ЭМНЭЛГИЙН ХЭРЭГСЛИЙГ ЭРСДЭЛИЙН ЗЭРГЭЭР АНГИЛАХ ЖУРМЫН ТӨСӨЛ

Нэг. Нийтлэг зүйл

1.1.Үндэсний үйлдвэр болон импортын эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилах, жагсаалт гаргах, түүнд нэмэлт өөрчлөлт оруулахтай холбоотой харилцааг энэхүү журмаар зохицуулна.

1.2.Энэхүү журмын зорилго нь Монгол улсад үйлдвэрлэх, импортлох-ханган нийлүүлэх, худалдах эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилахад оршино.

Хоёр. Нэр томьёоны тодорхойлолт

2.1.Энэхүү журамд дараах нэр томьёог дор дурдсан утгаар ойлгоно:

2.1.1.хэсэг зуурын хэрэглээ гэж 60 минутаас бага хугацаанд тасралтгүй хэрэглэх зориулалттайг;

2.1.2.богино хугацааны хэрэглээ гэж 60 минутаас 30 хоногийн хооронд тасралтгүй хэрэглэх зориулалттайг;

2.1.3.урт хугацааны хэрэглээ гэж 30-аас дээш хоног тасралтгүй хэрэглэх зориулалттайг;

2.1.4.тасралтгүй хэрэглээ гэж эмнэлгийн тоног төхөөрөмж, эмнэлгийн хэрэглэгдэхүүний хэрэглэх явцад түр зогсоохгүй, эсвэл цэвэрлэх, ариутгах зорилгоор түр авахгүй байх буюу хэрэглэсэн нийт хугацааг;

2.1.5.инвазив хэрэгсэл гэж бие махбодын сүв, арьс салстад хүрэлцэж бүхэл эсвэл тодорхой хэсгээр хүний бие махбодод оруулан хэрэглэдэг эмнэлгийн хэрэгслийг;

2.1.6.бие махбодын сүв гэж нүдний алимны гадаргуу, ходоод гэдэс, цагаан хоолой гэх мэт хүний биед байгалиас заяасан төрөлхийн сүв болон мэс заслаар зохиомлоор үүсгэсэн нүхийг;

2.1.7.гэмтсэн арьс, салст гэж эмгэг өөрчлөлтөд орсон эсвэл өвчин, шарх, сорвины дараах өөрчлөлттэй арьс салтстыг;

2.1.8.мэс заслын инвазив хэрэгсэл гэж мэс заслын үед ашигладаг хүний биеийн гадаргуу эсвэл бие махбодийн сүвийн салстыг цоолж нэвтэрдэг эмнэлгийн хэрэгслийг;

2.1.9.дахин ашигладаг мэс заслын хэрэгсэл гэж зүсэх, өрөмдөх, хөрөөдөх, хусах, хавчих, татах, хайчлах болон үүнтэй төстэй үйл ажиллагаанд мэс заслын зорилгоор ашигладаг, мэс ажилбарын үед өөр идэвхтэй хэрэгсэлтэй холбогддоггүй, үйлдвэрлэгчийн зөвлөмжийн дагуу цэвэрлэх, ариутгах, халдваргүйжүүлэх гэх мэт үйл ажиллагааг хийсний дараа дахин ашигладаг мэс заслын зориулалттай эмнэлгийн хэрэгслийг;

2.1.10.суулгац гэж мэс ажилбараар хүний биед хэсэгчлэн суулгадаг, тухайн байршилд 30 ба түүнээс дээш хоногоор үлдэх хэсэгчлэн болон бүхэлдээ шимэгддэг эмнэлгийн хэрэгслийг;

2.1.11.идэвхтэй эмнэлгийн хэрэгсэл гэж цахилгаан энерги болон хүний бие махбод таталцдын хүчнээс бусад хэлбэрийн эрчим хүчний нөөц эх үүсвэрийг ашиглан ажилладаг эсвэл тэдгээрийг өөр төрлийн эрчим хүч болгон хувиргадаг эмнэлгийн хэрэгслийг;

2.1.12.эмчилгээний идэвхтэй эмнэлгийн хэрэгсэл гэж өвчин эмгэг, гэмтэл согогийг эмчлэн өвчнийг намдааж бие махбодийн биологийн үйл ажиллагаа болон бүтцийг сэргээх, дэмжих, өөрчлөх, орлуулах, хэвийн хадгалах зорилгоор дангаар буюу бусад төрлийн хэрэглэгдэхүүнтэй хамт хэрэглэх идэвхтэй эмнэлгийн хэрэгслийг;

2.1.13.оношилгооны идэвхтэй эмнэлгийн хэрэгсэл гэж физиологийн төлөв, эрүүл мэндийн нөхцөл байдал, өвчин эмгэг, төрөлхийн гажиг зэргийг илрүүлэх, оношилох, хянахад мэдээлэл өгөх зорилгоор бусад эмнэлгийн тоног төхөөрөмжтэй хамт эсвэл дангаар ашиглах эмнэлгийн идэвхтэй хэрэгслийг;

2.1.14.хэмжлийн эмнэлгийн хэрэгсэл гэж физиологи, анатомийн болон хүний биед орох эсхүл биеэс гадагшлах энерги, бодисын тоон үзүүлэлт хэмжих зориулалттай эмнэлгийн хэрэгслийг;

2.1.15.ажилбарын багц гэж эмнэлгийн тусгай зориулалтаар хэрэглэх эмнэлгийн хэрэгслийг хамтад нь багцлан савласныг;

2.1.16.системийн багц гэж хоорондоо нийлж угсрагдан эмнэлгийн тусгай зориулалтаар ашиглагдах эмнэлгийн хэрэгслийг хамтад эсвэл тусад савласныг;

2.1.17.цусаар шимэгдэх гэж бодис, түүний завсрын бүтээгдэхүүн бие рүү нэвтэрч цус, тунгалагийн тогтолцоогоор дамжин тархах үйл явцыг;

2.1.18.бүхэлдээ эсхүл дийлэнх шимэгдэх гэж хүний биед тухайн материал задарч, задарсан бүтээгдэхүүн бодисийн солилцоонд орж, биеэс гадагшлахыг;

2.1.19.хэсэг газар тархах гэж цус, тунгалагийн тогтолцоогоор дамжихгүй, тухайн хэсэгт үлдэхийг;

2.1.20.баталгаажуулах хэрэгсэл гэж маркер эсвэл аналитийг илрүүлэхэд зориулагдсан шинжилгээний хариу урвалын үр дүнг баталгаажуулахад ашиглах зориулалттай төхөөрөмжийг;

Гурав. Эрсдэлийн зэргийн үнэлэх, ангилахад баримтлах зарчим

3.1.Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр бага (I ангилал), дунд (IIa, IIb ангилал), өндөр (III ангилал) эрсдэлтэй гэж ангилна.

3.2.Эмнэлгийн хэрэгслийн эрсдэлийн зэргээр ангилсан жагсаалтад эмнэлгийн хэрэгслийг ерөнхий нэршлээр оруулна.

