid damage to the airway during passage, and is withdrawn after intubation has been completed. This is a single-use device.	IIa
5287	37482	Pleural catheter	Гялтангийн катетер	A tube designed to be inserted through an intercostal space and into the pleural cavity to establish a channel for the removal of fluid (pleural effusion, blood, chyle), air (pneumothorax), or pus (empyema) to permit full expansion of the lungs typically after surgery or chest trauma. It is typically used with a pleural drainage system that uses a low negative pressure through the drain lumen. Often referred to as a chest tube, it is typically made of silicone and is available in various designs, shapes, and sizes; it may include disposable devices dedicated to catheter introduction, however it does not include fluid collection bags/containers. This is a single-use device.	IIa

5288	37503	Tone audiometer	Дууны аудиометр	An electroacoustic device intended for use in a clinical setting to generate tones in the audible range to measure the hearing threshold of a patient by establishing the level at which the patient first becomes aware of the sounds. The device controls tone intensity and frequency either by a computer or manually, and displays/records the patient's responses, typically in the form of an audiogram. It may include a bone vibrator for direct inner-ear stimulation.	IIa
5289	37515	Peritoneal dialysis dialysate warmer	Хэвлийн диализийн диализатын халаагуур	A device used by a kidney patient who is on continuous ambulatory peritoneal dialysis (CAPD) and uses this device to heat the dialysate to within on degree of their body temperature prior to infusion. It is specially designed for ambulatory use and may utilize the electricity output of a car cigarette lighter. The solution (dialysate) is heated in its' original packaging. It may also serve as the carrying case and insulator for the dialysate. This is a reusable device.	IIa
5290	37542	Dental bridge, polymer	Шүдний гүүр, полимер	A custom-made, non-removable, artificial replacement for one or more missing teeth made entirely of polymer-based material, with or without fibre reinforcement, and comprised of an artifical tooth/teeth and crowns. It is fixed to abutment/adjacent teeth, tooth roots, or dental implants. Also referred to as a fixed partial prosthesis or a fixed partial denture.	IIa
5291	37543	Dental bridge, metal-polymer	Шүдний гүүр, металл-полимер	A custom-made, non-removable, artificial replacement for one or more missing teeth made of metal alloy with a tooth-coloured polymer material (veneer), and comprised of an artifical tooth/teeth and crowns. It is fixed to abutment/adjacent teeth, tooth roots, or dental implants. Also referred to as a fixed partial prosthesis or a fixed partial denture.	IIa

5292	37552	Fallopian tube catheterization kit	Фаллопийн хоолойг катетержуулах хэрэгсэл	A collection of sterile devices designed for the transuterine catheterization of the fallopian tubes to inject dye or contrast medium for the evaluation of tubal patency during salpingoscopy/fluoroscopy, ultrasonography, hysteroscopy, or laparoscopy. It typically consists of a dedicated catheter with a balloon, a syringe to inflate the balloon, a secondary catheter [e.g., a tungsten (W) tipped catheter], a guidewire, and connectors. Some types may also facilitate the entry of other devices/instruments for procedures within the fallopian tubes. This is a single-use device.	IIa
5293	37555	Tracheal pilot tube repair kit	Гуурсан хоолойн туршилтын хоолойн засварын хэрэгсэл	A collection of devices designed to restore the integrity of a damaged endotracheal (ET)/tracheostomy pilot tube when it is no longer maintaining the tracheal cuff pressure. Such a repair can deter the need to replace the entire endotracheal/tracheostomy tube because of a damaged pilot tube. This is a single-use device.	IIa
5294	37597	Heat/moisture exchanger insertable filter	Дулаан/чийгийн солилцуур оруулах боломжтой шүүлтүүр	A dedicated membrane that is inserted into a reusable heat & moisture exchanger (HME) to capture a patient's exhaled heat and moisture, so that they can be used to heat and humidify therapeutic gases inspired by the patient typically during anaesthesia or intensive care ventilation. This is a single-use device.	IIa
5295	37625	Bone absorptiometric x-ray system, single-energy	Ясны шингээлтийн рентген систем, нэг энерги	An assembly of devices designed for bone density measurements and other calculations based on data obtained using a single photon energy peak. Also referred to as a bone densitometer. It utilizes a x-ray tube or tubes as the photon source which are mechanically aligned and moves along with a photon detector assembly typically in a rectilinear pattern. The collimated x-ray beam is directed through an anatomical region of interest and the differential absorption patterns are detected. This information is used in calculations to estimate bone mineral density (osteoporosis), subcutaneous fat, fracture risk.	IIa

5296	37651	Extremity MRI system, permanent magnet	Хэмжээний MRI систем, байнгын соронз	A diagnostic magnetic resonance imaging (MRI) system employing permanent magnet technology specifically designed to image only the head and neck or limbs. Extremity imaging systems are typically closed bore designs with cylindrical or rectangular bore openings but can be "open" bore designs. They include MRI systems with conventional extremity imaging capabilities, conventional systems capable of performing spectroscopy or other real-time imaging procedures necessary for interventional and therapeutic MRI applications, and dedicated MR spectroscopy systems.	IIa
5297	37652	Full-body MRI system, permanent magnet	Бүтэн биеийн MRI систем, байнгын соронз	A general-purpose magnetic resonance imaging (MRI) system designed to scan any targeted area of the body. It includes a permanent magnet assembly and can be fixed-location, mobile, or transportable. In addition to producing conventional MR images, it can be designed or modified through additional software/hardware to perform MR spectroscopy and other real-time imaging procedures necessary for physiologically gated imaging procedures, or MRI mammography and other MRI guided interventional, therapeutic, or surgical applications. It is available in a variety of gantry configurations including closed bore, open bore, open-sided or other patient accessible designs.	IIa

5298	37653	Full-body MRI system, resistive magnet	Бүтэн биеийн MRI систем, эсэргүүцэлтэй соронзон	A diagnostic general-purpose magnetic resonance imaging (MRI) system designed to scan any targeted area of the body (full-body imaging). It includes a resistive magnet assembly and can be fixed-location, mobile, or transportable. In addition to producing conventional MR images, it can be modified through the addition of software/hardware modules to perform MR spectroscopy and various real-time imaging procedures necessary for physiologically gated imaging procedures, or MRI mammography and other MRI guided interventional, therapeutic, or surgical applications. It is available in various gantry configurations, e.g. Closed bore, open bore, open-sided or other patient accessible designs.	IIa
5299	37654	Full-body MRI system, superconducting magnet	Бүтэн биеийн MRI систем, хэт дамжуулагч соронзон	A diagnostic general-purpose magnetic resonance imaging (MRI) system designed to scan any targeted area of the body (full-body imaging). This system includes a superconducting magnet assembly and can be fixed-location, mobile, or transportable. Some systems can perform MR spectroscopy or various real-time imaging procedures for MRI guided interventional, therapeutic, or surgical applications. The system is available in a variety of system gantry configurations including closed bore, open bore, and open-sided or other kinds of patient accessible designs.	IIa
5300	37655	Extremity MRI system, resistive magnet	Хэмжээний MRI систем, эсэргүүцэлтэй соронзон	A diagnostic magnetic resonance imaging (MRI) system employing resistive magnet technology specifically designed to image only the head and neck or limbs. An extremity imaging system is typically closed bore design with cylindrical or rectangular bore openings but can be "open" bore design. This device includes MRI systems with conventional extremity capabilities, conventional systems capable of performing spectroscopy or other real-time imaging procedures necessary for interventional and therapeutic MRI applications, and dedicated magnetic resonance (MR) spectroscopy systems.	IIa

5301	37656	Extremity MRI system, superconducting magnet	Хэт туйлын MRI систем, хэт дамжуулагч соронз	A diagnostic magnetic resonance imaging (MRI) system employing superconducting magnet technology specifically designed to image only the head and neck or limbs. Extremity imaging systems are typically closed bore designs with cylindrical or rectangular bore openings but can be "open" bore designs. They include MRI systems with conventional extremity imaging capabilities, conventional systems capable of performing spectroscopy or other real-time imaging procedures necessary for interventional and therapeutic MRI applications, and dedicated MR spectroscopy systems.	IIa
5302	37657	Hand-held basic diagnostic x-ray system, analogue	Гар оношилгооны үндсэн рентген систем, аналог	An assembly of devices that comprise an analogue general-purpose hand-held diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It is typically an x-ray film based system that uses analogue or analogue-to-digital techniques for image capture and display and is typically battery-powered. It is designed to be easily carried from location to location by a single operator and is commonly used in sports medicine or military applications. It consists of a modular configuration that can be upgraded by the addition of hardware or software components and/or other devices. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIa
5303	37658	Hand-held basic diagnostic x-ray system, digital	Гар оношилгооны үндсэн рентген систем, дижитал	An assembly of devices that comprise a digital general-purpose hand-held diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It uses digital techniques for image capture and display and manipulation. It typically operates on battery power and is designed to be easily carried from location to location by a single operator. It is most commonly used in sports medicine or military applications. It consists of a modular configuration that can be upgraded by the addition of hardware or software components and/or accessories. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIa

5304	37659	Permanent-magnet breast MRI system	Байнгын соронзон хөхний MRI систем	A diagnostic magnetic resonance imaging (MRI) system designed exclusively for breast imaging applications. This system includes a permanent magnet assembly and can be fixed location, mobile or transportable. Gantry configurations include closed bore, open bore, and various other patient accessible designs. In addition to producing conventional MR images, it can be designed with capabilities for performing MR spectroscopy and various real-time imaging procedures necessary for MRI guided interventional, therapeutic and surgical applications. Breast MRI systems typically include a specialized patient support table designed to position the patient for optimal imaging of the breast.	IIa
5305	37660	Multi-directional tomography x-ray system	Олон чиглэлтэй томографийн рентген систем	An assembly of devices used to produce 2-dimensional cross-sectional (tomographic) images on x-ray film at a fixed angle and depth in relation to body position by coordinating a prescribed pattern of non-linear x-ray tube motion (elliptical, circular, clover shaped, spiral, as well as linear, depending on the system design) during exposure sequences. This approach causes the shadow of the selected plane to remain stationary on the moving film while the shadows in both directions of the plane have a relative displacement on the film and are either obliterated or blurred. This group of devices reflects old technology, now superseded by computed tomography (CT) systems.	IIa

5306	37661	Bone absorptiometric x-ray system, dual-energy	Ясны шингээлтийн рентген систем, хос энерги	An assembly of devices designed for bone density measurements and other calculations based on data obtained using a two distinct photon energy peak. Also referred to as a bone densitometer. It utilizes an x-ray tube or tubes as the photon source which are mechanically aligned and moves along with a photon detector assembly typically in a rectilinear pattern. The collimated beam is directed through an anatomical region of interest and the differential absorption patterns are detected. This information is used in calculations to estimate bone mineral density (osteoporosis), subcutaneous fat, fracture risk.	IIa
5307	37663	Hand-held general-purpose fluoroscopic x-ray system, analogue	Гарын ерөнхий зориулалтын флюроскопийн рентген систем, аналог	A diagnostic hand-held general-purpose fluoroscopic x-ray system that uses real-time analogue or analogue-to-digital techniques for image capture, display and manipulation that is specifically designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging capabilities. It is typically used in military, emergency, or sports medicine applications and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It consists of modular configurations that can be upgraded by the addition of hardware or software components.	IIa

5308	37664	Hand-held general-purpose fluoroscopic x-ray system, digital	Гарын ерөнхий зориулалтын флюроскопийн рентген систем, дижитал	A hand-held general-purpose diagnostic fluoroscopic x-ray system that uses real-time digital techniques for image capture, display and manipulation that is specifically designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging capabilities. It is typically used in military, emergency, or sports medicine applications and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It consists of modular configurations that can be upgraded by the addition of hardware or software components.	IIa
5309	37681	Cardiovascular MRI system, resistive magnet	Зүрх судасны MRI систем, эсэргүүцэлтэй соронзон	A magnetic resonance imaging (MRI) system designed exclusively for use in cardiac or vascular imaging applications. It includes a resistive magnet assembly and can be fixed location, mobile, or transportable. Gantry configurations include closed bore, open bore, and various other patient accessible designs. Some systems can perform MR spectroscopy or various real-time imaging procedures for MRI guided interventional, therapeutic, or surgical applications. A system typically includes an imaging table designed to position the patient for optimal imaging of the heart or vascular system during rest, exercise studies, and interventional procedures.	IIa
5310	37682	Cardiovascular MRI system, permanent magnet	Зүрх судасны MRI систем, байнгын соронз	A magnetic resonance imaging (MRI) system designed exclusively for use in cardiac or vascular imaging applications. It includes a permanent magnet assembly and can be fixed location, mobile, or transportable. Gantry configurations include closed bore, open bore, and various other patient accessible designs. Some systems can perform MR spectroscopy or various real-time imaging procedures for MRI guided interventional, therapeutic, or surgical applications. A system typically includes an imaging table designed to position the patient for optimal imaging of the heart or vascular system during rest, exercise studies, and interventional procedures.	IIa

5311	37704	Anaesthesia breathing circuit, single-use	Мэдээ алдуулах амьсгалын хүрээ, нэг удаагийн хэрэглээ	An assembly of devices designed to conduct medical gases from an anaesthesia unit/workstation to a patient artificial airway/anaesthesia mask (not included) during general anaesthesia. It includes breathing tubes and a Y-piece connector, typically with a ventilator/ventilation bag and appropriate connectors, and may include a carbon dioxide (CO2) absorber, a one-way directional valve, or adjustable pressure limiting (APL) valve. This is a single-use device.	IIa
5312	37705	Ventilator breathing circuit, reusable	Агааржуулагчийн амьсгалын хүрээ, дахин ашиглах боломжтой	An assembly of devices designed to conduct air or oxygen (O2) enriched gases and additional gases [e.g., nitrous oxide (N2O), halogenated gases] from a ventilator, or other air-delivery therapeutic device such as a mechanical insufflator/exsufflator, to a patient. It includes breathing tubes, a Y-piece connector, and provides connections for devices that humidify, deliver medication, and monitor gas concentration or pressure within the breathing circuit. This is a reusable device.	IIa
5313	37706	Ventilator breathing circuit, single-use	Агааржуулагчийн амьсгалын хүрээ, нэг удаагийн	An assembly of devices designed to conduct air or oxygen (O2) enriched gases and additional gases [e.g., nitrous oxide (N2O), halogenated gases] from a ventilator to a patient artificial airway/respiratory mask (not included). It includes breathing tubes, a Y-piece connector, and provides connections for devices that humidify, deliver medication, and monitor gas concentration or pressure within the breathing circuit; some types may include a carbon dioxide cuvette and/or an integrated heating wire powered by a connected humidifier intended to warm breathing gases as they enter the patient's airway. This is a single-use device.	IIa

5314	37709	Breathing circuit bag, reusable	Амьсгалын хүрээний уут, дахин ашиглах боломжтой	A non-sterile elastomeric reservoir sac intended to store breathing gas during the respiratory cycle. The breathing bag may be on the inspiratory or expiratory limb of a breathing circuit depending on the breathing circuit design. It may also function as a maximum pressure limiting device during spontaneous or manually assisted ventilation. It may be made of conductive or non-conductive material and is typically used in anaesthesia or ventilator breathing circuits. This is a reusable device.	IIa
5315	37716	Colostomy irrigation kit, single-use	Колостоми усалгааны иж бүрдэл, нэг удаагийн хэрэглээ	A collection of non-sterile devices designed to wash out the colon through a colostomy site. It typically includes a container of fluid, tubing with a cone-shaped tip, or a soft and flexible catheter with a retention shield. This is a single-use device.	IIa
5316	37807	Cardiac catheterization monitoring system	Зүрхний катетержуулалтын хяналтын систем	An assembly of devices designed to continuously obtain, amplify, and record various signals (cardiac electrical and pressure signals) generated during cardiac catheterization procedures. It typically consists of a computerized central workstation including a monitor and a graphic recorder, and a slave monitor including patient interface modules in the catheterization laboratory. The system is used for procedures such as left heart catheterization, right heart catheterization ventriculograms, coronary angiography, and pacemaker insertions; also used in procedures intended for the determination of most haemodynamic characteristics, evaluation of therapies, and planning of surgical approaches.	IIa

5317	37819	Mechanical expiratory valve, reusable	Амьсгалын механик хавхлага, дахин ашиглах боломжтой	A non-sterile mechanical device intended to be used in a respiratory or anaesthesia breathing circuit to maintain a degree of positive pressure in a patient's airway at the end of expiration. Typically constructed of plastic/metal it has a valve that is actuated by a spring to provide expiratory airway resistance, and an adjustable knob (usually not graduated) that is typically set between 0 and 20 cmH20 pressure, but may be fully closed when controlled/assisted ventilation is applied. It is normally used with anaesthesia breathing systems, pulmonary resuscitators, or ventilators and is commonly known as a pop-	IIa
5318	37855	Ophthalmic flash generator	Нүдний флаш генератор	A mains electricity (AC-powered), electronic, device that is used to generate an extremely strong flash or series of flashes of bright light that are used as a photostimulation in a parent device, e.g., an electroencephalograph (EEG), an electroretinograph (ERG), or a euthyscope. This device may be known as a flash booster.	IIa
5319	37861	Surgical plume evacuation system	Мэс заслын чавганы нүүлгэн шилжүүлэх систем	A mains electricity (AC-powered) assembly of devices intended to capture smoke generated during open surgical procedures involving tissue ablation (e.g., laser surgery, electrocautery, electrosurgical diathermy device). It captures the plume (smoke composed of carbonized cell fragments, water vapour, and hydrocarbons from vaporized tissue) near its origin before it becomes dispersed and causes surgical staff respiratory exposure. It consists of a capture tube or wand and four elements to evacuate smoke: user interface, filters, suction source, and exhaust. The system may be mobile (on wheels) and used during closed surgical procedures (e.g., endoscopy, laparoscopy) to clear the view.	IIa

5320	37891	Oesophageal ultrasound imaging transducer, reusable	Улаан хоолойн хэт авианы дүрс хувиргагч, дахин ашиглах боломжтой	An ultrasound imaging transducer assembly enclosed in a fluid-resistant, acoustically- and electrically-insulated housing, designed to be inserted and positioned in the oesophagus to obtain ultrasound images of the heart and/or to navigate devices requiring ultrasound guidance and placement (e.g., endoscopy equipment or needle biopsy equipment). Also known as an oesophageal endosonography probe or transducer, it is composed of either a single transducer element or an array of transducer elements, i.e., piezoelectric element(s), active element(s), or crystal(s), and associated	IIa
5321	38049	Tinnitus masking application software	Чихний шуугианыг далдлах программ хангамж	An individual software application program or group of programs, routines or algorithms designed for use in, or together with, other devices such as a computer, a digital hearing aid, or formatted into a compact disc read-only memory (CD-ROM) or an MP3 format to enable it to provide generated noise of sufficient intensity and bandwidth to mask (make less noticeable and provide temporary relief from) tinnitus (a ringing sound in the ear or internal head noises). The basic set of applications programs and routines can be upgraded to add new system capabilities. Application program packages are typically identified by a proprietary name and "version" or "upgrade" number.	IIa
5322	38068	Video capsule endoscopy system capsule	Видео капсул дурангийн системийн капсул	An electrically-powered, non-digestible capsule containing a video camera designed to pass through the gastrointestinal (GI) tract of a patient after being swallowed or endoscopically introduced, for the internal visualization and examination of the GI tract. It is intended to acquire video images of GI tract sections (e.g., oesophagus, small bowel and colon) and wirelessly transmit the images to a dedicated control unit/monitor (not included) via an external sensor array for examination and data recording. The capsule can be freely mobile or externally controlled by another device (not included); the capsule is excreted from the gut. This is a single-use device.	IIa

5323	38142	Patient freezing chamber	Өвчтөний хөлдөөх камер	A small, special room where the temperature is maintained below freezing for special medical treatment purposes, e.g., in modern physiotherapy.	IIa
5324	38143	General skin wound clip	Арьсны ерөнхий шархны хавчаар	A metallic surgical instrument intended to be used to approximate the edges of any skin wound (non-dedicated) to facilitate wound healing and/or for the placement of sutures. This is a single-use device.	IIa
5325	38314	Bone absorptiometric radionuclide system	Ясны шингээлтийн радионуклидын систем	An assembly of devices using two or more radioactive sources containing different radionuclides to produce one multiple-energy photon radiation beam. The beam is directed through an anatomical region and differential photon absorption information is recorded in the form of digital-based images and calculated parameters. This information is used to calculate bone mineral density, subcutaneous fat percentages and other kinds of quantitative assessments. This is commonly called a bone densitometer, and consists of a variety of configurations which include, e.g., radionuclide source, source transport/shielding, energy detector, radiation detector movement system, beam collimator.	IIa
5326	38315	Bone absorptiometric radionuclide system source	Ясны шингээлтийн радионуклидын системийн эх үүсвэр	A device that is a naturally occurring, accelerator or reactor produced radioactive isotope used as a source of radiation in a diagnostic bone absorptiometric radionuclide system (bone densitometry). It is designed to deliver multiple energy photon radiation beams directed at an anatomical region for the purpose of producing energy attenuation information in the form of images or calculated bone density parameters. Bone absorptiometer sources typically come in the physical forms of encapsulated or sealed sources. Commonly used radioisotopes include, e.g., Iodine-125 (I-125), Americium-241 (Am-241), Gadolinium-57 (Gd-57) and Cobalt-57 (Co-57).	IIa

5327	38324	Liquid scintillation counter	Шингэний цацаргалтын тоолуур	A precise radiation counting instrument designed to measure radioactivity emanating from a radioactive tracer on labelled samples. Primarily used to count beta particles, the radioactive sample is dissolved or suspended in an organic scintillation fluid where the emission of a beta particle causes the liquid to emit light which is detected and counted. The instrument typically consist of vials containing the radioactive samples and scintillation fluid, and electronics. It is typically applied as a detector for radioimmunoassay or immuno-radiometric assay for clinical use.	IIa
5328	38406	Vaginal brachytherapy system applicator, manual	Үтрээний брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in vaginal or transvaginal radiation therapy treatments. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, topical placement, endoscopically guided placement or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes vaginal applicators such as hollow needles or tubes, catheters, ovoids or tandems, used in manual brachytherapy applications.	IIa
5329	38407	Vaginal brachytherapy system applicator, remote-afterloading	Үтрээний брахитерапийн систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in vaginal or transvaginal radiation therapy treatments. It is designed for temporary implantation within the body and serves as a guide for computer-controlled placement and removal of single or multiple radioactive sources in the vaginal area. This group of devices includes a variety of applicators, e.g., hollow needles or tubes and catheters, and their associated components.	IIa

5330	38408	Cervical/intrauterine brachytherapy system applicator, manual	Умайн хүзүү/умайн доторх брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in cervical and/or intrauterine radiation therapy treatments. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided placement or diagnostic imaging system guided placement, of single or multiple radioactive sources at a treatment site. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes cervical/intrauterine applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5331	38409	Cervical/intrauterine brachytherapy system applicator, remote-afterloading	Умайн хүзүүний/умайн доторх брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in cervical or intrauterine radiation therapy treatments. It is designed for temporary implantation within the body and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources in the cervical or intrauterine anatomy. This device includes a wide variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa
5332	38410	Bronchial brachytherapy system applicator, manual	Гуурсан хоолойн брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed for temporary use in bronchial radiation therapy treatments. It is an individual or modular device designed to facilitate manual placement, e.g., endoscopically guided placement, or diagnostic imaging system guided positioning and placement, and removal of single or multiple radioactive sources at the treatment site(s). The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes bronchial applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa

5333	38411	Bronchial brachytherapy system applicator, remote-afterloading	Гуурсан хоолойн брахитерапийн системийн түрхэгч, алсаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in bronchial radiation therapy treatments. It is designed for temporary placement within the body and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources in the bronchial area. This device includes a variety of applicators, e.g., hollow needles, tubes or catheters, and their associated components.	IIa
5334	38412	Brain brachytherapy system applicator, manual	Тархины брахитерапийн системийн түрхэгч, гарын авлага	A device specifically designed to be used in radiation therapy treatments of the brain. It has individual or modular device configurations designed to facilitate manual placement, e.g., puncture, endoscopically guided placement or diagnostic imaging guided placement, and removal of single or multiple radioactive sources at a treatment site within the brain. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes brain applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5335	38413	Brain brachytherapy system applicator, remote-afterloading	Тархины брахитерапийн системийн түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the brain. It is designed for temporary implantation within the body and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources in the brain. This device includes a variety of applicators, e.g., hollow needles, tubes or catheters, and their associated components.	IIa

5336	38414	Nasopharynx brachytherapy system applicator, manual	Nasopharynx brachytherapy системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the nasopharynx region. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided placement or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the nasopharynx region. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes nasopharynx applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5337	38415	Nasopharynx brachytherapy system applicator, remote-afterloading	Nasopharynx brachytherapy системийн түрхэгч, алсаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the nasopharynx region. It is designed for temporary implantation within the body and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources in the nasopharynx region. This group of devices includes a variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa
5338	38416	Tongue brachytherapy system applicator, manual	Хэлний брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the tongue. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, topical placement or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site on or within the tongue or in the tissue surrounding the tongue. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes tongue applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa

5339	38417	Tongue brachytherapy system applicator, remote-afterloading	Хэлний брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the tongue or oral cavity. It is typically designed for temporary implantation within the tongue and/or the tissue surrounding the tongue and serves as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa
5340	38418	Neck brachytherapy system applicator, manual	Хүзүүний брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the neck region. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, topical placement or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within neck tissue. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes neck applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5341	38419	Neck brachytherapy system applicator, remote-afterloading	Хүзүүний брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the neck. It is designed for temporary topical placement on or implantation within the neck tissue and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa

5342	38420	Oesophagus brachytherapy system applicator, manual	Улаан хоолойн брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the oesophagus. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the oesophagus. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes oesophageal applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5343	38421	Oesophagus brachytherapy system applicator, remote-afterloading	Улаан хоолойн бракитерапийн системийн түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the oesophagus. It is designed for temporary implantation within the oesophageal region and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of oesophageal applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa
5344	38422	Bile duct brachytherapy system applicator, manual	Цөсний сувгийн брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the bile duct. It is an individual device designed to facilitate manual placement, e.g., puncture, endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the bile duct. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes bile duct applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa

5345	38423	Bile duct brachytherapy system applicator, remote-afterloading	Цөсний сувгийн брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the bile duct. It is designed for temporary insertion into the bile duct and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This device includes, e.g., hollow needles, tubes or catheters, and their associated components.	IIa
5346	38424	Pancreas brachytherapy system applicator, manual	Нойр булчирхайн брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the pancreas. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the pancreas. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes pancreas applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5347	38425	Pancreas brachytherapy system applicator, remote-afterloading	Нойр булчирхайн брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the pancreas. It is designed for temporary implantation within the pancreas and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa

5348	38426	Prostate brachytherapy system applicator, manual	Түрүү булчирхайн брахи эмчилгээний систем түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the prostate. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided or diagnostic imaging system guided placement, and/or removal of single or multiple radioactive sources at a treatment site within the prostate. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes prostate applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5349	38427	Prostate brachytherapy system applicator, remote-afterloading	Түрүү булчирхайн брахи эмчилгээний систем түрхэгч, алсаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the prostate. It is designed for temporary implantation within the prostate and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa
5350	38428	Bladder brachytherapy system applicator, manual	Давсагны брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the bladder. It is an individual device designed to facilitate manual placement, e.g., endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the bladder. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes bladder applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa

5351	38429	Bladder brachytherapy system applicator, remote-afterloading	Давсагны брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the bladder. It is designed for temporary implantation within the bladder and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This device includes a variety of applicators, e.g., hollow needles, tubes or catheters, and their associated components.	IIa
5352	38430	Anorectal brachytherapy system applicator, manual	Анореталь брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy applicator specifically designed to be used in radiation therapy treatments of the rectum and/or anus. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within the rectum and/or anus. The device may be a fixed design or designed to accommodate individual patient source placement configurations and includes anorectal applicators such as hollow needles, tubes or catheters, used in manual brachytherapy applications.	IIa
5353	38431	Anorectal brachytherapy system applicator, remote-afterloading	Анореталь брахитерапийн систем түрхэгч, алсын зайнаас ачаалах	A remote afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the rectum and/or anus. It is designed for temporary placement within the rectum and/or anus and serve as a guide for computer-controlled placement and removal of single or multiple radioactive sources. This group of devices includes a variety of anorectal applicators, e.g., hollow needles, tubes, or catheters, and their associated components.	IIa

5354	38432	Intravascular brachytherapy system applicator, manual	Судасны брахитерапийн системийн түрхэгч, гарын авлага	A manual brachytherapy intravascular applicator specifically designed to be used in radiation treatments of the lumens of blood vessels. It is most typically used to deliver treatments intended to reduce plaque formation or to prevent stenosis or re-stenosis of the blood vessel after surgical procedures. It is an individual or modular device configuration designed to facilitate manual placement, e.g., endoscopically guided or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site within blood vessels. The device may be a fixed design or designed to accommodate individual patient source placement configurations.	IIa
5355	38433	Intravascular brachytherapy system applicator, remote-afterloading	Судас доторх брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A remote-afterloading brachytherapy applicator specifically designed for use in intravascular radiation therapy treatments of the lumens of blood vessels. This treatment is typically used to reduce plaque formation or prevent stenosis of the vessel after surgical procedures. The device is designed for temporary implantation within the blood vessels and serves as a guide for computer-controlled intravascular placement and removal of single or multiple radioactive sources. This group of devices includes a variety of applicators, e.g., hollow needles, tubes or catheters, and their associated components.	IIa
5356	38434	Eye brachytherapy system applicator, manual	Нүдний брахи эмчилгээний систем түрхэгч, гарын авлага	A device in the form of a template that is shielded on one side and containing grooved positions for manual brachytherapy sources on the other used for the temporary topical application of brachytherapy sources to the surface of the eye.	IIa

5357	38435	General-purpose brachytherapy system applicator, manual	Ерөнхий зориулалтын брахи эмчилгээний систем түрхэгч, гарын авлага	A general-purpose brachytherapy applicator designed to facilitate delivery of radiation therapy treatments that are not specific to a particular anatomical region. It is an individual or modular device designed to facilitate manual placement, e.g., puncture, topical placement, endoscopically guided placement or diagnostic imaging system guided placement, and removal of single or multiple radioactive sources at a treatment site. The device may be a fixed design or designed to facilitate the creation of variable physical configurations or individual patient source placement configurations and includes general-purpose applicators such as hollow needles, tubes or catheters, ovoids or tandems.	IIa
5358	38436	General-purpose brachytherapy system applicator, remote-afterloading	Ерөнхий зориулалтын брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A general-purpose remote-afterloading brachytherapy applicator intended to be used to facilitate the delivery of radiation therapy treatments in a range of anatomical regions (e.g., liver, kidneys, lungs, gastrointestinal tract). It is designed for temporary introduction into the body and functions as a guide for computer-controlled placement and removal of single or multiple radioactive sources in a treatment area. This device includes a variety of applicators (e.g., hollow needle, tube, catheter), and their associated components [e.g., introducer sheath, guidewire].	IIa
5359	38456	Laparoscopic multi-instrument access port, single-use	Дурангийн олон хэрэгсэлд нэвтрэх порт, нэг удаагийн	A sterile sleeve assembly made of plastic materials intended to retract a small abdominal incision to allow multiple laparoscopic instruments to pass into the abdomen at the same time during a laparoscopic procedure. It will typically have an introducer that creates the abdominal incision (but is not used in cases where the surgeon chooses to make the incision), and a valve component that maintains the pneumoperitoneum established for the surgical procedure. It allows for the introduction of multiple instruments and/or a camera port, and removal of larger specimens during minimally-invasive laparoscopic surgery. This is a single-use device.	IIa

5360	38469	Hot therapy pack heating unit	Халуун эмчилгээний багц халаалтын нэгж	A mains electricity (AC-powered) device used to heat the contents of a reusable hot therapy pack to temperatures appropriate to apply heat therapy to the human body. This device, also known as a hydrocollator, typically consists of a stainless steel container, shelves, trays, or drawers that facilitate the heating and handling of the many hot therapy packs, and heating elements that heat the packs to a specified temperature so that the they are conditioned for reuse when needed. It is typically used in accident and emergency (A&E) rooms, rehabilitation facilities and for physiotherapy treatments.	IIa
5361	38496	Radiopaque woven surgical sponge	Мэс заслын нэхмэлийн цацраг идэвхт хөвөн	A non-medicated device made from woven gauze (e.g., cotton, cellulose) primarily intended to be used inside the body, on a surgical incision or applied to internal organs or structures to control bleeding, absorb fluid, or protect organs or structures from abrasion, drying, or contamination during a procedure; also referred to as a laparotomy sponge, it may also be used for prepping the patient. It contains an x-ray detectable marker [e.g., a thread or strand(s)] to help detect gossypiboma (sponge left inside patient). This is a single-use device.	IIa
5362	38501	Insulin syringe/needle, basic	Инсулин тариур/зүү, үндсэн	A sterile device consisting of a calibrated barrel (cylinder) with plunger intended to be used to administer an injection of insulin to a patient subcutaneously; a non-retractable needle is included, either attached or detached (usually capped for user protection). The syringe is typically made of plastic and silicone materials and will have plunger anti-sticking properties allowing smooth plunger movement. It can be used by healthcare personnel or patient, and will allow for the aspiration of the pharmaceutical from its container for direct administration to the patient or via an intravenous (IV) port, heparin lock, or saline lock. This is a single-use device.	IIa

5363	38518	Surgical/emergency suction cannula, illuminating, single-use	Мэс заслын/яаралтай сорох суваг, гэрэлтүүлэгч, нэг удаагийн	An atraumatic, invasive, single-lumen, rigid/semi-rigid tube designed as a conduit for aspiration of body cavities, wounds, or surgical sites to facilitate observation and/or clear an airway obstruction, whilst providing illumination of the site. It is not dedicated to dental, intrauterine, or liposuction procedures, and is neither an ophthalmic, nor an intravascular device; it is not designed for surgical irrigation. It has a built-in light or fibreoptic bundle used to illuminate the operative site. Often referred to a as suction tube or tip, it may incorporate a handle with side valve(s)/hole(s), and may be provided with a stylet, sheath, and/or tubing. This is a single-use device.	IIa
5364	38523	Surgical penis clamp, single-use	Мэс заслын шодой хавчаар, нэг удаагийн	A sterile, hand-held manual surgical instrument designed to grasp the penis for manipulation during surgery (e.g., circumcision). It is typically a clip-like device e.g., with self-retaining levers. The penis is placed into this clamp that closes around or on the organ. This is a single-use device.	IIa
5365	38559	Insufflation gas conditioning tubing set	Агааржуулалтын хийн агааржуулалтын хоолойн иж бүрдэл	A collection of sterile and non-sterile devices intended to be used with an insufflation gas conditioning system and/or a laparoscopic gas distention system, or other gas source, to condition the insufflation gas stream [typically carbon dioxide (CO_2)] by heating and humidifying it before introduction into the peritoneal cavity or a wound during laparoscopic or open surgery. It is available in various configurations but typically includes a connection tube for connection to the gas source, an electrically-heated tube for transport of the conditioned gas to the operative site, a humidification chamber, a gas filter, and connectors. This is a single-use device.	IIa

5366	38561	Nasogastric/orogastric tube	Nasogastric / orgastric tube	A sterile, hollow cylinder that can be introduced into the gastrointestinal (GI) tract both nasally and orally for feeding and/or aspiration. It is made of plastic or rubber and is available in a variety of designs and lengths. Some types are a simple rubber tube with a glass window; other types can be radiopaque to assist accurate placement, have multiple flow-through eyes, and dual connectors (e.g., one for suction and the other for irrigation/feeding). Other uses can be to decompress the stomach, withdraw specimens for diagnostic analysis, administer medications, and for irrigation of the stomach to treat upper gastrointestinal (UGI) bleeding. This is a single-use device.	IIa
5367	38569	Blood transfusion set, non-exchange	Цус сэлбэх багц, солилцоогүй	An intravascular administration set intended to be used to administer blood from a container to a patient's vascular system through a needle or catheter inserted into a vein. The device typically includes a needle or catheter, tubing, a flow regulator, a drip chamber, an infusion line filter, a stopcock, connectors between parts of the set, a side tube with a cap to serve as an injection site, and a hollow spike to penetrate and connect the tubing to an intravenous (IV) bag or other infusion fluid container. This is a single-use device.	IIa
5368	38608	Dental wrought alloy	Шүдний хайлш	A wrought alloy (metal) intended to be used in dentistry to make individually formed retentive elements, clasps for removable dentures, posts for orthodontic appliances, and other dental devices. It is marketed in a variety of forms, dimensions and materials. After application, this device cannot be reused.	IIa
5369	38645	Dental veneer, professional	Шүдний өнгөлгөө, мэргэжлийн	A custom-made dental restoration made of ceramic or polymer-based material (resin) intended to be used in aesthetic dentistry to correct the facial surface of a tooth; it is intended to be applied to the teeth by a dental professional for long-term use, typically via an adhesive. This is a single-use device.	IIa

5370	38647	Ceramic dental inlay	Шүдний керамик инлай	A custom-made dental restoration made of ceramic material that is bonded within the center of a tooth (intracoronal) typically to serve as a well-fitting, long-lasting alternative to dental fillings for tooth decay or similar damage. It is fabricated indirectly in a dental lab, sometimes by computer-aided design/computer-aided manufacturing (CAD/CAM) techniques, before being fitted and bonded to the damaged tooth. This is a single-use device.	IIa
5371	38648	Gold dental inlay	Шүдний алтан шигтгээ	A custom-made dental restoration made of gold-based alloy that is bonded within the center of a tooth (intracoronal) typically to serve as a well-fitting, long-lasting alternative to dental fillings for tooth decay or similar damage. It is fabricated indirectly in a dental lab, sometimes by computer-aided design/computer-aided manufacturing (CAD/CAM) techniques, before being fitted and bonded to the damaged tooth. This is a single-use device.	IIa
5372	38649	Resin dental inlay	Шүдний давирхай шигтгээ	A custom-made dental restoration made of resin-based material that is bonded within the center of a tooth (intracoronal) typically to serve as a well-fitting, long-lasting alternative to dental fillings for tooth decay or similar damage. It is fabricated indirectly in a dental lab, sometimes by computer-aided design/computer-aided manufacturing (CAD/CAM) techniques, before being fitted and bonded to the damaged tooth. This is a single-use device.	IIa
5373	38678	Robotic surgical arm system	Робот мэс заслын гар систем	An assembly of electromechanical devices designed to be used during computer assisted surgery (CAS) as a functional extension of the surgeon for precise bone and soft-tissue modelling or soft-tissue removal (e.g., during a total knee joint arthroplasty (TKA)). It is computer-based and typically consists of an operator’s console and robotic arms for instrument manipulation. The input to a computer is usually by means of an existing computed tomography (CT) or magnetic resonance imaging (MRI) scan. It can also be used as a training aid for surgeons from a variety of specialities.	IIa

5374	38689	Flexible video ureteroscope, reusable	Уян хатан видео шээсний дуран, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the ureter (the upper urinary tract that connects the kidney to the bladder). It is inserted through the external urethral orifice and bladder during ureteroscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This device is commonly used for biopsies, endoscopic lithotripsy, treatment of upper urinary tract malignancies, incising strictures, and repairing ureteropelvic junction obstructions. This is a reusable device.	IIa
5375	38691	Flexible video pharyngoscope	Уян видео фарингоскоп	An endoscope intended for observation, diagnosis, and treatment of the pharynx. It is inserted through the nose and its inserted portiion is flexible to conform to body cavities. The image transmission is through a video system with an image sensor chip at the distal end of the endoscope. This is a reusable device.	IIa
5376	38703	Flexible video ureterorenoscope, reusable	Уян хатан видео ureterorenoscope, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the ureter and renal pelvis. It is inserted through the external urethral orifice or a surgically-created percutaneous route during a urological procedure. Anatomical images are transmitted to the user by a video system with an electronic image sensor at the distal end of the endoscope and the images showing on a monitor. This device is commonly used for the removal or crushing of stones, and evaluation of pyelitis and renal failure. This is a reusable device.	IIa

5377	38729	Telemetric electrocardiographic ambulatory recorder	Телеметрийн электрокардиографийн амбулаторийн бичигч	An electrically-powered, noninvasive device designed to be worn by a patient during daily activities for 24-hour recording of the electrocardiographic signals of the heart, for the diagnosis of cardiac disorders (e.g., arrhythmias). The recorded measurements can be wirelessly transmitted and analysed, typically to a remote computer with a dedicated software located at a medical facility. Otherwise known as a Holter monitor, the device typically incorporates display and controls, and may include surface electrodes, lead wires and accessories intended for attachment/removal (e.g., wipes, adhesive remover).	IIa
5378	38734	Orthodontic metal band	Ортодонт металл хамтлаг	A thin metal ring designed to be fitted around the contours of a tooth and cemented into place to support an orthodontic attachment (e.g., bracket, tube), brazed or soldered onto the ring, intended to be secured to the tooth. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa
5379	38736	Electroencephalographic monitoring system	Электроэнцефалографийн хяналтын систем	An electrically-powered device assembly designed to continuously measure the electrical signals produced by a patient's brain and display/record them as an electroencephalogram (EEG) to evaluate brain function, typically in an examination room or intensive care unit (ICU) [bedside]; it may also monitor additional physiological parameters [e.g., electromyogram (EMG), respiration wave forms, blood pressure, haemoglobin oxygen saturation (SpO2)] in relation to EEG. It typically includes a control unit, electrodes, and components (e.g., amplifier, cables, probes). It may include data interpretation and/or telemetry features.	IIa
5380	38741	Orthodontic lock	Ортодонт цоож	A dental device intended to be placed on an orthodontic archwire or rod via screwing, crimping, or soldering, for orthodontic spring activation and/or to prevent the archwire from sliding within the brackets. It may be designed in various forms (e.g., Gurin lock, stop). It does not incorporate a pin or hook. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	IIa

5381	38749	Surgical/emergency suction cannula, non-illuminating, reusable	Мэс заслын/ яаралтай сорох суваг, гэрэлтүүлдэггүй, дахин ашиглах боломжтой	An atraumatic, invasive, hand-operated, single-lumen, rigid/semi-rigid tube designed as a conduit for aspiration of body cavities, wounds, or surgical sites to facilitate observation and/or to clear an airway obstruction. It is not dedicated to dental, intrauterine, or liposuction procedures, and is neither an ophthalmic nor an intravascular device; it is not designed for	IIa
5382	38755	Dental anaesthesia syringe cartridge	Шүдний мэдээ алдуулалтын тариурын хайрцаг	A plastic or glass container prefilled with a single dose of anaesthetic medication intended to be inserted into a dental anaesthesia syringe and injected into oral tissues for a dental procedure. This is a single-use device.	IIa
5383	38762	Dental gallium alloy	Шүдний галлийн хайлш	A dental restorative material used for filling teeth that consists of a liquid gallium-tin-indium alloy, which when mixed with an appropriate alloy powder, forms a paste that hardens in the mouth of a patient. This is a single-use device.	IIa
5384	38764	Light-cured dental restorative composite resin	Гэрэлд хатдаг шүдийг нөхөн сэргээх нийлмэл давирхай	A dental restorative material that consists of a blend of filler particles (e.g., glass, ceramic, zirconia, silica) mixed with a synthetic, photo-polymerizable, organic resin matrix [e.g., bisphenol A-glycidyl methacrylate (BISGMA), urethane dimethacrylate (UDMA)] intended to fill dental cavities or restore damaged hard dental tissue. It is typically a one-part paste, contained within an application syringe or capsule, that requires a light source of specific wavelengths (e.g., 460 to 480 nm) to initiate resin polymerization/hardening post application; it is typically available in tooth-coloured shades. After application, this device cannot be reused.	IIa
5385	38779	Dental soldering alloy	Шүдний гагнуурын хайлш	A mixture of metals in the form of a thin rod used to solder cast dental restorations. It is a fusible alloy used to join less fusible materials (e.g., other metals, metal wires) through the application of high-temperature heat to the metal components to be joined; the soldering metal melts around the joint to create the fusion. The soldering process operates at lower termperatures than brazing. After application, this device cannot be reused.	IIa

5386	38780	Dental brazing alloy	Шүдний гагнах хайлш	A mixture of metals, usually in the form of a thin rod, used to braze cast dental restorations. It is a fusible alloy used to join less fusible materials (e.g., other metals, metal wires) through the application of high-temperature heat to the metal components to be joined; the brazing metal melts around the joint to create the fusion. The brazing process operates at higher temperatures than soldering. After application, this device cannot be reused.	IIa
5387	38781	Dental prosthesis veneer resin	Шүдний протезийн өнгөлгөөний давирхай	A dental resin composite material intended to be used for veneering a restorative dental prosthesis (e.g., crown, bridge, fixed or removable denture); some types may be used as stains to apply colour to the dental appliance. After application, this material cannot be reused.	IIa
5388	39335	Aerosol tent, paediatric	Шүршигч тэнт, хүүхдийн	A flexible enclosure designed to cover the bed of a infant or small child to provide an aerosolized environment of breathing gases/vapours, e.g., a suspension of medicated liquid or solid particles, for medication therapy. It is typically used for the treatment of breathing disorders (e.g., asthma). It typically consists of a metal frame covered with transparent plastic, and wide bore tubing connected to the aerosol source and is used for the treatment of paediatric patients permitting them movement without restriction. This is a reusable device.	IIa
5389	39662	Euthyscope, battery-powered	Эвтископ, батерейгаар ажилладаг	A battery-powered, modified ophthalmoscope (a perforated mirror device used to inspect the interior of the eye) that projects a bright light encompassing an arc of approximately 30 degrees on the fundus of the eye. The centre of the light bundle is blocked by a black disk covering the fovea (the central depression of the macular retina where only cones are present and blood vessels are lacking). It is used in the treatment of amblyopia otherwise known as lazy eye (dimness of vision without apparent disease of the eye). The batteries may be of the rechargeable type, and are housed within the handle of the instrument.	IIa

5390	40249	Tracheostomy suction kit	Трахеостомийн сорох хэрэгсэл	A collection of sterile devices and supplies intended to suction secretions from the trachea and bronchi through a tracheostomy tube. It typically includes a tracheal suctioning catheter with an appropriate tip (e.g., a whistle tip for adults, a smaller one for children) and a thumb operated valve, a pair of gloves, and a container for the aspirates. It is typically intended to be used with a suction machine. Some types include an inner cannula replacement for the tracheostomy tube. This is a single-use device.	IIa
5391	40516	Multi-purpose warming cabinet, stationary	Олон зориулалттай халаах кабинет, суурин	A mains electricity (AC-powered) device designed to warm various items and products prior to use, e.g., bags of irrigation or intravenous (IV) solutions, blankets or clothing to cover or put onto a patient, or clothing for the operating room (OR) personnel to adorn. It typically consists of a heat insulated enclosure with a sealing door, shelves, heating element(s), a thermostat and operating controls. This is a freestanding cabinet (tabletop or floor design) that is designed to be stationary and used in one location. It may also be used in a laboratory.	IIa
5392	40520	Carbon dioxide laboratory incubator	Нүүрстөрөгчийн давхар ислийн лабораторийн инкубатор	A mains electricity (AC-powered) incubator in which a fixed temperature and carbon dioxide (CO_2) controlled conditions can be achieved and maintained. It is used for the incubation of biological and chemical materials. The percentage mixture of carbon dioxide and other gases, typically oxygen, can be different depending on the use and device type.	IIa
5393	40548	Surgical glove, latex	Мэс заслын бээлий, латекс	A device made of latex, that acts as a protective barrier when worn on the hands of a surgeon. This is a single-use device.	IIa

5394	40601	Peripheral vascular catheter	Захын судасны катетер	A sterile, thin, flexible tube intended to be inserted into the peripheral vasculature of a patient to enable short-term (< 30 days) intravascular access; it is not intended to be advanced to the central vasculature. It typically includes dedicated accessories to facilitate catheter introduction/placement and function (e.g., connectors, injection ports, stylet and/or wings for fixation). It may be used for blood sampling, monitoring of blood pressure, to administer fluids, medication and/or for the injection of contrast media. This is a single-use device.	IIa
5395	40642	SPECT system, rotating detector head	SPECT систем, эргэдэг детекторын толгой	An assembly of devices comprising a diagnostic, stationary, single photon emission computed tomography (SPECT) system that is a three-dimensional (3-D) tomographic imaging gamma camera-based system used to detect, record, quantify and analyse radionuclide emissions (primarily gamma rays) produced during the decay of radiopharmaceuticals or other radiation emitting materials injected into, or ingested by, a patient. The gantry is designed to rotate a collimated detector head or heads around the body in a pre-programmed motion sequence. The gantry position is typically fixed and the table moveable. The imaging capabilities of most SPECT systems include both static and dynamic imaging.	IIa
5396	40643	SPECT system, annular detector array	SPECT систем, цагираг хэлбэрийн детекторын массив	An assembly of devices comprising a diagnostic, stationary, single photon emission computed tomography (SPECT) system designed exclusively for use in tomographic imaging applications. It detects, records, quantifies and analyses radionuclide emissions produced during the decay of radiopharmaceuticals or other radiation emitting materials injected into, or ingested by, a patient. The gantry position is fixed and the imaging table/chair moves/rotates under computer or manual control. Its imaging capabilities include static and dynamic imaging applications and three-dimensional (3-D) digital image reconstruction/display at any angle including axial, coronal and sagittal planes.	IIa

5397	40644	PET system	PET систем	An assembly of devices comprising a diagnostic, positron emission tomography (PET) imaging system used to detect, record, quantify and analyse 511 kilo-electronvolt (keV) photon emission patterns resulting from annihilation reactions produced during the decay of positron emitting radiopharmaceuticals. It produces three-dimensional (3-D) tomographic digital cross-sectional physiological images representing distribution patterns of positron emitting radiopharmaceuticals ingested by, or injected into the patient. It typically uses lead collimators and specialized software for image reconstruction allowing mapping of metabolic patterns and rates associated with targeted physiological processes.	IIa
5398	40645	Rectilinear-scanning nuclear medicine system	Шулуун шугаман сканнердсан цөмийн анагаах ухааны систем	An assembly of diagnostic devices comprising a rectilinear scanning system that detects, records and produces images of the distribution of gamma emissions from injected or ingested radiopharmaceuticals or other radioactive materials. The gantry is designed to allow a highly collimated scintillation detector (or detectors) to be moved across targeted areas of the body in predetermined narrow parallel increments. The detector heads move only in two dimensions with respect to the body. The image of the aggregate radiopharmaceutical distribution pattern detected is sequentially recorded and displayed on a cathode-ray tube display, photographic film or x-ray film.	IIa
5399	40646	Hand-held-detector nuclear medicine system	Гар мэдрэгчтэй цөмийн анагаах ухааны систем	An assembly of diagnostic devices comprising a hand-held, non-imaging system designed primarily to detect, record, quantify and analyse various radioactive emissions (gamma, alpha, beta) of injected or ingested radiopharmaceuticals, radiation emitting devices, or other materials. It is frequently used in the monitoring and detection of deep vein thrombosis (DVT), in surgical procedures requiring radionuclide localization and in some radiolabeled monoclonal antibody applications. It often has special software or accessory features that distinguish them from similar devices used for radiation protection purposes.	IIa

5400	40647	Whole-body-counter nuclear medicine system	Цөмийн анагаах ухааны бүхэл бүтэн систем	An assembly of diagnostic devices that comprise a non-imaging, nuclear medicine system designed to detect, record, quantify, and analyse various radioactive emissions (gamma, alpha, beta) from an isolated human body. This system requires a special isolation room or chamber that provides adequate shielding from all outside sources of radiation. It is used primarily in personnel monitoring and other radiation protection applications.	IIa
5401	40648	Thyroid-uptake nuclear medicine system	Бамбай булчирхайг шингээх цөмийн анагаах ухааны систем	An assembly of diagnostic devices that comprise a non-imaging nuclear medicine system designed primarily for radioactive iodine related thyroid uptake measurement and analysis applications. It can typically be upgraded with the addition of software and hardware for use in various quality assurance (QA) or radioimmunoassay laboratory applications, e.g., wipe-test assessment or Schilling tests. It typically includes a multichannel analyser, computer, scintillation detector, detector support equipment, an operator's console, video display, well counter detector, collimator, shielding, and application software.	IIa
5402	40667	PET system radiation scatter reduction device	PET системийн цацрагийн тархалтыг бууруулах төхөөрөмж	A device in the form of a lead ring or an array of lead protrusions that is placed around or in front of the scintillation detector(s) used in a positron emission tomography (PET) system or a dedicated "gamma-PET" imaging system detector array. It is used in conjunction with the electronic collimation of PET detectors specifically to reduce radiation scatter effects associated with coincidence imaging of 511 kilo-electronvolt (keV) photons. This device is intended to increase the efficiency of the detector arrays or heads used in coincidence PET imaging applications.	IIa

5403	40744	Radiation prep-pad warmer	Цацрагийн бэлтгэлийн дэвсгэр халаагч	A mains electricity (AC-powered) device designed to heat factory-sealed prep pads (skin cleansing pads typically containing alcohol or povidone iodine), with a pre-set maximum temperature (e.g., 55ºC) for the purpose of warming the pads prior to use on a paediatric patient, notably to reduce the number of venous access attempts (needle sticks). The device is typically of tabletop design and includes a heat exchanger that uses electromagnetic radiation (e.g., radio-frequency, microwaves) to transmit heat to the packaged pads that have been placed in separate compartments within the device; it also includes temperature controls and/or alarms.	IIa
5404	40759	Blood flow measurement ultrasound system	Цусны урсгалыг хэмжих хэт авиан систем	An assembly of devices that does not produce 2 or 3-D anatomical images, used exclusively to evaluate various blood flow related parameters in the heart, arteries, and veins. This system is used to output either audible information and/or produce visual displays of Doppler shift frequencies as a function of time (a spectral display) allowing diagnosis of normal versus abnormal blood flow patterns. This generic device group includes both continuous-wave and pulsed-wave Dopplers. Due to the Doppler-frequency shift detection requirements, the pulses emitted by this system are typically longer than those emitted by imaging systems.	IIa
5405	40761	General-purpose ultrasound imaging system	Ерөнхий зориулалтын хэт авиан дүрслэлийн систем	A stationary or mobile (e.g., on wheels) assembly of devices designed to collect, display, and analyse ultrasound images during a variety of extracorporeal and/or intracorporeal (endosonography or endoscopic) ultrasound imaging procedures (e.g., cardiac, OB/GYN, endoscopy, breast, prostate, vascular, and intra-surgical imaging). It consists of an electrically-powered (mains or battery) data processing unit with integrated software and a monitor. It is typically presented as a mobile assembly which may support a wide variety of transducers and related application software packages; an ultrasound transducer(s) may be included.	IIa

5406	40764	Breast ultrasound imaging system	Хөхний хэт авиан шинжилгээний систем	An assembly of electrically-powered devices designed for extracorporeal and/or intracorporeal (endosonography or endoscopic) ultrasound imaging procedures involving the breast. It typically includes special imaging tables used to optimize the ability to give reproducible images of the breast. It typically includes software packages that support a variety of static or real-time breast specific imaging used primarily for oncology. It will generate ultrasound pulses, direct them to the target area, detect the ultrasound echoes, and process the resulting information to produce and display static or dynamic two- or three-dimensional (3-D) images.	IIa
5407	40767	Extracorporeal ultrasound imaging transducer, mounted	Биеийн гаднах хэт авианы дүрс хувиргагч, суурилуулсан	An ultrasound imaging transducer assembly that is either located within the housing of an ultrasound based scanner system, e.g., a breast scanning system, Doppler flow system, ultrasound based bone absorptiometry or densitometry system; or is mounted on a floor, wall or ceiling suspension allowing the operator to position the transducer assembly outside of the patient's body. Included is a variety of single or multiple element transducer assembly configurations that convert electric voltages into an ultrasound beam. It steers, focuses and detects the ultrasound beam and resulting echoes either mechanically or electronically. This is a reusable device.	IIa
5408	40768	Extracorporeal ultrasound imaging transducer, hand-held	Биеийн гаднах хэт авиан дүрсний хувиргагч, гар ажиллагаатай	A hand-held noninvasive component of an ultrasound imaging assembly designed to be moved over the intact surface of a patient's body, typically with a coupling gel, during a variety of extracorporeal ultrasound imaging procedures (non-dedicated). Sometimes referred to as an ultrasound probe, it converts electric voltages into ultrasound which it transmits, detects resulting echoes, and transmits a proportional signal/data to an ultrasound system controller for image processing and display. This is a reusable device.	IIa

5409	40770	Surgical ultrasound imaging transducer	Мэс заслын хэт авианы дүрс хувиргагч	A hand-held ultrasound imaging transducer assembly designed to be positioned within a surgical site for localized intraoperative imaging applications. It is sometimes referred to as a surgical probe or fingertip probe. It steers, focuses, and detects the ultrasound beam and resulting echoes either mechanically or electronically. This group of devices includes ultrasound imaging transducer assemblies used with A-mode, B-mode, M-mode, Doppler, colour Doppler (CD), and duplex (combination imaging, Doppler and/or colour flow) scanning capabilities. This is a reusable device.	IIa
5410	40771	Rectal/vaginal ultrasound imaging transducer	Шулуун гэдэсний / үтрээний хэт авианы дүрс хувиргагч	An invasive component of an ultrasound imaging assembly designed to be positioned within the vagina and/or rectum, either manually or under endoscopic guidance, for ultrasound imaging from within the vagina/rectum. Sometimes referred to as an ultrasound probe, it converts electric voltages into ultrasound which it transmits, detects resulting echoes, and transmits a proportional signal/data to another device for display; it does not include an integrated display. It may be intended for wired or wireless data transfer and may be intended for use with a dedicated ultrasound system or with an off-the-shelf device (e.g., smartphone) with dedicated software installed. This is a reusable device.	IIa
5411	40772	Rectal ultrasound imaging system transducer	Шулуун гэдэсний хэт авиан дүрслэлийн системийн хувиргагч	An ultrasound imaging transducer assembly specifically designed to be positioned within the rectum either manually or under endoscopic guidance. Included is a variety of single or multiple element transducer assembly configurations that convert electric voltages into an ultrasound beam. It steers, focuses, and detects the ultrasound beam and resulting echoes either mechanically or electronically. Also known as a rectal, transrectal, or prostate probe, it may incorporate a biopsy needle guidance channel as part of the transducer casing or housing assembly design. This is a reusable device.	IIa

5412	40774	Physical therapy ultrasound system applicator	Физик эмчилгээний хэт авианы системийн түрхэгч	A hand-held component of a physical therapy ultrasound system that includes a transducer designed to convert electric voltages into ultrasound energy [e.g., frequencies greater than 20 kilohertz (kHz)] and directs this energy into body tissues. The localized thermal and nonthermal effects generated by the ultrasonic energy is associated with increased blood flow in the treated area and is intended to accelerate tissue repair. The device is typically used with ultrasound coupling gels to ensure an adequate interface with the patient. This is a reusable device.	IIa
5413	40775	Extracorporeal lithotripsy system ultrasound transducer	Биеийн гаднах литотрипсийн системийн хэт авианы хувиргагч	An ultrasound transducer that is either located within the housing of an extracorporeal shock wave lithotripsy (ESWL) system or is mounted on a floor, wall or ceiling suspension allowing the operator to position the transducer outside of the patient's body. It is used to convert electric voltages into ultrasound energy [frequencies greater than 20 kilohertz (kHz)] sufficient enough to create a lithotripsy effect (breaking up of a stone or calculus). It is typically composed of either a single transducer element or an array of transducer elements (also called piezoelectric elements, active elements or crystals) enclosed in a housing. This is a reusable device.	IIa
5414	40777	Ultrasound hyperthermia system transducer, extracorporeal	Хэт авианы гипертерми системийн хувиргагч, экстракорпораль	An ultrasound (US) transducer assembly that is a component of an ultrasound hyperthermia system used to induce systemic or local body heating of sufficient magnitude to create a targeted therapeutic effect. It is mounted within the gantry or housing of the hyperthermia system or mounted on a floor, wall, or ceiling suspension that allows the operator to position the transducer assembly external to the patient during treatment. It is typically composed of a single transducer element or an array of transducer elements, i.e., piezoelectric or active element(s), or crystal(s) and associated damping, backing, and matching layer materials. This is a reusable device.	IIa

5415	40778	Ultrasound hyperthermia system transducer, intracorporeal, reusable	Хэт авианы гипертерми системийн хувиргагч, бие доторх, дахин ашиглах боломжтой	An intracorporeal ultrasound (US) transducer assembly that is a component of an ultrasound hyperthermia system. It includes a variety of catheter-enclosed transducer designs intended to be introduced into the body either through vascular access, surgically, or endoscopically in order to deliver localized US-induced hyperthermia treatment. It is composed of a single transducer element or an array of transducer elements, i.e., piezoelectric or active element(s), or crystal(s) and associated damping, backing, and matching layer materials. This is a reusable device.	IIa
5416	40779	Bone absorptiometric ultrasound system	Ясны шингээлтийн хэт авианы систем	An assembly of devices used to produce bone density measurements and other calculations based on data obtained from transmitted and reflected ultrasound (US) waves. Also called a bone densitometer, it has an integrated ultrasound transducer to deliver an ultrasound beam to an anatomical region of interest. Information obtained from detection and analysis of resulting echoes is used in calculations to estimate bone mineral density or subcutaneous fat, or to make other quantitative assessments (e.g., fracture risk). It typically incorporates an ultrasound transducer, detection electronics, a control panel, a computer, software programs, a video display, and a patient positioning system (PPS).	IIa
5417	40786	Ultrasound imaging transducer positioning unit	Хэт авианы дүрс хувиргагчийг байрлуулах төхөөрөмж	A unit used to position an ultrasound system imaging transducer that is inserted into the body through an endoscope. This device is an accessory to a diagnostic ultrasound imaging system and it transmits electrical signals that, after processing, will display the position of a the transducer on a monitor. This unit will assist the endoscopist in the placement of the working transducer (the probe) and to allow monitoring of the movement after placement.	IIa

5418	40872	MRI system application software	MRI системийн хэрэглээний программ хангамж	An application software program intended to add specific image processing and/or analysis capabilities to a magnetic resonance imaging (MRI) system configuration; it is not dedicated to radiotherapy treatment planning. A basic set of applications programs and routines are included with such computer-controlled imaging systems and they can be upgraded to correct programming errors or to add new system capabilities. Some applications software programs or program packages must be combined with specific hardware or firmware configurations in order to function as intended. Applications program packages are typically identified by a proprietary name and "version" or "upgrade" number.	IIa
5419	40912	X-ray system exposure timer	Рентген туяаны системийн өртөлтийн таймер	A device that is an automatic or manual x-ray exposure timer is a component of a diagnostic x-ray system used to measure, record, and terminate x-ray generation at a time consistent with a desired exposure or exposure sequence. It is typically electronically controlled and integrated directly into the diagnostic x-ray imaging or x-ray fluoroscopy system. This group of devices includes a variety of timer designs, e.g., ionization chamber based, photoelectric detector based (phototimers), timers specifically for use in fluoroscopy applications, and specific electronic or electromechanical controlled x-ray timer designs. It may be a freestanding device, also used in quality assurance.	IIa
5420	40960	Dental x-ray system collimator	Шүдний рентген системийн коллиматор	A beam restriction device used in dental x-ray systems to determine the dimension and direction of the x-ray beam, limiting the effects of scattered radiation. It is used to control the size and shape of the x-ray beam reaching the patient's oral cavity and the film or image receptor. It includes all kinds of x-ray beam restriction devices used in diagnostic dental x-ray systems, such as cones and slit collimators. The device is typically designed for use with a specific dental x-ray system.	IIa

5421	40961	Bone-conduction tinnitus masker	Яс дамжуулагч чих шуугианыг дарагч	A battery-powered acoustic device designed to provide ultrasonic broadband noise and/or sweep-frequency stimuli noise of sufficient intensity and bandwidth to mask tinnitus (a ringing sound in the ear or internal head noises) by neutralizing a patient's perception of the symptoms for temporary relief. It consists of an out-of-ear miniature generator/amplifier with a piezoelectric element which conducts the noise to the inner ear across the skin and via the mastoid bone; it may be contained in a case worn behind-the-ear (BTE), attached to a headband, or hand-held by the user against the skin over the mastoid bone.	IIa
5422	41038	Orthotic helmet	Ортотик дуулга	A protective covering designed to be worn on the head (i.e., to encompass the brow, crown, back and sides of the head) to protect the cranium from non-penetrating external forces for the prevention/reduction of head injuries (e.g., mild traumatic brain injury). This is a reusable device.	IIa
5423	41126	Bronchoscopy tube	Бронхоскопийн хоолой	A hollow cylinder composed of plastic, rubber, or other material that is inserted orally into the trachea to maintain airway patency and/or to deliver anaesthetic inhalation agents or other medical gases, and secure ventilation during diagnostic or therapeutic bronchoscopy using a flexible bronchoscope. It has a cuff at the distal end, similar to that of a cuffed endotracheal (ET) tube and may be packaged with a connector that attaches to a breathing circuit. It has a large enough bore to accommodate a flexible bronchoscope; this can enhance the safety of the procedure. This is a single-use device.	IIa
5424	41134	Video capsule endoscopy system antenna	Видео капсул дурангийн системийн антен	An electrically-powered, noninvasive component of a video capsule endoscopy system designed to be attached to/worn by a patient to receive the image data signals from an ingested video capsule and transmit them to the system monitor. It typically has the form of a metallic plate(s) or adhesive pad(s) with connection cables. This is a reusable device.	IIa

5425	41188	Speech audiometer	Ярианы аудиометр	An electroacoustic device designed to measure the hearing threshold of a patient by presenting words of increasing or decreasing intensity through headphones, which the patient is required to recognize and repeat, to establish the hearing capacity of the patient and to determine if a hearing deficit exists.	IIa
5426	41215	Ear simulator, artificial ear	Чихний симулятор, хиймэл чих	A device for the calibration of earphones that incorporate a calibrated microphone for the measurement of sound pressure and an acoustic coupler. The overall acoustic impedance of the simulator approximates that of the average human ear in a given frequency band.	IIa
5427	41229	Cardiac mapping catheter, oesophageal, reprocessed	Зүрхний зураглал катетер, улаан хоолой, дахин боловсруулсан	A sterile, thin, flexible tube containing a sensor(s) that is introduced via the transpharyngeal or transnasal approach into the oesophagus to provide anatomic mapping data (tagging points for location and orientation) within the oesophagus during an electrophysiology (EP) ablation procedure. The device is used to provide reference data on the relative anatomic position of the oesophagus with respect to the heart and will relay three-dimensional (3-D) position information of the oesophagus lumen to an external cardiac mapping system as the catheter is slowly withdrawn. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIa
5428	41237	Earphone, supra-aural	Чихэвч, сонсголын дээд	An electroacoustic device intended to be worn on the ear to transmit sound to the ear from an external device for improved hearing or private listening. It is designed so that its cushion portion sits on top of the pinna.	IIa
5429	41238	Earmould impression block insertion tool	Чихний хэвийг блок оруулах хэрэгсэл	A hand-held, electrically-powered device intended to assist placement of a block (tamp) which limits the passage of earmould impression material when taking an ear canal impression. It consists of a disposable transparent probe illuminated with a reusable light source, to which a magnifying lens may be attached.	IIa

5430	41240	Earphone, circumaural	Чихэвч, тойрог	An electroacoustic device intended to be worn around the ear to transmit sound to the ear from an external device for improved hearing or private listening. It has a cavity large enough to cover the external ear.	IIa
5431	41246	Hearing aid induction loop system	Сонсголын аппаратын индукцийн гогцооны систем	A fixed assembly of devices intended to transfer sound from an audio source [e.g., microphone, television (TV)] into an audio frequency magnetic field which can be picked up by a hearing aid with an induction coil (i.e., bypassing the hearing aids microphone) when it is switched to the "T" or ‘’MT’’ position, in order for the hearing aid user to hear (e.g., announcements, presentations) more clearly. It typically consists of an amplifier connected to the audio source and a wire loop which creates the magnetic field and typically runs around the desired area (e.g., room, amphitheatre, table).	IIa
5432	41264	Surgical power tool system control unit, line-powered	Мэс заслын цахилгаан хэрэгслийн системийн удирдлагын хэсэг, шугамаар ажилладаг	A mains electricity (AC-powered) component of a line-powered surgical/dental power tool system intended to step down the electrical power from the mains to supply the handpiece/motor (not included), and may also be intended to regulate some of the functions of the connected power tools (e.g., speed and torque); it may be intended for single or multiple clinical applications (i.e., dedicated or non-dedicated). This device may have integrated irrigation functionality and may be operated through hand and/or foot controls.	IIa
5433	41267	Surgical power tool system control unit, pneumatic	Мэс заслын цахилгаан хэрэгслийн системийн удирдлагын хэсэг, пневматик	A pneumatically-powered (gas-powered) component of a surgical power tool system intended to regulate the gas pressure supplied to the pneumatic handpiece/motor (not included) and may also be intended to regulate some of the functions of the connected power tools (e.g., speed and torque); it may be intended for single or multiple clinical applications (i.e., dedicated or non-dedicated). This device may have integrated irrigation functionality and may be operated through hand and/or foot controls.	IIa

5434	41330	Ophthalmic cystotome, single-use	Нүдний цистотом, нэг удаагийн хэрэглээ	A sterile, hand-held manual ophthalmic surgical instrument designed for opening the capsule of the lens of the eye. It is typically made of high-grade stainless steel and is essentially a poniard-shaped cutter used for piercing the capsule. The cutter has a mechanism so that it can be retracted into a protective tubular support when repositioning of the instrument during the procedure. This is a single-use device.	IIa
5435	41499	Arthroscopic shaver system blade, single-use	Артроскопийн сахлын системийн ир, нэг удаагийн	A cutting device designed for use in a powered arthroscopic shaver system handpiece (not included) for bone and soft-tissue resection during arthroscopic surgery on a joint (e.g., a knee, shoulder, or ankle). It is locked into the handpiece, and typically consists of a small outer tube with a hub and a rotating inner tube with a connector that performs a rotational or reciprocating (back and forth) motion. It is typically made of high-grade stainless steel. This is a single-use device.	IIa
5436	41563	Eyebrow/eyelash prosthesis	Хөмсөг/сормуусны протез	A device intended to be used as an external artificial substitute for the eyebrows and/or eyelashes.	IIa
5437	41605	Ureteral transilluminator, reusable	Шээсний замын трансиллюминатор, дахин ашиглах боломжтой	A flexible tube containing a fibreoptic bundle that emits light throughout its length, intended to be inserted into the ureter for (trans)illumination to facilitate visualization of the ureter. It is used to aid dissection during laparoscopic and/or open abdominal surgery; sometimes it is referred to as illuminating catheter. This is a reusable device.	IIa
5438	41651	Electrocardiographic long-term ambulatory recording analyser application software	Электрокардиографийн урт хугацааны амбулаторийн бичлэгийн анализаторын хэрэглээний программ хангамж	A dedicated application data program designed for use in, or together with, an electrocardiographic long-term ambulatory recording analyser so that this may function according to its intended purpose. This software program can be permanently installed, or exchanged as an upgrade. It may also be produced for installation in an off-the-shelf desktop or laptop computer.	IIa

5439	41781	Surgical power tool system handpiece, wire-driving, rechargeable battery-powered	Мэс заслын цахилгаан хэрэгслийн системийн гар, утастай, цэнэглэдэг батерейгаар ажилладаг	A battery-powered, drill-like, machine intended to be used for the sole purpose of driving in orthopaedic bone wires, e.g., Steinmann pins, Kirschner wires or K-Wires (thin needle-like pins of different widths that are pointed for self-drilling), into bone for the restoration of bones. This device will typically have a special gripping collet for rapid repositioning of the hold on the wire as it is fed into the bone. A rechargeable battery pack is attached to this device to provide the low-voltage electrical power. This is a reusable device.	IIa
5440	41918	Cardiotomy reservoir vacuum relief valve	Кардиотоми савны вакуум тусламжийн хавхлага	A sterile, mechanical regulator used with a cardiopulmonary bypass blood reservoir (cardiotomy reservoir) to limit the level of vacuum within the reservoir. It remains closed until the level of vacuum reaches a pre-set threshold, whereupon it opens and vents the vacuum. This is a single-use device.	IIa
5441	42274	Radiation therapy beam block material	Цацрагийн эмчилгээний цацрагийн блок материал	A material designed for creating a custom-made beam block used to size, shape, or control depth of penetration of a beam of radiation delivered to a patient during radiation therapy treatments, to limit or eliminate exposure to non-target body areas. Beam block material is either: 1) a highly attenuating material, e.g., lead, cerrobend (Wood’s metal), or Rose's metal (aperture type); or 2) a material such as acrylic or wax that can be used to control the beam energy delivery depth. It can be cut or moulded into specific configurations to shape/define/attenuate the radiation beam, and is typically remelted for reuse after the patient treatment is considered finished.	IIa
5442	42281	Peripheral vascular ultrasound catheter, non-steerable	Захын судасны хэт авианы катетер, удирдах боломжгүй	A sterile, non-steerable, flexible tube with an ultrasonic imaging transducer at its distal tip that is used for intraluminal visualization and examination of the peripheral vasculature only and is typically for patients intended for a transluminal interventional procedure. It is introduced percutaneously and is typically over-the-wire (OTW) guided. It is connected to a compatible ultrasound system for transmission and display of the images. This is a single-use device.	IIa

5443	42282	Stationary specimen x-ray system, digital	Хөдөлгөөнгүй сорьцын рентген систем, дижитал	A stationary specimen x-ray system designed for permanent fixture in one location to generate and control x-ray beams and to record the absorption patterns of x-rays passing through tissue samples (e.g., stereotactic biopsy cores taken during mammographic procedures) or amputated body parts. The data is either from analogue imaging and digitized afterwards or by digital imaging.	IIa
5444	42285	Peripheral vascular ultrasound catheter, steerable	Захын судасны хэт авианы катетер, удирдах боломжтой	A sterile, steerable, flexible tube with an ultrasonic imaging transducer at its distal tip that is used for intraluminal visualization and examination of the peripheral vasculature only and is typically for patients intended for a transluminal interventional procedure. It is introduced percutaneously with the distal tip actuated by the operator using controls at the proximal end to accommodate manoeuvring in the peripheral vasculature. It is connected to a compatible ultrasound system for transmission and display of the images. This is a single-use device.	IIa
5445	42420	Oesophageal-obturating/tracheal airway, single-use	Улаан хоолой бөглөрөх/гуурсан хоолойн амьсгалын зам, нэг удаагийн	A two-lumen, semiflexible, single-use tube inserted blindly through the mouth into the oesophagus or trachea to maintain airway patency while obturating the oesophagus, typically during emergencies to facilitate breathing/resuscitation. The oesophageal-obturating lumen has a blocked distal end and perforations at the pharyngeal level. A large oropharyngeal balloon seals mouth and nose; a distal cuff seals either the oesophagus or the trachea. Ventilation starts via the oesophageal tube, if the tube is in the oesophagus air enters the pharynx via the perforations; when the tube is in the trachea the ventilation is performed directly through the tracheal tube. This is a single-use device.	IIa

5446	42425	Metal/carbide ENT bur, reprocessed	Металл/карбид чих хамар хоолойн шар, дахин боловсруулсан	A small rotary shaft of hard metal (e.g., steel) or carbide, with fluting or cutting planes of various shapes at the working end, designed for incising or removing cartilage and/or bone from the ear, nose, or throat during an ear/nose/throat (ENT) procedure. It is usually power-driven by a rotary handpiece or other powered device. It is typically used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
5447	42457	Single-administration urethral catheterization kit, reusable	Нэг удаагийн шээсний сувгийг катетержуулах иж бүрдэл, дахин ашиглах боломжтой	A collection of devices that includes a sterile urological catheter typically made of silicone, a carrying case, a cap, and other related accessories intended for one-time, self-urinary catheterization. The catheter is inserted through the urethra by the patient to provide urine drainage. After use, the catheter is placed back into the carrying case for safe keeping and must be sterilized according to the provided sterilization protocol (instructions) before being reused. This is a reusable device.	IIa
5448	42476	Breathing circuit catheter mount, single-use	Амьсгалын хэлхээний катетер суурилуулах, нэг удаагийн	A device designed to connect a respiratory circuit (e.g., an anaesthesia breathing circuit or ventilator breathing circuit) or a resuscitator to an endotracheal (ET) tube, to enable increased mobility at the patient end of the circuit or connections. It most commonly consists of a 22 mm female adaptor at the proximal end that is attached to a short length of corrugated, flexible tube (e.g., 150 mm long), and a straight or angled 15 mm male connector at the distal end; it may include an integrated suction port or be provided with a microbial medical gas filter. This is a single-use device.	IIa
5449	42522	Eyeball prosthesis, custom-made	Нүдний алимны протез, захиалгаар хийнэ	An artificial substitute for the eyeball, resembling the anterior portion of the eye, made to individual specifications. It is usually constructed of glass or plastic and is intended to be inserted into a patient/user's eye socket anterior to an orbital implant, or the eviscerated eyeball, for cosmetic purposes. This device is not intended to be implanted.	IIa

5450	42572	Ophthalmic irrigation/infusion/aspiration cannula, illuminating, single-use	Нүдний усалгаа/дусаах/сорох суваг, гэрэлтүүлэгч, нэг удаагийн	A hand-held ophthalmic surgical instrument with a thin, rigid insertion portion designed to infuse, irrigate and/or aspirate the interior of the eye during a surgical procedure (e.g., cataract extraction), and simultaneously conduct, typically via a fibreoptic bundle, a field of cold light to illuminate the surgical site. It is connected to a light source (through a light cable) and to appropriate devices that provide the infusion/aspiration function. It is typically made of high-grade stainless steel and fibreoptic materials. This is a single-use device.	IIa
5451	42587	Radionuclide system collimator	Радионуклидын системийн коллиматор	A beam-limiting device made of neutron absorbing material, e.g., cadmium (Cd) that is mounted directly on the outlet aperture of the fission reactor and identifies the useful treatment aperture for treatment with thermal neutrons.	IIa
5452	42727	Positive-pressure intravenous line needleless valve-connector	Эерэг даралттай судсаар тарих зүүгүй хавхлага-холбогч	A small, stand-alone, Luer-activated needleless plastic valve intended to mate two related intravenous (IV) line devices [e.g., hypodermic syringe and catheter port or tubing from an IV administration set] and hold them in a secured, sealed, locked position until disconnection, at which point positive pressure from the device causes a small volume of fluid to be expelled from the catheter/tubing. It is intended to eliminate the use of needles for IV administration of medications. This is a single-use device.	IIa
5453	42743	Negative-pressure intravenous line needleless valve-connector	Сөрөг даралттай судсаар тарих зүүгүй хавхлага-холбогч	A small, stand-alone, Luer-activated needleless plastic valve intended to mate two related intravenous (IV) line devices [e.g., hypodermic syringe and catheter port or tubing from an IV administration set] and hold them in a secured, sealed, locked position until disconnection, at which point negative pressure from the device causes a small volume of retrograde fluid flow into the catheter/tubing. It is intended to eliminate the use of needles for IV administration of medications. This is a single-use device.	IIa

5454	42750	Neutral-pressure intravenous line needleless valve-connector	Төвийг сахисан даралттай судсаар тарих зүүгүй хавхлага-холбогч	A small, stand-alone, Luer-activated needleless plastic valve intended to mate two related intravenous (IV) line devices [e.g., hypodermic syringe and catheter port or tubing from an IV administration set] and hold them in a secured, sealed, locked position until disconnection, at which point there is minimal fluid flow into or out of the catheter/tubing. It is intended to eliminate the use of needles for IV administration of medications. This is a single-use device.	IIa
5455	42895	Robotic surgical navigation system application software	Робот мэс заслын навигацийн системийн хэрэглээний программ хангамж	An individual application software program or group of programs, routines and/or algorithms designed for use in association with a robotic surgical navigation system used in computer assisted surgery (CAS) so that this can function according to its intended purpose. This program can be permanently installed or exchanged as an upgrade. It may also be produced for installation in an off-the-shelf desktop or laptop computer.	IIa
5456	42909	Ventilator IMV supplemental circuit, reusable	Агааржуулагч IMV нэмэлт хүрээ, дахин ашиглах боломжтой	A device designed to provide mandatory breathes to ventilator patients to supplement the spontaneous respiratory rate. It is typically constructed of durable materials and consists of tubing and one-way valves. It will be used as an accessory on older ventilators without built-in intermittent mandatory ventilation (IMV) functions. This is a reusable device.	IIa
5457	42912	Hysterosonography/endometrial biopsy catheter	Гистерозонографи/эндометрийн биопсийн катетер	A flexible tube designed for combined saline infusion sonohysterography (SIS) and biopsy functionality providing the physician with increased visibility offered by a sonohysterography during a diagnostic image ultrasound and the ability to take a biopsy of endometrial tissue during the same gynaecological procedure. It is introduced via the vagina and allows the uterus to be filled with saline which is retained with an acorn-tipped stopper placed against the cervical opening; a biopsy can be taken if indicated. This is a single-use device.	IIa

5458	42949	Needleless medication/vaccine injector, pneumatic	Зүүгүй эм/вакцины тарилга, пневматик	A hand-held, pneumatically-powered device designed to inject medication (especially a local anaesthetic) or vaccine transcutaneously into the human body. It is needleless and may have various configurations according to its application. It will typically be a pistol-shaped plunger driven instrument with single or multi-pointed holed barrels through which the medication/vaccine is driven under high pressure by compressed gas. The delivered medication/vaccine will typically be supplied in prefilled containers that are loaded into the device. This is not a hypodermic syringe. This is a reusable device.	IIa
5459	43018	Air-conduction tinnitus masker, out-of-ear	Агаар дамжуулагч чихний шуугианыг дарагч, чихний гадуур	A battery-powered digital acoustic device designed to provide noise of sufficient intensity and bandwidth to mask tinnitus (a ringing sound in the ear or internal head noises) by neutralizing a patient's perception of the symptoms for temporary relief. It typically consists of a miniature generator/microphone or speaker, which may be contained in a case worn behind-the-ear (BTE) or worn on the body (e.g., on a neck pendant, clipped to clothing), that delivers white noise to the eardrum through air; its digital design allows for the introduction of new tinnitus-masking software programs.	IIa
5460	43053	Rigid video laparoscope	Хатуу видео лапароскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the organs/structures of the abdominal/retroperitoneal cavity. It is inserted through a dedicated incision made in the abdominal wall during laparoscopy. Images are transmitted by a camera/video system to a monitor for viewing by the user. This is a reusable device.	IIa

5461	43114	Posturography system platform	Постурографийн системийн платформ	A device that is a component of a balance/mobility management system equipped with built-in sensors, transducer and/or force plates that register movement of the patient when he/she adjusts his/her centre of gravity (COG) alignment according to the doctor's instructions, or, the platform provokes destabilizing perturbations and the output of these movements are measured and recorded to the system computer. It is used, e.g., for motor control test (MCT), posture studies, balance, mobility training, and/or sense of equilibrium studies. The patient will stand on this device.	IIa
5462	43265	Robotic surgical system application software	Робот мэс заслын системийн хэрэглээний программ хангамж	An individual application software program or group of programs, routines and/or algorithms designed for use in association with a robotic surgical system typically used in computer assisted surgery (CAS) during orthopaedic procedures so that this can function according to its intended purpose. This program can be permanently installed or exchanged as an upgrade. It may also be produced for installation in an off-the-shelf desktop or laptop computer.	IIa
5463	43324	Fluid transfer set, general-purpose	Шингэн шилжүүлэх багц, ерөнхий зориулалттай	A collection of devices and supplies designed to transfer several types of medical fluids (e.g., drugs, vaccines, blood, and solutions) between a first container(s) [e.g., a vial(s)] and a second container [e.g., an intravenous (IV) bag]; it is not dedicated to a particular type of fluid or clinical procedure. It is available in a variety of configurations and typically includes tubes, connectors, spike(s), syringes, and caps. This is a single-use device.	IIa
5464	43415	Urological irrigation system	Урологийн усалгааны систем	An assembly of devices intended for the infusion of sterile fluids (e.g., saline, water) into the ureter and upper urinary tract to irrigate these passageways in a controlled manner during a diagnostic and/or a therapeutic urological procedure; including a urinary tract endoscopic procedure. It typically consists of a mains electricity (AC-powered) pump, tubing, connectors and other items that enable the pressure, temperature, or flow of water to be controlled.	IIa

5465	43435	Y-piece breathing circuit connector, single-use	Y хэсэг амьсгалын хэлхээний холбогч, нэг удаагийн	A connecting device shaped in the form of a "Y" and designed to connect compatible components [e.g., the tubing and face mask or an endotracheal (ET) tube] to create a breathing circuit. In order to function this device will be part of a breathing circuit and will typically connect the inspiratory and expiratory sides at the point of entry into the patient. It will typically be used during anaesthesia and/or ventilation and is typically made of light plastic. This is a single-use device.	IIa
5466	43666	Line-powered dental drilling system	Шугаман дээр ажилладаг шүдний өрөмдлөгийн систем	An assembly of devices designed to bore and excavate bones, teeth, and tough tissues during a dental surgical procedure. It typically consists of a motorized drill handpiece and/or motor, a control unit, and a variety of attachments used to hold the drilling/excavating endpieces (e.g., drill bits, burs, polishing disks). This system is electrically-powered from the mains (e.g., 230 or 115 volt) and supplies the handpiece/motor with low-voltage electricity (e.g., 24 volt) through a control unit. This is a reusable device.	IIa
5467	43946	Rigid optical laryngopharyngoscope	Хатуу оптик ларингофарингоскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the larynx/oropharynx. It is inserted into the body through the mouth during ear/nose/throat (ENT) procedures. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle, or the device may allow for direct visualization through the lumen of its shaft/working channel. This device may be equipped with a channel or mechanism allowing the introduction of air to prevent misting of the distal end. This is a reusable device.	IIa
5468	43954	Y-piece breathing circuit connector, reusable	Y хэсэг амьсгалын хэлхээний холбогч, дахин ашиглах боломжтой	A connecting device shaped in the form of a "Y" and designed to connect compatible components [e.g., the tubing and face mask or an endotracheal (ET) tube] to create a breathing circuit. In order to function this device will be part of a breathing circuit and will typically connect the inspiratory and expiratory sides at the point of entry into the patient. It will typically be used during anaesthesia and/or ventilation and is made of durable materials, e.g., plastic and/or metal. This is a reusable device.	IIa

5469	43978	Embolization implant inserter	Эмболизацийн суулгац суулгагч	A long, thin, manual surgical device intended to advance an embolization implant (e.g. an embolic coil) through the length of an appropriate catheter so that the implant is ready for discharge (implantation) when the catheter has been surgically positioned at the target site in an artery or vein. The inserter, also known as a pusher, is removed prior to discharge of the implant. This is a single-use device.	IIa
5470	44071	Amniocentesis kit, non-medicated	Амниоцентезийн иж бүрдэл, эмийн бус	A collection of sterile devices designed to aspirate and contain a sample of amniotic fluid from the amniotic sac, via a transabdominal approach, for analysis. Components typically include a needle with stylet and syringe, specimen containers/medium, drapes, and dressings. The device is typically used at 16-18 weeks gestation for antepartum diagnosis of certain congenital abnormalities (e.g., Down syndrome, spina bifida), or anytime after 24-weeks gestation to assess foetal maturity. This is a single-use device.	IIa
5471	44074	Infusion pump programmer	Судсаар хийх насосны программист	An external device that enables a user to interrogate, test, analyse and program, noninvasively, one or more of the operating parameters (the programs) of an implanted infusion pump. It is able to read stored parameters in the infusion pump, providing historic and/or current information regarding performance, and may be used to upload new software into the infusion pump. It is a dedicated device, typically with an electronic wand with a communication antenna, connected to a port of a personal computer (PC) using dedicated software to drive the electronics of the wand to communicate with the implanted infusion pump.	IIa
5472	44082	Clinical laboratory information system application software	Клиникийн лабораторийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with clinical laboratory services and facilities. It is typically supplied for installation into a dedicated information system used in the clinical laboratory or existing mainframe or decentralized computers/networks.	IIa

5473	44083	Emergency/ambulatory healthcare software	Яаралтай тусламжийн / амбулаторийн эрүүл мэндийн програм хангамж	A software program intended to support the administrative and clinical activities associated with the provision and utilization of emergency medical services (EMS), emergency social services (ESS), and/or public safety facilities. It typically allows for communication of patient physiological data to facilitate activities such as on-line consultation between EMS and clinician, and hospital preparation for emergency patients.	IIa
5474	44087	Radiology information system application software	Радиологийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in a radiology information system (RIS) to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within/between facilites, to support the administrative and clinical activities associated with the provision and utilization of radiology services and facilities. It may be used for patient scheduling and work-list generation for specific radiological systems; it may be used in conjunction with PACS and include various technology imaging modalities. It is installed into a dedicated radiology information system or existing mainframe or decentralized computers/network.	IIa
5475	44092	Laparoscopic surgical procedure kit, medicated	Дурангийн мэс заслын иж бүрдэл, эмийн	A collection of various sterile surgical and endoscopic instruments (e.g., trocars, sleeves, cannulae), dressings, pharmaceuticals, and the necessary materials used to perform a laparoscopic surgical procedure. This is a single-use device.	IIa
5476	44096	Laparoscopic surgical procedure kit, non-medicated, single-use	Дурангийн мэс заслын иж бүрдэл, эмийн бус, нэг удаагийн хэрэглээ	A collection of various sterile laparoscopic and surgical instruments (e.g., access cannulae, forceps), dressings, and additional materials intended to be used specifically to perform a laparoscopic surgical procedure. It does not contain pharmaceuticals. It may be referred to as a procedure tray. This is a single-use device.	IIa

5477	44099	Hospital-administration information system application software	Эмнэлэг-захиргааны мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in a hospital information system (HIS) to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of hospital services and facilities (e.g., human resources, staffing, scheduling). It is typically supplied for installation into a dedicated hospital administration information system or existing mainframe or decentralized computers/networks.	IIa
5478	44103	Pathology information system application software	Эмгэг судлалын мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of pathology services and facilities. It is typically supplied for installation into a dedicated pathology information system or existing mainframe or decentralized computers/networks.	IIa
5479	44105	Physician-practice-management information system application software	Эмч-практик-удирдлагын мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data to support the administrative and clinical activities associated with the provision and utilization of physician services and office facilities. It may be used to process insurance claims and prepare patient statements; schedule the physician's time and make patient appointments; and store and retrieve patient records. It is typically installed into a dedicated information system for physician practice management, or existing mainframe or decentralized computers/networks.	IIa

5480	44106	Patient health record information system application software	Өвчтөний эрүүл мэндийн бүртгэлийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the electronic registration and documentation of patient clinical data. It typically enables healthcare providers to review and update patient medical records, place orders (e.g., for medications, procedures, tests), and sometimes view multimedia data from many specialties. It is supplied for installation into a dedicated information system for patient health records, or existing mainframe or decentralized computers/networks.	IIa
5481	44107	Intravascular catheter endoluminal brush	Судасны катетер эндолумын сойз	A device designed to collect a biofilm or fibrin sample, suitable for microbiological analysis, from the inner lumen surface of an indwelling central venous catheter (CVC). It typically consists of a series of nylon bristles, for harvesting the sample, attached at the distal end of a flexible, stainless steel wire (shaft) that terminates proximally in a rigid handle. It is available in various lengths and diameters of brush bristles. This is a single-use device.	IIa
5482	44127	Autoinjector needle	Автоинжектор зүү	A device designed for the parenteral administration of a drug contained in a cartridge that forms part of, is attached to, or inserted into an autoinjector (drug pen injector). It is used by persons requiring regular, self-administrated dosages of insulin, hormones, or other pharmaceuticals. This device will typically be constructed as a double-ended, stainless steel needle of various sizes that is fixed to a threaded hub of plastic to which the drug pen injector is connected. This device is packaged in a sealed sterility barrier, and might include needle shielding safety features to reduce the risk of needle stick injury. This is a single-use device.	IIa

5483	44131	Medication/vaccine injector, needle	Эмийн/вакцины тарилга, зүү	A hand-held manual device designed to inject medication or vaccine intramuscularly (IM) or subcutaneously into the human body. This device (often pen-like in design) will typically require a dedicated exchangeable needle tip to be attached. It may have different configurations according to the application (e.g., injection of insulin, hormone treatment). The delivered medication/vaccine may be supplied through an inserted cartridge or other method and is administered by a healthcare worker or the recipient depending upon the intended use. It is not a hypodermic syringe. This is a reusable device.	IIa
5484	44135	Pericardiocentesis needle, single-use	Перикардиоцентезийн зүү, нэг удаагийн хэрэглээ	A sterile, sharp bevel-edged, hollow tubular metal instrument specifically designed for the puncture of the pericardial cavity for the aspiration (removal) of fluids (pericardiocentesis). The device is typically long and rigid enough to penetrate the pericardium (e.g., 10 to 18 centimetres in length). This is a single-use device.	IIa
5485	44136	Pericardiocentesis needle, reusable	Перикардиоцентезийн зүү, дахин ашиглах боломжтой	A sharp bevel-edged, hollow tubular metal instrument specifically designed for the puncture of the pericardial cavity for the aspiration (removal) of fluids (pericardiocentesis). The device is typically long and rigid enough to penetrate the pericardium (e.g., 10 to 18 centimetres in length). This is a reusable device.	IIa
5486	44139	Paranasal sinus ultrasound imaging transducer, single-use	Хамрын синусын хэт авианы дүрс хувиргагч, нэг удаагийн хэрэглээ	An ultrasound imaging transducer assembly enclosed in a fluid resistant acoustically and electrically insulated housing designed for insertion into the nasal sinuses and positioned by the operator. Also known as a sinus endosonography probe or transducer, it is frequently incorporated as part of, or used with, devices requiring ultrasound guidance and placement, e.g., endoscopy equipment or needle biopsy equipment. The device is composed of either a single transducer element or an array of transducer elements, i.e., piezoelectric element(s), active element(s) or crystal(s) and associated damping, backing, and matching layer materials. This is a single-use device.	IIa

5487	44140	Oesophageal ultrasound imaging transducer, single-use	Улаан хоолойн хэт авианы дүрс хувиргагч, нэг удаагийн хэрэглээ	An ultrasound imaging transducer assembly enclosed in a fluid-resistant, acoustically- and electrically-insulated housing, designed to be inserted and positioned in the oesophagus to obtain ultrasound images of the heart and/or to navigate devices requiring ultrasound guidance and placement (e.g., endoscopy equipment or needle biopsy equipment). Also known as an oesophageal endosonography probe or transducer, it is composed of either a single transducer element or an array of transducer elements, i.e., piezoelectric element(s), active element(s), or crystal(s), and associated damping, backing, and matching layer materials. This is a single-use device.	IIa
5488	44249	Keratome, water jet	Кератом, усан онгоц	A mains electricity (AC-powered) ophthalmic surgical instrument intended to shave tissue from sections of the cornea using a high pressure stream of water to produce a lamellar (partial thickness) transplant.	IIa
5489	44290	Assisted reproduction heater/incubator	Туслах нөхөн үржихүйн халаагуур/инкубатор	A mains electricity (AC-powered) device intended to provide suitable warming and/or incubation conditions for reproductive biological materials (e.g., gametes and embryos), at closely regulated and monitored temperatures, during assisted reproduction examination and processing procedures. It may support a more comprehensive growth environment [e.g., temperature, carbon dioxide (CO2) and oxygen (O2) concentrations]; it typically has adjustment and monitoring controls.	IIa
5490	44307	Mechanical atherectomy system catheter, peripheral	Механик атерэктомийн системийн катетер, захын	A sterile, flexible tube (catheter) intended to be percutaneously introduced for the intraluminal mechanical disruption of atheroma plaque from the walls of peripheral arteries. It has a power-driven cutting or abrasive head for slicing/grinding the atheroma into fragments small enough to be aspirated or absorbed. This device is not intended for use in the coronary, carotid, iliac or renal vasculature. This is a single-use device.	IIa

5491	44491	Multi-purpose surgical power tool system, line-powered	Олон зориулалттай мэс заслын цахилгаан хэрэгслийн систем, шугамаар ажилладаг	An assembly of devices designed to resect bones, tough tissues (e.g., cartilage, ligaments), and soft tissues during a surgical procedure; it is not dedicated to a specific clinical application. It includes a mains electricity (AC-powered) control unit which supplies low-voltage electricity, motors/handpieces/power tool attachments, and a variety of tools (e.g., drill bits, saw blades, burs, milling cutters, shavers, screwdriver bits, guide wires).	IIa
5492	44575	Dental impression spacer	Шүдний даралтын зай баригч	A device comprised of thin layers of wax or other plastic materials intended to be applied to the surface of edentulous ridges and dental structures before the preliminary application of impression material. After producing the preliminary model, the device is discarded, thus providing an equidistant space between the oral structures and the impression tray that allows escape of excess impression material and entrapped air, and facilitates manipulation during final impression taking. This is a single-use device.	IIa
5493	44632	Sternum saw blade, single-use	Өвчний хөрөөний ир, нэг удаагийн	A flat metal surgical instrument with a serrated edge intended to be attached to a dedicated powered surgical saw for cutting the sternum (the breastbone) during cardiovascular surgery. It is available in various forms (e.g., straight or arc-shaped) and is powered by a rapid reciprocating, oscillating or sagittal motion provided by the saw. This is a single-use device.	IIa
5494	44641	Multi-purpose surgical power tool system, rechargeable battery-powered	Олон зориулалттай мэс заслын цахилгаан хэрэгслийн систем, цэнэглэдэг батерейгаар ажилладаг	An assembly of devices designed to resect bones and tough tissues (e.g., cartilage, ligaments) during a surgical procedure; it is not dedicated to a specific clinical application. It includes a rechargeable battery pack/control unit which supplies low-voltage electricity, motors/handpieces/power tool attachments, and a variety of tools (e.g., drill bits, burs, saw blades, screwdriver bits, and guide wires); it is not intended to be connected to mains power.	IIa

5495	44685	Radiographic procedure tubing	Рентген шинжилгээний хоолой	A length of flexible tube typically intended to connect a contrast imaging syringe to a patient cannula for the conduction of contrast media and flushing fluids to a patient during diagnostic radiographic procedures [e.g., angiography or computed tomography (CT)]. The device is made of synthetic polymer material(s), will accommodate low and high pressures, and is available in various lengths with quick connecting fittings (e.g., Luer-lock).	IIa
5496	44713	Body-surface ultrasound imaging transducer cover	Биеийн гадаргуугийн хэт авианы дүрс хувиргагч бүрхэвч	A device/material intended to be used as a physical barrier for protection against the effects of environmental exposure (e.g., body fluids, gels) and/or to maintain the required hygienic level of an ultrasound system imaging transducer (probe) used on the body surface during an ultrasound examination. This is a single-use device.	IIa
5497	44714	Intraoperative ultrasound imaging transducer cover	Мэс заслын үед хэт авианы дүрс хувиргагч бүрхэвч	A sterile sheath intended to be used as a physical barrier for protection against the effects of environmental exposure (e.g., body fluids, gels) and/or to maintain the required hygienic level of an ultrasound imaging system transducer (probe) used intraoperatively, e.g., on internal organs, during an ultrasound examination. This is a single-use device.	IIa
5498	44715	Flexible fibreoptic nasopharyngolaryngoscope	Уян хатан шилэн хамар залгиурын дурангийн дуран	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the structures inside the nasal passages, including the sinus openings, the pharyngeal end of the auditory tube, the larynx, and the vocal cords. It is inserted through a nostril and typically provides the operator with greater manoeuvrability (flexibility of the distal end) for improved viewing during nasopharyngolaryngoscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
5499	44721	Keratome blade, reprocessed	Кератомын ир, дахин боловсруулсан	A surgical cutting device with a very sharp edge that is designed to be mounted into a keratome and is used to shave tissue from sections of the cornea. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5500	44722	Keratome blade, single-use	Кератом ир, нэг удаагийн хэрэглээ	A surgical cutting device with a very sharp edge that is designed to be mounted into a keratome and is used to shave tissue from sections of the cornea. This is a single-use device.	IIa
5501	44727	Dental porcelain/ceramic restoration kit	Шүдний шаазан / керамик нөхөн сэргээх иж бүрдэл	A collection of containers with different shades of porcelain (ceramic based material in powder form) intended to be used in prefabricated and custom-made dental restorations, e.g., artificial teeth on copings, crowns, or bridges. This kit is typically used in the dental laboratory. This is a reusable device.	IIa
5502	44742	Joint prosthesis implantation kit, reusable	Хамтарсан протез суулгах иж бүрдэл, дахин ашиглах боломжтой	A collection of surgical instruments used for cutting and forming bone to allow the implantation of a joint prosthesis. The instruments include various metallic and/or plastic reusable devices (e.g., retractors, rods, clamps, drills, pins, saws, guides, cutting blocks) that are specific to the joint of application (e.g., hip, knee, shoulder, ankle, or elbow); the implant(s) is not included. This is a reusable device.	IIa
5503	44772	Cardiac ablation system irrigation tubing set	Зүрхний абляцийн системийн усалгааны хоолойн багц	A collection of sterile flexible tubing and associated items that may include clamps, filters, and connectors, used with an irrigation pump to deliver irrigation and/or cooling solution (saline) to an ablation device (e.g., an ablation catheter or a cardiac tissue ablation system applicator) at a specified flow rate during a cardiac electrophysiology (EP) ablation procedure. The tubing is made of synthetic material and is of a fixed diameter that is specific to the requirements of the pump. This is a single-use device.	IIa

5504	44784	Intermittent venous compression system pump	Завсарлагатай венийн шахалтын системийн шахуурга	An electrically-powered device used for the noninvasive treatment and prevention of venous disorders/sequelae. As part of a compression system, the pump provides the connected stocking/sleeve/suit with the necessary pressure to promote venous blood flow. This is achieved through the cyclical inflation and deflation of a single-chambered stocking/sleeve/suit applied to the extremities. It typically consists of a compressor with control/timing mechanism, pressure limiting device, tubing, and connectors. The resulting increased venous blood flow may help to treat/prevent oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE) in non-ambulatory patients or patients at risk.	IIa
5505	44785	Sequential venous compression system inflator	Дараалсан венийн шахалтын системийн хийлэгч	An electrically-powered device intended to be used for the noninvasive treatment and prevention of venous disorders/sequelae. As part of a compression system, the pump provides the connected stocking/sleeve/suit applied to the extremities with the necessary pressure to promote venous blood flow through its sequential inflation and deflation. Also referred to as a pump, it typically consists of a compressor with advanced control/timing mechanism, pressure limiting device, tubing, and connectors. The resulting increased venous blood flow may help to treat/prevent oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE) in non-ambulatory patients or patients at risk.	IIa

5506	44792	Laparoscopic balloon dissector	Дурангийн бөмбөлөг задлагч	A device designed to dissect connective tissue layers creating access to a desired surgical site during a laparoscopic procedure. It typically consists of a cannula, a distention balloon, an obturator, an inflation bulb, and a regulating valve(s). An appropriate endoscope is introduced into the cannula to monitor the dissection and/or the insertion process. Using the inflation bulb, the balloon is inflated to a recommended fill volume exerting pressure on the tissue layers. Once the space is dissected the balloon is deflated and the device replaced by other suitable devices (e.g., trocar/cannula) whilst the peritoneal space is insufflated under low pressure. This is a single-use device.	IIa
5507	44812	Bio-energy system receiver	Био-энергийн системийн хүлээн авагч	An electronic device that receives electromagnetic (EM) impulses/signals from the body surface [e.g., electrical skin resistance of certain dermato-visceral zones or biological active zones (BAZ)] so that they can be mapped to specific disease diagnoses, references, or therapies contained in a computerized program. The device may be a plastic structure with metal contact points for the fingertips, or consist of sensors that are moved over the skin surface. It connects to a computer where a dedicated application software program is installed to interpret the inputs and provide the user with on-screen data and analysis. This is a reusable device.	IIa
5508	44839	Cardiac/peripheral vascular guidewire, reprocessed	Зүрхний/захын судасны чиглүүлэгч утас, дахин боловсруулсан	A long, thin, sterile wire intended to be percutaneously placed into the cardiac vasculature (ventricles or coronary vessels) to function as a guide for the introduction, positioning, and/or operation of a device (e.g., catheter, pacing lead); it may also be used in the peripheral vasculature. It is typically made of metal (e.g., stainless steel, Nitinol), with or without coating, and is available in a variety of distal tip designs. It is used for various diagnostic and interventional procedures. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5509	44854	Arthrodesis nail, fixed-length	Артродезийн хадаас, тогтмол урттай	A rod of fixed-length (i.e., not intended for distraction) intended to be implanted into the intramedullary canal of any long bone [e.g., femur, tibia, humerus (including fixation of the glenoid), talus, fibula, radius, ulna] for the purpose of joint fusion or arthrodesis; it is not dedicated to femur or tibia implantation. The device is used for traumatic repair or reconstructive procedures; it may include screws if locked into place. This is a single-use device.	IIa
5510	44886	Dental osteotome set	Шүдний остеотомийн багц	A collection of dental surgical osteotomes used during dental osteotomy for shaping and condensing bone, typically when performing a dental implant surgical procedure. This device typically contains osteotomes of varying sizes and shapes and a surgical mallet or hammer. These are used for ridge expanding, bone condensing and sinus floor elevation procedures. This is a reusable device.	IIa
5511	44903	Blood transfer set	Цус дамжуулах багц	A collection of sterile, flexible, plastic tubing and associated devices (e.g., couplers, adapters, clamps) intended to be used to transfer blood or blood components (e.g., peripheral stem cells, plasma) into containers or between containers for processing or storage (e.g., freezing). This is a single-use device.	IIa
5512	44906	Ultrasonic dental scaling/debridement system generator	Хэт авианы шүдний масштабыг арилгах / цэвэрлэх системийн генератор	A mains electricity (AC-powered) unit that functions as part of an ultrasonic dental scaling/debridement system, intended to generate, and enable control of, ultrasonic oscillations to: 1) mechanically fragment and dislodge gross debris in the dental pulp canal during an endodontic procedure; and/or 2) remove accretions from tooth surfaces during dental cleaning/periodontal therapy. It connects to the system handpiece, and may connect to a suitable water supply, or it may contain the water or rinsing solution (e.g., chlorhexidine) source.	IIa

5513	44907	Ultrasonic dental scaling/debridement system handpiece	Хэт авианы шүдний масштабыг арилгах / цэвэрлэх системийн гар багаж	A hand-held component of an ultrasonic dental debridement system intended to convert high frequency electrical current from a generator into an ultrasonic oscillation, for a tip placed at its end to mechanically fragment and dislodge gross debris/accretions during an endodontic and/or periodontal procedure. It may also serve as a conduit for fluid intended to prevent overheating of the tip and surrounding tissue. This device is typically in the form of a pen/pencil with attached cables. This is a reusable device.	IIa
5514	44908	Ultrasonic dental scaling/debridement system handpiece tip, periodontal	Хэт авианы шүдний масштабыг арилгах/цэвэршүүлэх системийн гарны үзүүр, шүдний шүдний	An insert intended to be attached to an ultrasonic dental scaling/debridement system handpiece, to transmit ultrasonic energy (e.g., 25 kHz/30 kHz) from a generator to the oral cavity for the removal of accretions from tooth surfaces during dental cleaning or periodontal therapy; it is not intended for endodontic use. This device vibrates at a high frequency to provide the scaling effect. Water or a rinsing solution (e.g., chlorhexidine) is intended to be fed through the handpiece/tip assembly to assist in the process. This device is available in a variety of designs and tip shapes. This is a reusable device.	IIa
5515	44909	Pneumatic dental scaling/debridement system handpiece	Шүдний хийн хэмжээс/цэвэршүүлэх системийн гар багаж	A holder for a detachable tip that functions as part of a pneumatic dental scaling/debridement system, designed to use compressed air to generate a vibrating action at the tip to: 1) mechanically fragment and dislodge gross debris in the dental pulp canal during an endodontic procedure; and/or 2) remove accretions from tooth surfaces during dental cleaning/periodontal therapy. Water is also fed through the handpiece and attached tip to assist in the process. It is typically designed with a standard 2-, 3-, or 4-hole connector utilizing the same connection to existing air-driven handpiece tubing and the water spray for lavage. This is a reusable device.	IIa

5516	44910	Pneumatic dental scaling/debridement system handpiece tip, periodontal, reusable	Шүдний пневматик масштабтай/цэвэршүүлэх системийн гарны үзүүр, шүдний шүдний, дахин ашиглах боломжтой	A removable endpiece intended to be attached to a pneumatic dental scaling/debridement system handpiece for the application of sonic vibrational energy (e.g., at a frequency of 6 kHz) to fragment and dislodge accretions or substances [e.g., dentine, enamel, plaque, calculus] from tooth and implant surfaces during dental cleaning/periodontal procedures (e.g., stripping, finishing); it is not intended for endodontic use. It is available in a variety of designs and may also be used for the removal of orthodontic cement. This is a reusable device.	IIa
5517	44911	Pneumatic dental scaling/debridement system	Шүдний пневматик масштабтай/цэвэршүүлэх систем	An assembly of devices designed to use compressed air to generate a vibrating action at its point of patient contact to: 1) mechanically fragment and dislodge gross debris in the dental pulp canal during an endodontic procedure; and/or 2) remove accretions from tooth surfaces during dental cleaning/periodontal therapy. It typically consists of a handpiece which converts pneumatic energy into sonic vibrational energy (e.g., at a frequency of 6 kHz); appropriate connection tubing; and a self-locking, removable tip(s); tip selection typically affects the intended application (endodontic vs periodontal)	IIa
5518	44912	Flexible fibreoptic angioscope, single-use	Уян хатан шилэн ангиоскоп, нэг удаагийн	A sterile endoscope with a very thin, flexible inserted portion intended for the visual examination and treatment of the lumen and patency of blood vessels (especially to evaluate the patency of veins or arteries). It is inserted into the body through an artificial orifice created by an incision made during the procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle (e.g., a fused silica flexible rod that provides sharper images and greater strength than individual strands). It is typically used for visualization of the coronary artery, an arterial bypass procedure with a saphenous vein, or a valvulotomy. This is a single-use device.	IIa

5519	44913	Flexible video angioscope	Уян хатан видео ангиоскоп	An endoscope with a very thin, flexible inserted portion intended for the visual examination and treatment of the lumen and patency of blood vessels (especially to evaluate the patency of veins or arteries). It is inserted into the body through an artificial orifice created by an incision. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end and the images showing on a monitor. It is typically used for visualization of the coronary arteries, an arterial bypass procedure with a saphenous vein, or a valvulotomy. This is a reusable device.	IIa
5520	44914	Optical anoscope, single-use	Оптик аноскоп, нэг удаагийн	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the anus and rectum. It is inserted into the body through the anus during anoscopy. The inserted portion is short in length, though longer than a sphincteroscope, and large in diameter, and an obturator is typically inserted into its lumen to assist the insertion. The anatomical images are illuminated by a built-in or external light source and can be viewed by the user through relayed lens optics or direct vision. This device is typically used to examine/diagnose patients suffering pain in the rectum/anus, haemorrhoids, or anal fissures. This is a single-use device.	IIa
5521	44915	Flexible fibreoptic antroscope	Уян хатан шилэн антроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of a cavity, particularly the pathological changes in the area of the maxillary sinus. It is inserted into the front of the head through an artificial orifice created by an incision made during antroscopy. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is mainly used to examine the structures of the maxillary antrum. This is a reusable device.	IIa

5522	44916	Flexible video antroscope	Уян хатан видео антроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of a cavity, particularly the pathological changes in the area of the maxillary sinus. It is inserted into the front of the head through an artificial orifice created by an incision made during antroscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end and the images displayed on a monitor. This device is mainly used to examine the structures of the maxillary antrum. This is a reusable device.	IIa
5523	44917	Flexible fibreoptic arterioscope, single-use	Уян хатан шилэн артериоскоп, нэг удаагийн хэрэглээ	A sterile endoscope with a very thin, flexible inserted portion intended for the visual examination and some treatment of coronary arteries, peripheral vessels, and intracardiac structures. It is inserted into the body through a surgically-created orifice during arterioscopy. Images are transmitted to the user through a fibreoptic bundle (e.g., a fused silica flexible rod that provides sharper images and greater strength). This device is used to examine arteries and arterial circulation; blood flow is normally blocked by a balloon while a clear liquid is infused to flush away residual blood to provide a clear view. This is a single-use device.	IIa
5524	44918	Flexible video arterioscope	Уян хатан видео артериоскоп	An endoscope with a very thin, flexible inserted portion intended for the visual examination and some treatment of coronary arteries, peripheral vessels, and intracardiac structures. It is inserted into the body through a surgically-created orifice during arterioscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end and the images showing on a monitor. The device is used to examine the arterial circulation for anomalies. The arteries may need to be emptied of blood and refilled with a clear fluid (e.g., saline) to assist in the quality of the imaging. This is a reusable device.	IIa

5525	44919	Flexible fibreoptic arthroscope	Уян хатан шилэн артроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the interior of a joint (e.g., knee, shoulder, elbow). It is inserted into the body through an artificial orifice created by an incision made during arthroscopy. The flexible inserted portion gives the operator enhanced viewing possibilities, and anatomical images of the structures are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used to examine structural damage to a joint, often from sports injuries. The arthroscope eyepiece is normally interfaced with a video camera. This is a reusable device.	IIa
5526	44920	Flexible video arthroscope	Уян хатан видео артроскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the interior of a joint (e.g., knee, shoulder, elbow). It is inserted into the body through an artificial orifice created by an incision made during arthroscopy. The flexible inserted portion gives the operator enhanced viewing possibilities, and anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end and the images showing on a monitor. This device is commonly used to examine structural damage to a joint, often from sports injuries. This is a reusable device.	IIa
5527	44921	Flexible ultrasound bronchoscope	Уян хатан хэт авиан бронхоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the trachea, bronchi, and lungs. It is inserted through the mouth or nose during bronchoscopy. Anatomical images are transmitted to the user by the device typically through a fibreoptic bundle or a video system, and an ultrasound probe. The probe may be built-in or inserted through a dedicated lumen so that its distal tip is positioned adjacent to that of the endoscope. It is commonly used to diagnose lung infections, pneumonia, or lung cancer, and allows physicians to view the insides of the lungs and take biopsies and samples of secretions. This is a reusable device.	IIa

5528	44923	Flexible video culdoscope	Уян хатан видео кульдоскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the female peritoneal cavity and organs. It is inserted into the body through a small incision made in the posterior vaginal fornix into the cul-de-sac, also called the rectouterine pouch (pouch of Douglas), during culdoscopy. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. It is commonly used to examine structures of the uterus, ovaries, fallopian tubes, pelvis, and pelvic cavity when viewing is done from just behind the uterus. This is a reusable device.	IIa
5529	44924	Gastrointestinal catheter/endoscope tracking system	Ходоод гэдэсний катетер/ дурангийн хяналтын систем	A multicomponent assembly of mains electricity (AC-powered) devices designed for real-time visualization/navigation of a catheter and/or endoscope during insertion in the gastrointestinal tract, by detecting its position/movement within an electromagnetic (EM) field and displaying three-dimensional (3-D) virtual images on a monitoring screen. The system primarily consists of a main control unit with monitor and an external EM field generator or sensor, and may also require/include an external reference sensor; additional accessories (e.g., remote control, stand/trolley) may also be included.	IIa
5530	44925	Flexible video cystoscope, reusable	Уян видео цистоскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urinary tract by introduction through the urethra. Anatomical images are transmitted from a distal camera and displayed on a monitor. It is typically used to examine/diagnose incontinence, urinary retention, recurrent urinary tract infections, and/or to remove tissue specimens/stones/small tumours from the bladder; it may have specialized tools for functions such as ureteral stent removal. This is a reusable device.	IIa

5531	44927	Flexible fibreoptic otoscope	Уян хатан шилэн отоскоп	An endoscope with a flexible inserted portion intended for observation, diagnosis, and treatment within the middle ear. It is typically used during ear/nose/throat (ENT) treatment and anatomical images are transmitted to the user by the device through a fibreoptic bundle. This is a reusable device.	IIa
5532	44928	Flexible video otoscope	Уян хатан видео отоскоп	An endoscope with a flexible inserted portion intended for use in otology mainly for observation, diagnosis, and treatment in the middle ear. Anatomical images are transmitted to the user by a video system with a charge-coupled device (CCD) chip at the distal end of the endoscope and the images showing on a monitor. This is a reusable device.	IIa
5533	44929	Otoscope, endoscopic	Отоскоп, дурангийн	An endoscope with a rigid inserted portion intended to be used in otology mainly for observation, diagnosis, and treatment of the outer and/or middle ear. Anatomical images are transmitted to the user by the device through relayed lens optics or a fibreoptic bundle typically with images displayed on a monitor. This is a reusable device.	IIa
5534	44930	Flexible fibreoptic ophthalmic endoscope	Нүдний уян хатан шилэн дуран	An endoscope with a flexible inserted portion intended for the observation and treatment of the eyeball and related structures. It is inserted into the eye during procedures such as endoscopic vitreoretinal surgery and glaucoma/cataract surgery. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. Some endoscopes have a working channel to convey an instrument for procedures. It is usually used for observation of the retina, pars plana, or the posterior part of the iris, angles (angulus iridocornealis). This is a reusable device.	IIa

5535	44931	Flexible video ophthalmic endoscope	Уян видео нүдний дуран	An endoscope with a flexible inserted portion intended for the observation and treatment of the eyeball and related structures. It is inserted into the eye during procedures such as endoscopic vitreoretinal surgery and glaucoma/cataract surgery. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. Some endoscopes have a working channel to convey an instrument for procedures. It is usually used for observation of the retina, pars plana, or the posterior part of the iris, angles (angulus iridocornealis). This is a reusable device.	IIa
5536	44932	Rigid optical ophthalmic endoscope	Хатуу оптик нүдний дуран	An endoscope with a rigid inserted portion intended for the observation and treatment of the eyeball and related structures. It is inserted into the eye during procedures such as endoscopic vitreoretinal surgery and glaucoma/cataract surgery. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. Some endoscopes have a working channel to convey an instrument for procedures. It is typically used for observation of the retina, pars plana, posterior part of the iris, or angle of iris (angulus iridocornealis). This is a reusable device.	IIa
5537	44934	Flexible fibreoptic lacrimal endoscope	Уян хатан шилэн лакрималь дуран	An endoscope with a flexible inserted portion intended for observation, diagnosis, and treatment within the lacrimal passage. It is inserted through the lacrimal puncti during nasolacrimal duct examination or nasolacrimal surgery. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This endoscope is used to observe the lacrimal passage (particularly between the lacrimal puncti and the nasolacrimal duct opening), and for treatment of the lesions therein. This is a reusable device.	IIa

5538	44935	Flexible video lacrimal endoscope	Уян хатан видео лакримал дуран	An endoscope with a flexible inserted portion intended for observation, diagnosis, and treatment within the lacrimal passage. It is inserted through the lacrimal puncti during nasolacrimal duct examination or nasolacrimal surgery. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This endoscope is used to observe the lacrimal passage (particularly between the lacrimal puncti and the nasolacrimal duct opening), and for treatment of the lesions therein. This is a reusable device.	IIa
5539	44936	Rigid optical lacrimal endoscope	Хатуу оптик лакримал дуран	An endoscope with a rigid inserted portion intended for observation, diagnosis, and treatment within the lacrimal passage. It is inserted through the lacrimal puncti during procedures such as nasolacrimal duct examination or nasolacrimal surgery. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This endoscope is used to observe the lacrimal passage (particularly between the lacrimal puncti and the nasolacrimal duct opening), and for treatment of the lesions therein. This is a reusable device.	IIa
5540	44939	Flexible fibreoptic reconstructive surgery endoscope	Уян хатан шилэн кабелийн нөхөн сэргээх мэс заслын дуран	An endoscope with a flexible inserted portion intended to be used in plastic surgery for reconstructive operations, the suction of subcutaneous tissue, or vein harvesting (e.g., for implantation as a coronary bypass graft). It is inserted percutaneously into the body. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device will have a working channel to convey an instrument for procedures. This is a reusable device.	IIa

5541	44940	Flexible video reconstructive surgery endoscope	Уян хатан видео нөхөн сэргээх мэс заслын дуран	An endoscope with a flexible inserted portion intended to be used in plastic surgery for reconstructive operations, the suction of subcutaneous tissue, or vein harvesting (e.g., for implantation as a coronary bypass graft). It is inserted percutaneously into the body. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This device will have a working channel to convey instruments for procedures. This is a reusable device.	IIa
5542	44941	Rigid optical reconstructive surgery endoscope	Хатуу оптик нөхөн сэргээх мэс заслын дуран	An endoscope with a rigid inserted portion intended to be used in plastic surgery for reconstructive operations, the suction of subcutaneous tissue, or vein harvesting (e.g., for implantation as a coronary bypass graft). It is inserted percutaneously into the body. Anatomical images are transmitted to the user through relayed lens optics or a fibreoptic bundle. This device will have a working channel to convey instruments for procedures. This is a reusable device.	IIa
5543	44960	Flexible fibreoptic laparoscope	Уян хатан шилэн лапароскоп	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the abdominal/retroperitoneal cavity and its organs. It is inserted through an incision made in the abdominal wall (routinely just below the umbilicus) during laparoscopy. Anatomical images are transmitted to the user through a fibreoptic bundle. The abdominal wall is distended, typically using a gas distention device, providing space to allow the surgeon to directly view and/or operate on the exposed organs. It is commonly used to evaluate/treat abdominal or pelvic pain, ectopic pregnancy, ovarian cysts, appendicitis, and to perform female sterilization. This is a reusable device.	IIa

5544	44961	Flexible ultrasound laparoscope	Уян хатан хэт авианы лапароскоп	An endoscope with a flexible inserted portion, combined with an ultrasound probe, intended for the visual examination, treatment, and ultrasonic imaging of the abdominal/retroperitoneal cavity and its organs. It is inserted through an incision made in the abdominal wall (routinely just below the umbilicus) during laparoscopy. Anatomical images are transmitted to the user through a fibreoptic bundle or a video system and the ultrasound probe. The abdominal wall is distended using a gas distention device. The probe may be built-in or inserted through a dedicated channel so that its distal tip is positioned adjacent to the targeted organ. This is a reusable device.	IIa
5545	44962	Flexible video intubation laryngoscope, reusable	Уян хатан видео интубацийн ларингоскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination of the trachea, and to assist the entry and positioning of an airway tube, typically an endotracheal (ET) tube, to secure an open airway in the case of difficult and non-difficult intubation procedures. The inserted portion is thin and long to facilitate endoscope entry and the intubation procedure. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. It is typically used during difficult and non-difficult intubation procedures when maintaining an airway open. This is a reusable device.	IIa
5546	44971	General-purpose surgical sponge	Ерөнхий зориулалтын мэс заслын хөвөн	A non-medicated cushion-like mass made of absorbent materials (e.g., woven gauze, cotton, cellulose) primarily intended to be used inside the body, on a surgical incision or applied to internal organs or structures to control bleeding, absorb fluid, or protect organs or structures from abrasion, drying, or contamination during a procedure; also referred to as a laparotomy sponge or cottonoid pad/pattie, it may also be used for prepping the patient. It does not contain special features to help detect gossypiboma (sponge left inside patient) [i.e., it is not radiopaque]. This is a single-use device.	IIa

5547	44981	Sternum saw blade guide	Хөхний ясны хөрөөний ирний хөтөч	A protective device with a bulbous distal end used together with a sternal saw blade when cutting open the sternum (the breastbone) during cardiovascular surgery. The saw blade will operate within the confines of this device that protects the underlying organs from contact with the end of the reciprocating blade. This is a reusable device.	IIa
5548	44985	Surgical saw blade, reciprocating, reusable	Мэс заслынхөрөөний ир, эргэдэг, дахин ашиглах боломжтой	A flat surgical cutting instrument, usually made of high-grade stainless steel, with a serrated edge designed for attachment to a dedicated powered saw used for cutting bone/tissue during orthopaedic or oral surgery; it is not dedicated to cutting through the sternum (i.e., not a dedicated sternum saw blade). This device is designed with the cutting teeth arranged in a straight line along the cutting edge and which cuts when the blade is powered in a rapid reciprocating movement (a back and forth motion like a jigsaw) against the object to be cut. The end of the blade is typically not protected. This is a reusable device.	IIa
5549	44986	Sternum saw blade, reusable	Өвчүүний хөрөөний ир, дахин ашиглах боломжтой	A flat metal surgical instrument with a serrated edge intended to be attached to a dedicated powered surgical saw for cutting the sternum (the breastbone) during cardiovascular surgery. It is available in various forms (e.g., straight or arc-shaped) and is powered by a rapid reciprocating, oscillating or sagittal motion provided by the saw. This is a reusable device.	IIa
5550	44993	Dental digital imaging sensor, extraoral	Шүдний дижитал дүрсний мэдрэгч, амнаас гадуур	A device designed to be placed outside a patient's mouth to perform routine diagnostic dental imaging procedures. It uses analogue-to-digital conversion techniques to record the absorption pattern of x-ray beams used in the diagnosis and treatment of diseases of the jaw or oral cavity structures. The device is used in combination with the x-ray source (x-ray tube) that is located outside the patient's mouth during the imaging procedure; the resulting digital image is transmitted to a monitor or workstation.	IIa

5551	45012	Aspiration/injection needle, single-use	Сорох/тарих зүү, нэг удаагийн	A sterile, sharp bevel-edged, hollow tubular metal instrument used for removing fluid from a body cavity and for injecting substances into the body typically during a surgical procedure. This is a single-use device.	IIa
5552	45035	Laryngeal mask airway, reusable	Хоолойн маск амьсгалын зам, дахин ашиглах боломжтой	A curved tube with a distal inflatable cuff/mask intended to be used in inhalational anaesthesia and resuscitation to facilitate and secure airway patency for the delivery and exchange of gases in spontaneously breathing and ventilated patients. It is inserted into the hypopharynx above the glottis to create a seal and to prevent the tongue from obstructing the anatomical airway. It may include a 15 mm connector that attaches to a breathing circuit or manual resuscitator, be radiopaque, and have a built-in pilot balloon for cuff pressure monitoring. It is available in various sizes/designs and is typically made of silicone/plastic materials. This is a reusable device.	IIa
5553	45036	Laryngeal mask airway, single-use	Хоолойн маск амьсгалын зам, нэг удаагийн	A curved tube with a distal inflatable cuff/mask intended to be used in inhalational anaesthesia and resuscitation to facilitate and secure airway patency for the delivery and exchange of gases in spontaneously breathing and ventilated patients. It is inserted into the hypopharynx above the glottis to create a seal and to prevent the tongue from obstructing the anatomical airway. It may include a 15 mm connector that attaches to a breathing circuit or manual resuscitator, be radiopaque, and have a built-in pilot balloon for cuff pressure monitoring. It is available in various sizes/designs and is typically made of silicone/plastic materials. This is a single-use device.	IIa
5554	45043	Flexible video nasopharyngoscope	Уян хатан видео хамар залгиурын дуран	An endoscope with a flexible inserted portion intended for the visual examination and treatment of the nasopharynx (the upper part of the throat behind the nose). It is inserted through a nostril during ear/nose/throat (ENT) procedures. Anatomical images are transmitted to the user by a video system with an image sensor chip at the distal end of the endoscope and the images showing on a monitor. This is a reusable device.	IIa

5555	45081	Synthetic gutta-percha	Синтетик гуттаперча	A dental material made from a polymer-based, synthetic gutta-percha containing fillers and radiopacifiers in a soft resin matrix, intended to fill the root canal of a tooth. This material has the ability to resist leakage significantly better than natural gutta-percha based obturation whilst strengthening the root resulting in roots having a coronal and apical seal as part of the canal filling process. After application, this device cannot be reused.	IIa
5556	45084	Ophthalmic/otologic diagnostic set	Нүдний / чих судлалын оношлогооны багц	A collection of battery-powered devices intended to be used by a physician to perform an ophthalmic and/or otoscopic clinical examination on a patient. The devices are typically enclosed in a dedicated case and will typically include an ophthalmoscope and an otoscope, a dedicated interchangeable handle that contains the batteries which may be rechargeable and common to these examination devices, spare parts (e.g., extra ear specula, light bulbs) may include a line-powered charging station (e.g., desktop, wall-mounted) to house/charge these devices. This is a reusable device that may contain some disposable devices.	IIa
5557	45125	Vitreous humour replacement medium, postoperative	Шилэн эсийн орлуулах орчин, мэс заслын дараах	A fluid or semifluid substance (e.g., silicone oil with or without a perfluorocarbon, or a semifluorinated alkane) intended to be used to compress/unfold the retina (up to weeks/months) to support its reattachment following the operative treatment of severe retinal detachment; it might in addition be intended for transient intraoperative use (e.g., to remove silicone oil residues). Often referred to as a retinal tamponade, it is intended to realign the retina by exerting a force against it without flowing behind it. It is typically removed after a period depending upon clinical findings. It may be supplied in a prefilled syringe or other container. This is a single-use device.	IIa

5558	45141	Drug-delivery iontophoresis patch	Эмийн ионтофорезийн наалт	A non-sterile device designed as a patch that is fixed on the skin, typically with a pressure-sensitive adhesive, intended to be used as an alternative to injections for the transport of ionic-solution medication (e.g., soluble salts) through the movement of ions, resulting from an applied electric field, to locally administer the medication transcutaneously (transdermal). It typically consists of a positive and a negative electrode, a reservoir/drug chamber(s) that hold the medication, a battery, and a perimeter adhesive; the reservoir must be filled by the user with the drug prior to use. This is a single-use device.	IIa
5559	45142	Blood lancing device tip	Цус хайлуулах төхөөрөмжийн үзүүр	A sterile, sharp, needle-like device intended to be loaded into a blood lancing device to function as the invasive portion of the assembly during skin puncture for capillary blood sampling, typically performed at a fingertip or ear lobe (e.g., by diabetic patients). This is a single-use device.	IIa
5560	45191	Ophthalmic irrigation/infusion/aspiration cannula, illuminating, reusable	Нүдний усалгаа/дусаах/сорох суваг, гэрэлтүүлэгч, дахин ашиглах боломжтой	A hand-held ophthalmic surgical instrument with a thin, rigid insertion portion designed to infuse, irrigate and/or aspirate the interior of the eye during a surgical procedure (e.g., cataract extraction), and simultaneously conduct, typically via a fibreoptic bundle, a field of cold light to illuminate the surgical site. It is connected to a light source (through a light cable) and to appropriate devices that provide the infusion/aspiration function. It is typically made of high-grade stainless steel and fibreoptic materials. This is a reusable device.	IIa

5561	45207	Short-wave diathermy treatment system, professional	Богино долгионы диатерми эмчилгээний систем, мэргэжлийн	An assembly of devices designed to provide a therapeutic deep heat within specific volumes of the body through the transcutaneous transmission of electromagnetic (EM) energy in the radio-frequency (RF) bands of 13 megahertz (MHz) to 27.12 MHz. It typically consists of an electric generator and two electrodes (active and return) intended to be held on/near the patient. The device is intended to be operated by healthcare provider in a clinical setting, typically to treat pain, muscle spasms, and joint contractures; it is not used for surgery or to treat malignancies.	IIa
5562	45221	Dermatological laser beam guiding handpiece	Арьс судлалын лазер туяа чиглүүлэх гар багаж	A hand-held component of a dermatological laser system designed to conduct a therapeutic laser (e.g., solid state laser) from the laser generator to the treatment site for ablative and non-ablative treatment of the skin (e.g., removal of pigment/vascular lesions, scarring, wrinkles, tattoos, hair, and skin resurfacing and rejuvenation). This is a reusable device.	IIa
5563	45225	Endoscope antifog solution	Дурангийн манангийн эсрэг уусмал	A liquid substance intended to be used to prevent the occurrence of condensed vapour (fog) on the lens of an endoscopic instrument during treatment. It will typically be used on the lens of an endoscopic camera where the warmth from an enclosed body cavity creates the conditions to produce fog on the lens. This device will typically be contained in a spray can, bottle, or squeeze bottle. After application, this device cannot be reused.	IIa
5564	45227	Root canal obturation kit	Үндэс сувгийн бөглөрөлт иж бүрдэл	A collection of sterile dental devices, synthetic materials, and solutions designed to permanently prime, seal, and fill a tooth undergoing a root canal procedure. This device typically includes materials such as a primer (for bonding to the walls of the canal), a sealer (for bonding to the primer), and endodontic points and pellets (for the filling). This bonding process creates a monoblock filling resulting in increased resistance to bacteria penetration and fracture for root canal-treated teeth. This is a single-use device.	IIa

5565	45234	Root canal filling-removal solution	Үндэс сувгийг дүүргэх-зайлуулах уусмал	A liquid substance used in endodontic procedures for the softening and removal of root canal fillings. It will typically be introduced into the root canal using instruments. The device typically contains solvents and other elements (e.g., tetra chloroethylene, formamide, eucalyptol, excipients). After application, this device cannot be reused.	IIa
5566	45235	Dental scaling solution	Шүдний масштабын шийдэл	A liquid substance used in dentistry to soften and partially solubilize a dental calculus (a hard deposit that forms on the teeth) before scaling mechanically so that less force is required, especially when teeth are loose. It will typically contain acid as a solvent (e.g., hydrochloric) and include other elements (e.g., iodine and excipients). After application, this device cannot be reused.	IIa
5567	45236	Temporary dental crown/bridge resin	Шүдний түр зуурын титэм/гүүр давирхай	A material [e.g., polymethylmethacrylate (PMMA)] intended to make a temporary crown or bridge prosthesis for use until a permanent restoration is fabricated.	IIa
5568	45241	Audiometric/hearing aid tester	Аудиометр/сонсголын аппарат шалгагч	An electroacoustic device intended to be used for both the evaluation of hearing loss (audiometer function) and the evaluation of hearing aids while worn for optimal amplification [real-ear measurement (REM)]; some types may in addition be used to test hearing aid function when being fitted to the patient. It typically consists of a test box and a control unit that connect to an off-the-shelf computer that runs application software to provide results and graphics (which may be stored in a database). It may be used as an audiometer or real-ear-measurement instrument without the test box.	IIa
5569	45294	Dental restorative material varnish	Шүдний нөхөн сэргээх материалын лак	A liquid substance used to cover dental filling material in the initial setting period after application typically to prevent moisture infiltration (especially when a dental silicate or glass ionomer cement is used as a filling material). The device typically consists of dissolved artificial resins. After application, this device cannot be reused.	IIa

5570	45342	Laparoscopic access cannula anchor, single-use	Дурангийн хандалтын сувгийн зангуу, нэг удаагийн	A small, sterile, luminal device designed to enable a laparoscopic access cannula (port) to be secured to the skin/tissue of an incision site during a laparoscopic surgical procedure. The outer surface is typically textured/ribbed and intended to grip the tissue whilst the laparoscopic access cannula is inserted through the device lumen and fixed at the required insertion depth using a clamping/locking mechanism. This is a single-use device.	IIa
5571	45393	Mechanical atherectomy system handpiece	Механик атероэктомийн системийн гар утас	A hand-held component of a mechanical atherectomy system that typically contains a transducer intended to convert high frequency electrical current from a generator into mechanical oscillations, to enable an attachable catheter (not included) to mechanically disrupt/remove atheroma plaque from the walls of both coronary and peripheral arteries. The operator regulates the energy with an electric power switch incorporated into a foot-pedal attached to the generator. The handpiece may also serve as a conduit for irrigation and aspiration during surgery. This is a reusable device.	IIa
5572	45406	Dental abrasive air jet system handpiece	Шүдний зүлгүүрийн агаарын тийрэлтэт системийн гар утас	A hand-held, dental device that is a component of a dental abrasive air jet system and which is used to direct a concentrated jet of air combined with an abrasive powder, together with water for cooling, to the surface of the patient's tooth or teeth. This device is connected to the control unit that regulates the sources of pressurized air and temperate water. The abrasive, typically in the form of a powder that, depending upon the design of the delivery method, can be contained within a receptacle in this device or a receptacle within the control unit, is mixed with the air and water as this passes through. This is a reusable device.	IIa
5573	45414	Liposuction system cannula, reusable	Өөх соруулах системийн суваг, дахин ашиглах боломжтой	A rigid tube that functions as a component of a lipectomy suction system and designed specifically for percutaneous insertion into body fat deposits for the aspiration of fat during liposuction/lipoplasty. The device may also be used to infiltrate the operative site with a solution during the procedure, which is then aspirated. This is a reusable device.	IIa

5574	45416	Muscle biopsy clamp	Булчингийн биопсийн хавчаар	A sterile manual gripping device designed to secure muscle tissue in order to obtain a biopsy sample. It is used to hold a muscle fibre specimen in a longitudinal position to help preserve the original orientation of the fibres, from the sampling stage through analysis of the tissue. It will typically be designed so that, with the in situ sample, it can fit into an automated histological processing/analysing machine. This is a single-use device.	IIa
5575	45480	Dental root surface conditioner	Шүдний үндэс гадаргуугийн ангижруулагч	A dental material, typically of neutral pH, used for topical application on exposed/scaled root surfaces for the removal of the smear layer (adherent debris produced when cutting the enamel or dentin in cavity or endodontic preparation, Circa 1 micron thick) during dental/periodontal surgery. The material is removed (washed off) after the recommended period to expose the collagenous matrix of dentine surfaces. It is typically presented in the form of a gel and consists of, e.g., edetate disodium (EDTA) and carboxymethylcellulose (CMC) with a neutral pH. After application, this device cannot be reused.	IIa
5576	45500	Root canal cleaning solution	Үндэс суваг цэвэрлэх уусмал	A fluid or gel material intended to be used in dentistry to facilitate cleaning/irrigation of the root canal during/after endodontic instrumentation to remove the smear layer, pulpal tissue, necrotic materials, and bacteria from the root canal, before placement of the endodontic filling; it may also act as a lubricant to facilitate the passage of an instrument (e.g., file/rasp) into the root canal. It is typically available as a disinfecting solution (e.g., chlorhexidine, sodium hypochlorite solution) delivered into the canal with an irrigation needle, or similar device, providing mechanical and possibly chemical cleaning of the canal. After application, this device cannot be reused.	IIa

5577	45501	Root canal irrigation handpiece	Үндэс сувгийн усалгааны гар утас	A hand-operated, air-powered, dental instrument used for the irrigation of prepared root canals to provide thorough debridement of the canal space. It is connected to an air supply via a pressure hose to activate its internal pump mechanism which injects a root canal cleanser via a thin disposable needle into the canal space. This device replaces time consuming manual syringe irrigation and is used for the elimination of pulpal tissue, necrotic materials, and bacteria from the instrumented root canal. This is a reusable device.	IIa
5578	45518	Surgical saw blade, sagittal, reusable	Мэс заслын хөрөөний ир, сагитал, дахин ашиглах боломжтой	A flat surgical cutting instrument, usually made of high-grade stainless steel, with a serrated edge designed for attachment to a dedicated powered saw used for cutting bone/tissue during orthopaedic or oral surgery; it is not dedicated to cutting through the sternum (i.e., not a sternum saw blade). This device is designed with the cutting teeth arranged in an arc or on a flat plane pointing directly forward at the distal end to cut in a rapid sagittal (side to side) motion; it may in addition cut in an oscillating motion. This is a reusable device.	IIa
5579	45519	Blood cell freeze/thaw system	Цусны эс хөлдөх / гэсэх систем	An assembly of devices designed for the automated processing of red blood cells received indirectly from a donor so that the cells can be safely frozen for storage in a closed, disposable set, and when needed, thawed for use. The assembly will typically add an appropriate substance (e.g., glycerol) to the blood cells to allow freezing, and facilitate the thawing process. The assembly may also wash the red blood cells to remove glycerol and plasma and extracellular components; it may also resuspend the cells in an additive solution. It will typically be comprised of pumps, a centrifuge, air detectors, a dedicated shaker, monitoring devices, disposable set, and possibly print-out facilities.	IIa

5580	45524	Diamond dental bur, reprocessed	Дахин боловсруулсан алмаазан шүдний шар	A rotary cutting device made of high-grade steel with the working end coated with particles of diamond, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials intended for use in the fabrication of dental devices. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
5581	45525	Diamond dental bur, single-use	Алмазан шүдний шар, нэг удаагийн	A rotary cutting device made of high-grade steel with the working end coated with particles of diamond, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials intended for use in the fabrication of dental devices. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a single-use device.	IIa
5582	45526	Diamond ENT bur, reprocessed	Дахин боловсруулсан чих хамар хоолойн алмааз шар	A rotary cutting device made of high-grade steel with the working end coated with particles of diamond, and which is designed to fit into an appropriate handpiece that provides the rotation allowing the user to incise or remove bone in the ear, nose, or throat area during an ear/nose/throat (ENT) procedure. It can be used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5583	45527	Diamond ENT bur, single-use	Алмазан чих хамар хоолойн шар, нэг удаагийн	A rotary cutting device made of a high-grade steel shank with the working end coated with particles of diamond, and which is designed to fit into a powered handpiece that provides the rotation for incising or removing bone in the ear, nose, or throat during an ear/nose/throat (ENT) procedure. It is typically used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a single-use device.	IIa
5584	45530	Artificial eyeball iris prosthesis	Хиймэл нүдний алимны цахилдаг протез	A clear, round, flat device, typically made of polymethylmethacrylate (PMMA), that contains a computer-generated pigmented iris image, and that is used as a component in the fabrication of a custom-made artificial eye that is inserted in a patient's eye socket anterior to an orbital implant, or the eviscerated eyeball, for cosmetic purposes. This device is not intended to be implanted.	IIa
5585	45537	Static/intermittent powered traction system, non-mobile	Хөдөлгөөнгүй / тасалдалтай хөдөлгүүртэй зүтгүүрийн систем	An assembly of devices capable of applying continuous and various intermittent (regular, progressive/regressive, cycled) traction forces from a motor through harnesses typically attached to the cervical or lumbar vertebrae. It usually consists of an AC-powered motor with a control unit used to generate and regulate the mechanical forces, and a cord clamped to harnesses to transmit the force. Adjustable spreader bars attached to the control unit may be used to vary the angle at which the cord applies traction. The assembly may be table/wall-mounted for horizontal cervical and lumbar traction, or vertical cervical traction. It is used primarily to widen intervertebral spaces.	IIa

5586	45538	Static/intermittent powered traction system, mobile	Статик/тасралттай хөдөлгүүртэй зүтгүүрийн систем, хөдөлгөөнт	An assembly of devices designed to apply continuous and/or various intermittent (regular, progressive/regressive, cycled) traction forces from a motor through harnesses typically attached to the cervical or lumbar vertebrae. It is designed to be placed on a trolley (cart) that can be rolled to a table or chair to apply horizontal or vertical traction. It usually consists of an AC-powered motor with a control unit used to generate and regulate the mechanical forces, and a cord clamped to harnesses to transmit the force. Adjustable spreader bars attached to the control unit may be used to vary the angle at which the cord applies traction. It is used primarily to widen intervertebral spaces.	IIa
5587	45543	Oxygen administration hood, adult	Хүчилтөрөгчийн удирдлагын бүрээс, насанд хүрсэн	A device consisting of a rigid transparent plastic shell forming an enclosure over the head of an adult, typically to provide an enriched oxygen (O2)environment to increase the patient's O2 uptake. It is connected to an O2 source and may be used concurrently with increased humidification and temperature control. It is designed for a variety of situations: 1) for those adverse to oxygen delivery devices such as a nasal cannula or face mask; 2) for use inside hyperbaric chambers; 3) for specific pulmonary testing. It may include the tubing, a diffuser (to disperse the flow of incoming O2), O2 concentration and humidity sensors, and audio listening facilities. This is a reusable device.	IIa
5588	45545	Oxygen administration tent, neonatal/paediatric	Хүчилтөрөгчийн хэрэглээний тент, нярайн/хүүхдийн	A flexible enclosure designed to cover the bed of a neonatal or small child to provide an enriched environment of oxygen (O2) to increase the patient's O2 uptake. It is connected to an O2 source and may be used concurrently with increased humidification and temperature control. It typically consists of a metal frame covered with transparent plastic, the tubing, and may have built-in humidification. It is used for the treatment of breathing disorders in infant and paediatric patients permitting them movement without restriction. This is a reusable device.	IIa

5589	45546	Bladder ultrasound imaging transducer	Давсагны хэт авиан дүрсний хувиргагч	An ultrasound imaging transducer assembly specifically designed to be positioned within the bladder either manually or under endoscopic guidance. Included is a variety of single or multiple element transducer assembly configurations that convert electric voltages into an ultrasound beam. It steers, focuses, and detects the ultrasound beam and resulting echoes either mechanically or electronically. Also referred to as a bladder, or urethra probe, it may incorporate a biopsy needle guidance channel as part of the transducer casing or housing assembly design. This is a reusable device.	IIa
5590	45553	Orthopaedic bur, single-use	Ортопедийн бур, нэг удаагийн	A sterile, rotary cutting device consisting of a shaft of high-grade steel and a cutting head of hard metal/material with fluting or cutting planes of various shapes at the working end and which is designed to fit into an appropriate powered handpiece that provides the rotation allowing the user to excavate/shape bone tissue during small and large bone surgery (e.g., maxillofacial, spinal, or orthopaedic). This is a single-use device.	IIa
5591	45591	Ultrasonic body contouring system	Хэт авианы биеийн хэлбэр дүрслэх систем	An assembly of devices intended for the transdermal application of ultrasonic energy to rupture targeted fat cells in areas where they tend to enlarge (e.g., hips, thighs, abdomen, buttocks), to reshape those areas for cosmetic purposes. The assembly typically consists of a mains electricity (AC-powered) ultrasonic energy generator with user controls/interface and an ultrasonic transducer used to transmit the energy to a target area to emulsify fat cells; it may include a video imaging system that takes into account real-time body movement to precisely position the transducer during treatment. The use of this system may serve as a noninvasive outpatient procedure alternative to liposuction.	IIa

5592	45597	Laparoscopic access cannula seal reducer, single-use	Дурангийн сувгийн битүүмжлэл бууруулагч, нэг удаагийн хэрэглээ	A small device intended to reduce the sealing diameter of an existing laparoscopic access cannula seal, so laparoscopic instruments with smaller diameters can be introduced through the parent laparoscopic sleeve whilst maintaining a seal and inhibiting the leakage of insufflation media [e.g., carbon dioxide (CO_2) gas]. It is intended to fit within the laparoscopic access cannula seal (fitted at the proximal end of the cannula) when required throughout the laparoscopic surgical procedure. This is a single-use device.	IIa
5593	45599	Contact lens protein-removal solution	Контакт линзний уураг арилгах уусмал	A formulation of proteolytic enzymes, that may or may not be dissolved in cleaning (and possibly disinfecting) contact lens solution, used to remove debris and protein deposits from reusable contact lenses, or to remove protein deposits only. The lenses are typically soaked for a period in the solution and then rinsed in fresh contact lens cleaning solution for the removal of any residual material. Protein build-up on contact lenses often occurs from tear secretion. After application, this device cannot be reused.	IIa
5594	45607	Pulse oximeter	Пульс оксиметр	An electrically-powered photoelectric device designed for the transcutaneous measurement and display of haemoglobin oxygen saturation (SpO_2). The signals are produced by light-emitting diodes (LEDs) and received by a photodetector. The device displays the SpO_2 values and may also measure/display pulse rate. It is typically applied to the fingertip or around the wrist, may be single-component (with built-in probe) or multi-component (includes external probe), and may in addition wirelessly transmit measurements to a receiving location (e.g., central station, bedside monitor); it is intended to be operated by laypersons and healthcare providers.	IIa

5595	45608	Intravascular catheter slitter	Судас доторх катетер таслагч	A hand-held, surgical instrument used to facilitate the removal of an intravascularly placed catheter, typically a guide catheter used to introduce a variety of transvenous devices [e.g., a balloon catheter, oxygen (O2) and/or other sensors, pacing electrode/leads]. It has a specially shielded steel blade that is integrated into the handle. The exposed end of the transvenous device is typically placed and held in a protective channel of this device (the slitter) and the physician pulls the proximal end of the catheter against the blade in a smooth, firm, motion; this splits open the catheter hub and the tubing wall, leaving the transvenous device intact, in situ. This is a single-use device.	IIa
5596	45645	Laparoscopic access cannula seal, single-use	Лапароскопийн сувгийн битүүмжлэл, нэг удаагийн хэрэглээ	A small, noninvasive device intended to be fitted into the proximal end of a laparoscopic access cannula to create a seal between the cannula and an introduced laparoscopic instrument, for inhibition of insufflation gas leakage. It is intended to be fitted directly to the proximal end of the sleeve and is typically available in a variety of sizes appropriate for given sleeve/instrument diameters. This is a single-use device.	IIa
5597	45662	Symblepharon ring, natural	Symblepharon бөгж, байгалийн	An implantable device formed as a circular band that is used to help prevent the eyelid from adhering to the eyeball. It is used occasionally in the case of, e.g., glaucoma, to keep raw surfaces separated. It is a simple mucous membrane graft derived from biological materials.	IIa

5598	45669	Blood centrifugation system containment kit	Цусны центрифугийн системийг хадгалах хэрэгсэл	A collection of sterile devices that is a component of a blood centrifugation system intended to be used during the centrifugation of blood, relative components or cellular products (e.g., umbilical cord blood, bone marrow), to automatically isolate constituent components (e.g., cells, plasma). The kit is not donor or patient connected and is placed in the centrifuge of the processing unit. It includes a centrifugation chamber into which blood is introduced and sedimented into its components during centrifugation, a stopcock manifold and tubing intended to direct and control the sequential movement of each component, and collection containers. This is a single-use device.	IIa
5599	45712	Gastrointestinal/biliary dilation balloon catheter, non-medicated	Ходоод гэдэс/цөс өргөсгөх бөмбөлөг катетер, эмийн бус	A long, thin, flexible tube with an inflatable balloon at its distal tip intended to be used for gastrointestinal and/or biliary intraluminal dilation; it is typically used to endoscopically dilate strictures of the oesophagus, pylorus, colon and/or biliary tract. The balloon is inflated to its prescribed diameter to widen the affected passage of the tract. The device may consist of one or more lumen, may be of the fixed-wire or wire-guided type, and is not coated with a drug/pharmaceutical. This is a single-use device.	IIa
5600	45734	Corneal topography system analyser	Эвэрлэгийн топографийн системийн анализатор	A mains electricity (AC-powered) ophthalmic device used to measure the curvature and concentricity of the anterior corneal surface. It is typically a dedicated videokeratoscope that uses Placido imaging (involves a disk with concentric white and black rings) to provide keratometric and topographic measurements and images. It will typically output to a dedicated computer workstation or external computer with installed dedicated application software.	IIa
5601	45750	Ophthalmic tonometer tip cover	Нүдний тонометрийн үзүүрийн таг	A device that is applied to the tip of a contact type tonometer in order to avoid cross-infection between patients. It is made of natural rubber latex or synthetic polymer materials. This is a single-use device.	IIa

5602	45851	Bare-metal carotid artery stent	Нүцгэн металл каротид артерийн стент	A non-bioabsorbable tubular device dedicated to implantation in a carotid artery to maintain arterial patency and improve luminal diameter in patients with atherosclerotic disease. It is made of metal [e.g., nickel-titanium alloy (Nitinol)] typically in a tubular mesh structure, and is typically delivered to the site of implantation by a dedicated instrument where it self-expands upon release. It is available in a variety of lengths and diameters and may be used in conjunction with an embolic protection device. Disposable devices associated with implantation may be included.	IIa
5603	45852	Bare-metal renal artery stent	Бөөрний артерийн нүцгэн металл стент	A non-bioabsorbable tubular device intended to be implanted in a renal artery to maintain arterial patency and improve luminal diameter in patients with symptomatic atherosclerotic disease. It is made of metal [e.g., stainless steel, cobalt-chrome (Co-Cr), nickel-titanium alloy (Nitinol)] typically in a tubular mesh structure, sometimes bifurcation (Y-shaped) design, and is typically delivered to the site of implantation with a balloon catheter which will expand the device upon balloon inflation. It is available in a variety of lengths and diameters. Disposable devices associated with implantation may be included.	IIa
5604	45920	Tracheostomy tube cannula, reusable	Трахеостомийн хоолойн суваг, дахин ашиглах боломжтой	A hollow, cylindrical, curved device designed as an internal, independent component of a metal tracheostomy tube. It is made of metal [e.g., high-grade stainless steel and/or silver (Ag) or silver plated brass] or plastic and has precise dimensions allowing it to fit exactly into the outer tube and function as the inner cannula for tracheostomy tubes that have this kind of function. It is removed once or more times daily to facilitate the removal of phlegm, slime, and contamination build-up, thereby preventing blockage and infection of the stoma and eliminates the traumatic removal of the tracheostomy tube. This is a reusable device.	IIa

5605	45923	Tracheostomy kit, reusable	Трахеостомийн иж бүрдэл, дахин ашиглах боломжтой	A collection of surgical instruments, dilators, tracheostomy tubes and other items intended to be used to create a percutaneous opening in the trachea (tracheotomy) for the insertion of a tracheostomy tube to relieve upper airway obstruction and to facilitate ventilation. This is a reusable device.	IIa
5606	45925	Operative tracheostomy tube	Мэс заслын трахеостомийн хоолой	A sterile hollow cylinder designed to be inserted into the tracheostomy of a patient during an operative procedure. It is extended in length compared to a basic tracheostomy tube to enable connection to a breathing system or a humidifier, typically located at a distance from the operative field to allow easier access to the site of intervention. It is typically made of plastic/silicone materials and has an inflatable cuff at its distal end. This is a single-use device.	IIa
5607	46035	Ultrasonic dental scaling/debridement system handpiece tip, endodontic	Хэт авианы шүдний масштабын/шүд арилгах системийн гарны үзүүр, эндодонт	An insert intended to be attached to an ultrasonic dental scaling/debridement system handpiece, to transmit ultrasonic energy (e.g., 25 kHz/30 kHz) from a generator to fragment and dislodge the debris within the dental pulp for removal during an endodontic procedure; it is not primarily intended for dental cleaning or periodontal therapy. Also referred to as an ultrasonic endodontic file or rasp, it is available in a variety of forms and sizes, and is typically made of metal. This is a reusable device.	IIa
5608	46052	Ophthalmic cryosurgical system, electronic	Нүдний крио мэс заслын систем, электрон	An assembly of mains electricity (AC-powered) devices designed to apply cold from a gaseous or liquid refrigerant (cryogen) [e.g., liquid nitrogen (LN2), nitrous oxide (N2O), carbon dioxide (CO2)] to a target tissue for its destruction and removal during an ophthalmic surgical procedure. The system typically includes an electronic control unit which controls the flow of cryogen contained in a connected cylinder, dedicated cryogen-cooled hand-held applicators (probes) to apply the cold to the tissue, a foot-switch, and interconnections. It is commonly used for cryopexy for retinal detachment, cataract extraction, and to treat glaucoma, trichiasis, and retinopathy of prematurity (ROP).	IIa

5609	46076	Pacemaker electrode, transcutaneous	Зүрхний аппаратын электрод, арьсаар дамждаг	A device that is fixed on the external surface of the chest for the application of electrical pacing stimuli to the heart that is delivered through a wire from a connected external pacemaker. It is typically a pre-gelled, disposable pad with a large surface area (80 to 100 square cm); it may have high impedance (e.g., larger than 500 Ohms) for pacing only, or low for pacing and defibrillation. It can deliver simultaneous stimuli to all chambers of the heart and can be used to assist in resuscitating patients, correct arrhythmias, for temporary pacing during invasive procedures, or provide backup pacing during surgical placement of implantable pacemakers. This is a single-use device.	IIa
5610	46102	Surgical irrigation tubing set, single-use	Мэс заслын усалгааны хоолойн багц, нэг удаагийн	A collection of flexible, noninvasive, single-lumen tubing and associated items intended to provide a conduit to deliver a sterile irrigation solution (e.g., saline) from its source (e.g., gravity feed bag, feed pump) to a surgical cannula (not included) during a surgical procedure (endoscopy, laparoscopy); it is not intended to navigate through an anatomical lumen. The tubing set includes devices such as clamps, filters, spikes, and Y-piece connectors, and may in addition include an integrated manual pump (e.g., a squeeze bulb) or handpiece. This is a single-use device.	IIa
5611	46119	Bone graft delivery kit	Ясны шилжүүлэн суулгах иж бүрдэл	A collection of sterile devices intended to be used to prepare and/or deliver bone graft material during an orthopaedic surgical procedure. It typically includes aspirating/delivery/mixing syringe(s), an adaptor, and a needle/cannula. It allows for the aspiration and/or premixing of bone marrow, autologous blood, plasma, intravenous fluids (IVF), and bone void filler (e.g., allograft, autograft, synthetic bone graft material), and their delivery to the surgical site. This is a single-use device.	IIa

5612	46121	Haemorrhage control pin	Цус алдалтыг хянах зүү	A thumbtack-like implant typically intended to be used during pelvic surgery to control severe, localized bleeding from veins in the presacral area. It is implanted through a presacral vein into the sacrum (fused vertebral bones of the lower spine) after other methods of haemostasis (e.g., cauterization, suturing, clamping) have been determined ineffective. The device is made of metal [e.g., titanium (Ti)], having a large disk-like head and a serrated shaft. It may be attached to a disposable pin applicator that helps the surgeon position it prior to pressing it into place.	IIa
5613	46234	Closed-wound drainage kit, micro-drainage	Хаалттай шархны ус зайлуулах хэрэгсэл, бичил ус зайлуулах хоолой	A collection of sterile devices designed to drain small, superficial abscesses and/or fluid collections. It will typically include an introducer needle, a guidewire, and a flexible, single-lumen, micro-drainage catheter with attached dilator that allows for atraumatic over-the-wire placement of the catheter. The initial puncture is made with the needle, the guidewire is advanced through the needle, which is then removed, and the catheter/dilator is advanced over the guidewire to obtain access to the site. The kit may have a wide range of surgical applications (e.g., general and plastic surgery). This is a single-use device.	IIa
5614	46269	Cranial bur, single-use	Гавлын яс, нэг удаагийн	A rotary cutting device consisting of a shaft of high-grade steel and a cutting head of hard metal and/or diamond material with fluting or cutting planes of various shapes at the working end and which is designed to fit into an appropriate powered handpiece that provides the rotation allowing the user to excavate soft or hard skull tissue. This is a single-use device.	IIa

5615	46271	Cardiac mapping catheter, oesophageal, single-use	Зүрхний зураглалын катетер, улаан хоолой, нэг удаагийн хэрэглээ	A sterile, thin, electrically-powered, flexible tube containing a sensor(s) designed to be introduced via the transpharyngeal or transnasal approach into the oesophagus to provide anatomical mapping reference data on the relative position of the oesophagus with respect to the heart during an electrophysiology (EP) ablation procedure; it relays three-dimensional (3-D) location information of the oesophagus lumen to an external cardiac mapping system. It may also be referred to as a cardiac mapping probe and is typically made of plastic and metal materials with embedded sensors (e.g., electromagnetic). This is a single-use device.	IIa
5616	46304	Drug-delivery iontophoresis system electrode, active	Эмийн ионтофорезийн системийн электрод, идэвхтэй	A dedicated, active, electrical conductor that is a component of an iontophoresis system for transcutaneous drug delivery of a localized medication (e.g., corticosteroids or local anaesthetics). It is typically a layered pad that is attached to the skin surface of the patient at the target site, and connected to the current generator with a lead wire. An applied electric field causes the ionic-solution medication to transport from a reservoir within the pad for patient exposure. It comes in a variety of sizes. This is a single-use device.	IIa
5617	46305	Iontophoresis system electrode, return	Ионтофорезийн системийн электрод, буцах	A non-sterile, non-active, electrical conductor that is fastened to a patient and connected to an iontophoresis system (e.g., typically the current generator), to create a circuit for the return of electrical current after its emission for the therapeutic transport of ions to the patient. It is fastened to the patient's body typically where the greatest effect can be achieved with respect to the active electrode. It will typically be designed with a detachable lead wire and comes in a variety of sizes. This is a single-use device.	IIa

5618	46329	Spring-loaded pneumoperitoneum needle, reusable	Пневмоперитонеум зүү, дахин ашиглах боломжтой	A slender, sharply-pointed metal tube designed to introduce or remove gas from the peritoneal cavity as a therapeutic or surgical/radiological procedural method. It is often inserted into the peritoneal cavity for the purpose of insufflation [e.g., with carbon dioxide (CO2)] to establish pneumoperitoneum prior to abdominal endoscopy. It is equipped with a spring-loaded, round-tipped obturator that extends from the tube when the device does not encounter resistance (i.e., when the cavity has been reached) to prevent damage from the sharp point. This is a reusable device.	IIa
5619	46338	Orthodontic band material	Ортодонтийн туузан материал	A material typically supplied in the form of rolls, strips, or precut blanks with the attachments in place ready to be configured as orthodontic bands. This is a single-use device.	IIa
5620	46350	Bone marrow biopsy needle, single-use	Ясны чөмөгний биопсийн зүү, нэг удаагийн хэрэглээ	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to obtain a specimen of bone marrow percutaneously. The device is typically available in a variety of large bores, and is sufficiently robust to penetrate bone (usually the hip bone or posterior iliac crest) with the force of pressure and twisting manually applied to its proximal handgrip. The resultant specimen is typically used for the pathological analysis of the source of blood cellular elements. This is a single-use device.	IIa
5621	46374	Vascular Doppler clamp	Судасны доплер хавчаар	An instrument with an integrated ultrasound transducer intended to be used for the detection and temporary occlusion of blood vessels during a surgical procedure. It is typically a held-hand device that is placed on the exposed vasculature to be affected. It is connected to an appropriate signal receiver, and using the Doppler effect [variation in the frequency of a wave of energy (as measured by an observer) due to relative motion between the observer and the source of the wave] provides the user with information regarding achieved occlusion of the vessel(s). It is typically used on uterine arteries during laparoscopic myomectomy. This is a reusable device.	IIa

5622	46391	Metal/carbide ENT bur, reusable	Металл/карбид чих хамар хоолойн шар, дахин ашиглах боломжтой	A small rotary shaft of hard metal (e.g., steel) or carbide, with fluting or cutting planes of various shapes at the working end, designed for incising or removing cartilage and/or bone from the ear, nose, or throat during an ear/nose/throat (ENT) procedure. It is usually power-driven by a rotary handpiece or other powered device. It is typically used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a reusable device.	IIa
5623	46392	General/plastic surgery bur	Ерөнхий/хуванцар мэс засал	A small rotary shaft of hard metal (e.g., steel) with fluting or cutting planes of various shapes on one end, designed to excavate soft tissue or cartilage during general and/or plastic surgery. It is usually power-driven by a rotary handpiece or other powered device. This is a reusable device.	IIa
5624	46423	Gingival retraction solution	Буйл татах уусмал	A liquid substance used in dentistry to induce gingival retraction by in situ impregnation of a non-medicated gingival retraction cord. It induces contraction of the upper strata of the free gingiva typically through the action of an astringent agent (e.g., aluminium chloride). This device may also induce a local stasis of gingival exudates and gingival haemorrhages. After application, this device cannot be reused.	IIa
5625	46434	Oesophageal bougie, single-use	Улаан хоолойтой, нэг удаагийн хэрэглээ	A cylindrical, rod-like, surgical instrument that is used to explore and/or dilate a stricture during oesophagoscopic or bronchoscopic procedures. It may be designed with a semi-rigid tapered end (Maloney type) or with a blunt end (Hurst type), and may be hollow for the passing of other slender devices through it. This is a single-use device.	IIa

5626	46456	Nerve-locating system, line-powered	Мэдрэлийн байрлал тогтоох систем, шугамаар ажилладаг	An assembly of mains electricity (AC-powered) devices designed to locate a nerve by applying an electrical stimulus with a probe and comparing muscle responses as the probe is moved. Once the pathways are located, their transmission capabilities can be assessed by comparing observed muscle responses with the expected maximum contractions. The system typically includes an electrical pulse generator, appropriate electrodes, sensors to detect muscle response (e.g., a strain gauge), and audible and/or visual indicators. It is used during the diagnosis and assessment of nerve function and to locate nerves during surgery to reduce the incidence of accidental injury.	IIa
5627	46479	Surgical implant template, reusable	Хагалгааны суулгацын загвар, дахин ашиглах боломжтой	A device designed to determine the appropriate size and placement of a non-dental implant for a patient prior to or during implantation surgery. It is typically available as a graduated set or an individual plate (e.g., a translucent plastic sheet or a cut metal shape) with patterns/sizes corresponding to the size of the implant to be used to aid the surgeon in final selection of implant size, placement, and/or adaption. It is used for, e.g., total- or partial-joint prostheses, bone fracture fixation implants (plates, nails, including skull plate implants) or other types of surgical implants. This is a reusable device.	IIa
5628	46483	Surgical plume evacuation system tube	Мэс заслын чавганы нүүлгэн шилжүүлэх системийн хоолой	A long, hollow cylinder which, as part of a surgical plume evacuation system, is intended to be used to capture, conduct, and exhaust the plume of smoke generated during open surgical procedures in which there is tissue ablation (e.g., laser surgery, electrocautery, electrosurgical diathermy device). This is a single-use device.	IIa

5629	46524	Surgical traction skull tongs	Мэс заслын гавлын ясны хавчуур	An instrument used during orthopaedic surgery to perform traction on the cervical spine by applying an upward force to the skull that causes hyperextension of the head and neck. It is typically a two-arm pivoted instrument that is attached to the skull using pins (either partially implanted or not); the proximal end includes a mechanism (e.g., an adjustable threaded bolt and nut) responsible for the application of the traction force. This device is typically used during procedures to treat a fractured spine. This is a single-use device.	IIa
5630	46554	Pacing/defibrillation lead repair tool	Пасинг/дефибрилляцийн хар тугалга засах хэрэгсэл	A dedicated device used to repair the lead of an implantable pacemaker or an implantable cardioverter-defibrillator (ICD). It is typically designed as a small wrench or screwdriver, and is typically used to repair a pacemaker lead or to reconnect a pacemaker/defibrillator lead to a pacemaker/defibrillator generator. This is a reusable device.	IIa
5631	46560	Visual evoked-potential graphic recorder	Харагдах боломжтой график бичигч	An electronic device designed to record an electrical potential that originates in the optical pathway of the brain in response to visual stimuli (e.g., shifting patterns of light). It is typically used as a component of a visual evoked-potential graphic recording system.	IIa
5632	46561	Somatosensory evoked-potential graphic recorder	Соматосенсорын өдөөгдсөн боломжит график бичигч	An electronic device designed to record an electrical potential that originates in the somatosensory pathway of the brain in response to somatosensory stimuli (e.g., an electrical or tactile stimulus on a part of the body). It is typically used as a component of a somatosensory evoked-potential graphic recording system.	IIa

5633	46573	Physical therapy transcutaneous neuromuscular electrical stimulation system	Физик эмчилгээ нь арьсан доорх мэдрэл-булчингийн цахилгаан өдөөлтийн систем	An electrically-powered device assembly intended to apply various modes of electrical stimulation transcutaneously to treat/prevent neuromuscular symptoms and disorders typically as a form of physical therapy [neuromuscular electrical stimulation (NMES)/electronic muscle stimulation (EMS)]; it may in addition be intended for transcutaneous electrical nerve stimulation (TENS) to treat pain, and/or electroacupuncture. It includes an electric current pulse generator and noninvasive electrodes; it is not intended for tremor suppression. Clinical applications typically include relaxation/re-education of muscles, prevention of muscle atrophy, and improvement of blood circulation.	IIa
5634	46581	Orthodontic bracket, metal	Ортодонт хаалт, металл	A metallic device that is bonded to an orthodontic band, or directly to a tooth, to hold an orthodontic wire and/or other appliance (e.g., rubber bands) used to apply pressure to the tooth in order to alter the position of the tooth. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa
5635	46582	Orthodontic bracket, plastic, single-use	Ортодонт хаалт, хуванцар, нэг удаагийн	A plastic device intended to be bonded to a tooth, to hold an orthodontic wire and/or other appliance (e.g., rubber bands) used to apply pressure to the tooth in order to alter the position of the tooth. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa
5636	46587	Cystographic/urethrographic catheter, female	Цистографи/шээсний катетер, эмэгтэй	A sterile, flexible or semi-rigid tube, typically double lumen, with one or more openings in the distal tip, designed to infuse a contrast medium into the female urethra, and possibly urinary bladder, for diagnostic radiographic imaging of the urethra and/or bladder. It may include a balloon at the distal tip that is placed in the bladder and another balloon that remains outside at the proximal end of the urethra. The imaging is typically used to delineate abnormalities of structure or function of the bladder and urethra, including the detection of vesicoureteral reflux (VUR) and stress incontinence. This is a single-use device.	IIa

5637	46589	Orthodontic bracket, plastic, reprocessed	Ортодонт хаалт, хуванцар, дахин боловсруулсан	A plastic device intended to be bonded to a tooth, to hold an orthodontic wire and/or other appliance (e.g., rubber bands) used to apply pressure to the tooth in order to alter the position of the tooth. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
5638	46604	Vascular puncture haemostasis arm clamp/band, reusable	Судасны хатгалт гемостазын гар хавчаар/буулга, дахин ашиглах боломжтой	A semi-flexible, adjustable, clamp or band/strap device designed for application over an arterial/venous/fistula needle-puncture site in a patient's arm to provide uniform pressure and achieve haemostasis. Commonly used on haemodialysis patients, some types are referred to as fistula clamps. This is a reusable device.	IIa
5639	46617	Tissue saturation oximeter sensor, reprocessed	Эдийн ханалтын оксиметрийн мэдрэгч, дахин боловсруулсан	A photoelectric device that is applied externally to a site on the body surface of a paediatric or adult patient for transcutaneous measurement the percent oxygen saturation of haemoglobin in a volume of tissue (StO2) to assess the amount of oxygen delivered to that tissue, typically during circulatory or perfusion examinations of skeletal muscle or when there is a suspicion of compromised circulation. It is connected to a tissue saturation oximeter via a fibreoptic cable. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5640	46618	Tissue saturation oximeter sensor, single-use	Эдийн ханалтын оксиметр мэдрэгч, нэг удаагийн	A photoelectric device that is applied externally to a site on the body surface of a paediatric or adult patient for transcutaneous measurement the percent oxygen saturation of haemoglobin in a volume of tissue (StO2) to assess the amount of oxygen delivered to that tissue, typically during circulatory or perfusion examinations of skeletal muscle or when there is a suspicion of compromised circulation. It is connected to a tissue saturation oximeter via a fibreoptic cable and will typically include a light shield to protect the measurements from ambient light. This is a single-use device.	IIa
5641	46626	Intermittent urethral drainage catheter, antimicrobial	Завсарлагатай шээсний суваг катетер, нянгийн эсрэг	A flexible or rigid, tube designed to be repeatedly inserted through the urethra, typically by the user (i.e., self-applied), to the urinary bladder to provide short-term, episodic urine drainage (removed after each void), typically for an individual who is physiologically incapable of voiding. Because of the potential frequency of catheterization, the device will typically be pre-lubricated or coated with/made of materials that facilitate easy insertion and removal; it is also coated with an antibiotic or antimicrobial agent to help prevent infection of the urinary tract. This is a reusable device on the same patient for a limited period of time.	IIa
5642	46676	Tissue injection cannula	Эдийн тарилгын суваг	A thin, sterile, semi-rigid or rigid metal tube intended to be inserted percutaneously for the injection of a substance into the cutaneous or subcutaneous layers. It is typically used for the administration of fillers [e.g., hyaluronic acid (HA)] to add volume to tissue for cosmetic or reconstructive purposes. The device is typically designed with a closed-off nose and a lateral hole at the distal tip, and a connector at the proximal end for attachment to a device that propels the injection substance. It is typically made of high-grade stainless steel. This is a single-use device.	IIa

5643	46678	Flexible endoscopic biopsy handpiece/needle	Уян дурангийн биопсийн гар утас/зүү	A sterile flexible device intended to be used to obtain tissue specimens, for histopathological examination, during various endoscopic procedures (e.g., bronchoscopy, gastroscopy). It is typically constructed of a flexible metal coil or plastic tube whose distal end is equipped with a biopsy needle which is operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the compatible endoscope. This is a single-use device.	IIa
5644	46686	Endoscopic overtube, reusable	Дурангийн хэт гуурсан хоолой, дахин ашиглах боломжтой	A tubular device intended to be used in combination with a compatible flexible endoscope to aid in endoscopic insertions and to secure a pathway for multiple endoscopic intubations during diagnostic and therapeutic endoscopic procedures (e.g., upper and/or lower gastrointestinal (GI) tract endoscopy). It is a non-steerable, typically single-lumen tube constructed of plastic; some types may be "shape locked" into a desired configuration or form to assist in the repeated advancement and withdrawal of the endoscope (e.g., for the removal of multiple polyps and/or foreign bodies). This is a reusable device.	IIa
5645	46687	Endoscopic overtube, single-use	Дурангийн хэт гуурсан хоолой, нэг удаагийн хэрэглээ	A tubular device intended to be used in combination with a compatible flexible endoscope to aid in endoscopic insertions and to secure a pathway for multiple endoscopic intubations during diagnostic and therapeutic endoscopic procedures (e.g., upper and/or lower gastrointestinal (GI) tract endoscopy). It is a non-steerable, typically single-lumen tube constructed of plastic; some types may be "shape locked" into a desired configuration or form to assist in the repeated advancement and withdrawal of the endoscope (e.g., for the removal of multiple polyps and/or foreign bodies). This is a single-use device.	IIa

5646	46689	Endoscopic stent-placement system	Дурангийн стент тавих систем	An assembly of sterile devices inserted through a compatible flexible endoscope to implant a stent, typically into a pancreatic or biliary duct in order to maintain patency. It typically consists of a positioning catheter onto which the stent is loaded, a guiding device (commonly known as an introducer or guidewire) that aids the initial placement of the stent, and a pusher catheter that holds the stent in place during withdrawal of the other component devices. It is commonly made of polytetrafluoroethylene (PTFE) [Teflon], or polyethylene (PE). This is a single-use device.	IIa
5647	46690	Gastro-urological guidewire, reusable	Ходоод урологийн чиглүүлэгч утас, дахин ашиглах боломжтой	A metal coil or wire intended to assist the insertion/positioning of a diagnostic/therapeutic device(s) [e.g., endoscope, catheter] within the gastrointestinal (GI) and/or urinary tract. It is typically coated with a plastic material [e.g., polytetrafluoroethylene (PTFE), commonly known as Teflon, or polyethylene (PE)]. It may have radiopaque graduated markings at the distal end to assist in the fluoroscopic monitoring of its advancement/position within the body. This is a reusable device.	IIa
5648	46691	Gastro-urological guidewire, single-use	Ходоод урологийн чиглүүлэгч утас, нэг удаагийн хэрэглээ	A metal coil or wire intended to assist the insertion/positioning of a diagnostic/therapeutic device(s) [e.g., endoscope, catheter] within the gastrointestinal (GI) and/or urinary tract. It is typically coated with a plastic material [e.g., polytetrafluoroethylene (PTFE), commonly known as Teflon, or polyethylene (PE)]. It may have radiopaque graduated markings at the distal end to assist in the fluoroscopic monitoring of its advancement/position within the body. This is a single-use device.	IIa

5649	46705	Ophthalmic irrigation/infusion/aspiration cannula, non-illuminating, single-use	Нүдний усалгаа/дусаах/сорох суваг, гэрэлтүүлдэггүй, нэг удаагийн	A rigid or semi-rigid tube (non-illuminating) designed to be inserted into the eye to facilitate infusion, irrigation, and/or aspiration of fluids/gases during ophthalmic surgery (e.g., phacoemulsification, vitreoretinal surgery, sub-Tenon's anaesthesia, capsule polishing). It is a single- or multi-lumen device, typically made of high-grade stainless steel, and may include a length of flexible tubing or a basic handle (without controls). It may be blunt, or include a sharp angled tip/hook (e.g., irrigating cystotome for capsulotomy), however it does not have a sharp bevelled end for initial puncture of the eye (i.e., not a needle). This is a single-use device.	IIa
5650	46715	ERCP catheter, balloon, non-electrical, stone-retrieval	ERCP катетер, бөмбөлөг, цахилгаангүй, чулуу авах	A flexible, tubular, non-electrical device with an inflatable multi-sizing balloon at the distal end designed for the removal of stones (calculi) from the biliary tract during endoscopic retrograde cholangiopancreatography (ERCP). It is inserted through the working channel of an endoscope, typically beyond the stones, where the balloon is inflated and retracted to pull the stones out. It typically has more than one lumen to allow, e.g., use of a guidewire while simultaneously enabling the injection of a contrast medium into the biliary tree for fluoroscopic visualization of the bile ducts. This is a single-use device.	IIa
5651	46722	Flexible fibreoptic cystonephroscope	Уян хатан шилэн цистонфроскоп	An endoscope with a flexible inserted portion intended for the visual examination/treatment of the bladder, the urethra (including the prostate region), and the kidneys. It is inserted into the urethra through the natural urinary orifice, and percutaneously into the renal pelvis for the kidneys during an endoscopic procedure. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used for the removal/crushing of stones, pyelitis, and renal failure (nephroscopy); and treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence (cystoscopy). This is a reusable device.	IIa

5652	46723	Flexible video cystonephroscope, reusable	Уян хатан видео цистонфроскоп, дахин ашиглах боломжтой	An endoscope with a flexible inserted portion intended for the visual examination/treatment of the bladder, urethra (including prostate region), and kidneys. It is inserted into the urethra via the natural urinary orifice, or percutaneously into the renal pelvis for the kidneys during endoscopy. Anatomical images are obtained via a camera incorporated at its distal end and are shown on a monitor. It is typically used for the removal/crushing of stones, investigation of pyelitis and renal failure, treatment of lesions of the urinary bladder/posterior urethra, or to evaluate bladder control/incontinence. This is a reusable device.	IIa
5653	46729	Tissue morcellation system	Эд эсийг задлах систем	An assembly of devices used to mechanically cut (slice), core (cut a hole into), peel (remove surface), and extract selected tissue from the body (a process known as morcellation), typically during laparoscopic surgery (e.g., for tumour or fibroid removal). It typically consists of a handpiece (high-speed rotating blade and holder) for tissue resection and extraction, a mains electricity (AC-powered) control unit that drives the handpiece blade, a remote drive cable to connect the handpiece with the control unit, and a foot-switch; some designs may also provide suction intended for removal of resected tissue.	IIa
5654	46733	Tissue morcellation system handpiece obturator	Эд эсийг задлах систем бариулын бөглөрөл	A surgical device designed to fill the lumen of a tissue morcellation system handpiece during its insertion into a body cavity, primarily to assist in the atraumatic positioning of its cutting head prior to tissue resection. It is typically a hollow rod with a rounded distal end that protrudes from the handpiece; it is typically made of plastic material to prevent damage to the handpiece blade. This is a single-use device.	IIa

5655	46738	Ophthalmic knife, reprocessed	Нүдний хутга, дахин боловсруулсан	A hand-held manual ophthalmic surgical instrument designed to make precise incisions in the eye and surrounding tissues during ophthalmic surgery. It is typically designed as a one-piece instrument with a sharp, single-edged cutting blade at the distal tip and a handle at the proximal end. It can have a variety of blade edge shapes, e.g., phaco (blunt or sharp), crescent, straight, and micro-phaco (for micro incision cataract surgery). It is usually made of high-grade stainless steel. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa
5656	46741	Ophthalmic knife, single-use	Нүдний хутга, нэг удаагийн	A hand-held manual ophthalmic surgical instrument designed to make precise incisions in the eye and surrounding tissues during ophthalmic surgery. It is typically designed as a one-piece instrument with a sharp, single-edged cutting blade at the distal tip and a handle at the proximal end. It can have a variety of blade edge shapes, e.g., phaco (blunt or sharp), crescent, straight, and micro-phaco (for micro incision cataract surgery). It is usually made of high-grade stainless steel and some types can employ silicon (i.e., a brittle metalloid material) blades. This is a single-use device.	IIa
5657	46747	Gastro-urological guidewire, reprocessed	Ходоод-урологийн чиглүүлэгч утас, дахин боловсруулсан	A sterile metal coil or wire intended to assist the insertion/positioning of a diagnostic/therapeutic device(s) [e.g., endoscope, catheter] within the gastrointestinal (GI) and/or urinary tract. It is typically coated with a plastic material and may have radiopaque graduated markings at the distal end to assist in the fluoroscopic monitoring of its advancement/position within the body. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIa

5658	46750	Vertebral bone biopsy procedure kit, single-use	Нугаламын ясны биопсийн процедурын багц, нэг удаагийн хэрэглээ	A collection of sterile devices, equipment, and supplies used to obtain a bone specimen from the vertebrae of a patient (the bony segments of the spinal column) for histological analysis. It typically contains a metal cannula which can have various tip designs (e.g., bevelled, pyramidal, scoop-, or diamond-shaped) and stylet(s), a biopsy needle, an obturator, a needle holder, syringes, and connecting tube. The specimen can be used for the detection of cancer, infection, or other bone disorders. The device may also be used for vertebral infusion (e.g., injection of bone cement). This is a single-use device.	IIa
5659	46799	Retinal optical coherence tomography system	Торлог бүрхэвчийн оптик когерент томографийн систем	An assembly of devices that uses a broad-bandwidth light beam aimed into the eye for in vivo tomographic imaging and measurement of the retina, the retinal nerve fibre layer (its thickness), and optic disk in order to diagnose and manage retinal diseases. Reflected light is picked up by a detector that converts it into electrical signals using a computer and dedicated software, providing cross-sectional images of the retina or three-dimensional (3-D) volume scans. Optical coherence tomography (OCT) is used for visualizing the area/location of retinal-thickness abnormalities, macular holes or oedema, atrophy associated with degenerative diseases, glaucoma, and other retinal pathologies.	IIa
5660	46800	Subcutaneous tunneller, reusable	Арьсан доорх туннеллер, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to create a subcutaneous tunnel (artificial passageway) between percutaneous entry and exit incisions for the subcutaneous placement of a device (e.g., catheter for medication administration, shunt, retinal chip). It is available in a variety of forms and may be: 1) a luminal sheath with a removable inner obturator, intended for co-axial device introduction, followed by sheath removal; or 2) a non-luminal device intended to either lead or pull the device through subcutaneous tissue. It is not intended for tunnelling through deep tissues. This is a reusable device intended to be sterilized prior to use.	IIa

5661	46801	Subcutaneous tunneller, single-use	Арьсан доорх туннеллер, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument designed to create a subcutaneous tunnel (artificial passageway) between percutaneous entry and exit incisions for the subcutaneous placement of a device (e.g., catheter for medication administration, shunt). It is available in a variety of forms and may be: 1) a luminal sheath with a removable inner obturator, intended for co-axial device introduction, followed by sheath removal; or 2) a non-luminal device intended to either lead or pull the device through subcutaneous tissue. It is not intended for tunnelling through deep tissues and is not a dedicated pacing or defibrillation lead tunneller. This is a single-use device.	IIa
5662	46816	Heat/moisture exchanger/microbial medical gas filter	Дулаан/чийг солилцуур/микробын эмнэлгийн хийн шүүлтүүр	A device intended to be placed within a breathing circuit proximal to the patient, to remove and retain microbes whilst capturing the patient's exhaled heat and moisture so that they can be used to heat and humidify the therapeutic gases inspired by the patient. It is typically a plastic housing which contains both a bidirectional microbial filter, intended to reduce the risk of cross-contamination between patients, and a heat/moisture exchanger (HME), intended to maintain the mucous membranes of the respiratory tract. It is typically used during anaesthesia or periods of prolonged respiratory support/therapy. This is a single-use device.	IIa
5663	46832	Laryngoscope blade cover	Ларингоскоп ирний бүрээс	A non-sterile device typically designed as a moulded plastic sleeve intended to be placed over the reusable blade and upper portion of the handle of a laryngoscope (i.e., rigid intubation type) during intubation to create a barrier in order to reduce the cleaning time and turnaround time of the laryngoscope blade for reuse. It is typically held in place with a rubber band or clip. This is a single-use device.	IIa

5664	46838	Cardiopulmonary bypass system, non-roller type	Зүрхний уушигны эргэлтийн систем, булны бус төрөл	An assembly of devices that provides mechanical circulatory support during open-heart surgery, bypassing the heart to facilitate surgery on the organ. The basic function of the machine is to oxygenate the body's venous supply of blood and then pump it back into the arterial circuit. It will typically provide features such as intracardiac suction, filtration, and temperature control. This device typically consists of mains electricity (AC-powered) console with centrifugal blood pumps, oxygenators, a heat exchanger, temperature regulators, a reservoir, filters, and a defoamer. Some systems are manufactured as a single unit while others are made up of modules.	IIa
5665	46839	Ophthalmic cannulation set, reusable	Нүдний сувгийн багц, дахин ашиглах боломжтой	A collection of non-powered devices intended to be used to create a channel into the eye for posterior segment ophthalmic surgery [e.g., infusion and/or aspiration of an ophthalmic replacement medium (e.g., silicone oil)]. It consists of metal cannulae, often with tubing, and includes additional ophthalmic instruments/devices intended to support the cannulation procedure (e.g., a trocar, plug, syringe, filter); it may be used in conjunction with a dedicated pump (not included) for pressure-controlled fluid delivery. This is a reusable device.	IIa
5666	46840	Ophthalmic cannulation set, single-use	Нүдний сувгийн багц, нэг удаагийн	A collection of non-powered devices intended to be used to create a channel into the eye for posterior segment ophthalmic surgery [e.g., infusion and/or aspiration of an ophthalmic replacement medium (e.g., silicone oil)]. It consists of metal cannulae, often with tubing, and includes additional ophthalmic instruments/devices intended to support the cannulation procedure (e.g., a trocar, plug, syringe, filter); it may be used in conjunction with a dedicated pump (not included) for pressure-controlled fluid delivery. This is a single-use device.	IIa

5667	46843	Ureteropelvic balloon catheter	Шээсний аарцагны бөмбөлөг катетер	A flexible tubular device with an inflatable balloon at the distal end that is placed via the ureter up to the ureteropelvic junction (UPJ) to primarily provide temporary occlusion of the UPJ to prevent stone fragments from lodging in the ureter during a lithotripsy procedure. It may also be used for the injection of a contrast medium for fluoroscopic visualization of UPJ structures, and some types may facilitate the introduction of a compatible endoscope. This is a single-use device.	IIa
5668	46852	Extraluminal vascular occluder, single-use	Гэрлийн гаднах судасны бөглөрөл, нэг удаагийн хэрэглээ	A device intended to be used to mechanically stop or interrupt the flow of blood in veins or arteries temporarily during vascular surgery and emergency trauma surgery. It is typically designed with a ring having a small portion left open so that it can be slipped over the blood vessel to be occluded, or it can have semicircular pivoted arms that can be opened and placed over the vessel with a latch to lock the arms once in place. The inner surface of this ring is lined with a soft-plastic balloon, or pair of balloons, inflated via a connecting tube using a standard syringe. This device facilitates occlusion with minimal trauma to the wall of the blood vessel. This is a single-use device.	IIa
5669	46876	Indirect calorimeter	Шууд бус калориметр	An electrically powered device primarily intended to measure oxygen consumption (VO2) and/or carbon dioxide output (VCO2) to estimate resting energy expenditure (REE) and/or resting metabolic rate (RMR), typically for weight loss/maintenance and nutritional assessments. It is intended to be used with a face mask, mouthpiece and/or head hood into	IIa
5670	46880	Wound closure set, topical	Шархыг хаах багц, сэдэвчилсэн	A collection of sterile devices used to topically close easily-approximated skin edges of wounds. It typically includes a pressure-sensitive adhesive tape or mesh and a liquid adhesive, each contained within a dispensing applicator. The tape/mesh is first applied to temporarily approximate the skin edges followed by application of the liquid adhesive, over the tape/mesh, which polymerizes to affect wound closure. This set may be used to treat surgical incisions, simple lacerations, and may also be used in conjunction with deep dermal stitches. This is a single-use device.	IIa

5671	46909	Ophthalmic working-channel cannula, reusable	Нүдний ажлын сувгийн суваг, дахин ашиглах боломжтой	A rigid tube designed to create a channel through the sclera for internal ocular access during posterior segment ophthalmic surgery. It is typically made of plastic materials or high-grade stainless steel and enables the introduction of ophthalmic surgical instruments; it may also be used for irrigation (i.e., the infusion of fluids to maintain the interior pressure of the eye during surgery). This is a reusable device.	IIa
5672	46938	Dental polishing cup, single-use	Шүд өнгөлөх аяга, нэг удаагийн	A rotational device, typically made from rubber material, that is used to apply polishing agents during dental prophylaxis (cleaning). Commonly known as a prophylaxis cup it is held in a dental handpiece, which rotates the cup at high speeds as the polishing agent is applied to the surface of the teeth. This is a single-use device.	IIa
5673	46939	Fatty acid dental cement	Тосны хүчлийн шүдний цемент	A non-sterile, non-aqueous substance containing fatty acids typically with a mixture of oxides or hydroxides of zinc, magnesium, and/or calcium, that cures upon the acid/base reaction of its components and is intended to be used in a professional setting for the temporary luting of prefabricated dental crowns and bridges, but may also be used for the temporary filling of small cavities. It is typically available as a two-component device that can be hand mixed or auto-mixed (using a dispenser with mixing nozzle) into a paste. After application, this device cannot be reused.	IIa
5674	46940	Dental polishing brush	Шүд өнгөлөх сойз	A rotational device, typically composed of a metal shaft with bristles containing silicium carbide material, that is used for the quick grinding and polishing of dental composite materials and hard dental tissues to produce a high shine. It is held in a dental handpiece, which rotates the brush at high speeds [e.g., 5000 revolutions per minute (rpm)]. It is suitable for interproximal areas and occlusal surfaces. This is a reusable device.	IIa

5675	46950	Scalp clip forceps	Толгойн хавчуур хямсаа	A hand-held, manually-operated, surgical instrument used to manually apply and remove haemostatic scalp clips (reusable or single-use) from the scalp during or after a surgical intervention on the cranium/scalp. It is typically a scissors-like device with ring handles, and may or may not be self-retaining. The working end of the device will typically have dedicated grasping blades that are profiled/designed to accommodate a compatible scalp clip. The device is available in various sizes and is typically made of high-grade stainless steel. This is a reusable device.	IIa
5676	46952	Scalp clip applier, single-use	Хуйсны хавчаар түрхэгч, нэг удаагийн хэрэглээ	A hand-held, manually-operated, surgical instrument used for the application (the attachment) of nonimplantable, single-use scalp clips to the margins of a scalp wound/incision during a surgical intervention on the cranium/scalp. Often referred to as a clip gun, it has a pistol-like design and holds an exchangeable, preloaded cassette of scalp clips that are fired into the scalp tissue, with the pull of a trigger, to approximate the margins of the wound/incision until it heals. This is a single-use device.	IIa
5677	46953	Scalp wound clip	Хуйсны шархны хавчаар	A small, nonimplantable device in the form of a U-shaped clip that is fired from a dedicated scalp-clip applier (clip gun) or manually applied using dedicated scalp clip forceps, to approximate the margins of a scalp wound/incision associated with a surgical intervention on the cranium/scalp. It is made of metal or plastic materials and is typically applied in rows; it is intended to remain in place until the incision has healed. This is a single-use device.	IIa

5678	46969	Conceptive cervical cap, reusable	Умайн хүзүүний малгай, дахин ашиглах боломжтой	A flexible device designed to promote conception, either by serving as a container to introduce semen into the cervix, or by acting as a cervical cup that allows sperm to be held in place for easier access to the cervical os. It is a plastic device that is typically larger, but shallower, than a contraceptive cap. The device is used to aid conception in couples who have experienced difficulties due to low sperm counts, reduced sperm motility or a hostile vaginal environment; and also for self or assisted insemination. This is a reusable device.	IIa
5679	46991	Intrauterine venogram set	Умайн доторх венограмм багц	A collection of devices designed for the introduction of contrast medium into the uterine cavity and/or the uterine veins for the purpose of radiographic examination using conventional x-ray. It typically consists of a catheter with catheter sheath, an injection needle (venogram needle), and connectors. It is typically used for assessment of chronic pelvic pain/congestion. This is a single-use device.	IIa
5680	47035	Polymeric urethral stent, short-term	Полимер шээсний сувгийн стент, богино хугацааны	A sterile non-bioabsorbable tubular device intended for short-term (<= 30 days) introduction into the urethra to facilitate urethral patency and an unimpeded flow of urine from the bladder, typically used during the postsurgical healing period [e.g., after thermal treatment of benign prostatic hyperplasia (BPH) or hypospadias/epispadias repair], or to relieve urethral obstruction from BPH and/or detrusor external sphincter dyssynergia (DESD). It is made entirely of a synthetic polymer(s) and may have various designs (e.g., continuous tube, meshed). It may be expandable in situ and disposable devices intended to assist implantation may be included. This is a single-use device.	IIa

5681	47038	Faecal incontinence collector, catheterization	Өтгөн ялгадас цуглуулагч, катетержуулалт	A receptacle intended to be used for the collection of liquid or semi-liquid stool (faeces) from a patient who is unable to control stool discharge. It consists of a faecal collection bag/pouch, a dedicated catheter intended to be attached to the bag proximally and inserted into the rectum distally, and adaptors/connectors. It is made of soft plastic material and may also include a drainage port and a syringe to drain faecal matter and/or to deliver medication. This is a single-use device.	IIa
5682	47039	Faecal incontinence kit	Өтгөн хаталтаас сэргийлэх иж бүрдэл	A collection of devices used for the conveyance and collection of liquid/semi-liquid stool (faeces) from the rectum to a collection bag for a patient who is unable to control stool discharge. It typically includes a balloon catheter, a disposable collection bag, a syringe, connectors, and ports for balloon inflation and irrigation. The catheter is inserted into the rectum where it is retained by the inflatable balloon for a prescribed length of time. The kit is appropriate for adult patients in an intensive care unit (ICU), other acute care settings, or for persons with a disability. This is a single-use device.	IIa
5683	47059	Nasal biliary/pancreatic drainage catheter	Хамрын цөс/нойр булчирхайн ус зайлуулах катетер	A sterile, flexible tube intended to be introduced endoscopically for the temporary drainage of the biliary and/or pancreatic duct. It is intended to navigate to the biliary and/or pancreatic tract via the sphincter of Oddi, and terminate proximally via the nasal passage; devices associated with catheter introduction/connection (excluding the endoscope) may be included (e.g., nasal transfer tube, drainage connecting tube, guidewire), however it does not include any fluid collection bags/containers. This is a single-use device.	IIa

5684	47064	Cardiac mapping system switchbox	Зүрхний зураглалын системийн шилжүүлэгч хайрцаг	An electronic device [switching/locating device (SLD)] that is a component of a cardiac mapping system and used in conjunction with a cardiac mapping catheter and the system software to interface the other component devices of the system. It enables the display and location of a roving catheter when in proximity to an electrophysiology (EP) mapping catheter, the selection of electrodes for unipolar and bipolar pacing, and the routing of intracardiac electrocardiograms (ECG) to the recording devices. The other component devices are plugged into the SLD, allowing the operator to make the electrode selection and alternate the procedure parameters.	IIa
5685	47130	Vitrectomy fluid/gas handling handpiece/cannula	Витректомийн шингэн/хийтэй харьцах гар утас/суваг	A sterile, hand-held, invasive, ophthalmic surgical instrument intended to handle fluids and gases during vitreoretinal surgery. It is used for controlling the extraction of fluids, the internal drainage of subretinal fluid, retinal fold manipulation [proliferative vitreoretinopathie (PVR), retinotomies, translocation], and simultaneous or sequential gas/fluid exchange [fluid-air, air-gas, fluid-gas, fluid-perfluorocarbon (PFC), PFC-gas]. It consists of a handle with a blunt or soft tip/cannula, that is inserted into the eye, and may include aspiration tubing or an integral backflush reservoir for retrograde flushing of incarcerated tissue during aspiration. This is a single-use device.	IIa
5686	47132	Vascular catheter/cannula flush solution, anticoagulant, non-antimicrobial	Судасны катетер/суваг угаах уусмал, антикоагулянт, нянгийн эсрэг үйлчилгээтэй	A solution which contains a low dose (e.g., 10 i.u.) of an anticoagulant agent(s) [typically heparin] intended to flush the lumen of an in situ intravenous access device, typically a peripheral intravenous cannula or central venous catheter, to maintain patency; it does not include an antimicrobial agent. Also known as lock solution, the device is available in a small container (e.g., bottle) or prefilled syringe. This is a single-use device.	IIa

5687	47153	Haematological concentrate system preparation kit, bone marrow concentration	Гематологийн баяжмалын систем бэлтгэх иж бүрдэл, ясны чөмөгний концентраци	A collection of sterile devices typically used at the point-of-care for the rapid preparation of autologous bone marrow aspirate concentrate (BMAC) from bone marrow aspirate. The kit components, with the bone marrow aspirate, are directly placed in a dedicated centrifuge that separates and concentrates the bone marrow. The cellular BMAC preparations are typically applied to general and orthopaedic surgical sites, or pre-mixed with graft material, to assist the healing and/or graft acceptance process. The kit may include specimen drawing devices. This is a single-use device.	IIa
5688	47154	Haematological concentrate system centrifuge	Гематологийн баяжмалын системийн центрифуг	An electrically-powered device typically intended to be used at the point-of-care to concentrate platelets or bone marrow aspirate cells from a small volume of autologous (patient's own) blood/bone marrow using centrifugal force, for the rapid preparation of platelet-rich plasma (PRP) or bone marrow aspirate concentrate (BMAC). The concentrates are applied to general and orthopaedic surgical sites, or pre-mixed with graft material, to assist the healing and/or graft acceptance process. It includes a rotor head with a receptacle(s) for dedicated autologous specimen processing equipment. This device may additionally have refrigeration capabilities to perform temperature-sensitive procedures.	IIa
5689	47155	Haematological concentrate system preparation kit, thrombin separation	Гематологийн баяжмалын систем бэлтгэх иж бүрдэл, тромбин ялгах	A collection of sterile devices intended for use at the point-of-care for preparation of autologous thrombin (AT) from a blood specimen. The kit components, with the blood specimen, are directly placed in a dedicated centrifuge that separates the AT from the peripheral blood. The AT preparations, in combination with autologous plasma and concentrated platelets, can be applied to surgical wounds to help control minor bleeding, or mixed with bone graft materials to assist the healing and/or graft acceptance process. The kit may include sample drawing devices. This is a single-use device.	IIa

5690	47178	Hevea-latex surgical glove, non-powdered, non-antimicrobial	Hevea-латекс мэс заслын бээлий, нунтаг биш, нянгийн эсрэг үйлчилгээтэй	A device made of Hevea natural rubber latex (NRL) intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect both the patient and the staff against contamination from microorganisms. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	IIa
5691	47179	Hevea-latex surgical glove, powdered	Hevea-латекс мэс заслын бээлий, нунтаг	A sterile device made of Hevea natural rubber latex (NRL) intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is covered with powder primarily to facilitate donning and removal; it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect both the patient and the staff against contamination from microorganisms. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	IIa
5692	47183	Haematological concentrate system	Гематологийн баяжмалын систем	An assembly of devices typically used at the point-of-care to concentrate platelets or bone marrow aspirate cells, through low-speed centrifugal force (e.g., 2,500 to 7,000 rpm), from a small volume of a patient's own blood/bone marrow for the rapid preparation of platelet-rich plasma (PRP) or bone marrow aspirate concentrate (BMAC). It typically consists of a centrifuge, a dedicated centrifuge tube(s) and sample collection/processing kits, a concentrate delivery unit, and various disposable applicators. After processing, the concentrates are applied to general and orthopaedic surgical sites, or pre-mixed with graft material, to assist the healing and/or graft acceptance process.	IIa

5693	47189	Extremity-oxygenation hyperbaric chamber, powered	Экстремит-хүчилтөрөгчийн гипербарик камер, цахилгаанаар ажилладаг	A small, mains electricity (AC-powered) device intended to hermetically surround a patient's limb for the topical application of oxygen (O2) from a O2 supply, usually humidified, at a pressure slightly greater than atmospheric (e.g., 1 to 2 atm) during hyperbaric oxygen therapy (HBOT). The O2-enriched atmosphere may be raised above normal pressure by the device either continuously or intermittently. The device is typically a rigid plastic shell with electronic controls or a flexible shell connected to controls, tubing, and other accessories. It is typically used to treat skin ulcerations, decubitus ulcers, infected stumps, skin grafts, burns, and frostbite.	IIa
5694	47192	Skin staple remover, single-use	Арьсны үндсэн арилгагч, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument intended to be used to remove skin staples after the healing process has progressed sufficiently to permit the borders of the wound or incision to remain together without assistance. It is a tweezers-like device made of metallic or synthetic polymer materials with blades at the distal end activated by lever action designed for grasping, opening, and removing surgical staples. This is a single-use device.	IIa
5695	47232	Calcium hydroxide dental suspension	Кальцийн гидроксидын шүдний суспенз	A very basic (high pH) calcium hydroxide (Ca(OH)2) solution (also known as slaked lime or milk of lime) intended to be used in dentistry for a variety of purposes including to flush and disinfect root canals and crowns/bridges before final insertion, and to change the viscosity and/or moisten a temporary tooth filling material. It may also encourage the change of fibroblasts (cells which form the connective tissue of the body) into odontoblast-like cells to produce reparative dentine. After application, this device cannot be reused.	IIa

5696	47240	Ophthalmic irrigation/infusion/aspiration tubing, single-use	Нүдний усалгаа/дусаах/сорох хоолой, нэг удаагийн хэрэглээ	A length of flexible, noninvasive tube intended to connect an ophthalmic cannula to an external device(s) [e.g., pump, bottles] for infusion, irrigation and/or aspiration (suction) during an ophthalmic procedure [e.g., tamponade, glaucoma treatment]. It is made of polymer material(s), may incorporate single- or double-lumen and may be provided in rolls from which required lengths are cut, or in predetermined lengths. It may be provided with simple connectors; however, it does not include other associated items (e.g., clamp, spike) [i.e., not a tubing set]. This is a single-use device.	IIa
5697	47258	Contrast medium injection system administration set	Тодосгогч бодис тарилгын системийн удирдлагын багц	A collection of noninvasive devices designed to conduct fluids between a contrast medium injection system and a patient catheter for the delivery of a contrast medium and/or saline solution to a patient undergoing a diagnostic imaging procedure. It consists of tubing with switches/valves and connectors to syringes/fluid/contrast medium injection system, and possibly a pressure transducer; it is typically made of plastic materials. This is a disposable device which may serve multiple patients before being discarded.	IIa
5698	47259	Contrast medium injection system syringe	Тодосгогч бодисын тарилгын системийн тариур	A component of a contrast medium injection system for the administration of a contrast medium or saline solution to a patient undergoing a diagnostic imaging procedure. It is primarily an exchangeable plunger-in-barrel chamber for the medium/solution; the movement of the plunger (piston) is controlled by the contrast medium/solution injector. It is typically made of plastic materials and can be reused for several patients, e.g., up to five patients. This is a reusable device.	IIa

5699	47286	Head-worn bone-conduction hearing aid	Толгойд зүүсэн ясны дамжуулагч сонсголын аппарат	An electrically-powered acoustic device intended to compensate for impaired hearing by transmitting vibrations, from transduced sound waves, through the skull to the inner ear. It typically consists of a microphone, amplifier, and vibrator mounted or magnetically connected to a headband, spectacles or an implantable magnet; it may include positioning and protection devices. The microphone receives sound waves and converts them into electrical signals sent to the vibrator which transmits vibrations, typically through the mastoid bone, to the inner ears for hearing. This device is typically used to treat hearing impairment due to middle and/or outer ear obstructive pathologies.	IIa
5700	47339	Donor-organ perfusion catheter	Донор-эрхтэн сэлбэх катетер	A sterile, flexible tube designed for the emergent cooling perfusion of abdominal organs, in a donor just declared dead (or brain dead), to enable their viable procurement for transplantation. It is typically a radiopaque tube made of a synthetic polymer (e.g., polyurethane) with inflatable balloons, valves, and perforations for perfusion. The device, which may also be known as a multi-organ procurement (MOP) catheter, is usually introduced into the abdominal cavity percutaneously via the femoral artery. This is a single-use device.	IIa
5701	47342	Laparoscopic irrigation/aspiration cannula	Дурангийн усалгаа/сорох суваг	A rigid, sterile, hand-operated, tube-like device intended to be inserted through a laparoscopic port to provide a conduit for the instillation and/or aspiration of fluid during laparoscopy. It has a single-lumen, a proximal handle, and is typically made of plastic materials. It is connected via tubing to an appropriate irrigating/aspirating device(s), the irrigation/aspiration being regulated by the operator with mechanical valve controls typically in the handle of the cannula. This is a single-use device.	IIa

5702	47363	Physical therapy insulation patch	Физик эмчилгээний дулаалгын нөхөөс	A non-sterile device (a patch) intended to be applied externally to a body area to provide heat insulation to an inflamed joint, providing an analgesic effect alleviating localized pain in the joint. It is typically layered (e.g., an inner layer to retain heat and an outer layer to repel cold) and has an adhesive surface for adherence to the body surface. It is used for the treatment of local rheumatic conditions (e.g., joint and muscular pains, sports traumas, stiff neck, lumbago). It is typically available [non-prescription] over-the-counter (OTC). This is a single-use device.	IIa
5703	47365	Ophthalmic working-channel cannula, single-use	Нүдний ажлын сувгийн суваг, нэг удаагийн	A sterile rigid tube designed to create a channel through the sclera for internal ocular access during posterior segment ophthalmic surgery. It is typically made of plastic materials or high-grade stainless steel and enables the introduction of ophthalmic surgical instruments; it may also be used for irrigation (i.e., the infusion of fluids to maintain the interior pressure of the eye during surgery). This is a single-use device.	IIa
5704	47436	Surgical optical-tracking spatial marker holder	Мэс заслын оптик хянах орон зайн маркер эзэмшигч	A component of a surgical navigation and/or device tracking system (e.g., computer-assisted neurosurgical ultrasound navigation system, surgical microscope with tracking camera) intended to be used preoperatively and/or intraoperatively as a localizer/holder for optical spatial markers (e.g., reflective marker spheres) that are attached to it prior to use. It can be attached to the distal end of an ultrasound transducer (US probe), neurosurgical instrument, hand-held pointer manipulated by the surgeon, or a patient reference point (e.g., head clamp), and is used as part of the tracking system to provide the correct position of the surgical devices and patient. This is a reusable device.	IIa

5705	47438	Neurosurgical ultrasound navigation system transducer	Мэдрэлийн мэс заслын хэт авиан навигацийн системийн хувиргагч	An ultrasound (US) imaging transducer assembly, enclosed in a fluid-resistant, acoustically- and electrically-insulated housing, used with a neurosurgical ultrasound navigation system. It is inserted by the operator through a small craniotomy/cranial bur hole to provide US imaging/positioning information. Commonly known as an ultrasound probe, it is equipped with a dedicated US probe localizer/spatial marker when used to provide navigational data. It is composed of either a single transducer element or an array of transducer elements [i.e., piezoelectric element(s), active element(s), or crystal(s)] and associated damping, backing, and matching layer materials. This is a reusable device.	IIa
5706	47498	Ophthalmic irrigation/infusion/aspiration tubing, reusable	Нүдний усалгаа/дусаах/сорох хоолой, дахин ашиглах боломжтой	A length of flexible, noninvasive tube intended to connect an ophthalmic cannula to an external device(s) [e.g., pump, bottles] for infusion, irrigation and/or aspiration (suction) during an ophthalmic procedure [e.g., tamponade, glaucoma treatment]. It is made of polymer material(s), may incorporate single- or double-lumen and may be provided in rolls from which required lengths are cut, or in predetermined lengths. It may be provided with simple connectors; however, it does not include other associated items (e.g., clamp, spike) [i.e., not a tubing set]. This is a reusable device intended to be sterilized prior to use.	IIa
5707	47507	Cardiopulmonary bypass system air bubble/foam detector	Зүрхний уушигны эргэлтийн системийн агаарын бөмбөлөг/хөөс мэдрэгч	A mains electricity (AC-powered) device designed to detect air bubbles and/or foam in blood returned to the body from the extracorporeal circuit of a cardiopulmonary (heart-lung) bypass system. It may detect the air bubbles/foam using either ultrasonic sensors (detecting changes in acoustic density) or less frequently photoelectric sensors (e.g., a photocell). The device usually consists of a control unit and a sensor; it usually triggers alarms and activates automated mechanisms to turn off the blood flow when a bubble occurs. It is typically an integral part of the cardiopulmonary bypass system.	IIa

5708	47514	Meniscus prosthesis	Мениск протез	An artificial substitute for the meniscus intended to be implanted in a patient who has undergone a total or partial meniscectomy (surgical removal of all or a part of a torn meniscus). It is made of synthetic polymer materials (e.g., polycarbonate urethane) and is designed to articulate with the tibial and femoral condylar cartilages; fixation screws may be included with the prosthesis. It is available in various widths and lengths.	IIa
5709	47532	Penile pressure measurement kit	Бэлэг эрхтний даралтыг хэмжих хэрэгсэл	A collection of devices designed to measure the vascular pressure in the corpus cavernosum (i.e., cavernosometry) of the penis during a forced erection. A vasodilator (e.g., prostaglandin) is injected and the rate of infusion required to achieve a rigid erection is measured. The collection includes appropriate drugs; a set of sterile devices such as infusion tubes, syringes, needles, clamps, catheters, and a basin; and a pressure transducer. It is used in the management of erectile dysfunction (ED) (commonly known as impotence). This is a single-use device.	IIa
5710	47535	Varicose vein lasing procedure kit	Варикозын судсыг арилгах процедурын багц	A collection of sterile devices and materials designed to perform percutaneous laser treatment of varicose veins and varicosities associated with reflux in the superficial veins of the leg. It typically contains an entry needle, a laser fibre, an introducer sheath, a catheter, a guidewire, a dilator, and connectors to facilitate connection to a laser (e.g., a diode laser) and provide a pathway for the laser energy into the section(s) of the vein to be treated. This device does not contain pharmaceuticals. This is a single-use device.	IIa
5711	47540	Soft-tissue biopsy needle, single-use	Зөөлөн эдийн биопсийн зүү, нэг удаагийн	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to percutaneously obtain a specimen of soft tissue, typically for histopathological examination. The device is usually attached to a syringe for the aspiration of the specimen; it is available in a variety of lengths, diameters (bores), and tip configurations (e.g., straight or curved). This is a single-use device.	IIa

5712	47558	Paranasal sinus ultrasound imaging system	Paranasal синусын хэт авиан шинжилгээний систем	An assembly of devices designed to detect liquid in the nasal and/or frontal sinuses using ultrasound. The system typically consists of a battery-powered, hand-held unit with a flat probe including a transducer; the transducer probe is externally applied on the patient's face close to the location of the sinus. A display, either a cathode-ray tube or a combination of light-emitting diodes (LEDs), shows the presence of liquids in the sinus typically up to a distance of 80 mm. The system is used to facilitate the diagnosis of maxillary and frontal sinusitis.	IIa
5713	47559	Water jet knife system handpiece, single-use	Усны тийрэлтэт хутганы системийн гар, нэг удаагийн хэрэглээ	A sterile, hand-operated device that is a component of a water jet knife system and designed to direct a concentrated stream of high-pressure water (typically sterile saline) to a surgical site to cut/dissect tissue. This handpiece is connected to a generator that pressurizes the water; it may also facilitate the aspiration of fluid and debris from the surgical site. This is a single-use device.	IIa
5714	47567	Polysomnography analyser	Полисомнографийн анализатор	A mains electricity (AC-powered) device designed to record and interpret a variety of physiologic functions during sleep to evaluate sleep/sleep-related disorders (e.g., insomnia, hypersomnia, apnoea). It typically performs electroencephalography, electrocardiography, electro-oculography, electromyography, and respiration, temperature, and pulse oximetry readings. It may also provide audiovisual information about the sleeping patient for behavioural analysis and other measurements (e.g., gastric reflux, bedwetting). The device includes electrodes, measuring instruments, samplers, filters, amplifiers, and appropriate software for processing data and providing patient diagnoses.	IIa

5715	47603	Vesico-urethral anastomosis device	Везико-шээсний сувгийн анастомозын төхөөрөмж	A device intended for short-term introduction into the body (< 30 days) to facilitate the healing of the vesico-urethral anastomosis (VUA) as part of a radical prostatectomy procedure. It is typically a balloon catheter-like device that approximates the bladder neck and urethral tissues to minimize extravasation (leakage), while simultaneously providing a conduit for the drainage of urine from the bladder as the anastomotic site heals. It may also be used post-cystectomy (removal of the bladder) to approximate the neck of the bladder to the severed urethra. This device does not involve the use of sutures and may be repositioned if necessary. This is a single-use device.	IIa
5716	47611	Liver biopsy procedure kit	Элэгний биопсийн процедурын багц	A collection of sterile devices, equipment, and supplies used to obtain a tissue specimen from the liver of a patient for histological analysis. It typically contains a biopsy needle, a stylet, syringes, and a scalpel. The specimen is aspirated through the needle when in situ using the syringe. This is a single-use device.	IIa
5717	47622	Radiation blood/fluid warmer intravenous set	Цацрагийн цус/шингэн дулаацуулагч судсаар тарьдаг	A collection of devices used in conjunction with a radiation blood/fluid warmer to heat banked blood, blood products, and intravenous (IV) fluids to a temperature appropriate for infusion into a patient. It typically consists of a pouch(es) or a flexible cassette through which blood/fluid flows from the infusion bag to the patient while being heated in-line by the warmer; clamps and a bubble trap may be included. The set is typically used in the operating room (OR) or in accident and emergency (A&E) situations when rapid infusion of several units of blood/fluid is necessary. This is a single-use device.	IIa

5718	47624	Bone graft harvesting filter	Ясны шилжүүлэн суулгах шүүлтүүр	A sterile receptacle designed to collect morselized (cut/shredded into small pieces) bone and bone marrow typically obtained during an intramedullary procedure involving reaming, irrigation, and aspiration (suction). The filter is situated, with connection tubing, between the bone harvesting device (e.g., the orthopaedic reamer handpiece) and a suction system which creates vacuum to draw the graft into the filter where it is captured. The retrieved tissue is used for surgical procedures requiring bone graft (e.g., to facilitate bone fusion and/or fill bone defects). This is a single-use device.	IIa
5719	47667	IVF oocyte collection kit	IVF өндөг цуглуулах иж бүрдэл	A collection of sterile devices designed for ultrasound-guided transvaginal aspiration of oocytes (eggs) during the harvesting phase of an in vitro fertilization (IVF) procedure. It typically includes a long aspiration needle, a stylet to prevent occlusion of the needle with tissue during the perforation of the vaginal wall, a stopper/cap to block the opening of a test tube, tubing (for aspiration and possibly washing of the aspiration site), and connectors. This is a single-use device.	IIa
5720	47674	Biopsy syringe holder, reusable	Биопсийн тариур эзэмшигч, дахин ашиглах боломжтой	A hand-operated device designed to hold a biopsy syringe to facilitate precision aspiration of a tissue specimen through a biopsy needle. The holder is typically made of metal and plastic materials and typically designed as a lightweight, hand-held frame in which the syringe is placed and its piston withdrawn using a sliding handle in the frame; a stopper may be included to prevent further aspiration at a predetermined point. This is a reusable device.	IIa

5721	47707	Leukocyte separation kit	Лейкоцит ялгах хэрэгсэл	A collection of sterile devices designed to be used in conjunction with a blood separator to separate leukocytes [white blood cells (WBCs)] from a whole blood specimen obtained from a patient, typically for subsequent infusion into the same patient to perform a radiographic procedure (e.g., scintigraphic imaging). It consists of disposable items for the separation and collection of leukocytes (e.g., microfluidics chip, cell concentrate receptacle, tubing, waste bag, saline bag). This device is not intended for in vitro diagnostic (IVD) use. This is a single-use device.	IIa
5722	47723	Menstrual cup, non-latex, single-use	Сарын тэмдгийн аяга, латексгүй, нэг удаагийн	A cup-like receptacle placed by the user into the vagina to collect blood and cellular debris discharges during menstruation and discharges outside of the monthly menses. It is a small, soft device typically made of a biocompatible synthetic materials (e.g., low density polyethylene) and is typically removed from the vagina by pulling on a protruding stem or by insertion of a finger to catch its rim; depending upon design, it may or may not touch the cervix. The device can function as an alternative to tampons and may remain in situ during sexual intercourse. This is a single-use device.	IIa
5723	47725	Manual intraocular lens injector, single-use	Гар ажиллагаатай нүдний дотоод линзний тарилга, нэг удаагийн хэрэглээ	A hand-held manual ophthalmic surgical instrument designed to expel (launch) a prepared (folded) intraocular lens (IOL) from an attached IOL insertion cartridge into the anterior or posterior chamber of the eye during ophthalmic implantation surgery. It has a central plunger that is activated by a precise mechanism (e.g., a screw thread) and a mechanism at the distal end to hold/grip the insertion cartridge; it is typically made of plastic materials. This is a single-use device.	IIa
5724	47727	Menstrual cup, Hevea-latex	Сарын тэмдгийн аяга, Hevea-латекс	A cup-like receptacle placed by the user into the vagina to collect blood and cellular debris discharges during menstruation and discharges outside of the monthly menses. It is a small, soft device made of Hevea natural rubber latex (NRL) and is typically removed from the vagina by pulling on a protruding stem; depending upon design, it may or may not touch the cervix. The device can function as an alternative to tampons. This is a reusable device.	IIa