3.3.Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилахдаа түүний зориулалт, ашиглалтын нөхцөлөөс гадна дараах хүчин зүйлийг харгалзан үзнэ. Үүнд:

3.3.1.эмнэлгийн хэрэгслийг хэрэглэх хугацаа;
3.3.2.эмнэлгийн хэрэгслийн инвазив байдал;
3.3.3.эмнэлгийн хэрэгсэл хүний биед хүрэлцэх эсэх;
3.3.4.эмнэлгийн хэрэгслийг хүний биед нэвтрүүлэх арга (биеийн нүхээр эсвэл мэс заслын аргаар);

3.4.5.амин чухал тогтолцооны эрхтэнд (зүрх, цусны эргэлтийн систем, төв мэдрэлийн систем) ашиглах эсэх;

3.3.6.эрчим хүчний эх үүсвэрийг хэрэглэдэг эсэх.

3.4.Лабораторийн оношилгооны хэрэгслийг эрсдэлийн зэргээр бага (А ангилал), дунд (В, С ангилал), өндөр (D ангилал) эрсдэлтэй гэж ангилна.

3.5. Лабораторийн оношилгооны хэрэгслийг эрсдэлийн зэргээр ангилахдаа түүний зориулалт, тодорхойлох арга, химийн бүлэг, шинжилгээний үр дүн алдаатай гарсан тохиолдолд хүний амь нас, эрүүл мэнд хохирол учруулах эсэхэд шалгуурыг харгалзан үзнэ.

Дөрөв. Эрсдэлийн зэргээр ангилах үйл ажиллагаа

4.1.Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилсан жагсаалтыг боловсруулах, нэмэлт, өөрчлөлт оруулах ажлыг хийх гүйцэтгэхдээ эм, эмнэлгийн хэрэгслийн асуудал хариуцсан төрийн захиргааны байгууллага эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилах ажлын хэсэг (цаашид “ажлын хэсэг” гэх) байгуулна.

4.2.Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилсан жагсаалтад тухайн бүтээгдэхүүн ерөнхий нэршлээр байхгүй тохиолдолд ханган нийлүүлэх байгууллага тухайн эмнэлгийн хэрэгслийн үйлдвэрлэгчийн тодорхойлолт, зориулалт, олон улсын нэршил (GMDN), түүний код, үйлдвэрлэсэн улсдаа ямар эрсдэлийн зэрэгт ангилалд багтаж байгааг илэрхийлсэн баримт бичгийг албан хүсэлтийн хамт эм, эмнэлгийн хэрэгслийн асуудал хариуцсан төрийн захиргааны байгууллагад ирүүлнэ.

4.4.Ажлын хэсэг ирүүлсэн албан хүсэлт, баримт бичигтэй танилцан холбогдох салбар зөвлөл болох Эмнэлгийн тоног төхөөрөмжийн салбар зөвлөл, Эмнэлгийн хэрэглэгдэхүүний салбар зөвлөл, Лабораторийн оношилгооны хэрэгслийн салбар зөвлөлөөр хэлэлцүүлж, тус зөвлөлийн шийдвэрийг үндэслэн Эмнэлгийн хэрэгслийг эрсдэлээр ангилсан жагсаалтад нэмэлт, өөрчлөлт оруулах бөгөөд тус нэмэлт, өөрчлөлтийг эм, эмнэлгийн хэрэгслийн асуудал хариуцсан төрийн захиргааны байгууллагын дарга батална.

4.5.Ажлын хэсэг тухайн эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилахад шаардлагатай нэмэлт баримт бичгийг ханган нийлүүлэх байгууллагаас шаардаж болно.

4.6.Эмнэлгийн хэрэгслийн олон улсын нэршил (GMDN)-ийн дагуу эмнэлгийн хэрэгслийг эрсдэлийн зэргээр жагсаалтыг боловсруулах бөгөөд эмнэлгийн

хэрэгслийн олон улсын нэршилд тухайн эмнэлгийн хэрэгсэл байхгүй тохиолдолд салбар зөвлөлийн шийдвэрийг үндэслэн шинэ нэршлийн дугаар олгож болно.

4.7.Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилсан жагсаалтыг цахим системээр дамжуулан олон нийтэд нээлттэй мэдээлнэ.

Тав. Эмнэлгийн тоног төхөөрөмж, эмнэлгийн хэрэглэгдэхүүнийг эрсдэлийн зэргээр ангилах арга

5.1. Хүний биед шууд хүрэлцдэггүй, эсхүл зөвхөн гэмтээгүй арьс, салстад хүрэлцдэг эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.1.1.бусад аргад хамаарахгүй бол бүх эмнэлгийн хэрэгсэл нэгдүгээр аргад хамаарна.

5.1.2.тус аргын аль нэгт тохирохгүй бол бүх инвазив бус эмнэлгийн хэрэгслийг бага эрсдэлтэй буюу I ангилалд хамаарна.

5.2.Хүний цус, биеийн шингэн, эс, эд, шингэн, хий зэргийг дамжуулах эсвэл хадгалах зориулалттай инвазив бус эмнэлгийн хэрэгслийг дараах байдлаар ангилах бөгөөд харин амьсгалын замаар эмийн бодисыг хүргэх зориулалттай инвазив, мэс заслын бус эмнэлгийн хэрэгслийг энэхүү журмын 5.20-д заасны дагуу ангилна.

5.2.1.Энэхүү журмын 5.1-д хамаарах хүний биед хүрэлцдэггүй эмнэлгийн хэрэгслээс хоёрдугаар аргад хамаарах эмнэлгийн хэрэгсэл ялгаатай. Дамжуулах, хадгалж буй бодис хүний бие рүү нэвтрэх учир шууд бус инвазив эмнэлгийн хэрэгсэл гэж үзэх бөгөөд тус эмнэлгийн хэрэгслийг цус сэлбэх, тариурын шахуурга, цусны зохиомол эргэлт, унтуулгын хий, хүчилтөрөгчийг дамжуулах зэрэгт түгээмэл хэрэглэдэг.

5.2.2.хүний цус, биеийн шингэн, эс, эд, шингэн, хий зэргийг хүний биед тарих, хийх, хүргэх зорилготой дамжуулах, хадгалах үйлдэлтэй бүх инвазив бус эмнэлгийн хэрэгсэл дунд эрсдэлтэй буюу IIa ангилалд хамаарна. Хэрэв эдгээр хэрэгсэл IIa, IIb, III ангиллын идэвхтэй эмнэлгийн хэрэгсэлтэй холбогдсон бол, эсвэл цус болон биеийн бусад шингэнийг дамжуулах, хадгалах, мөн эрхтэн, эрхтэний хэсэг, эд, эсийг хадгалах зориулалттай бол IIa ангилалд хамаарна.

5.2.3.цусны уут нь дунд эрсдэлтэй буюу IIb ангилалд хамаарна.

5.2.4.бусад тохиолдолд 5.1.1-д заасан эмнэлгийн хэрэгсэл бага эрсдэлтэй буюу I ангилалд хамаарна

5.3.Хүний эд, эс, цус, биеийн бусад шингэн, шингэнийг хүний биед суулгах зорилгоор биологи, химийн найрлагыг өөрчлөх зориулалттай эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.3.1.хүний эд, эс, цус, биеийн бусад шингэн, шингэнийг хүний биед суулгах, хийх зорилгоор биологи, химийн найрлагыг өөрчлөх зориулалттай бүх инвазив бус эмнэлгийн хэрэгсэл дунд эрсдэлтэй буюу IIb ангилалд хамаарна.

5.3.2.эмнэлгийн хэрэгсэл нь шүүх, центрифугдэх болон дулаан, хийг солилцох эмнэлгийн хэрэгслийн бүрдэл болж байвал дунд эрсдэлтэй буюу IIa ангилалд хамаарна.