5725	47728	Menstrual cup, non-latex, reusable	Сарын тэмдгийн аяга, латексгүй, дахин ашиглах боломжтой	A cup-like receptacle placed by the user into the vagina to collect blood and cellular debris discharges during menstruation and discharges outside of the monthly menses. It is a small, soft device made of a biocompatible synthetic material (e.g., silicone elastomer) and is typically removed from the vagina by pulling on a protruding stem; depending upon design, it may or may not touch the cervix. The device can function as an alternative to tampons. This is a reusable device.	IIa
5726	47732	Coronary angioplasty balloon catheter, basic	Титэм судасны ангиопластик бөмбөлөг катетер, үндсэн	A flexible tube designed for percutaneous transluminal coronary angioplasty (PTCA) to dilate a stenotic coronary artery by controlled inflation of a distensible balloon(s) at its distal tip. It is typically available as: 1) an over-the-wire (OTW) type that has a double or triple-lumen, one for the guidewire and one or two for single- or double-balloon inflation; and 2) a rapid exchange (RX) type with a single-lumen. It is available in various sizes for the dilatation of small, narrowed, or obstructed coronary arteries or bypass grafts. It may also be intended for pre- or post-dilatation of a balloon-expandable stent (not included) in the coronary arteries. This is a single-use device.	IIa
5727	47737	Orthopaedic cement injection cannula	Ортопедийн цемент шахах суваг	A sterile, semi-rigid or rigid tube that is attached to the distal end of an orthopaedic cement dispenser and through which the bone cement is precisely extruded (dispensed) from the dispenser to the target site. It is typically made of plastic material. This is a single-use device.	IIa
5728	47739	Haemodialysis system dialysate pyrogen filter	Гемодиализийн системийн диализат пироген шүүлтүүр	A sterile device designed to be used with a haemodialysis system for filtration of dialysate during haemodialysis to remove bacteria and endotoxins and produce purified dialysate for the procedure. It may perform secondary safety filtering to prepare on-line substitution solution that can be infused into the patient to compensate for loss of fluid volume resulting from haemodialysis. It typically consists of a plastic housing, containing a hollow fibre membrane, with appropriate connectors at either end. This is a reusable device.	IIa

5729	47740	Orthopaedic cement-chilling device	Ортопедийн цемент хөргөх төхөөрөмж	A sterile device designed to be placed over an orthopaedic cement dispenser to cool the acrylic resin of orthopaedic cement to retard cement setting and extend cement extrusion and application time. It is typically made of plastic materials and usually consists of an open-ended tube that fits snugly over the body (barrel) of the cement dispenser after having been chilled in a refrigerator or freezer for a specified length of time. This is a single-use device.	IIa
5730	47750	Warm-bonded endodontic obturation system	Дулаан холболттой эндодонт бөглөрөлтийн систем	An assembly of devices designed to deliver preheated resin-based sealing, filling, and core materials into a root canal for direct warm bonding during an endodontic obturation procedure. It typically consists of a mains electricity (AC-powered) oven used to heat the preloaded oburators, a series of root canal sizers (verifiers) used for the selection of the appropriate obturator, and preloaded obturators; other materials may be included (e.g., self-etch sealer).	IIa
5731	47751	Warm-bonded endodontic obturation system obturator	Дулаан холболттой эндодонт бөглөрөлтийн системийн бөглөрөл	A hand-held manual dental instrument designed for direct warm bonding during an endodontic obturation procedure. It is preloaded (encased) with a resin-based sealing, filling, and core material at its distal working end which is subsequently heated in a dedicated oven to a specified temperature prior to delivery of the materials into a root canal. It is available in a variety of root canal sizes. This is a single-use device.	IIa
5732	47766	Haemostasis valve obturator	Цус тогтоогч хавхлагын бөглөрөл	A sterile device designed to seal the sheath of a haemostasis valve to maintain sheath patency (i.e., to prevent blood from coagulating in the sheath and blocking access through the haemostasis valve). It is typically a long, thin, rod-like device made of plastic with a rounded distal tip and a cap at the proximal end; it is available in a variety of sizes (e.g., 4-13 French and 15-26 cm long). The proximal cap has a locking mechanism (e.g., a Luer-lock or snap lock) to hold it securely in place to prevent blood loss from the patient. This is a single-use device.	IIa

5733	47778	Intermittent urethral catheterization kit	Завсарлагатай шээсний сувгийн катетержуулалтын иж бүрдэл	A collection of devices that includes a urological catheter (with or without a urine drainage bag), a cap, and other related accessories (e.g., gloves, drapes, tray) intended for self-urinary catheterization. The catheter may be repeatedly inserted through the urethra by the user to provide short-term, episodic urine drainage. It is typically pre-lubricated or coated with, made of, or includes materials/substances that facilitate easy insertion and removal [e.g., polytetrafluoroethylene (PTFT) commonly known as Teflon, or glass]; it might also be coated with or include antimicrobial materials/substances to help prevent infection of the urinary tract. This is a reusable device.	IIa
5734	47787	Ophthalmic surgical instrument handle, pneumatic	Нүдний мэс заслын багажны бариул, пневматик	A sterile, hand-held, pneumatically-powered device designed to hold and operate a compatible ophthalmic surgical instrument tip (e.g., scissors, forceps). It is typically in the form of a conventional handle with a connector that secures the inserted tip, and has a pneumatic feedline (tubing) that connects to a parent device with gas source; when gas is supplied to the handle, typically using a foot-switch, a mechanism is activated to operate the inserted tip (e.g., opens and closes blades). It is typically used for surgery in the anterior or the posterior segment to cut, grasp, and manipulate eye tissue. This is a single-use device.	IIa
5735	47794	Supersaturated oxygen therapy system catheter	Хэт ханасан хүчилтөрөгчийн эмчилгээний системийн катетер	A sterile, long and thin flexible tube inserted percutaneously into the vasculature and connected to a supersaturated oxygen (SSO2) therapy system for the infusion of autologous blood mixed with an SSO2 solution (producing oxygen-enriched hyperoxaemic blood) to a targeted coronary artery. It is typically an over-the-wire (OTW) catheter with a radiopaque marker band for fluoroscopic visualization. This is a single-use device.	IIa

5736	47795	Supersaturated oxygen therapy system kit	Хэт ханасан хүчилтөрөгчийн эмчилгээний системийн иж бүрдэл	A collection of sterile devices used with a supersaturated oxygen (SSO2) therapy system for the infusion of autologous blood mixed with an SSO2 solution (producing oxygen-enriched hyperoxaemic blood) to a targeted coronary artery immediately following revasculization by means of percutaneous coronary intervention (PCI) with stenting. It typically consists of a dedicated catheter and a cartridge with connectors. This is a single-use device.	IIa
5737	47800	Surgical fluid/gas irrigator	Мэс заслын шингэн/хийн усжуулалт	A sterile, hand-operated surgical device intended for the controlled delivery of medical gas and fluid (e.g., saline solution) to an open surgical site to improve visibility, by clearing bloody fluids/debris, and to prevent tissue desiccation. It is typically made of plastic materials [e.g., polypropylene, polyvinyl chloride (PVC)] and may be double-lumen for nebulization of fluid/gas, or dual-line for separate fluid and gas administration and include an antibacterial filter. It typically includes a nozzle at the distal end and connector(s) [e.g., Luer] at the proximal end for connection to the fluid/gas sources; a manual tubing clamp may also be included. This is a single-use device.	IIa
5738	47871	Intraocular lens folder	Нүдний линзний хавтас	A hand-held device designed to uniformly fold a foldable intraocular lens (IOL) in order to reduce its natural physical size so that the IOL can be removed from the IOL folder with an implantation forceps and be implanted into the anterior or posterior chamber of the eye through a small incision during ophthalmic surgery. It is typically made of synthetic material (e.g., polypropylene) and is designed to accept the IOL in its natural unfolded state, when in place the operator activates the folding mechanism. This is a single-use device.	IIa

5739	47886	Surgical power tool irrigation-control device	Мэс заслын цахилгаан хэрэгсэл усалгааны хяналтын төхөөрөмж	A device designed to be activated by the surgeon to regulate the flow of irrigation fluid (normally sterile saline) to the surgical site where a rotational high-speed cutting tool [e.g., 40.000 - 90.000 revolutions per minute (rpm)] is being applied to bone; primarily to provide the fluid as a coolant to the cutting tool (e.g., a bur or drill bit) and the site to avoid necrosis. It typically consists of tubing, connectors, and a simple electrically or pneumatically activated valve in which the coolant tubing is placed and which is pinched to regulate the fluid flow. It is typically made of metal and/or synthetic materials. This is a reusable device.	IIa
5740	47889	Cardiopulmonary bypass system priming set	Зүрхний уушигны эргэлтийн системийн праймерын багц	A sterile, semi-rigid tube used in open heart surgery to facilitate the transfer of priming fluids during the priming of the extracorporeal circuit of a cardiopulmonary bypass system. It is a noninvasive product in the form of a tube or tubing used to channel the fluids (i.e., primer/blood) to facilitate priming of the extracorporeal circuit and connection of the cardiopulmonary bypass system (heart/lung machine) to the patient. It is typically a moulded plastic tube with hard plastic spike at the distal end that connects to the bag or container of primer solution, a connector at the proximal end, and a central pinch clamp. This is a single-use device.	IIa
5741	47890	Disposable surgical irrigation/aspiration system	Нэг удаагийн мэс заслын усалгаа/сорох систем	A device assembly designed to irrigate, wash, and evacuate debris from general soft-tissue and orthopaedic surgical sites (e.g., for soft-tissue wound or bone debridement, site clearing, bone cement residue removal) with a pulsatile jet of sterile fluid (typically saline). It typically consists of a handpiece with an electrically-powered pump and irrigation/suction controls, tubing, and patient contact devices [typically detachable tips (applicators)] of various shapes and sizes for specific surgical applications. This is a single-use device.	IIa

5742	47906	Custom-made dental composite resin kit	Захиалгат шүдний нийлмэл давирхайн иж бүрдэл	A collection of customized equipment and supplies intended to be used to apply/polymerize composite resins to fill dental cavities or restore damaged dental tissue. It includes the composite resin, which may be self-, light-, or dual-cured, and additional devices which typically include a dental syringe, a mixing palette, a mixing pad, and brushes; it is customized for a specific patient. This is a single-use device.	IIa
5743	47910	Non-rechargeable public semi-automated external defibrillator	Цэнэглэдэггүй нийтийн хагас автомат гадаад дефибриллятор	A portable electronic device designed to automatically detect cardiac arrhythmias (ventricular fibrillation/pulseless ventricular tachycardia) in a sudden cardiac arrest (SCA) patient, after which it audibly/visually instructs an operator to enable it to activate defibrillation of the heart through application of electrical shocks to the chest surface. It is placed in conspicuous public locations and is intended to be operated by a layperson. It consists of two skin-adhesive, cartridge-type, disposable electrodes containing non-rechargeable batteries that provide the shock energy, and an electrode-regulating external pulse generator (EPG), which may include a CPR feedback.	IIa
5744	47929	Lacrimal intubation set	Лакримал интубацийн багц	A collection of devices intended to be used to maintain patency of the nasolacrimal system typically for treating/preventing pathologies of the tear drainage system (e.g., post-chemotherapy stenosis) or after dacryocystorhinostomy (DCR). It consists of a long and flexible bicanalicular or monocanalicular tube (e.g., Crawford type) inserted through the lacrimal puncta into the canaliculi, lacrimal sac, and/or nasolacrimal duct; devices to assist the intubation procedure are typically provided preassembled to the tube (e.g., cannula, probes, bougies, introducer, stylet). The tube is typically left in place long-term before removal. This is a single-use device.	IIa

5745	47936	Colpotomy tube	Колпотоми хоолой	A sterile, hand-held, hollow cylindrical device designed to facilitate dissection of the cervical/vaginal junction during total laparoscopic-assisted hysterectomy. It is typically made of plastic material and functions as a transvaginal conduit for surgical instruments and as an anvil-like support during dissection. Its distal end is designed to fit tightly against the cervix, and its proximal end has a seal to prevent loss of peritoneum-distention gas [e.g., carbon dioxide (CO_2)] used during the laparoscopic procedure. This is a single-use device.	IIa
5746	47951	Surgical power tool drive-shaft seal	Мэс заслын цахилгаан багажны хөтөч босоо амны тамга	A small sterile device designed as an external seal that is placed on the drive shaft of a rotary cutting tool (e.g., an orthopaedic reamer) that is attached to and driven by a surgical power tool in order to prevent the backflow of fluid (i.e., blood and rinsing fluid) penetrating the drive mechanisms of the power tool. It is made of synthetic material (e.g., silicone) and is available in a variety of shapes and sizes. This is a single-use device.	IIa
5747	47952	Scanning-laser retinal imaging system	Торлог бүрхэвчийг сканнердах-лазер дүрслэх систем	An assembly of electrically-powered ophthalmic instruments and digital image capturing/processing devices intended to use a low power laser beam to scan in two dimensions over the retina and detect the reflected (or returned) light to generate and capture digital confocal images of the fundus. It typically consists of a laser, optics, image detection system, a digital processor/computer, application software and image display monitor(s). It is typically used for assessment/control of diabetic retinopathy/maculopathy, age-related macular degeneration (AMD), choroidal neovascularization (CNV), detection of retinal vascular disturbances, and diagnosis of chorioditis.	IIa

5748	47959	Corneal inlay, aperture reducing	Эвэрлэгийн шигтгээ, нүхийг багасгах	A sterile implantable device inserted into the natural cornea to treat presbyopia [age-related hyperopia (far sightedness)] based on aperture reduction. It is typically made of plastic material and is shaped as a thin annulus (disc) formed to fit the curvature of the cornea; it includes a central opening that restricts the optical aperture of the eye to increase depth of field. It is intended for long-term implantation and is surgically inserted in an intrastromal pocket or flap made by a keratome or an appropriate laser.	IIa
5749	47982	Pressure-wave skin contouring system applicator, electromagnetic	Даралтын долгионы арьс өнгөлөгч систем түрхэгч, цахилгаан соронзон	A hand-held device designed to produce and apply to the skin surface electrically-generated, unfocused planar pressure waves (e.g., using a metallic coil and membrane), at selected impulse frequencies, intended to reduce the appearance of cellulite and possibly treat other skin/muscle conditions. It connects to an electrical control unit distally, and proximally has a head portion that is applied to the surface of the treatment area. This is a reusable device.	IIa
5750	47993	Epididymal fluid aspiration catheter	Эпидидимийн шингэний сорох катетер	A flexible tube designed for the surgical aspiration of epididymal fluid during sperm extraction procedures such as microepididymal sperm aspiration (MESA), percutaneous epididymal sperm aspiration (PESA), and during open testicular procedures. It is typically made of plastic materials [e.g., polyethylene (PE), polytetrafluoroethylene (PTFE) commonly known as Teflon, polyurethane, or silicone] and is available in various lengths. The aspirate is processed for assisted reproductive technology (ART) procedures such as intracytoplasmic sperm injection (ICSI) and in vitro fertilization (IVF). This is a single-use device.	IIa

5751	48098	Catheter-tip-to-tissue contact monitor	Катетерийн үзүүрээс эдэд хүрэх монитор	An electronic component of an advanced cardiac mapping system designed to monitor catheter tip-to-tissue electrical coupling which may be indicative of catheter tip-to-tissue contact during cardiac ablation and mapping procedures via a proprietary electrical coupling index (ECI). It is used in an electrophysiology (EP) lab between the patient and the ablation generator making impedance based electrical coupling measurements of resistance and reactance which are sent to the advanced mapping system as signals for processing and display. The signals are combined into an ECI displayed via three elements (e.g., a waveform display, a meter, and an ablation catheter tip-to-tissue beacon).	IIa
5752	48140	Nasal/paranasal balloon catheter	Хамар/хамрын хөндийн бөмбөлөг катетер	A sterile flexible tube with an inflatable balloon at its distal tip designed to gently restructure nasal passages and dilate obstructed sinus ostia during a surgical procedure (sinuplasty), typically to treat sinusitis, and/or to gently restructure nasal passages to temporarily relieve nasal obstruction/congestion. The device typically consists of a single-lumen tube with a connector at the proximal end for attachment to an inflation device. This is a single-use device.	IIa
5753	48141	Paranasal sinus irrigation catheter	Хамрын синусын цэвэрлэгээний катетер	A sterile flexible tube designed to introduce fluid (e.g., saline solution) into the sinus cavities to provide irrigation for the flushing and removal of mucus, pus, and blood from the site of intervention. It typically consists of a single-lumen tube with end and/or side holes at the distal end; the proximal end is typically connected to a syringe or irrigation fluid pumping system via a Luer-lock. This is a single-use device.	IIa
5754	48142	Paranasal sinus guide-catheter	Хамрын синусын чиглүүлэгч-катетер	A sterile cannula-like catheter consisting of a tube with a tip designed to facilitate placement of other devices into or near different sinus ostia. It is used to provide a channel to access the sinus space during diagnostic and therapeutic procedures. This is a single-use device.	IIa

5755	48143	Paranasal sinus guide-catheter handle	Хамрын синусын чиглүүлэгч-катетерын бариул	A sterile, hand-held, tubular device designed to create an extension from which the user can stabilize the position of a sinus guide catheter. It typically has a malleable handle and a press-fit connector at the distal end for connection to the guide catheter. This is a single-use device.	IIa
5756	48148	Temporary maxillomandibular fixation set	Эрүү эрүүний түр зуурын бэхэлгээний багц	A collection of sterile devices designed to provide temporary maxillomandibular fixation and immobilization. It consists of flexible plastic bands which are wrapped around teeth to form the anchorage points, and interlocking elastic chains attached to the anchorage points like laces on a hiking boot. It is used for the short term fixation of minimally displaced fractures and/or splintage of post jaw dislocation in the maxillofacial area. This is a single-use device.	IIa
5757	48168	Insufflation gas conditioning system	Агааржуулах хийн агааржуулалтын систем	An assembly of devices used with a laparoscopic gas distention system or other gas source to condition the insufflation gas stream [typically carbon dioxide (CO_2)] by heating and humidifying the gas before introduction into the peritoneal cavity or a wound during laparoscopic or open surgery. It typically consists of a mains electricity (AC-powered) control unit, a humidification chamber through which cold/dry gas passes for conditioning, and a tubing set for connection to the gas source and delivery of the conditioned gas to the operative site. Conditioning of the gas helps alleviate problems associated with gas insufflation, i.e., desiccation of internal tissue and body temperature loss.	IIa
5758	48169	Insufflation gas conditioning system control unit	Хийн агааржуулалтын системийн хяналтын хэсэг	A mains electricity (AC-powered) device designed to be used together with a laparoscopic gas distention system or other gas source to condition the insufflation gas stream [typically carbon dioxide (CO_2)] by automatically heating and humidifying the gas before introduction into the peritoneal cavity or a wound during laparoscopic or open surgery. It is electronically controlled and has controls and displays for the user to operate and monitor the gas conditioning process which happens within an interchangeable humidification chamber that is fitted to this device. The gas is delivered to the operative site via a dedicated heated tubing set.	IIa

5759	50484	CAD/CAM software	CAD/CAM програм хангамж	A software program intended to provide computer-aided design (CAD) or computer-aided manufacturing (CAM) functionality for the production of patient-specific custom-made devices (e.g., orthopaedic implants, dental devices, anatomical models), treatment planning, simulation, and/or robotic capabilities for device production (e.g., 3-D printing). It may include functionality to upload patient-specific images and to facilitate communication between healthcare professionals.	IIa
5760	52522	Humeral head prosthesis trial, single-use	Хумерын толгойн протезийн туршилт, нэг удаагийн хэрэглээ	A sterile copy of a final humeral head prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient, to ensure its proper orientation and positioning, and to verify that the implant site has been cut to the proper dimensions. It has a cup-like ball shape and is available in types such as concentric head fixation, eccentric head fixation, or types for revision surgery. It is typically made of metal and/or polyethylene (PE). This is a single-use device.	IIa
5761	52847	Intraocular lens calculation software	Нүдний линзийг тооцоолох програм хангамж	A stand-alone software application designed to assist a surgeon in the selection and placement of an intraocular lens (IOL) by performing calculations to help predict the amount of postoperative corneal astigmatism that needs to be corrected. It is designed to be installed on an off-the-shelf computer/smart device.	IIa
5762	55831	Denture base resin kit	Шүдний суурь давирхайн иж бүрдэл	A collection of resins and other devices and/or materials intended to be used in the dental laboratory to manufacture a complete or partial denture base (the portion of a denture that rests on the oral mucosa and retains the artificial teeth). It usually includes the resin monomer (e.g., acrylic monomer of methyl methacrylate), a catalyst intended for polymerization, and additional products such as pigments, plasticizers, and/or devices (e.g., flasks, clamps). This is a single-use device.	IIa

5763	55842	Biliary manometric catheter	Цөсний манометрийн катетер	A non-electrical, flexible tube intended to be inserted through a flexible endoscope and into the biliary tree to measure pressures within the ducts, especially to evaluate sphincter of Oddi function. The measuring method employed is typically the infusion of water into the catheter (hydraulic manometry) having pressure-sensing membrane cavities along its length that transmit signals to proximally-connected pressure transducers. This is a single-use device.	IIa
5764	55847	Dental implant system	Шүдний суулгацын систем	A collection of devices designed for the surgical placement of a dental implant into alveolar and/or basal bone of the mandible or maxilla to provide support and a means of retention for a dental prosthesis (e.g., bridge, single-tooth, overdenture). It typically consists of a sterile endosteal dental implant (implant body and abutment) and surgical instruments for implantation.	IIa
5765	56281	Postsurgical hip supportive garment	Хагалгааны дараах түнхийг дэмжих хувцас	A fabric material designed to fit around the hip and/or surrounding tissues (i.e., upper leg, core) and intended to support the hip joint following injury (e.g., sports injuries), disease (e.g., rheumatism), and/or surgery; it is not primarily intended to treat disorder(s) of circulation, fluid retention or scar management. It is available in a variety of designs and may be designed to accommodate the insertion of thermal therapy pack(s). This is a reusable device.	IIa
5766	56289	Polychloroprene examination/treatment glove, powdered	Полихлоропренийн үзлэг/эмчилгээний бээлий, нунтаг	A device made of polychloroprene (neoprene) intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is covered with powder to facilitate donning/removal; it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	IIa

5767	56293	Polyisoprene surgical glove, non-powdered, non-antimicrobial	Полизопрен мэс заслын бээлий, нунтаггүй, нянгийн эсрэг үйлчилгээтэй	A device made of polyisoprene intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	IIa
5768	56294	Polyisoprene surgical glove, powdered	Полизопрен мэс заслын бээлий, нунтаг	A sterile device made of polyisoprene intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is covered with powder to facilitate donning and removal; it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microbes and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	IIa
5769	56295	Abdominal aorta endovascular stent-graft deployment aid	Хэвлийн гол судасны дотуур стент суулгахад туслах	A nonimplantable device designed to aid stability and control of the single-use delivery system during the deployment of an abdominal aorta stent-graft to repair an abdominal aortic aneurysm (AAA). This device, which is a separate attachment and does not have any patient contact, is attached to the AAA stent delivery system handle and may provide the surgeon with better mechanical control and stability during stent deployment, particularly in cases of difficult patient anatomy. It is typically made of moulded plastic and metal, and may be interchanged between delivery systems during a single implant. This is a single-use device.	IIa

5770	56627	Autologous adipose tissue collection/washing set	Автолог өөхний эд цуглуулах/угаах багц	A collection of sterile devices designed as a closed system for the harvesting and rapid treatment of autologous fat tissue for reinjection back into the patient from which it was taken for aesthetic body contouring. It typically consists of various chambers (e.g., a collection bag, waste material bag, and a cleaned tissue bag), flexible tubing, an intravenous (IV) spike for connection to the washing solutions, and a contiguous filter mesh which dialyses the fat graft. It is used in conjunction with appropriate IV solutions within the sterile field of intervention for plastic and reconstructive surgery and cosmetic surgery. This is a single-use device.	IIa
5771	56660	Assisted reproduction centrifuge tube	Тусламжтай нөхөн үржихүйн центрифугийн хоолой	A sterile container (a dedicated sealable centrifuge tube) intended for the preparation, centrifugation, and storage of biological specimens used in assisted reproduction techniques (ART) [e.g., sperm]. It is intended for use in assisted reproduction clinics and is specific to the procedures of in vitro fertilization (IVF). Its main application is the separation of unwanted biological material of human origin from the specimen (e.g., by adding semen and a gradient to the biological material in the tube, and applying centrifugation, the removal of seminal plasma, dead sperm and other cells is facilitated so that spermatozoa of highest mobility can be selected). This is a single-use device.	IIa
5772	56708	Bone tap, single-use	Ясны цорго, нэг удаагийн	A surgical instrument designed for cutting internal threads into bone, so that the threads facilitate the insertion of bone screws (not included). The screws may be used to anchor bone fragments, fixtures and/or other devices to the bone. It is typically manually rotated and consists of a metal shaft with a helical thread which may be cannulated or intersected with longitudinal cutting grooves. This is a single-use device.	IIa

5773	57786	Bronchoscopic catheter	Бронхоскопийн катетер	A sterile, flexible, single lumen tube designed to be used as a conduit to the lung(s) for the delivery of another device (e.g., an emphysematous lung sealant) during a bronchoscopic procedure. It is typically made of synthetic materials that resist kinking (may be capable of bending 135 degrees or more without kinking) and is advanced through the working channel of a bronchoscope to the treatment site by the operator, typically a pulmonologist or thoracic surgeon. The distal tip may be marked with a band to facilitate visualization by the operator during the procedure. This is a single-use device.	IIa
5774	57787	Atherectomy system saline/lubricant pump	Атерэктоми системийн давсны уусмал/тосолгооны насос	A mains electricity (AC-powered) component of a mechanical atherectomy system designed to inject cooled normal sterile saline and/or surgical lubricant via the system's dedicated catheter into the site of crossing a chronic partial occlusion (CPO) or chronic total occlusion (CTO) in both coronary and peripheral arteries. The device functions as a pump and will typically work in synchronization with the generator, whereby it may also function as the mains adaptor/control unit. This is a reusable device.	IIa
5775	57789	Surgical drill guide, single-use	Мэс заслын өрмийн гарын авлага, нэг удаагийн хэрэглээ	A hand-held tubular surgical device designed to simultaneously place, angle, and guide a rotating surgical drill on hard tissue (e.g., bone), and to protect the surrounding soft tissue while the drill is in operation. It may have serrations at its distal end to enable firm placement on hard tissue surfaces (it is not bored into the tissue); it can have a handle at its proximal end for holding and manipulation, or it may be held by another device (e.g., orthopaedic jig). The device is typically dedicated to drill bit size, made of metal, and may have graduations along its length; it is not custom-made for a specific patient. This is a single-use device.	IIa

5776	57791	Infusion pump cassette	Судсаар хийх шахуургын кассет	A sterile device designed to be used in conjunction with an infusion pump or a device containing an infusion pump (e.g., a physiology-monitoring sedation system, physiology-monitoring anaesthesia system), for the delivery of an intravenous (IV) medication (e.g., a sedative or anaesthetic) contained within an independent drug vial. The cassette is inserted into the infusion pump and the drug vial is inserted into the cassette; the cassette tubing interfaces with the pump drive mechanism for medication delivery through connection with an infusion administration set. This is a single-use device.	IIa
5777	57799	Rhinitis therapy ultrasound system	Ринит эмчилгээний хэт авиан систем	A mobile assembly of mains electricity (AC-powered) devices designed to treat the nasal tissues for rhinitis during an ENT procedure through the extracorporeal application of high intensity focused ultrasound (HIFU) intended to gradually denature targeted tissue lesions. It typically consists of a high frequency generator, a water supply (a tank) to provide a water coupling, a hand-held nasal probe (e.g., a piezoelectric transducer), an operator's console and monitoring systems, alarms, software, and a foot-switch. It is used by a clinician with the applicator either manually applied, or guided typically using a B-mode ultrasound scanner or a magnetic resonance imaging (MRI) system.	IIa
5778	57814	CPAP/BPAP face mask, reusable	CPAP/BPAP нүүрний маск, дахин ашиглах боломжтой	A flexible, form-shaped device designed to be placed over a user's nose and mouth to interface with a continuous positive airway pressure (CPAP) or bi-level positive airway pressure (BPAP) unit to provide the respiratory tract with direct ambient air, or medical oxygen (O2) and air, at a higher pressure than ambient air for noninvasive positive pressure ventilation (NPPV). It is typically made of plastic and/or silicone materials that create an airtight seal around the nose and mouth. It is available in various designs and sizes and stabilized with a headstrap. This is a reusable device.	IIa

5779	57815	CPAP/BPAP nasal mask, reusable	CPAP/BPAP хамрын маск, дахин ашиглах боломжтой	A flexible, form-shaped device designed to be placed over a user's nose to interface with a continuous positive airway pressure (CPAP) or bi-level positive airway pressure (BPAP) unit to provide the respiratory tract with direct ambient air, or medical oxygen (O2) and air, at a higher pressure than ambient air for noninvasive positive pressure ventilation (NPPV). It is typically made of plastic and/or silicone materials that create an airtight seal around the nose. It is available in various designs and sizes and stabilized with a headstrap. This is a reusable device.	IIa
5780	57816	CPAP/BPAP oral mask	CPAP/BPAP амны хөндийн маск	A flexible, form-shaped device designed to be fitted to the user's mouth to interface with a continuous positive airway pressure (CPAP) or bi-level positive airway pressure (BPAP) unit to provide the respiratory tract with direct ambient air, or medical oxygen (O2) and air, at a higher pressure than ambient air for noninvasive positive pressure ventilation (NPPV). It is typically made of plastic and/or silicone materials that create an airtight seal around the patient's mouth; this providing a solution for mouth breathers and patients with chronic nasal obstruction. It is available in various designs and sizes and stabilized with a headstrap. This is a reusable device.	IIa
5781	57821	Flexible ureteral sheath/fibreoptic telescope	Шээсний сувгийн уян хатан бүрээс/фиброптик дуран	A sterile device assembly intended to function as a flexible endoscope for the visual examination and treatment of body cavities/organs that can be accessed via the ureter for cystoscopic, nephroscopic, laparoscopic, and ureteroscopic procedures. It is introduced via the urethra and typically consists of a flexible dual-lumen sheath with a fibreoptic bundle (the telescope) that transmits images to the operator via an eyepiece or video monitor via connected adaptor and endoscopic camera. The sheath has a deflector control at the proximal end allowing steering and provides instrument access with a second working channel. This is a single-use device.	IIa

5782	57827	Digit tourniquet, manual	Оронтой чангалуур, гар ажиллагаатай	An elastic ring designed to be applied to an injured digit (finger or toe) to provide immediate haemostasis and subsequent wound visualization. The elastic properties of the device enable it to automatically adjust to the size of the digit to which it is applied and to provide pressure to stem the flow of blood producing a bloodless field for emergent and elective procedures. It is typically used in emergency departments, operating rooms (OR) for finger/toe surgery, by first responders [medical centres and emergency medical services (EMS)], and in environments where sharp utensils are used (e.g., restaurants, butcher shops). This is a single-use device.	IIa
5783	57834	Assisted reproduction cryotube	Тусламжтай нөхөн үржихүйн криотуб	A sterile container (a dedicated sealable tube) intended for transport, storage, and preparation of biological samples of human origin used in assisted reproduction techniques (ART) [e.g., embryos]. It is intended for use in assisted reproduction clinics and is specific to procedures for in vitro fertilization (IVF) and ART. Its main application is to hold biological materials when stored in a frozen state at temperatures below -130 Celsius (e.g., stored in the gas phase above the liquid nitrogen (LN2) at temperatures around -178 C to -150 C). This is a single-use device.	IIa
5784	57883	Surgical microscope fluorescent angiography system	Мэс заслын микроскоп флюресцент ангиографийн систем	A non-sterile, mains electricity (AC-powered) device assembly designed for viewing intraoperative blood flow in the cerebral vascular area, in bypass grafts during coronary artery bypass graft (CABG) surgery, and during plastic and reconstructive surgery. It enables a surgical microscope to produce excitation light and resolve fluorescence from the fluorescent agent indocyanine green (ICG). Fluorescent signals depict the distribution of the infrared dye in the patient's blood vessels during the operation. The system is attached to a compatible surgical microscope and typically includes an ICG filter, a near infrared (NIR) charge-coupled device (CCD) video camera, and connecting cables.	IIa

5785	57950	Ophthalmic ultraviolet phototherapy system	Нүдний хэт ягаан туяаны фото эмчилгээний систем	A mains electricity (AC-powered) mobile device assembly, with a rechargeable battery, designed to deliver a uniform and metered dose of ultraviolet A (UVA) light to the cornea to perform an ophthalmic crosslinking procedure (collagen fibres in the cornea are linked together to stiffen the cornea). It is normally used in a clinical office setting and typically consists of a wheeled central mount that supports the optic head containing the UV source, user control panel, software, and a rechargeable battery. It is typically used to treat corneal disorders such as keratoconus, post laser assisted in situ keratomileusis (LASIK) ectasia, and other post-LASIK disorders.	IIa
5786	57955	Dental implant/teeth debridement brush, non-biodegradable	Шүдний суулгац/шүд цэвэрлэх сойз, био задралгүй	A rotary/oscillating dental instrument intended to be used by a dental hygienist and/or dentist for the non-surgical-invasive debridement of a patient's dental implants and/or teeth affected by peri-implant disease (peri-implant mucositis, peri-implantitis) or periodontitis. It is a brush-like device, typically consisting of titanium bristles at the distal end of a high-grade steel shaft, that is held in a dental handpiece which provides its rotation for the mechanical removal of biofilm from the surface of the implants and teeth. This is a single-use device.	IIa
5787	57963	Prostate electrolytic therapy system catheter	Түрүү булчирхайн электролитийн эмчилгээний системийн катетер	A non-sterile, flexible tube with a balloon at its distal end designed to be used together with a prostate electrolytic therapy system to treat benign prostatic hyperplasia (BPH) and prostatitis through transurethral electrochemical treatment causing liquefaction necrosis to the diseased peri-urethral prostate. It typically consists of a single lumen tube with therapeutic electrodes spaced along its outer surface, an inflatable balloon, and holes for the introduction of an ionic solution (e.g., saline mixed with antibiotics) and drainage of discharged fluids/deciduous tissue at the working end, and connectors at the proximal end. This is a single-use device.	IIa

5788	57964	Gingiva bleaching protector	Буйл цайруулах үйлчилгээтэй	A non-sterile paste or gel-like substance designed to protect a patient's gums from the hydrogen peroxide (H2O2) found in teeth whitening agents used during chairside light-curing bleaching of the teeth. It is typically supplied in a disposable syringe and is applied with an applicator along the gingiva leaving the teeth exposed for treatment. After application, this device cannot be reused.	IIa
5789	57965	Thoracic electrical impedance system, tomographic	Цээжний цахилгаан эсэргүүцэл систем, томограф	An assembly of devices designed to perform continuous bioimpedance measurements throughout a cross-section of the thorax, to provide real-time feedback of lung function during controlled, assisted or spontaneous ventilation. It typically consists of a mobile trolley, an electrically-powered unit with a monitor and controls, connecting cables, and an electrode chest belt (typically with 16-32 electrodes). The technique [electrical impedance tomography (EIT)] uses single-frequency, low-amplitude alternating current applied by a pair of electrodes whereby the generated electrical potentials at the body surface are continuously measured by other electrodes.	IIa
5790	57970	Polychloroprene surgical glove, non-powdered	Нунтаггүй полихлоропрен мэс заслын бээлий	A device made of polychloroprene (neoprene) intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	IIa

5791	57982	Urinary catheter holder	Шээсний катетер эзэмшигч	A device designed to be attached to a patient's body to hold an indwelling urinary catheter line (e.g., Foley) in place. It consists of a wrap or adhesive strip/pad placed around the patient's thigh, abdomen, or pubis. The holder includes appropriate mechanisms or attachments that can hold the tube or catheter (e.g., integrated Velcro hook, loop, clip) without creating excessive pressure on it and permitting visual inspection of the site. It is not designed to hold a urine collection bag. This is a single-use device.	IIa
5792	57991	Polyglytone suture	Полиглитон оёдол	A sterile, single-strand (monofilament), synthetic, bioabsorbable thread made of polyglytone 6211 (a polyester composed of glycolide, caprolactone, trimethylene carbonate, and lactide) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues, including use in ophthalmic surgery but not for cardiovascular/neurological surgery and microsurgery; it may include an attached needle intended to be disposed of after single use. The thread provides temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis. This is a single-use device.	IIa
5793	58018	Otoacoustic emission system, line-powered	Отоакустик ялгаралтын систем, шугамаар ажилладаг	An assembly of mains electricity (AC-powered) devices designed to record and analyse the faint sounds hair cells in the inner ear emit [otoacoustic emission (OAE)] in response to a stimulus (e.g., click, tone burst, pure-tone signals) to test for a deficiency of function in the ear during diagnostic evaluation and/or neonatal screening. It typically consists of a programmable unit, an OAE probe, and eartips. The stimulus signal is emitted via the probe inserted into the ear canal and the response is recorded via a microphone in the probe; OAEs are absent/reduced in patients with hearing loss. The system may be combined with other audiological devices (e.g., tympanometer, ABR device).	IIa

5794	58019	Otoacoustic emission system, battery-powered	Отоакустик ялгаралтын систем, батарейгаар ажилладаг	An assembly of battery-powered devices designed to record and analyse the faint sounds hair cells in the inner ear emit [otoacoustic emission (OAE)] in response to a stimulus (e.g., click, tone burst, pure-tone signals) to test for a deficiency of function in the ear during diagnostic evaluation and/or neonatal screening. It typically consists of a portable programmable unit, an OAE probe, and eartips. The stimulus signal is emitted via the probe inserted into the ear canal and the response is recorded via a microphone in the probe; OAEs are absent/reduced in patients with hearing loss. The system may be combined with other audiological devices (e.g., tympanometer, ABR device).	IIa
5795	58020	Kyphoplasty balloon catheter	Кифопластик бөмбөлөг катетер	A sterile, flexible tube designed to be used for the creation of a void within a vertebral body during a minimally invasive procedure commonly known as balloon kyphoplasty. It is manually inserted percutaneously through an access channel under fluoroscopic guidance to a vertebral compression fracture (VCF) site (e.g., in the lumbar or thoracic region of the spine) where its balloon is inflated with a medium (e.g., a liquid contrast medium) to force the vertebrae apart for insertion of bone cement; thereafter it is deflated and removed via the access channel. This is a single-use device.	IIa
5796	58028	Intestinal mucosa barrier	Гэдэсний салст бүрхүүлийн саад тотгор	An orally-administered substance intended to protect intestinal mucosa from harmful/irritant influences (e.g., bacteria, viruses, toxins) by forming a mucoadhesive physical barrier and/or binding to the harmful agents for the control of intestinal conditions [e.g., inflammation, pain, bloating, diarrhoea, irritable bowel syndrome (IBS)]. It is based on mineral and/or plant-derived materials (e.g., diosmectite, plant polysaccharides/resins, charcoal) and does not include a pharmaceutical agent. It is available in various forms (e.g., tablet, fluid) and is normally available [non-prescription] over-the-counter (OTC) for home-use. After application, this device cannot be reused.	IIa

5797	58031	Bone access channel kit	Ясны хандалтын сувгийн хэрэгсэл	A collection of sterile manual devices intended to create a percutaneous access channel within a vertebral body or other bones (e.g., hand, radius, tibia, calcaneus) prior to the use of an inflatable balloon (e.g., a balloon catheter or balloon tamp) to create a bone space during kyphoplasty/osteoplasty. It typically consists of bone access needles/cannulae, orthopaedic bone wires (Kirschner wires), a drill, and a curette. It is used in orthopaedic surgery, typically under fluoroscopic guidance, to treat a patient diagnosed with compression fractures. This is a single-use device.	IIa
5798	58032	Vertebral body cement cannula	Нугаламын биеийн цементийн суваг	A sterile, manual, tubular device designed to create a percutaneous access channel into a vertebral body prior to and during injection of orthopaedic cement into the vertebral body during kyphoplasty. It is typically inserted under fluoroscopic guidance to treat a patient diagnosed with vertebral compression fractures (VCFs) in the lumbar or thoracic region of the spine. The device is typically made of stainless steel with an attached plastic handle and available in a kit of several equal size cannulae (e.g., 3 or 6) to provide access to one or more sites of intervention. This is a single-use device.	IIa
5799	58070	Vitrectomy contact lens, single-use	Витрэктомийн контакт линз, нэг удаагийн хэрэглээ	A sterile ophthalmic lens intended to be placed on the cornea of a patient to improve visualization of the fundus and retinal structures by surgical staff using an ophthalmic microscope during vitreoretinal surgery. Also known as a vitrectomy sutureless lens (VSL), it is made of various transparent materials [e.g., polymethylmethacrylate (PMMA), glass, quartz]. This is a single-use device.	IIa

5800	58074	Dermatological optical coherence tomography system	Арьс судлалын оптик когерент томографийн систем	An assembly of devices designed to use a broad-bandwidth light beam aimed via an applicator at a region of interest (ROI) on the surface of the skin for optical coherence tomography (OCT) to provide high-resolution images (e.g., above 1 micron) of the surface tissue in order to visualize skin morphology. It typically consists of a main unit with an operator's console, a computer for image storage, a hand-held or electromechanical probe (applicator), and a visual display unit (VDU). Reflected light is picked up by the probe that converts it into electrical signals. The computer and dedicated software provide cross-sectional images of the derma or two- or three-dimensional (3-D) volume scans.	IIa
5801	58095	Blood gas syringe/needle, lithium heparin	Цусны хийн тариур/зүү, литийн гепарин	A sterile glass or plastic barrel (cylinder) with plunger, and a pre-attached needle, that contains the anticoagulant lithium heparin and is intended to be used for the collection, and preservation and/or transport, of blood for blood gas determination and/or other investigation. The needle is typically removed after sampling and replaced with a cap or stopper for transport. This is a single-use device.	IIa
5802	58100	Intranasal cooling system catheter	Хамрын доторх хөргөлтийн системийн катетер	A sterile flexible tube that is a component of an intranasal cooling system and designed for the delivery of a pressurized coolant/medical gas [e.g., oxygen (O2) or medical air] mixture to the nasal cavity where it rapidly evaporates and removes heat from the surrounding tissue for temperature reduction of a patient. It typically consists of connectors to the system’s control unit and the coolant supply, delivery tubing, and at the distal end, a cannula hub with perforated nasal cannulae (nasal prongs). This is a single-use device.	IIa

5803	58123	Mobile multi-spectral vascular imaging device	Олон спектрийн судас дүрслэх хөдөлгөөнт төхөөрөмж	A mains electricity (AC-powered) mobile (on wheels) device designed to utilize visible and near infrared (IR) light for superficial vascular structure imaging by illuminating and projecting the subcutaneous venous structure of a patient onto the patient's skin surface. The device includes controls and a head unit for non-laser imaging; the adjustable head is intended to allow the operator to hands-free assess multiple vascular access points with a real-time digital image [active vascular imaging navigation (AVIN)] on any part of the anatomy. The device may include rechargeable batteries that allow its operation for a limited period without line power.	IIa
5804	58137	Endoscopic electromechanical surgical system	Дурангийн цахилгаан механик мэс заслын систем	An assembly of mains electricity (AC-powered) electromechanical devices designed to be used to perform an endoscopic surgical procedure (e.g., laparoscopy) via hand-held rigid endoscopic instruments that have motor-driven articulating and mechanically-operated tips intended to facilitate surgical dexterity. It typically consists of a control unit that provides power via connecting cables to individual handpieces (handles) and several interchangeable endoscopic instruments with tip articulation (e.g., roll, yaw) for performing tissue manipulation, ligation, suturing, and cutting. The system is connected to a visual display unit (VDU) and is typically mounted on a trolley (cart) for mobility.	IIa
5805	58160	Line-powered intraocular lens injector, reusable	Шугаман дээр ажилладаг нүдний дотоод линзний инжектор, дахин ашиглах боломжтой	A hand-held, direct current (DC) powered ophthalmic surgical instrument designed to expel (launch) a prepared folded intraocular lens (IOL) from an attached IOL insertion cartridge into the anterior chamber of the eye in association with cataract removal. It is a motorized device powered from a phacoemulsification system generator intended to carefully exert pressure on the prepared IOL to push it out of the IOL insertion cartridge. It is typically made of metallic and plastic materials and has a central plunger that is activated by a precise mechanism (e.g., a screw thread), and has a mechanism at the distal end to hold/grip the insertion cartridge. This is a reusable device.	IIa

5806	58161	Line-powered intraocular lens injector, single-use	Шугаман дээр ажилладаг нүдний дотоод линзний инжектор, нэг удаагийн хэрэглээ	A sterile, hand-held, direct current (DC) powered ophthalmic surgical instrument designed to expel (launch) a prepared folded intraocular lens (IOL) from an attached IOL insertion cartridge into the anterior chamber of the eye in association with cataract removal. It is a motorized device powered from a phacoemulsification system generator intended to carefully exert pressure on the prepared IOL to push it out of the IOL insertion cartridge. It is typically made of metallic and plastic materials and has a central plunger that is activated by a precise mechanism (e.g., a screw thread), and has a mechanism at the distal end to hold/grip the insertion cartridge. This is a single-use device.	IIa
5807	58165	Dental restorative material sonic handpiece	Шүдний нөхөн сэргээх материал дууны гар	A hand-held, pneumatically-powered dental instrument designed for the sound-activated (sonic) dispensation of specialized composite dental restorative material into a dental cavity. The device is intended to generate sonic energy to temporarily reduce the viscosity of the composite material and facilitate its application to cavities from a removable tip containing the material attached to the end of the handpiece. The device is typically made of metal (e.g., stainless steel) and connected to a dental delivery system for the supply of compressed air. This is a reusable device.	IIa
5808	58172	Thrombectomy rotational catheter	Тромбектомийн эргэлтийн катетер	A sterile flexible tube designed for the percutaneous, transluminal disruption and removal of clotted blood (i.e., a thrombus or thromboembolus) causing acute vascular obstruction in native and stented blood vessels, or in native and synthetic bypass or haemodialysis access grafts, through a mechanical rotational action intended to erode and aspirate the obstruction for removal. It typically consists of a rotational catheter body/head powered by a magnetic power transmission provided by a connected control unit; ancillary devices such as catheter guidewires, sterile cable covers, and collecting bags may be included. This is a single-use device.	IIa

5809	58173	Thrombectomy suction catheter	Тромбектомийн сорох катетер	A flexible or semi-flexible tube designed for the percutaneous, transluminal disruption and removal of clotted blood (i.e., a thrombus or thromboembolus) or other formed elements causing vascular obstruction in native/stented blood vessels, native/synthetic bypass grafts, and/or haemodialysis access grafts, through suction (aspiration) in conjunction with a syringe or dedicated suction pump system (pump not included). It may additionally be intended for infusion of fluids and/or used as a guide-catheter to facilitate introduction of a thrombectomy wire-net (not included) to remove residual thrombus. Collection containers may be included with the catheter. This is a single-use device.	IIa
5810	58174	Thrombectomy balloon catheter	Тромбектомийн бөмбөлөг катетер	A flexible tube designed for the percutaneous, transluminal disruption and removal of clotted blood (i.e., a thrombus or thromboembolus) causing vascular obstruction in native and stented blood vessels, native and synthetic bypass grafts, and/or haemodialysis access grafts, through distension of a balloon intended to dilate the stenosis. It is a balloon catheter that may include valves for the injection of contrast media/thrombolytic agents and/or an embolectomy coil for mechanical removal of the obstruction. This is a single-use device.	IIa
5811	58217	Eyelid thermal pulsation system control unit	Зовхины дулааны импульсийн системийн хяналтын хэсэг	An electrically-powered ophthalmic device intended to control the application of heat and pressure (intermittent pressure massage) applied to the eyelids during treatment of lid margin disease (LMD), meibomian gland dysfunction (MGD) and/or evaporative dry eye. It typically includes controls, integrated software, and a visual display unit (VDU) and is designed to control the heat and pressure supply that are applied via an attached disposable applicator (not included).	IIa

5812	58218	Eyelid thermal pulsation system applicator	Зовхины дулааны лугшилтын системийн түрхэгч	An ophthalmic device designed to apply heat and pressure (intermittent pressure massage) to the outer eyelid surface for treatment of lid margin disease (LMD), meibomian gland dysfunction (MGD) and/or evaporative dry eye. It consists of two small plates, one positioned under the eyelid, and the other with heating/pulsing elements applied to the outside of the eyelid, and is used with a reusable control unit (not included). This is a single-use device.	IIa
5813	58250	PET/MRI system	PET/MRI систем	A diagnostic radiological imaging system that is a combination of a positron emission tomography (PET) camera system for nuclear medicine (NM) images, and a magnetic resonance imaging (MRI) system for magnetic resonance images. The nuclear medicine images and the magnetic resonance images may be registered and displayed in a fused format (overlaid in the same orientation) for the anatomical localization of the nuclear medicine data (i.e., distribution of radiopharmaceuticals). The PET and MRI portions of the system may be used independently or in combination; their images may be transferred to other systems for additional processing.	IIa
5814	58252	Low-intensity laser fat liquefaction system	Бага эрчимтэй лазер өөх шингэрүүлэх систем	An assembly of devices designed for the noninvasive application of low-level laser energy [low-level laser therapy (LLLT)] to liquefy (emulsify) subcutaneous and visceral adipose tissue (fat) for cosmetic/aesthetic (e.g., body contouring, circumference reduction) and medical (e.g. weight-loss, lipid reduction) applications. It is a mains electricity (AC-powered) system, mobile on wheels, which incorporates laser diode modules on adjustable arms, a control monitor, and software. It is an independent, primary device which may be used as an adjunct modality in conjunction with liposuction and surgical techniques as a secondary function.	IIa

5815	58266	Lung donor-organ preservation/evaluation system	Уушигны донор-эрхтэн хадгалах/үнэлгээний систем	An assembly of devices designed to be used for the reconditioning, ex-vivo evaluation and cold preservation of donated lungs prior to transplantation. It typically consists of a mains electricity (AC-powered) unit which includes an operator's console, a roller pump, monitor, heat exchanger unit and gas system. The lungs are placed in a disposable chamber where they are connected, via tubing, to the evaluation unit. Typically, measurements can be made of pulmonary pressure, temperature, and flow, with calculation of pulmonary vascular resistance. The system is intended for use in a hospital in a clean area and is mobile on wheels.	IIa
5816	58284	Blood collection tube holder/needle	Цус цуглуулах хоолой эзэмшигч/зүү	A sterile, hand-held cylindrical device with a pre-attached needle designed to be used together with an evacuated blood collection tube to draw blood samples from a patient. It is typically a hollow plastic adaptor with a pre-attached blood collection needle at one end and into which the blood collection tube is inserted at the other end; this also facilitates a multiple-tube blood collection via one venipuncture. This is a single-use device.	IIa
5817	58286	Thermal vapour lung treatment system catheter	Уушигны дулааны уурын эмчилгээний системийн катетер	A sterile flexible tube with an inflatable balloon at the distal end designed to deliver heated sterile water vapour into a lung affected by emphysema to achieve bronchoscopic lung volume reduction through the application of high thermal vapour energy to the lung segment targeted for treatment. The catheter is introduced via the working channel of a bronchoscope, the occlusion balloon is inflated in the airway, and thermal water vapour is released to produce a limited energy transfer which is restricted to the airways and diseased parenchyma in the targeted lung segment. This is a single-use device.	IIa

5818	58288	Dental appliance fabrication material, thermoplastic	Шүдний аппарат үйлдвэрлэх материал, термопластик	A thermoplastic material intended to be used in the dental laboratory to manufacture a patient-worn dental prosthesis or appliance (e.g., denture/denture base, orthodontic retainer, implant bars, crowns/bridges, occlusal splint, mouthguard); it might in addition be intended to fabricate non-patient worn devices (e.g., dental impression tray). The material [e.g., nylon 12 beads, polyetheretherketone (PEEK) milling blank, thermoplastic sheet] is manipulated [e.g., by melting and moulding, or computer-aided techniques (dental CAD/CAM)] to form the shape needed for the patient. After application, this material cannot be refabricated.	IIa
5819	58292	Epidural needle, threaded	Эпидураль зүү, утастай	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to access the epidural space. The distal end is micro-threaded which is intended to provide more controlled advancement of the device. It may be used to deliver anaesthetic or analgesic agents or to introduce a dedicated catheter for continuous anaesthesia administration. This is a single-use device.	IIa
5820	58293	Epidural needle, non-threaded	Эпидураль зүү, утасгүй	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to access the epidural space. It may be used to deliver anaesthetic or analgesic agents or to introduce a dedicated catheter for continuous anaesthesia administration. If used with a stylet, it is often referred to as a cannula. This is a single-use device.	IIa
5821	58295	Oesophageal stent extractor	Улаан хоолойн стент соруулагч	A sterile device designed to extract a mesh-type oesophageal stent from the oesophagus, or after its potential migration into the stomach. The extractor is inserted via the working channel of an appropriate endoscope and during fluoroscopy; it typically consists of an extraction cable with a hook to catch a loop on the stent, which then pulls and compresses the stent into an included overtube intended to protect the oesophagus for an atraumatic removal. This is a single-use device.	IIa

5822	58386	Centrifugal sample concentrator	Төвөөс зугтах дээж баяжуулах	A mains electricity (AC-powered) laboratory device designed to condense fluid clinical specimens (e.g., serum, urine, cerebrospinal fluid, ascites) using centrifugal rotation in order to harvest and preserve the particulate matter. Commonly known as a cyto-spin, it separates fluid from the solid particles, or cellular elements, of a specimen so they are more concentrated. It typically consists of a centrifuge with various rotor heads, microplates, tubes, microscope slides, funnels and/or cups to which the sample is added, and absorptive material, filters, fluid collecting traps or a vacuum source utilized to separate and remove the liquid component.	IIa
5823	58392	Rectal suction biopsy system	Шулуун гэдэсний сорох биопсийн систем	An assembly of disposable and reusable devices designed to obtain a submucosal tissue specimen from the rectum using suction [rectal suction biopsy (RSB)], typically for histopathological analysis [e.g., to help diagnose Hirschsprung's disease (HD)]. It typically consists of dedicated disposable capsules (e.g., plastic cylinder-shaped devices with a small hole at their closed end that contain a metallic cutting blade), suction tubing with negative pressure manometers, and a reusable handpiece.	IIa
5824	58398	Urethral measuring catheter	Шээсний сувгийг хэмжих катетер	A sterile tube, constructed of materials which includes Hevea-latex, intended to be used to manually determine the length of male urethral segments, such as the length of a urethral stricture or the prostatic urethra. Typically it is introduced through the working channel of an endoscope and has an inflatable balloon at the distal end for anchorage at the bladder neck. The measurement is made by direct visualization of the catheter markings through the endoscope during withdrawal of the scope. This is a single-use device.	IIa

5825	58434	Intraocular telescope	Нүдний дотоод дуран	An implantable optical device designed to improve visual acuity in patients with bilateral moderate to profound central vision impairment due to age related macular degeneration. It is a non-active micro-Galilean telescope consisting of a doublet lens confined in a glass cylinder intended to replace the natural lens of the eye. The device functions together with the cornea as a telephoto system to render an enlarged image on the retina to improve vision. Disposable devices associated with implantation may be included with the lens.	IIa
5826	58479	Femoral head prosthesis trial	Гуяны толгойн протезийн туршилт	A copy of a final femoral head prosthesis designed to be used for trial reductions during hip arthroplasty to judge the correct size, and to help achieve the desired offset, leg-length, and range of motion of the final prosthesis to be implanted. It is one of a set, or a set, of graduated sizes, and is used in conjunction with femoral stem trial or final prostheses; some may be used with explantation instruments during removal of implanted acetabulum cups. It is typically made of metal or polymer material and includes trial adapters used with large trial heads. This is a reusable device intended to be sterilized prior to use.	IIa
5827	58480	Acetabulum prosthesis trial, prefabricated, reusable	Ацетабулум протезийн туршилт, угсармал, дахин ашиглах боломжтой	A copy of a final acetabular prosthesis designed to be used for trial reductions during hip arthroplasty to judge the correct size and position of the final acetabular prosthesis to be implanted. It is one of a set, or a set, of graduated sizes, is typically made of metal or polymer material and may be designed in the form of cages, shells, augments, or inserts. This is a reusable device intended to be sterilized prior to use.	IIa

5828	58481	Femoral stem prosthesis trial	Гуяны ишний протезийн туршилт	A copy of a final femoral stem prosthesis designed to be used for trial reductions during hip arthroplasty to judge the correct offset, leg-length, and range of motion of the final femoral prosthesis to be implanted. It is one of a set, or a set, of graduated sizes, and is used in conjunction with femoral head trial prostheses. It is typically made of metal or polymer material and includes trial stems, trial sleeves, and trial necks. This is a reusable device intended to be sterilized prior to use.	IIa
5829	58496	Blood collection set, noninvasive	Цус цуглуулах багц, инвазив бус	A collection of sterile, noninvasive devices intended to be used by a healthcare professional, in combination with evacuated blood collection tubes and a separate blood access device (e.g., intravenous catheter), for the routine collection of multiple blood specimens from a patient, for clinical analyses. It consists of various device combinations that may include tubing, male/female Luer-lock connectors, clamps, and a blood collection tube holder; the set may connect to, but does not contain, an invasive blood access device(s) [e.g., an intravenous catheter]. This is a single-patient device that may be reapplied over a short term (single-use) before being discarded.	IIa
5830	58497	Blood collection set, invasive	Цус цуглуулах багц, инвазив	A collection of devices intended to be used by a healthcare professional, in combination with evacuated blood collection tubes, for the routine collection of multiple blood specimens from a patient, via one venipuncture, for clinical analyses. It consists of a blood collection needle or venous butterfly/scalp vein needle and additional devices that may include tubing, male/female Luer-lock connectors, clamps, and a blood collection tube holder. Blood access is directly through the vein with the needle. This is a single-use device.	IIa
5831	58522	Retinal prosthesis system implantation test coil	Торлог бүрхэвчийн протезийн системийг суулгах туршилтын ороомог	A radio-frequency coil that is a component of a retinal prosthesis system designed for intraoperative testing of the implant. Typically it is used in the operating room (OR) by a surgeon or other healthcare personnel.	IIa

5832	58524	Retinal prosthesis system tester/clinical evaluator	Торлог бүрхэвчийн протезийн системийн шалгагч/эмнэлзүйн үнэлгээчин	A component of a retinal prosthesis system designed to perform diagnostic tests of the system, measure patient response to stimulation, and configure the system stimulation parameters and video processing strategies for each patient. It consists of laptop computer, dedicated software, and a communication adaptor. It is used in medical facilities and clinical research settings and is operated by a clinician or other healthcare personnel.	IIa
5833	58525	Dermatological Raman spectroscopy system	Арьс судлалын Раман спектроскопийн систем	A mains electricity (AC-powered) device assembly intended to be used by a healthcare professional to non-invasively evaluate a skin lesion clinically suspicious for carcinoma (e.g., melanoma, squamous cell) and precursors, before making a decision to biopsy, that operates based on inelastic (Raman) scattering of monochromatic light to measure molecular vibrations and identify pathology associated tissue molecules (e.g., proteins, lipids). It is an optical system applied to the skin surface typically consisting of a hardware unit (e.g., diode laser, fibreoptic system, Raman probe, spectrograph, image sensor chip, detector, computer), software, and a connected probe used to scan the lesion.	IIa
5834	58710	Hepatic ultrasound elastography system	Элэгний хэт авиан эластографийн систем	An assembly of mains electricity (AC-powered) devices, which may include rechargeable batteries, designed to measure liver stiffness/ultrasonic attenuation of tissues based on transient elastography for the evaluation/diagnosis of hepatic disease (e.g., liver fibrosis/steatosis); it may additionally be intended to measure spleen stiffness as an adjunct evaluation. It is typically used during diagnosis of chronic liver conditions such as viral hepatits, alcoholic hepatitis, and biliary disease, or for post-transplant evaluation. It consists of both a generator with dedicated software and a noninvasive applicator(s).	IIa

5835	58711	Hepatic ultrasound elastography system applicator	Элэгний хэт авиан эластографийн системийн түрхэгч	A non-sterile hand-held device designed to be used for the transcutaneous measurement of liver stiffness based on transient elastography. It includes an ultrasound transducer and an electrodynamic transducer intended to generate a controlled transient vibration that produces a mechanical elastic shear wave propagated through the skin and liver; subsequent ultrasound measurements can be used to calculate a measure of liver stiffness/ultrasonic attenuation of tissues. The device is designed to connect to a control unit and may be available in various forms for different applications [e.g., paediatric, bariatric (obese)]. This is a reusable device.	IIa
5836	58714	Patella prosthesis trial	Пателла протезийн туршилт	A copy of a final patella prosthesis designed to be used during unicompartmental knee replacement surgery or total knee arthroplasty (TKA) to determine the correct alignment, size, and fit of the final prosthesis, and to check that patellar ligament balancing is correct. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5837	58715	Knee femur prosthesis trial, reusable	Өвдөгний гуяны протезийн туршилт, дахин ашиглах боломжтой	A copy of a final femur prosthesis designed to be used during unicompartmental knee replacement surgery or total knee arthroplasty (TKA) to determine the correct alignment, size, and fit of the final prosthesis. It is one of a set, or a set, of graduated sizes, and may be used in conjunction with a knee tibia trial prosthesis and a patella trial prosthesis. It is typically made of metal or polymer material and includes femoral articulation trials, femoral spacer trials, femoral wedge/augment trials, anterior stop trials, stem adaptor trials, and stem trials. This is a reusable device.	IIa

5838	58716	Knee tibia prosthesis trial, reusable	Өвдөгний шилбэний протезийн туршилт, дахин ашиглах боломжтой	A copy of a final tibia prosthesis designed to be used during unicompartmental knee replacement surgery or total knee arthroplasty (TKA) to determine the correct alignment, size, and fit of the final prosthesis. It is one of a set, or a set, of graduated sizes, and may be used in conjunction with a knee femur trial prosthesis and a patella trial prosthesis. It is typically made of metal or polymer material and includes tibial base plate trials, tibial spacer trials, tibial insert trials, tibial stem trials, tibial wedge/augment trials, and guide pin trials. This is a reusable device.	IIa
5839	58717	Inhalation-therapy sodium chloride air purifier	Амьсгалах эмчилгээний натрийн хлоридын агаар цэвэршүүлэгч	A mains electricity (AC-powered) device intended to disperse dry-salt aerosols into the environment for patient inhalation, to increase the flow of respiratory secretions and reduce distension and inflammatory swelling within the respiratory tract; it is indicated for patients with respiratory disorders (e.g., asthma, sinusitis, rhinitis) and for general health promotion. It is designed to be stationary in a room in a variety of settings (e.g., healthcare, home, office) and typically consists of an electric motor that forces ambient air through a filter containing primarily sodium chloride (NaCl) which is released to the environment, while dust is trapped.	IIa
5840	58722	Fundus-imaging ophthalmic solid-state laser system	Нүдний ёроолыг дүрслэх хатуу төлөвт лазерын систем	A mains electricity (AC-powered) device assembly with an integral fundus camera and in which input energy, from a diode laser(s), is used to excite a glass/crystal rod to emit a high-power laser beam, in which the frequency is doubled (532nm), intended to coagulate abnormal vascular tissue in the retina and for other ocular photocoagulation procedures. The camera is designed to provide real-time digital images of the retina, created using colour, fluorescein angiography and infrared imaging, for diagnosis and photocoagulation planning and assistance. It does not include femtosecond pulsing technology.	IIa

5841	58723	Mobile extracorporeal gas exchange system	Хөдөлгөөнт биеийн гаднах хийн солилцооны систем	An assembly of devices designed to provide partial extracorporeal respiratory support to treat acute hypercapnic respiratory failure in settings where the patient may be moved while on therapy [e.g., intensive care unit (ICU), emergency room]. It is intended to function by pumping the patient's blood through a hollow-fibre membrane gas exchanger so that carbon dioxide is removed and oxygen added, and returning the blood to the patient's venous system (veno-venous), typically as an alternative to mechanical ventilation. It consists of a control unit, a single-use cartridge pump, and a single-use catheter kit. The system is not intended for long-term use.	IIa
5842	58724	Mobile extracorporeal gas exchange system control unit	Хөдөлгөөнт биеийн гаднах хийн солилцооны системийн хяналтын нэгж	A mains electricity (AC–powered) component of a mobile extracorporeal gas exchange system intended to control the extracorporeal blood flow rate and the sweep gas flow rate through the system cartridge. It contains a motor that is magnetically coupled with the pump in the cartridge, and may be connected to an external oxygen source. It typically consists of operator controls, a monitoring interface, ports, valves, and sensors. It typically has internal batteries that allow the device to operate for short periods when no line power is available.	IIa
5843	58750	Elbow humerus prosthesis trial	Тохойн ясны протезийн туршилт	A copy of a final humerus prosthesis designed to be used for trial reductions during elbow arthroplasty to judge the correct size, length, condyle positioning, and range of motion of the final prosthesis to be implanted. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5844	58751	Elbow ulna prosthesis trial	Тохойн үений протезийн туршилт	A copy of a final ulna prosthesis designed to be used for trial reductions during elbow arthroplasty to judge the correct sizing, length, and range of motion of the final prosthesis to be implanted. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

5845	58752	Arthroscopic access cannula, single-use	Артроскопийн суваг, нэг удаагийн	A single-lumen surgical device intended to be percutaneously inserted into a joint to create an access port for an arthroscope/arthroscopic instrument during arthroscopy. The cannula is designed to facilitate the passage of surgical instruments while preventing the escape of irrigation fluid and typically includes an internal watertight seal, and a port for drainage of fluid. It is available in a variety of dimensions and/or designs and may include one or more obturator(s) to facilitate insertion. This is a single-use device.	IIa
5846	58762	Deep-tissue electromagnetic stimulation system, professional	Гүн эдийн цахилгаан соронзон өдөөлтийн систем, мэргэжлийн	An assembly of devices designed to apply an electromagnetic (EM) field to body tissues to: 1) treat musculoskeletal disorders (e.g., osteoarthritis, osteoporosis); 2) treat body pain (musculoskeletal, postsurgical); 3) help facilitate soft and hard tissue wound/injury healing; and/or 4) reduce subcutaneous fat layers by muscle stimulation. It includes an electrically-powered control unit and application pads/flat coils intended to emit EM radiation to the treatment site. It is not intended to apply an electric current directly to the body nor produce therapeutic deep heat. The system is intended to be used in a clinical setting only.	IIa
5847	58772	Femoral head sphericity template	Гуяны толгойн бөмбөрцөг хэлбэрийн загвар	A non-sterile hand-held manual gauge intended to be used to help estimate the loss of sphericity of the femoral head to help guide femoral head restoration during an osteoplasty procedure [e.g., an osteotomy to correct femoro-acetabular impingement (FAI)]. It is typically made of plastic and includes a handle attached to a transparent, semi-spherical concave base applied to the femoral head for the estimation; it is available as a set of graduated sizes. This is a reusable device intended to be sterilized prior to use.	IIa

5848	58778	Atomizing surgical adhesive/sealant applicator	Хагалгааны цавуу / чигжээс түрхэгчийг атомжуулах	A sterile device designed to create a atomized spray of surgical adhesive/sealant for bonding and/or haemostasis of large areas of body tissue (e.g., liver, lung) during surgical procedures (e.g., laparoscopy, laparotomy, thoracoscopy). It typically consists of an operating handle that incorporates a syringe of adhesive and a small gas canister with non-toxic, non-flammable gas (e.g., tetrafluoroethane), with connectors to a dual-lumen catheter with a atomizing spray tip. This is a single-use device.	IIa
5849	58780	Open-surgery adhesive/sealant applicator, single-channel	Нээлттэй мэс заслын наалдамхай / чигжээс түрхэгч, нэг суваг	A sterile applicator designed for the controlled application of a surgical adhesive/sealant during open surgery (e.g., laparotomy, vascular surgery) for various haemostatic and/or tissue bonding uses. It typically consists of an applicator (e.g., dropper, spreader) for use with a single-component syringe; it may include the syringe and additional devices to assist extraction of the adhesive/sealant from a bottle. This is a single-use device.	IIa
5850	58784	Humeral head prosthesis trial, reusable	Хумерын толгойн протезийн туршилт, дахин ашиглах боломжтой	A copy of a final humeral head prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient, to ensure its proper orientation and positioning, and to verify that the implant site has been cut to the proper dimensions. It has a cup-like ball shape and is available in types such as concentric head fixation, eccentric head fixation, cuff tear arthropathy (CTA), or types for revision surgery. It is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

5851	58796	Surgical depth gauge, single-use	Мэс заслын гүн хэмжигч, нэг удаагийн хэрэглээ	A surgical instrument designed to measure the depth of a recess, usually to measure the depth of holes being drilled in bone to determine the length of the bone screw to be used. It may take the form of: 1) a device with a moveable (sliding) centrepiece (a prong), the tip of which is inserted into the recess to read from a scale; 2) a circular disc with a central hole which is clipped to a drill bit so that the device slides up as the drill bit is advanced; or 3) a cylindrical rod with markings. This is a single-use device.	IIa
5852	58804	Surgical implant template, single-use	Мэс заслын суулгацын загвар, нэг удаагийн	A device designed to determine the appropriate size and placement of a non-dental implant for a patient prior to or during implantation surgery. It is typically available as a graduated set or an individual plate (e.g., a translucent plastic sheet or a cut metal shape) with patterns/sizes corresponding to the size of the implant to be used to aid the surgeon in final selection of implant size, placement, and/or adaption. It is used for, e.g., total- or partial-joint prostheses, bone fracture fixation implants (plates, nails, including skull plate implants) or other types of surgical implants. This is a single-use device.	IIa
5853	58810	Vortex oxygen face mask	Vortex хүчилтөрөгчийн нүүрний маск	A non-sterile, form-shaped, fenestrated device designed to be placed over the nose and mouth to deliver a near-precise mixture of air and oxygen (O2) to a patient's airway without the use of a gas mixer. It incorporates a pin/diffuser intended to create vortices of high-concentration O2 directed to the mouth and nose to provide the full range of FiO2 (fraction of inspired oxygen) required for oxygen therapy. The fenestration designed to prevent positive pressure build-up and rebreathing, also allows for easier communication/feeding. It may include tubing, and various valves and connectors, however other respiratory equipment (e.g., nebulizer) is not included. This is a single-use device.	IIa

5854	58815	Hand-held multi-spectral vascular imaging device	Олон спектрийн судас дүрслэх гар төхөөрөмж	A battery-powered, hand-held device designed to utilize visible and near infrared (IR) light for superficial vascular structure imaging by illuminating and projecting the subcutaneous venous structure of a patient onto the patient's skin surface. The device includes controls and an optical unit for non-laser imaging which allows the operator to assess multiple vascular access points with a real-time digital image [active vascular imaging navigation (AVIN)] on any part of the anatomy. The device includes rechargeable batteries that allow its operation for a limited period. It is used in a variety of clinical settings. This portable device can also be attached to static mounting arm.	IIa
5855	58818	Self-ligating orthodontic bracket	Өөрөө холбох ортодонт хаалт	A ceramic device intended to be bonded to a tooth to hold an orthodontic archwire used to apply pressure to the tooth in order to alter the position of the tooth. It has an integral fixation clip, typically made of a polymer with a metal hinge, to retain the archwire (self-ligating) within a metal insert slot. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa
5856	58830	Cardiopulmonary bypass cannula holder set	Зүрхний уушигны сувгийн тавиурын багц	A collection of sterile devices intended to help secure a cardiopulmonary bypass cannula to the underlying tissue in the operative field to minimize displacement of the cannula during cardiopulmonary bypass surgery. Popularly known as a ‘snugger’, it typically consists of a number of colour-coded plastic tubes which can be cut to length, and a metal wire snare. The snare is intended to grasp a purse-string suture and to pull it taut through the tube; a holding suture is tied around the tube and the cannula to keep the cannula in place. This is a single-use device.	IIa

5857	58850	Ophthalmic spectral-domain optical coherence tomography system	Нүдний спектрийн домайн оптик когерент томографийн систем	A mobile assembly of devices designed to use near infrared (NIR) LED light aimed into the eye to acquire, process, display and save in vivo depth-resolved images of anterior and posterior ocular tissue microstructures in clinical and perioperative examination through the use of interchangeable lenses. Spectral domain optical coherence tomography (SDOCT) is intended to aid in the diagnosis and evaluation of physiologic and pathologic conditions of the eye through non-contact optical imaging. Reflected light is picked up by a detector that converts it into electrical signals using a computer and dedicated software, providing cross-sectional or three-dimensional (3-D) volume scans for analysis.	IIa
5858	58852	Endocardial injection catheter	Эндокардийн тарилгын катетер	A sterile, steerable, thin, flexible tube with a deflectable tip that includes a retractable injection needle, designed to be introduced percutaneously into the heart chambers to inject therapeutic and diagnostic agents into the myocardium. It typically includes a proximal handle with a thumbscrew intended to allow the operator to steer the tip as it is advanced to the site of agent injection; it does not include electrodes. Other devices such as a ruler, aortic arch simulator, and syringe extension may be included. This is a single-use device.	IIa
5859	58853	Radio-frequency ablation system probe, single-use	Радио давтамжийн абляцийн системийн датчик, нэг удаагийн	A sterile, semi-flexible, hand-held surgical instrument designed to connect to a radio-frequency (RF) ablation system generator to deliver RF energy to a targeted operative site for soft-tissue ablation (i.e., thermal ablation, therapeutic lesion, or denervation). It includes multiple monopolar electrodes that extend from its tip, once deployed, for application to the treatment site; the electrodes typically include temperature-sensing elements. The device is intended to be used in percutaneous, laparoscopic, or open surgery procedures to ablate tissue typically in the brain/nerves, liver, and/or in small or metastatic tumours. This is a single-use device.	IIa

5860	58856	Invasive breast implant sizer, fixed, reusable	Хөхний суулгацын инвазив хэмжээтэй, суурин, дахин ашиглах боломжтой	A device intended to be placed intraoperatively in a surgically-prepared mammary pocket to provide a volume measurement for the appropriate selection of a breast implant (mammary prosthesis). The device is typically composed of a silicone rubber shell with a single-lumen, filled with a fixed amount of silicone gel, which is placed in the pocket and then removed. The sizer may vary in shape, profile, and volume. This is a reusable device intended to be resterilized between patient applications.	IIa
5861	58860	Multi-purpose digital medical camera lens, extraocular	Олон зориулалттай дижитал эмнэлгийн камерын линз, нүдний гаднах	A non-sterile optical device intended for attachment to a multi-purpose digital medical camera to provide high-resolution focusing of digital imaging data from the surface of the eye and adjacent areas. It may use white and/or blue light for the capture of specialized images (e.g., dry eye). This is a reusable device.	IIa
5862	58861	Multi-purpose digital medical camera lens, intraocular, visible/infrared light	Олон зориулалттай дижитал эмнэлгийн камерын линз, нүдний дотоод, үзэгдэх/хэт улаан туяаны гэрэл	A non-sterile optical device intended for attachment to a multi-purpose digital medical camera to provide high-resolution focusing of digital imaging data from the fundus of the eye. It is typically intended for visualization of the optic disc, macula, and retinal vasculature with a wide field of view and facilitates documentation and screening for retinal lesions and disease using white light or infrared. This is a reusable device.	IIa
5863	58864	Circulating-fluid endometrial-ablation catheter	Цусны эргэлтийн шингэн эндометрийн-абляци катетер	A device in the form of a thin tube with an inflatable balloon at its distal tip intended to be used to provide heat ablation (typically at a temperature of approximately 150°C) of the interior lining of the uterus (endometrium) for the treatment of dysfunctional uterine bleeding (menorrhagia). It is designed to be attached to a hand-held control unit in which a fluid medium (e.g., glycerin) is heated before being forced into the catheter balloon under pressure to compress against the uterine wall and circulate within for homogenous heat distribution. This is a single-use device.	IIa

5864	58865	Vascular catheter introduction set, nonimplantable	Судасны катетер нэвтрүүлэх иж бүрдэл, суулгацгүй	A collection of nonimplantable, invasive devices intended to provide percutaneous vascular access to enable introduction of a catheter (not included) into the vascular system. It includes a non-steerable introducer sheath with an inner obturator/dilator, and typically an additional access device(s) [e.g., guidewire, introducer needle, syringe, additional dilators] which may include a haemostatic valve to control blood loss, usually to enable arterial access. This is a single-use device.	IIa
5865	58869	Intravascular extraction catheter-forceps	Судас доторх катетер-хямсаа	A long, thin flexible tube containing retractable forceps (grasping arms) intended to be inserted into the vasculature (artery/vein) to manually grasp and remove unintentionally-introduced foreign bodies (e.g., sheared cannula tips). Its use is typically indicated as an emergency measure during a cardiovascular procedure (e.g., cardiac catheterization), and it is typically operated under fluoroscopic control through the introduction site/instruments for the procedure. The handle of the device includes controls for operating the forceps and typically an extra port for flushing. This is a single-use device.	IIa
5866	58883	Externally-anchored laparoscopic retractor	Гадна бэхэлгээтэй дурангийн татагч	A non-sterile, intraoperative surgical instrument designed for use during laparoscopic procedures to provide hands-free retraction of lower abdominal, urogenital or pelvic structures. It is inserted into the abdominal cavity through a small dedicated incision and manoeuvred into place under direct laparoscopic vision to lift the urogenital structures, and then anchored external to the body to a fixation device typically attached to the operating table. It is typically made of metal (e.g., stainless steel) and is in the form of a rod-shaped to form a saddle-shaped hook, and may be available in left and right configurations. This is a reusable device intended to be sterilized prior to use.	IIa

5867	58925	Catheter-connected paediatric urine collection bag, closed-ended	Катетерт холбогдсон хүүхдийн шээс цуглуулах уут, хаалттай	A flexible plastic pouch designed to connect to a urinary catheter (typically indwelling) to collect discharged urine from an infant/pre-adolescent paediatric patient; it is not designed with an opening for urine drainage. The device is not attached to the patient and is disposed of when full. This is a single-use device.	IIa
5868	58927	Orthopaedic prosthesis implantation positioning instrument, single-use	Ортопедийн протез суулгах байрлал тогтоох хэрэгсэл, нэг удаагийн хэрэглээ	A hand-held surgical instrument intended to be used during implantation of an orthopaedic prosthesis, either manually or as a computer-assisted surgery (CAS) device, to aid in the navigation/placement of the prosthesis or other instruments [e.g., drill sleeves and guide wires (Kirschner wires), patella saw guide]. It may be used for the following applications: 1) to hold/align/fix/guide other instruments, prosthesis, or prosthesis component; 2) to provide relative position landmarks; 3) to ascertain correct spatial orientation or limb alignment; and/or 4) as an interface (non-adaptive) between prosthesis components. This is a single-use device.	IIa
5869	58928	Noninvasive ankle brachial pressure index measurement unit	Шагайны инвазив бус даралтын индекс хэмжих нэгж	An automated, battery-powered, portable electronic device designed to calculate the ankle brachial pressure index (ABPI), used in the diagnosis of peripheral vascular disease (PVD), from simultaneous oscillometric measurement of the ankle and brachial blood pressure indices. It typically consists of a control/analysis/display unit with cuffs placed around an arm and one or both ankles; it uses integrated transducers to measure cuff pressure oscillations which represent the fluctuations of pressure in the underlying blood vessels. The device is typically operated by a healthcare professional.	IIa

5870	58935	Intense pulsed light skin surface treatment system	Хүчтэй импульсийн цайвар арьсны гадаргуугийн эмчилгээний систем	A mains electricity (AC-powered) mobile (on wheels) device designed to produce strong, controlled flashes of filtered light in the wavelength range 400 - 1200nm [intense pulsed light (IPL)] for heat ablation of pigmented skin cells (selective photothermolysis) to treat multiple skin/pigmentation conditions. The device typically enables variation of treatment parameters (wavelength, duration of impulses, single/multiple impulses) for treatment of conditions such as acne, telangiectasia, pigmentation (freckles, sun spots, liver spots) and/or for hair reduction. It consists of a control unit with user interface display and control panel, and a wire-connected applicator.	IIa
5871	58936	Sialendoscope	Сиалендоскоп	An endoscope with a slender semiflexible inserted portion intended for the visual examination and treatment of the salivary ducts. Anatomical images are transmitted to the user by the device through a fibreoptic bundle. This device is commonly used in combination with special instruments (e.g., forceps, laser probes, stone extractors) to locate and extract/treat a salivary stone (sialolithiasis) and/or a stricture (sialostenosis) in the submandibular, parotid, and/or sublingual salivary duct. This is a reusable device intended to be sterilized before use.	IIa
5872	58937	Orthodontic bracket, ceramic	Ортодонт хаалт, керамик	A ceramic device intended to be bonded to a tooth to hold an orthodontic archwire used to apply pressure to the tooth in order to alter the position of the tooth. It typically has a metal (e.g., stainless steel) insert slot for the archwire, which is held in place with an orthodontic archwire/bracket fixation ring. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa

5873	58949	General-purpose surgical scissors, single-use	Ерөнхий зориулалтын мэс заслын хайч, нэг удаагийн	A hand-held manual surgical instrument designed to cut/dissect a variety of tissues during open surgery and having no dedication to a specific anatomy or clinical use; it might in addition be intended for cutting materials associated with surgery (e.g., sutures). It is comprised of two pivoted shearing blades with handles, whereby the blades cut as the sharpened edges pass one another as they are closed; some types may have blades that cross over to expose a sharp edge for slicing tissue like a scalpel. It is typically made of metal and is available in various designs and sizes, and some types can have carbide inserts along the cutting edges. This is a single-use device.	IIa
5874	58977	Basic intravenous administration set, noninvasive	Судсаар тарих үндсэн багц, инвазив бус	A collection of noninvasive devices intended to conduct fluids from an intravenous (IV) administration bag/bottle to a peripheral venous cannula (not included) during gravitational or pump administration to a patient's venous system; some types may in addition be intended for enteral feeding applications. It typically includes tubing, connectors, chambers, and clamps; the bag/bottle may be included. It neither includes devices intended for invasive use nor a heat exchanger. This is a single-use device.	IIa
5875	58988	Arthroplasty force sensor	Артропластикийн хүч мэдрэгч	An electronic device designed for use during arthroplasty to facilitate assessment of joint function during implantation of prosthesis components, typically to evaluate bone resection lines, prosthesis size and positioning, and/or soft tissue tension. It is dedicated to a specific joint or type of prosthesis (e.g., total knee, reverse shoulder) and consists of a transducer pad for insertion between opposing joint surfaces. It may have an integrated digital display or communicate with an external display unit; some types include a noninvasive analogue-to-digital converter and image display controller. It is typically available as a left or right version. This is a single-use device.	IIa

5876	58990	Side-notch biopsy gun handpiece/needle	Хажуугийн ховилтой биопсийн гар багаж/зүү	for the automatic extraction of a small tissue sample from an anatomical structure (a biopsy), while causing minimal surrounding tissue damage, for tissue pathological examination/testing. It consists of both: 1) a handpiece with a spring-loaded mechanism and release trigger; and 2) a percutaneous, distal, needle-like portion with a side-notch cutter which when activated causes a sharp, sliding cannula to slice a segment of tissue. It is typically used to obtain samples of soft tissue from the kidneys, prostate, pancreas, liver, and breast, often performed under image guidance. This is a single-use device.	IIa
5877	59020	Continuous electronic patient thermometer, line-powered	Тасралтгүй электрон өвчтөний термометр, шугамаар ажилладаг	A mains electricity (AC-powered) electronic instrument designed to continuously measure (monitor) a patient's body temperature (e.g., during the administration of general anaesthesia, treatment of hypothermia and hyperthermia). It comprises an electronic unit and an attached probe that detects and converts the changes in temperature into variations of an electric characteristic, e.g., resistance or voltage. These variations of the electric characteristic are processed in the electronic circuits and continuously displayed as temperature readings. This is a reusable device.	IIa
5878	59021	Breast implant delivery sleeve	Хөхний суулгац өгөх ханцуй	A sterile flexible cylinder intended to assist with the delivery of a prefilled breast implant by providing a low-friction shell-tissue interface during implant insertion into a surgically-created breast pocket, without constricting the size of the implant. It is typically made of polyethylene (PE) plastic and is not intended to be used with a lubricant other than saline. The implant is directed through the tube by twisting of the distal end, or by direct manual manipulation. This is a single-use device.	IIa

5879	59082	Urinary-incontinence vaginal insert, reusable	Шээс ялгаруулах үтрээний оруулга, дахин ашиглах боломжтой	A non-sterile, device intended to be inserted into the vagina in order to relieve mixed or stress urinary incontinence in an adult female by providing urethral support when pressure is transferred from the abdomen to the pelvic floor area (e.g. upon coughing, laughing, sneezing, exertion). It is a non-absorbent device with a removal cord; an application kit (tube and push rod) is typically included. This is a reusable device - after appropriate cleaning - intended for single-patient use.	IIa
5880	59225	Mechanical atherectomy system catheter/handpiece	Механик атерэктомийн системийн катетер/гар аппарат	A sterile catheter with attached handpiece, with a power-driven cutting or abrasive head intended to mechanically disrupt/remove atheroma plaque from the walls of both coronary and peripheral arteries. The operator regulates the energy via a remote control or foot-switch attached to the generator. The handpiece may also serve as a conduit for irrigation, aspiration and placement of a guidewire during surgery. This is a single-use device.	IIa
5881	59230	Hypodermic needle, single-use	Гиподермик зүү, нэг удаагийн хэрэглээ	A non-dedicated, sharp bevel-edged, hollow tubular device intended to be inserted beneath the skin of a patient while connected to a noninvasive device (e.g., syringe, secondary medication set) to administer and/or withdraw (aspirate) fluids/drugs; it may also be used for fluid/drug preparation. Some types are designed with a shielding mechanism (e.g., safety cap) for protection from sharp injuries. It is not specifically designed for blood collection or artery puncture, and does not have wings for fixation/placement (i.e., not a blood collection, intra-arterial, or venous butterfly needle). This is a single-use device.	IIa

5882	59251	Cold compression therapy cervical spine collar	Хүйтэн шахалтын эмчилгээ умайн хүзүүний нурууны хүзүүвч	A prefabricated (non-customized) wearable device intended to facilitate, through cooling and compression, the treatment of a variety of conditions resulting from injury/surgery to the neck region (e.g., inflammation, stiffness, whiplash). It consists of a cover/wrap intended to be frozen then strapped and fastened around the neck to support the entire neck, upper shoulders, and spine region. It is typically multi-layered with a skin contact surface intended to minimize cold-burn, a gel component (designed to maintain low temperatures), and stretchable outer surface. This is a reusable device after appropriate cleaning.	IIa
5883	59258	Vitrectomy system micro-cutting unit	Витректомийн системийн бичил зүсэх төхөөрөмж	A sterile, pneumatically-powered, hand-held cutting tool that incorporates a vitrectomy system handpiece, micro-tip and connecting tubing as a single unit, intended to remove (nibble away) vitreous humour (the jelly-like substance that fills the centre of the eye) during ophthalmic surgery. The tubing transmits pneumatic power produced by a system generator to the handpiece which converts this into a mechanical oscillating-cutting action at the tip. This device will typically be activated by the surgeon using a foot control and provide or support the irrigation/suction systems needed to supply replacement fluid and remove debris. This is a single-use device.	IIa
5884	59259	Macular pigment analyser	Шар толбоны пигмент анализатор	A mains electricity (AC-powered) computerized device designed for the noninvasive in vivo measurement of macular pigment optical density (MPOD) used in the evaluation of age-related macular degeneration (AMD). It is a portable unit that includes a light-emitting diode (LED) board intended to evaluate a patient who looks down an ocular lens and responds to a flickering spot (heterochromatic flicker photometry); after a series of presentations a value for the MPOD is calculated and displayed. The device may be used in association with dedicated software installed on a personal computer; it may be used in healthcare facilities or in the home.	IIa

5885	59281	Antisnoring mucosa lubricant	Хурхиралтын эсрэг салст бүрхэвчийн тосолгооны материал	A substance intended to be taken prior to sleep to control snoring; it may be in the form of a dissolvable lozenge, dissolvable oral strip, a throat spray, or a rinse. It typically contains natural ingredients (e.g., eucalyptus oil, glycerol, menthol, peppermint oil, hyaluronic acid) intended to lubricate and tone mucosa in the back of the throat to reduce sound vibration. This is a single-use device.	IIa
5886	59460	Contralateral hearing unit	Эсрэг талын сонсголын нэгж	A passive (i.e., non-powered) acoustic device intended to compensate for total hearing loss in one ear, by transmitting sound received by a microphone from the deaf ear to an active (i.e., powered) hearing aid worn on the hearing ear. This contralateral routing of sound (CROS) technology is designed to improve awareness of sounds (e.g., traffic, speech) emanating from all directions. The device typically consists of a microphone contained in a case worn behind-the-ear (BTE) with a connection cable. The cable both transmits the power from, and the signal to, the active hearing aid.	IIa
5887	59522	Wound hydrogel dressing, antimicrobial	Шархны гидрогелийн боолт, нянгийн эсрэг үйлчилгээтэй	A wound covering typically made of cross-linked polymer gels in sheet form or an amorphous hydrating gel of various formulations, and that includes an antimicrobial agent, intended to promote wound healing by maintaining a moist wound environment; it may also facilitate wound debridement and/or absorb exudates in wounds that are minimally to moderately exudative. It may combine hydrogel with supplemental dressing materials (e.g., alginate, film backing), require the use of a secondary dressing, and/or provide a barrier impermeable to liquids and gases. This is a single-use device.	IIa

5888	59677	Intraoperative/postoperative therapeutic x-ray system	Хагалгааны үеийн / мэс заслын дараах эмчилгээний рентген систем	A mobile (on wheels) assembly of mains electricity (AC-powered) devices designed to produce low-energy x-rays used for therapeutic purposes, primarily in the treatment of cancer (e.g., breast, brain, skin) typically during or after an operation for tumour resection. It uses a miniature electronic X-ray source (50kV maximum) attached to one of various types and sizes of applicators specific to the clinical application (e.g., from within a resected breast tumour site). It typically consists of an x-ray source and an applicator mounted on a floor stand, verification tools, control unit, and user interface. It may be used in an operating room (OR) or other clinical setting.	IIa
5889	59682	Intraoperative/postoperative therapeutic x-ray system intraoperative flat applicator	Хагалгааны дотор/хагалгааны дараах эмчилгээний рентген систем	A non-sterile component of an intraoperative/postoperative therapeutic x-ray system designed to be attached to and cover the x-ray source for direct patient contact when the system is used for the treatment of certain clinical conditions (e.g., intra-abdominal tumours). It has a flat distal end that is typically used to irradiate a treatment site while it is exposed surgically during an operation. It is typically supplied in a range of sizes (diameters). This is a reusable device intended to be sterilized prior to use.	IIa
5890	59691	Neuromuscular transmission regional anaesthesia block adaptor	Мэдрэл-булчингийн дамжуулалтын бүс нутгийн мэдээ алдуулалтын блок адаптер	A device intended to conduct electrical signals between an integrated electrode connection clip and an injection needle on a patient’s body, via a neuromuscular transmission (NMT) sensor cable, and subsequently to a patient monitoring module for the localization of a nerve in an area of the body for the administration of regional anaesthesia. This is a reusable device.	IIa

5891	59739	Skin photodynamic therapy lamp	Арьсны фотодинамик эмчилгээний гэрэл	A mobile, mains electricity (AC-powered) lamp intended to emit red light of high stability with a narrow spectrum (e.g., 630nm) for photodynamic therapy (PDT) applications on multiple anatomical sites (e.g., face, torso), to treat skin disorders such as non-melanoma skin cancer, non-cancerous skin lesions and/or ulcers. It is designed to selectively activate a photosensitizing agent at the specific anatomical site requiring treatment, thus providing anatomically specific PDT. This device is intended to be used by a healthcare professional in a clinical setting.	IIa
5892	59822	Skin photodynamic therapy/phototherapy lamp	Арьсны фотодинамик эмчилгээ/фото эмчилгээний чийдэн	A portable, mains electricity (AC-powered) lamp intended to emit low-level narrow-band (LLNB) red light (e.g., 600-650nm) and blue light (e.g., 415-440nm) either separately or simultaneously for photodynamic therapy (PDT) applications (with photosensitizing agent) to treat skin disorders such as actinic keratosis and non-melanoma skin cancer, and for phototherapy applications (through modification of skin metabolism) to treat skin complaints such as acne, rosacea and sun spots. It uses light-emitting diodes (LEDs) to produce a heatless light source which may be used for treatment at multiple anatomical sites. It is intended to be used by a healthcare professional in a clinical setting.	IIa
5893	59835	Sweat-induction iontophoresis system electrode, reusable	Хөлс индукцийн ионтофорезийн системийн электрод, дахин ашиглах боломжтой	A dedicated, non-sterile, active, electrical conductor that is a component of a sweat-induction iontophoresis system, for transcutaneous delivery of water-soluble electrolytic substances containing a sweat inducing agent (typically pilocarpine). It typically consists of skin contact portion, which may accommodate the sweat inducing agent, a lead wire which connects to a sweat-induction iontophoresis system generator, and may include the return electrode/contact. This is a reusable device after appropriate cleaning.	IIa

5894	60113	Magnetic cell separation system buffered saline solution	Соронзон эсийг ялгах систем буферт давсны уусмал	A sterile buffered aqueous salt solution that is a component of a magnetic cell separation system intended to be used during the magnetic separation of target cell types or subpopulations from heterogeneous human cell preparations. The device is intended for the priming of the separation system as well as the washing and elution of separated cells and to prevent cell aggregation and adherence. It is supplied in a container (e.g., polypropylene bag) and is not for direct intravenous (IV) infusion. This is a single-use device.	IIa
5895	60114	Magnetic cell separation system tubing set	Соронзон эс тусгаарлах системийн хоолойн багц	A sterile tubing set that is a component of a magnetic cell separation system intended to be used for the magnetic separation of target cell types or subpopulations from heterogeneous human cell preparations. It typically consists of flexible plastic tubes, connectors (e.g., spike, Luer-lock), connectors, bags (e.g. waste, target cells) and separation columns; it may also include filters, clamps, and centrifugation, cultivation, and heating/cooling chambers. The set provides a sterile interior fluid path. This is a single-use device.	IIa
5896	60212	Magnetic nanoparticle tracer	Соронзон нано бөөмс илрүүлэгч	A sterile, fluid magnetic material intended to be injected in close proximity to a tumour to facilitate its migration to sentinel lymph nodes; the lymph nodes can subsequently be localized with a magnetic field detector (magnetometer) and surgically removed for histological analysis. The device includes a suspension of dextran-coated iron oxide nanoparticles, available in a vial or syringe, that exhibit superparamagnetism in the presence of a magnetic field. It is typically used to support staging of a variety of cancers including breast, melanoma, prostate, and bowel. This is a single-use device.	IIa

5897	60248	Styrene-block-copolymer surgical glove, non-powdered, non-antimicrobial	Стирол-блок-сополимер мэс заслын бээлий, нунтаг биш, нянгийн эсрэг бодисгүй	A device made of styrene block copolymer (SBC) intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	IIa
5898	60275	Endodontic temporary cement	Эндодонтын түр зуурын цемент	A viscous material intended to be applied to a prepared root canal to maintain its relative sterility between procedures and to facilitate its healing. It is intended to be placed within the root canal temporarily and sealed with a temporary filling material to prevent repopulation of the canal by bacteria. It is typically a zinc or calcium cement-based material that includes an antimicrobial agent (e.g., pharmaceutical or pH), and sometimes an anti-inflammatory agent, available in a tube or syringe. After application, this device cannot be reused.	IIa
5899	60309	Heater/cooler system tester kit	Халаагч/хөргөлтийн системийн туршилтын хэрэгсэл	A collection of devices intended to be used to test/calibrate a clinical heater/cooler system (e.g., extravascular-circulation hyperthermia system, heating/cooling pad systems) with respect to fluid flow, thermal calibration, and electronic integrity. The kit may include a pressure/flow calibration unit, a thermocouple thermometer, a breakout box and relevant connection cables. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	IIa

5900	60334	Blood centrifugation system processing unit	Цусны центрифугийн систем боловсруулах нэгж	A mains electricity (AC-powered) portable device that is a component of a blood centrifugation system designed for the automated processing of blood, relative components or cellular products (e.g., umbilical cord blood, bone marrow), in a closed sterile environment using centrifugation to isolate constituent components (e.g., cells, plasma). It is a programmable device with an integral centrifuge intended to provide centrifugal and axial displacement drive to a centrifugation chamber, as well as drive to directional valves that control the flow of blood components to collection bags. The device is not donor or patient connected.	IIa
5901	60336	Blood centrifugation system	Цусны центрифугийн систем	An assembly of devices designed for the automated processing of blood, relative components or cellular products (e.g., umbilical cord blood, bone marrow), in a closed sterile environment using centrifugation to isolate constituent components (e.g., cells, plasma). The assembly typically consists of a mains electricity (AC-powered) processing unit with an integral centrifuge, a disposable kit that includes a centrifugation chamber into which blood is introduced and sedimented into its components during centrifugation, and application-specific protocol software. The system is not donor or patient connected and is typically used for stem cell banking and regenerative medicine.	IIa
5902	60358	Powered rectal/colostomy irrigation system	Шулуун гэдэсний/колостомын усалгааны системтэй	A portable assembly of battery-powered devices intended to be used by, or on a patient, for the controlled introduction of a non-medicated solution (typically water) into the rectum to treat faecal incontinence or constipation (rectal irrigation), and/or for colostomy site irrigation; it is not intended for irrigation of the entire colon. It consists of a reservoir, an electronic pump/control unit, connection tubing, and may include patient contact devices (e.g., rectal or colostomy irrigation nozzle/catheter), and a battery charging device (e.g., mains power lead). It is intended for use in the home and healthcare facility. This is a reusable device.	IIa

5903	60366	Dental material injection cannula, single-use	Шүдний материал тарилгын суваг, нэг удаагийн	A rigid or semi-rigid luminal device (dental tip) intended to channel and dispense a dental material/solution [e.g., restorative amalgam, resin, etching solution (etchant), topical dental anaesthetic] from a dental syringe, or similar applicator, to a patient's teeth, oral mucosa, or gums; it is not intended to penetrate tissue (it is not a needle), not dedicated to root canal irrigation, and may be used for dental applications outside the patients mouth. This is a single-use device.	IIa
5904	60377	Meniscus biomatrix implant cutter	Meniscus biomatrix суулгац таслагч	A bench-top, manual, surgical instrument intended to be used to cut/trim a meniscus biomatrix implant (e.g., porcine, bovine) to a specified shape in preparation for patient implantation following meniscectomy. It is typically presented as a cutting assembly that may include multiple contoured cutting blades. This is a reusable device intended to be sterilized prior to use.	IIa
5905	60378	Percutaneous biliary biopsy procedure kit	Арьсны цөсний биопсийн процедурын багц	A collection of sterile devices intended to be used to obtain a tissue specimen from within the biliary duct system for histological analysis by a percutaneous approach, typically under fluoroscopic visualization. It typically includes flexible biopsy forceps consisting of a handle, shaft, and a standard cup for tissue sampling, and various devices required for access [e.g., needle(s), introducer(s), guidewire(s) and catheter(s)]. This is a single-use device.	IIa

5906	60383	Nail photodynamic therapy kit	Хумсны фотодинамик эмчилгээний иж бүрдэл	A collection of devices and pharmaceuticals intended to be used to treat nail fungal infection (onychomycosis) with photodynamic therapy (PDT). It consists of an electrically-powered PDT lamp intended to emit red light of high stability with a narrow spectrum (e.g., 620-630 nm), an antifungal photosensitizer gel, and may include nail-covering light shields, rechargeable battery options/charging stations, and lamp stands. It is intended to be used by a healthcare provider in a clinical setting. This device is reusable after appropriate cleaning of the instruments/reusable products, and when the consumable/pharmaceutical products have been replenished.	IIa
5907	60388	Nail laser phototherapy unit	Хумсны лазер фото эмчилгээний аппарат	A portable, mains electricity (AC-powered), laser-emitting device intended to treat nail fungal infection (onychomycosis) using low-level laser treatment (LLLT). It typically consists of an electronic unit with a digital display and a treatment platform where the foot/hand is placed to receive LLLT; it typically includes protective eyewear. It is intended to be used by a healthcare provider in a clinical setting.	IIa
5908	60394	ENT cartilage cutter blade	Чих хамар хоолойн мөгөөрсний таслагч ир	A sterile, sharp metal blade intended to be mounted onto an ENT cartilage cutter to cut thin slices of harvested cartilage tissue (e.g., tragus-derived autograft) for patient implantation during an ear/nose/throat (ENT) procedure (e.g., middle ear surgery). This is a single-use device.	IIa
5909	60400	Endorectal surgical cooling system	Дотор гэдэсний мэс заслын хөргөлтийн систем	An assembly of portable devices intended for localized cooling/temperature control of internal pelvic tissues, via the rectum, during surgery (e.g., prostatectomy) to reduce neuromuscular injury and inflammation associated with surgical trauma. It typically consists of a mains electricity (AC-powered) control unit containing a heat exchange cassette, and a transanal balloon catheter. The balloon catheter is intended to be introduced through the rectum to circulate liquid coolant (e.g., saline) which is temperature monitored/regulated by the control unit.	IIa

5910	60401	Endorectal cooling system catheter	Дотор гэдэсний хөргөлтийн системийн катетер	A non-sterile flexible tube that is a component of an endorectal surgical cooling system intended to be introduced into the rectum during surgery (e.g., prostatectomy) for the in-line circulation of liquid coolant (e.g., saline) to reduce neuromuscular injury and inflammation associated with surgical trauma of internal pelvic tissues. It is a balloon catheter that consists of multiple connectors, fed by the system control unit, which supply/return coolant to/from single or multiple balloons. This is a single-use device.	IIa
5911	60408	Dental caries detecting stain	Шүд цоорох толбо илрүүлэх	A liquid substance intended for use in dentistry as a staining agent to detect early stage dental caries and/or to monitor the progress of caries. It typically consists of two solutions (e.g., metal fluorides) that are applied separately to the suspect area of the tooth/teeth, and change colour in the presence of the caries-producing bacteria or bacterial residues, and/or remnants of the tooth structure from a carious lesion. The staining produced can be monitored over time to assess the progression/remission of the caries. After application, this device cannot be reused.	IIa
5912	60446	Salivary gland balloon catheter	Шүлсний булчирхайн бөмбөлөг катетер	A sterile, flexible tube with a distensible balloon(s) at its distal tip designed to be used for the dilation of a lesion and/or stricture of the salivary ducts. It is typically inserted into a salivary duct and advanced to the stenotic site where it is inflated under endoscopic, fluoroscopic or ultrasonic control; it may be used with a guidewire. This is a single-use device.	IIa

5913	60451	Laser Doppler blood flowmeter	Лазер доплер цусны урсгал хэмжигч	A mobile, mains electricity (AC-powered) device designed to use laser Doppler techniques to measure the velocity of micro- and macrovascular blood circulation to assess the extent of vascular flow restrictions [e.g., clots, stenosis, mechanical damage, and peripheral vascular disease (PVD)]. It typically measures blood flow/perfusion, transcutaneous oxygen (TCOM) and/or carbon dioxide, and may have modules for heat provocation and pressure control. It typically consists of various laser Doppler probes, temperature measurement sensors, and pressure measuring cuff/sensors connected to a software-controlled control/visual display unit.	IIa
5914	60477	Bone biopsy needle	Ясны биопсийн зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument designed to obtain a specimen of bone, bone marrow and tumour from any bone of the body. It is typically inserted through a bone access cannula under imaging [e.g., fluoroscopic, ultrasonic, computed tomography (CT)] control and supplied with an ejector rod to remove the biopsy. This is a single-use device.	IIa
5915	60478	Bone access cannula	Ясны хандалтын суваг	A sterile, sharp, hollow tubular metal instrument designed for percutaneous insertion to provide access to any bone of the body for a bone biopsy needle or guidewire, or for a bone marrow aspiration technique, or for inserting therapeutic materials, including bone cements. It is typically inserted using a stylet under imaging [e.g., fluoroscopic, ultrasonic, computed tomography (CT)] control and has a proximal plastic handgrip to apply manual pressure and twist. This is a single-use device.	IIa

5916	60510	Hygroscopic dental cement	Гигроскопийн шүдний цемент	A substance intended for professional use as a dental cement (e.g., luting agent, liner, base, pulp-capping material, root canal sealer) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction of a hygroscopic inorganic compound(s) [e.g., calcium silicates, calcium aluminates, zinc sulfate, calcium sulfate] with water (hydration). It is intended to be either mixed with water prior to application or react with dentinal fluid in situ. After application, this device cannot be reused.	IIa
5917	60607	Blood refrigerator/freezer	Цусны хөргөгч / хөлдөөгч	An electrically-powered device intended to be used to store and/or transport whole blood and/or blood components (e.g., blood cells, plasma) while keeping them cold (temperatures from 1° to 6° Celsius), or alternatively frozen (-18° to -30° Celsius). It includes refrigeration and freezing compartments with internal shelving, controls, sensors and alarms to signal out-of-range temperatures and power failures; its interior is typically corrosion-resistant (typically stainless steel or synthetic materials) to minimize the risk of adulteration, contamination, and/or corrosion of contents. The refrigeration unit is typically equipped with a safety thermostat to protect the products from freezing.	IIa
5918	60622	Isoflurane/sevoflurane recycling anaesthesia vaporizer	Изофлуран/севофлурана ныг дахин боловсруулах мэдээ алдуулалтын ууршуулагч	A non-sterile device intended to be integrated within the common line of a breathing circuit (open or partial rebreathing) to vaporize an anaesthetic gas agent (i.e., isoflurane, sevoflurane) delivered via a syringe pump; absorb and desorb (i.e., recycle) exhaled volatile anaesthetic agents; and facilitate monitoring (e.g., gas concentration and pressure, breathing activity) via connection to gas monitoring equipment. It is typically a housing containing an anaesthetic gas absorption/desorption filter, and a vaporizer. This is a single-use device.	IIa

5919	60633	Body-orifice ultrasound imaging transducer cover, image-enhancement	Биеийн нүхний хэт авианы дүрс хувиргагч бүрхэвч, дүрсийг сайжруулах	A sheath containing an extraluminal pocket/balloon portion intended to cover an ultrasound imaging system transducer (probe) used in natural body orifices (e.g., vagina, rectum), to both protect the transducer and improve image quality. The balloon portion is intended to, when filled with an aqueous solution (e.g., saline), displace air and provide an adjustable interface between the transducer and the anatomy of interest (e.g., prostate) to improve imaging. This is a single-use device.	IIa
5920	60653	Chordae tendinae prosthesis implantation tool	Chordae tendinae протез суулгах хэрэгсэл	A sterile, surgical device intended for transapical (through the apex of the heart) deployment of a suture-like implant (not included) to function as an artificial chordae tendinae for repair of a defective (regurgitant, prolapsed) mitral valve on a beating heart during mini-thoracotomy. It consists of a hand-held, manually-powered, mechanical delivery instrument connected to a battery-powered display intended to confirm position of the implant mechanism prior to implant deployment. It is intended to be used in conjunction with transoesophageal echocardiography as an alternative to open heart surgery. This is a single-use device.	IIa
5921	60656	Rectal ultrasound navigational image processor	Шулуун гэдэсний хэт авиан навигацийн зургийн процессор	A mobile, mains electricity (AC-powered) device intended to be used in conjunction with an ultrasound imaging system and rectal ultrasound transducer to display two- and three-dimensional (3-D) ultrasound images of tissues (e.g., the prostate). It consists of a personal computer (PC) based workstation which processes data from the ultrasound imaging system, and a mechanical assembly intended to mount and track the rectal ultrasound transducer to generate a real-time 3-D image. Depending on specific software, packages may also allow for biopsy navigation and further image processing/data management.	IIa

5922	60657	Non-rebreathing valve, single-use	Амьсгалахгүй хавхлага, нэг удаагийн	A non-sterile device containing a one-way valve intended to be used to direct the flow of breathing gases (e.g., in a breathing circuit, between an oxygen mask and its reservoir bag, or between a breathing mouthpiece and a breath analyser) to prevent patient rebreathing of exhaled gases. It is available in various designs and includes unidirectional valves made of various materials (e.g., silicone, rubber, metal, or mica sheets/discs) that typically open and close with each inspiration/expiration. This is a single-use device.	IIa
5923	60662	Inspiratory line humidification chamber, reusable	Амьсгалын шугамын чийгшүүлэгч камер, дахин ашиглах боломжтой	A device intended to be fitted to a heated inspiratory line humidifier (e.g., positive-airway-pressure sleep apnoea treatment unit humidifier, heated inspiratory line humidifier) to contain water for the purpose of humidifying respiratory gases. It is a plastic chamber intended to allow the water to be heated by the attached humidifier and the subsequent vapour to be delivered to the patient through a connected breathing circuit. It may be used in a healthcare setting or in the home. This is a reusable device.	IIa
5924	60699	Inspiratory line humidification chamber, single-use	Амьсгалын шугамын чийгшүүлэгч камер, нэг удаагийн	A device intended to be fitted to a heated inspiratory line humidifier (e.g., positive-airway-pressure sleep apnoea treatment unit humidifier, heated inspiratory line humidifier) to contain water for the purpose of humidifying respiratory gases. It is a plastic chamber intended to allow the water to be heated by the attached humidifier and the subsequent vapour to be delivered to the patient through a connected breathing circuit. It may be used in a healthcare setting or in the home. This is a single-use device.	IIa