5.3.3.хүний биед суулгах, хийхээс өмнө хүний биеэс ялган авсан эд, эс, эрхтэнтэй шууд хүрэлцдэг эсвэл ин витро орчинд хүний үр хөврөлтэй шууд хүрэлцдэг бодис болон бодисын холимгоос тогтдог бүх инвазив бус эмнэлгийн хэрэгсэл өндөр эрсдэлтэй буюу III ангилалд хамаарна.

5.3.4.эмнэлгийн хэрэгсэл идэвхтэй эмнэлгийн хэрэгсэлтэй холбогдон ажилладаг бол энэхүү журмын 5.9, 511-д заасны дагуу ангилна.

5.4.Гэмтсэн арьс, салстын мембрантой хүрэлцдэг инвазив болон инвазив бус эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.4.1.тусдаа хэрэглэвэл эмийн бүтээгдэхүүн гэж тооцогдох ямар нэгэн бодистой шархны наалтыг арван дөрөвдүгээр аргын дагуу III ангилалд хамаарна. Харин хэсэг газраар хүний бие рүү шимэгддэг бодис агуулсан эмнэлгийн хэрэгслийг энэхүү журмын 5.21-д заасны дагуу ангилагдана.

5.4.2.эмнэлгийн хэрэгслийг механик хаалт байдлаар хэрэглэдэг ба дарах, шүүрлийг шимэгдүүлэх үүрэгтэй бол бага эрсдэлтэй буюу I ангилалд хамаарна.

5.4.3.арьсны давхарга, салстыг гэмтээсэн гэмтэл (шархны эдгэрэлт аяндаа эдгэх)-д зориулсан эмнэлгийн хэрэгсэл дунд эрсдэлтэй буюу IIb ангилалд хамаарна.

5.4.3.гэмтсэн арьс, салстын эргэн тойронд бичил орчныг зохицуулах зориулсан эмнэлгийн хэрэгсэл дунд эрсдэлтэй буюу IIa ангилалд хамаарна.

5.5.Нарийн мэргэшил (чих-хамар-хоолойн, нүдний, шүдний, бүдүүн-шулуун гэдэсний, урологийн, эмэгтэйчүүдийн салбар гэх мэт)-ийн салбарт ашиглагддаг оношилгоо, эмчилгээний тоног төхөөрөмжийг дараах байдлаар ангилна:

5.5.1.биеийн сүвтэй харьцдаг, идэвхтэй эмнэлгийн хэрэгсэлтэй холбох зориулалтгүй, эсвэл I ангиллын идэвхтэй хэрэгсэлтэй холбогдох зориулалттай, мэс заслын бус инвазив бүх эмнэлгийн хэрэгсэл түр зуур хэрэглэх зориулалттай бол I ангилалд хамаарна.

5.5.2.богино-хугацааны хэрэглээтэй бол IIa ангилалд хамаарна.

5.5.3.ам, залгиурын хөндий, чихний хэнгэрэг, чихний гадна суваг, хамрын хөндий зэрэгтэй харьцаж байвал I ангилалд хамаарна.

5.5.4.удаан хугацааны хэрэглээтэй бол IIb ангилалд хамаарна.

5.5.5.ам, залгиурын хөндий, чихний хэнгэрэг, чихний гадна суваг, хамрын хөндий зэрэгтэй харьцаж байвал, мөн салстын мембранаар шимэгдэх боломжгүй бол IIa ангилалд хамаарна.

5.5.6.биеийн сүвтэй харьцдаг IIa, IIb, III ангиллын идэвхтэй хэрэгсэлтэй холбогдох зориулалттай мэс заслын бус бүх инвазив хэрэгсэл IIa ангилалд хамаарна.

5.6.Хэсэг зуурын хэрэглээтэй мэс заслын инвазив эмнэлгийн хэрэгсэл болох гурван үндсэн бүлэг буюу арьсанд нүх үүсгэх зориулалттай, мэс заслын багаж, олон төрлийн катетар, сорох гуурс гэх мэт эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.6.1.түр зуурын хэрэглээтэй мэс заслын бүх инвазив эмнэлгийн хэрэгсэл IIa ангилалд хамаарна.

5.6.2.зүрх, төв цусны эргэлтийг удирдах, оношилох, хянах, гажигийг засах зориулалттай, эдгээр биеийн хэсгээр тухайлан харьцдаг хэрэгсэл III ангилалд хамаарна.

5.6.3.дахин ашиглагддаг мэс заслын багаж I ангилалд хамаарна;

5.6.4.зүрх, төв цусны эргэлтийн систем, төв мэдрэлийн системтэй шууд хүрэлцдэг хэрэгсэл III ангилалд хамаарна;

5.6.5.ионжуулагч цацраг хэлбэрээр энергиэр хангах зориулалттай хэрэгсэл IIb ангилалд хамаарна.

5.6.6.биологийн үйлчлэлтэй эсвэл бүхлээрээ, дийлэнх хэсэг нь шимэгддэг бол IIb ангилалд хамаарна.

5.6.7.эмийн бүтээгдэхүүнийг хүргэх зориулалттай хүргэлтийн систем, тухайн хүргэлтийн системийн ажиллагааны горимоос шалтгаалж аюул учруулж болзошгүй тохиолдолд IIb ангилалд хамаарна.

5.7.Богино хугацааны хэрэглээтэй мэс заслын инвазив эмнэлгийн хэрэгсэл буюу мэс заслын эсвэл мэс заслын дараах үеийн хэрэгсэл (хавчаар, цорго гэх мэт), шахуургын хэрэгсэл (гуурс, зүү гэх мэт), олон төрлийн катетарыг дараах байдлаар ангилна:

5.7.1.энэхүү аргын 5.7.2-5.7.6-д заасан шалгуураас бусад тохиолдолд богино хугацааны хэрэглээтэй мэс заслын инвазив эмнэлгийн хэрэгслийг IIa ангилалд хамаарна.

5.7.2.зүрх, төв цусны эргэлтийг удирдах, оношлох, хянах, гажгийг засах зориулалттай, эдгээр биеийн хэсэгтэй шууд хүрэлцдэг өвөрмөц эмнэлгийн хэрэгсэл III ангилалд хамаарна.

5.7.3.зүрх, төв цусны эргэлтийн систем, төв мэдрэлийн системтэй шууд хүрэлцдэг эмнэлгийн хэрэгсэл III ангилалд хамаарна;

5.7.4.ионжуулагч цацраг хэлбэрээр энергиэр хангах зориулалттай эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.7.5.биологийн үйлчлэлтэй эсвэл бүхлээрээ эсхүл дийлэнх хэсэг шимэгддэг эмнэлгийн хэрэгсэл бол III ангилалд хамаарна.

5.7.6.бие махбод руу ороод химийн өөрчлөлтөд ордог зориулалттай (шүдэнд байрлуулдаг хэрэгсэл биш бол) эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.7.7.эмийн бүтээгдэхүүнийг хүргэх зориулалттай эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.8.Суулгац болон удаан хугацаагаар ашигладаг мэс заслын инвазив эмнэлгийн хэрэгсэл буюу согог засал, шүд, нүд, зүрх судас, гоо сайхны мэс заслын хөхний болон зөөлөн эдийн суулгацыг дараах байдлаар ангилна:

5.8.1.суулгац болон удаан хугацаагаар ашигладаг мэс заслын эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.8.2.шүдэнд байрлуулдаг бол IIa ангилалд хамаарна.