5925	60703	Ultrasonic lithotripsy system probe, single-use	Хэт авианы литотрипсийн системийн мэдрэгч, нэг удаагийн хэрэглээ	A slender, metal, tubular device that is coaxially attached to an ultrasonic lithotripsy system handpiece [a hand-held acoustic transducer that produces ultrasound (US) waves] and intended to transmit US waves to calculi (stones) in the urinary tract (i.e., kidneys, ureters, and bladder) for their fragmentation. Its distal end is brought into contact with calculi and transmits the energy, breaking down the calculi in the body for removal through its lumen. This device is introduced through the working channel of an appropriate endoscope (e.g., a percutaneous nephroscope for ureteral stones). This is a single-use device.	IIa
5926	60707	Circulating-fluid localized thermal/compression therapy system control unit	Цусны эргэлтийн шингэний орон нутгийн дулаан/шахалтын эмчилгээний системийн хяналтын нэгж	An electrically-powered device intended to pump heated and/or cooled water through an externally applied wrap (not included), and to air inflate the wrap, for localized thermal and compression therapy to facilitate the treatment of a variety of adverse conditions resulting from musculoskeletal injury and/or orthopaedic surgery (e.g., pain, swelling, inflammation). It includes a fluid pump, air pump, controls, and either a heater or a means for cold therapy (e.g., refrigeration unit, addition of independently cooled ice water) or both. The unit may be programmable for selected treatment plans. It is intended for use in both professional and home settings.	IIa
5927	60719	Ultrasonic surgical system handpiece cooling sleeve	Хэт авианы мэс заслын системийн гар хөргөх ханцуй	A removable attachment to an ultrasonic surgical system handpiece intended to contain the flow of coolant liquid, supplied through the handpiece, over the ultrasonic surgical system handpiece tip; the coolant is intended to prevent overheating of the tip during a surgical procedure. It is typically a funnel-shaped sleeve designed to fit over the distal end of the handpiece and cover a portion of the tip. This is a reusable device intended to be sterilized prior to use.	IIa

5928	60725	Transfemoral amputation tissue-reinforcement implant trial	Трансфемораль ампутацын эдийг бэхжүүлэх суулгацын туршилт	A copy of a final transfemoral amputation tissue-reinforcement implant intended to be used during orthopaedic surgery to accurately size a transfemoral amputation tissue-reinforcement implant (medullary canal rod and bulb) prior to implantation, following a transfemoral (above-the-knee) amputation. It is typically made of metal or polymer materials and includes trial rods and/or trial bulbs; it is typically available in a set of trial implants of graduated sizes. This is a reusable device intended to be sterilized prior to use.	IIa
5929	60738	Endoscopic insufflation tubing set, single-use	Дурангийн дусаах хоолойн багц, нэг удаагийн	A collection of flexible tubing intended to channel medical gas [e.g., carbon dioxide (CO2), medical air] from its source into a body cavity for insufflation during endoscopy (e.g., gastrointestinal endoscopy, laparoscopy, arthroscopy). It includes synthetic polymer tubing and associated connectors; it may in addition be intended for endoscopic lens drying, and may include additional tubing for delivery of a sterile irrigation solution for endoscopic irrigation. This is a single-use device.	IIa
5930	60760	Endoscope channel support kit	Дурангийн сувгийг дэмжих хэрэгсэл	A collection of sterile devices intended to be fitted to the proximal end of an endoscope to enable/assist in the function of the endoscope ports/working channels or endoscopic devices. It includes a dedicated endoscopic valve (e.g., biopsy valve) and additional endoscope working channel/port accessories (e.g., additional valves, endoscopic guidewire holder). This is a single-use device.	IIa
5931	60769	Microcurrent electrotherapy device, non-powered	Бичил гүйдлийн цахилгаан эмчилгээний төхөөрөмж, цахилгаангүй	A self-adhesive patch intended to be applied to the skin to reduce local pain, facilitate circulation, and relax stiff muscles by producing a weak electrical current (microcurrent) in the skin under the patch. The current is created when the inorganic minerals scattered on the patch contact sweat. It is intended for use in the home. This is a single-use device.	IIa

5932	60778	Breathing circuit multi-parameter sensor	Амьсгалын хэлхээний олон параметрийн мэдрэгч	A device intended to be connected to a breathing circuit to transduce signals from respiratory gases to enable a parent device receiving the signals to measure multiple parameters of the respiratory gases (e.g., flow, temperature). It is in the form of a transducer connected to the parent monitoring/measuring device; the parent device will typically display the parameters it receives and may respond by making control adjustments. This is a reusable device.	IIa
5933	60790	Endothermic cold therapy pack	Эндотермик хүйтэн эмчилгээний багц	A device intended to be applied with pressure to the body surface to provide cold therapy to help reduce fever, pain, and inflammation associated with joint/muscle/tissue injury and/or minor burns. It typically consists of a compact envelope made of plastic and filled with chemicals that generate an endothermic chemical reaction when activated to reduce the temperature of the pack. This is a single-use device.	IIa
5934	60791	Dental implant/teeth debridement brush, biodegradable	Шүдний суулгац/шүд цэвэрлэх сойз, био задралд ордог	A rotary/oscillating dental instrument intended to be used by a dental hygienist and/or dentist for the non-surgical-invasive debridement of a patient's dental implants and/or teeth affected by peri-implant disease (peri-implant mucositis, peri-implantitis) or periodontitis. It is a brush-like device with biodegradable (e.g., chitosan) bristles at the distal end of a high-grade steel shaft. It is intended to be connected to a dental handpiece which provides the rotation or oscillation for the mechanical removal of biofilm from the surface of the implants and teeth. This is a single-use device.	IIa

5935	60793	Surgical irrigation/aspiration handpiece, single-use	Мэс заслын усалгаа/аспирацын гар, нэг удаагийн хэрэглээ	A hand-held device designed to be connected to a separate cannula/tip for both irrigation and aspiration of a surgical site by regulating and directing a stream of pressurized fluid (e.g., sterile water) to the site and facilitating suction of debris from the site. It is activated by the operator, typically through a push-type control(s); it may include connection tubing, however other associated devices (e.g., cannula/tip, clamps, filters, spikes) are not included (i.e., it is neither a tubing set nor an irrigation/aspiration cannula). It is typically intended for an ear/nose/throat (ENT) procedure or neurosurgical use; it is not an ophthalmic device. This is a single-use device.	IIa
5936	60797	Urological hydraulic implant revision kit	Урологийн гидравлик суулгацын засварын хэрэгсэл	A collection of sterile devices intended to be implanted during surgical revision of a urological hydraulic implant (e.g., inflatable penile prosthesis, hydraulic incontinence treatment system) to isolate tubing typically during partial/total deactivation of the original implant. The kit typically consists of metallic plugs and tubing connectors/adaptors; disposable devices associated with implantation may be included. This is a single-use device.	IIa
5937	60834	Cardiopulmonary bypass system filter, blood/cardioplegia solution	Зүрхний уушигны эргэлтийн системийн шүүлтүүр, цус/кардиоплегийн уусмал	A sterile, porous device intended to be incorporated into a blood/cardioplegia circuit during cardiopulmonary bypass to filter a mixture of oxygenated blood and crystalloid cardioplegia solution (e.g., 4:1 ratio) to remove/reduce potentially harmful gaseous emboli, aggregated blood constituents, particulate matter (e.g., greater than 40 microns), and leukocytes. It is typically a plastic housing with an input, output, and vent port containing a synthetic filter and leukocyte depleting media. This is a single-use device.	IIa
5938	60856	Oxygen administration kit	Хүчилтөрөгчийн удирдлагын хэрэгсэл	A collection of devices designed for oxygen (O2) delivery that may include a mask, a nasal cannula, oxygen tubing, disposable non-prefilled humidifier and connectors. This is a single-use device.	IIa

5939	60857	Composite-polymer surgical glove, non-powdered	Нунтаггүй нийлмэл полимер мэс заслын бээлий	A sterile device made from two or more polymer materials intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	IIa
5940	60879	Haemodialysis catheterization kit	Гемодиализийн катетержуулалтын иж бүрдэл	A collection of sterile devices and materials intended to be used for short-term (< 30 days) venous access during haemodialysis, to conduct blood from a patient and returning it after extracorporeal circulation; it may also be used during haemoperfusion and/or apheresis. It includes a nonimplantable double-lumen haemodialysis catheter, device dedicated to catheter introduction/function (e.g., introducer needle, guidewire) and includes non-dedicated supportive devices (e.g., drape, dressings, scalpel). This is a single-use device.	IIa
5941	60880	Intrauterine imaging medium catheterization kit	Умайн доторх дүрслэлийн дунд катетержуулалтын хэрэгсэл	A collection of sterile devices intended for the intrauterine injection of an opaque tracer medium, to facilitate radiography of the fallopian tubes/uterus (salpingography/ hysterosalpingography), and/or a saline solution, to enhance transvaginal ultrasonography (TVUS) [saline infused sonography (SIS)/ hysterosonography]. It includes an intrauterine imaging medium catheter, devices dedicated to catheter function (e.g., stylet, syringe), and non-dedicated supportive devices (e.g., drape, cervical dialator, gauze pad, swab sticks). This is a single-use device.	IIa

5942	60888	Gastric tonometry catheter	Ходоодны тонометрийн катетер	A sterile flexible tube intended for orogastric, nasogastric, or rectal insertion to sample carbon dioxide (CO2) from the mucosal vasculature of the stomach or sigmoid colon for the measurement of partial pressure (i.e., tonometry) of CO2 (pCO2) during diagnosis of mensenteric ischemia. It includes a gas-permeable sampling balloon on the distal end, which may be filled with saline or air, and a second lumen for feeding, aspiration, and decompression; it may include a biofilter to prevent sample contamination in air tonometry, and an adaptor for connection with a blood gas analyser for automated sample analysis. This is a single-use device.	IIa
5943	60912	Apheresis system column, pathogenic material adsorption, reusable	Аферезийн системийн багана, эмгэг төрүүлэгч материалыг шингээх, дахин ашиглах боломжтой	A cylinder intended to be used for the extracorporeal removal of specific pathogenic substances (e.g., endotoxins, lipids) from blood using adsorption techniques (e.g., immunoadsorption, chemical adsorption), to treat a specific disorder(s) [e.g., lipid metabolic diseases, humoral immunity diseases, sepsis]. It is a prefilled column containing specific adsorption agents/ligands (e.g., staphylococcal A protein, anti-apolipoprotein B antibodies, anti IgG antibodies, dextran sulfate, oligosaccharides) bound to an inert matrix, intended to allow perfusion of whole blood or pre-separated plasma before it is returned to the patient. This is a reusable device intended for single-patient use.	IIa
5944	60913	Apheresis system solution, column regeneration	Аферезийн системийн шийдэл, баганын нөхөн төлжилт	A sterile solution [e.g., glycine hydrochloride (Gly/HCl), phosphate buffered saline (PBS)] intended to be used to regenerate and neutralize an apheresis column for immediate or later reuse. The solution is passed through tubing into the column and removes substances bound to the adsorber after a donation or therapy session. This is a single-use device.	IIa
5945	60914	Apheresis system solution, column preservation	Аферезийн системийн шийдэл, баганын хадгалалт	A sterile solution intended to be used to preserve a regenerated apheresis system column until it is reused. It typically contains a preservative in a buffer solution to inhibit bacterial growth and maintain the integrity of the column. This is a single-use device.	IIa

5946	60915	Apheresis system filter, plasma	Аферезийн системийн шүүлтүүр, плазм	A sterile device designed to remove unwanted plasma components (based on size-exclusion principles) from plasma during manual or automated apheresis. The device is intended for therapeutic purposes or to filter healthy donor plasma. It is usually in the form of a hollow-fibre column (similar to those used in haemodialysis systems). This is a single-use device.	IIa
5947	60924	Hand-held ultrasound imaging system, body-surface	Гарын хэт авиан дүрслэлийн систем, биеийн гадаргуу	A battery-powered, hand-held device/device assembly designed to be placed over the external body surface for collection, display, and analysis of ultrasound information during a variety of ultrasound imaging procedures (i.e., non-dedicated); it may in addition be intended to be used with a sterile cover for intraoperative imaging. It consists of a flat- or concave-lensed ultrasound transducer and includes an integrated image processing system; it may include an integrated display or be intended to wirelessly transmit images to an off-the-shelf device (e.g., smartphone, tablet) with dedicated software installed. It is not designed to be inserted into the vagina or rectum.	IIa
5948	60931	Reverse shoulder head prosthesis trial	Урвуу мөрний толгойн протезийн туршилт	A copy of a final reverse shoulder prosthesis head designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is hemisphere-shaped (glenosphere) and typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5949	60932	Shoulder glenoid fossa prosthesis trial	Мөрний glenoid fossa протезийн туршилт	A copy of a final shoulder glenoid fossa prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is cup-like in shape and typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

5950	60934	Humeral body extension prosthesis trial	Хумерын биеийн өргөтгөлийн протезийн туршилт	A copy of a final humeral body extension prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is cup-like in shape and typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5951	60935	Humeral body prosthesis trial	Хумерын биеийн протезийн туршилт	A copy of a final humeral body prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It connects to a humeral stem prosthesis and articulates with a standard humeral head prosthesis, or connects to a reverse shoulder prosthesis cup, and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5952	60936	Humeral stem prosthesis trial, reusable	Хумерын ишний протезийн туршилт, дахин ашиглах боломжтой	A copy of a final humeral stem prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is typically made of metal and/or synthetic polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5953	60937	Reverse shoulder cup prosthesis trial, reusable	Урвуу мөрний аяга протезийн туршилт, дахин ашиглах боломжтой	A copy of a final reverse shoulder prosthesis cup designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is intended to connect to a reverse shoulder prosthesis/trial prosthesis body and articulates with a reverse shoulder prosthesis/trial prosthesis head; it is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

5954	60946	Pharyngeal electrical stimulation catheter	Залгиурын цахилгаан өдөөлт катетер	A sterile, flexible tubular device intended to deliver pharyngeal electrical stimulation for the treatment of neurogenic dysphagia. Electrical impulses from a dedicated control unit are delivered through electrodes on the surface of a specialized enteral feeding tube, which is positioned so that the electrodes are in contact with the mucous membrane of the oropharynx. The catheter may have additional electronics e.g., for storing product, patient and treatment information. This is a single-patient device.	IIa
5955	60961	Needleless transurethral injection system catheter	Зүүгүй трансуретрал тарилгын системийн катетер	A sterile, flexible tube component of a needleless transurethral injection system intended to deliver medication under high pressure into the bladder wall during a transurethral endoscopic procedure; it may also be intended to inject non-pharmaceutical injectate (e.g., saline). The proximal end typically includes a drug loading port and dose chamber and is intended to be connected to the system control unit; the delivery tube is intended to be advanced to the bladder wall, without penetration of tissues, via the working channel of an appropriate endoscope (e.g., cystoscope). This is a single-use device.	IIa
5956	60963	Flexible video bronchoscope, single-use	Уян хатан видео бронхоскоп, нэг удаагийн хэрэглээ	An endoscope with a flexible inserted portion intended for endoscopic procedures of the airways and tracheobronchial tree (i.e., bronchoscopy). It typically consists of a handle portion and an insertion tube which includes working channels and a distal camera from which anatomical images are transmitted and displayed on a monitor (video bronchoscopy). It is typically intended for flexible optical intubation, airway inspection, and may be used to assist in other diagnostic or therapeutic procedures [e.g., bronchoalveolar lavage (BAL)]. This is a single-use device.	IIa

5957	60965	Respiratory gas heating wire, infant	Амьсгалын хийн халаалтын утас, нярай	A non-sterile device intended to be integrated within a ventilator breathing circuit and used in conjunction with a heated respiratory humidifier (from which it draws its power) to maintain the temperature of inspiratory gases during ventilation of an infant/neonate. It typically consists of a compact heating unit and a length of heated wire which is integrated within the lumen of a neonatal/paediatric breathing circuit tube. This is a reusable device.	IIa
5958	60966	Respiratory gas heating wire, adult	Амьсгалын хийн халаалтын утас, насанд хүрсэн	A non-sterile device intended to be integrated within a ventilator breathing circuit and used in conjunction with a heated respiratory humidifier (from which it draws its power) to maintain the temperature of inspiratory gases during ventilation of an adult patient. It typically consists of a compact heating unit and a length of heated wire which is integrated within the lumen of an adult breathing circuit tube. This is a reusable device.	IIa
5959	61003	Humeral head spacer prosthesis trial	Хумерын толгойн протезийн туршилт	A copy of a final humeral head spacer designed to be used before primary or revision implant surgery to validate the appropriate size of the permanent prosthesis required by the patient, and to ensure its proper orientation and positioning. It is disk-like in shape and made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5960	61005	Shoulder reverse/standard adaptor prosthesis trial	Мөрний урвуу/стандарт адаптер протезийн туршилт	A copy of a final shoulder reverse/standard adaptor prosthesis designed to be used before revision implant surgery to validate the appropriate size of the permanent prosthesis required by the patient, and to ensure its proper orientation and positioning. It is double male taper disc typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5961	61007	Humeral stem extension prosthesis trial	Хумерын ишний өргөтгөлийн протезийн туршилт	A copy of a final humeral stem extension prosthesis designed to be used before revision implant surgery to validate the appropriate size of the permanent prosthesis required by the patient, and to ensure its proper orientation and positioning. It is a modular arrangement of interlocking parts typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

5962	61047	Carpometacarpal interpositional spacer prosthesis trial	Carpometacarpal interpositional spacer протезийн туршилт	A sterile copy of a final carpometacarpal interpositional spacer prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient, and to ensure its proper orientation and positioning. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a single-use device.	IIa
5963	61086	Powered bone mill cartridge	Эрчим хүчээр ажилладаг ясны тээрэм	A sterile cutting device intended to be powered by a bone mill motor to create particles of bone autografts (i.e., bone harvested from and transplanted into the same patient) for implantation during a bone regeneration or bone grafting procedure. It typically consists of a cutting disc, a plunger, and collection drawer. This is a single-use device.	IIa
5964	61109	Diagnostic x-ray digital imaging conversion system	Оношлогооны рентген дижитал дүрс хувиргах систем	An assembly of medical devices designed to convert an existing analogue x-ray system to digital (i.e., retrofit) through the acquisition and processing of digital images using existing analogue x-ray system components. As a system it consists of both: 1) a filmless cassette-size digital detector (e.g., indirect flat panel detector); and 2) additional processing/viewing hardware [e.g., a central processing unit (CPU) with integrated software and a monitor]. Following acquisition the system is intended to also process, view, and/or store patient images as part of picture archiving and communication. It does not contain the controls for the direct operation of an x-ray imaging system.	IIa
5965	61135	Microbial medical gas filter, reusable	Микробын эмнэлгийн хийн шүүлтүүр, дахин ашиглах боломжтой	A screening device intended to remove microbes from medical gases to prevent patient exposure during respiration, anaesthesia and/or endoscopy; it has no additional non-filtering functions. It is a small plastic housing containing a filter which will typically also filter other particulates (e.g., scale). This is a reusable device.	IIa

5966	61143	Suturing needle, single-use	Оёдлын зүү, нэг удаагийн	A cylindrical-shaped, solid, metal instrument intended to be used to insert and pull suture material through tissue (e.g., skin, fascia, serous, vascular, or other tissue/organ) during surgical stitching of tissues. It is available in various lengths, curvatures, diameters, cross-sectional shapes, and distal end forms. This is a single-use device.	IIa
5967	61148	Intervertebral disc prolapse therapy pack	Нугалам хоорондын дискний пролапс эмчилгээний багц	A device intended to be applied to the skin overlying an affected area of the spine (cervical or lumbar) to reduce pain associated with a prolapsed (herniated) intervertebral disc. It is typically in the form of a gel-filled pad or an empty pack/patch designed to be filled with supplied gel, and contains plant-based materials (e.g., plant oils) intended to facilitate the transcutaneous rehydration of the herniated portion of the disc; supportive devices (e.g., dressings, adhesive strips) may be included with the device. It is intended for use in the home or a clinical setting. This is a single-use device.	IIa
5968	61186	Multi-modality physical therapy system	Олон төрлийн физик эмчилгээний систем	An assembly of electrically-powered devices designed to apply multiple different energies (e.g., light-energy, ultrasound, radio-frequency electrical stimulation, and microcurrent electrotherapy) either alone or in sequence, but not simultaneously, to noninvasively treat/prevent a variety of soft-tissue, neuromuscular, and musculoskeletal injuries/disorders (e.g., joint pain/inflammation, stiffness, soft tissue injuries, muscle atrophy, plantar fasciitis); it may in addition be used for aesthetic skin/body contouring (e.g., minimize cellulite, loose or wrinkled skin). It consists of a multi-modality control unit/generator, and dedicated applicators for the transcutaneous delivery of energy.	IIa

5969	61206	Gastrointestinal endoscopic clip applier	Ходоод гэдэсний дурангийн клип түрхэгч	A device intended to be used in combination with a compatible flexible endoscope for the application of a gastrointestinal endoscopic clip(s) [not included] to the mucosal lining of the gastrointestinal (GI) tract for endoscopic marking, haemostasis, tissue approximation, closure of luminal perforations, and/or for treating mucosal/submucosal defects during an endoscopic procedure. It typically consists of an insertion sheath, a mechanism at the distal end for applying the clips, and a control handle at the proximal end for firing the clips into the target tissue. This is a reusable device.	IIa
5970	61212	Elbow radius prosthesis trial	Тохойн радиусын протезийн туршилт	A copy of a final elbow radius prosthesis designed to be used for trial reductions during elbow arthroplasty to help determine the correct size, length, and range of motion of the final prosthesis to be implanted. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
5971	61222	Cosmetic micro-needling electronic handpiece cartridge, professional	Гоо сайхны бичил зүүтэй электрон гар хайрцаг, мэргэжлийн	A device intended to be fitted to an electronic cosmetic micro-needling handpiece for the creation of high-density minute skin punctures to stimulate tissue regeneration and improve the appearance of the skin as part of collagen induction therapy (CIT). It is a small, sealed cartridge containing micro-needles intended to be fitted to the distal tip of the handpiece; it does not include any injectable materials. It is intended to be used by a healthcare provider in a clinical setting. It is not intended to be used for energy-based skin treatment. This is a single-use device.	IIa

5972	61258	Multi-purpose low-vacuum suction system	Олон зориулалттай бага вакуум сорох систем	An assembly of devices designed to generate a low vacuum [typically <400 millimetre(s) of mercury (mmHg)] for a variety of clinical applications (e.g., thoracic drainage, negative pressure wound therapy, endoluminal vacuum therapy, subglottic suctioning); it may be software limited to a single intended use whereby upgrade is possible. It consists of a mains electricity (AC-powered) suction pump (which may include a rechargeable battery) with software, controls, and a pressure regulator, a collection canister(s), tubing, and bacteria filter; it may also include patient contact devices. The low vacuum level is intended to reduce the risk of trauma.	IIa
5973	61345	Vascular catheterization support/maintenance kit, non-medicated	Судасны катетержуулалтын дэмжлэг/засвар үйлчилгээний хэрэгсэл, эмийн бус	A collection of non-dedicated devices intended for catheterization support and/or catheter maintenance (e.g., dressing change, catheter flushing) associated with peripheral venous, central venous, and/or arterial catheterization. Primarily intended to be used at the patient's bedside, the kit includes devices such as: personal protective equipment (PPE), drapes, disinfectant wipes, dressings, needles, syringes, tourniquets, ultrasound transducer cover, coupling gel, sharps container, and saline solution. Neither the catheter, catheter introduction device, nor pharmaceuticals are included. This is a single-use device.	IIa
5974	61346	Straight/elbow breathing circuit connector, single-use	Шулуун/тохой амьсгалын хэлхээний холбогч, нэг удаагийн	A device intended to create a direct connection between a breathing circuit breathing tube and an endotracheal (ET) tube, anaesthesia face mask, or other non-sampling breathing circuit component. It is constructed with specific connecting dimensions and may be designed to connect breathing tubes from paediatric to adult sizes. It is typically made of plastic materials and can have a straight or elbow-shaped design (excludes Y-piece connectors). Some designs may allow for partial rotation at the point of connection (a swivel) and may include a suction port or gas sampling port. This is a single-use device.	IIa

5975	61355	Urethral catheterization support kit, urinary drainage	Шээсний сувгийн катетержуулалтыг дэмжих хэрэгсэл, шээсний суваг	A collection of non-surgically invasive devices intended to assist a healthcare professional to insert a urethral catheter (not included) into the urinary bladder, typically for drainage of urine; some types may also be intended for catheter removal. It typically includes forceps, dressings, gloves, and drapes; it does not include pharmaceuticals. This is a single-use device.	IIa
5976	61377	Autologous platelet-based product centrifuge tube	Тромбоцит дээр суурилсан автомат центрифугийн хоолой	A small, cylindrical container intended to temporarily store venous blood and subsequently placed in a centrifuge to produce platelet rich fibrin (PRF) or platelet rich plasma (PRP) for application to the patient from whom the blood was taken (typically for mixing with bone graft to repair bone defects and/or application to skin wounds to accelerate healing and/or achieve haemostasis). It typically includes a lid intended to be pierced with a syringe needle for blood infusion and PRF/PRP withdrawal, clot activator (e.g., silica) and/or filter for isolation of the PRF/PRP, and a rotation mechanism facilitated by centrifugation. This is a single-use device.	IIa
5977	61420	Hypopharyngeal fistula occluder	Гипофарингал фистул бөглөрөх	A device intended to be used for the non-surgical short-term (i.e., < 30 days) occlusion of a fistula in the upper end of the oesophagus (hypopharynx), typically where the fistula has an external opening, to prevent leakage of oesophageal content. It consists of two disk-like flanges (one being positioned on the inside of the pharynx and one on the outside) attached to a single- or double-beaded stem, and is made of silicone and plastic materials. It is inserted and removed using a dedicated device. This is a single-use device.	IIa
5978	61421	Hypopharyngeal fistula occluder inserter/remover	Гипофарингелийн фистул бөглөрүүлэгч оруулагч/ арилгагч	A device intended to be used as a dedicated tool for the insertion and/or removal of a hypopharyngeal fistula occluder. It is in the form of a thin tube with a mechanism for attaching the occluder at the distal end so that it can be pulled into, or pushed away from, the site of use typically through the fistula orifice via the mouth. This is a single-use device.	IIa

5979	61429	Inflatable hot/cold therapy pack/electric pump	Хийлдэг халуун/хүйтэн эмчилгээний багц/цахилгаан насос	A non-sterile assembly of devices intended for localized thermal and compression therapy to facilitate the treatment of a variety of adverse conditions resulting from musculoskeletal injury (e.g., pain, swelling, inflammation). It includes one or more hot and/or cold therapy packs with an air inflation sleeve, a mains electricity (AC-powered) air pump with controls, and air-conduction tubing; the pack(s) is heated/cooled independently of the system (e.g., cooled using chilling unit) and may be anatomically specific. The unit may be programmed for selected treatment plans. It is intended for use in both professional and home settings.	IIa
5980	61474	General/multiple surgical laser system beam guide, reusable	Ерөнхий/олон мэс заслын лазерын системийн цацрагийн хөтөч, дахин ашиглах боломжтой	A surgical device intended to be connected to a general/multiple surgical laser system to invasively direct and deliver laser energy for multiple different surgical applications (non-dedicated), which may include vaporization, ablation, coagulation, haemostasis, excision, resection, incision of soft and cartilaginous tissue, and/or fragmentation of urinary and biliary calculi. It is typically a probe-, handpiece-, or tip-like device which includes fibreoptic materials; a fibreoptic cable may be included with the device. This is a reusable device.	IIa
5981	61481	Open-surgery biopsy forceps, single-use	Нээлттэй хагалгааны биопсийн хямсаа, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument designed to obtain soft-tissue biopsy specimens from an open surgical wound or from within/near a large natural orifice (e.g., vagina, rectum) for histopathological examination; it is not intended for endoscopic or catheterized access. It is a metallic forceps-like instrument with a distal mechanism designed to bite/punch the biopsy sample and hold it for extraction when the handles are squeezed together. It is not designed for cutting bone (i.e., not a rongeur). This is a single-use device.	IIa

5982	61486	Surgical simulation system	Мэс заслын симуляцийн систем	A mobile computerized assembly of mains electricity (AC-powered) devices intended to collect and manipulate medical imaging [e.g., computed tomography (CT), magnetic resonance imaging (MRI)] data to create a patient-specific, virtual, three-dimensional (3-D), interactive model to enable a surgeon to simulate, rehearse, and plan a surgical procedure (e.g., cranial) prior to surgery. It includes dedicated software, and dedicated and/or off-the-shelf hardware such as a cart, a personal computer (PC), monitors, 3-D glasses, and a controller to simulate surgical devices and perform measurements. It is capable of collecting patient demographics, which may be anonymised.	IIa
5983	61502	Vascular catheter introduction needle	Судасны катетер нэвтрүүлэх зүү	A sharp bevel-edged, hollow tubular metal instrument designed to make the initial percutaneous puncture to access a vein and/or artery during vascular catheterization. It is available in a variety of forms to enable a catheter to be introduced directly, or a guidewire to be introduced (Seldinger technique); the therapeutic or diagnostic aspiration of fluids may be achieved during its placement. A stylet/obturator may be included with the needle, however additional introduction devices are not included (i.e., not a set). This is a single-use device.	IIa
5984	61510	Bone tunnel plug, cannulated	Ясны хонгилын бөглөө, сувагтай	A sterile device intended to be inserted into a bone tunnel during an arthroscopic procedure to reduce the loss of the irrigation fluid used to maintain visualization, while allowing the passage of instruments (e.g., probes, guide pins, shavers and graspers) through its lumen to access the joint. It is a short, rigid, cannulated tube which tapers distally with a penetrable seal on the proximal end. It is inserted manually into the bone tunnel, or may be supplied with dedicated instruments for insertion (e.g., obturator). The device is available in a variety of diameters, and is typically made of plastic. This is a single-use device.	IIa

5985	61521	Nasal access transfer tube	Хамар руу нэвтрэх дамжуулах хоолой	A hollow tubular device intended to be used to transfer the proximal end of an in situ gastrointestinal tube/catheter (e.g., nasogastric/nasoesophogeal tube, biliary/pancreatic drainage catheter) so that it passes through a nostril, rather than the mouth, for user access. The transfer tube is introduced through a nostril and advanced to the pharynx/mouth where the in situ tube/catheter can be inserted into the transfer tube and drawn out through the nostril. This is a single-use device.	IIa
5986	61542	Sonic-dispensation dental restorative composite resin kit	Sonic-dispensation шүдний нөхөн сэргээх нийлмэл давирхайн иж бүрдэл	A collection of devices intended for the sound-activated (sonic) dispensation of light-cured dental restorative composite resin into a dental cavity. It includes a pneumatically-powered dental restorative material sonic handpiece, and a light-cured dental restorative composite resin preloaded within a removable, disposable handpiece tip; additional accessories (e.g., pneumatic coupler) may be included. The handpiece is intended to generate sonic energy to temporarily reduce the viscosity of the composite material inside the tip and facilitate its application to cavities. This is a reusable device after consumable products have been replenished.	IIa
5987	61546	Nerve-locating anaesthesia needle	Мэдрэлийг илрүүлэх мэдээ алдуулалтын зүү	A sterile device intended to functions as: 1) an electrode during nerve/nerve plexus location; and 2) as a conduit for administration of a local anaesthetic during peripheral nerve-blocking. It is a sharp, hollow, tubular, electrically-insulated metal needle with an uninsulated bevelled tip, intended to be used with an electrical pulse generator and an appropriate anaesthetic-filled syringe. This is a single-use device.	IIa

5988	61547	Peripheral nerve-block sharp needle	Захын мэдрэлийн блокийн хурц зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument intended to invasively access a peripheral nerve to inject an anaesthetic/analgesic agent for nerve-block/pain control (e.g., sleeve blocks, deep muscle blocks, hypogastric blocks, paravertebral blocks, joint blocks, selective nerve root, lumbar sympathetic, Coeliac plexus). It may be used to deliver anaesthetic or analgesic agents directly and/or to allow introduction of a dedicated catheter for administration. This is a single-use device.	IIa
5989	61558	Intrauterine haemostatic suction catheter	Умайн доторх цус тогтоогч сорох катетер	A sterile, flexible tube with a fenestrated loop at its distal end intended to be connected to a vacuum supply and inserted into the uterus to reduce postpartum bleeding through aspiration of blood/debris and induction of uterine contractions. It may have an additional balloon inflated in the upper vagina to seal the uterine cavity. This is a single-use device.	IIa
5990	61578	Manual blood lancing device, single-use	Гар аргаар цус хайлуулах төхөөрөмж, нэг удаагийн	A sterile, hand-held manual instrument intended to be used for controlled skin puncture/cut to obtain a capillary blood specimen, performed by a healthcare provider (e.g., on a neonate) or a patient (e.g., a diabetic), typically at the fingertip or ear lobe. It includes a preloaded lancet tip, and has a manually-powered mechanism (e.g., spring-loaded) which enables the tip to puncture to a predetermined depth and blood subsequently to be squeezed out of the puncture site. This is a single-use device.	IIa
5991	61579	Blood lancet, single-use	Цусны ланцет, нэг удаагийн хэрэглээ	A sterile, hand-held, sharply-pointed, non-mechanical, scalpel-like instrument intended to be used by a healthcare provider to manually puncture the skin of a patient to obtain a small blood specimen or drain a cyst or boil. This is a single-use device.	IIa
5992	61593	Medication injection site skin warmer holder	Эмийн тарилгын талбайн арьс халаагч эзэмшигч	A non-sterile, patient-worn device intended to attach a medication injection site skin warmer to the skin, typically at a subcutaneous injection site. It consists of a skin-adhesive patch on a plastic holding frame dedicated to the warming device. This is a single-use device.	IIa

5993	61604	Heart valve annulus sizer, single-use	Зүрхний хавхлагын цагираг хэмжигч, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument intended to be used during heart valve repair or replacement that enables evaluation of the valve opening (patent annulus) into which the appropriately sized annuloplasty ring or replacement valve will be implanted. It is typically available as a set of round tapered sizers in a range for the aortic, mitral, or tricuspid valve; it may include an attachable handle which may also be used to assist implantation. This is a single-use device.	IIa
5994	61637	Neonatal pulmonary surfactant catheter	Нярайн уушигны гадаргуугийн катетер	A sterile, flexible, single-lumen tube intended to be introduced into the trachea of a neonate for the administration of exogenous surfactant as part of pulmonary surfactant therapy. It may have a curved distal end to assist navigation into the trachea, and is usually used to treat neonates at a high-risk of infant respiratory distress syndrome [surfactant deficiency disorder (SDD)]. This is a single-use device.	IIa
5995	61639	Pneumatic dental scaling/debridement system handpiece tip, endodontic, single-use	Шүдний пневматик масштабтай/цэвэршүүлэх системийн гарны үзүүр, эндодонт, нэг удаагийн	A sterile, removable endpiece intended to be attached to a pneumatic dental scaling/debridement system handpiece for the application of sonic vibrational energy (e.g., at a frequency of 6 kHz) to fragment tissue for preparation of the dental pulp canal during an endodontic procedure. It is available in a variety of forms and sizes, and is typically made of plastic. This is a single-use device.	IIa
5996	61654	In-line CPAP pressure generating chamber	In-line CPAP даралт үүсгэх камер	A sterile portable device intended to be integrated between a medical gas supply and a face mask/mouthpiece (not included) to assist noninvasive ventilation (i.e., without an artificial airway) using continuous positive airway pressure (CPAP) during spontaneous patient respiration in respiratory emergency situations and/or respiratory therapy settings. It is typically a small plastic unit intended to be used with a separate flowmeter and manometer to establish a gas pressure proportional to gas flow rate through turbulent gas flow in an internal chamber using accelerating micro-channels (a virtual valve); tubing may be included. This is a single-use device.	IIa

5997	61678	Thoracic electrical impedance system, segmentographic	Цээжний цахилгаан эсэргүүцэл систем, сегментограф	An assembly of devices designed to perform thoracic bioimpedance measurements to continuously record the distribution of air across the four quadrants of the lungs, commonly in a neonatal/infant patient, for the detection of changes in lung ventilation at a regional level to assist in the diagnosis of lung conditions (e.g., atelectasis, pneumothorax, misplacement of endotracheal tube, effects of surfactant administration). It consists of a mobile support/trolley, an electrically-powered central unit with a display, and may include the appropriate patient electrodes.	IIa
5998	61692	Breathing circuit gas-flow sensor, single-use	Амьсгалын хэлхээний хийн урсгал мэдрэгч, нэг удаагийн	A sterile device that includes a transducer intended to detect the movement of gases in a breathing circuit, and convert this into an electrical signal for relay to a ventilator (e.g., adult/paediatric/neonatal ventilators, anaesthesia system ventilators). It is connected to the breathing circuit and an appropriate data transfer cable and intended to enable the ventilator to display/monitor the gas flow to and from the patient, whereby controlled adjustments may be made. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa
5999	61705	Manual-afterloading brachytherapy system	Гараар ачаалах брахи эмчилгээний систем	An assembly of devices designed to deliver/remove a therapeutic or palliative radiation dose to/from an anatomical region by temporarily or permanently placing a radioactive source on/in the treatment site. It typically consists of: 1) a hand-held manual transfer device intended to store a single or multiple radioactive source and deliver it to the treatment site through a connected delivery applicator (e.g., catheter) previously introduced in the patient; 2) disposable accessory devices used during the procedure (e.g., syringe); and 3) containers/cases used to safely store and transport the radioactive source-filled transfer device.	IIa

6000	61706	Manual-afterloading brachytherapy system source transfer device	Гараар ачаалах брахитерапийн системийн эх үүсвэр дамжуулах төхөөрөмж	A portable, battery-powered, hydraulically-operated, hand-held device intended to store and deliver/remove a therapeutic or palliative radiation dose to/from an anatomical region. It is designed to temporarily or permanently place a radioactive source on/in the treatment site through a connected applicator (e.g., coronary artery catheter) that has been previously introduced in the patient, and typically includes a sensor to monitor the position of the radioactive source. This is a reusable device.	IIa
6001	61724	Manual jet ventilation device	Гарын авлагын тийрэлтэт агааржуулалтын төхөөрөмж	A portable, manually-operated, noninvasive device intended to be used in conjunction with a separate compressed oxygen (O2) source and airway access device (e.g., cricothyrotomy kit) for transtracheal ventilation of a patient in an emergency situation where there is complete or partial obstruction of the airways. It includes a small unit with an on/off button, which a healthcare professional is intended to manually turn on to release O2 for patient inspiration and turn off to allow expiration; it may also include medical grade tubing and a medical gas regulator for connection to higher pressure (e.g., >50psi) O2 sources; it is not intended to provide automated ventilation.	IIa
6002	61728	Flexible video cystoscope, single-use	Уян видео цистоскоп, нэг удаагийн	A sterile endoscope with a flexible inserted portion intended for the visual examination and treatment of the bladder and the urinary tract by introduction through the urethra. Anatomical images are transmitted from a distal camera and displayed on a monitor. It is typically used to examine/diagnose incontinence, urinary retention, recurrent urinary tract infections, and/or to remove tissue specimens/stones/small tumours from the bladder; it may have specialized tools for functions such as ureteral stent removal. This is a single-use device.	IIa

6003	61730	Central venous catheter navigation system control unit	Төв венийн катетерийн навигацийн системийн удирдлагын хэсэг	A portable mains electricity (AC-powered) component of an electrocardiographic central venous catheter navigation system intended to process and display electrocardiographic (ECG) data to assist guidance and positioning of a central venous catheter [e.g., peripherally-inserted central catheter (PICC)]. It is a control unit with a monitor (e.g., a dedicated touchscreen unit) intended to be connected to the appropriate ECG cables/leads/catheter (not included). The technique involves the catheter functioning as an intravascular ECG electrode (using the guidewire or intraluminal saline as a conductor) which, along with skin surface ECG data, provides feedback on catheter tip location.	IIa
6004	61736	Breathing circuit condenser	Амьсгалын хэлхээний конденсатор	A portable, mains electricity (AC-powered) device designed to be integrated within the expiratory limb of a ventilator breathing circuit to remove excess moisture through cooling and condensing, whilst also reheating the dried gases to an appropriate ventilator-compatible temperature. It includes a heat exchanger and may include disposable condensate collection devices (e.g., cartridge, collection bag). It is intended to prevent condensation from forming within the expiratory limb and ventilator (rain-out).	IIa
6005	61737	Breathing circuit condenser cartridge	Амьсгалын хэлхээний конденсаторын хайрцаг	A non-sterile component of a breathing circuit condenser (integrated within the expiratory limb of a ventilator breathing circuit) intended to thermally interface the expiratory gases with the heat exchanger of the parent device, and collect the formed condensate; it will typically channel the condensate into separate collection bags. It is typically in the form of a rigid plastic chamber with appropriate properties of heat resistance/thermal conductivity. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa

6006	61738	Breathing circuit condenser cartridge bag	Амьсгалын хэлхээний конденсатор хайрцагны уут	A non-sterile elastomeric reservoir sac intended to be connected to a breathing circuit condenser (integrated within the expiratory limb of a ventilator breathing circuit) to collect and store condensate formed through active cooling prior to hygienic disposal. It is typically connected to a condenser cartridge and intended to enable disposal of condensate without stopping the condenser. This is a single-use device.	IIa
6007	61779	Thrombectomy wire-net	Тромбектомийн утас тор	A device intended to be percutaneously introduced into the vasculature (coronary, peripheral and/or intracranial) through an appropriate intravascular catheter for the removal of clotted blood (i.e., a thrombus or thromboembolus) or other formed elements causing vascular obstruction; revascularization may also be achieved through thrombus reorientation. Also referred to as a stent retriever or clot retrieval catheter, it consists of an expanding, stent-like wire net connected to a pusher wire primarily intended to grip and remove the emboli/thrombi; it might include a guide-catheter dedicated to introduction of the wire-net. This is a single-use device.	IIa
6008	61781	Joint prosthesis implantation kit, single-use	Хамтарсан протез суулгах иж бүрдэл, нэг удаагийн	A collection of surgical instruments intended to be used for cutting and forming bone to enable the implantation of a joint prosthesis. The instruments include various metallic and/or plastic disposable devices (e.g., retractors, rods, clamps, drills, pins, saws, guides, cutting blocks, trial prosthesis) that are specific to the joint of application (e.g., hip, knee, shoulder, ankle, or elbow); the implant(s) is not included. This is a single-use device.	IIa
6009	61790	Carbide dental bur, single-use	Карбид шүдний шар, нэг удаагийн	A rotary cutting device made of high-grade steel, the working end of which is made from, or coated with, tungsten carbide, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, e.g., teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a single-use device.	IIa

6010	61802	Bone tap, reprocessed	Ясны цорго, дахин боловсруулсан	A sterile, metal, surgical instrument designed for cutting internal threads into bone so that the threads facilitate the insertion of bone screws. It is made of high-grade stainless steel and has a helical thread intersected with longitudinal cutting grooves forming the cutting edges at its distal end, and may be cannulated. The proximal end typically terminates in a square to which a tapping instrument or extension can be attached, whereby it will typically be manually rotated. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIa
6011	61828	Soft-tissue ultrasonic surgical system transducer/tip	Зөөлөн эдийн хэт авианы мэс заслын системийн хувиргагч / үзүүр	A non-sterile component of an ultrasonic surgical system intended to convert high frequency electrical current from a generator into an ultrasonic oscillation at its distal tip to mechanically fragment soft-tissue cells upon contact for cutting and/or coagulating tissue during surgery. The tip makes direct (vibrating) patient contact and the device is typically used with a holder for the operator (not included). This is a non-dedicated device intended to be used in multiple clinical specialties. This is a reusable device intended to be sterilized prior to use.	IIa
6012	61831	Gas-sampling/monitoring respiratory tubing, single-use, sterile	Хийн дээж авах/хянах амьсгалын хоолой, нэг удаагийн, ариутгасан	A sterile length of flexible tube(s) primarily intended to be used as an interface between a tube/mask breathing circuit connector and a respiratory gas measuring instrument [e.g., a carbon dioxide (C02) or multi-gas analyser, manometer/pressure monitor]. It may be intended for pressure monitoring and/or gas sampling but does not include any components intended for delivery of medical gas to the patient; a microbial filter may be included. This is a single-use device.	IIa

6013	61832	Gas-sampling/monitoring respiratory tubing, reusable	Хийн дээж авах/хянах амьсгалын хоолой, дахин ашиглах боломжтой	A length of flexible noninvasive tube(s) primarily intended to be connected between a tube/mask breathing circuit connector and a respiratory gas measuring instrument [e.g., a carbon dioxide (CO_2) or multi-gas analyser, manometer/pressure monitor] for gas pressure or flow monitoring and/or gas sampling; a microbial filter may be included. It is not intended for delivery of medical gas to the patient and does not include a patient mask or nasal cannula. This is a reusable device intended to be cleaned/disinfected prior to use.	IIa
6014	61834	Breathing circuit gas-sampling/monitoring set	Амьсгалын хэлхээний хийн дээж авах/хяналтын багц	A collection of non-sterile devices intended to be integrated within a breathing circuit to enable interface of gases between the breathing circuit and a respiratory monitoring device for sampling the patient's expired gas for measurements of pressure, flow and/or gas analysis [e.g., end-tidal carbon dioxide ($EtCO_2$) concentration]. It includes both a tube/mask breathing circuit connector with sampling ports (sometimes referred to as a spirometry sensor) and gas-sampling/monitoring respiratory tubing; no electronic devices are included. This is a single-use device.	IIa
6015	61836	Cardiopulmonary bypass system pressure-monitoring tubing	Зүрхний уушигны эргэлтийн системийн даралтыг хянах хоолой	A sterile length of flexible tube intended to interface a pressure monitor/manometer with a cardiopulmonary bypass system to allow fluid pressure to be measured; connectors are typically included. This is a single-use device.	IIa
6016	61853	Urinary-incontinence vaginal insert, single-use	Шээс ялгаруулах үтрээний оруулга, нэг удаагийн	A non-sterile, device intended to be inserted into the vagina in order to relieve mixed or stress urinary incontinence in an adult female by providing urethral support when pressure is transferred from the abdomen to the pelvic floor area (e.g. upon coughing, laughing, sneezing, exertion). It is a non-absorbent device with a removal cord; an application kit (tube and push rod) is typically included. This is a single-use device.	IIa

6017	61863	Ankle prosthesis trial, reusable	Шагайны протезийн туршилт, дахин ашиглах боломжтой	A copy of a final prosthesis designed to be used during ankle replacement surgery to determine the correct alignment, size, and fit of the final tibial, talar or bearing prosthesis component. It is one of a set, or a set, of graduated sizes and is typically made of synthetic polymer or metal material. This is a reusable device.	IIa
6018	61910	Colonic decompression tube	Бүдүүн гэдэсний даралтыг бууруулах хоолой	A sterile, thin, flexible, hollow cylinder intended to be used to mechanically decompress the colon, typically by connection to an intermittent suction system, to treat conditions including non-toxic megacolon, pseudo-obstruction (Ogilvie syndrome) and/or colonic strictures. It includes a guidewire which is inserted per rectum using a colonoscope (not included) under fluoroscopic assistance. It is made of plastic and rubber materials and may be a straight or pigtail tube with drainage bag connectors/adaptors at the proximal end. This is a single-use device.	IIa
6019	62063	Endoscopic insufflation tubing set, reusable	Дурангийн дусаах хоолойн багц, дахин ашиглах боломжтой	A collection of flexible tubing intended to be used as a conduit to deliver a medical gas [e.g., carbon dioxide (CO2), medical air] from its source into a body cavity for insufflation during endoscopy (e.g., gastrointestinal endoscopy, laparoscopy, arthroscopy). It includes synthetic polymer tubing and associated connectors, and may include additional tubing for delivery of a sterile irrigation solution for endoscopic irrigation. This is a reusable device.	IIa
6020	62073	Orthodontic inter-bracket elastic chain	Ортодонт хаалт хоорондын уян гинж	A non-sterile device intended to be used during orthodontic treatment to function as an archwire/bracket ligature on several adjacent teeth and/or to exert a continuous light force to close the spaces between the teeth. It is also known as a power chain and is in the form of a series of connected loops made of an elastomeric material (e.g., polyurethane, rubber). This is a single-patient device intended to be replaced regularly during orthodontic treatment (single-use).	IIa

6021	62074	Orthodontic inter-arch elastic band	Ортодонтийн нуман хаалга хоорондын уян харимхай хамтлаг	A non-sterile circular band intended to be used during orthodontic treatment to exert a continuous light force to adjust bite and jaw position for correcting malocclusions (e.g., overbite, underbite). It is made of an elastomeric material (e.g., polyurethane, rubber) and is secured to hooks on orthodontic brackets across non-opposing mandibular and maxillary teeth. This is a single-patient device intended to be replaced regularly during orthodontic treatment (single-use).	IIa
6022	62085	Extracorporeal membrane oxygenation system circuit	Биеийн гаднах мембраны хүчилтөрөгчийн системийн хэлхээ	A complete portable assembly of noninvasive, non-powered devices intended to be used as part of an extracorporeal bypass system to provide short-term or prolonged (i.e., extra-surgical) mechanical circulatory life support during extracorporeal membrane oxygenation (ECMO) [sometimes referred to as extracorporeal lung support (ECLS)]. It usually includes a centrifugal pump mechanism, defoamer, heat exchanger, membrane oxygenator, and integrated tubing or independent tubing sets. It is intended to be used in conjunction with the capital components (e.g., pump drive unit, gas control unit, heating/cooling unit) and invasive components (e.g., cannulae) of the bypass. This is a single-use device.	IIa
6023	62086	Self-ligating orthodontic bracket open/close tool	Өөрөө холбох ортодонт хаалт нээх/хаах хэрэгсэл	A hand-held dental instrument intended to be used by an orthodontist for opening/closing a self-ligating orthodontic bracket and/or tube. It is made of metal and is in the form of a handle with thin pronged ends designed to release/close the orthodontic appliance clip mechanism; it may also be used to hold the archwire in place to assist manual closing of the clip. This is a reusable device.	IIa
6024	62110	Dental prosthesis dye	Шүдний протезийн будаг	A colouring intended to be used to stain a dental prosthesis (e.g., crown, bridge) before insertion in the patient to achieve a colour to match existing dentition. It is a mixture of inorganic chemicals typically used during the prosthesis manufacturing process. After application, this device cannot be reused.	IIa

6025	62116	Red/blue light phototherapy unit	Улаан/цэнхэр гэрлийн фото эмчилгээний аппарат	A portable electrically-powered device intended to emit both red and blue light for the treatment of a facial skin condition (e.g., acne, hyperpigmentation) by the patient in the home. It includes integral lights with a controller/controlling interface (to pair with an off-the-shelf computer/smartphone), and may be available in a variety of forms (e.g., a face-worn light mask with controller, hand-held light unit). It is not intended for use with a photosensitizing agent. This is a single-patient, reusable device.	IIa
6026	62119	Tracheoesophageal speech valve occluder, non-valved	Гуурсан хоолойн ярианы хавхлагын бөглөрөл, хавхлаггүй	A device intended to be temporarily inserted into the tracheal end of a tracheoesophageal speech valve (typically indwelling type) to prevent leakage of fluids from the oesophagus into the trachea during swallowing; it is not intended to enable voice production. It is a synthetic polymer plug that includes a neck fastening strap and may include dedicated devices intended to assist insertion. It may be placed by a healthcare professional or by the patient and is intended to remain in position until medical attention can be obtained. This is a reusable device.	IIa
6027	62125	Tracheoesophageal fistula dilator, reusable	Гуурсан хоолойн фистул өргөсгөгч, дахин ашиглах боломжтой	A hand-held, manual non-surgical instrument intended to dilate a surgically-created tracheoesophageal fistula (puncture) to facilitate insertion of a tracheoesophageal device (typically a non-indwelling tracheoesophageal speech valve); it may in addition be used as a temporary occluder to prevent leakage of fluids from the oesophagus into the trachea. It is a flexible, tapered, synthetic polymer shaft with a handle designed to access the fistula via the tracheostoma. It is intended for transient-use by the patient or clinician, in the home and healthcare facility. This is a reusable device.	IIa

6028	62126	Tracheoesophageal fistula gauge	Гуурсан хоолойн фистул хэмжигч	A non-sterile, hand-held, manual non-surgical instrument intended to be transiently inserted into a tracheoesophageal fistula (puncture) for measuring its length to determine appropriate tracheoesophageal speech valve size prior to placement; it may also be intended to temporarily dilate the fistula to facilitate insertion of the speech valve. It a synthetic polymer cylindrical shaft with graduated markings, attached to a handle, designed to be manually inserted via the tracheostoma by a clinician; devices intended to assist insertion may be included. This is a reusable device intended to be sterilized prior to use.	IIa
6029	62141	Wound therapy ultrasound system handpiece tip	Шархны эмчилгээний хэт авианы системийн гарны үзүүр	A sterile component of a wound therapy ultrasound (US) system intended to be attached to the system handpiece to interface low frequency US energy from the handpiece with a fluid solution (e.g., saline) for the production of an ultrasound-conductive mist used to promote wound healing. It typically includes fluid delivery tubing and is intended to fit on the distal end of the handpiece. This is a single-use device.	IIa
6030	62148	Tracheoesophageal fistula spacer/occluder	Гуурсан хоолойн фистул зайлагч/бүгдэгч	A non-sterile device intended to be placed in a surgically-created tracheoesophageal fistula/puncture (usually for more than 30 days) to: 1) maintain its shape and patency following total laryngectomy; and 2) to prevent leakage of fluids from the oesophagus into the trachea. It is made of synthetic polymer and includes a double retention flange and a neck fastening strap; it is not intended to enable voice production. It is inserted through the tracheostoma and replaced by a clinician as needed (indwelling type); devices to assist placement may be included. This is a single-use device.	IIa
6031	62163	Intrauterine cannula, reusable	Умайн доторх суваг, дахин ашиглах боломжтой	A semi-rigid or rigid, plastic tube designed to be inserted into the uterus and connected to an aspirator/suction system pump to aspirate fluid/material from the uterus for treatment of incomplete abortion, first trimester abortion, and/or for menstrual regulation; it may also be intended for endometrial biopsy. This is a reusable device after appropriate sterilization/disinfection.	IIa

6032	62169	Wireless patient monitor/sensor reporting software, layperson-use	Өвчтөний утасгүй монитор/мэдрэгч тайлагнах программ хангамж, энгийн хүний хэрэглээ	A software program intended to be used by a layperson at home to receive data from a noninvasive, patient-worn, wireless monitor/sensor to display, record, and assist in analysis and healthcare provider reporting of the collected clinical data, typically for continuous monitoring and optional communication with a clinician. It may enable configuration of alert notifications and is typically installed on an off-the-shelf, portable, computerized device (e.g., smartphone, tablet); it is not dedicated to bedside monitoring.	IIa
6033	62170	Wireless patient thermometer, single-use	Өвчтөний утасгүй термометр, нэг удаагийн хэрэглээ	A battery-powered electronic device intended to continuously measure body temperature and wirelessly transmit data to a computing device, typically a smartphone or tablet with dedicated software, for data display, recording and analysis. It is in the form of an adhesive patch designed to be placed on the skin (typically in/near the armpit), and is typically used to monitor a fever during daily activities and sleep. This is a single-use device.	IIa
6034	62178	Enteral feeding/medication connector, sterile	Enteral хооллолт/эмийн холбогч, ариутгасан	A sterile adaptor intended to enable connection of components of an enteral feeding and/or enteral medication administration kit (e.g., connection between tubing and syringe). It is typically a small plastic device containing a lumen to facilitate enteral administration after connection; it has no additional functionality and is dedicated to enteral administration applications. This is a single-use device.	IIa
6035	62199	Calcium hydroxide dental cement	Кальцийн гидроксидын шүдний цемент	A non-sterile, non-aqueous substance intended for professional use as a dental cement (e.g., pulp capping, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between calcium hydroxide and salicylic acid (or related esters such as butan-1,3-diol disalicylate). It typically includes some additional fillers/components. After application, this device cannot be reused.	IIa

6036	62200	Zinc oxide eugenol dental cement	Цайрын исэл eugenol шүдний цемент	A non-sterile, non-aqueous substance intended for professional use as a dental cement (e.g., luting agent, liner, base, pulp-capping material) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between eugenol and zinc oxide (ZnO). It typically includes some additional fillers/components. After application, this device cannot be reused.	IIa
6037	62201	Silicate dental cement	Силикат шүдний цемент	A non-sterile substance intended for professional use as a dental cement (e.g., luting agent, liner, base) and/or direct dental restorative material whereby the majority of the setting reaction is based on the hardening reaction between a powder of acid soluble aluminosilicate glass and an aqueous solution of phosphoric acid. It may typically include some additional fillers/components. After application, this device cannot be reused.	IIa
6038	62222	Off-line blood photoimmunotherapy bag	Оффлайн цусны фотоиммун эмчилгээний уут	A sterile container intended to be used in vitro with an ultraviolet A (UVA) blood irradiator and a photoactive drug (psoralen) for photochemical treatment of a leukocyte-enriched blood fraction previously collected off-line (i.e., not returned in a closed circuit), typically by apheresis, to treat immune disorders [e.g., cutaneous T-cell lymphoma (CTCL)]. It is a plastic UV translucent bag designed to contain the blood fraction, and typically includes tubing, a port for drug injection, filters and connectors. After the treatment the blood fraction is returned to the patient through infusion by a medical professional. This is a single-use device.	IIa
6039	62240	Intravenous catheter holding garment	Судсан дотуурх катетер баригчийг нөмрөг	A non-sterile piece of clothing (e.g., vest) with a holding pouch intended to be worn on the torso of a patient with an inserted/implanted venous catheter [typically central venous catheter (CVC)] to protect/hold the extracorporeal portion of the catheter. It is typically a lightweight garment intended for use in the home or healthcare facility. This is a single-patient reusable device.	IIa

6040	62248	Mechanical skin contouring system injection/transection set	Механик арьсны хэлбэр дүрслэх системийн тарилга/хэвчилтийн багц	A collection of sterile components of a mechanical skin contouring system intended to temporarily minimize the manifestation of cellulite by transection of the cellulite-tethering fibrous tissue by motorized mechanical means. It consists of template plates, needle and microblade assemblies to guide instruments, and a vacuum-assisted capture unit to control the tissue being treated. The device is placed on the skin, an area of skin/subcutaneous tissue is drawn by suction into a dome, and local anaesthesia is infiltrated prior to subcutaneous transection by a motorized cutting tool. This is a single-use device.	IIa
6041	62259	Earmould, preformed	Чихний хэв, урьдчилан бэлтгэсэн	A preformed device designed to fit in an ear canal and through which the acoustic output from a hearing aid is conveyed to the eardrum. It is made of soft synthetic polymer materials and may have various forms (e.g., plug-like, ear shape). This is a reusable device.	IIa
6042	62303	Acetabulum prosthesis trial, prefabricated, single-use	Ацетабулум протезийн туршилт, угсармал, нэг удаагийн хэрэглээ	A copy of a final acetabular cup prosthesis designed to be used for trial reductions during hip arthroplasty to judge the correct size and position of the final acetabular prosthesis to be implanted. It is one of a set, or a set, of graduated sizes, is typically made of metal or polymer materials and may be designed in the form of cages, shells or inserts. This is a single-use device.	IIa
6043	62310	Orthodontic vibrator	Ортодонт вибратор	An electronic device designed to be used in the home during treatment with orthodontic appliances (e.g., brackets, aligners) to provide small vibrations for gently accelerating the movement of anterior teeth, guided by the appliances, to help reduce treatment time and pain. It is in the form of a biteable plastic mouthpiece attached to a hands-free vibratory unit. This is a reusable device.	IIa

6044	62312	Cardiopulmonary bypass system filter, venous blood line	Зүрхний уушигны эргэлтийн системийн шүүлтүүр, венийн цусны шугам	A sterile, porous device intended to be used in the venous line of an extracorporeal circuit, during a cardiopulmonary bypass procedure, to trap and remove potentially harmful gaseous emboli, aggregated blood constituents, and particulate matter (e.g., greater than 40 microns) to prevent them from flowing into the bloodstream and obstructing extracorporeal circulation. It is commonly referred to as a bubble trap and will typically be used for a specified length of time (e.g., 6 hours). This is a single-use device.	IIa
6045	62320	Faecal-incontinence vaginal insert pump	Өтгөн хатах үтрээний шахуурга	A manually-powered air pump designed to inflate/deflate a faecal-incontinence vaginal insert used to assist bowel evacuation regulation, as a treatment for faecal incontinence. It includes a replaceable regulator which determines the maximum pressure of the insert balloon. This is a single-patient reusable device after appropriate cleaning/disinfection.	IIa
6046	62321	Faecal-incontinence vaginal insert sizer	Өтгөн ялгадасгүй үтрээний оруулга хэмжигч	A non-sterile device intended to be used to determine the appropriate size of a faecal-incontinence vaginal insert for a particular patient. It is in the form of a semi-rigid ring that is inserted into the vagina as a guide to the size of the trial/final insert. It is intended to be used by a healthcare professional in a clinical setting. This is a reusable device for multi-patient use after appropriate cleaning/disinfection.	IIa
6047	62322	Faecal-incontinence vaginal insert trial	Баас-шээсгүй үтрээний оруулга туршилт	A non-sterile inflatable device intended to be inserted into the vagina and inflated/deflated to assist bowel evacuation regulation, as a treatment for faecal incontinence. It consists of a semi-rigid base, an inflatable balloon, valve, and optional external tubing. The balloon is inflated to occlude the adjacent rectal lumen to prevent stool leakage, and deflated to allow normal passage of stool. The device is used for a short-term trial period (typically less than 2 weeks), and may be removed/replaced by the patient. This is a single-patient reusable device after appropriate cleaning/disinfection.	IIa

6048	62326	Endoscopic optical coherence tomography system	Дурангийн оптик когерент томографийн систем	An assembly of mains electricity-powered (AC-powered) devices designed to produce microscopic cross-sectional images of tissues within non-vascular luminal structures [e.g., gastrointestinal tract (GI), urinary tract, respiratory tract] during an endoscopic procedure or ex-vivo. It uses optical coherence tomography (OCT) whereby a light beam provides real-time, in-depth, high-resolution imagery by means of volumetric laser endomicroscopy (VLE) technology; it may also provide tissue laser marking for visual referencing. It consists of a mobile console with display/controls, an endoscopic fibreoptic probe, and a probe inflation device.	IIa
6049	62327	Endoscopic optical coherence tomography system probe	Дурангийн оптик когерент томографийн системийн датчик	A sterile endoscopic device intended to scan cross-sectional images of tissues within non-vascular luminal structures [e.g., gastrointestinal tract (GI), urinary tract] at a microscopic level. It is a flexible fibreoptic bundle with a rotating distal end designed to emit a light beam whereby real-time, in-depth, high-resolution imagery is produced by means of volumetric laser endomicroscopy (VLE) technology; it may also provide tissue laser marking for visual referencing. It is inserted through the working channel of an endoscope and may be inflated in situ with an inflator; the proximal end connects to the system’s console. It may also be used ex-vivo. This is a single-use device.	IIa
6050	62375	Dental coating, bond-reduction	Шүдний бүрээс, холбоосыг багасгах	A non-sterile, aqueous solution intended to be applied to a prepared tooth immediately prior to application of a temporary dental restoration (e.g., resin dental inlay) to prevent formation of a strong bond between the tooth and restoration, and therefore facilitate atraumatic removal of the provisional restoration. Also referred to as a dental separating medium, it may also help prevent microbial penetration of the tooth. After application, this device cannot be reused.	IIa

6051	62389	Wound irrigation cannula	Шархыг усжуулах суваг	A rigid or semi-rigid tube intended to be connected to a parent device (e.g., syringe) to channel irrigation fluids (e.g., saline solution) to a skin or surgical wound for washing and removing debris; it is not intended for aspiration of fluids. This is a single-use device intended to be used in a sterile condition.	IIa
6052	62390	Ceramic dental inlay adhesive solution	Шүдний керамик шигтгээний наалдамхай уусмал	A solution intended to be applied to a ceramic dental inlay (indirect restorative) prior to cementation within the tooth structure to improve adhesion to the cement/luting agent. The inlay is often submerged and heated in the coating solution which typically includes aluminium ions whereby a layer of aluminium oxide forms on the inlay surface. After application, this device cannot be reused.	IIa
6053	62391	Non-vascular catheter introduction set	Судасны бус катетер нэвтрүүлэх багц	A collection of invasive devices intended to enable percutaneous Seldinger-type introduction of a non-vascular catheter (e.g., drainage catheter) into a body cavity or lumen (e.g., biliary tract, ureter); it is not intended for introduction of a peritoneal dialysis catheter. It includes multiple invasive access devices which typically include an introducer needle, introducer sheath with an inner dilator, and guidewire; the catheter is not included. This is a single-use device.	IIa
6054	62429	Angiography injection needle	Ангиографийн тарилгын зүү	A sharp bevel-edged, hollow tubular metal instrument intended to be used for injection of contrast medium into select blood vessels of the central or peripheral vasculature during angiographic procedures. This is a reusable device.	IIa
6055	62434	Prostate immobilization balloon catheter	Түрүү булчирхайн хөдөлгөөнгүй бөмбөлөг катетер	A non-sterile flexible tube with an inflatable balloon at its distal end intended to be inserted into the rectum to facilitate adequate positioning and immobilization of the prostate during diagnostic imaging procedures, image-guided surgical or interventional procedures, and/or radiation therapy procedures. This is a single-use device.	IIa

6056	62448	Core temperature regulation orogastric tube	Гол температурыг зохицуулах орогастрийн хоолой	A multi-lumen, multi-purpose tube intended for oral introduction into the gastrointestinal (GI) tract for both: 1) enteral feeding/gastric decompression; and 2) core temperature regulation, via thermal transfer across the oesophagus (to lower and alternatively elevate core body temperature). It is typically a coaxial tube which includes an orogastric lumen, intended to allow access to the stomach for feeding/decompression/medication administration, and a closed circulating-fluid circuit intended to be connected to an appropriate core temperature regulation system pump. This is a single-use device.	IIa
6057	62450	Wireless patient thermometer, reusable	Өвчтөний утасгүй термометр, дахин ашиглах боломжтой	A wearable, battery-powered, electronic device intended to continuously measure body temperature and wirelessly transmit data to a computing device, typically a smartphone or tablet with dedicated software, for recording and data display; it is typically used to monitor temperature during daily activities and sleep. It is in the form of an adhesive patch designed to be placed on the skin (typically in/near the armpit); a charging case and software may be included. This is a reusable device.	IIa
6058	62461	Photodiode subretinal prosthesis system	Фотодиодын торлогийн доорх протезийн систем	An assembly of devices designed to provide visual function to a patient with vision loss due to retinal degeneration by detecting light, converting it into electrical signals, and relaying them to the retina for neural stimulation. It includes: 1) implantable components comprised of a subretinal chip (containing photodiodes, amplifier and stimulation electrodes) and a connected receiving coil; and 2) external components consisting of a transmitting coil designed to inductively power the implant transdermally, and a battery-powered hand-held control unit for providing power and adjusting implant settings.	IIa

6059	62462	Photodiode subretinal prosthesis system implant	Фотодиодын торлогийн доорх протезийн системийн суулгац	A sterile electronic component of a photodiode subretinal prosthesis system intended to be implanted in and around the eye to provide retinal stimulation for restoring vision. It is made of metal, ceramic and synthetic materials and is primarily comprised of: 1) a subretinal chip containing photodiodes, amplifier to produce electrical signals, and a stimulation electrode to relay them to the retina; and 2) a receiving coil connected to the subretinal chip designed to wirelessly receive power from an external battery-powered hand-held unit and transfer it to the subretinal chip.	IIa
6060	62463	Photodiode subretinal prosthesis system transdermal coil	Фотодиодын торлог бүрхэвчийн хиймэл эрхтэн тогтолцооны арьсан доорх ороомог	An external component of a photodiode subretinal prosthesis system designed to be worn by the patient near an implanted receiving coil to wirelessly power and transmit data to a subretinal implant transcutaneously. It is a discrete electronic patch (e.g., head-worn, or attached to spectacles) which draws power from a battery-powered hand-held control unit via a cable.	IIa
6061	62464	Photodiode subretinal prosthesis system control unit	Фотодиодын торлогийн доорх протезийн системийн хяналтын хэсэг	A battery-powered component of a photodiode subretinal prosthesis system intended to power the implanted components of the system and to adjust implant settings in order to provide vision restoration. It is a hand-held electronic box with display/controls designed to be connected via a cable to a head-worn transmitting coil for transdermal powering/adjustments of the implant.	IIa
6062	62474	Dental prosthesis priming agent	Шүдний протезийн праймер	A material primarily intended to be applied to a dental prosthesis (i.e., indirect restorative) and/or prosthesis component to promote bonding (e.g., to a composite resin cement, composite-based stain, or another prosthesis component). It may be referred to as a primer and includes compounds such as an unfilled-resin or silane-based agent; an applicator may also be included. The material is not intended to be used as a dentine bonding or dentine priming agent. After application, this device cannot be reused.	IIa

6063	62477	Dental composite resin kit	Шүдний нийлмэл давирхайн иж бүрдэл	A collection of non-sterile substances intended for professional use during dental restoration and prosthesis installation/repair which includes composite resin material and additional materials to support restoration (e.g., etching solution, bonding agent, primer, prosthesis bonding agents, unfilled resin sealant/coating agents), and may include dedicated disposable devices associated with application; it does not include non-resin-based cements nor dental prosthesis. After application, this device cannot be reused.	IIa
6064	62480	Surgical bulldog clamp, single-use	Мэс заслын бульдог хавчаар, нэг удаагийн хэрэглээ	A manual surgical instrument designed to grasp, join, compress or support an organ, vessel or soft-tissue. It has a flat, pincer-like design with self-retaining jaws that open upon squeezing of the handles and close upon release; it is typically made of plastic. It is commonly used for vascular clamping and is not dedicated to a specific type of non-vascular surgery. This is a single-use device.	IIa
6065	62494	Caecostomy tube	Каэкостоми хоолой	A sterile, thin, soft, hollow tube intended to be percutaneously placed and maintained in the caecum, following caecostomy, to permit instillation of fluids for colonic irrigation and evacuation of lower bowel contents through the anus, as an aid in the management of faecal incontinence. Also known as a C-tube, it is made of synthetic polymer materials and is curled at the distal end for retention in the colon; it contains a proximal port at the caecostoma to allow flushing by the user. Disposable devices to assist tube introduction/function (e.g., cannula, drainage catheter) may be included. This is a single-use device.	IIa
6066	62569	Prostate photodynamic therapy guide-catheter, transrectal	Түрүү булчирхайн фотодинамик эмчилгээний чиглүүлэгч катетер, шулуун гэдсээр	A sterile, flexible, non-steerable, transparent tube intended for transrectal introduction to guide a fibreoptic cable (not included) into position to enable subsequent monitoring of the exposure of the rectum to light during photodynamic therapy (PDT) of the prostate. It is often introduced alongside a transrectal ultrasound transducer. This is a single-use device.	IIa

6067	62592	Meibomian gland camera	Мейбомын булчирхайн камер	A mains electricity (AC-powered) optical device intended for infrared (IR) image capture of the meibomian glands for evaluation of structural abnormalities of the meibomian glands. It includes patient head/chin supports, an IR source(s), IR camera, controls and appropriate software intended to enable analysis of the images; it may include an eyelid everter to assist imaging of the meibomian glands.	IIa
6068	62602	Cochlear implant dummy magnet	Чихний дунгийн суулгацын дамми соронз	A small sterile device intended to be implanted short term as a temporary replacement for a cochlear implant implantable magnet during a magnetic resonance imaging (MRI) scan. It is typically in the same form as a cochlear implant magnet but without any magnetic material. This is a single-use device.	IIa
6069	62614	Corneal inlay, cornea-reshaping	Эвэрлэгийн шигтгээ, эвэрлэгийн хэлбэрийг өөрчлөх	A sterile implantable device inserted into the natural cornea to treat refractive errors (e.g., presbyopia, myopia, astigmatism) by reshaping the cornea. It may be made of various materials (e.g., gold, hydrogel), is intended for long-term implantation, and is surgically inserted in an intrastromal pocket or flap made by a keratome or an appropriate laser; it is not a corrective lens.	IIa
6070	62620	Corneal bur, rust ring removal, single-use	Эвэрлэг бүрхэвч, зэв цагираг арилгах, нэг удаагийн	A sterile, small shaft made of a hard metal (e.g., steel) with fluting or cutting planes designed for gentle removal ("brushing") of rust stains (rust rings) from the cornea after the extraction of a ferrous foreign object. It is attached to the tip of a special slow-rotation powered ophthalmic handpiece. This is a single-use device.	IIa
6071	62647	Single-lumen haemodialysis catheter, peripheral vascular	Нэг люмен гемодиализийн катетер, захын судас	A sterile, flexible, single-lumen tube intended to be used for short-term (< 30 days) peripheral arteriovenous access during extracorporeal blood therapies (i.e., haemodialysis haemoperfusion and/or apheresis), to conduct blood from a patient and to return it after extracorporeal circulation. It is designed to withstand elevated pressures associated with arteriovenous access (i.e., via shunt or fistula), and may be intended for single-needle technique (i.e., sequential bidirectional flow) and/or double-needle technique (i.e., using two catheters). Devices dedicated to catheter introduction/function (e.g., introducer needle, stylet) may be included. This is a single-use device.	IIa

6072	62654	Home-use peritoneal dialysis connection kit	Гэрийн хэвлийн диализийн холболтын иж бүрдэл	A collection of sterile and non-sterile devices intended to be used by a peritoneal dialysis patient in the home to assist, and reduce the risk of infection during, the routine connection/disconnection between a peritoneal catheter and a dialysate line. It consists of a portable housing and a disposable frame with preformed slots, where the premounted catheter adaptor and the proximal end of the dialysate line are manually fitted by the patient. After the housing is closed, levers/buttons on the housing are manually manipulated to provide a mechanical connection/disconnection between the elements inside. This is a reusable device.	IIa
6073	62655	Home-use peritoneal dialysis connection kit housing	Гэрийн хэрэглээний хэвлийн диализийн холболтын иж бүрдэл орон сууц	A component of a peritoneal dialysis connection kit intended to function as a casing for elements used in a routine connection/disconnection between a peritoneal catheter and a dialysate line. It is a portable, closable, rigid housing with user interface levers/buttons designed to be manually manipulated to provide a mechanical connection/disconnection between the elements inside (e.g., premounted catheter adaptor, proximal end of the dialysate line), previously fitted in the housing by the patient. This is a reusable device.	IIa
6074	62657	Peritoneal dialysis catheter adaptor/dialysate line holder	Хэвлийн диализийн катетер адаптер/диализатын шугам эзэмшигч	A non-sterile device intended to secure the connection between a peritoneal dialysis catheter adaptor and the dialysate line. It is a small plastic device that is manually fitted outside a mechanical connection housing by the patient during a peritoneal dialysis connection/disconnection session. This is a single-use device.	IIa
6075	62658	Peritoneal dialysis catheter adaptor, reusable	Хэвлийн диализийн катетер адаптер, дахин ашиглах боломжтой	A connecting device, often in two pieces, intended to be used to join a peritoneal dialysis catheter to the dialysate line during treatment. It is typically made of plastic or metal and may be used when the devices to be connected are from different manufacturers and not compatible, enabling them to mate, and/or within a mechanical connection system. This is a single-patient, reusable device.	IIa

6076	62662	Video-camera translingual electrical stimulation system	Видео камерын хэл дамнасан цахилгаан өдөөх систем	An assembly of devices designed to assist a blind person in orientation, mobility, and object recognition by capturing video images and translating them into electrical stimuli which are applied to the tongue. It consists of a pair of dedicated video-camera spectacles, a controller, and an electrode array intended to be placed on the tongue. With training, the device is intended to enable users to interpret the shape, size, location and motion of objects in their environment as an adjunct to other assistive devices (e.g., guide dog, cane). This is a single-patient, reusable device.	IIa
6077	62685	Heart valve prosthesis repositioning tool	Зүрхний хавхлагын протезийн байрлалыг өөрчлөх хэрэгсэл	A hand-held manual surgical instrument intended to be used to realign or reposition a heart valve prosthesis after initial insertion and positioning with a heart valve prosthesis holder. The device may be a one-piece instrument or attached to a separate handle, and is available in a range of configurations for the aortic, mitral, or tricuspid heart valve. It is typically made of plastic materials. This is a reusable device intended to be sterilized prior to use.	IIa
6078	62699	Vitreous body prosthesis inserter	Шилэн биеийн протез суулгагч	A hand-held, manual, ophthalmic surgical instrument designed to inject (insert) a vitreous body prosthesis into the prepared eye during ophthalmic surgery. It is typically in the form of a casing and plunger, with a side window for placing the prosthesis within the device. This is a reusable device intended to be sterilized prior to use.	IIa
6079	62715	Epicardial pacing lead inserter	Эпикардийн хэмнэлтийн хар тугалга оруулагч	A sterile, manually-powered, mechanical surgical instrument designed for the implantation of a pacing lead in the epicardium. It is a hand-held, shaft-like tool with a mechanical trigger and rotatable thumbwheel designed to deploy the distally-mounted lead and then fix it in the epicardium by rotation. This is a single-use device.	IIa

6080	62746	Orthopaedic trocar blade, single-use	Ортопедийн трокар ир, нэг удаагийн хэрэглээ	A sterile, rigid hand-held surgical instrument with a sharp (pyramidal or conical) point designed to be used during orthopaedic surgery for the manual puncture of a bodily entry point to: 1) gently part the surrounding soft tissue upon entry; 2) assist in the location and positioning of skeletal fractures; and/or 3) assist alignment of surgical instruments/implants. It is typically made of high-grade stainless steel, titanium (Ti), or synthetic material. This is a single-use device.	IIa
6081	62782	Optical surgical navigation device tracking system	Оптик мэс заслын навигацийн төхөөрөмжийг хянах систем	A mobile assembly of electrically-powered devices intended to provide a physician with optical tools to track manual surgical instruments and locate anatomical structures with respect to pre-acquired images (e.g., CT/MRI scan) or real-time data [e.g., endoscopic, ultrasound (US)] during computer assisted surgery (CAS). It consists of a workstation with controls/display, a position/movement tracking camera, adaptors, and sensors/spatial markers designed to be attached to the patient and instruments. It is used for multiple surgical procedures (e.g., craniotomy, tumour resection) in various fields [e.g., ear/nose/throat (ENT), neurosurgical, or craniomaxillofacial (CMF) surgery].	IIa
6082	62807	Transcutaneous central venous pressure monitoring system	Арьсны төв венийн даралтыг хянах систем	An assembly of mains electricity (AC-powered) devices intended to be used for the transcutaneous (noninvasive) monitoring of a patient's central venous pressure (CVP) using light emission/diffusion signals (e.g., near-infrared spectroscopy). It consists primarily of a small photoelectric sensor placed on the jugular vein area of the neck, patient adhesives, connecting cables, and a monitor with integrated software for the measurement, analysis, and display of CVP data.	IIa

6083	62817	Dental appliance fabrication material, combination-material	Шүдний аппарат үйлдвэрлэх материал, хосолсон материал	A dental material made of a combination of metal, ceramic, and/or synthetic polymer [e.g., polyethylene (PE)] intended to be used to manufacture a final dental appliance/prosthesis (e.g., a dental implant, removable dentures, crown, bridge) for patient use. It is used to create implantable and removable restorations using manual or computer-aided design/computer-aided manufacturing (CAD/CAM) technology. After application, this material cannot be reused for fabrication.	IIa
6084	62852	Breast ultrasound/mammography imaging system	Хөхний хэт авиан / маммографийн дүрслэлийн систем	A stationary assembly of electrically-powered devices designed for extracorporeal imaging of the breast using a combination of breast ultrasound (US) and digital x-ray mammography technologies for diagnosis and screening, typically in women with dense breast tissue. It consists of a C-arm with an x-ray camera and an US transducer that move in parallel beneath the breast platform, a gantry with an x-ray generator, US beam former, system computer, a radiation-shielding workstation with controls/display, and wireless foot pedals. The system produces static two-dimensional (2-D) x-ray and dynamic three-dimensional (3-D) US images for analysis.	IIa
6085	62857	Pleuroscopic/mediastinoscopic access cannula, reusable	Плейроскопийн/медиастиноскопийн суваг, дахин ашиглах боломжтой	A rigid, single-lumen, surgical instrument intended to be percutaneously inserted through the chest to provide access to the pleural and/or mediastinal cavity to facilitate the introduction of surgical instruments as part of a minimally-invasive procedure; it is not intended for pericardial access. It provides an entry between adjacent ribs and once in place is intended to remain in position for the duration of the procedure. It may include a trocar with a sharp or blunt tip intended to assist introduction; devices with the trocar included it may be referred to as a trocar or trocar assembly. This is a reusable device.	IIa

6086	62858	Pleuroscopic/mediastinoscopic trocar blade	Плейроскопийн/медиастиноскопийн трокар ир	A rigid surgical instrument with a sharp or blunt tip intended to be used in conjunction with a thoracic access cannula (not included) to puncture the thoracic wall (between adjacent ribs) to facilitate placement of the cannula in the pleural and/or mediastinal cavity during a minimally-invasive procedure; it is not intended for pericardial access. It is intended to fill the lumen of a thoracic cannula and is removed once the cannula is in place. This is a reusable device.	IIa
6087	62878	Heart donor-organ preservation/transport perfusion set organ holder	Зүрхний донор-эрхтэн хадгалах/тээвэрлэх сэлбэх багц эрхтэн эзэмшигч	A sterile frame/holder designed for use with a heart donor-organ preservation/transport perfusion set to support the heart within the organ chamber during preservation and transport. It is typically a malleable padded frame that surrounds the heart to minimize movement, while allowing the heart to continue beating. This is a single-use device.	IIa
6088	62965	Oesophageal warming balloon catheter	Улаан хоолойг дулаацуулах бөмбөлөг катетер	A sterile, flexible device with a distal balloon intended to be introduced into the oesophagus adjacent to the left atrium as a conduit for thermally regulated fluid, to maintain the temperature of oesophageal tissue during cardiac cryosurgical ablation to prevent oesophageal fistulas (injury). It is typically connected via tubing to fluid bags (e.g., saline bags) which may be included. The solution is intended to be warmed and then pumped through the distal balloon using an external thermal regulation/pumping assembly (not included). This is a single-use device.	IIa
6089	62985	Hair implantation unit	Үс суулгах төхөөрөмж	A sterile, hand-held, manual device intended to be used during a hair transplantation procedure (follicular transplantation) to implant hair follicles into the scalp, typically for the treatment of male pattern baldness. It consists of: 1) a dedicated needle(s) intended to be loaded with a hair follicle; and 2) a pen-like handpiece (implanter) with a manual plunger-like mechanism intended to deploy/implant the follicle from the needle. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa

6090	63060	Tracheostomy tube, non-reinforced, custom-made	Трахеостомийн хоолой, арматургүй, захиалгаар хийдэг	A custom-made, hollow cylinder designed to be inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway; it is not reinforced with a wire. It is constructed with specific characteristics (e.g., size, shape, material) as prescribed by a healthcare provider for a specific patient. It may be constructed of metal or plastic, might include an inner cannula and may be one of a variety of designs (e.g., cuffed, uncuffed, and/or fenestrated). It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-patient, reusable device after appropriate cleaning.	IIa
6091	63112	Robotic surgical scissors	Робот мэс заслын хайч	A surgical device intended to be used in conjunction with a robotic surgical system to cut tissue or sutures during a robotic endoscopic procedure. It is designed as a long shaft with a pair of mechanical (i.e., not electrosurgical) cutting blades at the distal end, and a proximal housing intended to be connected directly to an arm of the robotic surgical system. This is a reusable device.	IIa
6092	63113	Robotic surgical forceps, reusable	Робот мэс заслын хямсаа, дахин ашиглах боломжтой	A surgical device intended to be used in conjunction with a robotic surgical system to grasp tissue (typically atraumatically) or foreign bodies during a robotic endoscopic procedure. It is designed as a long shaft with a pair of scissors-like grasping tongs or claws at the distal end, and a proximal housing intended to be connected directly to an arm of the robotic surgical system; it is not an electrosurgical instrument. This is a reusable device.	IIa
6093	63114	Robotic surgical cutting stapler, reusable	Робот мэс заслын зүсэх үдэгч, дахин ашиглах боломжтой	An electrically-powered surgical instrument intended to be used in conjunction with a robotic surgical system during a robotic endoscopic procedure for the expeditious transection and resection of tissues and the creation of anastomoses. The device is intended to mechanically cut the tissue and simultaneously apply surgical staples to the resulting sides of the cut line, with power from a motor. It is designed as a long shaft with a distal stapling mechanism designed to accept an endpiece/loading unit. This is a reusable device.	IIa

6094	63116	Soft-tissue ultrasonic robotic surgical instrument, reusable	Зөөлөн эдийн хэт авианы робот мэс заслын багаж, дахин ашиглах боломжтой	A component of an ultrasonic surgical assembly intended to be connected directly to the arm of a robotic surgical system, and convert high frequency electrical current from a generator into an ultrasonic oscillation for a tip placed at its end to mechanically fragment soft-tissue cells upon contact during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It is typically in the form of an elongated probe with a proximal housing intended to attach to the robotic arm. This is a reusable device.	IIa
6095	63117	Robotic surgical retractor	Мэс заслын робот татагч	A surgical device intended to be used in conjunction with a robotic surgical system to enable retraction of tissues during a robotic endoscopic procedure. It is designed as a long shaft with a distal retracting mechanism (e.g., fan-like opening blades), and a proximal housing intended to be connected directly to an arm of the robotic surgical system. It is not intended for surgical wound retraction or tissue cutting. This is a reusable device.	IIa
6096	63133	Surgical torque wrench, single-use	Мэс заслын эргүүлэх эрэг чангалах түлхүүр, нэг удаагийн хэрэглээ	A sterile hand-held manual surgical instrument intended to be used for gripping, turning/tightening, or twisting an object (e.g., a nut, bolt, or wire) during a surgical intervention; it is not dedicated to dental use only. It may be available in a variety of forms and might have fixed or adjustable jaws, or a detachable endpiece(s) [e.g., ratchet type]. This is a single-use device.	IIa
6097	63141	Anal fistula circular cutter	Шулуун гэдсээр фистул дугуй зүсэгч	A sterile device intended for the circumferential resection of tissue to treat simple anal fistula. It includes a probe for initial exploration of the fistula, a guide with attachable base plate, and cylindrical cutting tool; the cutting tool is intended to be passed down the guide towards the base plate to remove diseased tissue and allow fistula healing. This is a single-use device.	IIa
6098	63142	Caecostomy irrigation kit	Caecostomy усалгааны иж бүрдэл	A collection of sterile devices designed to wash out the colon via a caecostomy. It typically includes a container of irrigation fluid and tubing/catheter with a cone-shaped tip. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	IIa

6099	63148	Pellet implantation cannula	Үрлэн суулгацын суваг	A sterile, rigid tube intended for subcutaneous delivery of an implantable drug pellet. The cannula is typically designed with a proximal well/side-hole for pellet loading, and typically includes a trocar blade to assist cannula introduction and a push rod to drive the pellet down the cannula; the implant is not included. This is a single-use device.	IIa
6100	63158	Diamond ENT bur, reusable	Дахин ашиглах боломжтой чих хамар хоолойн алмааз шар	A rotary cutting device made of high-grade steel with the working end coated with particles of diamond, and which is designed to fit into an appropriate handpiece that provides the rotation allowing the user to incise or remove bone in the ear, nose, or throat area during an ear/nose/throat (ENT) procedure. It can be used in mastoid surgery, frontal sinus surgery, or surgery of the facial nerves. This is a reusable device intended to be sterilized prior to use.	IIa
6101	63161	Cochlear electrode array introducer, single-use	Чихний дунгийн электродын массив танилцуулагч, нэг удаагийн хэрэглээ	A sterile, hand-held manual surgical instrument designed to aid insertion of an electrode array into the cochlea during implantation of a cochlear implant. It is typically a thin shaft onto which the electrode is distally mounted and then advanced into the cochlea by means of a manually-operated sliding mechanism. This is a single-use device.	IIa
6102	63176	Fluorescence wound imaging unit	Флюресценцийн шархны дүрсний төхөөрөмж	A hand-held, electrically-powered device designed to use violet light illumination and imaging to visualize fluorescent bacteria within/around a wound to assist with wound care protocols and documentation. It includes a violet light(s) for wound illumination and fluorescence, lens, display screen, and includes video/image capture technology.	IIa
6103	63177	Urethral catheterization support kit, intravesical chemotherapy	Шээсний сувгийн катетержуулалтыг дэмжих хэрэгсэл, судсаар хими эмчилгээ	A collection of various sterile, non-surgical devices dedicated to supporting the intravesical (in the bladder) administration of a chemotherapeutic pharmaceutical agent (not included) typically for the treatment of bladder cancer. It may include tubing, a saline bag filled with saline, and a saline bag spike; the urethral catheter is not included. This is a single-use device.	IIa

6104	63189	Implantable pacemaker battery	Суулгах боломжтой зүрхний аппаратын батерей	A hermetically-sealed, implantable, electrochemical cell designed to store chemical energy and release it in the form of electrical power to operate a co-implanted pacing device (e.g., pacemaker, wireless pacemaker sensor/transmitter). Disposable devices dedicated to implantation may be included.	IIa
6105	63202	Endodontic broach, serrated, single-use	Эндодонтын энгэрийн, шүдтэй, нэг удаагийн	A hand-held, manual, dental, cutting instrument with a slender, tapered, serrated/barbed tip intended to be used for shaping and enlarging holes in root canal tissue, particularly dentine, or for extirpating pulp. This is a single-use device.	IIa
6106	63220	Bone trephine tubing set	Ясны трефиний хоолойн багц	A collection of tubes and associated items (e.g., connectors, clamps) intended to be used with a bone trephine set to extract and fill cancellous bone and/or bone cement from and to the bones of a patient. The set is made of metal, it is exchangeable and may be attached to a manually-operated handle. This is a single-use device.	IIa
6107	63221	Bone trephine set	Ясны трефиний багц	A collection of devices intended to be used to remove the necrotic tissue from the interior of the bone and fill in cancellous tissue and/or bone cement. It consists of one or more drills, tubes, handles, curettes, hammers and associated items (e.g., connectors, clamps), and may be used with a single-use tubing set. The components of the set are made of metal and are exchangeable. This is a reusable device.	IIa
6108	63223	Orthodontic power arm	Ортодонтын цахилгаан гар	A dental device in the shape of a straight pin or hook designed to accept an elastic band, power chain, spring, or archwire (not included), which apply a force in addition to the main orthodontic archwire, for vertical alignment and/or horizontal positioning of the teeth; it may include a base that functions as an orthodontic lock/stop. The device is typically crimped, soldered, screwed on, or inserted in the slot of an orthodontic attachment (e.g., bracket, band), or on the surface of a tooth for orthodontic traction. This is a single-patient device intended to be used for the duration of treatment (single-use) before being discarded.	IIa

6109	63224	Skin closure clamp	Арьсыг хаах хавчаар	A sterile, nonimplantable, manual device designed for the temporary approximation of the free edges of a skin wound or skin incision until surgical repair. It includes hand-operated jaws with teeth/prongs designed to grip the skin; once applied it is intended to lock in place. The device is mainly used to arrest bleeding (i.e., haemostasis) and is typically intended for emergency situations (e.g., unintentional injuries, battlefield). This is a single-use device.	IIa
6110	63230	Vascular catheter introduction set, implantable	Судасны катетер нэвтрүүлэх иж бүрдэл, суулгах боломжтой	A collection of devices which includes an implantable device(s) intended to provide percutaneous, peripheral, arterial access to enable repeated introduction of a catheter (not included) into the vascular system over an extended period (e.g., months) without vascular wound closure. It includes an implantable non-steerable introducer sheath, an inner obturator/occluder, and typically an additional access device(s) [e.g., haemostatic valve, stylet]. The introducer sheath is typically anastomosed to the blood vessel and externalised via a subcutaneous tunnel; the occluder is intended to plug the introducer sheath between uses. This is a single-use device.	IIa
6111	63242	Haematological concentrate/haemostatic agent applicator cannula, endoscopic, reusable	Гематологийн баяжмал/цус тогтоогч түрхэгч суваг, дурангийн, дахин ашиглах боломжтой	A long flexible or rigid tube with an atraumatic tip intended to be used during an endoscopic/laparoscopic procedure to provide access for the administration of a haematological concentrate and/or haemostatic agent (e.g., thrombin, platelet concentrate, polysaccharide) to a bleeding surgical site, typically to facilitate haemostasis and healing, in conjunction with an applicator such as a syringe [not included]. It is designed to be inserted into the body percutaneously, via a port or endoscope/laparoscope. It may have a single or dual-channel(s) for administration of one or two agent(s); a channel for connection to a gas pump for spraying may be incorporated. This is a reusable device.	IIa
6112	63247	Surgical instrument guard, single-use	Мэс заслын багажны хамгаалалт, нэг удаагийн	A device designed to be used with a surgical or invasive instrument to protect the instrument from damage and/or the operator or patient from injury. It is typically made of metal or plastic materials and available in a variety of designs. This is a single-use device.	IIa

6113	63269	Urethral balloon catheter fill-media	Шээсний сувгийн бөмбөлөг катетер дүүргэх хэрэгсэл	A dedicated sterile solution (e.g., glycerin) intended to be pumped into an appropriate urethral drainage balloon catheter to inflate the distal balloon and facilitate catheter retention in the urethra. This is a single-use device.	IIa
6114	63275	Pleuroscopic/mediastinoscopic access cannula, single-use	Плейроскопийн/медиастиноскопийн хандалтын суваг, нэг удаагийн	A rigid, single-lumen, surgical instrument intended to be percutaneously inserted through the chest to provide access to the pleural and/or mediastinal cavity to facilitate the introduction of surgical instruments as part of a minimally-invasive procedure; it is not intended for pericardial access. It typically does not include an insufflation backflow valve and is not intended for endoscopic access requiring insufflation. It provides an entry between adjacent ribs and once in place is intended to remain in position for the duration of the procedure. It may include a trocar blade with a sharp or blunt tip designed to assist introduction. This is a single-use device.	IIa
6115	63299	Colonic lavage kit, surgical	Бүдүүн гэдэс угаах иж бүрдэл, мэс заслын	A collection of sterile devices intended to be used during open colorectal surgery (bowel resection) to irrigate the colon above (proximal to) the site of a lesion/blockage, prior to surgical anastomosis, when preoperative preparation of the colon has not been possible, normally due to obstruction. The kit includes a nozzle (intended to be secured to the transected end of the colon above the lesion), an inflow tube, a waste tube, and may include a waste collection bag; it is intended to be connected to a gravity feed bag. The nozzle may also allow colonoscope access for intraoperative colonoscopy. This is a single-use device.	IIa

6116	63349	Dental implant suprastructure, permanent, custom-made	Шүдний суулгацын дээд бүтэц, байнгын, захиалгаар хийдэг	A custom-made device intended to provide a permanent intermediate fixture level between a dental implant and the final prosthesis/restoration (e.g., bridge, single tooth, overdenture). It includes one or more structural component(s) [e.g., abutment, ball, bar, bar overlay, coping], and may be made of various materials [e.g., titanium (Ti), plastic, gold alloy]; an abutment screw(s) may be included, however the suprastructure does not represent the screw(s) in isolation. It may also be referred to as an abutment assembly or mesostructure and is manufactured for a specific patient.	IIa
6117	63364	Orthopaedic femur reamer trial	Ортопедийн гуяны зүсэгчийн туршилт	A manual surgical instrument designed to be inserted into the medullary canal of the femur as a guide to the size of orthopaedic reamer to be used prior to introduction of a femoral implant (e.g., transfemoral prosthesis intrafemoral implant, intramedullary nail, femoral component of hip arthroplasty). It is made of metal (e.g., stainless steel) and is typically used as a set of graduated sizes. This is a reusable device intended to be sterilized prior to use.	IIa
6118	63369	Tooth mill	Шүдний тээрэм	An electrically-powered electronic device designed to create collagen granules from extracted teeth for autologous bone grafting. The device is typically used to create bone graft materials for bone regeneration prior to dental implant insertion, by grinding/milling an extracted tooth and mixing with suitable reagents/dilutants.	IIa
6119	63370	Extracorporeal membrane oxygenation system heating/cooling unit	Биеийн гаднах мембраны хүчилтөрөгчийн систем халаах/хөргөх төхөөрөмж	A mains electricity (AC-powered) device intended to be used as part of an extracorporeal bypass system designed to heat or cool a patient's body by extracorporeal heat exchange with the patient's perfused blood during extracorporeal membrane oxygenation (ECMO) [sometimes referred to as extracorporeal lung support (ECLS)]. It consists of a system to heat or cool water (the medium used to regulate the blood temperature), pumps to provide circulation of the water to a heat exchanger, and monitoring/alarm systems. It is not intended for intraoperative cardiopulmonary bypass.	IIa

6120	63394	Hand-held ultrasound imaging system, rectal/vaginal	Гарын хэт авиан дүрслэлийн систем, шулуун гэдсээр/үтрээ	A battery-powered, hand-held device/device assembly designed to be inserted into the vagina and/or rectum for collection, display, and analysis of ultrasound information during an intracavity ultrasound imaging procedure. It consists of a long, slim, probe-like, ultrasound transducer designed to be positioned within the vagina and/or rectum and includes an integrated image processing system whereby image data is typically wirelessly transferred to an off-the-shelf device (e.g., smartphone, tablet) with dedicated software installed for viewing.	IIa
6121	63419	Surgical vessel loop tightening catheter	Мэс заслын судасны гогцоо чангалах катетер	A sterile flexible tube intended to be used during surgical procedures to tighten a surgical vessel loop during retraction and occlusion of blood vessels. Sometimes referred to as a snugger catheter, it is in the form of a short cylinder with a lumen through which both ends of a vessel loop cord, previously looped around the target artery or vein, are inserted and pulled to tighten the vessel loop and compress the blood vessel. This is a single-use device.	IIa
6122	63460	Fluid transfer tube, general-purpose	Шингэн дамжуулах хоолой, ерөнхий зориулалттай	A sterile, flexible, blunt tubular device made of plastic materials designed to be used for the manual transfer of several types of medical fluids (e.g., solutions, syrups) between a first container (e.g., a vial) and a second container [e.g., a syringe]; it is not dedicated to a particular type of fluid or clinical procedure. It is not intended to puncture the seal of a vial/container, nor is it intended for patient contact. This is a single-use device.	IIa
6123	63502	Robotic surgical cutting stapler, single-use	Робот мэс заслын зүсэх үдэгч, нэг удаагийн	A sterile electrically-powered surgical instrument intended to be used in conjunction with a robotic surgical system during a robotic endoscopic procedure for the expeditious transection and resection of tissues and the creation of anastomoses. The device is intended to mechanically cut the tissue and simultaneously apply surgical staples to the resulting sides of the cut line, with power from a motor. It is designed as a long shaft with a distal stapling mechanism designed to accept an endpiece/loading unit. This is a single-use device.	IIa

6124	63504	Musculoskeletal intense therapeutic ultrasound system	Яс-булчингийн эрчимтэй эмчилгээний хэт авианы систем	An assembly of noninvasive, electrically-powered devices designed to produce and deliver intense therapeutic ultrasound (ITU) waves through the skin to create ablative lesions in subcutaneous soft tissues (e.g., muscles, tendons). High intensity ultrasound is intended to reduce inflammation and pain associated with musculoskeletal disorders or injuries (e.g., plantar fasciitis, lateral epicondylitis) by stimulating collagen production and regenerating connective tissue. The system is used by a healthcare provider and includes a console with controls/display, a handpiece with ultrasound transducers for transcutaneous energy delivery (typically at frequencies of 2-12 MHz), and handpiece tips.	IIa
6125	63505	Musculoskeletal intense therapeutic ultrasound system handpiece	Яс-булчингийн эрчимтэй эмчилгээний хэт авиан аппарат	A hand-held, electrically-powered component of a musculoskeletal intense therapeutic ultrasound (ITU) system designed for the transcutaneous application of high intensity ultrasound energy to create ablative lesions in subcutaneous soft tissues (e.g., muscles, tendons), for reducing inflammation and pain associated with musculoskeletal disorders or injuries (e.g., plantar fasciitis, lateral epicondylitis). It includes piezoelectric transducers and is designed to be manually moved over the skin surface during treatment. This is a reusable device.	IIa
6126	63524	Knee revision prosthesis trial	Өвдөгний үений протезийн туршилт	A copy of a final knee revision prosthesis, in the form of combined femoral and tibial components, designed to be used before revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa

6127	63525	Hip revision prosthesis trial	Түнхний протезийн туршилт	A copy of a final hip revision prosthesis, in the form of a combined femoral stem and head, designed to be used before revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
6128	63526	Shoulder revision prosthesis trial	Мөр засах протезийн туршилт	A copy of a final shoulder revision prosthesis, in the form of a combined humeral stem and head, designed to be used before revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is one of a set, or a set, of graduated sizes and is typically made of metal and/or polymer. This is a reusable device intended to be sterilized prior to use.	IIa
6129	63534	Inspiratory/expiratory limb respiratory tubing, single-use	Амьсгалах / амьсгалах мөчний амьсгалын хоолой, нэг удаагийн хэрэглээ	A length of tube made of durable materials (e.g., rubber, silicone) intended to be used to conduct breathing gases towards or away from a patient during the respiratory cycle, typically during anaesthesia or ventilation [including continuous or bi-level positive airway pressure ventilation (CPAP or BPAP)]. It is intended to function as part of a breathing circuit and/or with other separate gas delivery devices (e.g., inhalational analgesia gas administration set, respiratory mask); connectors may be included with the device. This is a single-use device.	IIa
6130	63552	Surgical A/V-shaped microvessel clamp	Мэс заслын A/V хэлбэрийн бичил судасны хавчаар	A hand-held surgical instrument designed to compress the severed end of a small vessel (e.g., blood vessel, vas deferens) to occlude the vessel, typically prior to anastomosis formation. Often referred to as an Acland clamp, it has an A-/V-shaped design whereby the vessel is slid into the mouth of the clamp up to the apex where it is compressed; it does not have a hinge/jaws (i.e., it is not forceps or a bulldog clamp). This is a reusable device intended to be sterilized prior to use.	IIa

6131	63555	Intraocular scissors probe-tip, reusable	Дахин ашиглах боломжтой нүдний дотоод хайч	A distal component of a probe-like intraocular scissors assembly intended to be used to cut intraocular tissue (e.g., during anterior chamber surgery, vitrectomy). It is a probe-/cannula-like shaft with two shearing blades at the end, and is intended to be attached to an appropriate ophthalmic surgical instrument handle (not included). It is available with various blade designs and sizes. This is a reusable device intended to be sterilized prior to use.	IIa
6132	63566	Bone/joint surgical power tool motorized handpiece/set, electric, single-use	Яс/үе мөчний мэс заслын цахилгаан хэрэгсэл моторт гар багаж/иж бүрдэл, цахилгаан, нэг удаагийн	An electrically-powered one-piece device or modular device collection designed to accept an endpiece(s) [e.g., drill bit, saw blade, bur] for drilling, cutting, and/or inserting procedures involving bones and tough tissues during a non-dental surgical procedure. It includes an electric motor and one or more power tool attachments with a Jacobs chuck or quick-connect collet/adaptor at its distal end to connect the endpieces, and may include a rechargeable battery; the endpieces are not included. This is a single-use device.	IIa
6133	63589	Denture reliner sealing agent	Шүдний шүдний чигжээсийг битүүмжлэх бодис	A non-sterile dental material intended to be applied over the surface of a soft denture reliner (e.g., silicone reliner) by a dentist or dental laboratory technician to seal rough or porous spots on its surface during application to a denture base. After application, this device cannot be reused.	IIa
6134	63590	Denture relining kit	Шүдний үений иж бүрдэл	A collection of non-sterile devices intended for professional use during relining of a denture which includes a permanent or temporary denture reliner material (e.g., soft silicone, self-curing or light-curing hard acrylic PMMA) and additional materials to support denture preparation [e.g., primer, sealing agent]; dedicated disposable devices associated with application (e.g., brush, mixing tip) may be included. After application, this device cannot be reused.	IIa

6135	63591	Dental acrylic resin	Шүдний нийлэг давирхай	A non-sterile substance intended for professional use as a dental cement, luting agent, liner, base, pulp-capping material, pit/fissure sealant, and/or direct dental restorative material, typically for short-term fixed prosthesis use (temporary crowns and bridges used for 6 months or less) or long-term removable prosthesis use. It consists of a self-, light-, or dual-curing acrylic resin material [e.g., polymethylmethacrylate (PMMA)]; it does not include any additional hardening fillers/components. It may be preloaded into a syringe, and dedicated disposable devices associated with application may be included. After application, this device cannot be reused.	IIa
6136	63592	Dental acrylic resin kit	Шүдний нийлэг давирхайн иж бүрдэл	A collection of non-sterile substances intended for professional use during dental restoration and prosthesis installation/repair which includes acrylic resin material (without hardening fillers/materials) and additional materials to support restoration (e.g., etching solution, bonding agent, primer, prosthesis bonding agents, unfilled resin sealant/coating agents), and may include dedicated disposable devices associated with application; it does not include non-resin-based cements nor dental prostheses. After application, this device cannot be reused.	IIa
6137	63606	Luer/epidural catheter linear connector	Luer/epidural катетер шугаман холбогч	A small, non-powered, noninvasive tubular device with a Luer connection (either lock or slip) at one end and an epidural catheter adapting mechanism at the other end, intended to connect an external device with a Luer connection (e.g., syringe) with an epidural catheter with no pre-existing connector. It is designed to connect over the epidural catheter and seal the connection with either an integrated clamping mechanism or by means of an adhesive port. It does not incorporate a valve, tubing nor puncturing component. This is a single-use device.	IIa

6138	63607	NRFit/epidural catheter linear connector	NRFit/эпидураль катетер шугаман холбогч	A small, non-powered, noninvasive, tubular device with an NRFit connection at one end (a connection designed specifically for neuraxial applications according to ISO 80369-6) and an epidural catheter adapting mechanism at the other end, intended to connect an external device with an NRFit connection (e.g., syringe) with an epidural catheter with no pre-existing connector. It is designed to connect over the epidural catheter and seal the connection with either an integrated clamping mechanism or by means of an adhesive port. It does not incorporate a valve, tubing nor puncturing component. This is a single-use device.	IIa
6139	63622	Endodontic obturation material distribution endpiece, single-use	Эндодонт бөглөрөлтийн материалын түгээлтийн төгсгөл хэсэг, нэг удаагийн	A dental endpiece designed to be attached to a dental power tool handpiece to distribute root canal sealer/cement/paste evenly throughout the root canal system typically by applying the material in a lateral direction. It is a thin metal rod with a spiral (e.g., Lentulo spiral type), helicoidal, or circular design. This is a single-use device.	IIa
6140	63624	Scleral expansion implant implantation tool	Склераль тэлэлтийн суулгац суулгах хэрэгсэл	A non-powered, ophthalmic surgical device intended to be used for implantation of a scleral expansion implant (not included). It is typically a blunt dilator-like rod designed to accept the scleral expansion implant at its proximal end and then threaded through a prepared sub-scleral tunnel whereupon the implant is deployed. This is a reusable device intended to be sterilized prior to use.	IIa
6141	63626	Dental prosthesis-component adhesive	Шүдний протез-бүрэлдэхүүн хэсгийн цавуу	A non-sterile adhesive material (e.g., self- or light-cured polymer composite) intended to be used to bond together components of a restorative dental prosthesis [e.g., crown, removable denture] by functioning as a glue between metal, synthetic, and/or ceramic materials; it is not intended to bond prosthetic devices to patient tissues (e.g., oral mucosa, teeth). Dedicated disposable devices associated with application [e.g., brush, mixing tip] may be included. After application, this device cannot be reused.	IIa

6142	63630	Ceramic dental bur	Керамик шүдний шар	A rotary cutting device, the working end of which is made from ceramic, designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth and bone. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a reusable device.	IIa
6143	63632	Tracheostomy tube guide-catheter	Трахеостомийн хоолойн чиглүүлэгч-катетер	A sterile flexible tube intended to be used to facilitate the insertion or reinsertion of a tracheostomy tube into the trachea through the skin after a percutaneous tracheotomy; supportive devices associated with introduction (e.g., guidewire) may be included. This is a single-use device.	IIa
6144	63633	Tracheostomy tube guidewire	Трахеостомийн хоолойн чиглүүлэгч утас	A sterile wire intended to assist manual introduction of a tracheostomy tube guide-catheter used to facilitate the insertion or reinsertion of a tracheostomy tube into the trachea through the skin after a percutaneous tracheotomy. This is a single-use device.	IIa
6145	63646	Surgical irrigation pump	Мэс заслын усалгааны насос	An electrically-powered device, which may include noninvasive accessories, intended to pump a sterile fluid (e.g., saline water) to irrigate body cavities/wounds during surgery (e.g., general surgery, endoscopic). It is typically intended to be used to wash away tissues/fluids/debris with a sterile fluid to facilitate observation; it is not intended to administer parenteral fluids or drugs and is not capable of suction. The device may incorporate a display and may include collection containers or tubing; it does not include patient contact devices (e.g., handpiece/tip, catheter).	IIa
6146	63691	Urinary catheter ultrasonic bacterial adhesion inhibition system	Шээсний катетерийн хэт авианы бактерийн наалдацыг дарангуйлах систем	An assembly of portable, noninvasive, electrically-powered devices designed to deliver ultrasonic vibrations to the external portion of an indwelling urethral catheter to inhibit bacterial attachment/biofilm formation on the catheter surface to reduce risk of infection within the urinary tract; it may in addition be intended to improve patient comfort. It includes a control unit and an ultrasonic actuator intended to be attached (e.g., clipped onto) the catheter. This is a reusable device.	IIa

6147	63692	Urinary catheter ultrasonic bacterial adhesion inhibition system control unit	Шээсний катетерийн хэт авианы бактерийн наалдацыг дарангуйлах системийн хяналтын нэгж	A portable, electrically-powered device designed to power and control an ultrasonic bacterial adhesion system actuator (not included) which delivers ultrasonic vibrations to an indwelling urethral catheter to inhibit bacterial attachment/biofilm formation on the catheter surface to reduce risk of infection within the urinary tract. It is a small electronic unit with a display and controls.	IIa
6148	63693	Urinary catheter ultrasonic bacterial adhesion inhibition system actuator	Шээсний катетерийн хэт авианы бактерийн наалдацыг дарангуйлах системийн идэвхжүүлэгч	A non-sterile, portable, noninvasive device designed to generate and deliver ultrasonic vibrations to the external portion of an indwelling urethral catheter to inhibit bacterial attachment/biofilm formation on the catheter surface to reduce risk of infection within the urinary tract. It is a small unit with a transducer and integrated ultrasonic actuator intended to be attached (e.g., clipped onto) the catheter. It is designed to be used with a system control unit (not included) from which it is controlled and draws power. This is a single-use device.	IIa
6149	63706	Surgical irrigation/aspiration cannula, illuminating, single-use	Мэс заслын усалгаа/сорох суваг, гэрэлтүүлэгч, нэг удаагийн	An atraumatic, invasive, hand-operated tube designed as a conduit for irrigation and aspiration (i.e., capable of both functions) of body cavities/wounds during a surgical procedure (e.g., neurosurgery, laparoscopy), whilst providing illumination of the site. It is not dedicated to dental, intrauterine, or liposuction procedures, not an ophthalmic device, and is not designed to administer parenteral fluids or drugs. It has a built-in light or fibreoptic bundle for illumination. The device may incorporate a handle with side valve(s)/hole(s) for the control of irrigation/aspiration, and may be provided with a stylet, sheath, and/or connection tubing. This is a single-use device.	IIa
6150	63711	Infrared patient thermometer, ear/skin	Хэт улаан туяаны өвчтөний термометр, чих / арьс	A hand-held, battery-powered, electronic instrument designed to measure: 1) the temperature of a patient's ear canal, typically to estimate the internal (core) temperature; and 2) the temperature of a site on the skin (e.g., axilla, forehead), by measurement of body infrared emissions. It typically includes both a skin-surface tip and an intra-aural tip. This device is intended for use in the home or healthcare facility. This is a reusable device.	IIa

6151	63730	Fallopian tube biopsy everting-balloon catheter	Фаллопийн хоолойн биопси everting-бөмбөлөг катетер	A sterile device intended to be inserted through a hysteroscope to obtain biopsy samples from a fallopian tube for cytological examination. It consists of a slender tube with a linear everting (extending) balloon at the distal end, and a handle with controls at the proximal end. The balloon is pressurized prior to insertion into a hysteroscope and at the site of interest the balloon is extended into the fallopian tube where cells are collected on the balloon surface; the cells can then be placed into a transport medium for subsequent cytological examination. This is a single-use device.	IIa
6152	63798	Tracheostomy tube, reinforced, non-customized, reusable	Трахеостомийн хоолой, хүчитгэсэн, захиалгаар хийгдээгүй, дахин ашиглах боломжтой	An armoured, hollow cylinder that is inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway, typically for a patient with unusual neck mass, however it is not custom-made for a specific patient. It is constructed of plastic with wire reinforcement to provide additional resistance to kinking and may include an inner cannula. It is available in cuffed, uncuffed versions, and in a variety of sizes. It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-patient, reusable device after appropriate cleaning.	IIa
6153	63814	Root canal ultrasonic irrigation handpiece tip	Үндэс сувгийн хэт авианы усалгааны гарны үзүүр	A non-sterile, needle-like endpiece designed to be attached to an ultrasonic dental handpiece and intended to deliver irrigation solution to, and provide debridement of, the root canal by means of ultrasonic mechanical vibration, during an endodontic procedure. This is a single-use device.	IIa
6154	63826	Dental suction system fluid-separation unit	Шүдний сорох системийн шингэн ялгах төхөөрөмж	An electrically-powered unit designed to be permanently integrated within a dry dental suction system to separate fluids (saliva, blood) from gases to avoid liquids from entering the suction pump (i.e., dry suction). It is typically a compact housing that includes the necessary tubing, connections, valves and an integrated separation mechanism (e.g., centrifuge), and is intended to interface with the suction line (fed by a cuspidor and/or aspirating handpiece), suction pump, and waste fluid pipe. It may include a collection trap for collection of solid matter (excluding amalgam).	IIa

6155	63861	Gas-sampling/monitoring respiratory tubing/anaesthesia mask adaptor	Хийн дээж авах/хяналт хийх амьсгалын хоолой/мэдээ алдуулах маск адаптер	A non-sterile respiratory device intended to facilitate gas sampling/monitoring by allowing an anaesthesia mask to be connected to a length of gas-sampling/monitoring respiratory tubing; the tubing (not included) is intended for subsequent connection to a respiratory gas measuring instrument [e.g., a carbon dioxide (CO2) or multi-gas analyser, manometer/pressure monitor]. It is a small synthetic polymer device, typically with a slip/barbed connection, intended to be inserted within one of the ventilation holes of the mask. This is a single-use device.	IIa
6156	63932	Osteotomy compression/distraction instrument	Остеотоми шахах / анхаарал сарниулах хэрэгсэл	A non-sterile manual surgical instrument intended to be used for compression and distraction of an osteotomy. It is comprised of two arms that attach to pins/screws/nails inserted into both sides of the cut bone, and includes a mechanism (e.g., screw) used to close and open the arms of the device enabling compression and distraction at the osteotomy line. This is a reusable device.	IIa
6157	63978	Dental power tool non-rotary polishing endpiece	Шүдний цахилгаан хэрэгсэл эргэдэггүй өнгөлгөөний төгсгөл	An oscillating, sagittal, or reciprocating dental instrument designed to be attached to a dedicated dental power tool handpiece to perform a specific final mechanical function (e.g., polishing, contouring, finishing) during an orthodontic procedure (e.g., interproximal reduction). It is a metallic flat endpiece in the form of a blade; some types may be diamond coated. This is a reusable device.	IIa
6158	63997	Orthodontic appliance positioning tray	Ортодонт төхөөрөмжийн байрлал тогтоох тавиур	A custom-made dental device in the form of a patient's dentition with slots/sockets intended to position and hold in place a set of orthodontic appliances (e.g., brackets, buccal tubes, lingual retainers) [not included] to bond them to teeth during a single procedure; the orthodontic appliances are loaded onto the device by the orthodontist prior to the procedure. Also known as an indirect bonding tray, it is typically made of synthetic polymer materials and is manufactured from an oral cavity impression or oral scan for a specific patient. This is a single-use device.	IIa

6159	64000	Invasive ultrasound transducer cooling/coupling support kit	Инвазив хэт авианы хувиргагч хөргөх/холбогчийг дэмжих хэрэгсэл	A collection of devices intended to be used in conjunction with a non-surgically invasive ultrasound transducer (probe) (e.g., of a therapeutic oncological/gynaecological ultrasound system) to cool the transducer and improve coupling. It typically consists of a container(s) with fluid (e.g., water with dissolved polymers) which circulates between a heat exchanger and the transducer via connection tubing; it may also include coupling gel and devices intended to detect patient motion during the procedure. This is a single-use device.	IIa
6160	64004	Scanning-laser ophthalmoscope/retinal optical coherence tomography system	Сканнер-лазер офтальмоскоп/торлог бүрхэвчийн оптик когерент томографийн систем	An ophthalmic digital image capturing/processing device that is a combination of a scanning-laser ophthalmic imaging system and a retinal optical coherence tomography system intended to: 1) use a low power laser to generate and capture digital confocal images, 2) use a broad-bandwidth light beam aimed into the eye for in vivo tomographic imaging and measurement of the retina and associated structures to diagnose and manage retinal diseases. It typically consists of a laser, optics, image detection system, a digital processor/computer, application software and image display monitor(s).	IIa
6161	64006	Bone file/rasp, reciprocating, reusable	Ясны файл/хүлүүр, сэлгэн, дахин ашиглах боломжтой	A surgical instrument with a surface(s) of coarse and/or fine grooves or teeth designed to be attached to a reciprocating power tool handpiece to scrape and smooth the surface of bone during a surgical procedure. It has grooves/teeth along all or part of the distal working end and is made of metal [e.g., stainless steel, titanium (Ti)]; it is not dedicated for use at a specific anatomy (e.g., sinus, ear). This is a reusable device.	IIa
6162	64007	Bone file/rasp, reciprocating, single-use	Ясны файл/хүрхэвч, эргэлдэгч, нэг удаагийн	A surgical instrument with a surface(s) of coarse and/or fine grooves or teeth designed to be attached to a reciprocating power tool handpiece to scrape and smooth the surface of bone during a surgical procedure. It has grooves/teeth along all or part of the distal working end and is made of metal [e.g., stainless steel, titanium (Ti)]; it is not dedicated for use at a specific anatomy (e.g., sinus, ear). This is a single-use device.	IIa

6163	64010	Orthodontic appliance/positioning tray kit	Ортодонтийн хэрэгсэл/байрлал тогтоох тавиурын иж бүрдэл	A collection of dental devices which includes a custom-made positioning tray (indirect bonding tray) intended to position and hold in place a set of included orthodontic appliances (e.g., brackets, buccal tubes, lingual retainers) to bond them to teeth during a single procedure. The components are typically made of synthetic polymer and/or metal materials and include appliances manufactured from an oral cavity impression or oral scan for a specific patient (custom-made). This is a single-use device.	IIa
6164	64015	Dental-professional prophylaxis brush, single-use	Шүдний мэргэжлийн урьдчилан сэргийлэх сойз, нэг удаагийн	A non-sterile rotary dental instrument with natural or synthetic bristle brushes intended to be used by a dental hygienist and/or dentist to clean and polish teeth. It is designed to be attached to a powered dental handpiece which provides the necessary rotation. This is a single-use device.	IIa
6165	64041	Pneumatic dental scaling/debridement system handpiece tip, endodontic, reusable	Шүдний хийн хэмжээс/цэвэршүүлэх системийн гарны үзүүр, эндодонт, дахин ашиглах боломжтой	A removable endpiece intended to be attached to a pneumatic dental scaling/debridement system handpiece for the application of sonic vibrational energy (e.g., at a frequency of 6 kHz) to fragment/remove tissue during an endodontic procedure. It is available variety of forms and sizes, and is typically made of metal. This is a reusable device.	IIa
6166	64057	Ultrasound-guided gastrostomy system catheter	Хэт авианы удирдлагатай гастростомийн системийн катетер	A sterile, flexible, tubular device with an inflatable balloon and a magnet at its distal end intended to be placed in the stomach, via the oesophagus, and used to move the stomach to the anterior abdominal wall via attraction by an external magnet (not included), to facilitate a gastrostomy. The balloon is filled with a fluid (e.g., saline) to enable detection by an ultrasound imaging system (not included) for its optimal placement without intervention of other anatomical structures (e.g., organs, vessels). Devices dedicated to catheter introduction/function (e.g., introducer needle, guidewire) may be included. This is a single-use device.	IIa

6167	64065	Hydraulic male urinary incontinence treatment system tubing	Гидравлик эрэгтэй шээс ялгаруулах эмчилгээний системийн хоолой	An implantable length of tube that functions as a component of a hydraulic male urinary incontinence treatment system and intended to provide connection between the system's inflatable pad (e.g., cushion, balloon) and the system's port, for the intra- and/or postoperative introduction/removal of fluid (e.g., saline); it is typically made of silicone and metal.	IIa
6168	64100	Orthopaedic cement/bone filler mixing nozzle	Ортопедийн цемент/яс дүүргэгч холигч хошуу	A tube-like device designed for mixing compounds to create a final orthopaedic cement or bone filler and expressing the cement/filler into another device which is used for its implantation (e.g., syringe). It is attached to a cartridge containing the initial components and has an integral mixing mechanism (e.g., spiralled channels). This is a single-use device.	IIa
6169	64108	Suction/irrigation tubing, reusable	Сорох/усалгааны хоолой, дахин ашиглах боломжтой	A length of flexible noninvasive tube, typically made of synthetic polymer material(s), intended to interface between suction and/or irrigation devices (e.g., catheters, pumps, collection bottles) during a medical/surgical procedure (not dedicated to ophthalmic use); it might additionally be intended for use during reusable device reprocessing. The tubing may be provided in rolls from which required lengths are cut, or may be provided in predetermined lengths with connectors; it does not include additional associated items such as a clamp, spike, or bag (i.e., not a tubing set). This is a reusable device.	IIa
6170	64109	Tracheobronchial guidewire	Гуурсан хоолойн гуурсан хоолойн чиглүүлэгч утас	A sterile metal wire intended to assist the insertion/positioning of a diagnostic/therapeutic device(s) [e.g., bronchoscope, catheter] exclusively within the tracheobronchial tree. It is typically coated with a plastic material [e.g., polytetrafluoroethylene (PTFE), commonly known as Teflon, or polyethylene (PE)]. It may have radiopaque graduated markings at the distal end to assist in the fluoroscopic monitoring of its advancement/position within the body. This is a single-use device.	IIa

6171	64113	Vascular irrigation cannula, peripheral	Судасны усалгааны суваг, захын	A sterile, rigid tube designed to be surgically inserted, temporarily, into a peripheral blood vessel to function as a channel for the transport of irrigation fluid (e.g., saline, heparin solution) during open vascular surgery. It is typically made of metal with a shaped/bulbous tip (e.g., cone-, olive-shaped) and may be intended to be bent into shape; as it is a rigid device it is not intended to be advanced more than a minimal distance within the lumen of the blood vessel. This is a single-use device.	IIa
6172	64120	Surgical irrigation/aspiration cannula, non-illuminating, single-use	Мэс заслын усалгаа/сорох суваг, гэрэлтүүлдэггүй, нэг удаагийн	An atraumatic, invasive, hand-operated tube designed as a conduit for irrigation and aspiration (i.e., capable of both functions) of body cavities/wounds during a surgical procedure (typically laparoscopy), usually to facilitate observation. It is not dedicated to dental or intrauterine procedures, not an ophthalmic device, and is not designed to administer parenteral fluids or drugs. It might incorporate a handle with a valve(s) and hole(s) on its side for the control of irrigation/aspiration, and may be provided with a stylet, a sheath, and/or connection tubing; it is typically made of metal. This is a single-use device.	IIa
6173	64150	Medical device adhesive remover	Эмнэлгийн хэрэгслийн цавуу арилгагч	A liquid solvent intended to remove residual adhesive from a medical device prior to decontamination/disinfection; it is not intended for patient contact. After application, this device cannot be reused.	IIa
6174	64174	Intravascular ultrasound imaging catheter, reprocessed	Судасны хэт авиан дүрслэлийн катетер, дахин боловсруулсан	A flexible, non-steerable tube with an ultrasound imaging transducer enclosed in a fluid-resistant or waterproof acoustically- and electrically-insulated housing, designed for insertion into the vascular system (i.e., peripheral vascular system, coronary artery) by an operator; it is not intended for intracardial insertion/imaging. Also known as a vascular ultrasound transducer, it includes a single or an array of transducer element(s). This is a previously used single-use device that has been processed for an additional single-use patient application.	IIa

6175	64175	Endoscopic portal pressure measurement system	Дурангийн хаалганы даралтыг хэмжих систем	An assembly of devices intended to measure hepatic portal pressure gradient by direct measurements of pressure within the hepatic vein and portal vein using a needle inserted via the stomach or duodenum under ultrasound guidance during endoscopy. It consists of a fine needle, a mechanical manometer with connection tubing, and a syringe. This is a single-use device.	IIa
6176	64183	Stereotactic radiotherapy breast positioning system flange	Стереотактик туяа эмчилгээний хөхний байрлал тогтоох системийн фланц	A self-adhesive, circular component of a stereotactic radiotherapy breast positioning system intended to hold together the system's inner/outer cup pair and/or enable attachment of the cup(s) to the breast, to facilitate reproducible positioning/immobilization during stereotactic radiotherapy (SRT) imaging and treatment. It is typically made of silicone. This is a single-use device.	IIa
6177	64197	Infusion pump medication reservoir set	Судсаар хийх шахуургын эмийн сангийн багц	A receptacle and related attachments intended to be connected to an infusion pump and to function only as a reservoir for the infused medication/fluid; it does not include a mechanism by which to regulate flow (e.g., check valve, roller clamp). It typically consists of synthetic polymer bag, connection tubing, and an adaptor/connector for attachment to a general-purpose infusion pump. This is a single-use device.	IIa
6178	64222	Haematological concentrate/haemostatic agent applicator cannula, open-surgery	Гематологийн баяжмал/цус тогтоогч түрхэгч суваг, нээлттэй мэс засал	A flexible or rigid tube intended to be used during an open surgical procedure for the administration of a haematological concentrate and/or haemostatic agent (e.g., thrombin, platelet concentrate, polysaccharide) to a bleeding surgical site, typically to facilitate haemostasis and healing, in conjunction with an applicator such as a syringe/plunger [not included]. It may have a single channel, to administer one product, or dual channels for co-administration of two different agents simultaneously; a channel for connection to a gas pump for spraying may also be incorporated. This is a single-use device.	IIa

6179	64223	Irreversible electroporation system bronchoscopic catheter	Бронхоскопийн катетерийн эргэлт буцалтгүй электропорацийн систем	A sterile, flexible tube with an electrode array its distal end designed to be used as part of an irreversible electroporation system to apply a series of microsecond electrical pulses to ablate tissues within the airways (i.e., mucosa, bronchial endothelium) through irreversible electroporation, typically to treat chronic bronchitis. It is designed to be advanced through the working channel of a bronchoscope to the treatment site. This is a single-use device.	IIa
6180	64238	Vitreous humour replacement medium rinsing solution	Шилэн шингэнийг орлуулах дунд зэргийн зайлах уусмал	A liquid substance (e.g., a semifluorinated alkane) intended for intraoperative use as a transient medium [rinsing solution] to remove vitreous humour replacement medium residues (e.g., silicone oil residues) from the vitreous chamber after long-term retinal tamponade; it may in addition be intended to be used as a cleaning medium for an intraocular lens [IOL] following tamponade. It is intended to be injected into the interior of the eye, and may be supplied in a prefilled syringe or other container. This is a single-use device.	IIa
6181	64257	Surgical instrument irrigation channel	Мэс заслын багажийн усалгааны суваг	A length of invasive flexible or semi-flexible tube designed to be attached to a surgical instrument (e.g., surgical stapler) to direct irrigation fluids to the surgical site; it may in addition be intended to allow for introduction of air to facilitate procedures such as staple line leak testing, however it is not intended for medical gas insufflation or suction. It is intended to be used in combination with devices that do not have an integrated irrigation channel. This is a single-use device.	IIa
6182	64259	Ophthalmic fibreoptic light instrument orbital-depression tip	Нүдний шилэн кабелийн гэрлийн хэрэгсэл тойрог замын-хотгорын үзүүр	A small transparent device intended to be placed over the traumatic tip of an ophthalmic fibreoptic light instrument to allow the instrument to be used as an illuminating orbital depressor for: 1) extra-orbital displacement of the sclera; and 2) transscleral illumination, to facilitate examination during posterior segment surgery. It is a small cap-like device made from synthetic polymer materials. This is a single-use device.	IIa

6183	64261	Ultrasonic-degassing water bath catheter holder	Хэт авианы хийгүйжүүлэх усан ванны катетер эзэмшигч	degassing water bath to submerge a catheter under the waterline of the bath during ultrasonic degassing of the catheter. It is typically attached to the water bath and may incorporate a hole(s) and/or slot(s) for the placement/insertion of the catheter. This is a single-use device.	IIa
6184	64266	Intermittent urethral drainage catheter, non-antimicrobial, single-use	Шээсний сувгийн ус зайлуулах катетер, нянгийн эсрэг бус, нэг удаагийн хэрэглээ	A flexible or rigid tube designed for a single insertion into the urethra, typically by the user (i.e., self-applied), to the urinary bladder to provide urine drainage, typically for an individual who is physiologically incapable of voiding. The device is typically pre-lubricated or coated with/made of materials that facilitate easy insertion and removal [e.g., polytetrafluoroethylene (PTFT) - Teflon, or glass] and is disposed of after use; it does not include an antimicrobial agent(s). The device may be male or female dedicated. This is a single-use device.	IIa
6185	64279	Multiple-pronged submucosal injection needle	Олон талт салст бүрхүүлийн тарилгын зүү	An instrument in the form of a needle with multiple sharp prongs intended to be used in conjunction with a syringe to administer a multiple-site injection into the submucosal layer of tissue, typically of anatomical structures with lumens. It includes a retractable proximal handle to manually deploy and position the needle in the target tissue, and is often used to inject substances (e.g., cell therapy preparations) into urethral tissues [e.g., mid-urethral tissue, external urethral sphincter], typically for treating female stress urinary incontinence (SUI). This is a single-use device.	IIa
6186	64282	Epiduroscopic catheter	Эпидуроскопийн катетер	A flexible tube with endoscopic capabilities intended for the visual examination and treatment of intractable back and leg pain (e.g., chronic lumbago or sciatica) and typically used to facilitate and/or perform perfusion or wash in the epidural space, dissect epidural adhesions, or deliver medications. It is percutaneously inserted (e.g., via a transsacral or transforaminal approach) into the epidural space whereby anatomical images are transmitted to the user by a video system with a digital image sensor at the distal end of the catheter and the images showing on a monitor. This is a single-use device.	IIa

6187	64292	Paranasal sinus irrigation/aspiration cannula	Хамрын синусын усалгаа/сорох суваг	An atraumatic, non-surgically invasive, hand-operated, single-lumen, rigid or semi-rigid tube designed to be introduced into the sinus cavities, through the nostrils, to function as a conduit for irrigation and aspiration (i.e., capable of both functions) of the sinus cavities during an ENT procedure, typically for clearance. The device may incorporate a handle with a side valve(s)/hole(s) for the control of irrigation/aspiration, and may be provided with a stylet, sheath, and/or connection tubing. This is a reusable device.	IIa
6188	64302	Periocular/lacrimal retractor, hand-held, single-use	Перикуляр / лакрималь татагч, гар барих, нэг удаагийн хэрэглээ	A hand-held, non-self-retaining, ophthalmic surgical instrument intended to be used to separate periocular tissues and/or draw aside the margins of a periocular surgical wound during an ophthalmic intervention (e.g., eyelid retraction, lacrimal sac access). The instrument is typically designed with a shaped/hooked blade or flat plate (e.g., eyelid plate) with a handle/holding portion, and is usually made of metal. This is a single-use device.	IIa
6189	64328	Side-notch biopsy gun needle	Хажуу талын биопсийн буу зүү	An invasive tubular surgical instrument designed to be connected to a biopsy gun handpiece (not included) for the automatic extraction of a small tissue sample from an anatomical structure (a biopsy), while causing minimal surrounding tissue damage, for tissue pathological examination/testing. It is a percutaneously-inserted needle with a side-notch cutter at the distal end which when activated causes a sharp, sliding cannula to slice a segment of tissue. It is typically used to obtain samples of soft tissue from the kidneys, prostate, pancreas, liver, and breast, often performed under image guidance. This is a single-use device.	IIa

6190	64338	Multiparameter physiologic analysis workstation	Олон параметрт физиологийн шинжилгээний ажлын станц	A computerized unit intended to be used with a variety of noninvasive sensors (not included) for the non-continuous measurement of a variety of cardiovascular and pulmonary parameters [e.g., blood pressure, electrocardiography (ECG), SpO2, lung volume, airway resistance]; it might also be intended for additional physiologic analysis [e.g., electromyography (EMG), galvanic skin response (GSR)]. It includes sensor inputs, controls (e.g., touchscreen) and is intended to allow viewing, sharing and storage of the data; it is neither intended for continuous monitoring nor stress exercise monitoring.	IIa
6191	64359	Flexible endoscopic ultrasound imaging transducer	Уян дурангийн хэт авианы дүрс хувиргагч	A flexible, ultrasound imaging transducer assembly designed to be inserted through the working channel of an appropriate flexible endoscope and positioned within the gastrointestinal, respiratory or urinary tract (i.e., application is not specific to any particular anatomy) to convert electric voltages into an ultrasound beam and transmit a signal/data to another device for display of an anatomical image. This is a reusable device.	IIa
6192	64389	Ultrasound-guided intrauterine radio-frequency ablation system intrauterine ultrasound transducer, reusable	Хэт авианы удирдлагатай умайн доторх радио давтамжийн абляцийн систем Умайн хэт авианы хувиргагч, дахин ашиглах боломжтой	A component of an ultrasound-guided intrauterine radio-frequency (RF) ablation system designed to convert electric voltages into an ultrasound beam to produce intrauterine ultrasound images used to monitor/guide electrosurgical procedures. It is typically used as part of a dedicated handpiece and is inserted transcervically into the uterus where it is intended to be manually manoeuvred to steer/focus the ultrasound beam for visualization of uterine pathology (e.g., fibroids). This is a reusable device intended to be sterilized prior to use.	IIa
6193	64396	Intracorporal ultrasound transducer contouring attachment	Бие доторх хэт авианы хувиргагч контурын хавсралт	A non-surgical invasive device intended to be attached/fitted within a port/notch of a parent rectal/vaginal ultrasound imaging transducer solely for space-filling purposes, such that the parent instrument maintains a smooth contoured surface, typically for patient comfort. It is intended to replace a functional attachment (e.g., biopsy needle guide) when not in use. It may be referred to as a dummy attachment. This is a reusable device.	IIa

6194	64401	Robotic surgical ligation clip applier	Робот мэс заслын хавчаар түрхэгч	A surgical device intended to be used in conjunction with a robotic surgical system to apply small atraumatic clips (not included) for the ligation of blood vessels, or similar tubular anatomy, mainly to prevent and/or stop bleeding (i.e., haemostasis) during a robotic endoscopic (e.g., laparoscopic) procedure. It may also be used to apply small clamps (e.g., bulldog type) to tissues, however it is not intended to apply an aneurysm clip. The device is typically a metallic instrument with flat, curved ends to hold and deliver the clips (e.g., forceps-like) and a proximal housing intended to be connected directly to an arm of the robotic surgical system. This is a reusable device.	IIa
6195	64403	Root canal irrigation blunt needle	Үндэс сувгийн усалгааны мохоо зүү	A slender, hollow, tubular, metal instrument with a blunt tip designed specifically for irrigation of the root canal of a tooth during an endodontic procedure. Sometimes referred to as a root canal irrigation cannula, it is typically attached to a dental syringe (not included) filled with a root canal cleaning solution. It might be bent or straight and might have either a side vented tip or a blunt open-ended tip. This is a single-use device.	IIa
6196	64421	Robotic surgical needle holder, reusable	Робот мэс заслын зүү эзэмшигч, дахин ашиглах боломжтой	A surgical device intended to be used in conjunction with a robotic surgical system, to grasp a suture needle when pushing/pulling the needle and attached suture through tissue for suturing during a robotic endoscopic (e.g., laparoscopic) procedure. It has a long slender shaft with a distal forceps-like gripping mechanism and a proximal housing intended to be connected directly to an arm of the robotic surgical system. This is a reusable device.	IIa

6197	64425	Robotic surgical irrigation/aspiration cannula, reusable	Робот мэс заслын усалгаа/сорох суваг, дахин ашиглах боломжтой	An atraumatic, invasive tube intended to be connected directly to the arm of a robotic surgical system and designed as a conduit to allow irrigation and aspiration (i.e., capable of both functions) of body cavities/wounds during a robotic surgical (e.g., laparoscopic) procedure, typically to facilitate observation; it may additionally be used for tissue manipulation. It is typically a long, slim, rigid tube with a proximal housing that connects to an arm of the robotic surgical system; it may include connection tubing and additional tubing set components (e.g., clamps, filters, connectors). It is not designed to administer parenteral fluids or drugs. This is a reusable device.	IIa
6198	64461	Enteral feeding noninvasive-component set	Энтерал тэжээлийн инвазив бус бүрэлдэхүүн хэсэг	clamps, and bags/bottles intended to be used to create the noninvasive (i.e., fully external) portion of an enteral feeding device assembly; it is not intended for intravenous (IV) administration. This is a single-use device.	IIa
6199	64546	Ultrasonic biopsy gun system transducer	Хэт авианы биопсийн бууны системийн хувиргагч	system designed to convert electrical signals into ultrasonic oscillations, to vibrate a connected biopsy needle (not included), to: 1) reduce the force required for tissue penetration with the needle; and 2) allow for needle visualization using	IIa
6200	64565	Pericardioscopic access cannula	Перикардиоскопийн суваг	A rigid, single-lumen, surgical instrument intended to be percutaneously inserted through the chest and through the pericardial cavity to facilitate the introduction of surgical instruments as part of a minimally-invasive cardiac procedure (e.g., epicardial ablation). It is intended for subxiphoid or transdiaphragmatic access, and once in place is intended to remain in position for the duration of the procedure. It may include a trocar blade intended to assist introduction. This is a single-use device.	IIa

6201	64585	Cardiopulmonary bypass system heat exchanger, single-use	Зүрхний уушигны эргэлтийн системийн дулаан солилцуур, нэг удаагийн хэрэглээ	A device consisting of a heat exchanging system intended to be used in extracorporeal circulation to warm or cool the blood or perfusion fluid flowing through the device for the purposes of cardiopulmonary bypass intervention or treatment. This device will typically be a module of a cardiopulmonary bypass system whereby it receives thermal transfer fluid at a specific temperature from a system heating/cooling unit. This is a single-use device.	IIa
6202	64586	Cardiopulmonary bypass system thermal transfer fluid	Зүрхний уушигны эргэлтийн системийн дулаан дамжуулах шингэн	A dedicated solution intended to be heated or cooled to a specific temperature by a cardiopulmonary bypass system heating/cooling unit, to heat or cool a patient's body by extracorporeal heat exchange with the patient's perfused blood during a cardiopulmonary bypass procedure. It is typically pumped to a heat exchanger whereby thermal transfer occurs across a membrane/element; the solution has no direct contact with the patient’s blood. This is a reusable device.	IIa
6203	64599	Laparoscopic hysterectomy vaginal occluder	Үтрээний бөглөрөлтийг дурангийн гистерэктоми хийх	A semi-soft device designed to be inserted into the vagina to maintain pneumoperitoneum during removal of the uterus during laparoscopic hysterectomy. It is in the form of a cylinder with ridges and is made of synthetic polymer materials. This is a single-use device.	IIa
6204	64605	Excisional biopsy tissue orientation clip	Зүссэн биопсийн эдийг чиглүүлэх клип	A small, polymer, labelled clip intended to be attached to a piece of tissue resulting from an excisional biopsy (e.g., lumpectomy) to indicate the in situ anatomical orientation (anterior, posterior, inferior, superior, medial, lateral) of the specimen during its radiological examination. It is typically available as a set of six (one for each anatomical direction of the specimen). This is a single-use device.	IIa

6205	64617	Dental abrasive disk, single-use	Шүдний зүлгүүрийн диск, нэг удаагийн	A dental instrument consisting of a circular flat or slightly conical sheet, which may carry or contain an abrasive, intended to perform a circular and/or oscillatory motion for polishing and finishing a cavity preparation and/or for cutting or polishing dental restorations (e.g., dentures, fillings, crowns). It is designed to be fixed at its centre to a laboratory mandrel or lathe, and/or intended to be used with a dental power tool handpiece (e.g., straight or contra-angle). This is a single-use device.	IIa
6206	64627	Dental implant holding endpiece, reusable	Шүдний суулгац барих төгсгөл хэсэг, дахин ашиглах боломжтой	A device intended to hold a dental implant (e.g., orthodontic implant screw) at its distal end during the application of the implant to the patient's oral cavity. It is typically a small metal shaft with an opening at its distal end designed to be mounted onto the distal end of a manual screwdriver or power tool whereby rotation is applied to introduce the implant into a surgical cavity. This is a reusable device.	IIa
6207	64631	Endoscopic microwave ablation probe/needle	Дурангийн бичил долгионы датчик/зүү	A flexible, invasive, hand-held endoscopic device assembly intended to deliver microwave energy to tissues for coagulation, whilst allowing injection of a solution (e.g., vasoconstrictive agents) primarily to help control/stop serious bleeds (haemostasis) during endoscopic surgery. It includes a microwave antenna, a port with a distal needle, and proximal handpiece with controls for needle retraction. This is a single-use device.	IIa
6208	64659	Electromagnetic endoscope tracking system reference transmitter, internal	Цахилгаан соронзон дурангийн хяналтын системийн лавлагаа дамжуулагч, дотоод	A long, flexible, invasive component of an electromagnetic (EM) endoscope tracking system intended for insertion into one of the channels (e.g., biopsy channel) of an appropriate in situ endoscope, and designed to emit EM pulses for locating/tracking the endoscope. It is intended to be used with endoscopes which do not have integrated EM pulse-generating tracking technology. The EM field/pulses generated by this device are received by external sensors. This is a reusable device.	IIa

6209	64660	Gastrointestinal catheter/endoscope tracking system sensor, bedside	Ходоод гэдэсний катетер/дурангийн хяналтын системийн мэдрэгч, орны дэргэд	An external, electrically-powered component of a gastrointestinal catheter/endoscope tracking system designed to receive and process electromagnetic (EM) field data produced by an appropriate catheter/endoscope in situ for real-time visualization of the catheter/endoscope position within the gastrointestinal tract. It is typically a flat panel designed to be mounted next to the patient to transcutaneously receive the specific EM pulses generated by the catheter/endoscope and transmit the data to an appropriate processing unit/monitor (not included).	IIa
6210	64680	Electromagnetic endoscope tracking system reference transmitter, external, body-surface	Цахилгаан соронзон дурангийн хяналтын системийн лавлагаа дамжуулагч, гадаад, биеийн гадаргуу	An external component of an electromagnetic (EM) endoscope tracking system designed to emit EM pulses for spatial referencing of an appropriate EM pulse-transmitting endoscope in situ. It is intended to be attached to, or held next to, the patient; the system sensor (not included) simultaneously receives signals from both the endoscope and the reference transmitter for spatial referencing. This is a reusable device.	IIa
6211	64694	Pneumatic dental scaling/debridement system handpiece tip, periodontal, single-use	Шүдний пневматик масштабтай/цэвэршүүлэгч системийн гарны үзүүр, шүдний шүдний, нэг удаагийн	A removable endpiece intended to be attached to a pneumatic dental scaling/debridement system handpiece for the application of sonic vibrational energy (e.g., at a frequency of 6 kHz) to fragment and dislodge accretions or substances [e.g., dentine, enamel, plaque, calculus] from tooth and implant surfaces during dental cleaning/periodontal procedures (e.g., stripping, finishing); it is not intended for endodontic use. It is available in a variety of designs and may also be used for the removal of orthodontic cement. This is a single-use device.	IIa

6212	64701	Male intraurethral catheter/valve	Эрэгтэй шээсний судсаар катетер/хавхлага	A device that primarily consists of an internal urethral catheter with an incorporated magnetically-controlled valve designed to manage urinary continence. The catheter is fully inserted into the urethra/bladder using a dedicated insertion/removal tool and is stabilized with compression/expansion anchoring components; valve opening/closing to intermittently void urine on demand is controlled by an external magnet (e.g., passive or electrically-powered) which might be included with the device. It is intended to be managed by the patient/layperson at home. This is a single-patient device intended to be left in situ short-term (up to 30 days) before being discarded [single-use] and replaced.	IIa
6213	64707	Wound therapy autologous blood clot preparation kit	Шархыг эмчлэх аутологийн цусны бүлэгнэл бэлтгэх иж бүрдэл	A collection of devices intended to be used at the point-of-care to draw blood from a patient and produce an autologous whole blood clot tissue mass (gel-like) for temporary topical application to an exuding skin wound (e.g., diabetic or pressure ulcer, surgical wound) to promote healing. The kit includes devices for venous blood harvesting (e.g., needles, tourniquet, gauze), in vitro blood clot preparation (e.g., coagulation tissue mould, coagulation-inducing reagent, syringe/needles), and clot application to the wound (e.g., dressings). This is a single-use device.	IIa
6214	64746	Inner ear catheter	Дотор чихний катетер	A long, flexible, polymer tube designed to be used for the delivery of fluid materials (e.g., therapeutic drugs) into the cochlea during inner ear surgery; it may also be intended for aspiration of fluid from the cochlea (e.g., perilymph removal). This is a single-use device.	IIa
6215	64765	Hot/cold therapy system	Халуун/хүйтэн эмчилгээний систем	An electrically-powered assembly of devices intended to apply controlled heat and cold therapy (including contrast therapy) to the surface of the body for a variety of physiotherapy applications such as treatment of musculoskeletal pain, inflammation reduction, and analgesia during intramuscular injection. It includes both a control unit and a handpiece with a heating/cooling endpiece; liquid coolant is used to provide the cooling effect.	IIa

6216	64786	Vascular catheter/cannula flush solution, non-anticoagulant, non-antimicrobial	Судасны катетер/суваг угаах уусмал, антикоагулянтгүй, нянгийн эсрэг үйлчилгээтэй биш	A solution (e.g., saline, sterile water) intended to flush the lumen of an in situ intravenous access device, typically a peripheral intravenous cannula or central venous catheter, to maintain patency; it does not include an anticoagulant or antimicrobial agent. Also known as lock solution, the device is available in a small container (e.g., bottle) or prefilled syringe. This is a single-use device.	IIa
6217	64794	Dental coating, tooth-desensitizing, professional	Шүдний өнгөлгөө, шүдний мэдрэмжгүйжүүлэх, мэргэжлийн	A substance intended exclusively for professional use in a healthcare facility and designed to be applied to exposed dentine (resulting from enamel erosion, breakage, tooth restoration procedure or gingival recession) to treat dental hypersensitivity caused by physical, chemical, and/or physiological agents (e.g., cold, heat, contact, acid, bruxism) by forming a barrier within the dentine tubules. It is a mixture of synthetic and/or plant-derived ingredients in fluid form (e.g., solution, gel, mouth-rinse, resin, varnish); it may also have antimicrobial properties or contain fluoride for caries prevention. After application, this device cannot be reused.	IIa
6218	64799	Knee stem prosthesis trial	Өвдөгний ишний протезийн туршилт	A copy of a final femur or tibia stem prosthesis designed to be used during knee arthroplasty (TKA) to determine the correct size of the final prosthesis. It is one of a set, or a set, of graduated sizes and is typically made of metal or polymer material. This is a reusable device intended to be sterilized prior to use.	IIa
6219	64802	Cochlear nerve function operative test electrode	Чихний дунгийн мэдрэлийн үйл ажиллагааг шалгах мэс заслын электрод	electrode intended for preoperative and/or intraoperative delivery of electrical stimulation to the cochlear (auditory) nerve to assess nerve function prior to implantation of a cochlear implant (CI). It may be used during open surgery or via transtympanic approach and conducts electrical current via connection to an external electrical pulse generator; it is used	IIa

6220	64888	Cardiopulmonary bypass system centrifugal pump/heat exchanger	Зүрхний уушигны эргэлтийн систем төвөөс зугтах насос/дулаан солилцуур	A component of a non-roller type cardiopulmonary bypass system intended to: 1) circulate blood through the system's extracorporeal circuit, via a centrifugal force mechanism, for gas exchange and reinfusion; and 2) warm or cool the blood flowing through the device, during a cardiopulmonary bypass procedure. It includes flow channels and a rotor driven by the system's drive unit, and receives thermal transfer fluid from the system's heating/cooling unit (neither unit included). This is a single-use device.	IIa
6221	64905	Intravenous catheter injection port guard	Судсаар хийх катетер тарилгын портын хамгаалалт	A box-like device intended to attach to and encompass the proximal end/port of an in situ intravenous catheter to create a protective cover for the prevention of unauthorized intravenous access and/or tampering by the patient or other non-healthcare provider. It typically consists of a plastic box with a locking lid, which cannot be removed without being destroyed and providing tamper evidence. This is a single-use device.	IIa
6222	64913	Tracheostomy tube, reinforced, custom-made, reusable	Трахеостомийн хоолой, бэхжүүлсэн, захиалгаар хийсэн, дахин ашиглах боломжтой	An armoured, custom-made, hollow cylinder designed to be inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway. It is constructed with specific characteristics (e.g., size, shape, material) as prescribed by a healthcare provider for a specific patient, and is wire reinforced to prevent kinking during patient movement. It may be made of metal and/or plastic, include an inner cannula and be one of a variety of designs (e.g., cuffed, uncuffed, and/or fenestrated). It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-patient, reusable device after appropriate cleaning.	IIa

6223	64914	Tracheostomy tube, reinforced, custom-made, single-use	Трахеостомийн хоолой, хүчитгэсэн, захиалгаар хийсэн, нэг удаагийн	An armoured, custom-made, hollow cylinder designed to be inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway. It is constructed with specific characteristics (e.g., size, shape, material) as prescribed by a healthcare provider for a specific patient, and is wire reinforced to prevent kinking during patient movement. It may be constructed of metal or plastic, might include an inner cannula and may be one of a variety of designs (e.g., cuffed, uncuffed, and/or fenestrated). It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-use device.	IIa
6224	64917	Urethral catheterization inflation safety valve	Шээсний сувгийн катетержуулалтын инфляцийн аюулгүйн хавхлага	A pressure-release valve intended to connect between the inflation port of a urethral balloon catheter and an inflation syringe to prevent unintentional inflation of the balloon while in the urethra. Balloon fill-media fluid escaping from the valve is an indication that the catheter is not in the bladder as intended and should be repositioned. This is a single-use device.	IIa
6225	64928	Transocular electrical stimulation system, professional	Нүд дамнасан цахилгаан өдөөлтийн систем, мэргэжлийн	A collection of devices intended to produce and deliver a small electrical current, via noninvasive electrodes, to the eye, meibomian and lacrimal glands to treat a variety of ocular surface and eyelid pathological conditions caused by trauma, infection, inflammation, or other insults [e.g., dry eye, dysfunctional tear syndrome (DTS)]. It consists of an electrically-powered control unit, leads, and electrodes placed in front of the eyes. It is intended exclusively for professional use in a healthcare facility. The therapy may be referred to as transcorneal electrical stimulation (TES) or ocular neuromodulation. This is a reusable device.	IIa

6226	64943	Intravenous access site infiltration/extravasation monitoring system transceiver	Судсаар нэвтрэх талбайн нэвчилт/extravasation хяналтын системийн дамжуулагч	An electrically-powered component of an infiltration/extravasation monitoring system intended to receive and process the electrical signals acquired from the system's electronic sensor, and then transmit the signals to the monitor for display to enable detection of a fluid leak into surrounding tissues at the site of a peripheral intravenous (IV) infusion. This is a reusable device.	IIa
6227	64949	Steel dental bur, single-use	Ган шүдний шар, нэг удаагийн	A rotary cutting device made from high-grade carbon steel with the working end typically formed with cutting planes, e.g., spiralled flutes, and which is designed to fit into a dental handpiece that provides the rotation allowing the user to cut hard structures in the mouth, such as teeth or bone. It can also be used to cut hard metals, plastics, porcelains and similar materials intended for use in the fabrication of dental devices. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a single-use device.	IIa
6228	65026	Thrombectomy tubing set, non-electronic	Тромбектомийн гуурсан хоолойн багц, электрон бус	A collection of noninvasive tubing and associated non-powered components (typically connectors, clamps and spikes) designed to conduct fluids from a container (e.g., bag) to a thrombectomy catheter (not included) to assist with the intravascular disruption and removal of clotted blood (i.e., a thrombus or thromboembolus); it does not include invasive devices. This is a single-use device.	IIa
6229	65052	Electromagnetic endoscope tracking system image processing unit	Цахилгаан соронзон дурангийн хяналтын системийн дүрс боловсруулах нэгж	An electrically-powered component of an electromagnetic (EM) endoscope tracking system designed to process EM field data emitted/received by the system's transmitter/sensor for real-time visualization/navigation of an EM pulse-receiving endoscope in situ via an appropriate monitor. It is a hardware unit with controls; the endoscope, transmitter/sensor and monitor are not included.	IIa
6230	65053	Electromagnetic endoscope tracking system transmitter/sensor floor stand	Цахилгаан соронзон дурангийн хяналтын систем дамжуулагч/мэдрэгч шалны тавиур	A mobile component of an electromagnetic (EM) endoscope tracking system intended to be placed on the floor to mount, support, and facilitate positioning of the system's flat panel transmitter or sensor (not included). It typically consists of a vertical rack with wheels and/or an articulated arm.	IIa

6231	65074	Negative-pressure face tent	Сөрөг даралтын нүүрний майхан	A mask-like enclosure, with tubing for connection to a hospital suction system, designed to rest against the chin of a patient while remaining away from the face, and intended to create a negative pressure area near the patient's nose and mouth to suction exhaled air and reduce the dispersal of potentially infectious particulates into the local environment. It is typically used while treating patients with airborne or droplet-transmitted infectious diseases (e.g., COVID-19). This is a single-use device.	IIa
6232	65085	Cholangiography tubing set	Холангиографийн хоолойн иж бүрдэл	A collection of non-powered, noninvasive devices intended to be used during a cholangiography procedure [e.g., endoscopic retrograde cholangiopancreatography (ERCP)] to conduct fluids (typically contrast medium or saline) from a bag/bottle to a cholangiography catheter/needle (not included). It typically includes a syringe, tubing, connectors, clamps, and valves. This is a single-use device.	IIa
6233	65087	Bone-conduction hearing implant system implantation tool	Яс дамжуулагч сонсголын суулгац суулгах хэрэгсэл	A hand-held manual surgical instrument intended to assist with the implantation of the implantable component(s) of a bone-conduction hearing implant system (typically the magnet and/or vibration transmitter) into the temporal bone. It is typically in the form of a drill or pin; it may also have a component intended to sweep/scan (non-powered) the cranial bone surface to determine whether there is sufficient depth to place the implantable magnet. This is a reusable device.	IIa
6234	65089	Bone-conduction hearing implant system vibration transmission screw	Яс дамжуулах сонсголын суулгацын системийн чичиргээ дамжуулах шураг	A non-powered device in the form of a screw intended to be implanted into the temporal bone and connected to a bone-conduction hearing implant system implantable magnet or abutment (neither included), to transmit the vibrations generated by the external sound processor to the inner ear.	IIa

6235	65090	Bone-conduction hearing implant system vibration transmission plate	Яс дамжуулах сонсголын суулгацын системийн чичиргээ дамжуулах хавтан	A non-powered, implantable, magnetized device intended to be attached to the temporal bone and connected to a bone-conduction hearing implant system vibration transmission screw (not included), to: 1) assist with the transmission of the vibrations from the bone-conduction hearing system sound processor/vibrator (not included) to the inner ear; and 2) magnetically hold in place the sound processor/vibrator (against the skin on the side of the head). It is in the form of a metallic flat-disc. Disposable devices associated with implantation may be included.	IIa
6236	65099	Central venous catheter repair kit	Төв венийн катетер засварын хэрэгсэл	A collection of devices intended to repair an in situ central venous catheter by replacing the damaged external (proximal) portion of the catheter. It includes the replacement proximal section of the catheter and devices associated with the adhesion of this section to the catheter portion remaining in situ (e.g., adhesive material, needle, syringe, sleeve); a complete central venous catheter is not included. This is a single-use device.	IIa
6237	65103	Hysteroscopic/cystoscopic distention tubing set	Гистероскоп/цистоскопийн суналтын хоолойн багц	A collection of noninvasive, flexible, polymer tube segments with associated items (e.g., connectors, drainage bag, drape) intended to be used with an appropriate endoscope (hysteroscope, cystoscope) to manage the inflow and outflow of distension fluids during diagnostic and operative endoscopy of the uterine cavity and urinary bladder. This is a single-use device.	IIa
6238	65119	Vascular puncture haemostasis arm clamp/band, single-use	Судасны хатгалт гемостаз гарын хавчаар/боос, нэг удаагийн	A semi-flexible, adjustable, clamp or band/strap device designed for application over an arterial/venous/fistula needle-puncture site on a patient’s arm to provide uniform pressure and achieve haemostasis. Commonly used on haemodialysis patients, some types are referred to as fistula clamps. This is a single-use device.	IIa

6239	65125	Cryosurgical system temperature probe	Крио мэс заслын системийн температур мэдрэгч	A hand-held device intended to be used to monitor tissue temperature during a cryosurgical procedure, typically to measure the temperature in tissue adjacent to the ablated zone to assess extent of ablation and to limit ablation to protect local tissues. It is in the form of a needle-like probe with a temperature sensor and proximal handle with a cable for connecting to the cryosurgical system control unit. This is a single-use device.	IIa
6240	65127	Perineal cooler	Периналь хөргөгч	An absorbent device intended to cool the female perineum (the area between the vulva and the anus) by direct contact to provide pain relief and reduce inflammation after labour/childbirth. It is in the form of an absorbent pad with either: 1) an inbuilt pocket of chemicals that generate an endothermic chemical reaction when activated to reduce the temperature of the pad; or 2) an envelope filled with a thermally-retentive material (e.g., silicate-based gel) that can be precooled in a refrigerator/freezer. This is a single-use device.	IIa
6241	65188	Aerosol face mask, rebreathing, reusable	Аэрозоль нүүрний маск, дахин амьсгалах, дахин ашиглах боломжтой	A flexible, form-shaped device that is placed over the nose and mouth to deliver aerosolized particles/gases to a patient's airway. It is typically used in conjunction with a nebulizer or medicine chamber spacer for the delivery of medication in either a healthcare or home setting. It is made of high-grade resins or other materials to produce a soft, flexible mask that will create an airtight seal against the patient's face. It may include a headstrap and is available in a range of sizes. This is a reusable device.	IIa

6242	65195	Body temperature screening camera	Биеийн температурыг хэмжих камер	An electrically-powered portable camera designed to be placed in a stationary position to monitor passers-by using face detection and subsequent measurement of temperature on the forehead/face for screening purposes (e.g., to detect those with a fever). The device consists of a visible light camera for subject identification and an infrared camera for temperature measurement. It is connected to an off-the-shelf computer which runs dedicated application software.	IIa
6243	65196	General specimen collection kit	Сорьц цуглуулах ерөнхий иж бүрдэл	A collection of devices intended exclusively for professional use for the collection, and preservation and/or transport, of more than one type of clinical specimen (e.g., urine, faeces, sputum, mucous, vaginal secretions) derived from different body regions for laboratory analysis [e.g., nucleic acid technique (NAT), microbiological culture, histopathology]. The kit consists of a specimen sampling/collection tool(s) [e.g., swab, brush, spatula], and a covered receptacle with or without an additive/medium [e.g., preservation solution, microbiological medium (e.g., Amies, Stuart, viral transport/inactivation medium)]. This is a single-use device.	IIa
6244	65201	Neonatal indwelling urethral drainage catheter	Нярайн шээсний сувгийн ус зайлуулах катетер	A flexible tube intended to be inserted through the urethra and retained in the urinary bladder, or prostatic bed, of a neonatal or paediatric patient to function as an indwelling therapeutic device for urinary drainage and which may also be used to sample urine. It may have a bent tip (coude) and some types may be provided with a guidewire to facilitate insertion; it does not include an antimicrobial agent(s) or a balloon. It is intended to be introduced by a healthcare professional. This is a single-use device.	IIa

6245	65202	Indwelling urethral catheterization kit, neonatal	Шээсний сувгийн катетержуулалтын иж бүрдэл, нярайн	A collection of devices that includes an indwelling urethral catheter which does not incorporate a balloon, and devices associated with catheter introduction/function (e.g., gloves, lubricating gel, drapes), intended for urinary drainage and urine sampling from the bladder of a neonatal or paediatric patient. The catheter will be applied by trained staff and may be coated with an antibiotic to help prevent catheter-associated urinary tract infection (CAUTI). This is a single-use device.	IIa
6246	65203	IVF oocyte aspiration pump	IVF өндөгний сорох насос	An electrically-powered device, which may include noninvasive accessories, intended to generate negative pressure for aspiration of oocytes (eggs) from the ovarian follicles during the oocyte harvesting phase of an in vitro fertilization (IVF) procedure. The device may incorporate a pressure gauge/controls, and may include collection containers or tubing; it does not include patient contact devices (e.g., aspiration needle).	IIa
6247	65231	Peritoneal lavage catheter	Хэвлийн хөндийг угаах катетер	A flexible tube designed for percutaneous insertion into the peritoneal space to enable lavage through infusion and aspiration, typically of saline and/or medication to evaluate intraperitoneal bleeding. The catheter may include disposable devices dedicated to catheter introduction (e.g., insertion needle, guidewire). This is a single-use device.	IIa
6248	65232	Peritoneal lavage catheterization support kit	Хэвлийн хөндийг угаах катетержуулалтыг дэмжих хэрэгсэл	A collection of devices, that includes a local anaesthetic agent, intended to support catheterization of the peritoneal space to enable lavage. It includes the pharmaceutical (e.g., lidocaine) and devices utilized for the procedure (e.g., scalpel, syringe, drapes); it does not include the peritoneal lavage catheter. This is a single-use device.	IIa

6249	65247	Acetabulum prosthesis trial, custom-made	Ацетабулум протезийн туршилт, захиалгаар хийсэн	A custom-made copy of a final acetabular cup prosthesis designed to be used for trial reductions during hip arthroplasty to judge the correct size and position of the final acetabular prosthesis to be implanted. It is typically made of metal or polymer materials and is designed and constructed with specific characteristics (e.g., size, shape) as prescribed by a healthcare provider for a specified patient (e.g., using 3-D printing based on patient images). This is a single-use device.	IIa
6250	65265	Arthrodesis nail, distraction	Артродез хадаас, анхаарал сарниулах	A rod, capable of adjusting in length, designed to be inserted into the bones on both sides of a joint to fuse the joint (e.g. tibia and calcaneus for ankle arthrodesis) and to facilitate subsequent limb lengthening, in traumatic repair or reconstructive procedures. It consists of telescoping rods connected to the bone with dedicated locking screws, which have one or more integrated magnets that move in response to a noninvasive magnetic control device (not included) to adjust length. It is made of metal or other material (e.g., carbon fibre). This is a single-use device.	IIa
6251	65288	Magnetic resonance elastography acoustic driver	Соронзон резонансын эластографийн акустик драйвер	An assembly of devices, consisting of an electrically-powered pneumatic wave generator and a noninvasive vibration applicator, intended for use with a magnetic resonance imaging (MRI) system to provide a measure of tissue elasticity/stiffness. The generator is used outside the MRI scanner room and is connected by pneumatic tubing to the applicator, which is applied to the site of interest on the patient’s body while within the MRI scanner. The pneumatically-transferred vibrations are applied to the body and MRI images are taken to facilitate evaluation/diagnosis of the condition of tissues (e.g. liver, brain), including damage and tumours.	IIa

6252	65312	Cardiovascular catheter sheath	Зүрх судасны катетер бүрээс	A sterile, noninvasive, flexible sleeve intended to be used during cardiovascular catheterization (e.g., femoral, pulmonary) to cover and protect the exposed proximal end of a cardiovascular catheter to prevent contamination (extending the sterile field of the external catheter) and/or to contain a backflow of blood (e.g., during catheter introduction, repositioning or removal). It is typically transparent and includes appropriate connectors for distal attachment to the catheter introducer, and proximal attachment to the extracorporeal portion of the catheter. Neither the catheter nor introduction/procedural devices are included (i.e., not a set). This is a single-use device.	IIa
6253	65325	Endobronchial occluder	Endobronchial бөглөрөл	A solid, plug-like device intended to be implanted within and occlude a bronchus/bronchiole to restrict airflow into part of a lung, selectively removing its function, typically as treatment for bronchopleural fistulae, suture failure, haemoptysis and/or pneumothorax. It is in the form of a solid, blunt-ended cylinder made of synthetic polymer materials with outer projections for stabilization. This is a single-use device.	IIa
6254	65394	Tracheoesophageal speech valve guidewire	Гуурсан хоолойн ярианы хавхлагын хөтөч утас	A hand-held flexible wire intended to assist surgical placement of an indwelling tracheoesophageal speech valve into a tracheoesophageal fistula (puncture). It incorporates a distal connector onto which the speech valve is attached prior to guidewire advancement through a tracheostoma or endoscope; it may in addition be used for the transoral removal of a tracheoesophageal speech valve before introducing its replacement. This is a single-use device.	IIa
6255	65429	Subcutaneous local anaesthesia set, non-medicated	Арьсан доорх орон нутгийн мэдээ алдуулалтын багц, эмийн бус	A collection of devices intended for both subcutaneous administration of a local anaesthetic (not included) and to support the preparation of overlying skin prior to an invasive procedure (e.g., nerve block, catheterization, suturing). It includes a Luer-formatted syringe and patient needle(s), and procedural supportive devices (e.g., swabs, drapes and a pots). NRFit formatted syringes/needles and other specialized devices are not included. This is a single-use device.	IIa

6256	65471	Direct otoscope/ophthalmoscope handle	Шууд отоскоп/офтальмоскопын бариул	A hand-held electric component of a direct otoscope and/or ophthalmoscope intended to facilitate manipulation of, and supply electrical current to, the otoscope/ophthalmoscope head (not included). It typically includes a rechargeable battery (either incorporated or removable) with a power switch, and may include a battery charger. This is a reusable device.	IIa
6257	65476	Ophthalmic injector/illuminating catheter	Нүдний инжектор/гэрэлтүүлэгч катетер	A non-electric, hand-held, fibreoptic, device intended for controlled manual intraocular infusion of a fluid (e.g., viscoelastic substance), while facilitating illumination of the interior of the eye, during an ophthalmic surgical procedure (e.g., viscodilation of Schlemm's canal). It includes a very thin and flexible tube (microcatheter) with an incorporated fibreoptic bundle and a manual fluid injector; it is designed for connection to a light source (not included). This is a single-use device.	IIa
6258	65486	Carpal bone prosthesis trial	Бугуйн ясны протезийн туршилт	A copy of a final carpal bone prosthesis (e.g., carpal scaphoid, carpal lunate) designed to be used for trial reductions to help determine the correct size of the final prosthesis to be implanted. It is one of a set, or a set, of graduated sizes and is typically made of metal or polymer. This is a single-use device.	IIa
6259	65488	Tremor-suppression vibration ball	Чичиргээ дарах чичиргээний бөмбөг	An electrically-powered device in the form of a vibrating ball intended to be held in the hand of a patient with tremor (e.g., essential, Parkinsonian) to help temporarily suppress the tremor. It may include user controls to change vibration settings. This is a reusable device.	IIa
6260	65548	Tracheobronchial contrast medium catheter	Tracheobronchial тодосгогч бодисын катетер	A flexible tube designed to be introduced into the tracheobronchial tree for the injection of contrast medium. It typically consists of a single lumen and an irrigation port, and is introduced via the oral cavity with a flexible endoscope. This is a reusable device.	IIa

6261	65598	Cardiac occluder/interatrial shunt transcatheter introducer	Зүрхний бөглөрөл/тосгуур хоорондын шунт дамжуулагч	A hand-held, manual device designed for the transcatheter introduction of a cardiac occluder and/or interatrial shunt (not included). It comprises a handle with controls, a long flexible slender shaft, and a distal loading mechanism which typically includes a loading sleeve and grasping forceps. The implant is intended to be collapsed into the loading mechanism and the device introduced through a guide catheter typically to the cardiac septum, whereupon the implant can be deployed. This is a single-use device.	IIa
6262	65656	Renal denervation ultrasound system generator	Бөөрний мэдрэлийн хэт авиан системийн генератор	An electrically-powered component of an ultrasound renal denervation system intended to: 1) generate a high frequency electrical current for subsequent conversion to ultrasound energy by a system catheter (not included); and 2) control the flow of cooling solution (e.g., sterile water) intended to prevent arterial wall damage, during renal denervation (RDN).	IIa
6263	65657	Renal denervation ultrasound system catheter	Бөөрний мэдрэлийн хэт авианы системийн катетер	An electrically-powered, steerable, thin, flexible tube intended to be introduced percutaneously into the renal artery to emit ultrasound energy, with simultaneous arterial wall cooling to prevent arterial wall damage, for renal denervation (RDN). It includes a distal ultrasound transducer and balloon for the circulation of cooling fluids. This is a single-use device.	IIa
6264	65658	Renal denervation ultrasound system cooling solution flow chamber	Бөөрний мэдрэлийн хэт авиан системийн хөргөлтийн уусмалын урсгалын камер	A component of an ultrasound renal denervation system designed to facilitate system generator-controlled flow of cooling solution (e.g., sterile water) to the system catheter during renal denervation (RDN). It includes tubing, electronic sensors and syringes, and is intended to receive power from, and send signals to, the generator. The flow of cooling fluid to the catheter tip is intended to prevent arterial wall damage during ultrasound denervation. This is a single-use device.	IIa

6265	65675	Orthodontic habit prevention/breaking appliance, bonded	Шүдний гажиг заслын зуршлаас урьдчилан сэргийлэх/таслах хэрэгсэл, наасан	An orthodontic device intended to be bonded (fixed) to the teeth of a child to prevent or help break habits (typically finger sucking or tongue thrusting) that adversely affect the position of developing dentition. It is typically in the form of pins, a small sphere, or a circular/discoid structure held in the palate with wires and metal bands. This is a single-patient device intended to be used for the duration of treatment (single-use) before being discarded.	IIa
6266	65676	Orthodontic habit prevention/breaking appliance, self-removable	Шүдний гажиг заслын зуршлаас урьдчилан сэргийлэх, өөрөө салгах төхөөрөмж	An orthodontic device intended to be worn on the teeth of a child to prevent or help break habits (typically finger sucking or tongue thrusting) that adversely affect the position of developing dentition. It is typically in the form of pins, a small sphere, or a circular/discoid structure held in the palate with clasps, and that can be temporarily removed by the patient/layperson. This is a reusable device.	IIa
6267	65677	Orthodontic palate expander screw, bonded	Ортодонтын тагнай тэлэгч шураг, наасан	An orthodontic device intended to be used as part of a bonded palate expander to gradually spread the maxillary arch to create space for teeth alignment. It is in the form of a threaded rod with expandable pins of various lengths; it is intended to remain in the oral cavity for the duration of treatment (fixed), and may be periodically adjusted by an orthodontist to affect skeletal and/or dental changes. This is a single-patient device intended to be used for the duration of treatment (single-use) before being discarded.	IIa
6268	65678	Orthodontic palate expander screw, self-removable	Ортодонтийн тагнай тэлэгч шураг, өөрөө авагддаг	An orthodontic device intended to be used as part of a self-removable palate expander to gradually spread the maxillary arch to create space for teeth alignment. It is in the form of a threaded rod with expandable pins of various lengths; it is not fixed to the oral cavity so that it can be temporarily removed by the patient during the treatment period (e.g., for eating). This is a reusable device.	IIa

6269	65679	Orthodontic palate expander/teeth aligner, self-removable	Ортодонтийн тагнай тэлэгч/шүд тэгшлэгч, өөрөө авагддаг	An orthodontic device intended to gradually spread the maxillary arch and/or improve teeth alignment. It is typically in the form of either: 1) a segmented body separated by a palate expander screw; or 2) a spring-like mechanism with clasps and/or wires. It is not fixed to the oral cavity so that it can be temporarily removed and reapplied by the patient during the treatment period (e.g., for eating). This is a reusable device.	IIa
6270	65707	Tinnitus therapy auditory/translingual electrical stimulation system	Чихний шуугианыг эмчлэх сонсголын / хэл дамнасан цахилгаан өдөөх систем	An electrically-powered assembly of devices designed to treat tinnitus through bimodal neuromodulation of the brain, involving simultaneous application of electrical pulses to the tongue and delivery of specific sounds to the auditory system. It includes a system generator and a tongue applicator with integrated electrodes; it is intended to be used with headphones which might be included.	IIa
6271	65708	Tinnitus therapy translingual electrical stimulation electrode array	Чих шуугих эмчилгээ Хэл дамнасан цахилгаан өдөөгч электродын массив	A device designed to conduct electrical pulses from a system generator to the tongue as part of a bimodal neuromodulation therapy for tinnitus. It includes an electrode array and is intended to be placed in the mouth during therapy. This is a reusable device.	IIa
6272	65722	Cardiopulmonary bypass system filter, gas line	Зүрхний уушигны эргэлтийн системийн шүүлтүүр, хийн хоолой	A dedicated porous device intended to be fitted within a gas line of an extracorporeal circuit, during a cardiopulmonary bypass procedure, to trap and remove particulate matter; it is not designed to filter microbes. This is a single-use device.	IIa
6273	65723	Red/infrared light phototherapy unit	Улаан/хэт улаан туяаны гэрэл зургийн эмчилгээний хэсэг	An electrically-powered device designed to emit red light and infrared/near-infrared light for phototherapy primarily to accelerate healing of cutaneous/mucosal tissues and/or to treat musculoskeletal symptoms (e.g., pain, spasm, stiffness) through modification of cellular metabolism and/or improvement of blood flow. It may have various designs (e.g., hand-held, arched bar, flexible pad for adapting to body areas) and is intended for use in the home and clinical settings.	IIa

6274	65731	Physical therapy ultrasound system applicator, adhesive	Физик эмчилгээний хэт авианы системийн түрхэгч, цавуу	A component of a physical therapy ultrasound system that includes a transducer designed to convert electric voltages into ultrasound energy [e.g., frequencies greater than 20 kilohertz (kHz)] and directs this energy into body tissues; it is held in place on the skin by an adhesive patch typically for several hours. The localized thermal and nonthermal effects generated by the ultrasonic energy is associated with increased blood flow in the treated area and is intended to accelerate tissue repair and/or reduce pain. Disposable adhesive patches are included with the device. This is a reusable device.	IIa
6275	65738	Endodontic obturation material distribution endpiece, reusable	Эндодонт бөглөрөх материалын түгээлтийн төгсгөл хэсэг, дахин ашиглах боломжтой	A dental endpiece designed to be attached to a dental power tool handpiece to distribute root canal sealer/cement/paste evenly throughout the root canal system typically by applying the material in a lateral direction. It is a thin metal rod with a spiral (e.g., Lentulo spiral type), helicoidal, or circular design. This is a reusable device.	IIa
6276	65804	Orthodontic rod-based aligner	Ортодонтийн саваа дээр суурилсан тэгшлэгч	An orthodontic device which includes a rod(s) intended to be bonded to teeth to correct malocclusions (e.g., overbites); it is commonly known as Herbst appliance. The rod, also referred to as a piston or tube, is typically positioned with a metal band and/or bracket and incorporates a hinge-like mechanism to allow jaw opening/closing. This is a single-patient device intended to be used for the duration of treatment (single-use) before being discarded.	IIa
6277	65809	Percutaneous non-endoscopic instrument access cannula	Арьсан доорх дурангийн бус багажийн нэвтрэх суваг	A hollow slender tubular instrument designed for percutaneous insertion to provide access for instruments (e.g., biopsy needle) under radiological image guidance [e.g., ultrasound] during procedures relating to tissue lesions (e.g., biopsy, ablation). The cannula includes a sharp trocar blade/mandrel to assist introduction and is intended for soft tissue access, however it might additionally be intended for non-impactive bone access. It is not a dedicated bone access cannula and is not an endoscopic (laparoscopic, arthroscopic) access cannula. Some types include a guide to help percutaneous insertion (e.g., during transperineal prostate biopsy). This is a single-use device.	IIa

6278	65831	Wearable multiple vital physiological parameter monitor	Зүүж болох олон чухал физиологийн параметрүүдийг хянах	A portable assembly of electrically-powered devices intended to be worn by an ambulatory patient in a healthcare setting for intermittent assessment or continuous monitoring of several vital physiologic parameters [e.g., electrocardiogram (ECG), respiration rate, haemoglobin oxygen saturation (SpO2)] while allowing freedom of movement (e.g., in step-down care areas). It includes processing hardware to be used with dedicated software (that may be pre-installed); the sensors, probes, and/or electrodes are not included. It typically incorporates a monitoring screen and may allow communication with a stationary device (e.g., off-the shelf computer).	IIa
6279	65834	Wearable multiple vital physiological parameter monitoring system	Зүүж болох олон чухал физиологийн параметрүүдийг хянах систем	A portable assembly of electrically-powered devices intended to be worn by a patient in a healthcare or homecare setting for intermittent assessment or continuous monitoring, exclusively by a healthcare professional, of several vital physiologic parameters [e.g., electrocardiogram (ECG), noninvasive blood pressure (NIBP), pulse rate, haemoglobin oxygen saturation (SpO2), haematocrit]. It includes both physiological parameter sensors, probes, and/or electrodes (e.g., ECG electrodes, blood pressure cuff, skin patch) and processing hardware with dedicated software. It may include a monitoring screen or allow for remote communication with a smart device or central database.	IIa
6280	65855	Lung secretion sampling catheter	Уушигны шүүрлийн дээж авах катетер	A flexible tubular device designed to be introduced into a lung, via the upper airway and past the primary bronchus, to obtain a sample of lung mucus secretion by syringe suction for the diagnosis of lung infection (typically ventilator-associated pneumonia). The distal tip is shielded with a bioabsorbable polymer sheath designed to degrade following insertion and intended to protect the tip from microbial contamination as it passes through the airway to the sampling site. This is a single-use device.	IIa

6281	65870	Cellulite fibrous tether manual cutter	Целлюлитийн утаслаг гар аргаар таслагч	A hand-held manual surgical instrument intended to be used for the subdermal localization and mechanical transection of cellulite-tethering septal fibrous tissue, as a skin-contouring treatment to minimize the manifestation of cellulite. It consists of a handle with mechanical controls and a distal blade/hook designed to be inserted through a puncture in the skin surface, whereby it is manoeuvred to subcutaneously engage and cut (release) the septal fibrous tissue. This is a single-use device.	IIa
6282	65911	Portosystemic needle	Портосистемийн зүү	A sharp, bevel-edged, hollow tubular instrument intended to be introduced into the liver via the jugular vein to create an artificial passage between the hepatic and portal veins (through the liver parenchyma) as part of a transjugular intrahepatic portosystemic shunt (TIPS) procedure. It may include a handle at its proximal end or an obturator, however additional devices such as a catheter, introduction sheath, and implantable shunt are not included. This is a single-use device.	IIa
6283	66033	Endoscopic device drying tubing	Дурангийн төхөөрөмж хатаах хоолой	A length of flexible tube with connectors intended to channel air from an endoscope dryer to an endoscopic device (e.g., irrigation tubing or bottle) for drying after washing/disinfection. It is not intended to be used during a medical procedure. This is a reusable device.	IIa
6284	66089	Assisted reproduction humidification chamber	Туслах нөхөн үржихүйн чийгшүүлэх камер	A non-powered device intended to be fitted to an assisted reproduction incubator for the humidification of gases supplied to the incubation chamber. It includes an integrated water chamber in which water is heated by the incubator; it may include supportive accessories (e.g., funnel, filter, tubing). This is a single-use device.	IIa
6285	66137	Extracorporeal membrane oxygenation system heating/cooling tubing	Биеийн гаднах мембраны хүчилтөрөгчийн систем халаах / хөргөх хоолой	A length of flexible tube(s) intended to be used for the circulation of heated or cooled water between a heating/cooling unit and a heat exchanger, during extracorporeal membrane oxygenation (ECMO) [sometimes referred to as extracorporeal lung support (ECLS)]. It is typically hose-like tubing with appropriate connectors. This is a reusable device.	IIa

6286	66185	Knee femur prosthesis trial, single-use	Өвдөгний гуяны протезийн туршилт, нэг удаагийн хэрэглээ	A copy of a final femur prosthesis designed to be used during total knee arthroplasty (TKA) to determine the correct alignment, size, and fit of the final prosthesis. It is a one-piece device made of polymer material. This is a single-use device.	IIa
6287	66186	Knee tibia prosthesis trial, single-use	Өвдөгний шилбэний протезийн туршилт, нэг удаагийн хэрэглээ	A copy of a final tibia prosthesis designed to be used during total knee arthroplasty (TKA) to determine the correct alignment, size, and fit of the final prosthesis. It is a one-piece device made of polymer material. This is a single-use device.	IIa
6288	66206	Nasal oxygen cannula, mouth outlet	Хамрын хүчилтөрөгчийн суваг, амны гарц	A semi-rigid tube with nasal prongs and mouth-directed outlets intended for oxygen (O2) administration. Oxygen is directed to flow simultaneously into the nostrils superiorly and to the mouth inferiorly in case of oral breathing. The device is typically held in place with a headstrap. This is a single-use device.	IIa
6289	66246	Digit tourniquet, electric	Оронтой турник, цахилгаан	An electrically-powered device intended to be applied around a finger to facilitate the pooling of blood in the finger for lancet bloodletting to collect blood specimens for subsequent laboratory diagnostic testing. It incorporates a vibrating base plate to stimulate blood flow and a band to restrict venous return; it can be used in a healthcare setting or in the home. This is a single-use device.	IIa
6290	66270	Sclerotherapy dual injection/aspiration catheter	Sclerotherapy хос тарилга/сорох катетер	A flexible dual-lumen tube designed to be percutaneously introduced into an insufficient vein [commonly the greater saphenous vein (GSV)] to inject sclerosing solution and simultaneously aspirate blood, to shrink and close the varicose vein as part of an endovenous chemical ablation procedure. It is intended to be used with a dedicated injection/aspiration syringe which may be provided with the catheter. This is a single-use device.	IIa

6291	66273	Bone lever/elevator, single-use	Ясны хөшүүрэг/лифт, нэг удаагийн	A manual surgical instrument designed to lift, position, or pry up (elevate) bone, other anatomical structures, or surgical material/devices during an orthopaedic intervention. It is made of high-grade stainless steel and is available in a wide variety of sizes, designs, and blade shapes. It is typically a robust instrument with a blunted blade with no cutting edge at the distal end that can be pointed, rounded, flat, curved or hook shaped and a handle of various designs at the proximal end. Some types can have special functions, e.g., for angle joint operations or for luxation procedures. This is a single-use device.	IIa
6292	66342	Ophthalmic cryoanaesthesia handpiece tip	Нүдний криоанестези гар утасны үзүүр	A non-powered, patient-contact device intended to be attached to an ophthalmic cryoanaesthesia handpiece for the application of cold anaesthesia to the conjunctiva to reduce pain during an intravitreal injection. It includes a metal surface for thermal transfer between the handpiece cooler and the conjunctiva. This is a single-use device.	IIa
6293	66358	Ophthalmic diagnostic condensing lens antifog attachment	Нүдний оношилгооны конденсацын линз нь манангийн эсрэг хавсралт	A non-powered device intended to be attached to a diagnostic ophthalmic lens during patient examination to prevent lens fogging by shielding the lens from exhaled patient air, typically when the patient is wearing a face mask. It is in the form of a protruding shelf designed to be attached to the rim of the lens. This is a reusable device.	IIa
6294	66364	Dental prosthesis removal adhesive resin	Шүдний протез арилгах наалдамхай давирхай	An adherent dental material intended to be used by a dental professional to perform patient-assisted removal of a permanent or temporary cemented dental prosthesis (e.g., crown, bridge). It is typically in the form of a resin cube which, when moistened and bitten down upon, adheres to the prosthesis and the occlusal surface of opposing dentition, whereupon subsequent mouth opening by the patient detaches the prosthesis. This is a single-use device.	IIa
6295	66378	Humeral stem prosthesis trial, single-use	Хумерын ишний протезийн туршилт, нэг удаагийн хэрэглээ	A copy of a final humeral stem prosthesis designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is typically made of metal and/or synthetic polymer. This is a single-use device.	IIa

6296	66379	Reverse shoulder cup prosthesis trial, single-use	Урвуу мөрний аяга протезийн туршилт, нэг удаагийн хэрэглээ	A copy of a final reverse shoulder prosthesis cup designed to be used before primary or revision implant surgery to validate the proper size of the permanent prosthesis required by the patient and to ensure its proper orientation and positioning. It is intended to connect to a reverse shoulder prosthesis/trial prosthesis body and articulates with a reverse shoulder prosthesis/trial prosthesis head; it is typically made of metal and/or polymer. This is a single-use device.	IIa
6297	66381	Robotic surgical forceps, single-use	Робот мэс заслын хямсаа, нэг удаагийн хэрэглээ	A surgical device intended to be used in conjunction with a robotic surgical system to grasp tissue (typically atraumatically) or foreign bodies during a robotic endoscopic procedure. It is designed as a long shaft with a pair of scissors-like grasping tongs or claws at the distal end, and a proximal housing intended to be connected directly to an arm of the robotic surgical system; it is not an electrosurgical instrument. This is a single-use device.	IIa
6298	66382	Robotic surgical needle holder, single-use	Робот мэс заслын зүү эзэмшигч, нэг удаагийн	A surgical device intended to be used in conjunction with a robotic surgical system, to grasp a suture needle when pushing/pulling the needle and attached suture through tissue for suturing during a robotic endoscopic (e.g., laparoscopic) procedure. It has a long slender shaft with a distal forceps-like gripping mechanism and a proximal housing intended to be connected directly to an arm of the robotic surgical system. This is a single-use device.	IIa
6299	66399	Nasal carbon-dioxide-sampling cannula	Хамрын нүүрстөрөгчийн давхар ислийн дээж авах суваг	A semi-rigid tube with nasal prongs designed to be inserted into the nostrils of a patient, and held in place, to allow sampling of exhaled gas for carbon dioxide (CO_2) monitoring; it is not intended to supply oxygen or other medical gases to the patient. It may include attached gas sampling tubing. This is a single-use device.	IIa
6300	66421	Orthopaedic knee-balance analyser electrical cable/analogue-to-digital converter	Ортопедийн өвдөгний тэнцвэрийн анализатор цахилгаан кабель/аналог-тоон хувиргагч	A non-patient-contact electrical cord with integrated circuit board and software intended to interface between an electrically-powered orthopaedic knee-balance analyser and a computing device during a total knee arthroplasty (TKA) to: 1) transmit electrical power to the analyser; and 2) convert the analyser analogue data signal to digital for transmission to the computing device for display. This is a single-use device.	IIa

6301	66422	Orthopaedic knee-balance analyser, electrically-powered	Ортопедийн өвдөгний тэнцвэрийн анализатор, цахилгаанаар ажилладаг	An electrically-powered orthopaedic device intended for measurement of the forces within the knee joint during a total knee arthroplasty (TKA) to assist with further planning of the procedure. It is typically a hand-held device with prongs to push against the adjacent joint surfaces, with an integrated sensor for measuring the force applied and relaying the data to a disposable cable/converter (not included) for digital conversion and transmission to a computing device for display. This is a reusable device.	IIa
6302	66512	Scleral reinforcement surgery balloon catheter	Склерлыг бэхжүүлэх мэс заслын бөмбөлөг катетер	A flexible tube with an inflatable balloon at its distal end intended to be placed between the eyeball and the conjunctiva during scleral reinforcement surgery to treat retinal detachment. It is typically left in situ in ambulatory patients for a few days before removal. This is a single-use device.	IIa
6303	66589	Dental restoration/appliance gold electroplating solution	Шүдний нөхөн сэргээх/багах хэрэгслийн алтаар бүрэх уусмал	A solution containing gold (Au) particles intended to be used in the dental laboratory during an electroplating [electroforming] process to fabricate gold dental prostheses and restorations (e.g., crowns, bridges). An electrochemical reaction activator may be supplied with the solution. After application, this device cannot be reused.	IIa
6304	66591	Red-light phototherapy unit, home-use	Улаан гэрэлтэй гэрэл зургийн эмчилгээний хэсэг, гэрийн хэрэглээ	An electrically-powered, patient-worn device designed be used by a layperson in the home (may additionally be used by a healthcare professional in a clinical setting) to emit red light for phototherapy primarily to treat musculoskeletal symptoms (e.g., arthritis pain, spasm, stiffness) and increase muscle relaxation through localized modification of cellular metabolism and/or improvement of blood circulation. It is in the form of a wearable thin adhesive hydrogel patch with integrated light-emitting diodes (LEDs) designed to be applied to the affected area. This is a reusable device.	IIa

6305	66605	Patient fall-recovery chair, manual	Өвчтөнийг буух-дээш гарах зориулалттай сандал,гар ажиллагаатай	A manually-powered device designed to enable one person to lift an incapacitated or disabled patient safely and with minimal physical effort from a supine position on the floor (e.g., following a fall) to a seated position. Sometimes referred to as an emergency lifting chair, it consists of a seat with detachable legs and back supports, and a seatbelt, intended to be assembled beneath the patient like a scoop stretcher, prior to lifting them to a seated position using a manual mechanism (e.g., crank handle). It is intended for use in both the home and clinical setting.	IIa
6306	66609	Dental epoxy resin	Шүдний эпокси давирхай	A substance intended for professional use as a dental root canal sealant that consists of a chemical-curing epoxy resin material(s); it does not include any additional hardening fillers/components (i.e., not a composite resin). It may be provided as a powder and/or paste intended to be mixed prior to application; dedicated disposable devices associated with application may be included with the resin. After application, this device cannot be reused.	IIa
6307	66645	Ankle prosthesis trial, single-use	Шагайны протезийн туршилт, нэг удаагийн хэрэглээ	A copy of a final prosthesis designed to be used during ankle replacement surgery to determine the correct alignment, size, and fit of the final tibial, talar or bearing prosthesis component. It is one of a set, or a set, of graduated sizes and is typically made of synthetic polymer or metal material. This is a single-use device.	IIa
6308	66733	Polychloroprene surgical glove, powdered	Нунтагласан полихлоропрен мэс заслын бээлий	A device made of polychloroprene (neoprene) intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is covered with powder to facilitate donning/removal and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	IIa

6309	66738	Dental crown anvil	Шүдний титэм дөш	A dental laboratory device intended to be used for preforming (stamping) a metallic dental appliance fabrication material to shape it as a dental crown. It consists of a benchtop instrument with a base from where shafts extend, each having a distal end with an approximate shape of a tooth crown which serves as a mould.	IIa
6310	66788	Autotransfusion system aspiration/anticoagulation tubing set	Автотрансфузын системийн сорох/антикоагуляцийн хоолойн багц	A collection of flexible, noninvasive, double-lumen tubing and associated items (e.g., connector, clamp, spike) intended to both: 1) enable aspiration (suction) of blood from a patient to an appropriate container; and 2) deliver an anticoagulant solution to the aspirated blood, as part of an autotransfusion procedure. This is a single-use device.	IIa
6311	66833	Dental impression material vibration platform	Шүдний даралтын материалын чичиргээний платформ	An electrically-powered device with a vibrating surface intended to be used to remove entrapped air bubbles from dental impression materials through rapid movement during moulding box packing or fabrication of dental appliances.	IIa
6312	66999	Endodontic debridement/lavage system file	Эндодонт цэвэрлэх/угаах системийн файл	A hollow, mesh-like dental endpiece designed to be attached to a standard rotary or reciprocating dental power tool motorized handpiece, operated in conjunction with an endodontic debridement/lavage system, to debride and shape the root canal while simultaneously channelling irrigation solutions into the root canal. It is made of metal arranged as a flexible cannulated abrasive mesh. This is a single-use device.	IIa
6313	67008	Dental pulp devitalization material, arsenic-containing	Шүдний целлюлозыг идэвхгүйжүүлэх материал, хүнцэл агуулсан	A substance in the form of a paste containing arsenic intended to be applied to the exposed pulp chamber of a tooth/teeth to achieve pulp necrosis (e.g., in paediatric cases where pulp extirpation is not indicated). It typically contains an anaesthetic and/or antiseptic agent(s). After application, this device cannot be reused.	IIa
6314	67009	Dental pulp devitalization material, arsenic-free	Шүдний целлюлозыг сэргээх материал, хүнцэл агуулаагүй	A substance in the form of a paste without arsenic intended to be applied to the exposed pulp chamber of a tooth/teeth to achieve pulp necrosis (e.g., in paediatric cases where pulp extirpation is not indicated). It typically contains an anaesthetic and/or antiseptic agent(s). After application, this device cannot be reused.	IIa

6315	67041	Sinus aspiration cannula/trocar	Синусын сорох суваг/трокар	A rigid, single-lumen, surgical instrument (cannula) with trocar blade intended to access a sinus cavity (e.g., maxillary sinus) to facilitate suction/drainage; it is not intended for irrigation. Sometimes referred to as a Tilley Lichtwicz cannula and trocar, it is designed to puncture the sinus wall (e.g., inferior meatus) using the included trocar blade, which is subsequently withdrawn leaving the cannula in place. This is a single-use device.	IIa
6316	67045	Arterial tourniquet, manual, reusable	Артерийн чангалуур, гар ажиллагаатай, дахин ашиглах боломжтой	A device in the form of a band or strap intended to be wrapped and manually tightened around a patient's limb (arm or leg) to control/stop life-threatening (emergency) bleeding from an artery (e.g., in a military setting and/or high-risk work environment). It typically includes an adherent layer (e.g., Velcro) and/or a buckle mechanism for fastening/locking that allows adjustments to the degree of tightness. This is a reusable device.	IIa
6317	67046	Arterial tourniquet, manual, single-use	Артерийн чангалуур, гар ажиллагаатай, нэг удаагийн	A device in the form of a band or strap intended to be wrapped and manually tightened around a patient's limb (arm or leg) to control/stop life-threatening (emergency) bleeding from an artery (e.g., in a military setting and/or high-risk work environment). It typically includes an adherent layer (e.g., Velcro) and/or a buckle mechanism for fastening/locking that allows adjustments to the degree of tightness. This is a single-use device.	IIa
6318	67047	Venous tourniquet, reusable	Венийн чангалуур, дахин ашиглах боломжтой	A device in the form of a narrow strap intended to be wrapped and manually tightened typically around a patient's arm to control/stop blood flow during collection of blood from a vein; it may additionally be used with a pressure bandage to apply pressure to a wound. It typically includes an adherent layer (e.g., Velcro) and/or a buckle mechanism for fastening/locking that allows adjustments to the degree of tightness; it is not fastened via a rotating handle mechanism (i.e., not a windlass). This is a reusable device which might be intended for single-patient use.	IIa

6319	67048	Venous tourniquet, single-use	Венийн чангалуур, нэг удаагийн хэрэглээ	A device in the form of a narrow band or strap intended to be wrapped and manually tightened typically around a patient's arm to control/stop blood flow during collection of blood from a vein; it may additionally be used with a pressure bandage to apply pressure to a wound. It typically includes an adherent layer (e.g., Velcro) and/or a buckle mechanism for fastening/locking that allows adjustments to the degree of tightness; it is not fastened via a rotating handle mechanism (i.e., not a windlass). This is a single-use device.	IIa
6320	67050	Decorative dental varnish	Чимэглэлийн шүдний лак	A pigmented dental material intended to be used as a temporary/removable decorative agent to add colour and a pearlescent finish to the tooth surface. It typically contains pigment (e.g., titanium dioxide) and includes film-forming synthetic polymer material (e.g., hydroxyapatite) to re-mineralize and restore tooth enamel. It is available in various colours (e.g., white, yellow, blue, black) and might contain antimicrobial and/or antiseptic agents. After application, this device cannot be reused.	IIa
6321	67054	Gutta percha cutter	Гутта перча зүсэгч	An electrically-powered, hand-held device intended to be used to cut gutta percha pins inserted into the root canal of a tooth. It is typically a hand-held device with a thermoelectric wire (e.g., nickel-chromium alloy) at the distal end which delivers heat to cut the gutta percha. It might in addition provide the heat necessary to condense the gutta percha to seal the root canal.	IIa
6322	67061	Implantable prosthetic kinesiology recorder external transceiver	Суулгах протезийн кинезиологийн бичлэгийн гадаад дамжуулагч	An electrically-powered external unit intended to be used at home to wirelessly receive kinesiology/gait data (e.g., walking speed or distance) from an implantable prosthetic kinesiology recorder, and transmit the data to an off-the-shelf computerized device for processing/display; it is not intended for data processing. It is an electronic unit with an antenna.	IIa

6323	67084	Implantable electrical stimulation lead epidural tunneller	Суулгах боломжтой цахилгаан өдөөгч эпидураль туннеллер	A hand-held manual surgical instrument designed to create a tunnel (artificial passageway) in the epidural space of the spinal cord between an entry point (e.g. epidural needle) and the target stimulation site for the placement of a spinal cord electrical stimulation lead. It is a long, thin, semi-flexible rod with a rounded distal tip, and a handle at the proximal end to allow the surgeon to push through body tissues. It is intended to be inserted under fluoroscopic guidance. This is a single-use device.	IIa
6324	67089	Dental restorative material curing activator	Шүдний эдгэрэлтийн эдгэрэлтийг идэвхжүүлэгч	A dental, dual-cured, resin-based material intended to be mixed with a light-cured bonding agent prior to its application, to promote curing (bonding) between the bonding agent and a self- or dual-cured restorative material (e.g., cement, composite resin). After application, this device cannot be reused.	IIa
6325	67196	Male intraurethral catheter/valve external control magnet	Эрэгтэй шээсний судалтай катетер/хавхлагын гадна хяналтын соронз	A non-powered, noninvasive, external magnetic device designed to open/close the magnetically-controlled valve of an in situ male intraurethral catheter, for on demand urine voidance in the management of urinary continence. It is intended to be operated by a patient/layperson in the home. This is a reusable device.	IIa
6326	67214	Dental implant holding endpiece, single-use	Шүдний суулгац барих төгсгөл хэсэг, нэг удаагийн	A device intended to hold a dental implant (e.g., bone screw) at its distal end during the application of the implant to the patient’s oral cavity. It is typically a small shaft with an opening at its distal end designed to be mounted onto the distal end of a manual screwdriver or power tool whereby rotation is applied to introduce the implant into a surgical cavity. This is a single-use device.	IIa
6327	67228	Digital imaging phosphor plate, dental, extraoral	Дижитал дүрслэлийн фосфорын хавтан, шүдний, амны гаднах	A thin, photostimulable, extraoral, dental device intended to be placed in an appropriate light-shielding cassette (not included) and receive radiation by an extraoral dental x-ray system (typically a panoramic/cephalometric system) to record a radiation pattern of a patient’s teeth and/or jaws. Following exposure, it is designed for transfer in the cassette to a computed radiography (CR) scanner, to produce a digital image of the latent image formed on the plate. This is a reusable device.	IIa

6328	67229	Digital imaging phosphor plate, non-dental	Дижитал дүрслэлийн фосфорын хавтан, шүдний бус	A thin, photostimulable device intended to be placed in an appropriate light-shielding cassette (not included) and receive radiation by a diagnostic imaging x-ray system to record a radiation pattern of a patient's bone(s) and/or organ(s) during a non-dental procedure. Following exposure, it is designed to be transferred in the cassette to a computed radiography (CR) scanner to produce a digital image of the latent image formed on the device. It is also known as a photostimulable phosphor (PSP) screen or storage plate. This is a reusable device.	IIa
6329	67230	Digital imaging phosphor plate, dental, intraoral	Дижитал дүрслэлийн фосфорын хавтан, шүдний, амны хөндийн	A thin, photostimulable, dental device intended to be placed in an appropriate cover (not included), and subsequently introduced into the oral cavity and exposed to radiation by a diagnostic imaging x-ray system to record a radiation pattern of a patient's teeth and/or jaws. Following exposure, it is transferred, typically in a light-shielding container (not included), to a computed radiography scanner (CR) to produce a digital image of the latent image formed on the plate. This is a reusable device.	IIa
6330	67262	Rectoscope insufflation adaptor/valve	Ректоскопоор амьсгалах адаптер/хавхлага	A device in the form of a ring with a port and valve intended to be connected to the proximal end of a rectoscope to allow regulating the inflow of insufflation medical gas delivered via a tubing connected to the port/valve; it additionally allows fitting of a multi-channel valve/seal (not included) to the ring for the entry and/or exchange of endoscopic devices through the valve/seal. This is a reusable device.	IIa
6331	67263	Rectoscope multi-channel valve/seal	Ректоскопийн олон сувгийн хавхлага / лац	A device in the form of an elastic bulb that has multiple ports with valves intended to be fitted to the proximal end of a rectoscope to enable access and/or exchange of multiple endoscopic devices through its ports, while maintaining insufflation during an endoscopic procedure. This is a reusable device.	IIa
6332	67279	Laparoscopic access cannula instrument guide funnel	Дурангийн хандалтын сувгийн багажны хөтөч юүлүүр	A noninvasive device in the form of a funnel with a single lumen intended to be connected to the proximal end of a laparoscopic access cannula (not included) to facilitate smooth insertion of a laparoscopic instrument into the cannula. This is a reusable device.	IIa

6333	67390	Brain/neuromuscular intraoperative electrical stimulation system pulse generator	Тархи/мэдрэл булчингийн мэс заслын үед цахилгаан өдөөх системийн импульсийн генератор	An electrically-powered unit designed to generate pulsed electrical stimulus for transmission to the brain, nerves, and muscles (capable of use in the three regions), during a surgical procedure, to assist with the diagnosis of neurological diseases (e.g., to detect seizures) in conjunction with electroencephalography (EEG); it does not include monitoring functionality. It is intended to be used with appropriate electrodes (e.g., cortical, needle, skin surface), which are not included. It may be used in conjunction with dedicated software intended for installation on an off-the-shelf computer to allow display/adjustment of the settings.	IIa
6334	30194	Ammonia IVD, kit, ion-selective electrode (ISE)	Аммиак IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen, using an ion-selective electrode (ISE) method.	B
6335	30209	Urea IVD, kit, ion-selective electrode (ISE)	Мочевин IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen, using an ion-selective electrode (ISE) method. It is typically used as an indicator of kidney function and/or to differentiate between prerenal and postrenal azotemia.	B
6336	30210	Multiple blood gas analyte IVD, reagent	Олон тооны цусны хийн анализатор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of multiple blood gas analytes in a clinical specimen.	B
6337	30213	Multiple clinical chemistry enzyme IVD, control	Олон эмнэлзүйн химийн фермент IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	B

6338	30214	Multiple lipid analyte IVD, control	Олон тооны липидийн шинжилгээний IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple lipid analytes [e.g., total cholesterol, high-density lipoprotein (HDL), low-density lipoprotein (LDL)] to generate a lipid profile of a clinical specimen. Some types may also detect additional analytes (e.g., glucose, ketones, uric acid).	B
6339	30215	Total bilirubin IVD, control	Нийт билирубин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total bilirubin in a clinical specimen.	B
6340	30218	Multiple blood gas analyte IVD, control	Олон тооны цусны хийн анализатор IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the quantitative measurement of multiple blood gas analytes in a clinical specimen.	B
6341	30224	Lactate IVD, kit, rapid reduction/oxidation, clinical	Лактат IVD, иж бүрдэл, хурдан бууралт / исэлдэлт, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of lactate in a clinical specimen within a short period relative to standard laboratory testing procedures, using a rapid reduction/oxidation method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6342	30503	Multiple therapeutic drugs/drugs of abuse IVD, control	Олон тооны эмчилгээний эм / эм зүй бусаар хэрэглэх IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple therapeutic drugs and drugs of abuse in a clinical specimen.	B
6343	30504	Multiple human hormone IVD, calibrator	Хүний олон даавар IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple human hormones in a clinical specimen.	B
6344	30505	Plasma protein IVD, calibrator	Плазмын уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of plasma proteins in a clinical specimen.	B
6345	30506	Plasma protein IVD, control	Цусны сийвэнгийн уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of plasma proteins in a clinical specimen.	B

6346	30511	Total prostate specific antigen (tPSA) IVD, kit, rapid ICT, clinical	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6347	30514	Human placental lactogen (HPL) IVD, kit, rapid ICT, clinical	Хүний ихэсийн лактоген (HPL) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6348	30516	Amphetamine-specific IVD, kit, rapid ICT, clinical	Амфетамины өвөрмөц IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of a specific amphetamine in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6349	30517	Barbiturate IVD, kit, rapid ICT, clinical	Барбитурат IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of barbiturates in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

6350	30518	Benzodiazepine group IVD, kit, rapid ICT, clinical	Бензодиазепин бүлгийн IVD, иж бүрдэл, хурдан МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of benzodiazepine in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6351	30519	Cannabinoid/cannabinoid metabolite IVD, kit, rapid ICT, clinical	Каннабиноид/каннабиноид метаболит IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6352	30520	Cocaine/cocaine metabolite IVD, kit, rapid ICT, clinical	Кокаин/кокаины метаболит IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6353	30521	Methadone IVD, kit, rapid ICT, clinical	Метадон IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of methadone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

6354	30522	Opiate/opiate metabolite IVD, kit, rapid ICT, clinical	Опиат/опиатын метаболит IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of opiate and/or opiate metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6355	30523	Phencyclidine (PCP) IVD, kit, rapid ICT, clinical	Phencyclidin (PCP) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of phencyclidine (PCP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6356	30524	Tricyclic antidepressant IVD, kit, rapid ICT, clinical	Трициклик антидепрессант IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of tricyclic antidepressant drugs in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6357	31202	Monoamine oxidase (MAO) IVD, kit, enzyme immunoassay (EIA)	Моноамин оксидаза (MAO) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of monoamine oxidase (MAO) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6358	31449	Complement components C3/C3c IVD, control	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade components C3 and/or C3c in a clinical specimen.	B
6359	31461	Complement component C1q IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component C1q in a clinical specimen.	B

6360	31464	Alpha-2-AP-glycoprotein IVD, control	Альфа-2-АП-гликопротейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-2-AP-glycoprotein in a clinical specimen.	B
6361	31466	Complement component C1 inhibitor IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C1 дарангуйлагч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen.	B
6362	31468	Smooth muscle antibody IVD, control	Гөлгөр булчингийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to smooth muscle in a clinical specimen.	B
6363	31471	Complement components C4/C4c IVD, control	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade components C4 and/or C4c in a clinical specimen.	B
6364	31481	Beta-globulin IVD, control	Бета-глобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-globulins in a clinical specimen.	B
6365	31483	Alpha-globulin IVD, control	Альфа-глобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-globulins in a clinical specimen.	B
6366	31492	Carbonic anhydrase IVD, control	Нүүрстөрөгчийн ангидраз IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of carbonic anhydrase in a clinical specimen.	B
6367	31504	Inter-alpha trypsin inhibitor IVD, control	Альфа трипсин дарангуйлагч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of inter-alpha trypsin inhibitor in a clinical specimen.	B
6368	31505	Alpha-2-HS-glycoprotein (AHSG)/fetuin-A IVD, control	Альфа-2-HS-гликопротейн (AHSG)/фетуин-А IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-2-HS-glycoprotein (AHSG), also referred to as fetuin-A in a clinical specimen.	B
6369	31509	Alpha-2-glycoprotein IVD, control	Альфа-2-гликопротейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-2-glycoprotein in a clinical specimen.	B
6370	31523	Total lipoprotein IVD, control	Нийт липопротеины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total lipoprotein lipid in a clinical specimen.	B

6371	32145	Monoamine oxidase (MAO) IVD, kit, spectrophotometry	Моноамин оксидаза (MAO) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of monoamine oxidase (MAO) in a clinical specimen, using a spectrophotometry method.	B
6372	32246	Lipid peroxide IVD, kit, spectrophotometry	Липидийн хэт исэл IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipid peroxide in a clinical specimen, using a spectrophotometry method.	B
6373	32528	Lecithin-cholesterol acyltransferase (LCAT) IVD, reagent	Лецитин-холестерин ацилтрансфераза (LCAT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme lecithin-cholesterol acyltransferase (LCAT) in a clinical specimen.	B
6374	33023	Bromperidol therapeutic drug monitoring IVD, control	Bromperidol-ийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug bromperidol in a clinical specimen.	B
6375	33307	Vitamin A IVD, reagent	А аминдэм IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin A in a clinical specimen.	B
6376	33535	Bromperidol therapeutic drug monitoring IVD, calibrator	Bromperidol-ийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug bromperidol in a clinical specimen.	B
6377	33738	Leukocyte esterase IVD, kit, rapid colorimetric, clinical	Лейкоцитийн эстераза IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of leukocyte esterase in a clinical specimen within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6378	33784	Procainamide therapeutic drug monitoring IVD, control	Прокайнамид эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen.	B

6379	33819	Total human chorionic gonadotropin IVD, kit, rapid ICT, clinical	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid detection of pregnancy, or as a predictor of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome). It is not intended to be used for self-testing.	B
6380	33914	Alpha-1-acid glycoprotein (orosomucoid) IVD, control	Альфа-1 хүчлийн гликопротейн (оросомукоид) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-1-acid glycoprotein (orosomucoid) in a clinical specimen.	B
6381	34014	Adrenomedullin (ADM) IVD, kit, fluorescent immunoassay	Адреномедуллин (ADM) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of adrenomedullin (ADM) in a clinical specimen, using a fluorescent immunoassay method. It is typically used as a marker of endothelial function and/or to aid in the diagnosis and treatment of patients with sepsis or septic shock, acute heart failure, and cardiogenic shock.	B
6382	34015	Adrenomedullin (ADM) IVD, calibrator	Адреномедуллин (ADM) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of adrenomedullin (ADM) in a clinical specimen.	B
6383	34201	Ornithine carbamoyltransferase IVD, kit, spectrophotometry	Орнитин карбамойлтрансфераза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ornithine carbamoyltransferase in a clinical specimen, using a spectrophotometry method.	B
6384	34483	Ornithine carbamoyltransferase IVD, reagent	Орнитин карбамойлтрансфераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ornithine carbamoyltransferase in a clinical specimen.	B

6385	35716	Branched-chain amino acid IVD, calibrator	Салбарласан гинжин амин хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of branched-chain amino acid in a clinical specimen.	B
6386	35763	Pancreatic oncofetal antigen (POA) IVD, control	Нойр булчирхайн онкофетал антиген (POA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pancreatic oncofetal antigen (POA) in a clinical specimen.	B
6387	35933	Multiple blood gas analyte IVD, calibrator	Олон тооны цусны хийн анализатор IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the quantitative measurement of multiple blood gas analytes in a clinical specimen.	B
6388	35959	Branched-chain amino acids to tyrosine ratio (BTR) IVD, calibrator	Салаалсан гинжин амин хүчлүүдийн тирозины харьцаа (BTR) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used to determine the branched-chain amino acids to tyrosine ratio (BTR) in a clinical specimen.	B
6389	36101	Carbonic anhydrase IVD, kit, spectrophotometry	Нүүрстөрөгчийн ангидраз IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carbonic anhydrase in a clinical specimen, using a spectrophotometry method.	B
6390	37720	Haemopexin IVD, control	Гемопексин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of haemopexin in a clinical specimen.	B
6391	37721	Albumin IVD, control	Альбумин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of albumin in a clinical specimen.	B
6392	37762	Total immunoglobulin/gamma globulin IVD, control	Нийт иммуноглобулин/гамма глобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total immunoglobulins, also referred to as gamma globulins, in a clinical specimen.	B
6393	37763	Total immunoglobulin E (IgE total) IVD, control	Нийт иммуноглобулин E (IgE нийт) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen.	B

6394	38069	Pancreatic oncofetal antigen (POA) IVD, kit, enzyme immunoassay (EIA)	Нойр булчирхайн онкофетал антиген (POA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic oncofetal antigen (POA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6395	38120	Aprindine therapeutic drug monitoring IVD, kit, chemiluminescent assay	Априндины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen, using a chemiluminescent method.	B
6396	38170	5-Hydroxyindoleacetic acid (5HIAA) IVD, control	5-гидроксиндол цууны хүчил (5HIAA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B
6397	38171	5-Hydroxyindoleacetic acid (5HIAA) IVD, calibrator	5-гидроксиндол цууны хүчил (5HIAA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B
6398	38174	Carcinoembryonic antigen (CEA) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen.	B
6399	38177	Cytokeratin IVD, control	Цитокетин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen.	B
6400	38178	Cytokeratin IVD, calibrator	Cytokeratin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen.	B
6401	38180	Estrogen (oestrogen) receptor IVD, control	Эстроген (эстроген) рецептор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of estrogen (oestrogen) receptors in a clinical specimen.	B
6402	38181	Estrogen (oestrogen) receptor IVD, calibrator	Эстроген (эстроген) рецептор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of estrogen (oestrogen) receptors in a clinical specimen.	B

6403	38182	Free (unbound) prostate specific antigen (fPSA) IVD, control	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen.	B
6404	38183	Free (unbound) prostate specific antigen (fPSA) IVD, calibrator	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen.	B
6405	38186	Laminin IVD, control	Ламинин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of laminin in a clinical specimen.	B
6406	38187	Laminin IVD, calibrator	Ламинин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of laminin in a clinical specimen.	B
6407	38188	Mucin-like carcinoma-associated antigen (MCA) IVD, control	Муцинтэй төстэй хорт хавдартай холбоотой эсрэгтөрөгч (MCA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of mucin-like carcinoma-associated antigen (MCA) in a clinical specimen.	B
6408	38189	Mucin-like carcinoma-associated antigen (MCA) IVD, calibrator	Муцинтэй төстэй хорт хавдартай холбоотой антиген (MCA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of mucin-like carcinoma-associated antigen (MCA) in a clinical specimen.	B
6409	38190	Neuron-specific enolase (NSE) IVD, control	Нейроны өвөрмөц энолаза (NSE) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen.	B
6410	38191	Neuron-specific enolase (NSE) IVD, calibrator	Нейроны өвөрмөц энолаза (NSE) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen.	B

6411	38194	Oncogene protein p21(ras) IVD, control	Онкогений уураг p21(ras) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of oncogene protein p21 (ras) in a clinical specimen.	B
6412	38195	Oncogene protein p21(ras) IVD, calibrator	Онкогений уураг p21(ras) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of oncogene protein p21 (ras) in a clinical specimen.	B
6413	38198	Progesterone receptor IVD, control	Прогестерон рецептор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of progesterone receptors in a clinical specimen.	B
6414	38199	Progesterone receptor IVD, calibrator	Прогестерон рецептор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of progesterone receptors in a clinical specimen.	B
6415	38200	Squamous cell carcinoma antigen IVD, control	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen.	B
6416	38201	Squamous cell carcinoma antigen IVD, calibrator	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen.	B
6417	38202	Thymidine kinase IVD, control	Тимидин киназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thymidine kinase in a clinical specimen.	B
6418	38203	Thymidine kinase IVD, calibrator	Тимидин киназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thymidine kinase in a clinical specimen.	B
6419	38205	Tissue polypeptide antigen IVD, control	Эдийн полипептидийн эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tissue polypeptide antigen in a clinical specimen.	B

6420	38206	Tissue polypeptide antigen IVD, calibrator	Эдийн полипептидийн эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tissue polypeptide antigen in a clinical specimen.	B
6421	38207	Total prostate specific antigen (tPSA) IVD, control	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen.	B
6422	38208	Total prostate specific antigen (tPSA) IVD, calibrator	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen.	B
6423	38214	Beta-2-microglobulin IVD, control	Бета-2-микроглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen.	B
6424	38215	Beta-2-microglobulin IVD, calibrator	Бета-2-микроглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen.	B
6425	38219	Faecal occult blood IVD, calibrator	Өтгөний далд цус IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin).	B
6426	38220	Multiple tissue-associated protein/tumour marker IVD, control	Олон эд эстэй холбоотой уураг/хавдрын маркер IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple proteins or tumour markers associated with specific tissues in a clinical specimen.	B
6427	38221	Multiple tissue-associated protein/tumour marker IVD, calibrator	Олон эд эстэй холбоотой уураг/хавдрын маркер IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple proteins or tumour markers associated with specific tissues in a clinical specimen.	B

6428	38222	Cancer antigen 15-3 (CA15-3) IVD, control	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen.	B
6429	38223	Cancer antigen 15-3 (CA15-3) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen.	B
6430	38224	Cancer antigen 19-9 (CA19-9) IVD, control	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of gastrointestinal and pancreatic cancer antigen 19-9 (CA19-9) in a clinical specimen.	B
6431	38225	Cancer antigen 19-9 (CA19-9) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of gastrointestinal and pancreatic cancer antigen 19-9 (CA19-9) in a clinical specimen.	B
6432	38226	Cancer antigen 50 (CA50) IVD, control	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 50 (CA50) in a clinical specimen.	B
6433	38227	Cancer antigen 50 (CA50) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 50 (CA50) in a clinical specimen.	B
6434	38228	Cancer antigen 72-4 (CA72-4) IVD, control	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen.	B
6435	38229	Cancer antigen 72-4 (CA72-4) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen.	B