5.8.3.зүрх, төв цусны эргэлтийн систем, төв мэдрэлийн системтэй шууд хүрэлцдэг эмнэлгийн хэрэгсэл III ангилалд хамаарна.

5.8.4.биологийн үйлчлэлтэй эсвэл бүхлээрээ эсхүл дийлэнх хэсэг нь шимэгддэг эмнэлгийн хэрэгсэл III ангилалд хамаарна.

5.8.5.бие махбод руу ороод химийн өөрчлөлтөд ордог (шүдэнд байрлуулдаг хэрэгсэл биш бол) зориулалттай эмнэлгийн хэрэгсэл III ангилалд хамаарна.

5.8.6.эмийн бүтээгдэхүүнийг хүргэх зориулалттай бол III ангилалд хамаарна.

5.8.7.идэвхтэй суулгац болон тэдгээрийн дагалдах хэрэгсэл III ангилалд хамаарна.

5.8.8.хөхний суулгац, мэс заслын тор III ангилалд хамаарна.

5.8.9.бүтэн болон хэсэгчилсэн сольдог үе (эрэг, боолт, тусгаарлагч, багажууд зэрэг туслах хэрэгсэл үүнд хамаарахгүй) III ангилалд хамаарна.

5.8.10.нугалмын жийргэвч солих суулгац, эсвэл нугасны баганатай шууд хүрэлцдэг (эрэг, боолт, тусгаарлагч, багажууд зэрэг туслах хэрэгслүүд үүнд хамаарахгүй) суулгац III ангилалд хамаарна.

5.9.Энергийг дамжуулах, солилцох зориулалттай эмчилгээний болон бусад хэрэгслийг удирдах, хянах, шууд нөлөөлөх зориулалттай идэвхтэй эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.9.1.мэс заслын лазер, мэс заслын генератор гэх мэт цахилгаан төхөөрөмж, цочроогч, өдөөгч хэрэгсэл, эмчилгээний зорилгоор ионжуулагч цацраг ялгаруулдаг хэрэгсэл, мөн эдгээр хэрэгслийг удирдах, хянах, үйл ажиллагаанд нь шууд нөлөөлөх хэрэгсэл, суулгац идэвхтэй хэрэгслийг удирдах, хянах, үйл ажиллагаанд шууд нөлөөлөх зориулалттай хэрэгсэл хамаарна.

5.9.2.суулгадаг идэвхтэй хэрэгслийн энэхүү журмын 5.8, эмчилгээний идэвхтэй хэрэгслийг энэхүү журмын 5.22-д зааснын дагуу тус тус ангилна.

5.9.4.энерги дамжуулах, солилцох зориулалттай эмчилгээний идэвхтэй бүх эмнэлгийн хэрэгсэл IIa ангилалд хамаарна.

5.9.5.тухайн энергийн шинж чанар, нягтрал, энергийг хүргэж буй газар зэргээс шалтгаалж хүний биед аюул учруулж болохуйц эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.9.6.IIb ангиллын эмчилгээний идэвхтэй хэрэгслийг удирдах, хянах, үйл ажиллагаанд шууд нөлөөлөх зориулалттай бүх идэвхтэй эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.9.7.эмчилгээний зорилгоор ионжуулагч цацраг ялгаруулдаг идэвхтэй эмнэлгийн хэрэгсэл, мөн эдгээр хэрэгслийг удирдах, хянах, үйл ажиллагаанд шууд нөлөөлөх эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.9.8.суулгац идэвхтэй хэрэгслийг удирдах, хянах, үйл ажиллагаанд шууд нөлөөлөх зориулалттай идэвхтэй хэрэгсэл III ангилалд хамаарна

5.10.Оношлох, хянах зориулалттай идэвхтэй хэрэгсэл болон оношлох, эмчлэх зориулалттай радиологийн хэрэгсэл, физиологийн дохиоллыг бүртгэж авдаг төхөөрөмжийг дараах байдлаар ангилна:

5.10.1.оношилгооны рентген зураг авдаг хэрэгслийг арван долоодугаар, суулгац идэвхтэй хэрэгслийг хянадаг өвөрмөц хэрэгслийг найм эсвэл есдүгээр аргын дагуу ангилна.

5.10.2.оношилгоо, хяналтын зориулалттай бүх идэвхтэй хэрэгсэл IIa ангилалд хамаарна.

5.10.3.үзэгдэх орчинд хүний биеийг гэрэлтүүлэх зориулалттай эмнэлгийн хэрэгсэл I ангилалд хамаарна.

5.10.4.ин виво орчинд, радио идэвхт эмийн бодисын тархалтыг зураглан харуулах зориулалттай эмнэлгийн хэрэгсэл IIa ангилалд хамаарна.

5.10.5.физиологийн амин үзүүлэлтийг оношлох, хянах зориулалттай эмнэлгийн хэрэгсэл IIa ангилалд хамаарна.

5.10.6.хянаж буй физиологийн үзүүлэлт болон тэдгээрийн өөрчлөлт өвчтөнд шууд аюул учруулж болохуйц (зүрхний үйл ажиллагааны өөрчлөлт, амьсгалын өөрчлөлт, төв мэдрэлийн системийн идэвхи гэх мэт), эсвэл яаралтай тусламж шаардсан өвчтөнд оношлогоо хийх зориулагдсан эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.10.7.ионжуулагч цацраг ялгаруулдаг идэвхтэй хэрэгсэл болон оношилгоо, эмчилгээний зориулалттай радиологийн хэрэгсэл (интервенци радиологийн хэрэгсэл), эдгээр хэрэгслийг удирдах, хянах үйл ажиллагаанд шууд нөлөөлөх эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.11.Оношилгоо, эмчилгээний шийдвэрт туслах мэдээллээр хангадаг болон физиологийн үйл явцыг хянах зориулалттай программ хангамжийг дараах байдлаар ангилна:

5.11.1.программ хангамжийн эмнэлзүйн шийдвэр гаргахад өгч буй мэдээллийн ач холбогдол болон өвчтний эрүүл мэндийн байдалд үзүүлэх эрсдэлийг харгалзан ангилна.

5.11.2.оношилгоо, эмчилгээний шийдвэр гаргалтад нөлөөлөх мэдээллээр хангах зориулалттай программ хангамж IIa ангилалд хамаарна.

5.11.3.тухайн шийдвэрийн улмаас өвчтөн нас барах, эсвэл эргэшгүйгээр биеийн байдал эрс дордох эрсдэл үүсгэх программ хангамж III ангилалд хамаарна.

5.11.4.өвчтөний биеийн байдал хүнд зэргээр дордох тохиолдол эсвэл мэс заслын арга хэмжээ авах тохиолдолд хэрэглэх программ хангамж IIb ангилалд хамаарна.

5.11.5.физиологийн үзүүлэлтийг хянах зориулалттай хэрэгслүүд IIa ангилалд хамаарна.

5.11.6.хүний биеийн амин үзүүлэлтийг хянаж буй тохиолдол, тус үзүүлэлтийн өөрчлөлт нь өвчтөний биеийн байдалд шууд аюул учруулахуйц программ хангамж бол IIb ангилалд хамаарна.

5.11.7.бусад программ хангамж I ангилалд хамаарна.