6436	38230	Cancer antigen 125 (CA125) IVD, control	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen.	B
6437	38231	Cancer antigen 125 (CA125) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen.	B
6438	38232	Cancer antigen 195 (CA195) IVD, control	Хорт хавдрын эсрэгтөрөгч 195 (CA195) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 195 (CA195) in a clinical specimen.	B
6439	38233	Cancer antigen 195 (CA195) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 195 (CA195) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 195 (CA195) in a clinical specimen.	B
6440	38234	Cancer antigen 242 (CA242) IVD, control	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 242 (CA242) in a clinical specimen.	B
6441	38235	Cancer antigen 242 (CA242) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 242 (CA242) in a clinical specimen.	B
6442	38236	Cancer antigen 549 (CA549) IVD, control	Хорт хавдрын эсрэгтөрөгч 549 (CA549) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 549 (CA549) in a clinical specimen.	B
6443	38237	Cancer antigen 549 (CA549) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 549 (CA549) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 549 (CA549) in a clinical specimen.	B
6444	38239	p53 tumour protein IVD, control	p53 хавдрын уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen.	B

6445	38240	p53 tumour protein IVD, calibrator	p53 хавдрын уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen.	B
6446	38242	1,25-Dihydroxy vitamin D3 IVD, calibrator	1,25-Dihydroxy витамин D3 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen.	B
6447	38243	1,25-Dihydroxy vitamin D3 IVD, control	1,25-Dihydroxy витамин D3 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen.	B
6448	38247	Luteinizing hormone (LH) IVD, control	Luteinizing гормон (LH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen.	B
6449	38248	Estradiol (oestradiol) (E2) IVD, control	Эстрадиол (эстрадиол) (E2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen.	B
6450	38249	Estradiol (oestradiol) (E2) IVD, calibrator	Эстрадиол (эстрадиол) (E2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen.	B
6451	38250	Total estriol (oestriol) IVD, control	Нийт эстриол (эстриол) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total estriol (oestriol), an estrogen (oestrogen) hormone, in a clinical specimen.	B
6452	38251	Total estriol (oestriol) IVD, calibrator	Нийт эстриол (эстриол) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total estriol (oestriol), an estrogen (oestrogen) hormone, in a clinical specimen.	B
6453	38252	Estrone (oestrone) IVD, control	Эстрон (эстрон) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone (oestrone) in a clinical specimen.	B

6454	38253	Estrone (oestrone) IVD, calibrator	Эстрон (эстрон) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone (oestrone) in a clinical specimen.	B
6455	38254	Follicle stimulating hormone (FSH) IVD, control	Фолликул өдөөгч даавар (FSH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen.	B
6456	38255	Follicle stimulating hormone (FSH) IVD, calibrator	Фолликул өдөөгч даавар (FSH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen.	B
6457	38256	Free estriol (oestriol) IVD, control	Чөлөөт эстриол (эстриол) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone free estriol (oestriol) in a clinical specimen.	B
6458	38257	Free estriol (oestriol) IVD, calibrator	Чөлөөт эстриол (эстриол) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone free estriol (oestriol) in a clinical specimen.	B
6459	38258	Free thyroxine (FT4) IVD, control	Чөлөөт тироксин (FT4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen.	B
6460	38259	Free thyroxine (FT4) IVD, calibrator	Чөлөөт тироксин (FT4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen.	B
6461	38261	Free triiodothyronine (FT3) IVD, calibrator	Үнэгүй триодотиронин (FT3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen.	B
6462	38262	Total human chorionic gonadotropin IVD, control	Хүний нийт chorionic gonadotropin IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen.	B

6463	38263	Total human chorionic gonadotropin IVD, calibrator	Хүний нийт chorionic gonadotropin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen.	B
6464	38268	Human placental lactogen (HPL) IVD, control	Хүний ихэсийн лактоген (HPL) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen.	B
6465	38269	Human placental lactogen (HPL) IVD, calibrator	Хүний ихэсийн лактоген (HPL) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen.	B
6466	38270	Luteinizing hormone (LH) IVD, calibrator	Luteinizing гормон (LH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen.	B
6467	38271	Thyroid stimulating hormone (TSH) IVD, control	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen.	B
6468	38272	Thyroid stimulating hormone (TSH) IVD, calibrator	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen.	B
6469	38273	Thyroxine binding globulin (TBG) IVD, control	Тироксин холбогч глобулин (TBG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen.	B
6470	38274	Thyroxine binding globulin (TBG) IVD, calibrator	Тироксин холбогч глобулин (TBG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen.	B

6471	38524	Ethanol (ETOH) IVD, kit, rapid spectrophotometry, clinical	Этанол (ETOH) IVD, иж бүрдэл, түргэн спектрофотометр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ethyl alcohol (ETOH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid spectrophotometry method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to assess for alcohol intoxication and in the management of alcoholism. It is not intended to be used for self-testing.	B
6472	38527	Methanol IVD, control	Метанол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of methyl alcohol in a clinical specimen.	B
6473	38532	Digoxin therapeutic drug monitoring IVD, control	Дигоксин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen.	B
6474	38533	Digitoxin therapeutic drug monitoring IVD, control	Дигитоксин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen.	B
6475	38534	Lidocaine therapeutic drug monitoring IVD, control	Лидокаин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug lidocaine in a clinical specimen.	B
6476	38535	Methotrexate therapeutic drug monitoring IVD, control	Метотрексат эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug methotrexate in a clinical specimen.	B
6477	38536	N-acetylprocainamide therapeutic drug monitoring IVD, control	N-acetylprocainamide эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug N-acetylprocainamide in a clinical specimen.	B
6478	38537	Theophylline therapeutic drug monitoring IVD, control	Теофиллин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen.	B

6479	38538	Aldolase kit	Альдолазын багц	A collection of reagent(s) and other associated solutions and materials used to perform an assay to measure the concentration of aldolase in plasma or blood serum. The device is used in the diagnosis and treatment evaluation of the early stages of acute hepatitis, and for certain muscle diseases such as progressive Duchenne-type muscular dystrophy.	B
6480	39609	Lecithin-cholesterol acyltransferase (LCAT) IVD, kit, fluorescent immunoassay	Лецитин-холестерол ацилтрансфераза (LCAT) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme lecithin-cholesterol acyltransferase (LCAT) in a clinical specimen, using a fluorescent immunoassay method.	B
6481	39640	Cholesteryl ester transfer protein (CETP) IVD, kit, enzyme immunoassay (EIA)	Холестерилийн эфир дамжуулах уураг (CETP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cholesteryl ester transfer protein (CETP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6482	39765	Superoxide dismutase (SOD) IVD, control	Супероксид дисмутаза (SOD) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of superoxide dismutase (SOD) in a clinical specimen.	B
6483	40087	Adrenomedullin (ADM) IVD, reagent	Адреномедуллин (ADM) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of adrenomedullin (ADM) in a clinical specimen.	B
6484	40371	Adrenomedullin (ADM) IVD, kit, enzyme immunoassay (EIA)	Адреномедуллин (ADM) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of adrenomedullin (ADM) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a marker of endothelial function and/or to aid in the diagnosis and treatment of patients with sepsis or septic shock, acute heart failure, and cardiogenic shock.	B
6485	40420	Superoxide dismutase (SOD) IVD, calibrator	Супероксид дисмутаза (SOD) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of superoxide dismutase (SOD) in a clinical specimen.	B

6486	41075	Sulfidoleukotriene IVD, calibrator	Сульфидолейкотриен IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sulfidoleukotrienes, in a clinical specimen.	B
6487	41252	25-Hydroxy vitamin D3 IVD, control	25-гидрокси витамин D3 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D3 in a clinical specimen.	B
6488	41253	25-Hydroxy vitamin D3 IVD, calibrator	25-гидрокси витамин D3 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D3 in a clinical specimen.	B
6489	41254	Alpha-1-antitrypsin (protease inhibitor) IVD, calibrator	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD,	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor)	B
6490	41255	Alpha-1-antitrypsin (protease inhibitor) IVD, control	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen.	B
6491	41258	Alpha-1-microglobulin IVD, calibrator	Альфа-1-микроглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-microglobulin in a clinical specimen.	B
6492	41259	Alpha-1-microglobulin IVD, control	Альфа-1-микроглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-microglobulin in a clinical specimen.	B
6493	41260	Alpha-2-macroglobulin IVD, calibrator	Альфа-2-макроглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-2-macroglobulin in a clinical specimen.	B
6494	41261	Alpha-2-macroglobulin IVD, control	Альфа-2-макроглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-2-macroglobulin in a clinical specimen.	B
6495	41268	Alpha-2-pregnancy associated glycoprotein IVD, calibrator	Альфа-2 жирэмслэлттэй холбоотой гликопротейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-2-pregnancy associated glycoprotein in a clinical specimen.	B

6496	41269	Alpha-2-pregnancy associated glycoprotein IVD, control	Альфа-2 жирэмслэлттэй холбоотой гликопротейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-2-pregnancy associated glycoprotein in a clinical specimen.	B
6497	41270	Multiple antinuclear antibody (ANA) screening IVD, calibrator	Олон тооны антинуклеар эсрэгбие (ANA) илрүүлэх IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen.	B
6498	41271	Multiple antinuclear antibody (ANA) screening IVD, control	Олон тооны антинуклеар эсрэгбие (ANA) скрининг IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen.	B
6499	41275	Beta-2-glycoprotein I antibody IVD, calibrator	Бета-2-гликопротейн I эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to beta-2-glycoprotein I in a clinical specimen.	B
6500	41276	Beta-2-glycoprotein I antibody IVD, control	Бета-2-гликопротейн I эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to beta-2-glycoprotein I in a clinical specimen.	B
6501	41277	Ganglioside total antibody IVD, calibrator	Ганглиозидын нийт эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total antiganglioside antibodies in a clinical specimen.	B
6502	41278	Ganglioside total antibody IVD, control	Ганглиозидын нийт эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total antiganglioside antibodies in a clinical specimen.	B
6503	41279	Anticardiolipin antibody IVD, calibrator	Антикардиолипин эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to cardiolipin in a clinical specimen.	B
6504	41280	Anticardiolipin antibody IVD, control	Антикардиолипин эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to cardiolipin in a clinical specimen.	B

6505	41281	Ganglioside GD1b antibody (anti-GD1b) IVD, calibrator	Ганглиозидын GD1b эсрэгбие (anti-GD1b) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GD1b (anti-GD1b) in a clinical specimen.	B
6506	41282	Ganglioside GD1b antibody (anti-GD1b) IVD, control	Ганглиозидын GD1b эсрэгбие (эсрэг GD1b) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GD1b (anti-GD1b) in a clinical specimen.	B
6507	41283	Ganglioside GM1 antibody (anti-GM1) IVD, calibrator	Ганглиозид GM1 эсрэгбие (anti-GM1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GM1(anti-GM1) in a clinical specimen.	B
6508	41284	Ganglioside GM1 antibody (anti-GM1) IVD, control	Ганглиозид GM1 эсрэгбие (эсрэг GM1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GM1 (anti-GM1) in a clinical specimen.	B
6509	41285	Histamine antibody IVD, calibrator	Гистамин эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to histamine in a clinical specimen.	B
6510	41286	Histamine antibody IVD, control	Гистамин эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to histamine in a clinical specimen.	B
6511	41287	Hu antibody (anti-Hu) IVD, calibrator	Ху эсрэгбие (anti-Hu) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Hu antibodies in a clinical specimen.	B
6512	41288	Hu antibody (anti-Hu) IVD, control	Ху эсрэгбие (anti-Hu) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Hu antibodies in a clinical specimen.	B
6513	41289	Myelin-associated glycoprotein antibody (anti-MAG) IVD, calibrator	Миелинтэй холбоотой гликопротеины эсрэгбие (anti-MAG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to myelin-associated glycoprotein (anti-MAG) in a clinical specimen.	B

6514	41290	Myelin-associated glycoprotein antibody (anti-MAG) IVD, control	Миелинтэй холбоотой гликопротеины эсрэгбие (anti-MAG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to myelin-associated glycoprotein (anti-MAG) in a clinical specimen.	B
6515	41293	Phosphatidylserine antibody IVD, calibrator	Фосфатидилсериний эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antiphosphatidylserine antibodies in a clinical specimen.	B
6516	41294	Phosphatidylserine antibody IVD, control	Фосфатидилсериний эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antiphosphatidylserine antibodies in a clinical specimen.	B
6517	41295	Ri antibody (anti-Ri) IVD, calibrator	Ri эсрэгбие (anti-Ri) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Ri antibodies in a clinical specimen.	B
6518	41296	Ri antibody (anti-Ri) IVD, control	Ri эсрэгбие (anti-Ri) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Ri antibodies in a clinical specimen.	B
6519	41303	Polyvalent human immunoglobulin antibody IVD, calibrator	Хүний поливалент иммуноглобулины эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of all classes of human immunoglobulin (i.e, IgA, IgE, IgD, IgG, IgM) and/or specific immunoglobulin chains in a clinical specimen.	B
6520	41304	Polyvalent human immunoglobulin antibody IVD, control	Хүний поливалент иммуноглобулины эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of all classes of human immunoglobulin (i.e., IgA, IgE, IgD, IgG, IgM) and/or specific immunoglobulin chains (i.e., heavy/light chains) in a clinical specimen.	B
6521	41305	Yo antibody IVD, calibrator	Эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen.	B
6522	41306	Yo antibody IVD, control	Yo эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen.	B

6523	41321	Ceruloplasmin IVD, calibrator	Церулоплазмин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of ceruloplasmin in a clinical specimen.	B
6524	41322	Ceruloplasmin IVD, control	Церулоплазмины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of ceruloplasmin in a clinical specimen.	B
6525	41331	Vitamin B6 complex group IVD, calibrator	B6 витамины цогцолбор бүлгийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin B6 complex group, including pyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine and other B6-vitamers in a clinical specimen.	B
6526	41332	Vitamin B6 complex group IVD, control	B6 витамины цогцолбор бүлгийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin B6 complex group, including pyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine and other B6-vitamers in a clinical specimen.	B
6527	41334	Vitamin B2 (riboflavin) IVD, calibrator	Витамин B2 (рибофлавин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin B2 (riboflavin) in a clinical specimen.	B
6528	41335	Vitamin B2 (riboflavin) IVD, control	Витамин B2 (рибофлавин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin B2 (riboflavin) in a clinical specimen.	B
6529	41337	Vitamin B12 IVD, calibrator	Витамин B12 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin B12 in a clinical specimen.	B
6530	41338	Vitamin B12 IVD, control	B12 витамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen.	B
6531	41340	Vitamin B1 (thiamine) IVD, calibrator	Витамин B1 (тиамин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Vitamin B1 (thiamine) in a clinical specimen.	B

6532	41341	Vitamin B1 (thiamine) IVD, control	Витамин B1 (тиамин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Vitamin B1 (thiamine) in a clinical specimen.	B
6533	41343	Transferrin/transferrin isoform IVD, calibrator	Трансферрин/трансферрин изоформ IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen.	B
6534	41344	Transferrin/transferrin isoform IVD, control	Трансферрин/трансферрин изоформ IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen.	B
6535	41346	Multiple extractable nuclear antigen (ENA) IVD, calibrator	Олон хандлах цөмийн эсрэгтөрөгч (ENA) IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple extractable nuclear antigens (ENA) in a clinical specimen.	B
6536	41347	Multiple extractable nuclear antigen (ENA) IVD, control	Олон хандлах цөмийн эсрэгтөрөгч (ENA) IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple extractable nuclear antigens (ENA) in a clinical specimen.	B
6537	41348	Allergen-specific immunoglobulin E (IgE) antibody IVD, calibrator	Харшлын өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen.	B
6538	41349	Allergen-specific immunoglobulin E (IgE) antibody IVD, control	Харшлын өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen.	B
6539	41352	Total immunoglobulin G (IgG total) IVD, calibrator	Нийт иммуноглобулин G (IgG нийт) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen.	B

6540	41353	Total immunoglobulin G (IgG total) IVD, control	Нийт иммуноглобулин G (IgG нийт) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen.	B
6541	41354	Immunoglobulin G subclass (IgG subclass) IVD, calibrator	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G subclasses (IgG subclasses) in a clinical specimen.	B
6542	41355	Immunoglobulin G subclass (IgG subclass) IVD, control	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G subclasses (IgG subclasses) in a clinical specimen.	B
6543	41356	Total immunoglobulin M (IgM total) IVD, calibrator	Нийт иммуноглобулин M (IgM нийт) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen.	B
6544	41357	Total immunoglobulin M (IgM total) IVD, control	Нийт иммуноглобулин M (IgM нийт) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen.	B
6545	41358	Immunoglobulin M subclass (IgM subclass) IVD, calibrator	Иммуноглобулин M дэд ангилал (IgM дэд ангилал) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M subclasses (IgM subclasses) in a clinical specimen.	B
6546	41359	Immunoglobulin M subclass (IgM subclass) IVD, control	Иммуноглобулин M дэд ангилал (IgM дэд ангилал) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M subclasses (IgM subclasses) in a clinical specimen.	B
6547	41362	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, calibrator	Инсулин шиг өсөлтийн хүчин зүйлийг холбогч уураг 3 (IGFBP-3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen.	B
6548	41363	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, control	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбох уураг 3 (IGFBP-3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen.	B

6549	41364	Insulin-like growth factor II (IGFII) IVD, calibrator	Инсулин шиг өсөлтийн хүчин зүйл II (IGFII) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor II (IGFII) in a clinical specimen.	B
6550	41365	Insulin-like growth factor II (IGFII) IVD, control	Инсулин төст өсөлтийн хүчин зүйл II (IGFII) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor II (IGFII) in a clinical specimen.	B
6551	41367	Insulin antibody IVD, calibrator	Инсулины эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen.	B
6552	41368	Insulin antibody IVD, control	Инсулины эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen.	B
6553	41369	Interferon IVD, calibrator	Интерферон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen.	B
6554	41370	Interferon IVD, control	Интерферон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen.	B
6555	41385	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, calibrator	Протеиназа 3 антинейтрофил цитоплазмын эсрэгбие (PR3-ANCA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase 3 (PR3) in a clinical specimen.	B
6556	41386	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, control	Протеиназа 3 антинейтрофил цитоплазмын эсрэгбие (PR3-ANCA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase 3 (PR3) in a clinical specimen.	B
6557	41387	Prealbumin (transthyretin) IVD, calibrator	Преальбумин (транстиретин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of prealbumin (transthyretin) in a clinical specimen.	B

6558	41388	Prealbumin (transthyretin) IVD, control	Преальбумин (транстиретин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of prealbumin (transthyretin) in a clinical specimen.	B
6559	41389	Jo-1 antibody IVD, calibrator	Жо-1 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen.	B
6560	41390	Jo-1 antibody IVD, control	Жо-1 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen.	B
6561	41391	Erythropoietin (EPO) IVD, calibrator	Эритропоэтин (EPO) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of erythropoietin (EPO) in a clinical specimen.	B
6562	41392	Erythropoietin (EPO) IVD, control	Эритропоэтин (EPO) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of erythropoietin (EPO) in a clinical specimen.	B
6563	41393	Monoethylglycinexylidide (MEGX) IVD, calibrator	Моноэтилглицинексилидид (MEGX) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of monoethylglycinexylidide (MEGX) in a clinical specimen.	B
6564	41394	Monoethylglycinexylidide (MEGX) IVD, control	Моноэтилглицинексилидид (MEGX) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of monoethylglycinexylidide (MEGX) in a clinical specimen.	B
6565	41395	Melatonin IVD, calibrator	Мелатонин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of melatonin in a clinical specimen.	B
6566	41396	Melatonin IVD, control	Мелатонин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of melatonin in a clinical specimen.	B
6567	41398	Myosin light chain IVD, calibrator	Миозин хөнгөн гинж IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of myosin light chain in a clinical specimen.	B

6568	41405	Haptoglobin IVD, calibrator	Хаптоглобин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of haptoglobin in a clinical specimen.	B
6569	41406	Haptoglobin IVD, control	Гаптоглобин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of haptoglobin in a clinical specimen.	B
6570	41409	Lactoferrin IVD, calibrator	Лактоферрин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen.	B
6571	41410	Lactoferrin IVD, control	Лактоферрин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen.	B
6572	41414	Cysteinyl leukotriene (cys-LT) IVD, calibrator	Цистейнил лейкотриен (cys-LT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of cysteinyl leukotriene (cys-LT) in a clinical specimen following leukocyte stimulation.	B
6573	41415	Cysteinyl leukotriene (cys-LT) IVD, control	Цистейнил лейкотриен (cys-LT) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of cysteinyl leukotriene (cys-LT) in a clinical specimen following leukocyte stimulation.	B
6574	41417	Lipoprotein A IVD, calibrator	Липопротейн A IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lipoprotein A lipid in a clinical specimen.	B
6575	41418	Lipoprotein A IVD, control	Липопротейн A IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of lipoprotein A lipid in a clinical specimen.	B
6576	41420	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, calibrator	Элэг-бөөрний микросом 1 эсрэгбие (эсрэг LKM1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen.	B
6577	41421	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, control	Элэг-бөөрний микросом 1 эсрэгбие (эсрэг LKM1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen.	B

6578	41430	Kappa/lambda light chain immunoglobulin IVD, calibrator	Kappa/lambda хөнгөн гинжин иммуноглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of kappa and/or lambda light chain immunoglobulins in a clinical specimen.	B
6579	41431	Kappa/lambda light chain immunoglobulin IVD, control	Kappa/lambda хөнгөн гинжин иммуноглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of kappa and/or lambda light chain immunoglobulins in a clinical specimen.	B
6580	41689	5-Aminolaevulinate dehydratase IVD, calibrator	5-Аминолаевулинатын дегидратаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme 5-aminolaevulinate dehydratase, also known as porphobilinogen synthase, in a clinical specimen.	B
6581	41690	5-Aminolaevulinate dehydratase IVD, control	5-Аминолаевулинатын дегидратаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme 5-aminolaevulinate dehydratase, also known as porphobilinogen synthase, in a clinical specimen.	B
6582	41691	Phospholipid antibody IVD, control	Фосфолипидын эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple antiphospholipid antibodies associated with antiphospholipid syndrome in a clinical specimen.	B
6583	41692	Phospholipid antibody IVD, calibrator	Фосфолипидын эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antiphospholipid antibodies associated with antiphospholipid syndrome in a clinical specimen.	B
6584	41697	Total aspartate aminotransferase (AST) IVD, control	Нийт аспартат аминотрансфераза (AST) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total aspartate aminotransferase (AST) in a clinical specimen.	B
6585	41698	Total aspartate aminotransferase (AST) IVD, calibrator	Нийт аспартат аминотрансфераза (AST) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total aspartate aminotransferase (AST) in a clinical specimen.	B

6586	41708	Vanillylmandelic acid (VMA) IVD, control	Ваниллилманделийн хүчил (VMA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of vanillylmandelic acid (VMA) in a clinical specimen.	B
6587	41709	Vanillylmandelic acid (VMA) IVD, calibrator	Ваниллилманделийн хүчил (VMA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of vanillylmandelic acid (VMA) in a clinical specimen.	B
6588	41711	Thyroglobulin IVD, control	Тироглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen.	B
6589	41712	Thyroglobulin IVD, calibrator	Тироглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen.	B
6590	41728	Low density lipoprotein (LDL) cholesterol IVD, calibrator	Бага нягтралтай липопротейн (LDL) холестерины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen.	B
6591	41729	Low density lipoprotein (LDL) cholesterol IVD, control	Бага нягтралтай липопротейн (LDL) холестерины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen.	B
6592	41732	Myoglobin IVD, control	Миоглобин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of myoglobin in a clinical specimen.	B
6593	41733	Myoglobin IVD, calibrator	Миоглобин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of myoglobin in a clinical specimen.	B
6594	41734	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, calibrator	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen.	B
6595	41735	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, control	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen.	B

6596	41740	Nortriptyline IVD, calibrator	Нортриптилин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of nortriptyline in a clinical specimen.	B
6597	41741	Nortriptyline IVD, control	Нортриптилин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of nortriptyline in a clinical specimen.	B
6598	41744	Protoporphyrin IX IVD, calibrator	Протопорфирин IX IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite protoporphyrin IX in a clinical specimen.	B
6599	41745	Protoporphyrin IX IVD, control	Протопорфирин IX IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite protoporphyrin IX in a clinical specimen.	B
6600	41746	Reverse triiodothyronine (reverse T3) IVD, calibrator	Урвуу триодотиронин (урвуу T3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen.	B
6601	41747	Reverse triiodothyronine (reverse T3) IVD, control	Урвуу триодотиронин (урвуу T3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen.	B
6602	41748	Salicylate IVD, calibrator	Салицилат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen.	B
6603	41749	Salicylate IVD, control	Салицилат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen.	B
6604	41753	Sisomycin therapeutic drug monitoring IVD, calibrator	Сисомицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug sisomycin in a clinical specimen.	B
6605	41754	Sisomycin therapeutic drug monitoring IVD, control	Сисомицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug sisomycin in a clinical specimen.	B

6606	41765	Total immunoglobulin A (IgA total) IVD, calibrator	Нийт иммуноглобулин А (IgA нийт) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen.	B
6607	41766	Total immunoglobulin A (IgA total) IVD, control	Нийт иммуноглобулин А (IgA нийт) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen.	B
6608	41767	Myosin light chain IVD, control	Миозин хөнгөн гинж IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of myosin light chain in a clinical specimen.	B
6609	41768	Immunoglobulin A subclass (IgA subclass) IVD, calibrator	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A subclasses (IgA subclasses) in a clinical specimen.	B
6610	41769	Immunoglobulin A subclass (IgA subclass) IVD, control	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A subclasses (IgA subclasses) in a clinical specimen.	B
6611	41770	Total immunoglobulin D (IgD total) IVD, calibrator	Нийт иммуноглобулин D (IgD нийт) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen.	B
6612	41771	Total immunoglobulin D (IgD total) IVD, control	Нийт иммуноглобулин D (IgD нийт) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen.	B
6613	41772	Immunoglobulin D subclass (IgD subclass) IVD, calibrator	Иммуноглобулин D дэд ангилал (IgD дэд ангилал) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D subclasses (IgD subclasses) in a clinical specimen.	B
6614	41773	Immunoglobulin D subclass (IgD subclass) IVD, control	Иммуноглобулин D дэд ангилал (IgD дэд ангилал) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D subclasses (IgD subclasses) in a clinical specimen.	B

6615	41779	Androstenedione IVD, calibrator	Androstenedione IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of androstenedione in a clinical specimen.	B
6616	41780	Androstenedione IVD, control	Андростендион IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of androstenedione in a clinical specimen.	B
6617	41782	Amanitin IVD, calibrator	Аманитин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of amanitin in a clinical specimen.	B
6618	41783	Amanitin IVD, control	Аманитин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of amanitin in a clinical specimen.	B
6619	41793	Bombesin IVD, calibrator	Bombesin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of bombesin in a clinical specimen.	B
6620	41794	Bombesin IVD, control	Bombesin IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of bombesin in a clinical specimen.	B
6621	41795	Adrenocorticotropic hormone (ACTH) IVD, calibrator	Адренокортикотроп даавар (ACTH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen.	B
6622	41796	Adrenocorticotropic hormone (ACTH) IVD, control	Адренокортикотроп даавар (ACTH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen.	B
6623	41799	Cancer-associated retinopathy antibody (anti-CAR) IVD, calibrator	Хорт хавдартай холбоотой ретинопатийн эсрэгбие (анти-CAR) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer-associated retinopathy antibodies (anti-CAR antibodies) in a clinical specimen.	B

6624	41800	Cancer-associated retinopathy antibody (anti-CAR) IVD, control	Хорт хавдартай холбоотой ретинопатийн эсрэгбие (анти-CAR) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer-associated retinopathy antibodies (anti-CAR antibodies) in a clinical specimen.	B
6625	41808	Apolipoprotein A-I (Apo A1) IVD, calibrator	Аполипопротейн AI (Apo A1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein A-I (Apo A1) lipid in a clinical specimen.	B
6626	41809	Apolipoprotein A-I (Apo A1) IVD, control	Аполипопротейн AI (Apo A1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein A-I (Apo A1) lipid in a clinical specimen.	B
6627	41810	Apolipoprotein A-II (Apo A2) IVD, calibrator	Аполипопротейн A-II (Apo A2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein A-II (Apo A2) lipid in a clinical specimen.	B
6628	41811	Apolipoprotein A-II (Apo A2) IVD, control	Аполипопротейн A-II (Apo A2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein A-II (Apo A2) lipid in a clinical specimen.	B
6629	41812	Apolipoprotein B (Apo B) IVD, calibrator	Аполипопротейн B (Апо B) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein B (Apo B) lipid in a clinical specimen.	B
6630	41813	Apolipoprotein B (Apo B) IVD, control	Аполипопротейн B (Апо B) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein B (Apo B) lipid in a clinical specimen.	B
6631	41816	Asialo-GM1 antibody IVD, calibrator	Asialo-GM1 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the asialo-GM1 antigen in a clinical specimen.	B
6632	41817	Asialo-GM1 antibody IVD, control	Asialo-GM1 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the asialo-GM1 antigen in a clinical specimen.	B
6633	41818	Glucose IVD, calibrator	Глюкозын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of glucose in a clinical specimen.	B

6634	41819	Glucose IVD, control	Глюкозын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of glucose in a clinical specimen.	B
6635	41824	Atrial natriuretic peptide (ANP) IVD, calibrator	Тосгуурын натриуретик пептид (ANP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of atrial natriuretic peptide (ANP) in a clinical specimen.	B
6636	41825	Atrial natriuretic peptide (ANP) IVD, control	Тосгуурын натриуретик пептид (ANP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of atrial natriuretic peptide (ANP) in a clinical specimen.	B
6637	41827	Beta-endorphin IVD, calibrator	Бета-эндорфин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of beta-endorphin in a clinical specimen.	B
6638	41828	Beta-endorphin IVD, control	Бета-эндорфин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of beta-endorphin in a clinical specimen.	B
6639	41830	Total bilirubin IVD, calibrator	Нийт билирубин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total bilirubin in a clinical specimen.	B
6640	41836	C-peptide IVD, calibrator	С-пептид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen.	B
6641	41837	C-peptide IVD, control	С-пептид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen.	B
6642	41838	C-reactive protein (CRP) IVD, calibrator	С-реактив ууpаг (CRP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen [includes high-sensitivity CRP (hsCRP) types].	B

6643	41839	C-reactive protein (CRP) IVD, control	С-реактив уураг (CRP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen [includes high-sensitivity CRP (hsCRP) types].	B
6644	41840	Calcitonin IVD, calibrator	Кальцитонин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of calcitonin in a clinical specimen.	B
6645	41841	Calcitonin IVD, control	Кальцитонин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of calcitonin in a clinical specimen.	B
6646	41842	Calcium (Ca2+) IVD, calibrator	Кальци (Ca2+) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of calcium (Ca2+) in a clinical specimen.	B
6647	41843	Calcium (Ca2+) IVD, control	Кальци (Ca2+) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of calcium (Ca2+) in a clinical specimen.	B
6648	41848	Centromere protein antibody (anti-CENP) IVD, calibrator	Центромер уургийн эсрэгбие (anti-CENP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to centromere protein (anti-CENP) in a clinical specimen.	B
6649	41849	Centromere protein antibody (anti-CENP) IVD, control	Центромер уургийн эсрэгбие (anti-CENP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to centromere protein (anti-CENP) in a clinical specimen.	B
6650	41852	Circulating immune complex (CIC) IVD, calibrator	Цусны эргэлтийн дархлааны цогцолбор (CIC) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of circulating immune complexes (CIC) in a clinical specimen.	B
6651	41853	Circulating immune complex (CIC) IVD, control	Цусны эргэлтийн дархлааны цогцолбор (CIC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of circulating immune complexes (CIC) in a clinical specimen.	B
6652	41854	Citrate IVD, calibrator	Цитрат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of citrate in a clinical specimen.	B

6653	41855	Citrate IVD, control	Цитрат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of citrate in a clinical specimen.	B
6654	41866	Complement component C3b IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C3b IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of activated complement cascade component C3b in a clinical specimen.	B
6655	41888	Cyclic adenosine monophosphate (cAMP) IVD, calibrator	Цикл аденозин монофосфат (cAMP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of cyclic adenosine monophosphate (cAMP) in a clinical specimen.	B
6656	41889	Cyclic adenosine monophosphate (cAMP) IVD, control	Цикл аденозин монофосфат (cAMP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of cyclic adenosine monophosphate (cAMP) in a clinical specimen.	B
6657	41896	Dehydroepiandrosterone (DHEA) IVD, calibrator	Дегидроэпиандростерон (DHEA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of dehydroepiandrosterone (DHEA) in a clinical specimen.	B
6658	41897	Dehydroepiandrosterone (DHEA) IVD, control	Дегидроэпиандростерон (DHEA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of dehydroepiandrosterone (DHEA) in a clinical specimen.	B
6659	41907	Double stranded DNA antibody (anti-dsDNA) IVD, control	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen.	B
6660	41925	Fatty acid binding protein (FABP) IVD, calibrator	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen.	B
6661	41926	Fatty acid binding protein (FABP) IVD, control	Өөх тосны хүчлийг холбох уураг (FABP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen.	B
6662	41927	Ferritin IVD, calibrator	Ферритин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of ferritin in a clinical specimen.	B

6663	41928	Ferritin IVD, control	Ферритин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of ferritin in a clinical specimen.	B
6664	41929	Fibronectin IVD, calibrator	Фибронектин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of fibronectin in a clinical specimen.	B
6665	41930	Fibronectin IVD, control	Фибронектин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of fibronectin in a clinical specimen.	B
6666	41931	Folate (vitamin B9) IVD, calibrator	Фолат (витамин B9) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen.	B
6667	41932	Folate (vitamin B9) IVD, control	Фолат (витамин B9) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen.	B
6668	41939	Lecithin-cholesterol acyltransferase (LCAT) IVD, calibrator	Лецитин-холестерол ацилтрансфераза (LCAT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme lecithin-cholesterol acyltransferase (LCAT) in a clinical specimen.	B
6669	41940	Gliadin antibody IVD, calibrator	Глиадин эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen.	B
6670	41941	Gliadin antibody IVD, control	Глиадин эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen.	B
6671	41942	Glucagon IVD, calibrator	Глюкагон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of glucagon in a clinical specimen.	B
6672	41943	Glucagon IVD, control	Глюкагон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of glucagon in a clinical specimen.	B

6673	41944	Glycogen phosphorylase BB IVD, calibrator	Гликоген фосфорилаза BB IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of glycogen phosphorylase BB isoenzyme in a clinical specimen.	B
6674	41945	Glycogen phosphorylase BB IVD, control	Гликоген фосфорилаза BB IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of glycogen phosphorylase BB isoenzyme in a clinical specimen.	B
6675	42052	Vitamin D3 (cholecalciferol) IVD, calibrator	Витамин D3 (холекальциферол) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin D3 (cholecalciferol) in a clinical specimen.	B
6676	42053	Vitamin D3 (cholecalciferol) IVD, control	Витамин D3 (холекальциферол) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin D3 (cholecalciferol) in a clinical specimen.	B
6677	42055	Vasopressin IVD, calibrator	Вазопрессин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of vasopressin in a clinical specimen.	B
6678	42056	Vasopressin IVD, control	Вазопрессин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of vasopressin in a clinical specimen.	B
6679	42061	Total porphyrin (coproporphyrin/uroporphyrin) IVD, calibrator	Нийт порфирин (копропорфирин/уропорфирин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total porphyrin (coproporphyrin/uroporphyrin) in a clinical specimen.	B
6680	42062	Total porphyrin (coproporphyrin/uroporphyrin) IVD, control	Нийт порфирин (копропорфирин/уропорфирин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total porphyrin (coproporphyrin/uroporphyrin) in a clinical specimen.	B
6681	42073	U1-RNP antibody IVD, calibrator	U1-RNP эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen.	B

6682	42074	U1-RNP antibody IVD, control	U1-RNP эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen.	B
6683	42079	Thyroid stimulating hormone receptor (TSHR) antibody IVD, calibrator	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen.	B
6684	42080	Thyroid stimulating hormone receptor (TSHR) antibody IVD, control	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen.	B
6685	42085	Transcobalamin IVD, calibrator	Транскобаламин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of transcobalamin in a clinical specimen.	B
6686	42086	Transcobalamin IVD, control	Транскобаламин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of transcobalamin in a clinical specimen.	B
6687	42087	Histone antibody IVD, calibrator	Гистоны эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen.	B
6688	42088	Histone antibody IVD, control	Гистоны эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen.	B
6689	42091	Insulin IVD, calibrator	Инсулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of insulin in a clinical specimen.	B
6690	42092	Insulin IVD, control	Инсулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of insulin in a clinical specimen.	B

6691	42181	Sex hormone binding globulin (SHBG) IVD, calibrator	Бэлгийн даавар холбогч глобулин (SHBG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen.	B
6692	42182	Sex hormone binding globulin (SHBG) IVD, control	Бэлгийн даавар холбох глобулин (SHBG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen.	B
6693	42185	Hydroxyproline IVD, control	Гидроксипролин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of hydroxyproline in a clinical specimen.	B
6694	42187	Osteocalcin IVD, calibrator	Остеокальцин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen.	B
6695	42188	Osteocalcin IVD, control	Остеокальцин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen.	B
6696	42191	Human growth hormone (HGH) IVD, calibrator	Хүний өсөлтийн даавар (HGH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen.	B
6697	42192	Human growth hormone (HGH) IVD, control	Хүний өсөлтийн даавар (HGH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen.	B
6698	42193	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, calibrator	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen.	B
6699	42194	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, control	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбох уураг 1 (IGFBP-1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen.	B

6700	42196	Insulin-like growth factor I (IGF1) IVD, calibrator	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen.	B
6701	42197	Insulin-like growth factor I (IGF1) IVD, control	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen.	B
6702	42198	Neopterin IVD, calibrator	Neopterin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of neopterin in a clinical specimen.	B
6703	42199	Neopterin IVD, control	Неоптерин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of neopterin in a clinical specimen.	B
6704	42200	Prostaglandin IVD, calibrator	Простагландин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of prostaglandin in a clinical specimen.	B
6705	42201	Prostaglandin IVD, control	Простагландин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of prostaglandin in a clinical specimen.	B
6706	42207	Parathyroid hormone (PTH) IVD, calibrator	Бамбай булчирхайн даавар (PTH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen.	B
6707	42208	Parathyroid hormone (PTH) IVD, control	Бамбай булчирхайн даавар (PTH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen.	B
6708	42209	Parathyroid hormone related peptide (PTHrP) IVD, calibrator	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen.	B
6709	42210	Parathyroid hormone related peptide (PTHrP) IVD, control	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen.	B

6710	42213	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, calibrator	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen.	B
6711	42214	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, control	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen.	B
6712	42217	Retinol binding protein IVD, calibrator	Ретинол холбогч уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of retinol binding protein in a clinical specimen.	B
6713	42218	Retinol binding protein IVD, control	Ретинол холбох уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of retinol binding protein in a clinical specimen.	B
6714	42221	Sperm antibody IVD, calibrator	Спермийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-sperm antibodies in a clinical specimen.	B
6715	42222	Sperm antibody IVD, control	Спермийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-sperm antibodies in a clinical specimen.	B
6716	42224	Multiple systemic lupus erythematosus (SLE)-associated antibody IVD, calibrator	Олон системийн чонон хөрвөс (SLE)-тэй холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple different antibodies associated with systemic lupus erythematosus (SLE) in a clinical specimen.	B
6717	42225	Multiple systemic lupus erythematosus (SLE)-associated antibody IVD, control	Олон системийн чонон хөрвөс (SLE)-тэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple different antibodies associated with systemic lupus erythematosus (SLE) in a clinical specimen.	B
6718	42226	Scleroderma-70 antibody (anti-Scl-70) IVD, calibrator	Scleroderma-70 эсрэгбие (anti-Scl-70) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen.	B

6719	42227	Scleroderma-70 antibody (anti-Scl-70) IVD, control	Scleroderma-70 эсрэгбие (anti-Scl-70) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen.	B
6720	42228	Oxytocin IVD, calibrator	Окситоцин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of oxytocin in a clinical specimen.	B
6721	42229	Oxytocin IVD, control	Окситоцин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of oxytocin in a clinical specimen.	B
6722	42230	Rheumatoid factor IVD, calibrator	Ревматоид хүчин зүйл IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen.	B
6723	42231	Rheumatoid factor IVD, control	Ревматоид хүчин зүйл IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen.	B
6724	42249	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, calibrator	Миелопероксидазын эсрэг нейтрофилын цитоплазмын эсрэгбие (MPO-ANCA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen.	B
6725	42250	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, control	Миелопероксидазын эсрэг нейтрофил цитоплазмын эсрэгбие (MPO-ANCA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen.	B
6726	42478	Midregional pro-adrenomedullin (MR-proADM) IVD, kit, enzyme immunoassay (EIA)	Дунд бүсийн про-адреномедуллин (MR-proADM) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of midregional pro-adrenomedullin (MR-proADM) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6727	42524	Monoamine oxidase (MAO) IVD, kit, chemiluminescent immunoassay	Моноамин оксидаза (MAO) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of monoamine oxidase (MAO) in a clinical specimen, using a chemiluminescent immunoassay method.	B

6728	42604	Bromperidol therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Bromperidol-ийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug bromperidol in a clinical specimen, using a fluorescent immunoassay method.	B
6729	42606	Monoamine oxidase (MAO) IVD, control	Моноамин оксидаза (MAO) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the enzyme monoamine oxidase (MAO) in a clinical specimen.	B
6730	42608	Arbekacin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Арбекацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug arbekacin in a clinical specimen, using a fluorescent immunoassay method.	B
6731	42615	Lipid peroxide IVD, reagent	Липидийн хэт исэл IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lipid peroxide in a clinical specimen.	B
6732	42626	Bromperidol therapeutic drug monitoring IVD, reagent	Bromperidol-ийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug bromperidol in a clinical specimen.	B
6733	42628	Branched-chain amino acid IVD, kit, spectrophotometry	Салбарласан гинжин амин хүчил IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of branched-chain amino acid in a clinical specimen, using a spectrophotometry method.	B
6734	42633	Amphetamine/methamphetamine group IVD, kit, chemiluminescent immunoassay	Амфетамин/метамфетамин бүлэг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6735	42634	Complement factor H antibody IVD, control	Комплемент хүчин зүйл H эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to complement factor H in a clinical specimen.	B

6736	42636	Methamphetamine-specific IVD, kit, chemiluminescent immunoassay	Метамфетамины өвөрмөц IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen, using a chemiluminescent immunoassay method.	B
6737	42639	Methadone IVD, kit, chemiluminescent immunoassay	Метадон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen, using a chemiluminescent immunoassay method.	B
6738	42641	Complement factor H IVD, control	Нэмэлт хүчин зүйл H IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of complement factor H in a clinical specimen.	B
6739	42642	Complement factor H IVD, calibrator	Нөлөөллийн хүчин зүйл H IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of complement factor H in a clinical specimen.	B
6740	42643	Human chorionic gonadotropin alpha-subunit IVD, kit, enzyme immunoassay (EIA)	Хүний chorionic gonadotropin альфа дэд нэгж IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6741	42645	Phencyclidine (PCP) IVD, kit, chemiluminescent immunoassay	Фенциклидин (PCP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6742	42650	Complement factor H IVD, reagent	Комлемент хүчин зүйл H IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of complement factor H in a clinical specimen.	B
6743	42656	2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) IVD, reagent	2-этилидин-1,5-диметил-3,3-дифенилпирролидин (EDDP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the methadone metabolite 2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) in a clinical specimen.	B

6744	42658	Human chorionic gonadotropin beta-core fragment IVD, kit, enzyme immunoassay (EIA)	Хүний chorionic gonadotropin бета-цөмийн фрагмент IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6745	42661	Barbiturate IVD, kit, chemiluminescent immunoassay	Барбитурат IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of barbiturates in a clinical specimen, using a chemiluminescent immunoassay method.	B
6746	42662	Benzodiazepine group IVD, kit, chemiluminescent immunoassay	Бензодиазепин бүлгийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple benzodiazepines in a clinical specimen, using a chemiluminescent immunoassay method.	B
6747	42663	Human chorionic gonadotropin beta-core fragment IVD, kit, rapid ICT, clinical	Хүний chorionic gonadotropin beta-core fragment IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-) quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6748	42664	Human chorionic gonadotropin beta-core fragment IVD, kit, chemiluminescent immunoassay	Хүний chorionic gonadotropin бета-цөмийн фрагмент IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen, using a chemiluminescent immunoassay method.	B
6749	42667	Minichromosome maintenance protein 5 (MCM5) IVD, calibrator	Минихромосомын засвар үйлчилгээ уураг 5 (MCM5) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of minichromosome maintenance protein 5 (MCM5) in a clinical specimen.	B

6750	42670	Human chorionic gonadotropin alpha-subunit IVD, reagent	Хүний chorionic gonadotropin альфа дэд нэгж IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen.	B
6751	42673	Complement factor H antibody IVD, calibrator	Complement factor H эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to complement factor H in a clinical specimen.	B
6752	42678	Tricyclic antidepressant IVD, kit, chemiluminescent immunoassay	Трициклик антидепрессант IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using a chemiluminescent immunoassay method.	B
6753	42679	Opiate/opiate metabolite IVD, kit, chemiluminescent immunoassay	Опиат/опиатын метаболит IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen, using a chemiluminescent immunoassay method.	B
6754	42683	Minichromosome maintenance protein 5 (MCM5) IVD, control	Минихромосомын засвар үйлчилгээ уураг 5 (MCM5) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of minichromosome maintenance protein 5 (MCM5) in a clinical specimen.	B
6755	42685	Complement factor H IVD, kit, enzyme immunoassay (EIA)	Комплемент хүчин зүйл H IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement factor H in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6756	42689	Ornithine carbamoyltransferase IVD, calibrator	Орнитин карбамойлтрансфераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ornithine carbamoyltransferase in a clinical specimen.	B
6757	42691	Buprenorphine IVD, calibrator	Бупренорфин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of buprenorphine in a clinical specimen.	B

6758	42695	Buprenorphine IVD, reagent	Бупренорфин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of buprenorphine in a clinical specimen.	B
6759	42708	Cartilage oligomeric matrix protein (COMP) IVD, calibrator	Мөгөөрсний олигомер матриц уураг (COMP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of cartilage oligomeric matrix protein (COMP) in a clinical specimen.	B
6760	42725	Adiponectin IVD, control	Адипонектин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of adiponectin in a clinical specimen.	B
6761	42728	Human chorionic gonadotropin beta-core fragment IVD, reagent	Хүний chorionic gonadotropin бета-цөмийн фрагмент IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen.	B
6762	42729	Human chorionic gonadotropin beta-core fragment IVD, control	Хүний chorionic gonadotropin бета үндсэн фрагмент IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen.	B
6763	42730	Human chorionic gonadotropin beta-core fragment IVD, calibrator	Хүний chorionic gonadotropin beta-core fragment IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen.	B
6764	42742	Drug/toxicology adulteration IVD, kit, chemiluminescent immunoassay	Мансууруулах бодис / хор судлалын хуурамчаар үйлдэх IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for detection of the adulteration of a clinical specimen for drug and/or toxicology testing, using a chemiluminescent immunoassay method.	B

6765	42748	Lecithin-cholesterol acyltransferase (LCAT) IVD, kit, spectrophotometry	Лецитин-холестерол ацилтрансфераза (LCAT) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme lecithin-cholesterol acyltransferase (LCAT) in a clinical specimen, using a spectrophotometry method.	B
6766	42749	Cartilage oligomeric matrix protein (COMP) IVD, control	Мөгөөрсний олигомер матриц уураг (COMP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of cartilage oligomeric matrix protein (COMP) in a clinical specimen.	B
6767	42751	Buprenorphine IVD, kit, enzyme immunoassay (EIA)	Бупренорфины IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of buprenorphine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6768	42756	Ornithine carbamoyltransferase IVD, control	Орнитин карбамойлтрансфераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ornithine carbamoyltransferase in a clinical specimen.	B
6769	42758	Superoxide dismutase (SOD) IVD, kit, enzyme immunoassay (EIA)	Супероксид дисмутаза (SOD) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of superoxide dismutase (SOD) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6770	42760	Buprenorphine IVD, control	Бупренорфин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of buprenorphine in a clinical specimen.	B
6771	42766	Complement factor H antibody IVD, reagent	Комплемент хүчин зүйл H эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to complement factor H in a clinical specimen.	B
6772	42767	Carbonic anhydrase IVD, calibrator	Нүүрстөрөгчийн ангидраз IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of carbonic anhydrase in a clinical specimen.	B
6773	42768	Carbonic anhydrase IVD, reagent	Нүүрстөрөгчийн ангидраз IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of carbonic anhydrase in a clinical specimen.	B

6774	42770	Arbekacin therapeutic drug monitoring IVD, calibrator	Арбекацин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug arbekacin in a clinical specimen.	B
6775	42777	Aprindine therapeutic drug monitoring IVD, reagent	Априндины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen.	B
6776	42784	Branched-chain amino acids to tyrosine ratio (BTR) IVD, kit, spectrophotometry	Салаалсан гинжин амин хүчлүүдийн тирозины харьцаа (BTR) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used to determine the molar ratio of branched-chain amino acids to tyrosine (BTR) in a clinical specimen, using a spectrophotometry method.	B
6777	42786	Multiple steroid hormone IVD, calibrator	Олон стероид гормоны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple steroid hormones in a clinical specimen.	B
6778	42790	Bromperidol therapeutic drug monitoring IVD, kit, liquid chromatography	Bromperidol-ийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug bromperidol in a clinical specimen, using a liquid chromatography method.	B
6779	42792	Branched-chain amino acids to tyrosine ratio (BTR) IVD, control	Салбарласан гинжин амин хүчлүүдийн тирозины харьцаа (BTR) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to determine the branched-chain amino acids to tyrosine ratio (BTR) in a clinical specimen.	B
6780	42806	Monoamine oxidase (MAO) IVD, calibrator	Моноамин оксидаза (MAO) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the enzyme monoamine oxidase (MAO) in a clinical specimen.	B
6781	42807	Monoamine oxidase (MAO) IVD, reagent	Моноамин оксидаза (MAO) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the enzyme monoamine oxidase (MAO) in a clinical specimen.	B

6782	43450	Adrenomedullin (ADM) IVD, control	Адреномедуллин (ADM) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of adrenomedullin (ADM) in a clinical specimen.	B
6783	43488	Sulfidoleukotriene IVD, reagent	Сульфидолейкотриен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sulfidoleukotrienes, in a clinical specimen.	B
6784	43489	Cartilage oligomeric matrix protein (COMP) IVD, reagent	Мөгөөрсний олигомер матриц уураг (COMP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of cartilage oligomeric matrix protein (COMP) in a clinical specimen.	B
6785	43502	Lipid peroxide IVD, calibrator	Липидийн хэт исэл IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lipid peroxide in a clinical specimen.	B
6786	43540	Adiponectin IVD, reagent	Адипонектин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of adiponectin in a clinical specimen.	B
6787	43552	Cholesteryl ester transfer protein (CETP) IVD, calibrator	Холестерилийн эфир дамжуулах уураг (CETP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of cholesteryl ester transfer protein (CETP) in a clinical specimen.	B
6788	43562	Midregional pro-adrenomedullin (MR-proADM) IVD, reagent	Дунд бүсийн про-адреномедуллин (MR-proADM) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of midregional pro-adrenomedullin (MR-proADM) in a clinical specimen.	B
6789	43570	Branched-chain amino acids to tyrosine ratio (BTR) IVD, kit, liquid chromatography	Салбарласан гинжин амин хүчлүүдийн тирозины харьцаа (BTR) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used to determine the molar ratio of branched-chain amino acids to tyrosine (BTR) in a clinical specimen, using a liquid chromatography method.	B

6790	43572	Arbekacin therapeutic drug monitoring IVD, control	Арбекацин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug arbekacin in a clinical specimen.	B
6791	43575	T-cell receptor excision circle (TREC) IVD, calibrator	Т-эсийн рецепторыг хасах тойрог (TREC) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of T-cell receptor excision circles, or circular remnants of deoxyribonucleic acid (DNA) formed during normal T-cell development, in a clinical specimen.	B
6792	43576	T-cell receptor excision circle (TREC) IVD, control	Т-эсийн рецепторыг хасах тойрог (TREC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of T-cell receptor excision circles, or circular remnants of deoxyribonucleic acid (DNA) formed during normal T-cell development, in a clinical specimen.	B
6793	43577	Sulfidoleukotriene IVD, control	Сульфидолейкотриен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sulfidoleukotrienes, in a clinical specimen.	B
6794	43582	Clara cell protein IVD, calibrator	Клара эсийн уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of Clara cell protein, also known as Clara cell protein 10 (CC10), CC16, uteroglobin, urinary protein 1 and Clara cell secretory protein, in a clinical specimen.	B
6795	43599	Hepatocyte growth factor (HGF) IVD, control	Элэгний өсөлтийн хүчин зүйл (HGF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of hepatocyte growth factor (HGF) in a clinical specimen.	B
6796	43604	Azithromycin minimum inhibitory concentration (MIC) IVD	Азитромицины дарангуйлах хамгийн бага концентраци (MIC) IVD	A graduated test strip or collection of reagents containing a specified concentration gradient of the antimicrobial azithromycin, intended to be used to determine the minimum inhibitory concentration (MIC) for a particular microorganism, isolated from a clinical specimen by culture.	B
6797	43605	Aprindine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Априндины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

6798	43616	Superoxide dismutase (SOD) IVD, reagent	Супероксид дисмутаза (SOD) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of superoxide dismutase (SOD) in a clinical specimen.	B
6799	43622	Hepatocyte growth factor (HGF) IVD, kit, enzyme immunoassay (EIA)	Элэгний өсөлтийн хүчин зүйл (HGF) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of hepatocyte growth factor (HGF) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6800	43624	Human immunoglobulin A (IgA)/IgG/IgM murine conjugate antibody reagent IVD	Хүний иммуноглобулин A (IgA)/IgG/IgM хулганы коньюгат эсрэгбиеийн урвалж IVD	Multiple murine immunoglobulins (sourced from a mouse) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin A (IgA), immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	B
6801	43625	Allergen-specific immunoglobulin G (IgG) antibody IVD, control	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen.	B
6802	43626	Tumour necrosis factor receptor superfamily IVD, reagent	Хавдрын үхжилийн хүчин зүйлийн рецепторын дээд бүлгийн IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple members of the tumour necrosis factor receptor superfamily (e.g., GITR, TNFR1, 4-1BB) in a clinical specimen.	B
6803	43631	Aprindine therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Априндины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen, using a fluorescent immunoassay method.	B

6804	43641	Cannabinoid/cannabinoid metabolite IVD, kit, chemiluminescent immunoassay	Каннабиноид/каннабиноид метаболит IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6805	43643	Buprenorphine IVD, kit, chemiluminescent immunoassay	Бупренорфин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of buprenorphine in a clinical specimen, using a chemiluminescent immunoassay method.	B
6806	43675	Superoxide dismutase (SOD) IVD, kit, chemiluminescent immunoassay	Супероксид дисмутаза (SOD) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of superoxide dismutase (SOD) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6807	43682	Arbekacin therapeutic drug monitoring IVD, reagent	Арбекацин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug arbekacin in a clinical specimen.	B
6808	43689	Human chorionic gonadotropin alpha-subunit IVD, kit, chemiluminescent immunoassay	Хүний chorionic gonadotropin alpha-дэд нэгж IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6809	43703	Hepatocyte growth factor (HGF) IVD, calibrator	Гепатоцитын өсөлтийн хүчин зүйл (HGF) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of hepatocyte growth factor (HGF) in a clinical specimen.	B
6810	43711	Branched-chain amino acid IVD, reagent	Салбарласан гинжин амин хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of branched-chain amino acid in a clinical specimen.	B
6811	43716	Hepatocyte growth factor (HGF) IVD, reagent	Элэгний өсөлтийн хүчин зүйл (HGF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of hepatocyte growth factor (HGF) in a clinical specimen.	B

6812	43719	Adiponectin IVD, calibrator	Адипонектин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of adiponectin in a clinical specimen.	B
6813	43722	Pancreatic oncofetal antigen (POA) IVD, calibrator	Нойр булчирхайн онкофетал антиген (POA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pancreatic oncofetal antigen (POA) in a clinical specimen.	B
6814	43724	Multiple steroid hormone IVD, control	Олон стероид гормоны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple steroid hormones in a clinical specimen.	B
6815	43725	Cholesteryl ester transfer protein (CETP) IVD, reagent	Холестерилийн эфир дамжуулах уураг (CETP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of cholesteryl ester transfer protein (CETP) in a clinical specimen.	B
6816	43726	Minichromosome maintenance protein 5 (MCM5) IVD, reagent	Минихромосомын засвар үйлчилгээ уураг 5 (MCM5) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of minichromosome maintenance protein 5 (MCM5) in a clinical specimen.	B
6817	43740	Human chorionic gonadotropin alpha-subunit IVD, kit, rapid ICT, clinical	Хүний chorionic gonadotropin alpha-дэд нэгж IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6818	43743	Multiple steroid hormone IVD, reagent	Олон стероид гормоны IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple steroid hormones in a clinical specimen.	B

6819	43744	Hepatocyte growth factor (HGF) IVD, kit, chemiluminescent immunoassay	Элэгний өсөлтийн хүчин зүйл (HGF) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of hepatocyte growth factor (HGF) in a clinical specimen in a clinical specimen, using a chemiluminescent immunoassay method.	B
6820	43752	Pancreatic oncofetal antigen (POA) IVD, reagent	Нойр булчирхайн онкофетал антиген (POA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pancreatic oncofetal antigen (POA) in a clinical specimen.	B
6821	43756	T-cell receptor excision circle (TREC) IVD, reagent	Т-эсийн рецепторыг хасах тойрог (TREC) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of T-cell receptor excision circles, or circular remnants of deoxyribonucleic acid (DNA) formed during normal T-cell development, in a clinical specimen.	B
6822	43766	Resistin/adipose tissue-specific secretory factor (ADSF) IVD, reagent	Резистин/өөхний эдийн өвөрмөц шүүрлийн хүчин зүйл (ADSF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of resistin, also known as adipose tissue-specific secretory factor (ADSF), in a clinical specimen.	B
6823	43769	Leptin receptor IVD, reagent	Лептин рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of leptin receptors in a clinical specimen.	B
6824	43770	Methylenetetrahydrofolate reductase (MTHFR) deficiency IVD, control	Метилентетрагидрофолат редуктазын (MTHFR) дутагдал IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to diagnose, monitor or predict the genetic disorder methylenetetrahydrofolate reductase (MTHFR) deficiency, an inborn error of folate metabolism associated with mutation in the MTHFR gene.	B
6825	43771	Phenylalanine IVD, kit, enzyme fluorescence	Фенилаланин IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of phenylalanine in a clinical specimen, using an enzyme fluorescence method.	B
6826	43774	Human chorionic gonadotropin alpha-subunit IVD, calibrator	Хүний chorionic gonadotropin альфа дэд нэгж IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen.	B

6827	43775	Allergen-specific immunoglobulin G (IgG) antibody IVD, reagent	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen.	B
6828	43778	Resistin/adipose tissue-specific secretory factor (ADSF) IVD, control	Резистин/өөх тосны эдийн өвөрмөц шүүрлийн хүчин зүйл (ADSF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of resistin, also known as adipose tissue-specific secretory factor (ADSF), in a clinical specimen.	B
6829	43785	Clara cell protein IVD, reagent	Клара эсийн уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of Clara cell protein, also known as Clara cell protein 10 (CC10), CC16, uteroglobin, urinary protein 1 and Clara cell secretory protein, in a clinical specimen.	B
6830	43786	Leptin receptor IVD, control	Лептин рецептор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of leptin receptors in a clinical specimen.	B
6831	43790	Resistin/adipose tissue-specific secretory factor (ADSF) IVD, calibrator	Резистин/өөхний эдийн өвөрмөц шүүрлийн хүчин зүйл (ADSF) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of resistin, also known as adipose tissue-specific secretory factor (ADSF), in a clinical specimen.	B
6832	43791	Tumour necrosis factor receptor superfamily IVD, calibrator	Хавдрын үхжилийн хүчин зүйлийн рецепторын superfamily IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple members of the tumour necrosis factor receptor superfamily (e.g., GITR, TNFR1, 4-1BB) in a clinical specimen.	B
6833	43792	Tumour necrosis factor receptor superfamily IVD, control	Хавдрын үхжилийн хүчин зүйлийн рецепторын superfamily IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple members of the tumour necrosis factor receptor superfamily (e.g., GITR, TNFR1, 4-1BB) in a clinical specimen.	B

6834	43794	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, calibrator	Харшлын өвөрмөц/нийт иммуноглобулин Е (IgE) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) and total immunoglobulin E (IgE total) antibodies in a clinical specimen.	B
6835	43796	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, reagent	Харшлын өвөрмөц/нийт иммуноглобулин Е (IgE) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) and total immunoglobulin E (IgE total) antibodies in a clinical specimen.	B
6836	43797	Clara cell protein IVD, control	Клара эсийн уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of Clara cell protein, also known as Clara cell protein 10 (CC10), CC16, uteroglobin, urinary protein 1 and Clara cell secretory protein, in a clinical specimen.	B
6837	43798	Allergen-specific immunoglobulin G (IgG) antibody IVD, calibrator	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen.	B
6838	43801	Human chorionic gonadotropin alpha-subunit IVD, control	Хүний chorionic gonadotropin альфа дэд нэгж IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-subunit human chorionic gonadotropin (alpha-HCG) in a clinical specimen.	B
6839	43802	2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) IVD, control	2-этилидин-1,5-диметил-3,3-дифенилпирролидин (EDDP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the methadone metabolite 2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) in a clinical specimen.	B
6840	43803	Branched-chain amino acids to tyrosine ratio (BTR) IVD, reagent	Салбарласан гинжин амин хүчлүүдийн тирозины харьцаа (BTR) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to determine the branched-chain amino acids to tyrosine ratio (BTR) in a clinical specimen.	B

6841	43807	Sulfidoleukotriene IVD, kit, enzyme immunoassay (EIA)	Сульфидолейкотриен IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sulfidoleukotrienes in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6842	44250	Blood specific gravity kit IVD	Цусны өвөрмөц таталцлын иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to measure the specific gravity (density of a substance relative to the density of water) of a blood specimen, typically to test for conditions related to a patient's hydration status or other abnormal conditions.	B
6843	44325	Pregnancy specific protein-1 kit	Жирэмсний тусгай уураг-1 иж бүрдэл	A device consisting of one or more reagent(s), and other items used to determine the concentration of pregnancy specific protein-1 (SP-1) in a clinical sample.	B
6844	44695	High density lipoprotein (HDL) cholesterol IVD, control	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen.	B
6845	44696	High density lipoprotein (HDL) cholesterol IVD, calibrator	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen.	B
6846	44697	Total cholesterol lipid IVD, control	Нийт холестерины липидийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total cholesterol lipid in a clinical specimen.	B
6847	44698	Total cholesterol lipid IVD, calibrator	Нийт холестерины липидийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total cholesterol lipid in a clinical specimen.	B
6848	44699	Creatinine IVD, control	Креатинин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of creatinine in a clinical specimen.	B
6849	44700	Creatinine IVD, calibrator	Креатинин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of creatinine in a clinical specimen.	B

6850	44701	Triglyceride IVD, control	Триглицерид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of triglycerides in a clinical specimen.	B
6851	44702	Triglyceride IVD, calibrator	Триглицеридын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of triglycerides in a clinical specimen.	B
6852	44703	Uric acid IVD, control	Шээсний хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of uric acid in a clinical specimen.	B
6853	44704	Uric acid IVD, calibrator	Шээсний хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of uric acid in a clinical specimen.	B
6854	45702	1,3-Beta-D-glucan IVD, calibrator	1,3-Бета-D-глюкан IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen.	B
6855	45703	1,3-Beta-D-glucan IVD, control	1,3-Бета-D-глюкан IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen.	B
6856	45706	17-Hydroxyketosterone (17OH) IVD, calibrator	17-гидроксикетостерон (17OH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxyketosterone (17OH) in a clinical specimen.	B
6857	45707	17-Hydroxyketosterone (17OH) IVD, control	17-гидроксикетостерон (17OH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxyketosterone (17OH) in a clinical specimen.	B
6858	45708	17-Hydroxyprogesterone IVD, calibrator	17-гидроксипрогестерон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen.	B
6859	45709	17-Hydroxyprogesterone IVD, control	17-гидроксипрогестерон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen.	B

6860	45710	17-Ketogenic steroid (17KGS) IVD, calibrator	17-Кетоген стероид (17KGS) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-ketogenic steroids (17KGS) in a clinical specimen.	B
6861	45711	17-Ketogenic steroid (17KGS) IVD, control	17-Кетоген стероид (17KGS) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-ketogenic steroids (17KGS) in a clinical specimen.	B
6862	45730	1,5-Anhydroglucitol IVD, calibrator	1,5-Ангидроглюцитол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of 1,5-anhydroglucitol in a clinical specimen.	B
6863	45731	1,5-Anhydroglucitol IVD, control	1,5-Ангидроглюцитол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of 1,5-anhydroglucitol in a clinical specimen.	B
6864	45761	17-Ketosteroid (17KS) IVD, calibrator	17-Кетостероид (17KS) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS) in a clinical specimen.	B
6865	45762	17-Ketosteroid (17KS) IVD, control	17-Кетостероид (17KS) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS) in a clinical specimen.	B
6866	45765	2-5A synthetase IVD, calibrator	2-5A синтетаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme 2-5A synthetase, also known as 2-5 oligoadenylate synthetase, in a clinical specimen.	B
6867	45766	2-5A synthetase IVD, control	2-5A синтетаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme 2-5A synthetase, also known as 2-5 oligoadenylate synthetase, in a clinical specimen.	B
6868	45767	Androstanediol glucuronide (3a-diol G) IVD, calibrator	Андростандиол глюкуронид (3a-диол G) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide in a clinical specimen.	B

6869	45768	Androstanediol glucuronide (3a-diol G) IVD, control	Андростандиол глюкуронид (3а-диол G) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide in a clinical specimen.	B
6870	45772	5-Nucleotidase IVD, calibrator	5-нуклеотидазын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 5-nucleotidase, also known as CD73, in a clinical specimen.	B
6871	45773	5-Nucleotidase IVD, control	5-нуклеотидазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 5-nucleotidase, also known as CD73, in a clinical specimen.	B
6872	45776	Afamin IVD, calibrator	Афамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of afamin, also known as alpha-albumin (previously known as alpha-1-T glycoprotein) in a clinical specimen.	B
6873	45777	Afamin IVD, control	Афамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of afamin, also known as alpha-albumin (previously known as alpha-1-T glycoprotein) in a clinical specimen.	B
6874	45778	Acetaminophen IVD, calibrator	Ацетаминофен IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen.	B
6875	45780	Acetaminophen IVD, control	Ацетаминофен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen.	B
6876	45789	Calcium (Ca2+) IVD, kit, spectrophotometry	Кальци (Ca2+) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of calcium (Ca2+) in a clinical specimen, using a spectrophotometry method.	B

6877	45795	Total angiotensin/angiotensin subtype IVD, calibrator	Нийт ангиотензин/ангиотензин дэд төрөл IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total angiotensin or angiotensin subtypes in a clinical specimen.	B
6878	45796	Total angiotensin/angiotensin subtype IVD, control	Нийт ангиотензин/ангиотензин дэд төрөл IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total angiotensin or angiotensin subtypes in a clinical specimen.	B
6879	45799	Alpha-fetoprotein-L3 fraction (AFP-L3) IVD, calibrator	Альфа-фетопротейн-L3 фракц (AFP-L3) IVD, калибратор	A material used to establish known points of reference for an assay intended to qualitatively and/or quantitatively detect alpha-fetoprotein-L3 fraction (AFP-L3) in a clinical specimen.	B
6880	45800	Alpha-fetoprotein-L3 fraction (AFP-L3) IVD, control	Альфа-фетопротейн-L3 фракц (AFP-L3) IVD, хяналт	A material used to verify the performance of an assay intended to qualitatively and/or quantitatively detect alpha-fetoprotein-L3 fraction (AFP-L3) in a clinical specimen.	B
6881	45801	Alanine aminotransferase (ALT) IVD, calibrator	Аланин аминотрансфераза (ALT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alanine aminotransferase (ALT) in a clinical specimen.	B
6882	45802	Alanine aminotransferase (ALT) IVD, control	Аланин аминотрансфераза (ALT) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alanine aminotransferase (ALT) in a clinical specimen.	B
6883	45803	Albumin IVD, calibrator	Альбумин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of albumin in a clinical specimen.	B
6884	45817	11-Deoxycortisol IVD, calibrator	11-Деоксикортизол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 11-deoxycortisol in a clinical specimen.	B
6885	45818	11-Deoxycortisol IVD, control	11-Деоксикортизол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 11-deoxycortisol in a clinical specimen.	B
6886	45822	Albumin-globulin ratio IVD, calibrator	Альбумин-глобулины харьцаа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used to determine the albumin-globulin ratio of a clinical specimen.	B

6887	45823	Albumin-globulin ratio IVD, control	Альбумин-глобулины харьцаа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to determine the albumin-globulin ratio of a clinical specimen.	B
6888	45825	Aldolase IVD, calibrator	Альдолаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of aldolase in a clinical specimen.	B
6889	45826	Aldolase IVD, control	Альдолаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of aldolase in a clinical specimen.	B
6890	45827	Aldosterone IVD, calibrator	Альдостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of aldosterone in a clinical specimen.	B
6891	45828	Aldosterone IVD, control	Альдостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of aldosterone in a clinical specimen.	B
6892	45841	Alpha-1-acid glycoprotein (orosomucoid) IVD, calibrator	Альфа-1 хүчлийн гликопротейн (оросомукоид) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-1-acid glycoprotein (orosomucoid) in a clinical specimen.	B
6893	45842	Alpha-1-antichymotrypsin IVD, calibrator	Альфа-1-антихимотрипсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-antichymotrypsin in a clinical specimen.	B
6894	45843	Alpha-1-antichymotrypsin IVD, control	Альфа-1-антихимотрипсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-1-antichymotrypsin in a clinical specimen.	B
6895	45932	Adenosine deaminase (ADA) IVD, calibrator	Аденозин деаминаза (ADA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of adenosine deaminase (ADA) in a clinical specimen.	B
6896	45933	Adenosine deaminase (ADA) IVD, control	Аденозин деаминаза (ADA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of adenosine deaminase (ADA) in a clinical specimen.	B

6897	45936	Alpha-globulin IVD, calibrator	Альфа-глобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-globulins in a clinical specimen.	B
6898	45938	Alpha-1-B glycoprotein IVD, calibrator	Альфа-1-В гликопротейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-1-B glycoprotein in a clinical specimen.	B
6899	45939	Alpha-1-B glycoprotein IVD, control	Альфа-1-В гликопротейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-1-B glycoprotein in a clinical specimen.	B
6900	45942	Alpha-2-AP-glycoprotein IVD, calibrator	Альфа-2-АП-гликопротейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-2-AP-glycoprotein in a clinical specimen.	B
6901	45944	Alpha-2-glycoprotein IVD, calibrator	Альфа-2-гликопротейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-2-glycoprotein in a clinical specimen.	B
6902	45946	Alpha-2-HS-glycoprotein (AHSG)/fetuin-A IVD, calibrator	Альфа-2-HS-гликопротеин (AHSG)/фетуин-А IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-2-HS-glycoprotein (AHSG), also referred to as fetuin-A in a clinical specimen.	B
6903	45950	Alpha-hydroxybutyrate dehydrogenase IVD, calibrator	Альфа-гидроксибутиратдегидрогеназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-hydroxybutyrate dehydrogenase in a clinical specimen.	B
6904	45951	Alpha-hydroxybutyrate dehydrogenase IVD, control	Альфа-гидроксибутиратдегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-hydroxybutyrate dehydrogenase in a clinical specimen.	B
6905	45952	Aluminium IVD, calibrator	Хөнгөн цагаан IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of aluminium in a clinical specimen.	B
6906	45954	Aluminium IVD, control	Хөнгөн цагаан IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of aluminium in a clinical specimen.	B

6907	45956	Amikacin therapeutic drug monitoring IVD, calibrator	Амикацин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen.	B
6908	45957	Amikacin therapeutic drug monitoring IVD, control	Амикацин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen.	B
6909	45986	Amitriptyline IVD, calibrator	Амитриптилин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of amitriptyline in a clinical specimen.	B
6910	45987	Amitriptyline IVD, control	Амитриптилин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of amitriptyline in a clinical specimen.	B
6911	45994	Amphetamine-specific IVD, calibrator	Амфетамины тусгай IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of a specific amphetamine in a clinical specimen.	B
6912	45995	Amphetamine-specific IVD, control	Амфетамины өвөрмөц IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of a specific amphetamine in a clinical specimen.	B
6913	46013	Androsterone IVD, calibrator	Андростерон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of androsterone in a clinical specimen.	B
6914	46014	Androsterone IVD, control	Андростерон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of androsterone in a clinical specimen.	B
6915	46015	Angiotensin converting enzyme (ACE) IVD, calibrator	Ангиотензин хувиргах фермент (ACE) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of angiotensin converting enzyme (ACE) in a clinical specimen.	B
6916	46016	Angiotensin converting enzyme (ACE) IVD, control	Ангиотензин хувиргах фермент (ACE) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of angiotensin converting enzyme (ACE) in a clinical specimen.	B

6917	46020	Acetylcholine receptor antibody IVD, calibrator	Ацетилхолин рецепторын эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptors in a clinical specimen.	B
6918	46021	Acetylcholine receptor antibody IVD, control	Ацетилхолин рецепторын эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptors in a clinical specimen.	B
6919	46025	Anticardiolipin-B2-glycoprotein I complex antibody IVD, calibrator	Антикардиолипин-B2-гликопротейн I цогцолбор эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to cardiolipin-B2-glycoprotein I complex in a clinical specimen.	B
6920	46026	Anticardiolipin-B2-glycoprotein I complex antibody IVD, control	Антикардиолипин-B2-гликопротейн I цогцолбор эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple classes of antibodies to cardiolipin-B2-glycoprotein I complex in a clinical specimen.	B
6921	46039	Agalactosyl immunoglobulin G (IgG) antibody IVD, calibrator	Агалактозил иммуноглобулин G (IgG) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of agalactosyl forms of immunoglobulin G (IgG) antibodies, also known as agalactosyl IgG, agalacto IgG or Gal(0), in a clinical specimen.	B
6922	46040	Agalactosyl immunoglobulin G (IgG) antibody IVD, control	Агалактозил иммуноглобулин G (IgG) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of agalactosyl forms of immunoglobulin G (IgG) antibodies, also known as agalactosyl IgG, agalacto IgG or Gal(0), in a clinical specimen.	B
6923	46043	Centromere antibody IVD, calibrator	Центромер эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen.	B
6924	46044	Centromere antibody IVD, control	Центромер эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen.	B

6925	46060	SSA/Ro antibody (Sjogren's antibody) IVD, calibrator	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen.	B
6926	46061	SSA/Ro antibody (Sjogren's antibody) IVD, control	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen.	B
6927	46062	SSB/La antibody (Sjogren's antibody) IVD, calibrator	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen.	B
6928	46063	SSB/La antibody (Sjogren's antibody) IVD, control	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen.	B
6929	46064	Total apolipoprotein IVD, calibrator	Нийт apolipoprotein IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen.	B
6930	46065	Apolipoprotein C-II (Apo C2) IVD, calibrator	Аполипопротейн C-II (Apo C2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein C-II (Apo C2) lipid in a clinical specimen.	B
6931	46066	Apolipoprotein C-II (Apo C2) IVD, control	Аполипопротейн C-II (Apo C2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein C-II (Apo C2) lipid in a clinical specimen.	B
6932	46067	Apolipoprotein C-III (Apo C3) IVD, calibrator	Apolipoprotein C-III (Apo C3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein C-III (Apo C3) lipid in a clinical specimen.	B
6933	46068	Apolipoprotein C-III (Apo C3) IVD, control	Аполипопротейн C-III (Apo C3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein C-III (Apo C3) lipid in a clinical specimen.	B
6934	46069	Total apolipoprotein IVD, control	Нийт аполипопротеины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen.	B

6935	46070	Apolipoprotein E (Apo E) IVD, calibrator	Apolipoprotein E (Apo E) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of apolipoprotein E (Apo E) lipid in a clinical specimen.	B
6936	46071	Apolipoprotein E (Apo E) IVD, control	Аполипопротейн Е (Апо Е) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of apolipoprotein E (Apo E) lipid in a clinical specimen.	B
6937	46072	Double stranded DNA antibody (anti-dsDNA) IVD, calibrator	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen.	B
6938	46073	Single stranded DNA antibody (anti-ssDNA) IVD, calibrator	Нэг судалтай ДНХ-ийн эсрэгбие (эсрэг ssDNA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to single stranded DNA (anti-ssDNA) in a clinical specimen.	B
6939	46074	Single stranded DNA antibody (anti-ssDNA) IVD, control	Нэг хэлхээтэй ДНХ-ийн эсрэгбие (эсрэг ssDNA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to single stranded DNA (anti-ssDNA) in a clinical specimen.	B
6940	46079	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, calibrator	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen.	B
6941	46080	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, control	Олон хандлах цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen.	B
6942	46081	Ribonucleoprotein antibody (anti-RNP) IVD, calibrator	Рибонуклеопротеины эсрэгбие (anti-RNP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ribonucleoprotein (anti-RNP) in a clinical specimen.	B

6943	46082	Ribonucleoprotein antibody (anti-RNP) IVD, control	Рибонуклеопротеины эсрэгбие (anti-RNP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ribonucleoprotein (anti-RNP) in a clinical specimen.	B
6944	46084	Smith antibody (anti-Sm) IVD, calibrator	Смитийн эсрэгбие (anti-Sm) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen.	B
6945	46085	Smith antibody (anti-Sm) IVD, control	Смитийн эсрэгбие (anti-Sm) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen.	B
6946	46086	Smooth muscle antibody IVD, calibrator	Гөлгөр булчингийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to smooth muscle in a clinical specimen.	B
6947	46510	Human chorionic gonadotropin beta-core fragment IVD, kit, radioimmunoassay	Хүний chorionic gonadotropin beta-core fragment IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human chorionic gonadotropin beta-core fragment, a metabolite of human chorionic gonadotropin beta-subunit (beta-HCG), in a clinical specimen, using a radioimmunoassay method.	B
6948	46603	Branched-chain amino acid IVD, control	Салбарласан гинжин амин хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of branched-chain amino acid in a clinical specimen.	B
6949	46765	Ribosomal phosphoprotein antibody IVD, calibrator	Рибосомын фосфопротеины эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen.	B
6950	46766	Ribosomal phosphoprotein antibody IVD, control	Рибосомын фосфопротеины эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen.	B
6951	46795	Magnesium (Mg2+) IVD, kit, spectrophotometry	Магни (Mg2+) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of magnesium (Mg2+) in a clinical specimen, using a spectrophotometry method.	B

6952	46836	Aprindine therapeutic drug monitoring IVD, calibrator	Априндины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen.	B
6953	46837	Aprindine therapeutic drug monitoring IVD, control	Априндины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug aprindine in a clinical specimen.	B
6954	46883	Antimony IVD, calibrator	Сурьма IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antimony in a clinical specimen.	B
6955	46884	Arsenic IVD, calibrator	Хүнцэл IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of arsenic in a clinical specimen.	B
6956	46887	Lead IVD, calibrator	Хар тугалга IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lead in a clinical specimen.	B
6957	46890	Zinc IVD, calibrator	Цайр IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of zinc in a clinical specimen.	B
6958	46891	Antimony IVD, control	Сурьма IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antimony in a clinical specimen.	B
6959	46892	Arsenic IVD, control	Хүнцэл IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of arsenic in a clinical specimen.	B
6960	46895	Lead IVD, control	Тэргүүлэх IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lead in a clinical specimen.	B
6961	46898	Zinc IVD, control	Цайр IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of zinc in a clinical specimen.	B

6962	46987	Myoglobin IVD, kit, rapid ICT, clinical	Миоглобин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of myoglobin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6963	46989	Troponin I IVD, kit, rapid ICT, clinical	Тропонин I IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of troponin I in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6964	46990	Troponin T IVD, kit, rapid ICT, clinical	Troponin T IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of troponin T in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6965	46994	Multiple drugs of abuse IVD, kit, rapid ICT, clinical	IVD, иж бүрдэл, шуурхай ICT, эмнэлзүйн хүчирхийллийн олон эм	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple drugs of abuse in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

6966	46999	Triglyceride IVD, kit, rapid ICT, clinical	Триглицеридын IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of triglycerides in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6967	47002	Ketone (acetoacetate) IVD, kit, rapid colorimetric, clinical	Кетон (ацетоацетат) IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ketone (acetoacetate) in a clinical specimen within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6968	47041	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, kit, rapid ICT, clinical	B төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
6969	47134	Tissue transglutaminase antibody IVD, kit, rapid ICT, clinical	Эдийн трансглютаминазын эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the screening of Coeliac disease (intolerance to gluten). It is not intended to be used for self-testing.	B

6970	47207	Hyaluronic acid (HA) IVD, calibrator	Гиалуроны хүчил (HA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of hyaluronic acid (HA) in a clinical specimen.	B
6971	47208	Hyaluronic acid (HA) IVD, control	Гиалуроны хүчил (HA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of hyaluronic acid (HA) in a clinical specimen.	B
6972	47209	Hyaluronic acid (HA) IVD, kit, binding assay	Гиалуроны хүчил (HA) IVD, иж бүрдэл, холбох шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of hyaluronic acid (HA) in a clinical specimen, using a binding assay.	B
6973	47210	Hyaluronic acid (HA) IVD, reagent	Гиалуроны хүчил (HA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of hyaluronic acid (HA) in a clinical specimen.	B
6974	47211	Alpha-fetoprotein-L3 fraction (AFP-L3) IVD, kit, fluorescent immunoassay	Альфа-фетопротейн-L3 фракц (AFP-L3) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein-L3 fraction (AFP-L3) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of hepatocellular carcinoma (HCC).	B
6975	47212	Alpha-fetoprotein-L3 fraction (AFP-L3) IVD, reagent	Альфа-фетопротейн-L3 фракц (AFP-L3) IVD, урвалж	A biochemical agent intended to be used with a parent IVD to perform a specific function in an assay used to qualitatively and/or quantitatively detect alpha-fetoprotein-L3 fraction (AFP-L3) in a clinical specimen.	B
6976	47213	Des-gamma-carboxyprothrombin (DCP) IVD, calibrator	Дес-гамма-карбоксипротромбин (DCP) IVD, калибратор	A material used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of des-gamma-carboxyprothrombin (DCP) [protein induced by vitamin K absence-II (PIVKA-II)] in a clinical specimen.	B
6977	47214	Des-gamma-carboxyprothrombin (DCP) IVD, control	Дес-гамма-карбоксипротромбин (DCP) IVD, хяналт	A material used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of des-gamma-carboxyprothrombin (DCP) [protein induced by vitamin K absence-II (PIVKA-II)] in a clinical specimen.	B

6978	47215	Des-gamma-carboxyprothrombin (DCP) IVD, kit, fluorescent immunoassay	Дес-гамма-карбоксипротромбин (DCP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of des-gamma-carboxyprothrombin (DCP) [protein induced by vitamin K absence-II (PIVKA-II)] in a clinical specimen using a fluorescent immunoassay method. This assay is typically used as an aid for the diagnosis of hepatocellular carcinoma (HCC), monitoring of high-risk patients (e.g., hepatitis virus infections, chronic liver disease, cirrhosis) for the development of HCC, and in the management/treatment of HCC.	B
6979	47216	Des-gamma-carboxyprothrombin (DCP) IVD, reagent	Дес-гамма-карбоксипротромбин (DCP) IVD, урвалж	A biochemical agent intended to be used with a parent IVD to perform a specific function in an assay intended to be used for the qualitative and/or quantitative detection of des-gamma-carboxyprothrombin (DCP) [protein induced by vitamin K absence-II (PIVKA-II)] in a clinical specimen.	B
6980	47350	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, kit, enzyme immunoassay (EIA)	В төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6981	47351	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, kit, chemiluminescent immunoassay	В төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen, using a chemiluminescent immunoassay method.	B
6982	47352	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, kit, fluorescent immunoassay	В төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen, using a fluorescent immunoassay method.	B

6983	47353	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, calibrator	В төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen.	B
6984	47354	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, control	В төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen.	B
6985	47355	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, reagent	төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen.	B
6986	47395	Multiple stroke (cerebral vascular accident) marker IVD, control	Олон цус харвалт (тархины судасны осол) маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple stroke (cerebral vascular accident) markers in a clinical specimen. These stroke markers may include B-type natriuretic protein (BNP), D-dimer, matrix metalloproteinase-9 (MMP9), S100β protein, vascular adhesion molecule (VCAM), neuron-specific enolase (NSE) and/or myelin basic protein (MBP).	B
6987	47396	Multiple stroke (cerebral vascular accident) marker IVD, reagent	Олон тооны цус харвалт (тархины судасны осол) маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple stroke (cerebral vascular accident) markers in a clinical specimen. These stroke markers may include B-type natriuretic protein (BNP), D-dimer, matrix metalloproteinase-9 (MMP9), S100β protein, vascular adhesion molecule (VCAM), neuron-specific enolase (NSE) and/or myelin basic protein (MBP).	B
6988	47418	Collagen type I cross-linked C-telopeptide IVD, calibrator	Коллаген төрлийн I хөндлөн холбоот С-телопептидийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of collagen type I cross-linked C-telopeptides in a clinical specimen.	B

6989	47419	Collagen type I cross-linked C-telopeptide IVD, control	Коллаген I төрлийн хөндлөн холбоот С-телопептидийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of collagen type I cross-linked C-telopeptides in a clinical specimen.	B
6990	47420	Collagen type I cross-linked C-telopeptide IVD, kit, chemiluminescent immunoassay	Коллаген төрлийн I хөндлөн холбоот С-телопептидийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of collagen type I cross-linked C-telopeptides and/or metabolites [e.g., beta-isomerized C-terminal telopeptide of type I collagen (beta-CTx)] in a clinical specimen, using a chemiluminescent immunoassay method. Collagen type I cross-linked C-telopeptide and metabolites are typically used to aid in the diagnosis of conditions associated with elevated bone lysis/resorption (e.g., multiple myeloma, osteolytic metastasis, osteoporosis, rheumatoid arthritis).	B
6991	47421	Collagen type I cross-linked C-telopeptide IVD, kit, enzyme immunoassay (EIA)	Коллаген төрлийн I хөндлөн холбоот С-телопептидийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of collagen type I cross-linked C-telopeptides in a clinical specimen, using an enzyme immunoassay (EIA) method. Collagen type I cross-linked C-telopeptide is a biomarker for bone turnover and elevated levels are associated with conditions of increased bone lysis (e.g., multiple myeloma, osteolytic metastases, and rheumatoid arthritis).	B
6992	47422	Collagen type I cross-linked C-telopeptide IVD, reagent	Коллаген төрлийн I хөндлөн холбоот С-телопептид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of collagen type I cross-linked C-telopeptides in a clinical specimen.	B
6993	47425	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, control	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen.	B

6994	47426	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, fluorescent immunoassay	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen, using a fluorescent immunoassay method.	B
6995	47427	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, enzyme immunoassay (EIA)	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
6996	47428	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, immunoblot	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen, using an immunoblot method.	B
6997	47429	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, calibrator	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen.	B
6998	47430	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, reagent	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen.	B
6999	47626	Agalactosyl immunoglobulin G (IgG) antibody IVD, kit, enzyme immunoassay (EIA)	Агалактозил иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, ферментийн иммуноглобулин (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of agalactosyl forms of immunoglobulin G (IgG) antibodies, also known as agalactosyl IgG, agalacto IgG or Gal(0), in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7000	47627	Agalactosyl immunoglobulin G (IgG) antibody IVD, kit, fluorescent immunoassay	Агалактозил иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of agalactosyl forms of immunoglobulin G (IgG) antibodies, also known as agalactosyl IgG, agalacto IgG or Gal(0), in a clinical specimen, using a fluorescent immunoassay method.	B
7001	47628	Agalactosyl immunoglobulin G (IgG) antibody IVD, reagent	Агалактозил иммуноглобулин G (IgG) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of agalactosyl forms of immunoglobulin G (IgG) antibodies, also known as agalactosyl IgG, agalacto IgG or Gal(0), in a clinical specimen.	B
7002	47868	Multiple-type clinical chemistry analyte profile IVD, calibrator	Олон төрлийн эмнэлзүйн химийн аналитын профиль IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple types of clinical chemistry analytes (e.g., combination of electrolytes, hormones, and proteins) in a clinical specimen, which contribute to or create a full general biochemistry profile.	B
7003	47869	Multiple-type clinical chemistry analyte profile IVD, control	Олон төрлийн эмнэлзүйн химийн аналитын профайл IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple types of clinical chemistry analytes (e.g., combination of electrolytes, hormones, and proteins) in a clinical specimen, which contribute to or create a full general biochemistry profile.	B
7004	48149	Galectin-3 IVD, kit, enzyme immunoassay (EIA)	Галектин-3 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to identify early myocardial fibrosis and heart failure.	B
7005	48150	Galectin-3 IVD, calibrator	Галектин-3 IVD, калибратор	A material which is used to establish known points of reference for an assay that is intended to be used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen.	B
7006	48151	Galectin-3 IVD, control	Галектин-3 IVD, хяналт	A material which is used to verify the performance of an assay that is intended to be used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen.	B

7007	48152	Galectin-3 IVD, reagent	Галектин-3 IVD, урвалж	A reagent which is intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen.	B
7008	48154	Galectin-3 IVD, antibody	Галектин-3 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen.	B
7009	48173	Cystatin C IVD, antibody	Цистатин C IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen.	B
7010	48174	Cystatin C IVD, calibrator	Цистатин C IVD, калибратор	A material which is used to establish known points of reference for an assay that is intended to be used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen.	B
7011	48175	Cystatin C IVD, control	Цистатин C IVD, хяналт	A material which is used to verify the performance of an assay that is intended to be used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen.	B
7012	48177	Cystatin C IVD, reagent	Цистатин C IVD, урвалж	A reagent which is intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen.	B
7013	48178	Cystatin C IVD, kit, nephelometry/turbidimetry	Цистатин C IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen using a nephelometry/turbidimetry method.	B
7014	52848	Multiple lipid analyte IVD, kit, multiple technologies	Олон тооны липидийн аналит IVD, иж бүрдэл, олон технологи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple lipid analytes [e.g., total cholesterol, high-density lipoprotein (HDL), low-density lipoprotein (LDL)] to produce a lipid profile, using a number of different technologies on a single analyser. Some types may also detect additional analytes (e.g., glucose, ketones, uric acid).	B

7015	52862	Multiple gastrointestinal disease marker IVD, kit, enzyme immunoassay (EIA)	Ходоод гэдэсний олон өвчний маркер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with gastrointestinal disease in a clinical specimen, using an enzyme immunoassay (EIA) method. Markers to be assayed may include pepsinogen I, pepsinogen II, gastrin and/or antibodies to the bacteria Helicobacter pylori.	B
7016	52863	Multiple gastrointestinal disease marker IVD, calibrator	Ходоод гэдэсний замын олон өвчний маркер IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with gastrointestinal disease in a clinical specimen. These markers may include pepsinogen I, pepsinogen II, gastrin and/or antibodies to the bacteria Helicobacter pylori.	B
7017	52864	Multiple gastrointestinal disease marker IVD, control	Ходоод гэдэсний замын олон өвчний маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with gastrointestinal disease in a clinical speciomen. These markers may include pepsinogen I, pepsinogen II, gastrin and/or antibodies to the bacteria Helicobacter pylori.	B
7018	52865	Multiple gastrointestinal disease marker IVD, reagent	Ходоод гэдэсний замын олон өвчний маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple biochemical markers associated with gastrointestinal disease in a clinical specimen. These markers may include pepsinogen I, pepsinogen II, gastrin and/or antibodies to the bacteria Helicobacter pylori.	B
7019	52866	Multiple electrolyte IVD, kit, ion-selective electrode (ISE)	Олон электролитийн IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple electrolytes in a clinical specimen, using an ion-selective electrode (ISE) method.	B
7020	52867	Multiple electrolyte IVD, calibrator	Олон электролитийн IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the quantitative measurement of multiple electrolytes in a clinical specimen.	B

7021	52868	Multiple electrolyte IVD, control	Олон электролитийн IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the quantitative measurement of multiple electrolytes in a clinical specimen.	B
7022	52869	Multiple electrolyte IVD, reagent	Олон электролитийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of multiple electrolytes in a clinical specimen.	B
7023	52921	Adenosine deaminase (ADA) IVD, kit, spectrophotometry	Аденозин деаминаза (ADA) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of adenosine deaminase (ADA) in a clinical specimen, using a spectrophotometry method.	B
7024	52922	Adenosine deaminase (ADA) IVD, reagent	Аденозин деаминаза (ADA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of adenosine deaminase (ADA) in a clinical specimen.	B
7025	52924	Alanine aminotransferase (ALT) IVD, kit, spectrophotometry	Аланин аминотрансфераза (ALT) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alanine aminotransferase (ALT) in a clinical specimen, using a spectrophotometry method.	B
7026	52925	Alanine aminotransferase (ALT) IVD, reagent	Аланин аминотрансфераза (ALT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alanine aminotransferase (ALT) in a clinical specimen.	B
7027	52926	Aldolase IVD, kit, spectrophotometry	Aldolase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of aldolase in a clinical specimen, using a spectrophotometry method.	B
7028	52927	Aldolase IVD, reagent	Альдолаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of aldolase in a clinical specimen.	B
7029	52936	Amino-nitrogen IVD, kit, spectrophotometry	Амин азотын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of amino-nitrogen in a clinical specimen, using a spectrophotometry method.	B

7030	52937	Amino-nitrogen IVD, calibrator	Амин азотын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of amino-nitrogen in a clinical specimen.	B
7031	52938	Amino-nitrogen IVD, control	Амин азотын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of amino-nitrogen in a clinical specimen.	B
7032	52939	Amino-nitrogen IVD, reagent	Амин азотын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of amino-nitrogen in a clinical specimen.	B
7033	52944	Angiotensin converting enzyme (ACE) IVD, kit, spectrophotometry	Ангиотензин хувиргах фермент (ACE) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of angiotensin converting enzyme (ACE) in a clinical specimen, using a spectrophotometry method.	B
7034	52945	Angiotensin converting enzyme (ACE) IVD, reagent	Ангиотензин хувиргах фермент (ACE) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of angiotensin converting enzyme (ACE) in a clinical specimen.	B
7035	52946	Arylamine N-acetyltransferase IVD, kit, spectrophotometry	Ариламин N-ацетилтрансфераза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of arylamine N-acetyltransferase in a clinical specimen, using a spectrophotometry method.	B
7036	52947	Arylamine N-acetyltransferase IVD, calibrator	Ариламин N-ацетилтрансфераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of arylamine N-acetyltransferase in a clinical specimen.	B
7037	52948	Arylamine N-acetyltransferase IVD, control	Ариламин N-ацетилтрансфераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of arylamine N-acetyltransferase in a clinical specimen.	B
7038	52949	Arylamine N-acetyltransferase IVD, reagent	Ариламин N-ацетилтрансфераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of arylamine N-acetyltransferase in a clinical specimen.	B

7039	52950	Aspartate aminotransferase (AST) isoenzyme IVD, kit, electrophoresis	Аспартат аминотрансфераза (AST) изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple aspartate aminotransferase (AST) isoenzymes in a clinical specimen, using an electrophoresis method.	B
7040	52951	Aspartate aminotransferase (AST) isoenzyme IVD, calibrator	Аспартат аминотрансфераза (AST) изоэнзим IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple aspartate aminotransferase (AST) isoenzymes in a clinical specimen.	B
7041	52952	Aspartate aminotransferase (AST) isoenzyme IVD, control	Аспартат аминотрансфераза (AST) изоэнзим IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple aspartate aminotransferase (AST) isoenzymes in a clinical specimen.	B
7042	52953	Aspartate aminotransferase (AST) isoenzyme IVD, reagent	Аспартат аминотрансфераза (AST) изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple aspartate aminotransferase (AST) isoenzymes in a clinical specimen.	B
7043	52954	Total aspartate aminotransferase (AST) IVD, kit, spectrophotometry	Нийт аспартат аминотрансфераза (AST) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total aspartate aminotransferase (AST) in a clinical specimen, using a spectrophotometry method.	B
7044	52955	Total aspartate aminotransferase (AST) IVD, reagent	Нийт аспартат аминотрансфераза (AST) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total aspartate aminotransferase (AST) in a clinical specimen.	B
7045	52956	Beta-hexosaminidase A (HexA) IVD, kit, enzyme immunoassay (EIA)	Бета-гексозаминидаза А (HexA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme beta-hexosaminidase A (HexA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7046	52957	Beta-hexosaminidase A (HexA) IVD, calibrator	Бета-гексозаминидаз А (HexA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme beta-hexosaminidase A (HexA) in a clinical specimen.	B

7047	52958	Beta-hexosaminidase A (HexA) IVD, control	Бета-гексозаминидаз A (HexA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme beta-hexosaminidase A (HexA) in a clinical specimen.	B
7048	52959	Beta-hexosaminidase A (HexA) IVD, reagent	Бета-гексозаминидаза A (HexA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme beta-hexosaminidase A (HexA) in a clinical specimen.	B
7049	52960	Biotinidase IVD, kit, spectrophotometry	Биотинидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme biotinidase in a clinical specimen, using a spectrophotometry method.	B
7050	52961	Biotinidase IVD, calibrator	Биотинидазын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme biotinidase in a clinical specimen.	B
7051	52962	Biotinidase IVD, control	Биотинидазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme biotinidase in a clinical specimen.	B
7052	52963	Biotinidase IVD, reagent	Биотинидаз IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme biotinidase in a clinical specimen.	B
7053	53007	Galactokinase (GALK) IVD, kit, radioimmunoassay	Галактокиназа (GALK) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of galactokinase (GALK) in a clinical specimen, using a radioimmunoassay method.	B
7054	53008	Galactokinase (GALK) IVD, calibrator	Галактокиназа (GALK) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of galactokinase (GALK) in a clinical specimen.	B
7055	53009	Galactokinase (GALK) IVD, control	Галактокиназа (GALK) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of galactokinase (GALK) in a clinical specimen.	B
7056	53010	Galactokinase (GALK) IVD, reagent	Галактокиназа (GALK) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of galactokinase (GALK) in a clinical specimen.	B

7057	53015	Galactose-1-phosphate uridyl transferase IVD, kit, spectrophotometry	Галактоз-1-фосфат уридил трансфераза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of galactose-1-phosphate uridyl transferase (G1PUT), also known as galactose transferase (GALT) enzyme, in a clinical specimen, using a spectrophotometry method.	B
7058	53016	Galactose-1-phosphate uridyl transferase IVD, calibrator	Галактоз-1-фосфат уридил трансфераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of galactose-1-phosphate uridyl transferase (G1PUT), also known as galactose transferase (GALT) enzyme, in a clinical specimen.	B
7059	53017	Galactose-1-phosphate uridyl transferase IVD, control	Галактоз-1-фосфат уридил трансфераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of galactose-1-phosphate uridyl transferase (G1PUT), also known as galactose transferase (GALT) enzyme, in a clinical specimen.	B
7060	53018	Galactose-1-phosphate uridyl transferase IVD, reagent	Галактоз-1-фосфат уридил трансфераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of galactose-1-phosphate uridyl transferase (G1PUT), also known as galactose transferase (GALT) enzyme, in a clinical specimen.	B
7061	53019	Alpha-galactosidase IVD, kit, spectrophotometry	Альфа-галактозидаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-galactosidase in a clinical specimen, using a spectrophotometry method.	B
7062	53020	Alpha-galactosidase IVD, calibrator	Альфа-галактозидаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-galactosidase in a clinical specimen.	B
7063	53021	Alpha-galactosidase IVD, control	Альфа-галактозидаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-galactosidase in a clinical specimen.	B
7064	53022	Alpha-galactosidase IVD, reagent	Альфа-галактозидаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-galactosidase in a clinical specimen.	B

7065	53023	Beta-galactosidase IVD, kit, spectrophotometry	Бета-галактозидаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-galactosidase in a clinical specimen, using a spectrophotometry method.	B
7066	53024	Beta-galactosidase IVD, calibrator	Бета-галактозидаз IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-galactosidase in a clinical specimen.	B
7067	53025	Beta-galactosidase IVD, control	Бета-галактозидаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-galactosidase in a clinical specimen.	B
7068	53026	Beta-galactosidase IVD, reagent	Бета-галактозидаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-galactosidase in a clinical specimen.	B
7069	53027	Gamma-glutamyltransferase (GGT) IVD, kit, spectrophotometry	Гамма-глутамилтрансфераза (GGT) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of gamma glutamyltransferase (GGT) in a clinical specimen, using a spectrophotometry method.	B
7070	53028	Gamma-glutamyltransferase (GGT) IVD, calibrator	Гамма-глутамилтрансфераза (GGT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of gamma glutamyltransferase (GGT) in a clinical specimen.	B
7071	53029	Gamma-glutamyltransferase (GGT) IVD, control	Гамма-глутамилтрансфераза (GGT) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of gamma glutamyltransferase (GGT) in a clinical specimen.	B
7072	53030	Gamma-glutamyltransferase (GGT) IVD, reagent	Гамма-глутамилтрансфераза (GGT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of gamma glutamyltransferase (GGT) in a clinical specimen.	B
7073	53031	Beta-glucosidase IVD, kit, spectrophotometry	Бета-глюкозидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-glucosidase in a clinical specimen, using a spectrophotometry method.	B

7074	53032	Beta-glucosidase IVD, calibrator	Бета-глюкозидазын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-glucosidase in a clinical specimen.	B
7075	53033	Beta-glucosidase IVD, control	Бета-глюкозидазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-glucosidase in a clinical specimen.	B
7076	53034	Beta-glucosidase IVD, reagent	Бета-глюкозидаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-glucosidase in a clinical specimen.	B
7077	53035	Beta-glucuronidase IVD, kit, spectrophotometry	Бета-глюкуронидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-glucuronidase in a clinical specimen, using a spectrophotometry method.	B
7078	53036	Beta-glucuronidase IVD, calibrator	Бета-глюкуронидаз IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-glucuronidase in a clinical specimen.	B
7079	53037	Beta-glucuronidase IVD, control	Бета-глюкуронидазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-glucuronidase in a clinical specimen.	B
7080	53038	Beta-glucuronidase IVD, reagent	Бета-глюкуронидаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-glucuronidase in a clinical specimen.	B
7081	53039	Glutamate dehydrogenase IVD, kit, spectrophotometry	Глутамат дегидрогеназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glutamate dehydrogenase in a clinical specimen, using a spectrophotometry method.	B
7082	53040	Glutamate dehydrogenase IVD, calibrator	Глутамат дегидрогеназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of glutamate dehydrogenase in a clinical specimen.	B
7083	53041	Glutamate dehydrogenase IVD, control	Глутамат дегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of glutamate dehydrogenase in a clinical specimen.	B

7084	53042	Glutamate dehydrogenase IVD, reagent	Глутамат дегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of glutamate dehydrogenase in a clinical specimen.	B
7085	53043	Glycerol kinase IVD, kit, spectrophotometry	Глицерол киназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycerol kinase in a clinical specimen, using a spectrophotometry method.	B
7086	53044	Glycerol kinase IVD, calibrator	Глицерол киназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of glycerol kinase in a clinical specimen.	B
7087	53045	Glycerol kinase IVD, control	Глицерол киназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of glycerol kinase in a clinical specimen.	B
7088	53046	Glycerol kinase IVD, reagent	Глицерол киназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of glycerol kinase in a clinical specimen.	B
7089	53047	Glycogen phosphorylase BB IVD, kit, enzyme immunoassay (EIA)	Гликоген фосфорилаза BB IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycogen phosphorylase BB isoenzyme in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7090	53048	Glycogen phosphorylase BB IVD, reagent	Гликоген фосфорилаза BB IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of glycogen phosphorylase BB isoenzyme in a clinical specimen.	B
7091	53049	Granulocyte elastase IVD, kit, enzyme immunoassay (EIA)	Гранулоцит эластаза IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of granulocyte elastase in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7092	53050	Granulocyte elastase IVD, calibrator	Гранулоцит эластаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of granulocyte elastase in a clinical specimen.	B

7093	53051	Granulocyte elastase IVD, control	Гранулоцитын эластаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of granulocyte elastase in a clinical specimen.	B
7094	53052	Granulocyte elastase IVD, reagent	Гранулоцит эластаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of granulocyte elastase in a clinical specimen.	B
7095	53053	Guanase IVD, kit, spectrophotometry	Guanase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of guanase in a clinical specimen, using a spectrophotometry method.	B
7096	53054	Guanase IVD, calibrator	Гуаназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of guanase in a clinical specimen.	B
7097	53055	Guanase IVD, control	Гуаназын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of guanase in a clinical specimen.	B
7098	53056	Guanase IVD, reagent	Гуаназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of guanase in a clinical specimen.	B
7099	53057	Alpha-hydroxybutyrate dehydrogenase IVD, kit, enzyme immunoassay (EIA)	Альфа-гидроксибутиратдегидрогеназа IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-hydroxybutyrate dehydrogenase in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7100	53058	Alpha-hydroxybutyrate dehydrogenase IVD, reagent	Альфа-гидроксибутиратдегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-hydroxybutyrate dehydrogenase in a clinical specimen.	B
7101	53059	Beta-hydroxybutyrate dehydrogenase IVD, kit, enzyme immunoassay (EIA)	Бета-гидроксибутиратдегидрогеназа IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of beta-hydroxybutyrate dehydrogenase in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7102	53060	Beta-hydroxybutyrate dehydrogenase IVD, calibrator	Бета-гидроксибутиратдегидрогеназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-hydroxybutyrate dehydrogenase in a clinical specimen.	B
7103	53061	Beta-hydroxybutyrate dehydrogenase IVD, control	Бета-гидроксибутиратдегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-hydroxybutyrate dehydrogenase in a clinical specimen.	B
7104	53062	Beta-hydroxybutyrate dehydrogenase IVD, reagent	Бета-гидроксибутиратдегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-hydroxybutyrate dehydrogenase in a clinical specimen.	B
7105	53063	Isocitric dehydrogenase IVD, kit, spectrophotometry	Isocitric dehydrogenase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of isocitric dehydrogenase in a clinical specimen, using a spectrophotometry method.	B
7106	53064	Isocitric dehydrogenase IVD, calibrator	Isocitric dehydrogenase IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of isocitric dehydrogenase in a clinical specimen.	B
7107	53065	Isocitric dehydrogenase IVD, control	Изоцитрит дегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of isocitric dehydrogenase in a clinical specimen.	B
7108	53066	Isocitric dehydrogenase IVD, reagent	Изоцитрит дегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of isocitric dehydrogenase in a clinical specimen.	B
7109	53067	Lactase IVD, kit, enzyme immunoassay (EIA)	Lactase IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lactase enzyme in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7110	53068	Lactase IVD, kit, rapid ICT, clinical	Lactase IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of lactase enzyme in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for the detection of hypolactasia of the small bowel which is associated with lactose intolerance. It is not intended to be used for self-testing.	B
7111	53069	Lactase IVD, calibrator	Lactase IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lactase enzyme in a clinical specimen.	B
7112	53070	Lactase IVD, control	Lactase IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of lactase enzyme in a clinical specimen.	B
7113	53071	Lactase IVD, reagent	Lactase IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lactase enzyme in a clinical specimen.	B
7114	53105	Leukocyte esterase IVD, calibrator	Лейкоцит эстераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of leukocyte esterase in a clinical specimen.	B
7115	53106	Leukocyte esterase IVD, control	Лейкоцитийн эстераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of leukocyte esterase in a clinical specimen.	B
7116	53107	Leukocyte esterase IVD, reagent	Лейкоцит эстераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of leukocyte esterase in a clinical specimen.	B
7117	53108	Lipase IVD, kit, spectrophotometry	Липаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipase in a clinical specimen, using a spectrophotometry method.	B

7118	53109	Lipase IVD, calibrator	Липаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lipase in a clinical specimen.	B
7119	53110	Lipase IVD, control	Липаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of lipase in a clinical specimen.	B
7120	53111	Lipase IVD, reagent	Липаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lipase in a clinical specimen.	B
7121	53112	Lipoprotein lipase IVD, kit, nephelometry/turbidimetry	Липопротейн липаза IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen, using a nephelometry/turbidimetry method.	B
7122	53113	Lipoprotein lipase IVD, kit, enzyme chemiluminescence	Липопротейн липаза IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen, using an enzyme chemiluminescence method.	B
7123	53114	Lipoprotein lipase IVD, kit, spectrophotometry	Липопротейн липаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen, using a spectrophotometry method.	B
7124	53115	Lipoprotein lipase IVD, kit, mass spectrometry	Липопротейн липаза IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen, using a mass spectrometry method.	B
7125	53116	Lipoprotein lipase IVD, calibrator	Липопротейн липаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen.	B
7126	53117	Lipoprotein lipase IVD, control	Липопротейн липаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen.	B

7127	53118	Lipoprotein lipase IVD, reagent	Липопротейн липаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the lipid hydrolysing enzyme lipoprotein lipase in a clinical specimen.	B
7128	53119	Lysozyme (muramidase) IVD, kit, enzyme immunoassay (EIA)	Лизоцим (мурамидаза) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7129	53120	Lysozyme (muramidase) IVD, kit, nephelometry/turbidimetry	Лизоцим (мурамидаза) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7130	53121	Lysozyme (muramidase) IVD, calibrator	Лизоцим (мурамидаза) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen.	B
7131	53122	Lysozyme (muramidase) IVD, control	Лизоцим (мурамидаза) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen.	B
7132	53123	Lysozyme (muramidase) IVD, reagent	Лизоцим (мурамидаза) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen.	B
7133	53124	Malate dehydrogenase IVD, kit, spectrophotometry	Малатдегидрогеназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme malate dehydrogenase in a clinical specimen, using a spectrophotometry method.	B
7134	53125	Malate dehydrogenase IVD, calibrator	Малатдегидрогеназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the enzyme malate dehydrogenase in a clinical specimen.	B

7135	53126	Malate dehydrogenase IVD, control	Малатдегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the enzyme malate dehydrogenase in a clinical specimen.	B
7136	53127	Malate dehydrogenase IVD, reagent	Малатдегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the enzyme malate dehydrogenase in a clinical specimen.	B
7137	53128	Myeloperoxidase (MPO) IVD, kit, spectrophotometry	Миелопероксидаза (MPO) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myeloperoxidase (MPO) in a clinical specimen, using a spectrophotometry method. MPO is used as a marker of cardiovascular disease (e.g., atherosclerosis, coronary artery disease, heart failure).	B
7138	53129	Myeloperoxidase (MPO) IVD, calibrator	Миелопероксидаза (MPO) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in a clinical specimen.	B
7139	53130	Myeloperoxidase (MPO) IVD, control	Миелопероксидаза (MPO) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in a clinical specimen.	B
7140	53131	Myeloperoxidase (MPO) IVD, reagent	Миелопероксидаза (MPO) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in a clinical specimen.	B
7141	53132	N-acetyl-beta-D-glucosaminidase (NAG) IVD, kit, spectrophotometry	N-ацетил-бета-D-глюкозаминидаза (NAG) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of N-acetyl-beta-D-glucosaminidase (NAG) in a clinical specimen, using a spectrophotometry method.	B
7142	53133	N-acetyl-beta-D-glucosaminidase (NAG) IVD, calibrator	N-ацетил-бета-D-глюкозаминидаза (NAG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of N-acetyl-beta-D-glucosaminidase (NAG) in a clinical specimen.	B

7143	53134	N-acetyl-beta-D-glucosaminidase (NAG) IVD, control	N-ацетил-бета-D-глюкозаминидаз (NAG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of N-acetyl-beta-D-glucosaminidase (NAG) in a clinical specimen.	B
7144	53135	N-acetyl-beta-D-glucosaminidase (NAG) IVD, reagent	N-ацетил-бета-D-глюкозаминидаза (NAG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of N-acetyl-beta-D-glucosaminidase (NAG) in a clinical specimen.	B
7145	53136	5-Nucleotidase IVD, kit, spectrophotometry	5-нуклеотидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 5-nucleotidase, also known as CD73, in a clinical specimen, using a spectrophotometry method.	B
7146	53137	5-Nucleotidase IVD, reagent	5-нуклеотидазын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 5-nucleotidase, also known as CD73, in a clinical specimen.	B
7147	53138	Oxytocinase IVD, kit, enzyme fluorescence	Окситоциназа IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oxytocinase (also known as cysteine aminopeptidase or leucine arylamidase) in a clinical specimen, using an enzyme fluorescence method. It is typically used to determine enzyme activity to aid in the diagnosis of jaundice, liver cirrhosis, carcinoma, or to indicate pregnancy.	B
7148	53139	Oxytocinase IVD, calibrator	Окситоциназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of oxytocinase (also known as cysteine aminopeptidase or leucine arylamidase) in a clinical specimen.	B
7149	53140	Oxytocinase IVD, control	Окситоциназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of oxytocinase (also known as cysteine aminopeptidase or leucine arylamidase) in a clinical specimen.	B

7150	53141	Oxytocinase IVD, reagent	Окситоциназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of oxytocinase (also known as cysteine aminopeptidase or leucine arylamidase) in a clinical specimen.	B
7151	53142	Pancreatic elastase (PE) IVD, kit, enzyme immunoassay (EIA)	Нойр булчирхайн эластаза (PE) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of conditions associated with pancreatic insufficiency (e.g., chronic pancreatitis).	B
7152	53143	Pancreatic elastase (PE) IVD, calibrator	Нойр булчирхайн эластаза (PE) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen.	B
7153	53144	Pancreatic elastase (PE) IVD, control	Нойр булчирхайн эластаза (PE) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen.	B
7154	53145	Pancreatic elastase (PE) IVD, reagent	Нойр булчирхайн эластаза (PE) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen.	B
7155	53146	Pepsin IVD, kit, spectrophotometry	Пепсин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pepsin in a clinical specimen, using a spectrophotometry method.	B
7156	53147	Pepsin IVD, kit, nephelometry/turbidimetry	Пепсин IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of pepsin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7157	53148	Pepsin IVD, calibrator	Пепсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of pepsin in a clinical specimen.	B

7158	53149	Pepsin IVD, control	Пепсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of pepsin in a clinical specimen.	B
7159	53150	Pepsin IVD, reagent	Пепсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of pepsin in a clinical specimen.	B
7160	53151	Phosphohexose isomerase IVD, kit, spectrophotometry	Фосфогексоз изомераза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme phosphohexose isomerase in a clinical specimen, using a spectrophotometry method.	B
7161	53152	Phosphohexose isomerase IVD, calibrator	Фосфогексоз изомераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of phosphohexose isomerase in a clinical specimen.	B
7162	53153	Phosphohexose isomerase IVD, control	Фосфогексоз изомераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of phosphohexose isomerase in a clinical specimen.	B
7163	53154	Phosphohexose isomerase IVD, reagent	Фосфогексоз изомераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of phosphohexose isomerase in a clinical specimen.	B
7164	53155	Phospholipase A2 IVD, kit, spectrophotometry	Фосфолипаза A2 IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme phospholipase A2 in a clinical specimen, using a spectrophotometry method. It is used as an aid in the diagnosis and risk assessment of atherosclerotic diseases such as coronary artery disease and ischemic stroke.	B
7165	53156	Phospholipase A2 IVD, calibrator	Фосфолипаза A2 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the enzyme phospholipase A2 in a clinical specimen.	B
7166	53157	Phospholipase A2 IVD, control	Фосфолипаза A2 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the enzyme phospholipase A2 in a clinical specimen.	B

7167	53158	Phospholipase A2 IVD, reagent	Фосфолипаза A2 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the enzyme phospholipase A2 in a clinical specimen.	B
7168	53159	Prolyl hydroxylase IVD, kit, spectrophotometry	Prolyl hydroxylase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme prolyl hydroxylase in a clinical specimen, using a spectrophotometry method.	B
7169	53160	Prolyl hydroxylase IVD, calibrator	Пролил гидроксилаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of prolyl hydroxylase in a clinical specimen.	B
7170	53161	Prolyl hydroxylase IVD, control	Prolyl hydroxylase IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of prolyl hydroxylase in a clinical specimen.	B
7171	53162	Prolyl hydroxylase IVD, reagent	Пролил гидроксилаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of prolyl hydroxylase in a clinical specimen.	B
7172	53163	Pyruvate kinase M2 (PKM2) IVD, kit, spectrophotometry	Пируват киназа M2 (PKM2) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen, using a spectrophotometry method.	B
7173	53164	Pyruvate kinase M2 (PKM2) IVD, calibrator	Пируват киназа M2 (PKM2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen.	B
7174	53165	Pyruvate kinase M2 (PKM2) IVD, control	Пируват киназа M2 (PKM2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen.	B

7175	53166	Pyruvate kinase M2 (PKM2) IVD, reagent	Пируват киназа M2 (PKM2) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen.	B
7176	53167	Sorbitol dehydrogenase IVD, kit, spectrophotometry	Сорбитолдегидрогеназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sorbitol dehydrogenase in a clinical specimen, using a spectrophotometry method.	B
7177	53168	Sorbitol dehydrogenase IVD, calibrator	Сорбитолдегидрогеназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sorbitol dehydrogenase in a clinical specimen.	B
7178	53169	Sorbitol dehydrogenase IVD, control	Сорбитолдегидрогеназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sorbitol dehydrogenase in a clinical specimen.	B
7179	53170	Sorbitol dehydrogenase IVD, reagent	Сорбитолдегидрогеназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sorbitol dehydrogenase in a clinical specimen.	B
7180	53171	2-5A synthetase IVD, kit, enzyme radiometry	2-5A синтетаза IVD, иж бүрдэл, ферментийн радиометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme 2-5A synthetase, also known as 2-5 oligoadenylate synthetase, in a clinical specimen, using an enzyme radiometry method.	B
7181	53172	2-5A synthetase IVD, reagent	2-5A синтетаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme 2-5A synthetase, also known as 2-5 oligoadenylate synthetase, in a clinical specimen.	B
7182	53173	Thymidine kinase IVD, kit, enzyme immunoassay (EIA)	Тимидин киназа IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thymidine kinase in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a prognostic marker to monitor the progression of haematological malignancies [e.g., non-Hodgkin lymphoma, chronic lymphocytic leukaemia (CLL)] and assess the response to treatment.	B

7183	53174	Thymidine kinase IVD, reagent	Тимидин киназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thymidine kinase in a clinical specimen.	B
7184	53187	Mast cell protease IVD, kit, enzyme immunoassay (EIA)	шигүү мөхлөгт эсийн протеаз IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a mast cell protease (e.g., tryptase, chymase), using an enzyme immunoassay (EIA) method.	B
7185	53188	Tryptase IVD, calibrator	Triptase IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of tryptase in a clinical specimen.	B
7186	53189	Tryptase IVD, control	Triptase IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of tryptase in a clinical specimen.	B
7187	53190	Tryptase IVD, reagent	Триптаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of tryptase in a clinical specimen.	B
7188	53191	UDP-galactose 4-epimerase (GALE) IVD, kit, spectrophotometry	UDP-галактоз 4-эпимераза (GALE) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of UDP-galactose 4-epimerase (GALE) in a clinical specimen, using a spectrophotometry method.	B
7189	53192	UDP-galactose 4-epimerase (GALE) IVD, calibrator	UDP-галактоз 4-эпимераза (GALE) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of UDP-galactose 4-epimerase (GALE) in a clinical specimen.	B
7190	53193	UDP-galactose 4-epimerase (GALE) IVD, control	UDP-галактоз 4-эпимераза (GALE) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of UDP-galactose 4-epimerase (GALE) in a clinical specimen.	B
7191	53194	UDP-galactose 4-epimerase (GALE) IVD, reagent	UDP-галактоз 4-эпимераза (GALE) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of UDP-galactose 4-epimerase (GALE) in a clinical specimen.	B

7192	53195	Uropepsin IVD, kit, spectrophotometry	Uropepsin IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of uropepsin in a clinical specimen, using a spectrophotometry method.	B
7193	53196	Uropepsin IVD, calibrator	Уропепсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of uropepsin in a clinical specimen.	B
7194	53197	Uropepsin IVD, control	Уропепсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of uropepsin in a clinical specimen.	B
7195	53198	Uropepsin IVD, reagent	Уропепсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of uropepsin in a clinical specimen.	B
7196	53199	Acylglycine IVD, kit, gas chromatography	Acylglycine IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acylglycine in a clinical specimen, using a gas chromatography method.	B
7197	53200	Acylglycine IVD, calibrator	Acylglycine IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of acylglycine in a clinical specimen.	B
7198	53201	Acylglycine IVD, control	Acylglycine IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of acylglycine in a clinical specimen.	B
7199	53202	Acylglycine IVD, reagent	Ацилглицин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of acylglycine in a clinical specimen.	B
7200	53203	Ammonia IVD, kit, enzyme spectrophotometry	Аммиакийн IVD, иж бүрдэл, ферментийн спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen, using an enzyme spectrophotometry method.	B

7201	53204	Ammonia IVD, kit, ion-exchange chromatography	Аммиакийн IVD, иж бүрдэл, ион солилцооны хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen, using an ion-exchange chromatography method.	B
7202	53205	Ammonia IVD, kit, spectrophotometry	Аммиак IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen, using a spectrophotometry method.	B
7203	53206	Ammonia IVD, calibrator	Аммиак IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen.	B
7204	53207	Ammonia IVD, control	Аммиак IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ammonia in a clinical specimen.	B
7205	53208	Ammonia IVD, reagent	Аммиак IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ammonia in a clinical specimen.	B
7206	53209	Multiple amino acid IVD, kit, gas chromatography	Олон амин хүчлийн IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple amino acids in a clinical specimen, using a gas chromatography method.	B
7207	53210	Multiple amino acid IVD, calibrator	Олон тооны амин хүчил IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple amino acids in a clinical specimen.	B
7208	53211	Multiple amino acid IVD, control	Олон тооны амин хүчил IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple amino acids in a clinical specimen.	B
7209	53212	Multiple amino acid IVD, reagent	Олон тооны амин хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple amino acids in a clinical specimen.	B

7210	53213	1,5-Anhydroglucitol IVD, kit, spectrophotometry	1,5-Ангидроглюцитол IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,5-anhydroglucitol in a clinical specimen, using a spectrophotometry method.	B
7211	53214	1,5-Anhydroglucitol IVD, reagent	1,5-Ангидроглюцитол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of 1,5-anhydroglucitol in a clinical specimen.	B
7212	53215	Alpha-1-antichymotrypsin IVD, kit, enzyme immunoassay (EIA)	Альфа-1-антихимотрипсин IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antichymotrypsin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7213	53216	Alpha-1-antichymotrypsin IVD, reagent	Альфа-1-антихимотрипсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-1-antichymotrypsin in a clinical specimen.	B
7214	53217	Beta-thromboglobulin IVD, kit, nephelometry/turbidimetry	Бета-тромбоглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-thromboglobulin in a clinical specimen, using a nephelometry/turbidimetry method. Beta-thromboglobulin is a marker of platelet activation associated with various conditions such as thromboembolism, myocardial infarction and renal disorders.	B
7215	53218	Beta-thromboglobulin IVD, calibrator	Бета-тромбоглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of beta-thromboglobulin in a clinical specimen.	B
7216	53219	Beta-thromboglobulin IVD, control	Бета-тромбоглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of beta-thromboglobulin in a clinical specimen.	B
7217	53220	Beta-thromboglobulin IVD, reagent	Бета-тромбоглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of beta-thromboglobulin in a clinical specimen.	B

7218	53221	Cholylglycine bile acid IVD, kit, radioimmunoassay	Cholylglycine цөсний хүчил IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the bile acid cholylglycine, also referred to as glycocholic acid, in a clinical specimen using a radioimmunoassay method. Cholylglycine is used as a marker to aid the diagnosis of acute and chronic hepatitis, and liver cirrhosis.	B
7219	53222	Cholylglycine bile acid IVD, control	Cholylglycine цөсний хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the bile acid cholylglycine, also referred to as glycocholic acid, in a clinical specimen.	B
7220	53223	Cholylglycine bile acid IVD, calibrator	Холилглицины цөсний хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the bile acid cholylglycine, also referred to as glycocholic acid, in a clinical specimen.	B
7221	53224	Cholylglycine bile acid IVD, reagent	Холилглицины цөсний хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the bile acid cholylglycine, also referred to as glycocholic acid, in a clinical specimen.	B
7222	53225	Conjugated sulfalithocholic acid (SLCG) IVD, kit, radioimmunoassay	Коньюгат сульфалитохолийн хүчил (SLCG) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the bile acid conjugated sulfalithocholic acid (SLCG), in a clinical specimen using a radioimmunoassay method.	B
7223	53226	Conjugated sulfalithocholic acid (SLCG) IVD, control	Коньюгат сульфалитохолийн хүчил (SLCG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the bile acid conjugated sulfalithocholic acid (SLCG), in a clinical specimen.	B
7224	53227	Conjugated sulfalithocholic acid (SLCG) IVD, calibrator	Коньюгат сульфалитохолийн хүчил (SLCG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the bile acid conjugated sulfalithocholic acid (SLCG), in a clinical specimen.	B
7225	53228	Conjugated sulfalithocholic acid (SLCG) IVD, reagent	Коньюгат сульфалитохолийн хүчил (SLCG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the bile acid conjugated sulfalithocholic acid (SLCG), in a clinical specimen.	B

7226	53229	Total bilirubin IVD, kit, spectrophotometry	Нийт билирубин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total bilirubin in a clinical specimen, using a spectrophotometry method.	B
7227	53231	Total bilirubin IVD, reagent	Нийт билирубин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total bilirubin in a clinical specimen.	B
7228	53233	Conjugated (direct) bilirubin IVD, kit, spectrophotometry	Коньюгат (шууд) билирубин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of conjugated (direct) bilirubin in a clinical specimen, using a spectrophotometry method.	B
7229	53234	Conjugated (direct) bilirubin IVD, calibrator	Коньюгат (шууд) билирубин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of conjugated (direct) bilirubin in a clinical specimen.	B
7230	53235	Conjugated (direct) bilirubin IVD, control	Коньюгат (шууд) билирубин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of conjugated (direct) bilirubin in a clinical specimen.	B
7231	53236	Conjugated (direct) bilirubin IVD, reagent	Коньюгат (шууд) билирубин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of conjugated (direct) bilirubin in a clinical specimen.	B
7232	53238	Bromide IVD, control	Бромид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of bromide in a clinical specimen.	B
7233	53239	Bromide IVD, calibrator	Бромид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of bromide in a clinical specimen.	B
7234	53240	Bromide IVD, reagent	Бромид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of bromide in a clinical specimen.	B
7235	53241	Carnitine IVD, kit, spectrophotometry	Карнитин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carnitine in a clinical specimen, using a spectrophotometry method.	B

7236	53242	Carnitine IVD, calibrator	Карнитин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of carnitine in a clinical specimen.	B
7237	53243	Carnitine IVD, control	Карнитин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of carnitine in a clinical specimen.	B
7238	53244	Carnitine IVD, reagent	Карнитин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of carnitine in a clinical specimen.	B
7239	53245	Creatine IVD, kit, spectrophotometry	Креатин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine in a clinical specimen, using a spectrophotometry method.	B
7240	53246	Creatine IVD, kit, enzyme chemiluminescence	Креатин IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of creatine in a clinical specimen, using an enzyme chemiluminescence method.	B
7241	53247	Creatine IVD, calibrator	Креатин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of creatine in a clinical specimen.	B
7242	53248	Creatine IVD, control	Креатин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of creatine in a clinical specimen.	B
7243	53249	Creatine IVD, reagent	Креатин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of creatine in a clinical specimen.	B
7244	53251	Creatinine IVD, kit, spectrophotometry	Креатинин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatinine in a clinical specimen, using a spectrophotometry method.	B
7245	53252	Creatinine IVD, reagent	Креатинин IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of creatinine in a clinical specimen.	B

7246	53253	Cyclic adenosine monophosphate (cAMP) IVD, kit, spectrophotometry	Цикл аденозин монофосфат (cAMP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cyclic adenosine monophosphate (cAMP) in a clinical specimen, using a spectrophotometry method.	B
7247	53254	Cyclic adenosine monophosphate (cAMP) IVD, kit, enzyme immunoassay (EIA)	Цикл аденозин монофосфат (cAMP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cyclic adenosine monophosphate (cAMP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7248	53255	Cyclic adenosine monophosphate (cAMP) IVD, kit, radioimmunoassay	Цикл аденозин монофосфат (cAMP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cyclic adenosine monophosphate (cAMP) in a clinical specimen, using a radioimmunoassay method.	B
7249	53256	Cyclic adenosine monophosphate (cAMP) IVD, reagent	Цикл аденозин монофосфат (cAMP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of cyclic adenosine monophosphate (cAMP) in a clinical specimen.	B
7250	53257	Cyclic guanosine monophosphate (cGMP) IVD, kit, spectrophotometry	Цикл гуанозин монофосфат (cGMP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cyclic guanosine monophosphate (cGMP) in a clinical specimen, using a spectrophotometry method.	B
7251	53258	Cyclic guanosine monophosphate (cGMP) IVD, kit, enzyme immunoassay (EIA)	Цикл гуанозин монофосфат (cGMP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cyclic guanosine monophosphate (cGMP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7252	53259	Cyclic guanosine monophosphate (cGMP) IVD, kit, radioimmunoassay	Цикл гуанозин монофосфат (cGMP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cyclic guanosine monophosphate (cGMP) in a clinical specimen, using a radioimmunoassay method.	B
7253	53260	Cyclic guanosine monophosphate (cGMP) IVD, calibrator	Цикл гуанозин монофосфат (cGMP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of cyclic guanosine monophosphate (cGMP) in a clinical specimen.	B

7254	53261	Cyclic guanosine monophosphate (cGMP) IVD, control	Цикл гуанозин монофосфат (cGMP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of cyclic guanosine monophosphate (cGMP) in a clinical specimen.	B
7255	53262	Cyclic guanosine monophosphate (cGMP) IVD, reagent	Цикл гуанозин монофосфат (cGMP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of cyclic guanosine monophosphate (cGMP) in a clinical specimen.	B
7256	53263	Cystine IVD, kit, gas chromatography	Cystine IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the amino acid cystine in a clinical specimen, using a gas chromatography method.	B
7257	53264	Cystine IVD, calibrator	Cystine IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the amino acid cystine in a clinical specimen.	B
7258	53265	Cystine IVD, control	Цистин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the amino acid cystine in a clinical specimen.	B
7259	53266	Cystine IVD, reagent	Cystine IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the amino acid cystine in a clinical specimen.	B
7260	53267	Cysteinyl leukotriene (cys-LT) IVD, kit, liquid chromatography	Цистейнил лейкотриен (cys-LT) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cysteinyl leukotriene (cys-LT) following leukocyte stimulation of a clinical specimen, using a liquid chromatography method.	B
7261	53268	Cysteinyl leukotriene (cys-LT) IVD, reagent	Цистейнил лейкотриен (cys-LT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of cysteinyl leukotriene (cys-LT) in a clinical specimen, following leukocyte stimulation.	B
7262	53269	D-Xylose IVD, kit, spectrophotometry	D-Xylose IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of D-xylose in a clinical specimen, using a spectrophotometry method.	B

7263	53270	D-Xylose IVD, kit, enzyme chemiluminescence	D-Xylose IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of D-xylose in a clinical specimen, using an enzyme chemiluminescence method.	B
7264	53271	D-Xylose IVD, calibrator	D-Xylose IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of D-xylose in a clinical specimen.	B
7265	53272	D-Xylose IVD, control	D-Xylose IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of D-xylose in a clinical specimen.	B
7266	53273	D-Xylose IVD, reagent	D-Xylose IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of D-xylose in a clinical specimen.	B
7267	53274	Fructosamine IVD, kit, spectrophotometry	Фруктозамин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the glycated serum protein fructosamine in a clinical specimen, using a spectrophotometry method. It is typically used to aid in monitoring of average glucose levels and glycaemic control in diabetic patients.	B
7268	53275	Fructosamine IVD, calibrator	Фруктозамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the glycated serum protein fructosamine in a clinical specimen.	B
7269	53276	Fructosamine IVD, control	Фруктозамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the glycated serum protein fructosamine in a clinical specimen.	B
7270	53277	Fructosamine IVD, reagent	Фруктозамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the glycated serum protein fructosamine in a clinical specimen.	B
7271	53278	Fructose IVD, kit, spectrophotometry	Фруктозын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fructose in a clinical specimen, using a spectrophotometry method.	B

7272	53279	Fructose IVD, calibrator	Фруктозын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of fructose in a clinical specimen.	B
7273	53280	Fructose IVD, control	Фруктозын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of fructose in a clinical specimen.	B
7274	53281	Fructose IVD, reagent	Фруктоз IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of fructose in a clinical specimen.	B
7275	53282	L-Fucose IVD, kit, spectrophotometry	L-Fucose IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of L-fucose in a clinical specimen, using a spectrophotometry method.	B
7276	53283	L-Fucose IVD, calibrator	L-Fucose IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of L-fucose in a clinical specimen.	B
7277	53284	L-Fucose IVD, control	L-Fucose IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of L-fucose in a clinical specimen.	B
7278	53285	L-Fucose IVD, reagent	L-Fucose IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of L-fucose in a clinical specimen.	B
7279	53286	Galactose IVD, kit, spectrophotometry	Галактозын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of galactose in a clinical specimen, using a spectrophotometry method.	B
7280	53287	Galactose IVD, kit, fluorescent immunoassay	Галактозын IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of galactose in a clinical specimen, using a fluorescent immunoassay method.	B
7281	53288	Galactose IVD, calibrator	Галактозын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of galactose in a clinical specimen.	B

7282	53289	Galactose IVD, control	Галактозын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of galactose in a clinical specimen.	B
7283	53290	Galactose IVD, reagent	Галактоз IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of galactose in a clinical specimen.	B
7284	53294	Galactose-1-phosphate IVD, kit, gas chromatography	Галактоз-1-фосфат IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of galactose-1-phosphate in a clinical specimen, using a gas chromatography method.	B
7285	53295	Galactose-1-phosphate IVD, calibrator	Галактоз-1-фосфат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of galactose-1-phosphate in a clinical specimen.	B
7286	53296	Galactose-1-phosphate IVD, control	Галактоз-1-фосфат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of galactose-1-phosphate in a clinical specimen.	B
7287	53297	Galactose-1-phosphate IVD, reagent	Галактоз-1-фосфат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of galactose-1-phosphate in a clinical specimen.	B
7288	53298	1,3-Beta-D-glucan IVD, kit, enzyme immunoassay (EIA)	1,3-Бета-D-глюкан IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7289	53299	1,3-Beta-D-glucan IVD, kit, nephelometry/turbidimetry	1,3-Бета-D-глюкан IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen, using a nephelometry/turbidimetry method.	B
7290	53300	1,3-Beta-D-glucan IVD, reagent	1,3-Бета-D-глюкан IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen.	B

7291	53301	Glucose IVD, kit, spectrophotometry	Глюкозын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glucose in a clinical specimen, using a spectrophotometry method.	B
7292	53303	Glucose IVD, kit, electrometry	Глюкозын IVD, иж бүрдэл, цахилгаан хэмжигч	A collection of reagents and other associated materials intended to be used for the quantitative measurement of glucose in a clinical specimen, using an electrometry method.	B
7293	53305	Glucose IVD, kit, ion-selective electrode (ISE)	Глюкозын IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of glucose in a clinical specimen, using an ion-selective electrode (ISE) method.	B
7294	53306	Glucose IVD, kit, enzyme fluorescence	Глюкозын IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of glucose in a clinical specimen, using an enzyme fluorescence method.	B
7295	53307	Glucose IVD, reagent	Глюкозын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of glucose in a clinical specimen.	B
7296	53308	Glycated albumin IVD, kit, enzyme immunoassay (EIA)	Гликаталсан альбумин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7297	53309	Glycated albumin IVD, kit, liquid chromatography	Гликат альбумин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen, using a liquid chromatography method.	B
7298	53310	Glycated albumin IVD, calibrator	Гликатлагдсан альбумин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen.	B
7299	53311	Glycated albumin IVD, control	Гликатлагдсан альбумин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen.	B

7300	53312	Glycated albumin IVD, reagent	Гликатжуулсан альбумин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen.	B
7301	53313	Glycated haemoglobin (HbA1c) IVD, kit, liquid chromatography	Гликатлагдсан гемоглобин (HbA1c) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen using a liquid chromatography method.	B
7302	53314	Glycated haemoglobin (HbA1c) IVD, kit, ion-selective electrode (ISE)	Гликатлагдсан гемоглобин (HbA1c) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen using an ion-selective electrode (ISE) method.	B
7303	53315	Glycated haemoglobin (HbA1c) IVD, calibrator	Гликатжуулсан гемоглобин (HbA1c) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative measurement of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen.	B
7304	53316	Glycated haemoglobin (HbA1c) IVD, reagent	Гликатжуулсан гемоглобин (HbA1c) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin in a clinical specimen.	B
7305	53321	Guanidinoacetate IVD, kit, spectrophotometry	Гуанидиноацетат IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of guanidinoacetate in a clinical specimen, using a spectrophotometry method.	B
7306	53322	Guanidinoacetate IVD, kit, mass spectrometry	Гуанидиноацетат IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of guanidinoacetate in a clinical specimen, using a mass spectrometry method.	B
7307	53323	Guanidinoacetate IVD, calibrator	Гуанидиноацетат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of guanidinoacetate in a clinical specimen.	B

7308	53324	Guanidinoacetate IVD, control	Гуанидиноацетат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of guanidinoacetate in a clinical specimen.	B
7309	53325	Guanidinoacetate IVD, reagent	Гуанидиноацетат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of guanidinoacetate in a clinical specimen.	B
7310	53326	Histidine IVD, kit, liquid chromatography	Гистидин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the amino acid histidine in a clinical specimen, using a liquid chromatography method.	B
7311	53327	Histidine IVD, calibrator	Гистидин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the amino acid histidine in a clinical specimen.	B
7312	53328	Histidine IVD, control	Гистидин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the amino acid histidine in a clinical specimen.	B
7313	53329	Histidine IVD, reagent	Гистидин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the amino acid histidine in a clinical specimen.	B
7314	53330	Beta-hydroxybutyrate IVD, kit, rapid colorimetric, clinical	Бета-гидроксибутират IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi)-quantitative detection of beta-hydroxybutyrate (3-hydroxybutyric acid) within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
7315	53331	Beta-hydroxybutyrate IVD, kit, spectrophotometry	Бета-гидроксибутират IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-hydroxybutyrate (3-hydroxybutyric acid) in a clinical specimen, using a spectrophotometry method.	B
7316	53332	Beta-hydroxybutyrate IVD, calibrator	Бета-гидроксибутират IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-hydroxybutyrate (3-hydroxybutyric acid) in a clinical specimen.	B

7317	53333	Beta-hydroxybutyrate IVD, control	Бета-гидроксибутират IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-hydroxybutyrate (3-hydroxybutyric acid) in a clinical specimen.	B
7318	53334	Beta-hydroxybutyrate IVD, reagent	Бета-гидроксибутират IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-hydroxybutyrate (3-hydroxybutyric acid) in a clinical specimen.	B
7319	53335	Inter-alpha trypsin inhibitor IVD, kit, chemiluminescent immunoassay	Альфа трипсин дарангуйлагч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of inter-alpha trypsin inhibitor in a clinical specimen, using a chemiluminescent immunoassay method.	B
7320	53336	Inter-alpha trypsin inhibitor IVD, calibrator	Альфа трипсин дарангуйлагч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of inter-alpha trypsin inhibitor in a clinical specimen.	B
7321	53337	Inter-alpha trypsin inhibitor IVD, reagent	Альфа трипсин дарангуйлагч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of inter-alpha trypsin inhibitor in a clinical specimen.	B
7322	53338	Ketone (acetoacetate) IVD, kit, spectrophotometry	Кетон (ацетоацетат) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ketone (acetoacetate) in a clinical specimen, using a spectrophotometry method.	B
7323	53339	Ketone (acetoacetate) IVD, calibrator	Кетон (ацетоацетат) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ketone (acetoacetate) in a clinical specimen.	B
7324	53340	Ketone (acetoacetate) IVD, control	Кетон (ацетоацетат) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ketone (acetoacetate) in a clinical specimen.	B

7325	53341	Ketone (acetoacetate) IVD, reagent	Кетон (ацетоацетат) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ketone (acetoacetate) in a clinical specimen.	B
7326	53342	Lactate IVD, kit, spectrophotometry	Лактат IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactate in a clinical specimen, using a spectrophotometry method.	B
7327	53343	Lactate IVD, kit, reduction/oxidation	Лактат IVD, иж бүрдэл, бууралт / исэлдэлт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactate in a clinical specimen, using a reduction/oxidation method.	B
7328	53344	Lactate IVD, calibrator	Лактат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lactate in a clinical specimen.	B
7329	53345	Lactate IVD, control	Лактат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lactate in a clinical specimen.	B
7330	53346	Lactate IVD, reagent	Лактат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lactate in a clinical specimen.	B
7331	53347	Lecithin IVD, kit, spectrophotometry	Лецитин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lecithin in a clinical specimen, using a spectrophotometry method.	B
7332	53348	Lecithin IVD, calibrator	Лецитин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lecithin in a clinical specimen.	B
7333	53349	Lecithin IVD, control	Лецитин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of lecithin in a clinical specimen.	B
7334	53350	Lecithin IVD, reagent	Лецитин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lecithin in a clinical specimen.	B

7335	53358	Total cholesterol lipid IVD, kit, chemiluminescent immunoassay	Нийт холестерины липидийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total cholesterol lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B
7336	53359	Total cholesterol lipid IVD, kit, spectrophotometry	Нийт холестерины липидийн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total cholesterol lipid in a clinical specimen, using a spectrophotometry method.	B
7337	53360	Total cholesterol lipid IVD, kit, enzyme chemiluminescence	Нийт холестерины липидийн IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total cholesterol lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7338	53361	Total cholesterol lipid IVD, kit, mass spectrometry	Нийт холестерины липидийн IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total cholesterol lipid in a clinical specimen, using a mass spectrometry method.	B
7339	53362	Total cholesterol lipid IVD, reagent	Нийт холестерины липидийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total cholesterol lipid in a clinical specimen.	B
7340	53363	Fatty acid binding protein (FABP) IVD, kit, enzyme immunoassay (EIA)	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen, using an enzyme immunoassay (EIA) method. FABP is used as a marker of various metabolic, cardiac and other conditions [e.g., obesity, diabetes mellitus, hypertension, atherosclerosis, coronary heart disease, acute myocardial infarction, acute kidney injury (AKI)].	B
7341	53364	Fatty acid binding protein (FABP) IVD, kit, immunoblot	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen, using an immunoblot method. FABP is used as a marker of various metabolic, cardiac and other conditions [e.g., obesity, diabetes mellitus, hypertension, atherosclerosis, coronary heart disease, acute myocardial infarction, acute kidney injury (AKI)].	B

7342	53365	Fatty acid binding protein (FABP) IVD, reagent	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen.	B
7343	53366	Essential fatty acid profile IVD, kit, mass spectrometry	Эфирийн тосны хүчлийн профиль IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of an essential fatty acid profile in a clinical specimen, using a mass spectrometry method.	B
7344	53367	Essential fatty acid profile IVD, calibrator	Чухал тосны хүчлийн профиль IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative determination of an essential fatty acid profile of a clinical specimen.	B
7345	53368	Essential fatty acid profile IVD, control	Чухал тосны хүчлийн профиль IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative determination of an essential fatty acid profile of a clinical specimen.	B
7346	53369	Essential fatty acid profile IVD, reagent	Чухал тосны хүчлийн профиль IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative determination of the essential fatty acid profile of a clinical specimen.	B
7347	53370	Free fatty acid profile IVD, kit, mass spectrometry	Чөлөөт тосны хүчлийн профиль IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of free fatty acid profile of a clinical specimen, using a mass spectrometry method.	B
7348	53371	Free fatty acid profile IVD, calibrator	Чөлөөт тосны хүчлийн профиль IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative determination of a free fatty acid profile of a clinical specimen.	B
7349	53372	Free fatty acid profile IVD, control	Чөлөөт тосны хүчлийн профиль IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative determination of a free fatty acid profile of a clinical specimen.	B
7350	53373	Free fatty acid profile IVD, reagent	Чөлөөт тосны хүчлийн профиль IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative determination of a free fatty acid profile of a clinical specimen.	B

7351	53380	Total fatty acid IVD, kit, spectrophotometry	Нийт тосны хүчлийн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total fatty acid in a clinical specimen, using a spectrophotometry method.	B
7352	53381	Total fatty acid IVD, calibrator	Нийт тосны хүчлийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total fatty acid in a clinical specimen.	B
7353	53382	Total fatty acid IVD, control	Нийт өөх тосны хүчлийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total fatty acid in a clinical specimen.	B
7354	53383	Total fatty acid IVD, reagent	Нийт тосны хүчлийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total fatty acid in a clinical specimen.	B
7355	53384	Very long chain fatty acid IVD, kit, liquid chromatography	Маш урт гинжний тосны хүчлийн IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of very long chain fatty acid in a clinical specimen, using a liquid chromatography method.	B
7356	53385	Very long chain fatty acid IVD, calibrator	Маш урт гинжин тосны хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of very long chain fatty acid in a clinical specimen.	B
7357	53386	Very long chain fatty acid IVD, control	Маш урт гинжний тосны хүчлийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of very long chain fatty acid in a clinical specimen.	B
7358	53387	Very long chain fatty acid IVD, reagent	Маш урт гинжний тосны хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of very long chain fatty acid in a clinical specimen.	B
7359	53388	High density lipoprotein (HDL) cholesterol IVD, kit, chemiluminescent immunoassay	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B

7360	53389	High density lipoprotein (HDL) cholesterol IVD, kit, chemiluminescent immunoassay, rapid	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ, хурдан	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a chemiluminescent immunoassay method. This test is commonly used in the laboratory or in point-of-care analyses.	B
7361	53390	High density lipoprotein (HDL) cholesterol IVD, kit, enzyme chemiluminescence	Өндөр нягтралтай липопротейн (HDL) холестерин IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7362	53391	High density lipoprotein (HDL) cholesterol IVD, kit, spectrophotometry	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen, using a spectrophotometry method.	B
7363	53392	High density lipoprotein (HDL) cholesterol IVD, kit, mass spectrometry	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen, using a mass spectrometry method.	B
7364	53393	High density lipoprotein (HDL) cholesterol IVD, reagent	Өндөр нягтралтай липопротейн (HDL) холестерин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen.	B
7365	53394	Low density lipoprotein (LDL) cholesterol IVD, kit, chemiluminescent immunoassay	Бага нягтралтай липопротейн (LDL) холестерины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B
7366	53395	Low density lipoprotein (LDL) cholesterol IVD, kit, spectrophotometry	Бага нягтралтай липопротейн (LDL) холестерины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen, using a spectrophotometry method.	B

7367	53396	Low density lipoprotein (LDL) cholesterol IVD, kit, enzyme chemiluminescence	Бага нягтралтай липопротейн (LDL) холестерин IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7368	53397	Low density lipoprotein (LDL) cholesterol IVD, kit, mass spectrometry	Бага нягтралтай липопротейн (LDL) холестерины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen, using a mass spectrometry method.	B
7369	53398	Low density lipoprotein (LDL) cholesterol IVD, reagent	Бага нягтралтай липопротейн (LDL) холестерин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of low density lipoprotein (LDL) cholesterol lipid in a clinical specimen.	B
7370	53399	Very low density lipoprotein (VLDL) cholesterol IVD, kit, chemiluminescent immunoassay	Маш бага нягтралтай липопротейн (VLDL) холестерины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B
7371	53400	Very low density lipoprotein (VLDL) cholesterol IVD, kit, spectrophotometry	Маш бага нягтралтай липопротейн (VLDL) холестерины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen, using a spectrophotometry method.	B
7372	53401	Very low density lipoprotein (VLDL) cholesterol IVD, kit, enzyme chemiluminescence	Маш бага нягтралтай липопротейн (VLDL) холестерин IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7373	53402	Very low density lipoprotein (VLDL) cholesterol IVD, kit, mass spectrometry	Маш бага нягтралтай липопротейн (VLDL) холестерины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen, using a mass spectrometry method.	B

7374	53403	Very low density lipoprotein (VLDL) cholesterol IVD, calibrator	Маш бага нягтралтай липопротейн (VLDL) холестерины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen.	B
7375	53404	Very low density lipoprotein (VLDL) cholesterol IVD, control	Маш бага нягтралтай липопротейн (VLDL) холестерины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen.	B
7376	53405	Very low density lipoprotein (VLDL) cholesterol IVD, reagent	Маш бага нягтралтай липопротейн (VLDL) холестерин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of very low density lipoprotein (VLDL) cholesterol lipid in a clinical specimen.	B
7377	53406	Dense low density lipoprotein (DLDL) cholesterol IVD, kit, chemiluminescent immunoassay	Нягт бага нягтралтай липопротейн (DLDL) холестерины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B
7378	53407	Dense low density lipoprotein (DLDL) cholesterol IVD, kit, spectrophotometry	Нягт бага нягтралтай липопротейн (DLDL) холестерины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen, using a spectrophotometry method.	B
7379	53408	Dense low density lipoprotein (DLDL) cholesterol IVD, kit, enzyme chemiluminescence	Нягт бага нягтралтай липопротейн (DLDL) холестерин IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7380	53409	Dense low density lipoprotein (DLDL) cholesterol IVD, kit, mass spectrometry	Нягт бага нягтралтай липопротейн (DLDL) холестерины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen, using a mass spectrometry method.	B
7381	53410	Dense low density lipoprotein (DLDL) cholesterol IVD, calibrator	Нягт бага нягтралтай липопротейн (DLDL) холестерины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen.	B

7382	53411	Dense low density lipoprotein (DLDL) cholesterol IVD, control	Нягт бага нягтралтай липопротейн (DLDL) холестерины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen.	B
7383	53412	Dense low density lipoprotein (DLDL) cholesterol IVD, reagent	Нягт бага нягтралтай липопротейн (DLDL) холестерин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of dense low density lipoprotein (DLDL) cholesterol lipid in a clinical specimen.	B
7384	53413	Total lipoprotein IVD, kit, nephelometry/turbidimetry	Нийт липопротеины IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total lipoprotein lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7385	53414	Total lipoprotein IVD, kit, enzyme chemiluminescence	Нийт липопротеины IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total lipoprotein lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7386	53415	Total lipoprotein IVD, kit, spectrophotometry	Нийт липопротейн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total lipoprotein lipid in a clinical specimen, using a spectrophotometry method.	B
7387	53416	Total lipoprotein IVD, kit, mass spectrometry	Нийт липопротеины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total lipoprotein lipid in a clinical specimen, using a mass spectrometry method.	B
7388	53417	Total lipoprotein IVD, calibrator	Нийт липопротеины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total lipoprotein lipid in a clinical specimen.	B
7389	53418	Total lipoprotein IVD, reagent	Нийт липопротеины IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total lipoprotein lipid in a clinical specimen.	B
7390	53419	Remnant lipoprotein IVD, kit, nephelometry/turbidimetry	Үлдэгдэл липопротеины IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B

7391	53420	Remnant lipoprotein IVD, kit, enzyme chemiluminescence	Үлдэгдэл липопротейн IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7392	53421	Remnant lipoprotein IVD, kit, spectrophotometry	Үлдэгдэл липопротеины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of remnant lipoprotein lipid in a clinical specimen, using a spectrophotometry method.	B
7393	53422	Remnant lipoprotein IVD, kit, mass spectrometry	Үлдэгдэл липопротеины IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen, using a mass spectrometry method.	B
7394	53423	Remnant lipoprotein IVD, calibrator	Үлдэгдэл липопротеины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen.	B
7395	53424	Remnant lipoprotein IVD, control	Үлдэгдэл липопротеины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen.	B
7396	53425	Remnant lipoprotein IVD, reagent	Үлдэгдэл липопротеины IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of remnant lipoprotein lipid in a clinical specimen.	B
7397	53426	Lipoprotein X IVD, kit, nephelometry/turbidimetry	Липопротейн X IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein X in a clinical specimen, using a nephelometry/turbidimetry method.	B
7398	53427	Lipoprotein X IVD, kit, enzyme chemiluminescence	Липопротейн X IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein X in a clinical specimen, using an enzyme chemiluminescence method.	B
7399	53428	Lipoprotein X IVD, kit, spectrophotometry	Липопротейн X IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipoprotein X in a clinical specimen, using a spectrophotometry method.	B

7400	53429	Lipoprotein X IVD, kit, mass spectrometry	Липопротейн X IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein X in a clinical specimen, using a mass spectrometry method.	B
7401	53430	Lipoprotein X IVD, calibrator	Липопротейн X IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of lipoprotein X in a clinical specimen.	B
7402	53431	Lipoprotein X IVD, control	Липопротейн X IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of lipoprotein X in a clinical specimen.	B
7403	53432	Lipoprotein X IVD, reagent	Липопротейн X IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lipoprotein X in a clinical specimen.	B
7404	53433	Total apolipoprotein IVD, kit, nephelometry/turbidimetry	Нийт аполипопротейн IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7405	53434	Total apolipoprotein IVD, kit, enzyme chemiluminescence	Нийт apolipoprotein IVD, иж бүрдэл, ферментийн химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7406	53435	Total apolipoprotein IVD, kit, spectrophotometry	Нийт аполипопротейн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total apolipoprotein lipid in a clinical specimen, using a spectrophotometry method.	B
7407	53436	Total apolipoprotein IVD, kit, mass spectrometry	Нийт apolipoprotein IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen, using a mass spectrometry method.	B
7408	53437	Total apolipoprotein IVD, reagent	Нийт apolipoprotein IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total apolipoprotein lipid in a clinical specimen.	B

7409	53438	Lipoprotein A IVD, kit, nephelometry/turbidimetry	Липопротейн А IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein A lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7410	53439	Lipoprotein A IVD, kit, enzyme chemiluminescence	Липопротейн А IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein A lipid in a clinical specimen, using an enzyme chemiluminescence method.	B
7411	53440	Lipoprotein A IVD, kit, spectrophotometry	Липопротейн А IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipoprotein A lipid in a clinical specimen, using a spectrophotometry method.	B
7412	53441	Lipoprotein A IVD, kit, mass spectrometry	Липопротейн А IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein A lipid in a clinical specimen, using a mass spectrometry method.	B
7413	53442	Lipoprotein A IVD, reagent	Липопротейн А IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of lipoprotein A lipid in a clinical specimen.	B
7414	53443	Apolipoprotein A-I (Apo A1) IVD, kit, nephelometry/turbidimetry	Аполипопротейн AI (Apo A1) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein A-I (Apo A1) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7415	53444	Apolipoprotein A-I (Apo A1) IVD, reagent	Аполипопротейн AI (Apo A1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein A-I (Apo A1) lipid in a clinical specimen.	B
7416	53445	Apolipoprotein A-II (Apo A2) IVD, kit, nephelometry/turbidimetry	Аполипопротейн A-II (Apo A2) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein A-II (Apo A2) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7417	53446	Apolipoprotein A-II (Apo A2) IVD, reagent	Аполипопротейн A-II (Apo A2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein A-II (Apo A2) lipid in a clinical specimen.	B

7418	53447	Apolipoprotein B (Apo B) IVD, kit, nephelometry/turbidimetry	Аполипопротейн B (Апо B) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein B (Apo B) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7419	53448	Apolipoprotein B (Apo B) IVD, reagent	Аполипопротейн B (Апо B) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein B (Apo B) lipid in a clinical specimen.	B
7420	53449	Apolipoprotein C-II (Apo C2) IVD, kit, nephelometry/turbidimetry	Аполипопротейн C-II (Apo C2) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein C-II (Apo C2) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7421	53450	Apolipoprotein C-II (Apo C2) IVD, reagent	Аполипопротейн C-II (Apo C2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein C-II (Apo C2) lipid in a clinical specimen.	B
7422	53451	Apolipoprotein C-III (Apo C3) IVD, kit, nephelometry/turbidimetry	Аполипопротейн C-III (Apo C3) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein C-III (Apo C3) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7423	53452	Apolipoprotein C-III (Apo C3) IVD, reagent	Аполипопротейн C-III (Apo C3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein C-III (Apo C3) lipid in a clinical specimen.	B
7424	53453	Serum amyloid A IVD, kit, nephelometry/turbidimetry	Сийвэнгийн амилоид A IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the apolipoprotein serum amyloid A in a clinical specimen, using a nephelometry/turbidimetry method. This test is used to aid in the diagnosis of inflammatory disease.	B
7425	53454	Serum amyloid A IVD, kit, enzyme immunoassay (EIA)	Сийвэнгийн амилоид A IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the apolipoprotein serum amyloid A in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is used to aid in the diagnosis of inflammatory disease.	B

7426	53455	Serum amyloid A IVD, calibrator	Сийвэнгийн амилоид А IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the apolipoprotein, serum amyloid A in a clinical specimen.	B
7427	53456	Serum amyloid A IVD, control	Сийвэнгийн амилоид А IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the apolipoprotein, serum amyloid A in a clinical specimen.	B
7428	53457	Serum amyloid A IVD, reagent	Сийвэнгийн амилоид А IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the apolipoprotein, serum amyloid A in a clinical specimen.	B
7429	53458	Apolipoprotein E (Apo E) IVD, kit, nephelometry/turbidimetry	Аполипопротейн Е (Apo E) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of apolipoprotein E (Apo E) lipid in a clinical specimen, using a nephelometry/turbidimetry method.	B
7430	53459	Apolipoprotein E (Apo E) IVD, reagent	Apolipoprotein E (Apo E) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of apolipoprotein E (Apo E) lipid in a clinical specimen.	B
7431	53460	Triglyceride IVD, kit, spectrophotometry	Триглицеридын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of triglycerides in a clinical specimen, using a spectrophotometry method.	B
7432	53461	Triglyceride IVD, kit, nephelometry/turbidimetry	Триглицеридын IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of triglycerides in a clinical specimen, using a nephelometry/turbidimetry method.	B
7433	53462	Triglyceride IVD, reagent	Триглицерид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of triglycerides in a clinical specimen.	B
7434	53463	3-Methylglutaconic acid IVD, kit, liquid chromatography	3-Метилглютаконы хүчил IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 3-methylglutaconic acid in a clinical specimen, using a liquid chromatography method.	B

7435	53464	3-Methylglutaconic acid IVD, calibrator	3-Метилглютаконы хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 3-methylglutaconic acid in a clinical specimen.	B
7436	53465	3-Methylglutaconic acid IVD, control	3-Метилглютаконы хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 3-methylglutaconic acid in a clinical specimen.	B
7437	53466	3-Methylglutaconic acid IVD, reagent	3-Метилглютаконы хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 3-methylglutaconic acid in a clinical specimen.	B
7438	53467	Methionine IVD, kit, gas chromatography	Метионин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the amino acid methionine in a clinical specimen, using a gas chromatography method.	B
7439	53468	Methionine IVD, calibrator	Метионин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the amino acid methionine in a clinical specimen.	B
7440	53469	Methionine IVD, control	Метионин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the amino acid methionine in a clinical specimen.	B
7441	53470	Methionine IVD, reagent	Метионин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the amino acid methionine in a clinical specimen.	B
7442	53471	Methylmalonic acid (MMA) IVD, kit, gas chromatography	Метилмалоны хүчил (MMA) IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of methylmalonic acid (MMA) in a clinical specimen, using a gas chromatography method.	B
7443	53472	Methylmalonic acid (MMA) IVD, calibrator	Метилмалоны хүчил (MMA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of methylmalonic acid (MMA) in a clinical specimen.	B

7444	53473	Methylmalonic acid (MMA) IVD, control	Метилмалоны хүчил (MMA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of methylmalonic acid (MMA) in a clinical specimen.	B
7445	53474	Methylmalonic acid (MMA) IVD, reagent	Метилмалоны хүчил (MMA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of methylmalonic acid (MMA) in a clinical specimen.	B
7446	53475	Microalbumin IVD, kit, nephelometry/turbidimetry	Микроальбумин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of microalbumin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7447	53476	Microalbumin IVD, kit, spectrophotometry	Микроальбумин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of microalbumin in a clinical specimen, using a spectrophotometry method.	B
7448	53477	Microalbumin IVD, calibrator	Микроальбумин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of microalbumin in a clinical specimen.	B
7449	53478	Microalbumin IVD, control	Микроальбумин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of microalbumin in a clinical specimen.	B
7450	53479	Microalbumin IVD, reagent	Микроальбумин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of microalbumin in a clinical specimen.	B
7451	53480	Total microprotein IVD, kit, nephelometry/turbidimetry	Нийт микропротейн IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total microprotein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7452	53481	Total microprotein IVD, kit, spectrophotometry	Нийт микропротейн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total microprotein in a clinical specimen, using a spectrophotometry method.	B
7453	53482	Total microprotein IVD, calibrator	Нийт бичил уургийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total microprotein in a clinical specimen.	B

7454	53483	Total microprotein IVD, control	Нийт бичил уургийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total microprotein in a clinical specimen.	B
7455	53484	Total microprotein IVD, reagent	Нийт бичил уургийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total microprotein in a clinical specimen.	B
7456	53485	Monoethylglycinexylidide (MEGX) IVD, kit, fluorescent immunoassay	Моноэтилглицинексилидид (MEGX) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of monoethylglycinexylidide (MEGX) in a clinical specimen, using a fluorescent immunoassay method.	B
7457	53486	Monoethylglycinexylidide (MEGX) IVD, reagent	Моноэтилглицинексилидид (MEGX) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of monoethylglycinexylidide (MEGX) in a clinical specimen.	B
7458	53487	Mucopolysaccharide fraction IVD, kit, liquid chromatography	Мукополисахаридын фракц IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of mucopolysaccharide fractions in a clinical specimen, using a liquid chromatography method.	B
7459	53488	Mucopolysaccharide fraction IVD, calibrator	Мукополисахаридын фракц IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of mucopolysaccharide fractions in a clinical specimen.	B
7460	53489	Mucopolysaccharide fraction IVD, control	Мукополисахаридын фракц IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of mucopolysaccharide fractions in a clinical specimen.	B
7461	53490	Mucopolysaccharide fraction IVD, reagent	Мукополисахаридын фракц IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of mucopolysaccharide fractions in a clinical specimen.	B
7462	53495	N-acetyl procainamide (NAPA) IVD, kit, fluorescent immunoassay	N-ацетил прокаинамид (NAPA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of N-acetyl procainamide (NAPA) in a clinical specimen, using a fluorescent immunoassay method.	B

7463	53496	N-acetyl procainamide (NAPA) IVD, calibrator	N-ацетил прокаинамид (NAPA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of N-acetyl procainamide (NAPA) in a clinical specimen.	B
7464	53497	N-acetyl procainamide (NAPA) IVD, control	N-ацетил прокаинамид (NAPA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of N-acetyl procainamide (NAPA) in a clinical specimen.	B
7465	53498	N-acetyl procainamide (NAPA) IVD, reagent	N-ацетил прокаинамид (NAPA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of N-acetyl procainamide (NAPA) in a clinical specimen.	B
7466	53507	Pancreatic secretory trypsin inhibitor IVD, kit, enzyme immunoassay (EIA)	Нойр булчирхайн шүүрлийн трипсин дарангуйлагч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic secretory trypsin inhibitor in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7467	53508	Pancreatic secretory trypsin inhibitor IVD, calibrator	Нойр булчирхайн шүүрлийн трипсин дарангуйлагч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pancreatic secretory trypsin inhibitor in a clinical specimen.	B
7468	53509	Pancreatic secretory trypsin inhibitor IVD, control	Нойр булчирхайн шүүрлийн трипсин дарангуйлагч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pancreatic secretory trypsin inhibitor in a clinical specimen.	B
7469	53510	Pancreatic secretory trypsin inhibitor IVD, reagent	Нойр булчирхайн шүүрлийн трипсин дарангуйлагч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pancreatic secretory trypsin inhibitor in a clinical specimen.	B
7470	53511	Phenylalanine IVD, kit, ion exchange chromatography	Фенилаланин IVD, иж бүрдэл, ион солилцооны хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative measurement of phenylalanine in a clinical specimen, using an ion exchange chromatography method.	B
7471	53512	Phenylalanine IVD, calibrator	Фенилаланин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of phenylalanine in a clinical specimen.	B

7472	53513	Phenylalanine IVD, control	Фенилаланин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of phenylalanine in a clinical specimen.	B
7473	53514	Phenylalanine IVD, reagent	Фенилаланин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of phenylalanine in a clinical specimen.	B
7474	53515	Phospholipid IVD, kit, spectrophotometry	Фосфолипидын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple phospholipids in a clinical specimen, using a spectrophotometry method.	B
7475	53516	Phospholipid IVD, calibrator	Фосфолипидын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of one or multiple phospholipids in a clinical specimen.	B
7476	53517	Phospholipid IVD, control	Фосфолипидын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of one or multiple phospholipids in a clinical specimen.	B
7477	53518	Phospholipid IVD, reagent	Фосфолипидын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of one or multiple phospholipids in a clinical specimen.	B
7478	53519	Phosphatidyl glycerol (PG) IVD, kit, agglutination	Фосфатидил глицерол (PG) IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phosphatidyl glycerol in a clinical specimen, using an agglutination method.	B
7479	53520	Phosphatidyl glycerol (PG) IVD, calibrator	Фосфатидил глицерол (PG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of phosphatidyl glycerol in a clinical specimen.	B
7480	53521	Phosphatidyl glycerol (PG) IVD, control	Фосфатидил глицерол (PG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of phosphatidyl glycerol in a clinical specimen.	B
7481	53522	Phosphatidyl glycerol (PG) IVD, reagent	Фосфатидил глицерол (PG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of phosphatidyl glycerol in a clinical specimen.	B

7482	53523	5-Aminolaevulinate dehydratase IVD, kit, spectrophotometry	5-Аминолаевулинатын дегидратаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme 5-aminolaevulinate dehydratase, also known as porphobilinogen synthase, in a clinical specimen using a spectrophotometry method.	B
7483	53524	5-Aminolaevulinate dehydratase IVD, reagent	5-Аминолаевулинатын дегидратаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme 5-aminolaevulinate dehydratase, also known as porphobilinogen synthase, in a clinical specimen.	B
7484	53525	Porphyrin precursor IVD, kit, spectrophotometry	Порфирины урьдал IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple porphyrin precursors (e.g., porphobilinogen [PBG], delta-aminolaevulinic acid [delta-ALA]) in a clinical specimen, using a spectrophotometry method. It is typically used to aid in the diagnosis of porphyria.	B
7485	53526	Porphyrin precursor IVD, calibrator	Порфирины урьдал IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple porphyrin precursors (e.g., porphobilinogen [PBG], delta-aminolaevulinic acid [delta-ALA]) in a clinical specimen.	B
7486	53527	Porphyrin precursor IVD, control	Порфирины урьдал IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple porphyrin precursors (e.g., porphobilinogen [PBG], delta-aminolaevulinic acid [delta-ALA]) in a clinical specimen.	B
7487	53528	Porphyrin precursor IVD, reagent	Порфирины урьдал IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple porphyrin precursors (e.g., porphobilinogen [PBG], delta-aminolaevulinic acid [delta-ALA]) in a clinical specimen.	B

7488	53533	Porphobilinogen deaminase IVD, kit, enzyme fluorescence	Порфобилиноген деаминаза IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme porphobilinogen deaminase in a clinical specimen, using an enzyme fluorescence method.	B
7489	53534	Porphobilinogen deaminase IVD, calibrator	Порфобилиноген деаминаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme porphobilinogen deaminase in a clinical specimen.	B
7490	53535	Porphobilinogen deaminase IVD, control	Порфобилиноген деаминаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme porphobilinogen deaminase in a clinical specimen.	B
7491	53536	Porphobilinogen deaminase IVD, reagent	Порфобилиноген деаминаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the porphyrin metabolism enzyme porphobilinogen deaminase in a clinical specimen.	B
7492	53537	Protoporphyrin IX IVD, kit, liquid chromatography	Protoporphyrin IX IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite protoporphyrin IX in a clinical specimen, using a liquid chromatography method.	B
7493	53538	Protoporphyrin IX IVD, reagent	Протопорфирин IX IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the porphyrin metabolite protoporphyrin IX in a clinical specimen.	B
7494	53539	Total porphyrin (coproporphyrin/uroporphyrin) IVD, kit, liquid chromatography	Нийт порфирин (копропорфирин/уропорфирин) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total porphyrin (coproporphyrin/uroporphyrin) in a clinical specimen, using a liquid chromatography method.	B
7495	53540	Total porphyrin (coproporphyrin/uroporphyrin) IVD, reagent	Нийт порфирин (копропорфирин/уропорфирин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total porphyrin (coproporphyrin/uroporphyrin) in a clinical specimen.	B

7496	53541	Uroporphyrin IVD, kit, liquid chromatography	Уропорфирин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite uroporphyrin in a clinical specimen, using a liquid chromatography method.	B
7497	53542	Uroporphyrin IVD, calibrator	Уропорфирин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite uroporphyrin in a clinical specimen.	B
7498	53543	Uroporphyrin IVD, control	Уропорфирин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the porphyrin metabolite uroporphyrin in a clinical specimen.	B
7499	53544	Uroporphyrin IVD, reagent	Уропорфирин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the porphyrin metabolite uroporphyrin in a clinical specimen.	B
7500	53545	Pyruvate IVD, kit, spectrophotometry	Пируват IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pyruvate in a clinical specimen, using a spectrophotometry method.	B
7501	53546	Pyruvate IVD, calibrator	Пируват IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of pyruvate in a clinical specimen.	B
7502	53547	Pyruvate IVD, control	Пируват IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of pyruvate in a clinical specimen.	B
7503	53548	Pyruvate IVD, reagent	Пируват IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of pyruvate in a clinical specimen.	B
7504	53549	Prostacyclin IVD, kit, radioimmunoassay	Простациклин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of prostacyclin in a clinical specimen, using a radioimmunoassay method.	B
7505	53550	Prostacyclin IVD, calibrator	Простациклин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of prostacyclin in a clinical specimen.	B

7506	53551	Prostacyclin IVD, control	Простациклин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of prostacyclin in a clinical specimen.	B
7507	53552	Prostacyclin IVD, reagent	Простациклин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of prostacyclin in a clinical specimen.	B
7508	53553	Sialic acid (free) IVD, kit, spectrophotometry	Сиал хүчил (үнэгүй) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free sialic acid in a clinical specimen, using a spectrophotometry method.	B
7509	53554	Sialic acid (free) IVD, calibrator	Сиалийн хүчил (үнэгүй) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of free sialic acid in a clinical specimen.	B
7510	53555	Sialic acid (free) IVD, control	Сиалийн хүчил (үнэгүй) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of free sialic acid in a clinical specimen.	B
7511	53556	Sialic acid (free) IVD, reagent	Сиалийн хүчил (үнэгүй) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of free sialic acid in a clinical specimen.	B
7512	53557	Sorbitol IVD, kit, spectrophotometry	Сорбитол IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sorbitol in a clinical specimen, using a spectrophotometry method.	B
7513	53558	Sorbitol IVD, calibrator	Сорбитол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sorbitol in a clinical specimen.	B
7514	53559	Sorbitol IVD, control	Сорбитол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sorbitol in a clinical specimen.	B
7515	53560	Sorbitol IVD, reagent	Сорбитол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sorbitol in a clinical specimen.	B

7516	53561	Succinyl acetone IVD, kit, spectrophotometry	Сукцинил ацетон IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of succinyl acetone in a clinical specimen, using a spectrophotometry method.	B
7517	53562	Succinyl acetone IVD, kit, gas chromatography	Сукцинил ацетон IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of succinyl acetone in a clinical specimen, using a gas chromatography method.	B
7518	53563	Succinyl acetone IVD, calibrator	Сукцинил ацетон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of succinyl acetone in a clinical specimen.	B
7519	53564	Succinyl acetone IVD, control	Сукцинил ацетон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of succinyl acetone in a clinical specimen.	B
7520	53565	Succinyl acetone IVD, reagent	Сукцинил ацетон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of succinyl acetone in a clinical specimen.	B
7521	53566	Sulfatide IVD, kit, spectrophotometry	Сульфатидын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sulfatide in a clinical specimen, using a spectrophotometry method.	B
7522	53567	Sulfatide IVD, calibrator	Сульфатид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sulfatide in a clinical specimen.	B
7523	53568	Sulfatide IVD, control	Сульфатид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sulfatide in a clinical specimen.	B
7524	53569	Sulfatide IVD, reagent	Сульфатид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sulfatide in a clinical specimen.	B
7525	53570	Thiocyanate IVD, kit, spectrophotometry	Тиоцианатын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thiocyanate in a clinical specimen, using a spectrophotometry method.	B

7526	53571	Thiocyanate IVD, calibrator	Тиоцианат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thiocyanate in a clinical specimen.	B
7527	53572	Thiocyanate IVD, control	Тиоцианатын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thiocyanate in a clinical specimen.	B
7528	53573	Thiocyanate IVD, reagent	Тиоцианат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thiocyanate in a clinical specimen.	B
7529	53574	Thromboxane IVD, kit, gas chromatography	Тромбоксан IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative detection of thromboxane in a clinical specimen, using a gas chromatography method. Thromboxane is typically used as a marker of platelet activity, which may be affected by a variety of conditions and treatments (e.g., aspirin intake).	B
7530	53575	Thromboxane IVD, kit, radioimmunoassay	Тромбоксан IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative detection of thromboxane in a clinical specimen, using a radioimmunoassay method. Thromboxane is typically used as a marker of platelet activity, which may be affected by a variety of conditions and treatments (e.g., aspirin intake).	B
7531	53576	Thromboxane IVD, calibrator	Тромбоксан IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thromboxane in a clinical specimen.	B
7532	53577	Thromboxane IVD, control	Тромбоксан IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thromboxane in a clinical specimen.	B
7533	53578	Thromboxane IVD, reagent	Тромбоксан IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thromboxane in a clinical specimen.	B
7534	53579	Tyrosine IVD, kit, fluorescent immunoassay	Тирозин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of tyrosine in a clinical specimen, using a fluorescent immunoassay method.	B

7535	53580	Tyrosine IVD, calibrator	Тирозин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of tyrosine in a clinical specimen.	B
7536	53581	Tyrosine IVD, control	Тирозин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of tyrosine in a clinical specimen.	B
7537	53582	Tyrosine IVD, reagent	Тирозин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of tyrosine in a clinical specimen.	B
7538	53583	Uric acid IVD, kit, spectrophotometry	Шээсний хүчил IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of uric acid in a clinical specimen, using a spectrophotometry method.	B
7539	53584	Uric acid IVD, kit, ion-selective electrode (ISE)	Шээсний хүчил IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of uric acid in a clinical specimen, using an ion-selective electrode (ISE) method.	B
7540	53585	Uric acid IVD, kit, chemiluminescent immunoassay	Шээсний хүчил IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of uric acid in a clinical specimen, using a chemiluminescent immunoassay method.	B
7541	53586	Uric acid IVD, reagent	Шээсний хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of uric acid in a clinical specimen.	B
7542	53587	Urea IVD, kit, enzyme spectrophotometry	Мочевин IVD, иж бүрдэл, ферментийн спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen, using an enzyme spectrophotometry method. It is typically used as an indicator of kidney function and/or to differentiate between prerenal and postrenal azotemia.	B
7543	53588	Urea IVD, calibrator	Мочевин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen.	B

7544	53589	Urea IVD, control	Мочевин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen.	B
7545	53590	Urea IVD, reagent	Мочевин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen.	B
7546	53591	Multiple clinical chemistry protein IVD, kit, immunoblot	Олон эмнэлзүйн химийн уураг IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen, using an immunoblot method.	B
7547	53592	Multiple clinical chemistry protein IVD, kit, nephelometry/turbidimetry	Олон эмнэлзүйн химийн уураг IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen, using a nephelometry/turbidimetry method.	B
7548	53593	Multiple clinical chemistry protein IVD, calibrator	Олон эмнэлзүйн химийн уураг IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen.	B
7549	53594	Multiple clinical chemistry protein IVD, control	Олон эмнэлзүйн химийн уураг IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen.	B
7550	53595	Multiple clinical chemistry protein IVD, reagent	Олон эмнэлзүйн химийн уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen.	B
7551	53596	Albumin IVD, kit, nephelometry/turbidimetry	Альбумин IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	B

7552	53598	Albumin IVD, kit, enzyme immunoassay (EIA)	Альбумин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	B
7553	53599	Albumin IVD, reagent	Альбумин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of albumin in a clinical specimen.	B
7554	53600	Albumin-globulin ratio IVD, kit, enzyme immunoassay (EIA)	Альбумин-глобулины харьцаа IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used to determine the albumin-globulin ratio of a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7555	53601	Albumin-globulin ratio IVD, reagent	Альбумин-глобулины харьцаа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to determine the albumin-globulin ratio of a clinical specimen.	B
7556	53602	Alpha-1-antitrypsin (protease inhibitor) IVD, kit, nephelometry/turbidimetry	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen, using a nephelometry/turbidimetry method. Alpha-1-antitrypsin deficiency is typically associated with liver cirrhosis and pulmonary emphysema.	B
7557	53603	Alpha-1-antitrypsin (protease inhibitor) IVD, kit, enzyme immunoassay (EIA)	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen, using an enzyme immunoassay (EIA) method. Alpha-1-antitrypsin deficiency is typically associated with liver cirrhosis and pulmonary emphysema.	B
7558	53604	Alpha-1-antitrypsin (protease inhibitor) IVD, kit, immunoblot	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen, using an immunoblot method. Alpha-1-antitrypsin deficiency is typically associated with liver cirrhosis and pulmonary emphysema.	B

7559	53605	Alpha-1-antitrypsin (protease inhibitor) IVD, reagent	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen.	B
7560	53606	Alpha-1-acid glycoprotein (orosomucoid) IVD, kit, nephelometry/turbidimetry	Альфа-1-хүчлийн гликопротейн (оросомукоид) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-1-acid glycoprotein (orosomucoid) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7561	53607	Alpha-1-acid glycoprotein (orosomucoid) IVD, reagent	Альфа-1 хүчлийн гликопротейн (оросомукоид) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-1-acid glycoprotein (orosomucoid) in a clinical specimen.	B
7562	53608	Alpha-1-B glycoprotein IVD, kit, nephelometry/turbidimetry	Альфа-1-В гликопротеины IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-1-B glycoprotein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7563	53609	Alpha-1-B glycoprotein IVD, reagent	Альфа-1-В гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-1-B glycoprotein in a clinical specimen.	B
7564	53610	Afamin IVD, kit, nephelometry/turbidimetry	Афамин IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of afamin, also known as alpha-albumin (previously known as alpha-1-T glycoprotein) in a clinical specimen, using a nephelometry/turbidimetry method. Afamin has been associated with metabolic syndrome, insulin resistance and ovarian cancer.	B
7565	53611	Afamin IVD, reagent	Афамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of afamin, also known as alpha-albumin (previously known as alpha-1-T glycoprotein) in a clinical specimen.	B

7566	53612	Alpha-2-glycoprotein IVD, kit, nephelometry/turbidimetry	Альфа-2-гликопротейн IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-2-glycoprotein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7567	53613	Alpha-2-glycoprotein IVD, reagent	Альфа-2-гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-2-glycoprotein in a clinical specimen.	B
7568	53614	Alpha-2-AP-glycoprotein IVD, kit, nephelometry/turbidimetry	Альфа-2-АП-гликопротейн IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-2-AP-glycoprotein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7569	53615	Alpha-2-AP-glycoprotein IVD, reagent	Альфа-2-АП-гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-2-AP-glycoprotein in a clinical specimen.	B
7570	53618	Alpha-2-HS-glycoprotein (AHSG)/fetuin-A IVD, kit, nephelometry/turbidimetry	Альфа-2-HS-гликопротеин (AHSG)/фетуин-А IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-2-HS-glycoprotein (AHSG), also referred to as fetuin-A, in a clinical specimen using a nephelometry/turbidimetry method.	B
7571	53619	Alpha-2-HS-glycoprotein (AHSG)/fetuin-A IVD, reagent	Альфа-2-HS-гликопротейн (AHSG)/фетуин-А IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-2-HS-glycoprotein (AHSG), also referred to as fetuin-A in a clinical specimen.	B
7572	53620	Beta-2-glycoprotein IVD, kit, nephelometry/turbidimetry	Бета-2-гликопротейн IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of beta-2-glycoprotein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7573	53621	Beta-2-glycoprotein IVD, calibrator	Бета-2-гликопротейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-2-glycoprotein in a clinical specimen.	B

7574	53622	Beta-2-glycoprotein IVD, control	Бета-2-гликопротейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of beta-2-glycoprotein in a clinical specimen.	B
7575	53623	Beta-2-glycoprotein IVD, reagent	Бета-2-гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-2-glycoprotein in a clinical specimen.	B
7576	53624	Calprotectin IVD, kit, enzyme immunoassay (EIA)	Калпротектин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is commonly used to aid in the diagnosis of inflammatory bowel disease or other causes of intestinal inflammation.	B
7577	53625	Calprotectin IVD, calibrator	Калпротектин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen.	B
7578	53626	Calprotectin IVD, control	Калпротектин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen.	B
7579	53627	Calprotectin IVD, reagent	Калпротектин IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen.	B
7580	53628	Transferrin/transferrin isoform IVD, kit, liquid chromatography	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using a liquid chromatography method.	B
7581	53632	Ceruloplasmin IVD, kit, nephelometry/turbidimetry	Церулоплазмины IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ceruloplasmin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7582	53633	Ceruloplasmin IVD, kit, gas chromatography	Церулоплазмин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ceruloplasmin in a clinical specimen, using a gas chromatography method.	B

7583	53634	Ceruloplasmin IVD, reagent	Церулоплазмин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of ceruloplasmin in a clinical specimen.	B
7584	53635	Collagen type I cross-linked N-telopeptide IVD, kit, chemiluminescent immunoassay	Коллаген төрлийн I хөндлөн холбоот N-телопептидийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of collagen type I cross-linked N-telopeptides in a clinical specimen, using a chemiluminescent immunoassay method.	B
7585	53636	Collagen type I cross-linked N-telopeptide IVD, kit, enzyme immunoassay (EIA)	Коллаген төрлийн I хөндлөн холбоот N-телопептидийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of collagen type I cross-linked N-telopeptides in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7586	53637	Collagen type I cross-linked N-telopeptide IVD, calibrator	Коллаген төрлийн I хөндлөн холбоост N-телопептидийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of collagen type I cross-linked N-telopeptides in a clinical specimen.	B
7587	53638	Collagen type I cross-linked N-telopeptide IVD, control	Коллаген төрлийн I хөндлөн холбоос N-телопептидийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of collagen type I cross-linked N-telopeptides in a clinical specimen.	B
7588	53639	Collagen type I cross-linked N-telopeptide IVD, reagent	Коллаген төрлийн I хөндлөн холбоост N-телопептид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of collagen type I cross-linked N-telopeptides in a clinical specimen.	B
7589	53640	Procollagen type I C-terminal propeptide (PICP) IVD, kit, enzyme immunoassay (EIA)	Проколлаген төрлийн I С-терминал пропептид (PICP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type I C-terminal propeptide (PICP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7590	53641	Procollagen type I C-terminal propeptide (PICP) IVD, calibrator	Проколлаген төрлийн I С-терминал пропептид (PICP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of procollagen type I C-terminal propeptide (PICP) in a clinical specimen.	B
7591	53642	Procollagen type I C-terminal propeptide (PICP) IVD, control	Проколлаген төрлийн I С-терминал пропептид (PICP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of procollagen type I C-terminal propeptide (PICP) in a clinical specimen.	B
7592	53643	Procollagen type I C-terminal propeptide (PICP) IVD, reagent	Проколлаген төрлийн I С-терминал пропептид (PICP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of procollagen type I C-terminal propeptide (PICP) in a clinical specimen.	B
7593	53644	Procollagen type III C-terminal propeptide IVD, kit, enzyme immunoassay (EIA)	III төрлийн проколлаген С-терминал пропептид IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type III C-terminal propeptide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7594	53645	Procollagen type III C-terminal propeptide IVD, calibrator	Проколлаген төрлийн III С-терминал пропептид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of procollagen type III C-terminal propeptide in a clinical specimen.	B
7595	53646	Procollagen type III C-terminal propeptide IVD, control	III төрлийн проколлаген С-терминал пропептид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of procollagen type III C-terminal propeptide in a clinical specimen.	B
7596	53647	Procollagen type III C-terminal propeptide IVD, reagent	III төрлийн проколлаген С-терминал пропептид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of procollagen type III C-terminal propeptide in a clinical specimen.	B
7597	53648	Collagen type IV IVD, kit, enzyme immunoassay (EIA)	Коллагены IV төрлийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of collagen type IV in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7598	53649	Collagen type IV IVD, calibrator	Коллаген IV төрлийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of collagen type IV in a clinical specimen.	B
7599	53650	Collagen type IV IVD, control	Коллагены IV төрлийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of collagen type IV in a clinical specimen.	B
7600	53651	Collagen type IV IVD, reagent	Коллаген IV төрлийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of collagen type IV in a clinical specimen.	B
7601	53654	Collagen pyridium crosslink IVD, kit, enzyme immunoassay (EIA)	Коллаген пиридиумын хөндлөн холбоос IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a specific marker of bone resorption and osteoclastic activity to help in the diagnosis of bone disease (e.g., postmenopausal osteoporosis, bone metastasis, and Paget's disease) or in monitoring collagen resorption changes in patients receiving antiresorptive therapy.	B
7602	53655	Collagen pyridium crosslink IVD, calibrator	Коллаген пиридиумын хөндлөн холбоос IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen.	B
7603	53656	Collagen pyridium crosslink IVD, control	Коллаген пиридиумын хөндлөн холбоос IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen.	B
7604	53657	Collagen pyridium crosslink IVD, reagent	Коллаген пиридиумын хөндлөн холбоос IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen.	B

7605	53658	Multiple complement component IVD, control	Олон нэмэлт бүрэлдэхүүн хэсэг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of multiple components of the complement cascade in a clinical specimen.	B
7606	53659	Total complement activity (CH50) IVD, kit, enzyme immunoassay (EIA)	Нийт нэмэлт идэвхжил (CH50) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total complement activity (CH50) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7607	53660	Total complement activity (CH50) IVD, calibrator	Нийт нэмэлт идэвхжил (CH50) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total complement activity (CH50) in a clinical specimen.	B
7608	53661	Total complement activity (CH50) IVD, control	Нийт нэмэлт үйл ажиллагаа (CH50) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total complement activity (CH50) in a clinical specimen.	B
7609	53662	Total complement activity (CH50) IVD, reagent	Нийт нэмэлт идэвхжил (CH50) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total complement activity (CH50) in a clinical specimen.	B
7610	53668	Complement component B IVD, kit, enzyme immunoassay (EIA)	Б бүрэлдэхүүн хэсэг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component B in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7611	53669	Complement component B IVD, kit, fluorescent immunoassay	Б бүрэлдэхүүн хэсэг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component B in a clinical specimen, using a fluorescent immunoassay method.	B
7612	53670	Complement component B IVD, calibrator	Б бүрэлдэхүүн хэсэг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component B in a clinical specimen.	B
7613	53671	Complement component B IVD, control	Б бүрэлдэхүүн хэсэг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component B in a clinical specimen.	B

7614	53672	Complement component B IVD, reagent	Б бүрэлдэхүүн хэсэг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component B in a clinical specimen.	B
7615	53673	Complement component C1q IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C1q in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used for the characterization and/or diagnosis of complement cascade component C1q deficiency, which may be associated with systemic lupus erythematosus (SLE) and glomerulonephritis.	B
7616	53674	Complement component C1q IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component C1q in a clinical specimen.	B
7617	53675	Complement component C1q IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component C1q in a clinical specimen.	B
7618	53676	Complement component C1 inhibitor IVD, kit, nephelometry/turbidimetry	C1 дарангуйлагч IVD, иж бүрдэл, нефелометр/турбидиметрийн нэмэлт бүрэлдэхүүн хэсэг	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen, using a nephelometry/turbidimetry method.	B
7619	53677	Complement component C1 inhibitor IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C1 дарангуйлагч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen.	B
7620	53678	Complement component C1 inhibitor IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C1 дарангуйлагч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen.	B
7621	53679	Complement component C2 IVD, kit, precipitation/immunodiffusion	Нэмэлт бүрэлдэхүүн хэсэг C2 IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C2 in a clinical specimen, using a precipitation/immunodiffusion method.	B

7622	53680	Complement component C2 IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C2 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component C2 in a clinical specimen.	B
7623	53681	Complement component C2 IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C2 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component C2 in a clinical specimen.	B
7624	53682	Complement component C2 IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C2 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component C2 in a clinical specimen.	B
7625	53683	Complement components C3/C3c IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade components C3 and/or C3c in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7626	53684	Complement components C3/C3c IVD, kit, nephelometry/turbidimetry	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade components C3 and/or C3c in a clinical specimen, using a nephelometry/turbidimetry method.	B
7627	53685	Complement components C3/C3c IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade components C3 and/or C3c in a clinical specimen.	B
7628	53686	Complement components C3/C3c IVD, reagent	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade components C3 and/or C3c in a clinical specimen.	B
7629	53687	Complement component C3b IVD, kit, precipitation/immunodiffusion	Нэмэлт бүрэлдэхүүн хэсэг C3b IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the quantitative measurement of activated complement cascade component C3b in a clinical specimen, using a precipitation/immunodiffusion method.	B

7630	53688	Complement component C3b IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C3b IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of activated complement cascade component C3b in a clinical specimen.	B
7631	53689	Complement component C3b IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C3b IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of activated complement cascade component C3b in a clinical specimen.	B
7632	53690	Complement components C4/C4c IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade components C4 and/or C4c in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7633	53691	Complement components C4/C4c IVD, kit, nephelometry/turbidimetry	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade components C4 and/or C4c in a clinical specimen, using a nephelometry/turbidimetry method.	B
7634	53692	Complement components C4/C4c IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade components C4 and/or C4c in a clinical specimen.	B
7635	53693	Complement components C4/C4c IVD, reagent	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade components C4 and/or C4c in a clinical specimen.	B
7636	53694	Complement component C5a IVD, kit, precipitation/immunodiffusion	Нэмэлт бүрэлдэхүүн хэсэг C5a IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade component C5a in a clinical specimen, using a precipitation/immunodiffusion method.	B
7637	53695	Complement component C5a IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C5a IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component C5a in a clinical specimen.	B

7638	53696	Complement component C5a IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C5a IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component C5a in a clinical specimen.	B
7639	53697	Complement component C5a IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C5a IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component C5a in a clinical specimen.	B
7640	53698	Complement complex C5-C9 IVD, kit, enzyme immunoassay (EIA)	Complement C5-C9 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement complex C5-C9 in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7641	53699	Complement complex C5-C9 IVD, calibrator	Нэмэлт цогцолбор C5-C9 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement complex C5-C9 in a clinical specimen.	B
7642	53700	Complement complex C5-C9 IVD, control	Нэмэлт цогцолбор C5-C9 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement complex C5-C9 in a clinical specimen.	B
7643	53701	Complement complex C5-C9 IVD, reagent	Complement C5-C9 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement complex C5-C9 in a clinical specimen.	B
7644	53705	C-reactive protein (CRP) IVD, kit, nephelometry/turbidimetry	С-реактив уураг (CRP) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using a nephelometry/turbidimetry method [includes high-sensitivity CRP (hsCRP) types]. CRP is a marker associated with bacterial infection, inflammatory conditions, and cardiovascular disease.	B
7645	53706	C-reactive protein (CRP) IVD, kit, spectrophotometry	С-реактив уураг (CRP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using a spectrophotometry method [includes high-sensitivity CRP (hsCRP) types]. CRP is a marker associated with bacterial infection, inflammatory conditions, and cardiovascular disease.	B

7646	53707	C-reactive protein (CRP) IVD, reagent	С-реактив уураг (CRP) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen [includes high-sensitivity CRP (hsCRP) types].	B
7647	53708	Cryoglobulin IVD, kit, nephelometry/turbidimetry	Криоглобулин IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cryoglobulin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7648	53709	Cryoglobulin IVD, calibrator	Криоглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cryoglobulin in a clinical specimen.	B
7649	53710	Cryoglobulin IVD, control	Криоглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cryoglobulin in a clinical specimen.	B
7650	53711	Cryoglobulin IVD, reagent	Криоглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cryoglobulin in a clinical specimen.	B
7651	53712	Eosinophil cationic protein (ECP) IVD, kit, enzyme immunoassay (EIA)	Эозинофил катион уураг (ECP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of eosinophil cationic protein (ECP) in a clinical specimen, using an enzyme immunoassay (EIA) method. ECP is typically used to monitor active inflammatory diseases marked by activated eosinophils (e.g., bronchial asthma, atopic dermatitis, parasitic and bacterial infections, or autoimmune diseases).	B
7652	53713	Eosinophil cationic protein (ECP) IVD, calibrator	Эозинофил катион уураг (ECP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of eosinophil cationic protein (ECP) in a clinical specimen.	B
7653	53714	Eosinophil cationic protein (ECP) IVD, control	Эозинофил катион уураг (ECP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of eosinophil cationic protein (ECP) in a clinical specimen.	B

7654	53715	Eosinophil cationic protein (ECP) IVD, reagent	Эозинофил катион уураг (ECP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of eosinophil cationic protein (ECP) in a clinical specimen.	B
7655	53716	Ferritin IVD, kit, radioimmunoassay	Ферритин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ferritin in a clinical specimen, using a radioimmunoassay method.	B
7656	53717	Ferritin IVD, kit, enzyme immunoassay (EIA)	Ферритин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ferritin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7657	53718	Ferritin IVD, kit, nephelometry/turbidimetry	Ферритин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ferritin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7658	53719	Ferritin IVD, reagent	Ферритин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of ferritin in a clinical specimen.	B
7659	53720	Fibronectin IVD, kit, enzyme immunoassay (EIA)	Фибронектин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of fibronectin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7660	53721	Fibronectin IVD, reagent	Фибронектин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of fibronectin in a clinical specimen.	B
7661	53722	Alpha-globulin IVD, kit, enzyme immunoassay (EIA)	Альфа-глобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-globulins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7662	53723	Alpha-globulin IVD, kit, nephelometry/turbidimetry	Альфа-глобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-globulins in a clinical specimen, using a nephelometry/turbidimetry method.	B

7663	53724	Alpha-globulin IVD, reagent	Альфа-глобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-globulins in a clinical specimen.	B
7664	53725	Beta-globulin IVD, kit, enzyme immunoassay (EIA)	Бета-глобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of beta-globulins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7665	53726	Beta-globulin IVD, kit, nephelometry/turbidimetry	Бета-глобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of beta-globulins in a clinical specimen, using a nephelometry/turbidimetry method.	B
7666	53727	Beta-globulin IVD, calibrator	Бета-глобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of beta-globulins in a clinical specimen.	B
7667	53728	Beta-globulin IVD, reagent	Бета-глобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of beta-globulins in a clinical specimen.	B
7668	53729	Total globulin IVD, kit, enzyme immunoassay (EIA)	Нийт глобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total globulin proteins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7669	53730	Total globulin IVD, kit, nephelometry/turbidimetry	Нийт глобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total globulin proteins in a clinical specimen, using a nephelometry/turbidimetry method.	B
7670	53731	Total globulin IVD, calibrator	Нийт глобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total globulin proteins in a clinical specimen.	B
7671	53732	Total globulin IVD, control	Нийт глобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total globulin proteins in a clinical specimen.	B

7672	53733	Total globulin IVD, reagent	Нийт глобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total globulin proteins in a clinical specimen.	B
7673	53734	Haemopexin IVD, kit, radioimmunoassay	Гемопексин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of haemopexin in a clinical specimen, using a radioimmunoassay method.	B
7674	53735	Haemopexin IVD, calibrator	Haemopexin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of haemopexin in a clinical specimen.	B
7675	53736	Haemopexin IVD, reagent	Гемопексин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of haemopexin in a clinical specimen.	B
7676	53737	Haptoglobin IVD, kit, nephelometry/turbidimetry	Хаптоглобин IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of haptoglobin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7677	53738	Haptoglobin IVD, reagent	Гаптоглобин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of haptoglobin in a clinical specimen.	B
7678	53739	Histamine IVD, kit, radioimmunoassay	Гистамин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of histamine in a clinical specimen, using a radioimmunoassay method.	B
7679	53740	Histamine IVD, calibrator	Гистамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of histamine in a clinical specimen.	B
7680	53741	Histamine IVD, control	Гистамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of histamine in a clinical specimen.	B

7681	53742	Histamine IVD, reagent	Гистамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of histamine in a clinical specimen.	B
7682	53743	Histamine release IVD, kit, enzyme immunoassay (EIA)	Гистамин ялгаруулах IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of histamine release due to the presence of auto-antibodies, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
7683	53744	Histamine release IVD, calibrator	Гистамин ялгаруулах IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of histamine release due to the presence of auto-antibodies, in a clinical specimen.	B
7684	53745	Histamine release IVD, control	Гистамин ялгаруулах IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of histamine release due to the presence of auto-antibodies, in a clinical specimen.	B
7685	53746	Histamine release IVD, reagent	Гистамин ялгаруулах IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of histamine release due to the presence of auto-antibodies, in a clinical specimen.	B
7686	53747	Homocysteine IVD, kit, spectrophotometry	Гомоцистеин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen, using a spectrophotometry method.	B
7687	53748	Homocysteine IVD, kit, liquid chromatography	Homocysteine IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen, using a liquid chromatography method.	B
7688	53749	Homocysteine IVD, calibrator	Гомоцистеин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen.	B
7689	53750	Homocysteine IVD, control	Гомоцистеины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen.	B

7690	53751	Homocysteine IVD, reagent	Гомоцистеин IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen.	B
7691	53752	Total immunoglobulin/gamma globulin IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин/гамма глобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total immunoglobulins, also referred to as gamma globulins, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
7692	53753	Total immunoglobulin/gamma globulin IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин/гамма глобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total immunoglobulins, also referred to as gamma globulins, in a clinical specimen using a nephelometry/turbidimetry method.	B
7693	53754	Total immunoglobulin/gamma globulin IVD, calibrator	Нийт иммуноглобулин/гамма глобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total immunoglobulins, also referred to as gamma globulins, in a clinical specimen.	B
7694	53755	Total immunoglobulin/gamma globulin IVD, reagent	Нийт иммуноглобулин/гамма глобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total immunoglobulins, also referred to as gamma globulins, in a clinical specimen.	B
7695	53756	Total immunoglobulin A (IgA total) IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин А (нийт IgA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7696	53757	Total immunoglobulin A (IgA total) IVD, kit, enzyme chemiluminescence	Нийт иммуноглобулин А (нийт IgA) IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen, using an enzyme chemiluminescence method.	B

7697	53758	Total immunoglobulin A (IgA total) IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин А (нийт IgA) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7698	53759	Total immunoglobulin A (IgA total) IVD, reagent	Нийт иммуноглобулин А (IgA нийт) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen.	B
7699	53760	Immunoglobulin A sub (IgA sub) IVD, kit, nephelometry/turbidimetry	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A sub es (IgA sub es) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7700	53761	Immunoglobulin A sub (IgA sub) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Урсгал)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A sub es (IgA sub es) in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
7701	53762	Immunoglobulin A sub (IgA sub) IVD, reagent	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A sub es (IgA sub es) in a clinical specimen.	B
7702	53763	Secretory immunoglobulin A (secretory IgA) IVD, kit, enzyme immunoassay (EIA)	Нууцлаг иммуноглобулин А (нууцлагдмал IgA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of secretory immunoglobulin A (secretory IgA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7703	53764	Secretory immunoglobulin A (secretory IgA) IVD, kit, nephelometry/turbidimetry	Нууцлаг иммуноглобулин А (нууцлагдмал IgA) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of secretory immunoglobulin A (secretory IgA) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7704	53765	Secretory immunoglobulin A (secretory IgA) IVD, calibrator	Нууцлаг иммуноглобулин А (нууцлагдмал IgA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of secretory immunoglobulin A (secretory IgA) in a clinical specimen.	B
7705	53766	Secretory immunoglobulin A (secretory IgA) IVD, control	Нууц иммуноглобулин А (нууцлагдмал IgA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of secretory immunoglobulin A (secretory IgA) in a clinical specimen.	B
7706	53767	Secretory immunoglobulin A (secretory IgA) IVD, reagent	Нууцлаг иммуноглобулин А (нууцлагдмал IgA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of secretory immunoglobulin A (secretory IgA) in a clinical specimen.	B
7707	53768	Total immunoglobulin D (IgD total) IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин D (нийт IgD) IVD, иж бүрдэл, ферментийн иммуно шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7708	53769	Total immunoglobulin D (IgD total) IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин D (нийт IgD) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7709	53770	Total immunoglobulin D (IgD total) IVD, kit, chemiluminescent immunoassay	Нийт иммуноглобулин D (нийт IgD) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7710	53771	Total immunoglobulin D (IgD total) IVD, reagent	Нийт иммуноглобулин D (IgD нийт) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen.	B

7711	53772	Immunoglobulin D sub (IgD sub) IVD, kit, radioimmunoassay	Иммуноглобулины D дэд ангилал (IgD дэд ангилал) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D sub es (IgD sub es) in a clinical specimen, using a radioimmunoassay method.	B
7712	53773	Immunoglobulin D sub (IgD sub) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Иммуноглобулин D дэд ангилал (IgD дэд ангилал) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Урсгал)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D sub es (IgD sub es) in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
7713	53774	Immunoglobulin D sub (IgD sub) IVD, reagent	Иммуноглобулин D дэд ангилал (IgD дэд ангилал) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D sub es (IgD sub es) in a clinical specimen.	B
7714	53775	Total immunoglobulin E (IgE total) IVD, kit, chemiluminescent immunoassay	Нийт иммуноглобулин E (нийт IgE) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7715	53776	Total immunoglobulin E (IgE total) IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин E (нийт IgE) IVD, иж бүрдэл, ферментийн иммуно шинжилгээ (БОНУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7716	53777	Total immunoglobulin E (IgE total) IVD, calibrator	Нийт иммуноглобулин E (нийт IgE) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen.	B
7717	53778	Total immunoglobulin E (IgE total) IVD, reagent	Нийт иммуноглобулин E (нийт IgE) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen.	B

7718	53781	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, enzyme immunoassay (EIA)	Харшлын өвөрмөц иммуноглобулин Е (IgE) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B
7719	53782	Allergen-specific immunoglobulin E (IgE) antibody IVD, reagent	Харшлын өвөрмөц иммуноглобулин Е (IgE) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen.	B
7720	53783	Total immunoglobulin G (IgG total) IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин G (нийт IgG) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7721	53784	Total immunoglobulin G (IgG total) IVD, kit, chemiluminescent immunoassay	Нийт иммуноглобулин G (нийт IgG) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7722	53785	Total immunoglobulin G (IgG total) IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин G (нийт IgG) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7723	53786	Total immunoglobulin G (IgG total) IVD, reagent	Нийт иммуноглобулин G (IgG нийт) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen.	B
7724	53787	Immunoglobulin G sub (IgG sub) IVD, kit, nephelometry/turbidimetry	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using a nephelometry/turbidimetry method.	B

7725	53788	Immunoglobulin G sub (IgG sub) IVD, kit, liquid chromatography	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using a liquid chromatography method.	B
7726	53789	Immunoglobulin G sub (IgG sub) IVD, kit, radioimmunoassay	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using a radioimmunoassay method.	B
7727	53790	Immunoglobulin G sub (IgG sub) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Урсгал)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
7728	53791	Immunoglobulin G sub (IgG sub) IVD, reagent	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen.	B
7729	53792	Total immunoglobulin M (IgM total) IVD, kit, enzyme immunoassay (EIA)	Нийт иммуноглобулин M (нийт IgM) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7730	53793	Total immunoglobulin M (IgM total) IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин M (нийт IgM) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7731	53794	Total immunoglobulin M (IgM total) IVD, reagent	Нийт иммуноглобулин M (нийт IgM) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen.	B

7732	53795	Immunoglobulin M sub (IgM sub) IVD, kit, nephelometry/turbidimetry	Иммуноглобулин М дэд ангилал (IgM дэд ангилал) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M sub es (IgM sub es) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7733	53796	Immunoglobulin M sub (IgM sub) IVD, kit, liquid chromatography	Иммуноглобулин М дэд ангилал (IgM дэд ангилал) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M sub es (IgM sub es) in a clinical specimen, using a liquid chromatography method.	B
7734	53797	Immunoglobulin M sub (IgM sub) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Иммуноглобулин М дэд ангилал (IgM дэд ангилал) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Урсгал)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M sub es (IgM sub es) in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
7735	53798	Immunoglobulin M sub (IgM sub) IVD, reagent	Иммуноглобулин М дэд ангилал (IgM дэд ангилал) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M sub es (IgM sub es) in a clinical specimen.	B
7736	53799	Kappa/lambda light chain immunoglobulin IVD, kit, nephelometry/turbidimetry	Каппа/ламбда хөнгөн гинжин иммуноглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of kappa and/or lambda light chain immunoglobulins in a clinical specimen, using a nephelometry/turbidimetry method.	B
7737	53800	Kappa/lambda light chain immunoglobulin IVD, kit, enzyme immunoassay (EIA)	Каппа/ламбда хөнгөн гинжин гинжин иммуноглобулин IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of kappa and/or lambda light chain immunoglobulins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7738	53801	Kappa/lambda light chain immunoglobulin IVD, reagent	Каппа/ламбда хөнгөн гинжин иммуноглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of kappa and/or lambda light chain immunoglobulins in a clinical specimen.	B
7739	53802	Immunoreactive trypsinogen IVD, kit, enzyme immunoassay (EIA)	Дархлаа идэвхгүй трипсиноген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7740	53803	Immunoreactive trypsinogen IVD, kit, radioimmunoassay	Дархлаа идэвхгүй трипсиноген IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen, using a radioimmunoassay method.	B
7741	53804	Immunoreactive trypsinogen IVD, calibrator	Дархлаа идэвхгүй трипсиноген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen.	B
7742	53805	Immunoreactive trypsinogen IVD, control	Дархлаа идэвхгүй трипсиноген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen.	B
7743	53806	Immunoreactive trypsinogen IVD, reagent	Дархлаа идэвхгүй трипсиноген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen.	B
7744	53807	Interferon IVD, kit, enzyme immunoassay (EIA)	Интерферон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7745	53808	Interferon IVD, reagent	Интерферон IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen.	B

7746	53809	Multiple interleukin/interleukin receptor IVD, kit, enzyme immunoassay (EIA)	Олон интерлейкин/интерлейкин рецептор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple interleukins and/or interleukin receptors in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7747	53810	Multiple interleukin/interleukin receptor IVD, kit, chemiluminescent immunoassay	Олон интерлейкин/интерлейкин рецептор IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple interleukins and/or interleukin receptors in a clinical specimen, using a chemiluminescent immunoassay method.	B
7748	53812	Multiple interleukin/interleukin receptor IVD, calibrator	Олон интерлейкин/интерлейкин рецептор IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple interleukins and/or interleukin receptors in a clinical specimen.	B
7749	53813	Multiple interleukin/interleukin receptor IVD, control	Олон интерлейкин/интерлейкин рецептор IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple interleukins and/or interleukin receptors in a clinical specimen.	B
7750	53814	Multiple interleukin/interleukin receptor IVD, reagent	Олон интерлейкин/интерлейкин рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple interleukins and/or interleukin receptors in a clinical specimen.	B
7751	53815	Interleukin-1 (IL-1) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-1 (IL-1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family pro-inflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7752	53816	Interleukin-1 (IL-1) IVD, kit, chemiluminescent immunoassay	Интерлейкин-1 (IL-1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family proinflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen, using a chemiluminescent immunoassay method.	B

7753	53818	Interleukin-1 (IL-1) IVD, calibrator	Интерлейкин-1 (ИЛ-1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family proinflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen.	B
7754	53819	Interleukin-1 (IL-1) IVD, control	Интерлейкин-1 (ИЛ-1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family proinflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen.	B
7755	53820	Interleukin-1 (IL-1) IVD, reagent	Интерлейкин-1 (ИЛ-1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family proinflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen.	B
7756	53823	Interleukin-1 (IL-1) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Интерлейкин-1 (IL-1) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ангилах/урсгалын цитометр (FACS/Flow)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an interleukin-1 (IL-1) family proinflammatory cytokine [e.g., interleukin-1 alpha (IL-1a), interleukin-1 beta (IL-1b)] in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
7757	53832	Interleukin-2 (IL-2) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-2 (IL-2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-2 (IL-2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7758	53834	Interleukin-2 (IL-2) IVD, calibrator	Интерлейкин-2 (ИЛ-2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-2 (IL-2) in a clinical specimen.	B
7759	53835	Interleukin-2 (IL-2) IVD, control	Интерлейкин-2 (ИЛ-2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-2 (IL-2) in a clinical specimen.	B

7760	53836	Interleukin-2 (IL-2) IVD, reagent	Интерлейкин-2 (ИЛ-2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-2 (IL-2) in a clinical specimen.	B
7761	53837	Interleukin-2 receptor (IL-2r) IVD, kit, chemiluminescent immunoassay	Интерлейкин-2 рецептор (IL-2r) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-2 receptor (IL-2r) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7762	53838	Interleukin-2 receptor (IL-2r) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-2 рецептор (IL-2r) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-2 receptor (IL-2r) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7763	53840	Interleukin-2 receptor (IL-2r) IVD, calibrator	Интерлейкин-2 рецептор (IL-2r) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-2 receptor (IL-2r) in a clinical specimen.	B
7764	53841	Interleukin-2 receptor (IL-2r) IVD, control	Интерлейкин-2 рецептор (IL-2r) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-2 receptor (IL-2r) in a clinical specimen.	B
7765	53842	Interleukin-2 receptor (IL-2r) IVD, reagent	Интерлейкин-2 рецептор (IL-2r) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-2 receptor (IL-2r) in a clinical specimen.	B
7766	53843	Interleukin-3 (IL-3) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-3 (IL-3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-3 (IL-3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7767	53845	Interleukin-3 (IL-3) IVD, calibrator	Интерлейкин-3 (ИЛ-3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-3 (IL-3) in a clinical specimen.	B

7768	53846	Interleukin-3 (IL-3) IVD, control	Интерлейкин-3 (ИЛ-3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-3 (IL-3) in a clinical specimen.	B
7769	53847	Interleukin-3 (IL-3) IVD, reagent	Интерлейкин-3 (ИЛ-3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-3 (IL-3) in a clinical specimen.	B
7770	53848	Interleukin-4 (IL-4) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-4 (IL-4) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-4 (IL-4) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7771	53850	Interleukin-4 (IL-4) IVD, calibrator	Интерлейкин-4 (ИЛ-4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-4 (IL-4) in a clinical specimen.	B
7772	53851	Interleukin-4 (IL-4) IVD, control	Интерлейкин-4 (ИЛ-4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-4 (IL-4) in a clinical specimen.	B
7773	53852	Interleukin-4 (IL-4) IVD, reagent	Интерлейкин-4 (ИЛ-4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-4 (IL-4) in a clinical specimen.	B
7774	53853	Interleukin-5 (IL-5) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-5 (IL-5) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-5 (IL-5) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7775	53855	Interleukin-5 (IL-5) IVD, calibrator	Интерлейкин-5 (ИЛ-5) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-5 (IL-5) in a clinical specimen.	B
7776	53856	Interleukin-5 (IL-5) IVD, control	Интерлейкин-5 (ИЛ-5) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-5 (IL-5) in a clinical specimen.	B

7777	53857	Interleukin-5 (IL-5) IVD, reagent	Интерлейкин-5 (ИЛ-5) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-5 (IL-5) in a clinical specimen.	B
7778	53858	Interleukin-6 (IL-6) IVD, kit, chemiluminescent immunoassay	Интерлейкин-6 (IL-6) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-6 (IL-6) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7779	53860	Interleukin-6 (IL-6) IVD, calibrator	Интерлейкин-6 (ИЛ-6) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-6 (IL-6) in a clinical specimen.	B
7780	53861	Interleukin-6 (IL-6) IVD, control	Интерлейкин-6 (ИЛ-6) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-6 (IL-6) in a clinical specimen.	B
7781	53862	Interleukin-6 (IL-6) IVD, reagent	Интерлейкин-6 (ИЛ-6) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-6 (IL-6) in a clinical specimen.	B
7782	53863	Interleukin-6 receptor (IL-6r) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-6 рецептор (IL-6r) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-6 receptor (IL-6r) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7783	53865	Interleukin-6 receptor (IL-6r) IVD, calibrator	Интерлейкин-6 рецептор (IL-6r) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-6 receptor (IL-6r) in a clinical specimen.	B
7784	53866	Interleukin-6 receptor (IL-6r) IVD, control	Интерлейкин-6 рецептор (IL-6r) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-6 receptor (IL-6r) in a clinical specimen.	B
7785	53867	Interleukin-6 receptor (IL-6r) IVD, reagent	Интерлейкин-6 рецептор (IL-6r) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-6 receptor (IL-6r) in a clinical specimen.	B

7786	53868	Interleukin-7 (IL-7) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-7 (IL-7) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-7 (IL-7) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7787	53870	Interleukin-7 (IL-7) IVD, calibrator	Интерлейкин-7 (ИЛ-7) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-7 (IL-7) in a clinical specimen.	B
7788	53871	Interleukin-7 (IL-7) IVD, control	Интерлейкин-7 (ИЛ-7) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-7 (IL-7) in a clinical specimen.	B
7789	53872	Interleukin-7 (IL-7) IVD, reagent	Интерлейкин-7 (ИЛ-7) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-7 (IL-7) in a clinical specimen.	B
7790	53873	Interleukin-8 (IL-8) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-8 (IL-8) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-8 (IL-8) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7791	53875	Interleukin-8 (IL-8) IVD, kit, chemiluminescent immunoassay	Интерлейкин-8 (IL-8) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-8 (IL-8) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7792	53876	Interleukin-8 (IL-8) IVD, calibrator	Интерлейкин-8 (ИЛ-8) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-8 (IL-8) in a clinical specimen.	B
7793	53877	Interleukin-8 (IL-8) IVD, control	Интерлейкин-8 (ИЛ-8) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-8 (IL-8) in a clinical specimen.	B
7794	53878	Interleukin-8 (IL-8) IVD, reagent	Интерлейкин-8 (ИЛ-8) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-8 (IL-8) in a clinical specimen.	B

7795	53879	Interleukin-9 (IL-9) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-9 (IL-9) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-9 (IL-9) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7796	53881	Interleukin-9 (IL-9) IVD, calibrator	Интерлейкин-9 (ИЛ-9) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-9 (IL-9) in a clinical specimen.	B
7797	53882	Interleukin-9 (IL-9) IVD, control	Интерлейкин-9 (ИЛ-9) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-9 (IL-9) in a clinical specimen.	B
7798	53883	Interleukin-9 (IL-9) IVD, reagent	Интерлейкин-9 (ИЛ-9) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-9 (IL-9) in a clinical specimen.	B
7799	53884	Interleukin-10 (IL-10) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-10 (IL-10) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-10 (IL-10) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of immune and/or inflammatory response disorders.	B
7800	53886	Interleukin-10 (IL-10) IVD, calibrator	Интерлейкин-10 (ИЛ-10) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-10 (IL-10) in a clinical specimen.	B
7801	53887	Interleukin-10 (IL-10) IVD, control	Интерлейкин-10 (ИЛ-10) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-10 (IL-10) in a clinical specimen.	B
7802	53888	Interleukin-10 (IL-10) IVD, reagent	Интерлейкин-10 (ИЛ-10) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-10 (IL-10) in a clinical specimen.	B

7803	53889	Interleukin-11 (IL-11) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-11 (IL-11) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-11 (IL-11) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7804	53891	Interleukin-11 (IL-11) IVD, calibrator	Интерлейкин-11 (ИЛ-11) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-11 (IL-11) in a clinical specimen.	B
7805	53892	Interleukin-11 (IL-11) IVD, control	Интерлейкин-11 (ИЛ-11) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-11 (IL-11) in a clinical specimen.	B
7806	53893	Interleukin-11 (IL-11) IVD, reagent	Интерлейкин-11 (ИЛ-11) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-11 (IL-11) in a clinical specimen.	B
7807	53894	Interleukin-12 (IL-12) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-12 (IL-12) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-12 (IL-12) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7808	53896	Interleukin-12 (IL-12) IVD, calibrator	Интерлейкин-12 (ИЛ-12) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-12 (IL-12) in a clinical specimen.	B
7809	53897	Interleukin-12 (IL-12) IVD, control	Интерлейкин-12 (ИЛ-12) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-12 (IL-12) in a clinical specimen.	B
7810	53898	Interleukin-12 (IL-12) IVD, reagent	Интерлейкин-12 (ИЛ-12) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-12 (IL-12) in a clinical specimen.	B

7811	53899	Interleukin-13 (IL-13) IVD, kit, enzyme immunoassay (EIA)	Интерлейкин-13 (IL-13) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-13 (IL-13) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7812	53901	Interleukin-13 (IL-13) IVD, calibrator	Интерлейкин-13 (ИЛ-13) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-13 (IL-13) in a clinical specimen.	B
7813	53902	Interleukin-13 (IL-13) IVD, control	Интерлейкин-13 (ИЛ-13) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-13 (IL-13) in a clinical specimen.	B
7814	53903	Interleukin-13 (IL-13) IVD, reagent	Интерлейкин-13 (ИЛ-13) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-13 (IL-13) in a clinical specimen.	B
7815	53904	Total iron binding capacity (TIBC) IVD, kit, spectrophotometry	Нийт төмөр холбох чадвар (TIBC) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total iron binding capacity (TIBC) of a clinical specimen, using a spectrophotometry method. TIBC is determined by adding the values obtained for the concentration of serum iron and the available iron-binding capacity of transferrin [i.e., the unsaturated iron binding capacity (UIBC)].	B
7816	53905	Total iron binding capacity (TIBC) IVD, kit, atomic spectroscopy	Нийт төмөр холбох чадвар (TIBC) IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total iron binding capacity (TIBC) of a clinical specimen, using an atomic spectroscopy method. TIBC is determined by adding the values obtained for the concentration of serum iron and the available iron-binding capacity of transferrin [i.e., the unsaturated iron binding capacity (UIBC)].	B
7817	53906	Total iron binding capacity (TIBC) IVD, calibrator	Нийт төмрийг холбох чадвар (TIBC) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total iron binding capacity (TIBC) of a clinical specimen.	B
7818	53907	Total iron binding capacity (TIBC) IVD, control	Нийт төмрийг холбох чадвар (TIBC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total iron binding capacity (TIBC) of a clinical specimen.	B