5.12.Эмийн бүтээгдэхүүн, биеийн шингэн, эсвэл бусад бодисуудыг биеэс гаргах, эсвэл бие рүү хүргэх зориулалттай идэвхтэй хэрэгслийг дараах байдлаар ангилна:

5.12.1.Тус аргаар эм хүргэх систем болон мэдээгүйжүүлгийн багажийг голчлон зохицуулна. Хэрэв эм хүргэх бай нь амьсгалын зам бол энэхүү журмын 5.20-д заасны дагуу ангилна.

5.12.2.эмийн бүтээгдэхүүн, биеийн шингэн, эсвэл бусад бодисыг биеэс гаргах, эсвэл бие рүү хүргэх зориулалттай бүх идэвхтэй хэрэгсэл IIa ангилалд хамаарна.

5.12.3.тухайн бодисын шинж чанар, биеийн аль хэсэг рүү хийж буй, ажиллагааны горим зэргээс шалтгаалж аюул учруулж болзошгүй эмнэлгийн хэрэгсэл бол IIb ангилалд хамаарна.

5.13.Бусад аргаар ангилагдаагүй идэвхтэй хэрэгслийг дараах байдлаар ангилна:

5.13.1.бусад бүх идэвхтэй хэрэгсэл I ангилалд хамаарна.

5.14. Нэмэлтээр хүний цус эсвэл сийвэнгийн гаралтай эмийн бүтээгдэхүүнийг өөртөө нэгтгэсэн эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.14.1.энэхүү аргад тусад нь хэрэглэхэд эмийн бүтээгдэхүүн гэсэн ангилалд хамаарах тухайн хэрэгслийн хувьд нэмэлт үүрэгтэй бодисыг өөртөө нэгтгэсэн эмнэлгийн хэрэгсэлд хамаарна. Тухайн эмнэлгийн хэрэгслийн үндсэн үйлдэл өөртөө нэгтгэсэн уг бодисын фармакологи, иммунологи, бодисын солилцооны үйлдлээр илрэх ёсгүй.

5.14.2.эмийн бүтээгдэхүүн эсвэл хүний цус сийвэнгийн гаралтай эмийн бүтээгдэхүүн зэргийг өөртөө нэгтгэсэн эмнэлгийн бүх хэрэгсэл III ангилалд хамаарна. Уг эмийн бүтээгдэхүүн тухайн эмнэлгийн хэрэгслийн хувьд нэмэлт үүргийг гүйцэтгэнэ.

5.15.Жирэмслэлтээс хамгаалах эсвэл бэлгийн замын халдварт өвчнөөс сэргийлэх эмнэлгийн хэрэгслийг арван тавдугаар аргын дагуу ангилна:

5.15.1.жирэмслэлтээс хамгаалах эсвэл бэлгийн замын халдварт өвчнөөс сэргийлэх зориулалттай бүх эмнэлгийн хэрэгсэл IIb ангилалд хамаарна.

5.15.2.суулгац эсвэл урт хугацаанд хэрэглэдэг инвазив хэрэгсэл III бүлэгт хамаарна.

5.16.Халдваргүйжүүлэх, цэвэрлэх, угаах, чийглэх, ариутгах зориулалттай хэрэгслийг дараах байдлаар ангилна:

5.16.1.контакт линзийг халдваргүйжүүлэх, цэвэрлэх, угаах, чийглэх өвөрмөц зориулалттай хэрэгсэл IIb ангилалд хамаарна.

5.16.2.эмнэлгийн хэрэгслийг халдваргүйжүүлэх, ариутгах зориулалттай хэрэгсэл IIa ангилалд хамаарна.

5.16.3.инвазив хэрэгслийн сүүлийн шатны халдваргүйжүүлэлтийг хийдэг өвөрмөц зориулалттай халдваргүйжүүлэх уусмал, угаагч-халдваргүйжүүлэгчийг IIb ангилалд хамаарна.

5.16.4.контакт линзийг механик аргаар цэвэрлэдэг хэрэгслээс бусад бүх цэвэрлэгээний хэрэгслийг энэ аргаар ангилахгүй.

5.17.Рентген оношилгооны зураг авах хэрэгслийг дараах байдлаар ангилна:

5.17.1.рентген туяаны тусламжтайгаар оношилгооны зураг авах өвөрмөц зориулалттай хэрэгсэл IIa ангилалд хамаарна.

5.18.Хүн, амьтны гаралтай эд, эсээр хийгдсэн хэрэгслийг дараах байдлаар ангилна:

5.18.1.энэ аргад хүн, амьтны гаралтай эд, эс эсвэл дайвраар хийгдсэн хэрэгсэл хамаарна.

5.18.2.дахин сэргэх боломжгүй хүний, амьтны гаралтай эд, эсээр хийгдсэн эсвэл тэдний дайвраар хийгдсэн хэрэгсэл III ангилалд хамаарна.

5.18.3.дахин сэргэх боломжгүй амьтны гаралтай эд, эсээр хийгдсэн эсвэл тэдний дайвраар хийгдсэн хэрэгсэл нь зөвхөн гэмтээгүй арьстай хүрэлцэх зориулалттай бол I ангилалд хамаарна.

5.19.Нано материал агуулсан хэрэгслийг дараах байдлаар ангилна:

5.19.1.дотоод өртөлтийн зэрэг нь өндөр, дунд байвал III ангилалд хамаарна.

5.19.2.дотоод өртөлтийн зэрэг нь бага бол IIb ангилалд хамаарна.

5.19.3.дотоод өртөлтийн зэрэг нь үл мэдэг бол IIa ангилалд хамаарна.

5.20.Амьсгалын замаар эмийн бүтээгдэхүүнийг биед хүргэх инвазив хэрэгслийг дараах байдлаар ангилна:

5.20.1.амьсгалын замаар эмийн бүтээгдэхүүнийг биед хүргэх зориулалттай биеийн сүвтэй харьцдаг, мэс заслын бус бүх инвазив хэрэгслийг IIa ангилалд хамаарна.

5.20.2.тухайн хэрэгслийн ажиллах горим нь амь насанд аюултай өвчин, эмгэгийг эмчлэх зориулалттай эмийн бүтээгдэхүүний үр нөлөө, аюулгүй байдалд нь шууд нөлөөлдөг хэрэгсэл IIb ангилалд хамаарна.

5.21.Химийн бодисоос бүрдсэн эсвэл химийн бодисыг найрлагадаа агуулсан хэрэгсэл нь хүний биеийн сүв рүү, арьсанд түрхэх байдлаар биед нэвтрэх зориулалттай, хэсэг газар шимэгддэг эмнэлгийн хэрэгслийг дараах байдлаар ангилна:

5.21.1.тухайн бодис болон түүний завсрын бүтээгдэхүүн үндсэн үйлдлээ үзүүлэхдээ цусаар шимэгдэн биеэр тархаж байвал III ангилалд хамаарна.

5.21.2.тухайн бодис болон түүний завсрын бүтээгдэхүүн үндсэн үйлдлээ үзүүлэхдээ ходоод, гэдэсний замаар дамжин цусаар шимэгдэн биеэр тархаж байвал III ангилалд хамаарна.

5.21.3.хамар, ам, залгиурын хөндийд түрхэж, цацаж хэрэглэж, үйлдлээ үзүүлж байвал IIa ангилалд хамаарна.

5.21.4.бусад тохиолдолд IIb ангилалд хамаарна.