7819	53908	Total iron binding capacity IVD (TIBC), reagent	Нийт төмрийг холбох чадвар IVD (TIBC), урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total iron binding capacity (TIBC) of a clinical specimen.	B
7820	53909	Lactoferrin IVD, kit, enzyme immunoassay (EIA)	Лактоферрин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7821	53910	Lactoferrin IVD, kit, rapid ICT, clinical	Лактоферрин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of lactoferrin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
7822	53911	Lactoferrin IVD, kit, agglutination	Лактоферрин IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen, using an agglutination method.	B
7823	53912	Lactoferrin IVD, reagent	Лактоферрин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen.	B
7824	53913	Laminin IVD, kit, enzyme immunoassay (EIA)	Ламинины IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of laminin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7825	53914	Laminin IVD, reagent	Ламинин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of laminin in a clinical specimen.	B
7826	53915	Lecithin/Sphingomyelin ratio (amniotic fluid) IVD, kit, liquid chromatography	Лецитин/Сфингомиелины харьцаа (амнион шингэн) IVD, иж бүрдэл, шингэний хроматограф	A collection of reagents and other associated materials intended to be used for the determination of the lecithin/sphingomyelin ratio from amniotic fluid using a liquid chromatography method.	B

7827	53916	Lecithin/Sphingomyelin ratio (amniotic fluid) IVD, calibrator	Лецитин / Сфингомиелины харьцаа (амнион шингэн) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the determination of the lecithin/sphingomyelin ratio from amniotic fluid.	B
7828	53917	Lecithin/Sphingomyelin ratio (amniotic fluid) IVD, control	Лецитин / Сфингомиелины харьцаа (амнион шингэн) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the determination of the lecithin/sphingomyelin ratio from amniotic fluid.	B
7829	53918	Lecithin/Sphingomyelin ratio (amniotic fluid) IVD, reagent	Лецитин / Сфингомиелины харьцаа (амнион шингэн) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the determination of the lecithin/sphingomyelin ratio from amniotic fluid.	B
7830	53919	Alpha-1-macroglobulin IVD, kit, nephelometry/turbidimetry	Альфа-1-макроглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-1-macroglobulin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7831	53920	Alpha-1-macroglobulin IVD, calibrator	Альфа-1-макроглобулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of alpha-1-macroglobulin in a clinical specimen.	B
7832	53921	Alpha-1-macroglobulin IVD, control	Альфа-1-макроглобулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of alpha-1-macroglobulin in a clinical specimen.	B
7833	53922	Alpha-1-macroglobulin IVD, reagent	Альфа-1-макроглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-1-macroglobulin in a clinical specimen.	B
7834	53923	Alpha-1-microglobulin IVD, kit, nephelometry/turbidimetry	Альфа-1-микроглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-microglobulin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7835	53924	Alpha-1-microglobulin IVD, reagent	Альфа-1-микроглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-1-microglobulin in a clinical specimen.	B

7836	53925	Alpha-2-macroglobulin IVD, kit, nephelometry/turbidimetry	Альфа-2-макроглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-2-macroglobulin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7837	53926	Alpha-2-macroglobulin IVD, reagent	Альфа-2-макроглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of alpha-2-macroglobulin in a clinical specimen.	B
7838	53927	Beta-2-microglobulin IVD, kit, nephelometry/turbidimetry	Бета-2-микроглобулин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen, using a nephelometry/turbidimetry method.	B
7839	53928	Beta-2-microglobulin IVD, kit, enzyme immunoassay (EIA)	Бета-2-микроглобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7840	53929	Beta-2-microglobulin IVD, kit, chemiluminescent immunoassay	Бета-2-микроглобулин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen, using a chemiluminescent immunoassay method.	B
7841	53930	Beta-2-microglobulin IVD, reagent	Бета-2-микроглобулин IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen.	B
7842	53931	Mammaglobin IVD, kit, enzyme immunoassay (EIA)	Маммаглобин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7843	53932	Mammaglobin IVD, kit, immunoblot	Маммаглобин IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen, using an immunoblot method.	B
7844	53933	Mammaglobin IVD, calibrator	Маммаглобин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen.	B

7845	53934	Mammaglobin IVD, control	Маммаглобин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen.	B
7846	53935	Mammaglobin IVD, reagent	Маммаглобин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen.	B
7847	53936	Melanin IVD, kit, spectrophotometry	Меланин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of melanin in a clinical specimen, using a spectrophotometry method.	B
7848	53937	Melanin IVD, calibrator	Меланин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of melanin in a clinical specimen.	B
7849	53938	Melanin IVD, control	Меланин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of melanin in a clinical specimen.	B
7850	53939	Melanin IVD, reagent	Меланин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of melanin in a clinical specimen.	B
7851	53940	Methemalbumin IVD, kit, spectrophotometry	Метемалбумин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methemalbumin in a clinical specimen, using a spectrophotometry method.	B
7852	53941	Methemalbumin IVD, calibrator	Метемалбумин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of methemalbumin in a clinical specimen.	B
7853	53942	Methemalbumin IVD, control	Метемалбумин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of methemalbumin in a clinical specimen.	B
7854	53943	Methemalbumin IVD, reagent	Метемалбумин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of methemalbumin in a clinical specimen.	B

7855	53944	Mucin IVD, kit, enzyme immunoassay (EIA)	Муцин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of mucin protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7856	53945	Mucin IVD, calibrator	Муцин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of mucin protein in a clinical specimen.	B
7857	53946	Mucin IVD, control	Муцин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of mucin protein in a clinical specimen.	B
7858	53947	Mucin IVD, reagent	Муцин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of mucin protein in a clinical specimen.	B
7859	53948	Myelin basic protein IVD, kit, enzyme immunoassay (EIA)	Миелин үндсэн уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myelin basic protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7860	53949	Myelin basic protein IVD, calibrator	Миелин үндсэн уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of myelin basic protein in a clinical specimen.	B
7861	53950	Myelin basic protein IVD, control	Миелин үндсэн уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of myelin basic protein in a clinical specimen.	B
7862	53951	Myelin basic protein IVD, reagent	Миелин үндсэн уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of myelin basic protein in a clinical specimen.	B
7863	53952	Myoglobin IVD, kit, chemiluminescent immunoassay	Миоглобин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myoglobin in a clinical specimen, using a chemiluminescent immunoassay method.	B

7864	53953	Myoglobin IVD, kit, enzyme immunoassay (EIA)	Миоглобин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myoglobin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7865	53954	Myoglobin IVD, reagent	Миоглобин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of myoglobin in a clinical specimen.	B
7866	53955	Myosin light chain IVD, kit, immunoblot	Миозин хөнгөн гинж IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myosin light chain in a clinical specimen, using an immunoblot method.	B
7867	53956	Myosin light chain IVD, reagent	Миозин хөнгөн гинжин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of myosin light chain in a clinical specimen.	B
7868	53957	Prealbumin (transthyretin) IVD, kit, nephelometry/turbidimetry	Преальбумин (транстиретин) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of prealbumin (transthyretin) in a clinical specimen, using a nephelometry/turbidimetry method.	B
7869	53958	Prealbumin (transthyretin) IVD, kit, enzyme immunoassay (EIA)	Преальбумин (транстиретин) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of prealbumin (transthyretin) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7870	53959	Prealbumin (transthyretin) IVD, reagent	Преальбумин (транстиретин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of prealbumin (transthyretin) in a clinical specimen.	B
7871	53960	Plasma protein IVD, kit, nephelometry/turbidimetry	Плазмын уураг IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of plasma proteins in a clinical specimen, using a nephelometry/turbidimetry method.	B
7872	53961	Plasma protein IVD, reagent	Цусны сийвэнгийн уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of plasma proteins in a clinical specimen.	B

7873	53962	Protein 14-3-3 IVD, kit, enzyme immunoassay (EIA)	Ураг 14-3-3 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of protein 14-3-3 in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7874	53963	Protein 14-3-3 IVD, kit, immunoblot assay	Ураг 14-3-3 IVD, иж бүрдэл, иммуноблотын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of protein 14-3-3 in a clinical specimen, using an immunoblot assay method.	B
7875	53964	Protein 14-3-3 IVD, calibrator	Ураг 14-3-3 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of protein 14-3-3 in a clinical specimen.	B
7876	53965	Protein 14-3-3 IVD, control	Ураг 14-3-3 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of protein 14-3-3 in a clinical specimen.	B
7877	53966	Protein 14-3-3 IVD, reagent	Ураг 14-3-3 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of protein 14-3-3 in a clinical specimen.	B
7878	53967	Protein electrophoresis IVD, kit, electrophoresis	Уургийн электрофорез IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for determining the qualitative and/or quantitative separation of proteins in a clinical specimen, using an electrophoresis method.	B
7879	53968	Protein electrophoresis IVD, calibrator	Уургийн электрофорез IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for determining the qualitative and/or quantitative separation of proteins by electrophoresis, in a clinical specimen.	B
7880	53969	Protein electrophoresis IVD, control	Уургийн электрофорез IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for determining the qualitative and/or quantitative separation of proteins by electrophoresis, in a clinical specimen.	B
7881	53970	Protein electrophoresis IVD, reagent	Уургийн электрофорез IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for determining the qualitative and/or quantitative separation of proteins by electrophoresis, in a clinical specimen.	B

7882	53971	Retinol binding protein IVD, kit, nephelometry/turbidimetry	Ретинол холбогч уураг IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of retinol binding protein in a clinical specimen, using a nephelometry/turbidimetry method.	B
7883	53972	Retinol binding protein IVD, reagent	Ретинол холбогч уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of retinol binding protein in a clinical specimen.	B
7884	53973	S100 protein IVD, kit, enzyme immunoassay (EIA)	S100 уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of S100 protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7885	53974	S100 protein IVD, calibrator	S100 уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of S100 protein in a clinical specimen.	B
7886	53975	S100 protein IVD, control	S100 уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of S100 protein in a clinical specimen.	B
7887	53976	S100 protein IVD, reagent	S100 уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of S100 protein in a clinical specimen.	B
7888	53977	Soluble transferrin receptor IVD, kit, nephelometry/turbidimetry	Уусдаг трансферрин рецептор IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of soluble transferrin receptor in a clinical specimen, using a nephelometry/turbidimetry method.	B
7889	53978	Soluble transferrin receptor IVD, calibrator	Уусдаг трансферрин рецептор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of soluble transferrin receptor in a clinical specimen.	B
7890	53979	Soluble transferrin receptor IVD, control	Уусдаг трансферрин рецептор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of soluble transferrin receptor in a clinical specimen.	B

7891	53980	Soluble transferrin receptor IVD, reagent	Уусдаг трансферрин рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of soluble transferrin receptor in a clinical specimen.	B
7892	53981	Tau protein IVD, kit, enzyme immunoassay (EIA)	Тау уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid the diagnosis of neurodegenerative disorders such as Alzheimer's disease.	B
7893	53982	Tau protein IVD, calibrator	Тау уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen.	B
7894	53983	Tau protein IVD, control	Тау уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen.	B
7895	53984	Tau protein IVD, reagent	Тау уураг IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen.	B
7896	53985	Total protein IVD, kit, enzyme spectrophotometry	Нийт уургийн IVD, иж бүрдэл, ферментийн спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total protein in a clinical specimen, using an enzyme spectrophotometry method.	B
7897	53986	Total protein IVD, kit, nephelometry/turbidimetry	Нийт уургийн IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total protein in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used to aid in the diagnosis of various conditions [e.g., liver, kidney, central nervous system (CNS) disorders.]	B

7898	53987	Total protein IVD, control	Нийт уургийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total protein in a clinical specimen.	B
7899	53988	Total protein IVD, calibrator	Нийт уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total protein in a clinical specimen.	B
7900	53989	Total protein IVD, reagent	Нийт уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total protein in a clinical specimen.	B
7901	53990	Transcobalamin IVD, kit, enzyme immunoassay (EIA)	Транскобаламин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of transcobalamin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7902	53991	Transcobalamin IVD, reagent	Транскобаламин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of transcobalamin in a clinical specimen.	B
7903	53992	Transferrin/transferrin isoform IVD, kit, chemiluminescent immunoassay	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using a chemiluminescent immunoassay method.	B
7904	53993	Transferrin/transferrin isoform IVD, kit, enzyme immunoassay (EIA)	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7905	53994	Transferrin/transferrin isoform IVD, reagent	Трансферрин/трансферрин изоформ IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen.	B

7906	53995	Troponin T/Troponin I IVD, kit, radioimmunoassay	Тропонин Т/Тропонин I IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen, using a radioimmunoassay method.	B
7907	53996	Troponin T/Troponin I IVD, kit, enzyme immunoassay (EIA)	Troponin T/Troponin I IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7908	53997	Troponin T/Troponin I IVD, kit, fluorescent immunoassay	Troponin T/Troponin I IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen, using a fluorescent immunoassay method.	B
7909	53998	Troponin T/Troponin I IVD, kit, rapid ICT, clinical	Тропонин Т/Тропонин I IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of troponin T and/or troponin I in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
7910	53999	Troponin T/Troponin I IVD, calibrator	Тропонин Т/Тропонин I IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen.	B
7911	54000	Troponin T/Troponin I IVD, control	Тропонин Т/Тропонин I IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen.	B
7912	54001	Troponin T/Troponin I IVD, reagent	Тропонин Т/Тропонин I IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of troponin T and/or troponin I in a clinical specimen.	B
7913	54002	Troponin T IVD, kit, radioimmunoassay	Troponin T IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T in a clinical specimen, using a radioimmunoassay method.	B

7914	54003	Troponin T IVD, kit, enzyme immunoassay (EIA)	Troponin T IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7915	54004	Troponin T IVD, kit, fluorescent immunoassay	Troponin T IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T in a clinical specimen, using a fluorescent immunoassay method.	B
7916	54005	Troponin T IVD, calibrator	Troponin T IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Troponin T in a clinical specimen.	B
7917	54006	Troponin T IVD, control	Troponin T IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Troponin T in a clinical specimen.	B
7918	54007	Troponin T IVD, reagent	Troponin T IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Troponin T in a clinical specimen.	B
7919	54008	Troponin I IVD, kit, radioimmunoassay	Тропонин I IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen, using a radioimmunoassay method.	B
7920	54009	Troponin I IVD, kit, enzyme immunoassay (EIA)	Тропонин I IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7921	54010	Troponin I IVD, kit, fluorescent immunoassay	Тропонин I IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen, using a fluorescent immunoassay method.	B
7922	54011	Troponin I IVD, calibrator	Тропонин I IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen.	B

7923	54012	Troponin I IVD, control	Тропонин I IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen.	B
7924	54013	Troponin I IVD, reagent	Тропонин I IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of troponin I in a clinical specimen.	B
7925	54014	Vasoactive intestinal peptide (VIP) IVD, kit, radioimmunoassay	Гэдэсний васоактив пептид (VIP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vasoactive intestinal peptide (VIP), also referred to as vasoactive intestinal polypeptide, in a clinical specimen using a radioimmunoassay method.	B
7926	54015	Vasoactive intestinal peptide (VIP) IVD, calibrator	Васоактив гэдэсний пептид (VIP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vasoactive intestinal peptide (VIP), also referred to as vasoactive intestinal polypeptide, in a clinical specimen.	B
7927	54016	Vasoactive intestinal peptide (VIP) IVD, control	Васоактив гэдэсний пептид (VIP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vasoactive intestinal peptide (VIP), also referred to as vasoactive intestinal polypeptide, in a clinical specimen.	B
7928	54017	Vasoactive intestinal peptide (VIP) IVD, reagent	Васоактив гэдэсний пептид (VIP) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vasoactive intestinal peptide (VIP), also referred to as vasoactive intestinal polypeptide, in a clinical specimen.	B
7929	54018	Multiple human hormone IVD, control	Хүний олон даавар IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple human hormones in a clinical specimen.	B

7930	54019	Human chorionic gonadotropin beta-subunit/follicle stimulating hormone IVD, kit, rapid ICT, clinical	Хүний chorionic gonadotropin бета-дэд нэгж/уутанцрыг өдөөгч даавар IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of beta-subunit human chorionic gonadotropin (beta-HCG) and follicle stimulating hormone (FSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for the detection of pregnancy. It is not intended to be used for self-testing.	B
7931	54020	Human chorionic gonadotropin beta-subunit (beta-HCG)/follicle stimulating hormone (FSH) IVD, calibrator	Хүний chorionic gonadotropin бета дэд нэгж (бета-HCG) / уутанцраас өдөөгч даавар (FSH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or semi-quantitative detection of beta-subunit human chorionic gonadotropin (beta-HCG) and follicle stimulating hormone (FSH) in a clinical specimen.	B
7932	54021	Human chorionic gonadotropin beta-subunit (beta-HCG)/follicle stimulating hormone (FSH) IVD, control	Хүний chorionic gonadotropin бета дэд нэгж (бета-HCG) / уутанцраас өдөөгч даавар (FSH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or semi-quantitative detection of beta-subunit human chorionic gonadotropin (beta-HCG) and follicle stimulating hormone (FSH) in a clinical specimen.	B
7933	54022	Human chorionic gonadotropin beta-subunit (beta-HCG)/follicle stimulating hormone (FSH) IVD, reagent	Хүний chorionic gonadotropin бета дэд нэгж (бета-HCG) / уутанцраас өдөөгч даавар (FSH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or semi-quantitative detection of beta-subunit human chorionic gonadotropin (beta-HCG) and follicle stimulating hormone (FSH) in a clinical specimen.	B
7934	54023	5-Hydroxyindoleacetic acid (5HIAA) IVD, kit, chromogenic	5-гидроксиндол цууны хүчил (5HIAA) IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen, using a chromogenic method. 5HIAA is a serotonin metabolite associated with carcinoid tumours (e.g., of the enterochromaffin cells of the midgut).	B

7935	54024	5-Hydroxyindoleacetic acid (5HIAA) IVD, kit, liquid chromatography	5-гидроксиндол цууны хүчил (5HIAA) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen, using a liquid chromatography method. 5HIAA is a serotonin metabolite associated with carcinoid tumours (e.g., of the enterochromaffin cells of the midgut).	B
7936	54025	5-Hydroxyindoleacetic acid (5HIAA) IVD, reagent	5-гидроксиндол цууны хүчил (5HIAA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B
7937	54026	11-Deoxycortisol IVD, kit, spectrophotometry	11-Деоксикортизол IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 11-deoxycortisol in a clinical specimen, using a spectrophotometry method.	B
7938	54027	11-Deoxycortisol IVD, kit, radioimmunoassay	11-Деоксикортизол IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 11-deoxycortisol in a clinical specimen, using a radioimmunoassay method.	B
7939	54028	11-Deoxycortisol IVD, reagent	11-Деоксикортизол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 11-deoxycortisol in a clinical specimen.	B
7940	54029	17-Hydroxycorticoid IVD, kit, spectrophotometry	17-Гидроксикортикоид IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxycorticoids in a clinical specimen, using a spectrophotometry method.	B
7941	54030	17-Hydroxycorticoid IVD, kit, radioimmunoassay	17-гидроксикортикоид IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxycorticoids in a clinical specimen, using a radioimmunoassay method.	B
7942	54031	17-Hydroxycorticoid IVD, calibrator	17-гидроксикортикоид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxycorticoids in a clinical specimen.	B
7943	54032	17-Hydroxycorticoid IVD, control	17-гидроксикортикоид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxycorticoids in a clinical specimen.	B

7944	54033	17-Hydroxycorticoid IVD, reagent	17-гидроксикортикоид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-hydroxycorticoids in a clinical specimen.	B
7945	54034	17-Hydroxyketosterone (17OH) IVD, kit, spectrophotometry	17-Гидроксикетостерон (17OH) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyketosterone (17OH) in a clinical specimen, using a spectrophotometry method.	B
7946	54035	17-Hydroxyketosterone (17OH) IVD, kit, radioimmunoassay	17-Гидроксикетостерон (17OH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyketosterone (17OH) in a clinical specimen, using a radioimmunoassay method.	B
7947	54036	17-Hydroxyketosterone (17OH) IVD, reagent	17-гидроксикетостерон (17OH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-hydroxyketosterone (17OH) in a clinical specimen.	B
7948	54037	17-Hydroxypregnenolone IVD, kit, spectrophotometry	17-Гидроксипрегненолон IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxypregnenolone in a clinical specimen, using a spectrophotometry method.	B
7949	54038	17-Hydroxypregnenolone IVD, kit, radioimmunoassay	17-гидроксипрегненолон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxypregnenolone in a clinical specimen, using a radioimmunoassay method.	B
7950	54039	17-Hydroxypregnenolone IVD, calibrator	17-гидроксипрегненолон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxypregnenolone in a clinical specimen.	B
7951	54040	17-Hydroxypregnenolone IVD, control	17-гидроксипрегненолон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 17-hydroxypregnenolone in a clinical specimen.	B

7952	54041	17-Hydroxypregnenolone IVD, reagent	17-гидроксипрегненолон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-hydroxypregnenolone in a clinical specimen.	B
7953	54042	17-Hydroxyprogesterone IVD, kit, spectrophotometry	17-гидроксипрогестерон IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-ketogenic steroid (17KGS) hormones in a clinical specimen, using a spectrophotometry method.	B
7954	54043	17-Hydroxyprogesterone IVD, kit, radioimmunoassay	17-гидроксипрогестерон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen, using a radioimmunoassay method.	B
7955	54044	17-Hydroxyprogesterone IVD, reagent	17-гидроксипрогестерон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen.	B
7956	54045	17-Ketogenic steroid (17KGS) IVD, kit, spectrophotometry	17-Кетоген стероид (17KGS) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS), the breakdown product of steroid hormones, in a clinical specimen, using a spectrophotometry method.	B
7957	54046	17-Ketogenic steroid (17KGS) IVD, kit, radioimmunoassay	17-Кетоген стероид (17KGS) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-ketogenic steroids (17KGS) in a clinical specimen, using a radioimmunoassay method.	B
7958	54047	17-Ketogenic steroid (17KGS) IVD, reagent	17-Кетоген стероид (17KGS) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-ketogenic steroids (17KGS) in a clinical specimen.	B
7959	54048	17-Ketosteroid (17KS) IVD, kit, spectrophotometry	17-Кетостероид (17KS) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS) in a clinical specimen, using a spectrophotometry method.	B

7960	54049	17-Ketosteroid (17KS) IVD, kit, radioimmunoassay	17-Кетостероид (17KS) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS) in a clinical specimen, using a radioimmunoassay method.	B
7961	54050	17-Ketosteroid (17KS) IVD, reagent	17-Кетостероид (17KS) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 17-ketosteroids (17KS) in a clinical specimen.	B
7962	54051	18-Hydroxycorticosterone IVD, kit, radioimmunoassay	18-гидроксикортикостероны IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 18-hydroxycorticosterone in a clinical specimen, using a radioimmunoassay method.	B
7963	54052	18-Hydroxycorticosterone IVD, calibrator	18-гидроксикортикостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 18-hydroxycorticosterone in a clinical specimen.	B
7964	54053	18-Hydroxycorticosterone IVD, control	18-гидроксикортикостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 18-hydroxycorticosterone in a clinical specimen.	B
7965	54054	18-Hydroxycorticosterone IVD, reagent	18-гидроксикортикостероны IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 18-hydroxycorticosterone in a clinical specimen.	B
7966	54055	Adrenocorticotropic hormone (ACTH) IVD, kit, chemiluminescent immunoassay	Адренокортикотроп даавар (ACTH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen, using a chemiluminescent immunoassay method.	B
7967	54056	Adrenocorticotropic hormone (ACTH) IVD, kit, enzyme immunoassay (EIA)	Адренокортикотроп даавар (ACTH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

7968	54057	Adrenocorticotropic hormone (ACTH) IVD, reagent	Адренокортикотроп даавар (ACTH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen.	B
7969	54058	Aldosterone IVD, kit, radioimmunoassay	Альдостероны IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of aldosterone in a clinical specimen, using a radioimmunoassay method.	B
7970	54059	Aldosterone IVD, reagent	Альдостероны IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of aldosterone in a clinical specimen.	B
7971	54060	Alpha-fetoprotein (AFP) IVD, kit, fluorescent immunoassay	Альфа-фетопротейн (AFP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen, using a fluorescent immunoassay method.	B
7972	54061	Alpha-fetoprotein (AFP) IVD, kit, enzyme immunoassay (EIA)	Альфа-фетопротейн (AFP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7973	54062	Alpha-fetoprotein (AFP) IVD, calibrator	Альфа-фетопротейн (AFP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen.	B
7974	54063	Alpha-fetoprotein (AFP) IVD, control	Альфа-фетопротейн (AFP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen.	B
7975	54064	Alpha-fetoprotein (AFP) IVD, reagent	Альфа-фетопротейн (AFP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen.	B

7976	54065	Androstanediol glucuronide (3a-diol G) IVD, kit, radioimmunoassay	Андростандиол глюкуронид (3а-диол G) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide in a clinical specimen, using a radioimmunoassay method.	B
7977	54066	Androstanediol glucuronide (3a-diol G) IVD, kit, enzyme immunoassay (EIA)	Андростандиол глюкуронид (3а-диол G) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
7978	54067	Androstanediol glucuronide (3a-diol G) IVD, reagent	Андростандиол глюкуронид (3а-диол G) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide in a clinical specimen.	B
7979	54068	Androstenedione IVD, kit, chemiluminescent immunoassay	Androstenedione IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androstenedione in a clinical specimen, using a chemiluminescent immunoassay method.	B
7980	54069	Androstenedione IVD, kit, enzyme immunoassay (EIA)	Androstenedione IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androstenedione in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7981	54070	Androstenedione IVD, reagent	Андростендион IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of androstenedione in a clinical specimen.	B
7982	54071	Androsterone IVD, kit, radioimmunoassay	Андростерон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androsterone in a clinical specimen, using a radioimmunoassay method.	B
7983	54072	Androsterone IVD, reagent	Андростерон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of androsterone in a clinical specimen.	B

7984	54073	Total angiotensin/angiotensin subtype IVD, kit, spectrophotometry	Нийт ангиотензин/ангиотензин дэд төрөл IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total angiotensin or angiotensin subtypes in a clinical specimen, using a spectrophotometry method.	B
7985	54074	Total angiotensin/angiotensin subtype IVD, kit, chemiluminescent immunoassay	Нийт ангиотензин/ангиотензин дэд төрөл IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total angiotensin or angiotensin subtypes in a clinical specimen, using a chemiluminescent immunoassay method.	B
7986	54075	Total angiotensin/angiotensin subtype IVD, reagent	Нийт ангиотензин/ангиотензин дэд төрөл IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total angiotensin or angiotensin subtypes in a clinical specimen.	B
7987	54076	Antidiuretic hormone (ADH) IVD, kit, radioimmunoassay	Антидиуретик даавар (ADH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of antidiuretic hormone (ADH) in a clinical specimen, using a radioimmunoassay method.	B
7988	54077	Antidiuretic hormone (ADH) IVD, calibrator	Антидиуретик даавар (ADH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antidiuretic hormone (ADH) in a clinical specimen.	B
7989	54078	Antidiuretic hormone (ADH) IVD, control	Антидиуретик даавар (ADH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of antidiuretic hormone (ADH) in a clinical specimen.	B
7990	54079	Antidiuretic hormone (ADH) IVD, reagent	Антидиуретик даавар (ADH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of antidiuretic hormone (ADH) in a clinical specimen.	B
7991	54080	Arginine vasopressin IVD, kit, radioimmunoassay	Аргинин вазопрессин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of arginine vasopressin in a clinical specimen, using a radioimmunoassay method.	B
7992	54081	Arginine vasopressin IVD, calibrator	Аргинин вазопрессин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of arginine vasopressin in a clinical specimen.	B

7993	54082	Arginine vasopressin IVD, control	Аргинин вазопрессин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of arginine vasopressin in a clinical specimen.	B
7994	54083	Arginine vasopressin IVD, reagent	Аргинин вазопрессин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of arginine vasopressin in a clinical specimen.	B
7995	54084	Calcitonin IVD, kit, chemiluminescent immunoassay	Кальцитонин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of calcitonin in a clinical specimen, using a chemiluminescent immunoassay method.	B
7996	54085	Calcitonin IVD, kit, enzyme immunoassay (EIA)	Кальцитонин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of calcitonin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
7997	54086	Calcitonin IVD, reagent	Кальцитонин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of calcitonin in a clinical specimen.	B
7998	54087	3-Methoxy-4-hydroxyphenylglycol (MHPG) IVD, kit, liquid chromatography	3-метокси-4-гидроксифенилгликол (MHPG) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the catecholamine metabolite 3-methoxy-4-hydroxyphenylglycol (MHPG), in a clinical specimen using a liquid chromatography method.	B
7999	54088	3-Methoxy-4-hydroxyphenylglycol (MHPG) IVD, calibrator	3-метокси-4-гидроксифенилгликол (MHPG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the catecholamine metabolite 3-methoxy-4-hydroxyphenylglycol (MHPG), in a clinical specimen.	B
8000	54089	3-Methoxy-4-hydroxyphenylglycol (MHPG) IVD, control	3-метокси-4-гидроксифенилгликол (MHPG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the catecholamine metabolite 3-methoxy-4-hydroxyphenylglycol (MHPG), in a clinical specimen.	B

8001	54090	3-Methoxy-4-hydroxyphenylglycol (MHPG) IVD, reagent	3-метокси-4-гидроксифенилгликол (MHPG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the catecholamine metabolite 3-methoxy-4-hydroxyphenylglycol (MHPG), in a clinical specimen.	B
8002	54091	Adrenalin (epinephrine) IVD, kit, liquid chromatography	Адреналин (эпинефрин) IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the catecholamine adrenalin (epinephrine) in a clinical specimen, using a liquid chromatography method.	B
8003	54092	Adrenalin (epinephrine) IVD, calibrator	Адреналин (эпинефрин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the catecholamine adrenalin (epinephrine) in a clinical specimen.	B
8004	54093	Adrenalin (epinephrine) IVD, control	Адреналин (эпинефрин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the catecholamine adrenalin (epinephrine) in a clinical specimen.	B
8005	54094	Adrenalin (epinephrine) IVD, reagent	Адреналин (эпинефрин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the catecholamine adrenalin (epinephrine) in a clinical specimen.	B
8006	54095	Dopamine IVD, kit, liquid chromatography	Допамин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the catecholamine dopamine in a clinical specimen, using a liquid chromatography method.	B
8007	54096	Dopamine IVD, calibrator	Допамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the catecholamine dopamine in a clinical specimen.	B
8008	54097	Dopamine IVD, control	Допамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the catecholamine dopamine in a clinical specimen.	B
8009	54098	Dopamine IVD, reagent	Допамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the catecholamine dopamine in a clinical specimen.	B

8010	54099	Homovanillic acid (HVA) IVD, kit, liquid chromatography	Гомованилийн хүчил (HVA) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials to be used for the quantitative measurement of homovanillic acid (HVA) in a clinical specimen, using a liquid chromatography method.	B
8011	54100	Homovanillic acid (HVA) IVD, calibrator	Гомованилийн хүчил (HVA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of homovanillic acid (HVA) in a clinical specimen.	B
8012	54101	Homovanillic acid (HVA) IVD, control	Гомованилийн хүчил (HVA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of homovanillic acid (HVA) in a clinical specimen.	B
8013	54102	Homovanillic acid (HVA) IVD, reagent	Гомованилийн хүчил (HVA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of homovanillic acid (HVA) in a clinical specimen.	B
8014	54103	Metanephrine IVD, kit, liquid chromatography	Метанефрин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the catecholamine metanephrine in a clinical specimen, using a liquid chromatography method.	B
8015	54104	Metanephrine IVD, calibrator	Метанефрин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the catecholamine metanephrine in a clinical specimen.	B
8016	54105	Metanephrine IVD, control	Метанефрин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the catecholamine metanephrine in a clinical specimen.	B
8017	54106	Metanephrine IVD, reagent	Метанефрин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the catecholamine metanephrine in a clinical specimen.	B
8018	54107	Noradrenaline (norepinephrine) IVD, kit, liquid chromatography	Норадреналин (норепинефрин) IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the catecholamine noradrenaline (norepinephrine) in a clinical specimen, using a liquid chromatography method.	B
8019	54108	Noradrenaline (norepinephrine) IVD, calibrator	Норадреналин (норепинефрин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the catecholamine noradrenaline (norepinephrine) in a clinical specimen.	B

8020	54109	Noradrenaline (norepinephrine) IVD, control	Норадреналин (норепинефрин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the catecholamine noradrenaline (norepinephrine) in a clinical specimen.	B
8021	54110	Noradrenaline (norepinephrine) IVD, reagent	Норадреналин (норепинефрин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the catecholamine noradrenaline (norepinephrine) in a clinical specimen.	B
8022	54111	Vanillylmandelic acid (VMA) IVD, kit, liquid chromatography	Vanillylmandelic acid (VMA) IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials to be used for the quantitative measurement of vanillylmandelic acid (VMA) in a clinical specimen, using a liquid chromatography method.	B
8023	54112	Vanillylmandelic acid (VMA) IVD, reagent	Ваниллилманделийн хүчил (VMA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of vanillylmandelic acid (VMA) in a clinical specimen.	B
8024	54113	Corticosteroid-binding globulin (CBG) IVD, kit, radioimmunoassay	Кортикостероид холбогч глобулин (CBG) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials to be used for the quantitative measurement of corticosteroid-binding globulin (CBG), also known as transcortin, in a clinical specimen using a radioimmunoassay method.	B
8025	54114	Corticosteroid-binding globulin (CBG) IVD, calibrator	Кортикостероид холбогч глобулин (CBG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of corticosteroid-binding globulin (CBG) also known as transcortin, in a clinical specimen.	B
8026	54115	Corticosteroid-binding globulin (CBG) IVD, control	Кортикостероид холбогч глобулин (CBG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of corticosteroid-binding globulin (CBG) also known as transcortin, in a clinical specimen.	B
8027	54116	Corticosteroid-binding globulin (CBG) IVD, reagent	Кортикостероид холбогч глобулин (CBG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used for the quantitative measurement of corticosteroid-binding globulin (CBG) also known as transcortin, in a clinical specimen.	B

8028	54117	Corticosterone IVD, kit, gas chromatography	Кортикостероны IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of corticosterone in a clinical specimen, using a gas chromatography method. Corticosterone is a glucocorticoid associated with emotional stress, long-term memory, and sleep-wake patterns.	B
8029	54118	Corticosterone IVD, calibrator	Кортикостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of corticosterone in a clinical specimen.	B
8030	54119	Corticosterone IVD, control	Кортикостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of corticosterone in a clinical specimen.	B
8031	54120	Corticosterone IVD, reagent	Кортикостероны IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of corticosterone in a clinical specimen.	B
8032	54121	Free cortisol IVD, kit, enzyme immunoassay (EIA)	Үнэгүй кортизолын IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free cortisol in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8033	54122	Free cortisol IVD, calibrator	Үнэгүй кортизолын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of free cortisol in a clinical specimen.	B
8034	54123	Free cortisol IVD, control	Үнэгүй кортизол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of free cortisol in a clinical specimen.	B
8035	54124	Free cortisol IVD, reagent	Үнэгүй кортизол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of free cortisol in a clinical specimen.	B
8036	54125	Total cortisol IVD, kit, chemiluminescent immunoassay	Нийт кортизолын IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen, using a chemiluminescent immunoassay method.	B

8037	54126	Total cortisol IVD, calibrator	Нийт кортизолын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen.	B
8038	54127	Total cortisol IVD, control	Нийт кортизолын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen.	B
8039	54128	Total cortisol IVD, reagent	Нийт кортизолын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen.	B
8040	54129	C-peptide IVD, kit, radioimmunoassay	С-пептид IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen, using a radioimmunoassay method.	B
8041	54130	C-peptide IVD, kit, chemiluminescent immunoassay	С-пептид IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen, using a chemiluminescent immunoassay method.	B
8042	54131	C-peptide IVD, reagent	С-пептид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen.	B
8043	54132	Deoxycorticosterone IVD, kit, radioimmunoassay	Дезоксикортикостероны IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of deoxycorticosterone in a clinical specimen, using a radioimmunoassay method.	B
8044	54133	Deoxycorticosterone IVD, calibrator	Дезоксикортикостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of deoxycorticosterone in a clinical specimen.	B
8045	54134	Deoxycorticosterone IVD, control	Дезоксикортикостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of deoxycorticosterone in a clinical specimen.	B

8046	54135	Deoxycorticosterone IVD, reagent	Дезоксикортикостероны IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of deoxycorticosterone in a clinical specimen.	B
8047	54136	Dehydroepiandrosterone (DHEA) IVD, kit, radioimmunoassay	Дегидроэпиандростерон (DHEA) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dehydroepiandrosterone (DHEA) in a clinical specimen, using a radioimmunoassay method.	B
8048	54137	Dehydroepiandrosterone (DHEA) IVD, kit, enzyme immunoassay (EIA)	Дегидроэпиандростерон (DHEA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dehydroepiandrosterone (DHEA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8049	54138	Dehydroepiandrosterone (DHEA) IVD, reagent	Дегидроэпиандростерон (DHEA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is intended to be used for the quantitative measurement of dehydroepiandrosterone (DHEA) in a clinical specimen.	B
8050	54139	Dehydroepiandrosterone sulfate (DHEAS) IVD, kit, chemiluminescent immunoassay	Дегидроэпиандростерон сульфат (DHEAS) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8051	54140	Dehydroepiandrosterone sulfate (DHEAS) IVD, calibrator	Дегидроэпиандростерон сульфат (DHEAS) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen.	B
8052	54141	Dehydroepiandrosterone sulfate (DHEAS) IVD, control	Дегидроэпиандростерон сульфат (DHEAS) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen.	B
8053	54142	Dehydroepiandrosterone sulfate (DHEAS) IVD, reagent	Дегидроэпиандростерон сульфат (DHEAS) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen.	B

8054	54143	Dihydrotestosterone IVD, kit, radioimmunoassay	Дихидротестостерон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dihydrotestosterone (DHT) in a clinical specimen, using a radioimmunoassay method. It is used as an aid in the diagnosis of conditions such as Klinefelter syndrome, idiopathic hirsutism, and polycystic ovaries.	B
8055	54144	Dihydrotestosterone IVD, calibrator	Дихидротестостерон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of dihydrotestosterone (DHT) in a clinical specimen.	B
8056	54145	Dihydrotestosterone IVD, control	Дигидротестостерон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of dihydrotestosterone (DHT) in a clinical specimen.	B
8057	54146	Dihydrotestosterone IVD, reagent	Дихидротестостерон IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of dihydrotestosterone (DHT) in a clinical specimen.	B
8058	54147	Beta-endorphin IVD, kit, radioimmunoassay	Бета-эндорфин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-endorphin in a clinical specimen, using a radioimmunoassay method.	B
8059	54148	Beta-endorphin IVD, reagent	Бета-эндорфин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of beta-endorphin in a clinical specimen.	B
8060	54149	Erythropoietin (EPO) IVD, kit, chemiluminescent immunoassay	Эритропоэтин (EPO) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of erythropoietin (EPO) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8061	54150	Erythropoietin (EPO) IVD, reagent	Эритропоэтин (EPO) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of erythropoietin (EPO) in a clinical specimen.	B

8062	54151	Estradiol (oestradiol) (E2) IVD, kit, radioimmunoassay	Эстрадиол (эстрадиол) (E2) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen, using a radioimmunoassay method.	B
8063	54152	Estradiol (oestradiol) (E2) IVD, kit, enzyme immunoassay (EIA)	Эстрадиол (эстрадиол) (E2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8064	54153	Estradiol (oestradiol) (E2) IVD, reagent	Эстрадиол (эстрадиол) (E2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen.	B
8065	54154	Total estriol (oestriol) IVD, kit, chemiluminescent immunoassay	Нийт эстриол (эстриол) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total estriol (oestriol), an estrogen (oestrogen) hormone, in a clinical specimen using a chemiluminescent immunoassay method. It is typically measured in maternal blood or urine as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
8066	54155	Total estriol (oestriol) IVD, kit, radioimmunoassay	Нийт эстриол (эстриол) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total estriol (oestriol), an estrogen (oestrogen) hormone, in a clinical specimen using a radioimmunoassay method. It is typically measured in maternal blood or urine as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
8067	54156	Total estriol (oestriol) IVD, reagent	Нийт эстриол (эстриол) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total estriol (oestriol), an estrogen (oestrogen) hormone, in a clinical specimen.	B

8068	54157	Estriol-16-alpha-glucuronide IVD, kit, chemiluminescent immunoassay	Эстриол-16-альфа-глюкуронид IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of estriol-16-alpha-glucuronide in a clinical specimen for the determination of pregnancy, using a chemiluminescent immunoassay method.	B
8069	54158	Estriol-16-alpha-glucuronide IVD, kit, radioimmunoassay	Эстриол-16-альфа-глюкуронид IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of estriol-16-alpha-glucuronide in a clinical specimen for the determination of pregnancy, using a radioimmunoassay method.	B
8070	54159	Estriol-16-alpha-glucuronide IVD, calibrator	Эстриол-16-альфа-глюкуронид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of estriol-16-alpha-glucuronide in a clinical specimen for the determination of pregnancy.	B
8071	54160	Estriol-16-alpha-glucuronide IVD, control	Эстриол-16-альфа-глюкуронид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of estriol-16-alpha-glucuronide in a clinical specimen for the determination of pregnancy.	B
8072	54161	Estriol-16-alpha-glucuronide IVD, reagent	Эстриол-16-альфа-глюкуронид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of estriol-16-alpha-glucuronide in a clinical specimen for the determination of pregnancy.	B
8073	54162	Free estriol (oestriol) IVD, kit, radioimmunoassay	Чөлөөт эстриол (эстриол) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone free estriol (oestriol) in a clinical specimen, using a radioimmunoassay method. It is typically measured in maternal blood or urine as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
8074	54163	Free estriol (oestriol) IVD, reagent	Чөлөөт эстриол (эстриол) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the estrogen (oestrogen) hormone free estriol (oestriol) in a clinical specimen.	B

8075	54164	Estrone (oestrone) IVD, kit, enzyme immunoassay (EIA)	Эстрон (эстрон) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone (oestrone) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8076	54165	Estrone (oestrone) IVD, reagent	Эстрон (эстрон) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the estrogen (oestrogen) hormone estrone (oestrone) in a clinical specimen.	B
8077	54166	Estrone-3-glucuronide IVD, kit, enzyme immunoassay (EIA)	Эстрон-3-глюкуронид IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8078	54167	Estrone-3-glucuronide IVD, kit, rapid ICT, clinical	Эстрон-3-глюкуронид IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8079	54168	Estrone-3-glucuronide IVD, kit, radioimmunoassay	Эстрон-3-глюкуронид IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen, using a radioimmunoassay method.	B
8080	54169	Estrone-3-glucuronide IVD, calibrator	Эстрон-3-глюкуронид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen.	B
8081	54170	Estrone-3-glucuronide IVD, control	Эстрон-3-глюкуронид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen.	B

8082	54171	Estrone-3-glucuronide IVD, reagent	Эстрон-3-глюкуронид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the estrogen (oestrogen) hormone estrone-3-glucuronide in a clinical specimen.	B
8083	54172	Estrogen (oestrogen) receptor IVD, kit, enzyme immunoassay (EIA)	Эстроген (эстроген) рецептор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of estrogen (oestrogen) receptors in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8084	54173	Estrogen (oestrogen) receptor IVD, reagent	Эстроген (эстроген) рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of estrogen (oestrogen) receptors in a clinical specimen.	B
8085	54174	Trisomy 21-risk hormone IVD, kit, radioimmunoassay	Trisomy 21-эрсдлийн даавар IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for quantitative measurement of multiple hormone levels in a clinical specimen using a radioimmunoassay method, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B
8086	54175	Trisomy 21-risk hormone IVD, kit, chemiluminescent immunoassay	Трисоми 21 эрсдэлт даавар IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple hormone levels in a clinical specimen using a chemiluminescent immunoassay method, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B

8087	54176	Trisomy 21-risk hormone IVD, kit, enzyme immunoassay (EIA)	Трисоми 21-эрсдлийн даавар IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple hormone levels in a clinical specimen using an enzyme immunoassay (EIA) method, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B
8088	54177	Trisomy 21-risk hormone IVD, calibrator	Trisomy 21-эрсдлийн даавар IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for quantitative measurement of multiple hormone levels in a clinical specimen, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B
8089	54178	Trisomy 21-risk hormone IVD, control	Trisomy 21-эрсдлийн даавар IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of multiple hormone levels in a clinical specimen, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B
8090	54179	Trisomy 21-risk hormone IVD, reagent	Trisomy 21-эрсдлийн даавар IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of multiple hormone levels in a clinical specimen, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B

8091	54180	Free testosterone IVD, kit, radioimmunoassay	Үнэгүй тестостероны IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen, using a radioimmunoassay method.	B
8092	54181	Free testosterone IVD, kit, enzyme immunoassay (EIA)	Үнэгүй тестостероны IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8093	54182	Free testosterone IVD, calibrator	Үнэгүй тестостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen.	B
8094	54183	Free testosterone IVD, control	Үнэгүй тестостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen.	B
8095	54184	Free testosterone IVD, reagent	Үнэгүй тестостероны IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen.	B
8096	54185	Follicle stimulating hormone (FSH) IVD, kit, radioimmunoassay	Фолликул өдөөгч даавар (FSH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen, using a radioimmunoassay method.	B
8097	54186	Follicle stimulating hormone (FSH) IVD, kit, enzyme immunoassay (EIA)	Фолликул өдөөгч даавар (FSH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8098	54187	Follicle stimulating hormone (FSH) IVD, kit, chemiluminescent immunoassay	Фолликул өдөөгч даавар (FSH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen, using a chemiluminescent immunoassay method.	B

8099	54188	Follicle stimulating hormone (FSH) IVD, reagent	Фолликул өдөөгч даавар (FSH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of follicle stimulating hormone (FSH) in a clinical specimen.	B
8100	54189	Gastrin IVD, kit, radioimmunoassay	Гастрин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gastrin in a clinical specimen, using a radioimmunoassay method. It is used to aid in the investigation and treatment of disorders associated with abnormal gastrin production [e.g., recurrent peptic ulcers, gastrin-producing tumours (gastrinomas) and Zollinger-Ellison syndrome (ZES)].	B
8101	54190	Gastrin IVD, kit, enzyme immunoassay (EIA)	Гастрин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gastrin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid in the investigation and treatment of disorders associated with abnormal gastrin production [e.g., recurrent peptic ulcers, gastrin-producing tumours (gastrinomas) and Zollinger-Ellison syndrome (ZES)].	B
8102	54191	Gastrin IVD, kit, fluorescent immunoassay	Гастрин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gastrin in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the investigation and treatment of disorders associated with abnormal gastrin production [e.g., recurrent peptic ulcers, gastrin-producing tumours (gastrinomas) and Zollinger-Ellison syndrome (ZES)].	B
8103	54192	Gastrin IVD, calibrator	Гастрин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of gastrin in a clinical specimen.	B
8104	54193	Gastrin IVD, control	Гастрин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of gastrin in a clinical specimen.	B
8105	54194	Gastrin IVD, reagent	Гастрин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of gastrin in a clinical specimen.	B

8106	54195	Glucagon IVD, kit, enzyme immunoassay (EIA)	Глюкагон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of glucagon in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8107	54196	Glucagon IVD, reagent	Глюкагон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of glucagon in a clinical specimen.	B
8108	54197	Growth hormone releasing hormone (GHRH) IVD, kit, chemiluminescent immunoassay	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8109	54198	Growth hormone releasing hormone (GHRH) IVD, kit, enzyme immunoassay (EIA)	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8110	54199	Growth hormone releasing hormone (GHRH) IVD, kit, radioimmunoassay	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen, using a radioimmunoassay method.	B
8111	54200	Growth hormone releasing hormone (GHRH) IVD, calibrator	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen.	B
8112	54201	Growth hormone releasing hormone (GHRH) IVD, control	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen.	B
8113	54202	Growth hormone releasing hormone (GHRH) IVD, reagent	Өсөлтийн даавар ялгаруулах даавар (GHRH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of growth hormone releasing hormone (GHRH) in a clinical specimen.	B

8114	54203	Gonadotropin releasing hormone (GnRH) IVD, kit, chemiluminescent immunoassay	Гонадотропин ялгаруулах даавар (GnRH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen using a chemiluminescent immunoassay method.	B
8115	54204	Gonadotropin releasing hormone (GnRH) IVD, kit, enzyme immunoassay (EIA)	Гонадотропин ялгаруулах даавар (GnRH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8116	54205	Gonadotropin releasing hormone (GnRH) IVD, kit, radioimmunoassay	Гонадотропин ялгаруулах даавар (GnRH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen using a radioimmunoassay method.	B
8117	54206	Gonadotropin releasing hormone (GnRH) IVD, calibrator	Гонадотропин ялгаруулах даавар (GnRH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen.	B
8118	54207	Gonadotropin releasing hormone (GnRH) IVD, control	Гонадотропин ялгаруулах даавар (GnRH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen.	B
8119	54208	Gonadotropin releasing hormone (GnRH) IVD, reagent	Гонадотропин ялгаруулах даавар (GnRH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of gonadotropin releasing hormone (GnRH), also known as luteinizing hormone releasing hormone (LHRH), in a clinical specimen.	B

8120	54209	Total human chorionic gonadotropin IVD, kit, radioimmunoassay	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen using a radioimmunoassay method. It is used to aid detection of pregnancy, or as a predicitive indicator of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome).	B
8121	54210	Total human chorionic gonadotropin IVD, kit, enzyme immunoassay (EIA)	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen using an enzyme immunoassay (EIA) method. It is used to aid detection of pregnancy, or as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome).	B
8122	54211	Total human chorionic gonadotropin IVD, kit, chemiluminescent immunoassay	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen using a chemiluminescent immunoassay method. It is used to aid detection of pregnancy, or as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome).	B
8123	54212	Total human chorionic gonadotropin IVD, reagent	Хүний нийт chorionic gonadotropin IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen.	B
8124	54218	Human growth hormone (HGH) IVD, kit, radioimmunoassay	Хүний өсөлтийн даавар (HGH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen, using a radioimmunoassay method.	B

8125	54219	Human growth hormone (HGH) IVD, kit, enzyme immunoassay (EIA)	Хүний өсөлтийн даавар (HGH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8126	54220	Human growth hormone (HGH) IVD, kit, chemiluminescent immunoassay	Хүний өсөлтийн даавар (HGH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8127	54221	Human growth hormone (HGH) IVD, reagent	Хүний өсөлтийн даавар (HGH) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen.	B
8128	54222	Human placental lactogen (HPL) IVD, kit, enzyme immunoassay (EIA)	Хүний ихэсийн лактоген (HPL) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8129	54223	Human placental lactogen (HPL) IVD, kit, radioimmunoassay	Хүний ихэсийн лактоген (HPL) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen using a radioimmunoassay method.	B
8130	54224	Human placental lactogen (HPL) IVD, reagent	Хүний ихэсийн лактоген (HPL) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen.	B
8131	54225	Hydroxyproline IVD, kit, electrometry	Гидроксипролин IVD, иж бүрдэл, цахилгаан хэмжигч	A collection of reagents and other associated materials intended to be used for the quantitative measurement of hydroxyproline in a clinical specimen, using an electrometry method.	B

8132	54226	Hydroxyproline IVD, reagent	Гидроксипролин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of hydroxyproline in a clinical specimen.	B
8133	54227	Inhibin A IVD, kit, chemiluminescent immunoassay	Inhibin A IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inhibin A in a clinical specimen, using a chemiluminescent immunoassay method.	B
8134	54228	Inhibin A IVD, kit, enzyme immunoassay (EIA)	Inhibin A IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inhibin A in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8135	54229	Inhibin A IVD, calibrator	Inhibin A IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of inhibin A in a clinical specimen.	B
8136	54230	Inhibin A IVD, control	Inhibin A IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of inhibin A in a clinical specimen.	B
8137	54231	Inhibin A IVD, reagent	Inhibin A IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of inhibin A in a clinical specimen.	B
8138	54232	Inhibin B IVD, kit, chemiluminescent immunoassay	Inhibin B IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inhibin B in a clinical specimen, using a chemiluminescent immunoassay method.	B
8139	54233	Inhibin B IVD, kit, enzyme immunoassay (EIA)	Inhibin B IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inhibin B in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8140	54234	Inhibin B IVD, calibrator	Inhibin B IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of inhibin B in a clinical specimen.	B
8141	54235	Inhibin B IVD, control	Inhibin B IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of inhibin B in a clinical specimen.	B

8142	54236	Inhibin B IVD, reagent	Inhibin B IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of inhibin B in a clinical specimen.	B
8143	54237	Insulin IVD, kit, chemiluminescent immunoassay	Инсулин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of insulin in a clinical specimen, using a chemiluminescent immunoassay method.	B
8144	54238	Insulin IVD, kit, enzyme immunoassay (EIA)	Инсулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of insulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8145	54239	Insulin IVD, reagent	Инсулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of insulin in a clinical specimen.	B
8146	54240	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, kit, chemiluminescent immunoassay	Инсулин төст өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8147	54241	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, reagent	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen.	B
8148	54242	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, kit, chemiluminescent immunoassay	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 3 (IGFBP-3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen, using a chemiluminescent immunoassay method.	B

8149	54243	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, reagent	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 3 (IGFBP-3) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen.	B
8150	54244	Insulin-like growth factor I (IGF1) IVD, kit, chemiluminescent immunoassay	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen, using a chemiluminescent immunoassay method.	B
8151	54245	Insulin-like growth factor I (IGF1) IVD, reagent	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of insulin-like growth factor I [(IGF1), also referred to as somatomedin C, in a clinical specimen.	B
8152	54246	Insulin-like growth factor II (IGFII) IVD, kit, radioimmunoassay	Инсулин шиг өсөлтийн хүчин зүйл II (IGFII) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor II (IGFII) in a clinical specimen, using a radioimmunoassay method.	B
8153	54247	Insulin-like growth factor II (IGFII) IVD, reagent	Инсулин шиг өсөлтийн хүчин зүйл II (IGFII) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of insulin-like growth factor II (IGFII) in a clinical specimen.	B
8154	54248	Leptin IVD, kit, enzyme immunoassay (EIA)	Лептин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of leptin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of leptin resistance in obese patients.	B
8155	54249	Leptin IVD, calibrator	Лептин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of leptin in a clinical specimen.	B
8156	54250	Leptin IVD, control	Лептин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of leptin in a clinical specimen.	B

8157	54251	Leptin IVD, reagent	Лептин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of leptin in a clinical specimen.	B
8158	54252	Luteinizing hormone (LH) IVD, kit, radioimmunoassay	Luteinizing гормон (LH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen, using a radioimmunoassay method.	B
8159	54253	Luteinizing hormone (LH) IVD, kit, enzyme immunoassay (EIA)	Luteinizing hormone (LH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8160	54254	Luteinizing hormone (LH) IVD, kit, chemiluminescent immunoassay	Luteinizing гормон (LH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8161	54255	Luteinizing hormone (LH) IVD, kit, rapid ICT, clinical	Luteinizing hormone (LH) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of luteinizing hormone (LH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8162	54256	Luteinizing hormone (LH) IVD, reagent	Luteinizing гормон (LH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen.	B
8163	54257	Alpha-melanocyte stimulating hormone (MSH) IVD, kit, radioimmunoassay	Альфа-меланоцитыг өдөөдөг даавар (MSH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-melanocyte stimulating hormones (MSH) in a clinical specimen, using a radioimmunoassay method.	B

8164	54258	Alpha-melanocyte stimulating hormone (MSH) IVD, calibrator	Альфа-меланоцитыг өдөөдөг даавар (MSH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-melanocyte stimulating hormones (MSH) in a clinical specimen.	B
8165	54259	Alpha-melanocyte stimulating hormone (MSH) IVD, control	Альфа-меланоцитыг өдөөдөг даавар (MSH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-melanocyte stimulating hormones (MSH) in a clinical specimen.	B
8166	54260	Alpha-melanocyte stimulating hormone (MSH) IVD, reagent	Альфа-меланоцитыг өдөөдөг даавар (MSH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-melanocyte stimulating hormones (MSH) in a clinical specimen.	B
8167	54261	Melatonin IVD, kit, radioimmunoassay	Мелатонин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of melatonin in a clinical specimen, using a radioimmunoassay method.	B
8168	54262	Melatonin IVD, reagent	Мелатонин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of melatonin in a clinical specimen.	B
8169	54263	Motilin IVD, kit, radioimmunoassay	Motilin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of motilin in a clinical specimen, using a radioimmunoassay method.	B
8170	54264	Motilin IVD, calibrator	Motilin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of motilin in a clinical specimen.	B
8171	54265	Motilin IVD, control	Мотилин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of motilin in a clinical specimen.	B
8172	54266	Motilin IVD, reagent	Мотилин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of motilin in a clinical specimen.	B

8173	54267	Neopterin IVD, kit, radioimmunoassay	Neopterin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neopterin in a clinical specimen, using a radioimmunoassay method. Neopterin is typically used as a marker commonly associated with viral infections and inflammatory diseases.	B
8174	54268	Neopterin IVD, reagent	Неоптерин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neopterin in a clinical specimen.	B
8175	54269	Neurotensin IVD, kit, radioimmunoassay	Нейротензин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neurotensin in a clinical specimen, using a radioimmunoassay method.	B
8176	54270	Neurotensin IVD, calibrator	Нейротензин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of neurotensin in a clinical specimen.	B
8177	54271	Neurotensin IVD, control	Нейротензин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of neurotensin in a clinical specimen.	B
8178	54272	Neurotensin IVD, reagent	Нейротензин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of neurotensin in a clinical specimen.	B
8179	54273	Osteocalcin IVD, kit, chemiluminescent immunoassay	Остеокальцин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget’s disease).	B
8180	54274	Osteocalcin IVD, reagent	Остеокальцин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen.	B

8181	54275	Oxytocin IVD, kit, radioimmunoassay	Окситоцин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of oxytocin in a clinical specimen, using a radioimmunoassay method.	B
8182	54276	Oxytocin IVD, reagent	Окситоцин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of oxytocin in a clinical specimen.	B
8183	54277	Parathyroid hormone (PTH) IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн даавар (PTH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen, using a chemiluminescent immunoassay method.	B
8184	54278	Parathyroid hormone (PTH) IVD, kit, radioimmunoassay	Бамбай булчирхайн даавар (PTH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen, using a radioimmunoassay method.	B
8185	54279	Parathyroid hormone (PTH) IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн даавар (PTH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8186	54280	Parathyroid hormone (PTH) IVD, reagent	Бамбай булчирхайн даавар (PTH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen.	B
8187	54285	Parathyroid hormone related peptide (PTHrP) IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen, using a chemiluminescent immunoassay method.	B

8188	54286	Parathyroid hormone related peptide (PTHrP) IVD, kit, radioimmunoassay	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen, using a radioimmunoassay method.	B
8189	54287	Parathyroid hormone related peptide (PTHrP) IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8190	54288	Parathyroid hormone related peptide (PTHrP) IVD, reagent	Бамбай булчирхайн даавартай холбоотой пептид (PTHrP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of parathyroid hormone related peptide (PTHrP) in a clinical specimen.	B
8191	54289	Pepsinogen I IVD, kit, enzyme immunoassay (EIA)	Пепсиноген I IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of pepsinogen I in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8192	54290	Pepsinogen I IVD, kit, fluorescent immunoassay	Пепсиноген I IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of pepsinogen I in a clinical specimen, using a fluorescent immunoassay method.	B
8193	54291	Pepsinogen I IVD, calibrator	Пепсиноген I IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of pepsinogen I in a clinical specimen.	B
8194	54292	Pepsinogen I IVD, control	Пепсиноген I IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of pepsinogen I in a clinical specimen.	B
8195	54293	Pepsinogen I IVD, reagent	Пепсиноген I IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of pepsinogen I in a clinical specimen.	B

8196	54294	Pepsinogen II IVD, kit, fluorescence immunoassay	Пепсиноген II IVD, иж бүрдэл, флюресценцийн дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of pepsinogen II in a clinical specimen, using a fluorescence immunoassay method.	B
8197	54295	Pepsinogen II IVD, kit, enzyme immunoassay (EIA)	Пепсиноген II IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of pepsinogen II in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8198	54296	Pepsinogen II IVD, calibrator	Пепсиноген II IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of pepsinogen II in a clinical specimen.	B
8199	54297	Pepsinogen II IVD, control	Пепсиноген II IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of pepsinogen II in a clinical specimen.	B
8200	54298	Pepsinogen II IVD, reagent	Пепсиноген II IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of pepsinogen II in a clinical specimen.	B
8201	54299	Alpha-2-pregnancy associated glycoprotein IVD, kit, fluorescent immunoassay	Альфа-2 жирэмслэлттэй холбоотой гликопротеины IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-2-pregnancy associated glycoprotein in a clinical specimen, using a fluorescent immunoassay method.	B
8202	54300	Alpha-2-pregnancy associated glycoprotein IVD, reagent	Альфа-2 жирэмслэлттэй холбоотой гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-2-pregnancy associated glycoprotein in a clinical specimen.	B
8203	54301	Pregnancy-associated plasma protein A (PAPP-A) IVD, kit, fluorescence immunoassay	Жирэмсэнтэй холбоотой сийвэнгийн уураг A (PAPP-A) IVD, иж бүрдэл, флюресценцийн дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen, using a fluorescence immunoassay method. It is used in foetal screening of Down syndrome and other chromosomal abnormalities during pregnancy.	B

8204	54302	Pregnancy-associated plasma protein A (PAPP-A) IVD, calibrator	Жирэмсэнтэй холбоотой плазмын уураг А (PAPP-A) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen.	B
8205	54303	Pregnancy-associated plasma protein A (PAPP-A) IVD, control	Жирэмсэнтэй холбоотой плазмын уураг А (PAPP-A) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen.	B
8206	54304	Pregnancy-associated plasma protein A (PAPP-A) IVD, reagent	Жирэмсэнтэй холбоотой плазмын уураг А (PAPP-A) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen.	B
8207	54305	Pregnancy-specific beta1-glycoprotein IVD, kit, fluorescent immunoassay	Жирэмсний тусгай бета1-гликопротеины IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnancy specific beta1-glycoprotein in a clinical specimen, using a fluorescent immunoassay method.	B
8208	54306	Pregnancy-specific beta1-glycoprotein IVD, calibrator	Жирэмсний өвөрмөц бета1-гликопротеины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pregnancy specific beta1-glycoprotein in a clinical specimen.	B
8209	54307	Pregnancy-specific beta1-glycoprotein IVD, control	Жирэмсний өвөрмөц бета1-гликопротеины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pregnancy specific beta1-glycoprotein in a clinical specimen.	B
8210	54308	Pregnancy-specific beta1-glycoprotein IVD, reagent	Жирэмсний өвөрмөц бета1-гликопротейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pregnancy specific beta1-glycoprotein in a clinical specimen.	B
8211	54309	Pregnanetriol IVD, kit, chemiluminescent immunoassay	Pregnanetriol IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the hormone pregnanetriol in a clinical specimen, using a chemiluminescent immunoassay method.	B

8212	54310	Pregnanetriol IVD, calibrator	Pregnanetriol IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the hormone pregnanetriol in a clinical specimen.	B
8213	54311	Pregnanetriol IVD, control	Pregnanetriol IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the hormone pregnanetriol in a clinical specimen.	B
8214	54312	Pregnanetriol IVD, reagent	Pregnanetriol IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the hormone pregnanetriol in a clinical specimen.	B
8215	54313	Procalcitonin (PCT) IVD, kit, fluorescent immunoassay	Прокальцитонин (PCT) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procalcitonin (PCT) in a clinical specimen, using a fluorescent immunoassay method.	B
8216	54314	Procalcitonin (PCT) IVD, calibrator	Прокальцитонин (ПСТ) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of procalcitonin (PCT) in a clinical specimen.	B
8217	54315	Procalcitonin (PCT) IVD, control	Прокальцитонин (ПСТ) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of procalcitonin (PCT) in a clinical specimen.	B
8218	54316	Procalcitonin (PCT) IVD, reagent	Прокальцитонин (ПСТ) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of procalcitonin (PCT) in a clinical specimen.	B
8219	54317	Pregnenolone IVD, kit, radioimmunoassay	Прегненолон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen, using a radioimmunoassay method.	B
8220	54318	Pregnenolone IVD, kit, chemiluminescent immunoassay	Прегненолон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen, using a chemiluminescent immunoassay method.	B

8221	54319	Pregnenolone IVD, calibrator	Прегненолон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen.	B
8222	54320	Pregnenolone IVD, control	Прегненолон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen.	B
8223	54321	Pregnenolone IVD, reagent	Прегненолон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen.	B
8224	54322	Progesterone IVD, kit, chemiluminescent immunoassay	Прогестерон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progesterone in a clinical specimen, using a chemiluminescent immunoassay method.	B
8225	54323	Progesterone IVD, kit, radioimmunoassay	Прогестерон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progesterone in a clinical specimen, using a radioimmunoassay method.	B
8226	54324	Progesterone IVD, kit, enzyme immunoassay (EIA)	Прогестерон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progesterone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8227	54325	Progesterone IVD, calibrator	Прогестерон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of progesterone in a clinical specimen.	B
8228	54326	Progesterone IVD, control	Прогестерон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of progesterone in a clinical specimen.	B
8229	54327	Progesterone IVD, reagent	Прогестерон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of progesterone in a clinical specimen.	B

8230	54328	Progesterone receptor IVD, kit, enzyme immunoassay (EIA)	Прогестерон рецептор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progesterone receptors in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8231	54329	Progesterone receptor IVD, reagent	Прогестерон рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of progesterone receptors in a clinical specimen.	B
8232	54330	Proinsulin IVD, kit, enzyme immunoassay (EIA)	Проинсулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of proinsulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8233	54331	Proinsulin IVD, calibrator	Проинсулин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of proinsulin in a clinical specimen.	B
8234	54332	Proinsulin IVD, control	Проинсулин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of proinsulin in a clinical specimen.	B
8235	54333	Proinsulin IVD, reagent	Проинсулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of proinsulin in a clinical specimen.	B
8236	54334	Prolactin IVD, kit, radioimmunoassay	Prolactin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen, using a radioimmunoassay method.	B
8237	54335	Prolactin IVD, kit, chemiluminescent immunoassay	Prolactin IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen, using a chemiluminescent immunoassay method.	B
8238	54336	Prolactin IVD, kit, enzyme immunoassay (EIA)	Пролактин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8239	54337	Prolactin IVD, calibrator	Пролактин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen.	B
8240	54338	Prolactin IVD, control	Пролактин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen.	B
8241	54339	Prolactin IVD, reagent	Пролактин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of prolactin in a clinical specimen.	B
8242	54340	Prostaglandin IVD, kit, radioimmunoassay	Простагландин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of prostaglandin in a clinical specimen, using a radioimmunoassay method.	B
8243	54341	Prostaglandin IVD, reagent	Простагландин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of prostaglandin in a clinical specimen.	B
8244	54342	Collagen pyridium crosslink IVD, kit, liquid chromatography	Коллаген пиридиумын хөндлөн холбоос IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen, using a liquid chromatography method. It is typically used as a specific marker of bone resorption and osteoclastic activity to help in the diagnosis of bone disease (e.g., postmenopausal osteoporosis, bone metastasis, and Paget's disease) or in monitoring collagen resorption changes in patients receiving antiresorptive therapy.	B
8245	54346	Renin IVD, control	Ренин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen.	B
8246	54347	Renin IVD, reagent	Ренин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen.	B

8247	54348	Renin IVD, kit, radioimmunoassay	Ренин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen, using a radioimmunoassay method. It is used to aid in the diagnosis of certain forms of hypertension.	B
8248	54349	Renin IVD, calibrator	Ренин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen.	B
8249	54352	Secretin IVD, kit, radioimmunoassay	Secretin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of secretin in a clinical specimen, using a radioimmunoassay method.	B
8250	54353	Secretin IVD, kit, enzyme immunoassay (EIA)	Secretin IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of secretin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8251	54354	Secretin IVD, kit, fluorescent immunoassay	Secretin IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of secretin in a clinical specimen, using a fluorescent immunoassay method.	B
8252	54355	Secretin IVD, calibrator	Secretin IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of secretin in a clinical specimen.	B
8253	54356	Secretin IVD, control	Нууц IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of secretin in a clinical specimen.	B
8254	54357	Secretin IVD, reagent	Secretin IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of secretin in a clinical specimen.	B
8255	54358	Serotonin IVD, kit, enzyme immunoassay (EIA)	Серотонин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of serotonin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8256	54359	Serotonin IVD, reagent	Серотонин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of serotonin in a clinical specimen.	B
8257	54360	Sex hormone binding globulin (SHBG) IVD, kit, chemiluminescent immunoassay	Бэлгийн даавар холбогч глобулин (SHBG) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8258	54361	Sex hormone binding globulin (SHBG) IVD, kit, enzyme immunoassay (EIA)	Бэлгийн даавар холбогч глобулин (SHBG) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8259	54362	Sex hormone binding globulin (SHBG) IVD, reagent	Бэлгийн даавар холбогч глобулин (SHBG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen.	B
8260	54363	Somatostatin IVD, kit, enzyme immunoassay (EIA)	Соматостатин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of somatostatin (growth hormone inhibiting hormone) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8261	54364	Somatostatin IVD, kit, radioimmunoassay	Соматостатин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of somatostatin (growth hormone inhibiting hormone) in a clinical specimen, using a radioimmunoassay method.	B
8262	54365	Somatostatin IVD, calibrator	Соматостатин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of somatostatin (growth hormone inhibiting hormone) in a clinical specimen.	B
8263	54366	Somatostatin IVD, control	Соматостатин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of somatostatin (growth hormone inhibiting hormone) in a clinical specimen.	B

8264	54367	Somatostatin IVD, reagent	Соматостатин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of somatostatin (growth hormone inhibiting hormone) in a clinical specimen.	B
8265	54368	Substance P IVD, kit, enzyme immunoassay (EIA)	Р бодис IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of substance P in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8266	54369	Substance P IVD, calibrator	Р IVD бодис, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of substance P in a clinical specimen.	B
8267	54370	Substance P IVD, control	Р IVD бодис, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of substance P in a clinical specimen.	B
8268	54371	Substance P IVD, reagent	Р IVD бодис, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of substance P in a clinical specimen.	B
8269	54372	Thyroglobulin IVD, kit, enzyme immunoassay (EIA)	Тироглобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8270	54373	Thyroglobulin IVD, kit, fluorescent immunoassay	Тироглобулин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen, using a fluorescent immunoassay method.	B
8271	54374	Thyroglobulin IVD, kit, radioimmunoassay	Тироглобулин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen, using a radioimmunoassay method.	B
8272	54375	Thyroglobulin IVD, kit, chemiluminescent immunoassay	Тироглобулин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroglobulin in a clinical specimen, using a chemiluminescent immunoassay method.	B

8273	54376	Thyroglobulin IVD, reagent	Тироглобулин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thyroglobulin in a clinical specimen.	B
8274	54377	Thyrotropin releasing factor (TRF) IVD, kit, fluorescent immunoassay	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen, using a fluorescent immunoassay method.	B
8275	54378	Thyrotropin releasing factor (TRF) IVD, kit, radioimmunoassay	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen, using a radioimmunoassay method.	B
8276	54379	Thyrotropin releasing factor (TRF) IVD, kit, chemiluminescent immunoassay	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8277	54380	Thyrotropin releasing factor (TRF) IVD), calibrator	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD), калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen.	B
8278	54381	Thyrotropin releasing factor (TRF) IVD, control	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen.	B
8279	54382	Thyrotropin releasing factor (TRF) IVD, reagent	Тиротропин ялгаруулах хүчин зүйл (TRF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thyrotropin releasing factor (TRF) in a clinical specimen.	B
8280	54383	Thyroid stimulating hormone (TSH) IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8281	54384	Thyroid stimulating hormone (TSH) IVD, kit, fluorescent immunoassay	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen, using a fluorescent immunoassay method.	B
8282	54385	Thyroid stimulating hormone (TSH) IVD, kit, radioimmunoassay	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen, using a radioimmunoassay method.	B
8283	54386	Thyroid stimulating hormone (TSH) IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8284	54387	Thyroid stimulating hormone (TSH) IVD, reagent	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thyroid stimulating hormone (TSH) in a clinical specimen.	B
8285	54388	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, kit, radioimmunoassay	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen, using a radioimmunoassay method.	B
8286	54389	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, kit, enzyme immunoassay (EIA)	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8287	54390	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, kit, chemiluminescent immunoassay	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen, using a chemiluminescent immunoassay method.	B

8288	54391	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, reagent	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen.	B
8289	54392	Thyroid stimulating hormone receptor (TSHR) antibody IVD, kit, radioimmunoassay	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen using a radioimmunoassay method. It is used in the diagnosis of autoimmune thyroid disorders such as hyperthyroidism in Graves' disease.	B
8290	54393	Thyroid stimulating hormone receptor (TSHR) antibody IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen using a chemiluminescent immunoassay method. It is used in the diagnosis of autoimmune thyroid disorders such as hyperthyroidism in Graves' disease.	B
8291	54394	Thyroid stimulating hormone receptor (TSHR) antibody IVD, reagent	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen.	B
8292	54395	Multiple thyroid hormone uptake (T-uptake) IVD, kit, radioimmunoassay	Бамбай булчирхайн олон дааврын шингээлт (Т-хэрэглэх) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, using a radioimmunoassay method. It is typically used to aid in the assessment of thyroid hormone binding capacity for the diagnosis of thyroid disorders associated with hypothyroidism or hyperthyroidism.	B

8293	54396	Multiple thyroid hormone uptake (T-uptake) IVD, kit, fluorescent immunoassay	Бамбай булчирхайн олон дааврын шингээлт (Т-хэрэглэх) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the assessment of thyroid hormone binding capacity for the diagnosis of thyroid disorders associated with hypothyroidism or hyperthyroidism.	B
8294	54397	Multiple thyroid hormone uptake (T-uptake) IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн олон дааврын шингээлт (Т-хэрэглэх) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the assessment of thyroid hormone binding capacity for the diagnosis of thyroid disorders associated with hypothyroidism or hyperthyroidism.	B
8295	54398	Multiple thyroid hormone uptake (T-uptake) IVD, calibrator	Бамбай булчирхайн олон дааврын шингээлт (Т-хэрэглэх) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative determination of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, in a clinical specimen.	B
8296	54399	Multiple thyroid hormone uptake (T-uptake) IVD, control	Олон бамбай булчирхайн дааврын шингээлт (Т-хэрэглэх) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the unbound/free portion of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, in a clinical specimen.	B

8297	54400	Multiple thyroid hormone uptake (T-uptake) IVD, reagent	Олон бамбай булчирхайн дааврын шингээлт (Т-хэрэглэх) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the unbound/free portion of multiple proteins [e.g., thyroxine binding globulin (TBG), transthyretin and/or albumin] associated with thyroid hormone uptake, in a clinical specimen.	B
8298	54401	Thyroxine binding capacity IVD, kit enzyme immunoassay (EIA)	Тироксиныг холбох чадвар IVD, иж бүрдэл ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding capacity of a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8299	54402	Thyroxine binding capacity IVD, kit, radioimmunoassay	Тироксиныг холбох чадвар IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding capacity of a clinical specimen, using a radioimmunoassay method.	B
8300	54403	Thyroxine binding capacity IVD, kit, chemiluminescent immunoassay	Тироксиныг холбох чадвар IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding capacity of a clinical specimen, using a chemiluminescent immunoassay method.	B
8301	54404	Thyroxine binding capacity IVD, calibrator	Тироксиныг холбох чадвар IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of thyroxine binding capacity of a clinical specimen.	B
8302	54405	Thyroxine binding capacity IVD, control	Тироксиныг холбох чадвар IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of thyroxine binding capacity of a clinical specimen.	B
8303	54406	Thyroxine binding capacity IVD, reagent	Тироксиныг холбох чадвар IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thyroxine binding capacity of a clinical specimen.	B
8304	54407	Thyroxine binding globulin (TBG) IVD, kit enzyme immunoassay (EIA)	Тироксин холбогч глобулин (TBG) IVD, иж бүрдэл ферментийн иммуно шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8305	54408	Thyroxine binding globulin (TBG) IVD, kit, radioimmunoassay	Тироксин холбогч глобулин (TBG) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen, using a radioimmunoassay method.	B
8306	54409	Thyroxine binding globulin (TBG) IVD, kit, chemiluminescent immunoassay	Тироксин холбогч глобулин (TBG) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8307	54410	Thyroxine binding globulin (TBG) IVD, reagent	Тироксин холбогч глобулин (TBG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of thyroxine binding globulin (TBG) in a clinical specimen.	B
8308	54411	Free thyroxine (FT4) IVD, kit, radioimmunoassay	Чөлөөт тироксин (FT4) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen, using a radioimmunoassay method.	B
8309	54412	Free thyroxine (FT4) IVD, kit, enzyme immunoassay (EIA)	Чөлөөт тироксин (FT4) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8310	54413	Free thyroxine (FT4) IVD, kit, chemiluminescent immunoassay	Чөлөөт тироксин (FT4) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8311	54414	Free thyroxine (FT4) IVD, reagent	Чөлөөт тироксин (FT4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of free thyroxine (FT4) in a clinical specimen.	B
8312	54415	Free triiodothyronine (FT3) IVD, kit, radioimmunoassay	Үнэгүй триодотиронин (FT3) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen, using a radioimmunoassay method.	B

8313	54416	Free triiodothyronine (FT3) IVD, kit, enzyme immunoassay (EIA)	Үнэгүй триодотиронин (FT3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8314	54417	Free triiodothyronine (FT3) IVD, kit, chemiluminescent immunoassay	Үнэгүй триодотиронин (FT3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8315	54418	Free triiodothyronine (FT3) IVD, control	Чөлөөт триодотиронин (FT3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen.	B
8316	54419	Free triiodothyronine (FT3) IVD, reagent	Чөлөөт триодотиронин (FT3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of free triiodothyronine (FT3) in a clinical specimen.	B
8317	54420	Reverse triiodothyronine (reverse T3) IVD, kit, radioimmunoassay	Урвуу триодотиронин (урвуу T3) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen, using a radioimmunoassay method.	B
8318	54421	Reverse triiodothyronine (reverse T3) IVD, kit, enzyme immunoassay (EIA)	Урвуу трийодтиронин (урвуу T3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8319	54422	Reverse triiodothyronine (reverse T3) IVD, kit, chemiluminescent immunoassay	Урвуу триодотиронин (урвуу T3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8320	54423	Reverse triiodothyronine (reverse T3) IVD, reagent	Урвуу триодотиронин (урвуу T3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of reverse triiodothyronine (reverse T3) in a clinical specimen.	B
8321	54424	Serotonin IVD, kit, liquid chromatography	Серотонин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials to be used for the quantitative measurement of serotonin in a clinical specimen, using a liquid chromatography method.	B

8322	54425	Serotonin IVD, calibrator	Серотонин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of serotonin in a clinical specimen.	B
8323	54426	Serotonin IVD, control	Серотонин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of serotonin in a clinical specimen.	B
8324	54429	Vasopressin IVD, kit, radioimmunoassay	Вазопрессин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of vasopressin in a clinical specimen, using a radioimmunoassay method.	B
8325	54430	Vasopressin IVD, reagent	Вазопрессин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of vasopressin in a clinical specimen.	B
8326	54431	Multiple vitamin IVD, kit, radioimmunoassay	Олон тооны витамин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen, using a radioimmunoassay method.	B
8327	54432	Multiple vitamin IVD, calibrator	Олон төрлийн витамин IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen.	B
8328	54433	Multiple vitamin IVD, control	Олон тооны витамин IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen.	B
8329	54434	Multiple vitamin IVD, reagent	Олон төрлийн витамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen.	B
8330	54435	Renal/physiological stone analysis IVD, kit, combination	Бөөр/физиологийн чулууны шинжилгээ IVD, иж бүрдэл, хослол	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative analyses of renal stones or stones from any other physiological source, using a combination of methods.	B

8331	54436	Vitamin A IVD, kit, spectrophotometry	А витамин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin A in a clinical specimen, using a spectrophotometry method.	B
8332	54437	Vitamin A IVD, calibrator	А аминдэм IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin A in a clinical specimen.	B
8333	54438	Vitamin A IVD, control	А аминдэм IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin A in a clinical specimen.	B
8334	54439	Vitamin B1 (thiamine) IVD, kit, liquid chromatography	Витамин B1 (тиамин) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Vitamin B1 (thiamine) in a clinical specimen, using a liquid chromatography method.	B
8335	54440	Vitamin B1 (thiamine) IVD, kit, radioimmunoassay	Витамин B1 (тиамин) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Vitamin B1 (thiamine) in a clinical specimen, using a radioimmunoassay method.	B
8336	54441	Vitamin B1 (thiamine) IVD, reagent	Витамин B1 (тиамин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Vitamin B1 (thiamine) in a clinical specimen.	B
8337	54442	Vitamin B2 (riboflavin) IVD, kit, liquid chromatography	Витамин B2 (рибофлавин) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B2 (riboflavin) in a clinical specimen, using a liquid chromatography method.	B
8338	54443	Vitamin B2 (riboflavin) IVD, kit, radioimmunoassay	Витамин B2 (рибофлавин) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B2 (riboflavin) in a clinical specimen, using a radioimmunoassay method.	B
8339	54444	Vitamin B2 (riboflavin) IVD, reagent	Витамин B2 (рибофлавин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin B2 (riboflavin) in a clinical specimen.	B

8340	54445	Vitamin B3 (niacin) IVD, kit, liquid chromatography	Витамин B3 (ниацин) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen, using a liquid chromatography method.	B
8341	54446	Vitamin B3 (niacin) IVD, kit, radioimmunoassay	Витамин B3 (ниацин) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen, using a radioimmunoassay method.	B
8342	54447	Vitamin B3 (niacin) IVD, calibrator	Витамин B3 (ниацин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen.	B
8343	54448	Vitamin B3 (niacin) IVD, control	Витамин B3 (ниацин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen.	B
8344	54449	Vitamin B3 (niacin) IVD, reagent	Витамин B3 (ниацин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen.	B
8345	54450	Vitamin B6 complex group IVD, kit, liquid chromatography	B6 витамины цогцолбор бүлэг IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B6 complex group, including pyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine and other B6-vitamers in a clinical specimen, using a liquid chromatography method.	B
8346	54451	Vitamin B6 complex group IVD, kit, radioimmunoassay	B6 витамины цогцолбор бүлгийн IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B6 complex group, including pyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine and other B6-vitamers in a clinical specimen, using a radioimmunoassay method.	B
8347	54452	Vitamin B6 complex group IVD, reagent	B6 витамины цогцолбор бүлгийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin B6 complex group, including pyridoxine, pyridoxal, pyridoxal phosphate, pyridoxamine and other B6-vitamers in a clinical specimen.	B

8348	54453	Folate (vitamin B9) IVD, kit, liquid chromatography	Фолат (витамин B9) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen, using a liquid chromatography method.	B
8349	54454	Folate (vitamin B9) IVD, kit, radioimmunoassay	Фолат (витамин B9) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen, using a radioimmunoassay method.	B
8350	54455	Folate (vitamin B9) IVD, reagent	Фолат (витамин B9) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen.	B
8351	54456	Vitamin B12 IVD, kit, liquid chromatography	Витамин B12 IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen, using a liquid chromatography method.	B
8352	54457	Vitamin B12 IVD, kit, radioimmunoassay	Витамин B12 IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen, using a radioimmunoassay method.	B
8353	54458	Vitamin B12 IVD, reagent	B12 витамин IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen.	B
8354	54459	Vitamin C (ascorbic acid) IVD, kit, liquid chromatography	Витамин C (аскорбины хүчил) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin C (ascorbic acid) in a clinical specimen, using a liquid chromatography method.	B
8355	54460	Vitamin C (ascorbic acid) IVD, kit, radioimmunoassay	Витамин C (аскорбины хүчил) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin C (ascorbic acid) in a clinical specimen, using a radioimmunoassay method.	B
8356	54461	Vitamin C (ascorbic acid) IVD, calibrator	Витамин C (аскорбины хүчил) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin C (ascorbic acid) in a clinical specimen.	B

8357	54462	Vitamin C (ascorbic acid) IVD, control	Витамин С (аскорбины хүчил) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin C (ascorbic acid) in a clinical specimen.	B
8358	54463	Vitamin C (ascorbic acid) IVD, reagent	Витамин С (аскорбины хүчил) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin C (ascorbic acid) in a clinical specimen.	B
8359	54464	Vitamin D3 (cholecalciferol) IVD, kit, liquid chromatography	Витамин D3 (холекальциферол) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin D3 (cholecalciferol) in a clinical specimen, using a liquid chromatography method.	B
8360	54465	Vitamin D3 (cholecalciferol) IVD, kit, radioimmunoassay	Витамин D3 (холекальциферол) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin D3 (cholecalciferol) in a clinical specimen, using a radioimmunoassay method.	B
8361	54466	Vitamin D3 (cholecalciferol) IVD, reagent	Витамин D3 (холекальциферол) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin D3 (cholecalciferol) in a clinical specimen.	B
8362	54467	Vitamin D2 (ergocalciferol) IVD, kit, liquid chromatography	Витамин D2 (ergocalciferol) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin D2 (ergocalciferol) in a clinical specimen, using a liquid chromatography method.	B
8363	54468	Vitamin D2 (ergocalciferol) IVD, kit, radioimmunoassay	Витамин D2 (ergocalciferol) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin D2 (ergocalciferol) in a clinical specimen, using a radioimmunoassay method.	B
8364	54469	Vitamin D2 (ergocalciferol) IVD, calibrator	Витамин D2 (ergocalciferol) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin D2 (ergocalciferol) in a clinical specimen.	B

8365	54470	Vitamin D2 (ergocalciferol) IVD, control	Витамин D2 (ergocalciferol) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin D2 (ergocalciferol) in a clinical specimen.	B
8366	54471	Vitamin D2 (ergocalciferol) IVD, reagent	Витамин D2 (ergocalciferol) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin D2 (ergocalciferol) in a clinical specimen.	B
8367	54472	Multiple form 25-hydroxy Vitamin D IVD, kit, radioimmunoassay	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen, using a radioimmunoassay method.	B
8368	54473	Multiple form 25-hydroxy Vitamin D IVD, kit, liquid chromatography	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen, using a liquid chromatography method.	B
8369	54474	Multiple form 25-hydroxy Vitamin D IVD, calibrator	Олон хэлбэрийн 25-гидрокси витамин D IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen.	B
8370	54475	Multiple form 25-hydroxy Vitamin D IVD, control	Олон хэлбэрийн 25-гидрокси витамин D IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen.	B
8371	54476	Multiple form 25-hydroxy Vitamin D IVD, reagent	Олон хэлбэрийн 25-гидрокси витамин D IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen.	B
8372	54477	25-Hydroxy vitamin D2 IVD, kit, liquid chromatography	25-гидрокси витамин D2 IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D2 in a clinical specimen, using a liquid chromatography method.	B
8373	54478	25-Hydroxy vitamin D2 IVD, kit, radioimmunoassay	25-гидрокси витамин D2 IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D2 in a clinical specimen, using a radioimmunoassay method.	B

8374	54479	25-Hydroxy vitamin D2 IVD, calibrator	25-гидрокси витамин D2 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D2 in a clinical specimen.	B
8375	54480	25-Hydroxy vitamin D2 IVD, control	25-гидрокси витамин D2 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D2 in a clinical specimen.	B
8376	54481	25-Hydroxy vitamin D2 IVD, reagent	25-гидрокси витамин D2 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D2 in a clinical specimen.	B
8377	54482	25-Hydroxy vitamin D3 IVD, kit, liquid chromatography	25-гидрокси витамин D3 IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D3 in a clinical specimen, using a liquid chromatography method.	B
8378	54483	25-Hydroxy vitamin D3 IVD, kit, radioimmunoassay	25-гидрокси витамин D3 IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D3 in a clinical specimen, using a radioimmunoassay method.	B
8379	54484	25-Hydroxy vitamin D3 IVD, reagent	25-гидрокси витамин D3 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 25-hydroxy vitamin D3 in a clinical specimen.	B
8380	54485	1,25-Dihydroxy vitamin D3 IVD, kit, liquid chromatography	1,25-Dihydroxy витамин D3 IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen, using a liquid chromatography method. Prevalent examples of use include determination and monitoring of vitamin D status, especially in the presence of disease (e.g., cancer, renal failure) or during vitamin D therapy.	B
8381	54486	1,25-Dihydroxy vitamin D3 IVD, kit, radioimmunoassay	1,25-Dihydroxy витамин D3 IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen, using a radioimmunoassay method.	B

8382	54487	1,25-Dihydroxy vitamin D3 IVD, reagent	1,25-дигидрокси витамин D3 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen.	B
8383	54488	Vitamin E IVD, kit, liquid chromatography	Е витамин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin E in a clinical specimen, using a liquid chromatography method.	B
8384	54489	Vitamin E IVD, kit, radioimmunoassay	Витамин Е IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin E in a clinical specimen, using a radioimmunoassay method.	B
8385	54490	Vitamin E IVD, calibrator	Витамин Е IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin E in a clinical specimen.	B
8386	54491	Vitamin E IVD, control	Е витамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin E in a clinical specimen.	B
8387	54492	Vitamin E IVD, reagent	Е витамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin E in a clinical specimen.	B
8388	54493	Vitamin K IVD, kit, liquid chromatography	Витамин К IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin K in a clinical specimen, using a liquid chromatography method.	B
8389	54494	Vitamin K IVD, kit, radioimmunoassay	Витамин К IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin K in a clinical specimen, using a radioimmunoassay method.	B
8390	54495	Vitamin K IVD, calibrator	Витамин К IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vitamin K in a clinical specimen.	B

8391	54496	Vitamin K IVD, control	Витамин К IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vitamin K in a clinical specimen.	B
8392	54497	Vitamin K IVD, reagent	Витамин К IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vitamin K in a clinical specimen.	B
8393	54498	Multiple blood gas analyte IVD, kit, ion-selective electrode (ISE)	Олон тооны цусны хийн анализатор IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple blood gas analytes in a clinical specimen, using an ion-selective electrode (ISE) method.	B
8394	54499	Blood gas pH IVD, kit, ion-selective electrode (ISE)	Цусны хийн pH IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of blood gas pH using an ion-selective electrode (ISE) method.	B
8395	54500	Blood gas pCO2 IVD, kit, ion-selective electrode (ISE)	Цусны хий pCO2 IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of blood gas partial pressure of carbon dioxide (pCO2) using an ion-selective electrode (ISE) method.	B
8396	54501	Blood gas pO2 IVD, kit, ion-selective electrode (ISE)	Цусны хий pO2 IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of blood gas partial pressure of oxygen (pO2) using an ion-selective electrode (ISE) method.	B
8397	54502	Ionized calcium (iCa) IVD, kit, ion-selective electrode (ISE)	Ионжуулсан кальци (iCa) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ionized calcium (iCa) using an ion-selective electrode (ISE) method.	B
8398	54503	Uric acid (UA) IVD, kit, ion-selective electrode (ISE)	Шээсний хүчил (UA) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of uric acid (UA) using an ion-selective electrode (ISE) method.	B
8399	54504	Multiple haemoximetry analyte IVD, kit, haemoximetry	Олон тооны гемоксиметрийн аналит IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple haemoglobin complexes in a clinical specimen, using a haemoximetry method.	B

8400	54505	Multiple haemoximetry analyte IVD, calibrator	Олон тооны гемоксиметрийн анализатор IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the quantitative measurement of multiple haemoglobin complexes in a clinical specimen.	B
8401	54506	Multiple haemoximetry analyte IVD, control	Олон тооны гемоксиметрийн шинжилгээний IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the quantitative measurement of multiple haemoglobin complexes in a clinical specimen.	B
8402	54507	Multiple haemoximetry analyte IVD, reagent	Олон тооны гемоксиметрийн шинжилгээний бодис IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of multiple haemoglobin complexes in a clinical specimen.	B
8403	54508	Total haemoglobin (totHb) IVD, kit, haemoximetry	Нийт гемоглобин (totHb) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total haemoglobin (totHb) in a clinical specimen, using a haemoximetry method.	B
8404	54509	Reduced haemoglobin (RHb) IVD, kit, haemoximetry	Гемоглобины бууралт (RHb) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement of reduced haemoglobin (RHb) in a clinical specimen, using a haemoximetry method.	B
8405	54510	Percentage oxyhaemoglobin (O2Hb%) IVD, kit, haemoximetry	Оксигемоглобины хувь (O2Hb%) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for determining the percentage of oxyhaemoglobin (O2Hb%) in a clinical specimen, using a haemoximetry method.	B
8406	54511	Percentage carboxyhaemoglobin (COHb%) IVD, kit, haemoximetry	Карбоксигемоглобины хувь (COHb%) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for determining the percentage of carboxyhaemoglobin (COHb%) in a clinical specimen, using a haemoximetry method.	B
8407	54512	Percentage methaemoglobin (MetHb%) IVD, kit, haemoximetry	Метаемоглобины хувь (MetHb%) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for determining the percentage of methaemoglobin (MetHb%) in a clinical specimen, using a haemoximetry method.	B
8408	54513	Percentage sulphaemoglobin (SulphHb) IVD, kit, haemoximetry	Сульфаемоглобины хувь (SulphHb) IVD, иж бүрдэл, гемоксиметри	A collection of reagents and other associated materials intended to be used for determining the percentage of sulphaemoglobin (SulphHb) in a clinical specimen, using a haemoximetry method.	B

8409	54528	Faecal occult blood IVD, kit, colorimetric dipstick	Өтгөний далд цус IVD, иж бүрдэл, колориметрийн хэмжүүр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin) using a colorimetric dipstick method.	B
8410	54534	Faecal (meconium) albumin IVD, kit, chromogenic	Өтгөн (meconium) альбумин IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of faeces (meconium) for albumin using a chromogenic method.	B
8411	54539	Faecal fat IVD, kit, chromogenic	Өтгөн ялгадас IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of faecal fat in a clinical specimen, using a chromogenic method.	B
8412	54540	Faecal fat IVD, kit, spectrophotometry	Өтгөн ялгадас IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of faecal fat in a clinical specimen, using a spectrophotometry method.	B
8413	54542	Faecal fat IVD, kit, rapid colorimetric, clinical	Өтгөн ялгадас IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of faecal fat in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8414	54543	Faecal fat IVD, calibrator	Өтгөн ялгадас IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of faecal fat in a clinical specimen.	B
8415	54544	Faecal fat IVD, control	Өтгөн ялгадас IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of faecal fat in a clinical specimen.	B
8416	54545	Faecal fat IVD, reagent	Өтгөн ялгадас IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of faecal fat in a clinical specimen.	B

8417	54547	Biological fluid occult blood screening IVD, kit, rapid colorimetric, clinical	Биологийн шингэний далд цусны скрининг IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of biological fluids for the presence of occult blood within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8418	54548	Biological fluid occult blood screening IVD, kit, rapid ICT, clinical	Биологийн шингэний далд цусны скрининг IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of biological fluids for the presence of occult blood in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8419	54549	Biological fluid occult blood screening IVD, calibrator	Биологийн шингэний далд цусны шинжилгээ IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative screening of biological fluids for the presence of occult blood.	B
8420	54550	Biological fluid occult blood screening IVD, control	Биологийн шингэний далд цусны шинжилгээ IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative screening of biological fluids for the presence of occult blood.	B
8421	54551	Biological fluid occult blood screening IVD, reagent	Биологийн шингэн далд цусны скрининг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening of biological fluids for the presence of occult blood.	B
8422	54552	Vaginal pH screening IVD, kit, rapid colorimetric, clinical	Үтрээний pH-ийн скрининг IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative determination of the pH range of vaginal secretionse within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

8423	54553	Vaginal pH screening IVD, calibrator	Үтрээний pH скрининг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or semi-quantitative determination of the pH range of vaginal secretions.	B
8424	54554	Vaginal pH screening IVD, control	Үтрээний pH скрининг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or semi-quantitative determination of the pH range of vaginal secretions.	B
8425	54555	Vaginal pH screening IVD, reagent	Үтрээний pH скрининг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or semi-quantitative determination of the pH range of vaginal secretions.	B
8426	54556	Multiple solid tumour differentiation marker IVD, kit, enzyme immunoassay (EIA)	Олон хатуу хавдрын ялгах маркер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple proteins/markers associated with more than one specific tissue or solid tumour (e.g., lung, breast, ovarian, kidney, gastrointestinal, colon) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used in cancer-screening assays to help diagnostic differentiation between solid tumour types through detection of various types of proteins/markers [e.g., epithelial cell adhesion molecule (EpCAM), pan-cytokeratin (pan-CK), prostate-specific membrane antigen (PSMA), alpha-methylacyl-CoA racemase (AMACR)].	B
8427	54557	Multiple tissue-associated protein/tumour marker IVD, reagent	Олон эд эстэй холбоотой уураг/хавдрын маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple proteins or tumour markers associated with specific tissues in a clinical specimen.	B
8428	54558	Bladder tumour associated antigen IVD, kit, enzyme immunoassay (EIA)	Давсагны хавдартай холбоотой антиген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bladder tumour associated antigen in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8429	54560	Bladder tumour associated antigen IVD, kit, rapid ICT, clinical	Давсагны хавдартай холбоотой антиген IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of bladder tumour associated antigen in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8430	54561	Bladder tumour associated antigen IVD, calibrator	Давсагны хавдартай холбоотой антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of bladder tumour associated antigen in a clinical specimen.	B
8431	54562	Bladder tumour associated antigen IVD, control	Давсагны хавдартай холбоотой антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of bladder tumour associated antigen in a clinical specimen.	B
8432	54563	Bladder tumour associated antigen IVD, reagent	Давсагны хавдартай холбоотой антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of bladder tumour associated antigen in a clinical specimen.	B
8433	54564	Bombesin IVD, kit, liquid chromatography	Bombesin IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative measurement of bombesin in a clinical specimen, using a liquid chromatography method.	B
8434	54565	Bombesin IVD, kit, radioimmunoassay	Bombesin IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of bombesin in a clinical specimen, using a radioimmunoassay method.	B
8435	54566	Bombesin IVD, reagent	Bombesin IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of bombesin in a clinical specimen.	B
8436	54567	Cancer antigen 11-19 (CA11-19) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч 11-19 (CA11-19) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bowel cancer antigen 11-19 (CA11-19) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8437	54568	Cancer antigen 11-19 (CA11-19) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 11-19 (CA11-19) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of bowel cancer antigen 11-19 (CA11-19) in a clinical specimen.	B
8438	54569	Cancer antigen 11-19 (CA11-19) IVD, control	Хорт хавдрын эсрэгтөрөгч 11-19 (CA11-19) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of bowel cancer antigen 11-19 (CA11-19) in a clinical specimen.	B
8439	54570	Cancer antigen 11-19 (CA11-19) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 11-19 (CA11-19) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of bowel cancer antigen 11-19 (CA11-19) in a clinical specimen.	B
8440	54571	Cancer antigen 15-3 (CA15-3) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8441	54572	Cancer antigen 15-3 (CA15-3) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen.	B
8442	54573	Cancer antigen 19-9 (CA19-9) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 19-9 (CA19-9) in a clinical specimen, using an enzyme immunoassay (EIA) method. CA19-9 is typically used as a marker commonly associated with gastrointestinal, pancreatic, bile duct and gallbladder cancer.	B
8443	54574	Cancer antigen 19-9 (CA19-9) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of gastrointestinal and pancreatic cancer antigen 19-9 (CA19-9) in a clinical specimen.	B

8444	54575	Cancer antigen 27-29 (CA27-29) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 27-29 (CA27-29) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 27-29 (CA27-29) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8445	54576	Cancer antigen 27-29 (CA27-29) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 27-29 (CA27-29) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 27-29 (CA27-29) in a clinical specimen.	B
8446	54577	Cancer antigen 27-29 (CA27-29) IVD, control	Хорт хавдрын эсрэгтөрөгч 27-29 (CA27-29) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 27-29 (CA27-29) in a clinical specimen.	B
8447	54578	Cancer antigen 27-29 (CA27-29) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 27-29 (CA27-29) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 27-29 (CA27-29) in a clinical specimen.	B
8448	54579	Cancer antigen 50 (CA50) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 50 (CA50) in a clinical specimen, using a radioimmunoassay method. It is typically used as a prognostic marker to monitor the progression of malignant tumours and assess the response to treatment.	B
8449	54580	Cancer antigen 50 (CA50) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 50 (CA50) in a clinical specimen.	B
8450	54581	Cancer antigen 54-61 (CA54-61) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 54-61 (CA54-61) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 54-61 (CA54-61) in a clinical specimen, using a radioimmunoassay method.	B

8451	54582	Cancer antigen 54-61 (CA54-61) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 54-61 (CA54-61) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 54-61 (CA54-61) in a clinical specimen.	B
8452	54583	Cancer antigen 54-61 (CA54-61) IVD, control	Хорт хавдрын эсрэгтөрөгч 54-61 (CA54-61) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 54-61 (CA54-61) in a clinical specimen.	B
8453	54584	Cancer antigen 54-61 (CA54-61) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 54-61 (CA54-61) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 54-61 (CA54-61) in a clinical specimen.	B
8454	54585	Cancer antigen 72-4 (CA72-4) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen, using a radioimmunoassay method. CA72-4 is typically used as a marker commonly associated with gastrointestinal and ovarian cancer.	B
8455	54586	Cancer antigen 72-4 (CA72-4) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen.	B
8456	54587	Cancer antigen 125 (CA125) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8457	54588	Cancer antigen 125 (CA125) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen using a chemiluminescent immunoassay method.	B

8458	54589	Cancer antigen 125 (CA125) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen.	B
8459	54590	Cancer antigen 130 (CA130) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 130 (CA130) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 130 (CA130), a pulmonary adenocarcinoma antigen, in a clinical specimen using a radioimmunoassay method.	B
8460	54591	Cancer antigen 130 (CA130) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 130 (CA130) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 130 (CA130), a pulmonary adenocarcinoma antigen, in a clinical specimen.	B
8461	54592	Cancer antigen 130 (CA130) IVD, control	Хорт хавдрын эсрэгтөрөгч 130 (CA130) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 130 (CA130), a pulmonary adenocarcinoma antigen, in a clinical specimen.	B
8462	54593	Cancer antigen 130 (CA130) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 130 (CA130) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 130 (CA130), a pulmonary adenocarcinoma antigen, in a clinical specimen.	B
8463	54594	Cancer antigen 195 (CA195) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 195 (CA195) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 195 (CA195) in a clinical specimen, using a radioimmunoassay method.	B
8464	54595	Cancer antigen 195 (CA195) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 195 (CA195) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 195 (CA195) in a clinical specimen.	B

8465	54596	Cancer antigen 242 (CA242) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 242 (CA242), in a clinical specimen, using a radioimmunoassay method. It is typically used as a prognostic marker to monitor the progression of malignant tumours and measure the response to treatment.	B
8466	54597	Cancer antigen 242 (CA242) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 242 (CA242) in a clinical specimen.	B
8467	54598	Cancer antigen 549 (CA549) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 549 (CA549) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 549 (CA549) in a clinical specimen, using a radioimmunoassay method.	B
8468	54599	Cancer antigen 549 (CA549) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 549 (CA549) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 549 (CA549) in a clinical specimen.	B
8469	54600	Cancer antigen 602 (CA602) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 602 (CA602) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 602 (CA602) in a clinical specimen, using a radioimmunoassay method.	B
8470	54601	Cancer antigen 602 (CA602) IVD, calibrator	Хорт хавдрын эсрэгтөрөгч 602 (CA602) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 602 (CA602) in a clinical specimen.	B
8471	54602	Cancer antigen 602 (CA602) IVD, control	Хорт хавдрын эсрэгтөрөгч 602 (CA602) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer antigen 602 (CA602) in a clinical specimen.	B

8472	54603	Cancer antigen 602 (CA602) IVD, reagent	Хорт хавдрын эсрэгтөрөгч 602 (CA602) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer antigen 602 (CA602) in a clinical specimen.	B
8473	54604	Cancer associated serum antigen (CASA) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдартай холбоотой ийлдэс антиген (CASA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer associated serum antigen (CASA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8474	54605	Cancer associated serum antigen (CASA) IVD, calibrator	Хорт хавдартай холбоотой ийлдэс антиген (CASA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cancer associated serum antigen (CASA) in a clinical specimen.	B
8475	54606	Cancer associated serum antigen (CASA) IVD, control	Хорт хавдартай холбоотой ийлдэс антиген (CASA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cancer associated serum antigen (CASA) in a clinical specimen.	B
8476	54607	Cancer associated serum antigen (CASA) IVD, reagent	Хорт хавдартай холбоотой ийлдэс антиген (CASA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer associated serum antigen (CASA) in a clinical specimen.	B
8477	54608	Chromogranin A IVD, kit, enzyme immunoassay (EIA)	Хромогранин А IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8478	54609	Chromogranin A IVD, calibrator	Хромогранин А IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen.	B
8479	54610	Chromogranin A IVD, control	Хромогранин А IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen.	B

8480	54611	Chromogranin A IVD, reagent	Хромогранин A IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen.	B
8481	54612	Cytokeratin IVD, kit, chemiluminescent immunoassay	Cytokeratin IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8482	54614	Carcinoembryonic antigen (CEA) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8483	54615	Carcinoembryonic antigen (CEA) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8484	54616	Carcinoembryonic antigen (CEA) IVD, kit, fluorescent immunoassay	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen, using a fluorescent immunoassay method.	B
8485	54617	Carcinoembryonic antigen (CEA) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8486	54618	Carcinoembryonic antigen (CEA) IVD, reagent	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen.	B

8487	54619	DUPAN-2 antigen IVD, kit, radioimmunoassay	DUPAN-2 антиген IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of DUPAN-2 antigen in a clinical specimen, using a radioimmunoassay method.	B
8488	54620	DUPAN-2 antigen IVD, calibrator	DUPAN-2 антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of DUPAN-2 antigen in a clinical specimen.	B
8489	54621	DUPAN-2 antigen IVD, control	DUPAN-2 антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of DUPAN-2 antigen in a clinical specimen.	B
8490	54622	DUPAN-2 antigen IVD, reagent	DUPAN-2 антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of DUPAN-2 antigen in a clinical specimen.	B
8491	54623	Human ovarian tumour antigen NB/70K IVD, kit, radioimmunoassay	Хүний өндгөвчний хавдрын эсрэгтөрөгч NB/70K IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human ovarian tumour antigen NB/70K in a clinical specimen, using a radioimmunoassay method.	B
8492	54624	Human ovarian tumour antigen NB/70K IVD, calibrator	Хүний өндгөвчний хавдрын эсрэгтөрөгч NB/70K IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human ovarian tumour antigen NB/70K in a clinical specimen.	B
8493	54625	Human ovarian tumour antigen NB/70K IVD, control	Хүний өндгөвчний хавдрын эсрэгтөрөгч NB/70K IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human ovarian tumour antigen NB/70K in a clinical specimen.	B
8494	54626	Human ovarian tumour antigen NB/70K IVD, reagent	Хүний өндгөвчний хавдрын эсрэгтөрөгч NB/70K IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human ovarian tumour antigen NB/70K in a clinical specimen.	B

8495	54627	KMO1 tumour associated carbohydrate antigen IVD, kit, radioimmunoassay	KMO1 хавдартай холбоотой нүүрсустөрөгчийн эсрэгтөрөгч IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of KMO1 tumour associated carbohydrate antigen in a clinical specimen, using a radioimmunoassay method.	B
8496	54628	KMO1 tumour associated carbohydrate antigen IVD, calibrator	KMO1 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of KMO1 tumour associated carbohydrate antigen in a clinical specimen.	B
8497	54629	KMO1 tumour associated carbohydrate antigen IVD, control	KMO1 хавдартай холбоотой нүүрсустөрөгчийн эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of KMO1 tumour associated carbohydrate antigen in a clinical specimen.	B
8498	54630	KMO1 tumour associated carbohydrate antigen IVD, reagent	KMO1 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of KMO1 tumour associated carbohydrate antigen in a clinical specimen.	B
8499	54631	Lipid-associated sialic acid (LASA) IVD, kit, spectrophotometry	Липидтэй холбоотой сиалийн хүчил (LASA) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipid-associated sialic acid (LASA) in a clinical specimen, using a spectrophotometry method.	B
8500	54632	Lipid-associated sialic acid (LASA) IVD, calibrator	Липидтэй холбоотой сиалийн хүчил (LASA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lipid-associated sialic acid (LASA) in a clinical specimen.	B