5.22.Оношилгоо хийх үйлдэлтэй эмчилгээний идэвхтэй хэрэгслийг дараах байдлаар ангилна:

5.22.1.Оношилгооны нэмэлт үйлдлийг өөртөө нэгтгэсэн эмчилгээний идэвхтэй хэрэгсэл, тухайлбал хаалттай систем, автомат дефибриллатор гэх мэт өвчтөний менежментийг шууд чиглүүлж байдаг хэрэгсэл III ангилалд хамаарна.

Зургаа. Лабораторийн оношилгооны хэрэгслийг эрсдэлийн зэргээр ангилах арга

6.1.Цус сэлбэх, эрхтэн шилжүүлэх, эсийн эмчилгээнд тохиромжтой эсэхийг үнэлэхийн тулд цус, цусны бүрэлдэхүүн хэсэг, эс, эд, эрхтэн, тэдгээрийн аль нэг дериативын халдварт өртсөн, халдвартай эсэхийг илрүүлэхэд зориулагдсан лабораторийн оношилгооны хэрэгслийг дараах байдлаар ангилна:

6.1.1.цус сэлбэх, эрхтэн шилжүүлэх, эсийн эмчилгээнд тохиромжтой эсэхийг үнэлэхийн тулд цус, цусны бүрэлдэхүүн хэсэг, эс, эд, эрхтэн, тэдгээрийн аль нэг дериативын халдварт өртсөн, халдвартай эсэхийг илрүүлэхэд зориулалттай лабораторийн оношилгооны хэрэгсэл өндөр эрсдэл буюу D ангилалд хамаарна.

6.1.2.энэхүү аргад хамаарах хэрэгсэл халдвар дамжих эрсдэлийн хүрээнд донорт шаардаглах шинжилгээнд нийцүүлэн халдвар үүсгэгчийг илрүүлэхэд зориулагдсан байдаг.

6.1.3.хүний амь насанд хохирол учруулах өндөр эрсдэлтэй болон өндөр эрсдэлтэй байж болохуйц халдвар үүсгэгчийг илрүүлэх болон өртөлтийг тодорхойлох зориулалттай лабораторийн оношилгооны хэрэгсэл өндөр эрсдэл буюу D ангилалд хамаарна.

6.1.4.хүн амын дунд эмгэг төрүүлэгчийн тархах эрсдэлийг Монгол Улсын нийт хүн амд үзүүлэх эрсдэл гэж үздэг.

6.1.5. хүн амын дундах эмгэг төрүүлэгчийг тараах эрсдэлд шууд болон шууд бус халдвар дамжих чадвар, халдвар авсан болон эмзэг бүлгийн хүмүүсийн холбоо үүсгэх түвшин, халдварын үргэлжлэх хугацаа зэрэг хүчин зүйл нөлөөлнө.

6.1.6.өвчтөний өвчний төлөв байдал тодорхойлогдсны дараа амь насанд аюултай халдварт өвчний халдварын ачааллыг тодорхойлоход зориулалттай лабораторийн оношилгооны хэрэгсэл өндөр эрсдэл буюу D ангилалд хамаарна.

6.2.Цусны бүлэг, эхийн цусны бүлгийн үл нийцэл болон цус сэлбэх, эрхтэн шилжүүлэн суулгах, эсийн эмчилгээнд хэрэгсэл цус, цусан бүрэлдэхүүн, эс, эд, эрхтнүүдийн дархлааны нийцтэй байдлыг тодорхойлох зориулалттай лабораторийн оношилгооны хэрэгслийг дараах байдлаар ангилна:

6.2.1.цусны бүлэг, эхийн цусны бүлгийн үл нийцэл болон цус сэлбэх, эрхтэн шилжүүлэн суулгах, эсийн эмчилгээнд хэрэгсэл цус, цусан бүрэлдэхүүн, эс, эд, эрхтнүүдийн дархлааны нийцтэй байдлыг тодорхойлох зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.2.2.дараах маркерийн аль нэгийг тодорхойлохоос бусад тохиолдолд дунд эрсдэлтэй буюу С ангилалд хамаарна:

6.2.2.1.ABO систем: A (ABO1), B (ABO2), AB (ABO3);
6.2.2.2.Rhesus систем: RH1 (D), RHW1, RH2 (C), RH3 (E), RH4 (c), RH5 (e);
6.2.2.3.Kell систем KEL1 (K);
6.2.2.4.Кидд систем JK1 (Jka), JK2 (Jkb);
6.2.2.5.Даффи систем FY1 (Fya), FY2 (Fyb);

6.2.3.хэрэв 5.2.2-д заасан маркерийг тодорхойлож байгаа тохиолдолд тэдгээр хэрэгсэл өндөр эрсдэл буюу D ангилалд хамаарна.

6.3.бэлгийн замаар дамждаг халдварт үүсгэгчийн байгаа болон өртсөн эсэхийг илрүүлэх зориулалттай хэрэгслийг дараах байдлаар ангилна:

6.3.1.бэлгийн замаар буюу үтрээ, ам, шулуун гэдэсний бэлгийн хавьтлаар дамжих халдварыг үүсгэгч илрүүлэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.2. тархи нугасны шингэн болон цуснаас авсан сорьцонд халдварын үүсгэгч буюу бактери, вирус, мөөгөнцөр, паразит, эгэл биетэн зэргийг илрүүлэх

зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.3.алдаатай үр дүнгээс үүдэлтэй хувь хүн, ураг, үр хөврөл, үр удамд нас баралт, хүнд хэлбэрийн хөгжлийн бэрхшээл үүсэж болохуйц ноцтой эрсдэлтэй халдвар үүсгэгчийг илрүүлэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.4.халдвараас хамгаалах дархлааны байдлыг тодорхойлохын тулд эмэгтэйчүүдийн төрөхийн өмнөх үзлэгт зориулагдсан лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.5.алдаатай шинжилгээний үр дүн өвчтөний менежментийн шийдвэр дамжин өвчтөн болон үр удмын амь насанд аюултай эрсдэлтэй дархлааны төлөв, халдварт өвчинд өртсөн байдлыг тодорхойлоход зориулагдсан лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.6.дагалдах оношлогоо буюу эмчилгээний өмнө болон эмчилгээний явцад тохирох эмийн үр дүнг хүртэх магадлал өндөр байгаа эсхүл тохирох эмийн бүтээгдэхүүнээс үүдэлтэй ноцтой гаж нөлөө үүсэх эрсдэлтэй өвчтөнүүдийг тодорхойлох зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.7.алдаатай шинжилгээний үр дүн өвчтөний менежментийн шийдвэр дамжин өвчтөн болон үр удамын амь насанд аюултай эрсдэлтэй өвчний үе шатыг тодорхойлоход зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.8.хорт хавдрыг илрүүлэх, оношлох, үе шатанд хэрэглэх тусгай зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.9.хүний генетикийн шинжилгээ буюу хувь хүн болон тэдний үр удамд удамшлын шинж чанар, өвчин, өвчинд нэрвэгдэх хандлагатай тодорхой аллель, мутаци, генотип, кариотип болон эпигенетикийн өөрчлөлтийн илрүүлэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.10.алдаатай шинжилгээний хариу нь өвчтөн болон өвчтөний үр удмын амь насанд аюултай нөхцөл үүсэх эрсдэл гарах үед төхөөрөмж нь эмийн бүтээгдэхүүн, бодис болон биологийн бүрэлдэхүүний түвшинг хянахад зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.11.амь насанд нь аюултай нөхцөл байдлаас болж шаналж буй өвчтөнийг эмчлэхэд зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.12.үр хөврөл ба ургийн төрөлхийн эмгэгийг илрүүлэх шинжилгээнд зориулагдсан лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.3.13.шинээр төрсөн нярайд төрөлхийн эмгэг буюу уг эмгэгийг эмчлээгүй, илрүүлээгүй тохиолдолд амь насанд аюултай нөхцөл байдал, эсвэл хүнд хэлбэрийн хөгжлийн бэрхшээлийг үүсгэх эрсдэлтэй эмгэгийг илрүүлэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.4.Жирэмслэлт, үр тогтоох чадамж, холестерины түвшинг тодорхойлох, шээсэнд агуулагдах глюкоз, эритроцит, лейкоцит, бактерийг илрүүлэх хэрэгслээс бусад өөрөө хэрэглэхэд зориулагдсан лабораторийн оношилгооны хэрэгслийг дараах байдлаар ангилна:

6.4.1.жирэмслэлт, үр тогтоох чадамж, холестерины түвшинг тодорхойлох, шээсэнд агуулагдах глюкоз, эритроцит, лейкоцит, бактерийг илрүүлэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу В ангилалд хамаарна.

6.4.2.энэхүү журмын 6.4.1-д зааснаас бусад өөрөө хэрэглэх зориулалттай лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу С ангилалд хамаарна.

6.4.2.өвчтөнд яаралтай тусламжийн үед хэрэглэхэд мэргэжлийн хүний нөөц ашиглах лабораторийн оношилгооны хэрэгслийг бусад ангилалтай нийцүүлэх тус тусад нь ангилна.

6.5.Эмнэлгийн хэрэгслийн тодорхойлолтод хамаарахгүй лабораторийн ерөнхий хэрэгсэл болон ин витро оношлогоонд ашиглах тусгай зориулалтын багаж хэрэгслийг дараах байдлаар ангилна:

6.5.1.лабораторийн ерөнхий хэрэглээнд зориулагдсан бүтээгдэхүүн, тусгайлсан зориулалтгүй дагалдах хэрэгсэл, буфер уусмал, угаах уусмал, ерөнхий өсгөвөрлөх орчин, гистологийн будаг зэргийг үйлдвэрлэгчээс тусгай шинжилгээнд хамаарах ин витро оношлогоонд тохиромжтой болгох зорилгоор гаргасан лабораторийн оношилгооны хэрэгсэл бага эрсдэлтэй буюу А ангилалд хамаарна.

6.5.2.үйлдвэрлэгчийн зааврааар ин витро оношлогоонд ашиглах тусгай зориулалтын лабораторийн оношилгооны хэрэгсэл бага эрсдэлтэй буюу А ангилалд хамаарна.

6.5.3. Сорьцын сав нь бага эрсдэлтэй буюу А ангилалд хамаарна.

6.6.Энэхүү журмын 5.1-5.5-д заасан шалгуурт хамаарахгүй хэрэгслийг зургаадугаар аргын дагуу ангилна:

6.6.1.бусад аргад хамаарахгүй хэрэгсэл буюу тус хэрэгслийн алдаатай шинжилгээний үр дүн нь өвчтөнд мэдэгдэхүйц сөрөг нөлөө үзүүлэх, амь насанд халтай, хүнд хэлбэрийн хөгжлийн бэрхшээлтэй болох, тухайн хүнийг шууд аюулд оруулах магадлал багатай бол дунд эрсдэлтэй буюу В ангилалд хамаарна.

6.6.2.даавар, витамин, фермент, бодисын солилцооны маркер, электролит, субстратын эмнэлзүйн химийн шинжилгээ, түүнчлэн эмгэг судлалын иммуногистохимийн ихэнх шинжилгээг болон хувь хүн дунд зэргийн эрсдэлтэй, амархан тархдаггүй халдварыг илрүүлэх зориулалтын лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу В ангилалд хамаарна.

6.7.Тоон болон чанарын үнэлгээгүй хяналтын лабораторийн оношилгооны хэрэгсэл дунд эрсдэлтэй буюу В ангилалд хамаарна.

6.8.Харшил төрүүлэгч шинжилгээний уусмал бол дунд эрсдэлтэй буюу В ангилалд хамаарна.

Эмнэлгийн хэрэгслийг эрсдэлийн зэргээр ангилсан жагсаалтын төсөл

№	Нэршлийн код	Англи нэршил	Монгол нэршил	Бүтээгдэхүүний тодорхойлолт	Эрсдэлийн зэрэг
Бага эрсдэлтэй эмнэлгийн хэрэгсэл					
1	10003	Abdominal binder, single-use	Хэвлийн хөндийг холбогч, нэг удаагийн хэрэглээ	A strip, roll or tube of fabric or polymer material intended to be applied to the abdomen to support relaxed abdominal walls (e.g., after surgery, during pregnancy) or to provide support for another device (e.g., dressing, ultrasound transducer, percutaneous lead). This is a single-use device.	I
2	10025	Adenotome	Аденотом	A hand-held manual surgical instrument designed to excise hypertrophic lymphoid tissue in the nasopharynx (i.e., pharyngeal tonsils or adenoids) during a procedure known as an adenoidectomy. It is typically a long, slender instrument with cutting blades at the working end, and a handle with a mechanism to operate the blades. It is available in various designs and sizes and may be a one-piece instrument or require the insertion of the blades into the handle. This is a reusable device.	I
3	10033	Adhesive tape remover	Наалдамхай тууз арилгагч	A solvent material containing, e.g., liquid trichloroethane, trifluoroethane, or natural nut oils designed to remove adhesive tape from surfaces, or to remove adhesive residue left on a patient's skin or other surfaces after removal of an adhesive tape or other adhesive affixed device (e.g., ostomy devices). After application, this device cannot be reused.	I
4	10035	Skin surface device adhesive	Арьсны гадаргуугийн төхөөрөмжийн цавуу	A substance (e.g., gel, aerosol) intended to adhere a medical device (e.g., dressing, ostomy device, aesthetic restoration prosthesis) to the skin surface; it is not intended for invasive/surgical use but may be intended for other non-patient contact uses. It may be used in the home or healthcare facility. After application, this device cannot be reused.	I

5	10051	Environmental air sampling kit	хүрээлэн буй орчны агаарын дээж авах иж бүрдэл	A collection of sterile devices designed to collect a sample of air. This kit may or may not be required to be used with an appropriate air sampling device. This is a single-use device.	I
6	10058	Airway obstruction forceps	Амьсгалын замын бөглөрөлт хямсаа	A device intended to be used in an emergency to remove an airflow-obstructing object or material in the oropharynx, trachea, or upper bronchi to prevent patient asphyxiation. It is typically a plastic instrument with serrated ends that is inserted into the airway in a blind manner to grasp and extract the foreign item, or a stainless steel forceps with spoon ends that is inserted under tactile guidance to grasp and extract the foreign item from the airway. The handles may be joined by a swivel pin and pivoted to work in opposition as scissors (classical forceps) or joined at the proximal end (e.g., tweezers). It may be used by emergency medical services (EMS). This is a reusable device.	I
7	10082	Dental amalgam mixer	Шүдний амальгам холигч	A mains electricity (AC-powered) device used to shake a homogenous mixture of fine dental alloy particles [e.g., tin (Sn), silver (Ag), zinc (Zn), or copper (Cu)] with mercury (Hg) to obtain a dental amalgam, typically right before application. The amalgam is usually prepared in an appropriate capsule that may or may not be an integral part of the device.	I
8	10089	Amniotome, reusable	Амниотом, дахин ашиглах боломжтой	A surgical instrument used to cut/rupture the amniotic membrane (i.e., the amnion - the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid) to assist in childbirth, without causing injury to the mother or foetus. It is long and shaft-like, and terminates in a sharp hook or protected blade used to rupture the membrane. It is typically made of high-grade stainless steel, and may be curved to follow the natural contours of the birthing canal into which it is inserted. Amniotic membrane rupture may also be performed using an amniotic perforator or forceps and/or a trocar. This is a reusable device.	I
9	10098	Ampule opener	Ампул онгойлгогч	A cutting instrument intended to safely remove/break the protective, sterile seal of an ampule. It is typically designed to protect the user from inadvertent contact with the sharp edges of the seal while being removed. This is a reusable device.	I

10	10149	Anaesthetist's stool	Мэдээ алдуулах эмчийн өтгөн	A seat, usually padded and height-adjustable, intended to be occupied by anaesthesia staff during surgical procedures as an alternative to standing; it does not include support for the back or arms. It is intended to be used in operating rooms or cleanrooms and is therefore constructed so that it is easy to clean to help minimize risk of contamination.	I
11	10153	Ankle binder, single-use	Шагай холбогч, нэг удаагийн	A strip or roll of fabric or plastic material designed to be wrapped around the ankle to help stabilize and support the joint. It does not include a rigid support (i.e., not an ankle/foot orthosis) and is not a tubular support bandage. This is a single-use device.	I
12	10155	Anklet	Шагай	A device soft to the touch designed to embrace the ankle, providing limited support and protection. It is typically made of elastic fabrics that may be combined with soft plastics. The device is used for temporary treatment of small ankle injuries such as sprains and also during rehabilitation and to perform exercises; it may also provide compression to increase venous activity. This is a single-use device.	I
13	10156	Optical anoscope, reusable	Оптик аноскоп, дахин ашиглах боломжтой	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the anus and rectum. It is inserted into the body through the anus during anoscopy. The inserted portion is short in length, though longer than a sphincteroscope, and large in diameter, and an obturator is typically inserted into its lumen to assist the insertion. The anatomical images are illuminated by a built-in or external light source and can be viewed by the user through relayed lens optics or direct vision. This device is typically used to examine/diagnose patients suffering pain in the rectum/anus, haemorrhoids, or anal fissures. This is a reusable device.	I
14	10164	Apex cardiograph	Апекс кардиограф	A device used for recording the pulsations of the precordium in the region of the left ventricular apex. This type of cardiograph uses a noninvasive transducer that senses the movement (vibration) of the soft body tissue enclosed in the intercostal space, reproducing its characteristics in an apexcardiogram. This is used to assess the status of left ventricular function.	I

15	10171	Applicator jar	Түрхэгч сав	A cylindrical vessel designed for holding various types of applicators (e.g., swabs, towelettes) in a clean container to reduce the possibility of contamination and to be ready for use. It is typically made of high-grade stainless steel, glass, or less frequently sterilizable plastic material (e.g., polypropylene). It will have a wide or weighted base to give it stability and a tightly sealed cover (lid). It is frequently used in ear/nose/throat (ENT) procedures, as well as procedures on the eyes, or the vagina and used in, e.g., an examination room, a doctor's surgery, or the sterile field during a surgical intervention. This is a reusable device.	I
16	10173	Applicator, antiseptic	Түрхэгч, антисептик	A slender rod of wood or synthetic material with a pledget of cotton at one end, or a towelette that is pre-soaked with antiseptic medication that is applied to a body surface to inhibit the growth of microorganisms. This is a single-use device.	I
17	10175	Ophthalmic applicator	Нүдний түрхэгч	A device used for applying ophthalmic medication or ointments to the eye. It is typically designed as a slender rod of wood, flexible metal, or a synthetic material, to which is attached a pledget of cotton at one end. This is a single-use device.	I
18	10176	Proctoscopic applicator	Проктоскопийн түрхэгч	A device intended to be used for applying medication to the area of the anus, rectum, or sigmoid colon. It is typically designed as a slender rod of wood, flexible metal, or a synthetic material, to which is attached a pledget of cotton at one end. This is a single-use device.	I
19	10177	Tracheal applicator	Гуурсан хоолойн түрхэгч	A device intended for medical purposes that is used to apply a substance to the trachea (the windpipe). It is typically designed as an absorbent, sterile, swab (i.e., a pledget of cotton) on a slender rod of wood, flexible metal, or a synthetic material. This is a single-use device.	I

20	10182	Arm bath	Гар банн	A device typically consisting of an elongated receptacle to hold water for physiotherapeutic treatment to the body via the arms. Hot and cold water are connected and a thermometer is used to help gauge the water temperature. The patient immerses the arms up to the middle upper arm while the patient's trunk is covered with a blanket. The arms are heated over a period to 40 - 45°C followed by the hands being rapidly cooled with cold water. This treatment dilates blood vessels of the hands and is intended to facilitate the draining of blood from the thoracic organs to the arms to relieve congestion and induce perspiration for therapeutic effects (e.g., relieve coughs, asthma).	I
21	10184	Armboard, reusable	Арматер, дахин ашиглах боломжтой	A device designed to stabilize a patient's arm during an intervention or procedure typically to maintain the patency of an intravenous (IV) needle or an intravascular catheter. It is typically an elongated, flat surface of expanded polystyrene, wood, or artificial fibre board that is covered with a durable plastic or coating that can be easily cleaned. It may have a metal attachment so that it can be affixed to, e.g., an operating/examination table, a blood donor couch, or a chair, or it may be placed on a flat surface (e.g., on top of an operating/examination table). This is a reusable device.	I
22	10190	Arrhythmia simulator	Аритмийн симулятор	An instrument that electronically produces or replays digitally recorded patient cardiac arrhythmias for the purposes of applying performance tests on electrocardiograph (ECG) recording equipment. The device may also be used to train healthcare personnel in the recognition of various cardiac arrhythmias.	I
23	10200	Articulator, cast	Артикулятор, жүжигчид	A mechanical device used in the fabrication of orthopaedic casts to establish correct function (articulation).	I

24	10201	Dental articulator	Шүдний артикулятор	A hinged, mechanical, dental device designed to simulate the movement of a patient's upper and lower jaws and onto which maxillary and mandibular casts or models are attached according to a pre-recorded intermaxillary relationship. It is designed to simulate all or part of the mandibular movements and is used for, e.g., examination, diagnosis, or to construct dental appliances. This is a reusable device.	I
25	10216	Nasal suction system	Хамрын сорох систем	An assembly of devices designed to evacuate obstructive secretions, gas, liquids (e.g., blood, vomitus), and/or foreign bodies from the upper respiratory tract (i.e., the nasal cavities and oropharynx). It generally consists of mains electricity (AC-powered) suction pump, a pressure regulator and gauge, one or more collection canisters, plastic tubes connecting the components to each other, and an overflow protection and/or bacteria filter. The typical vacuum level is low; free flow rates may be as high as 30 L/min. The system is used mainly in physician offices and for emergency procedures.	I
26	10217	Surgical suction system	Мэс заслын сорох систем	An assembly of devices designed to evacuate large volumes of gas, liquid, tissue and/or other debris from a surgical site by means of suction during surgical procedures. It generally consists of a mains electricity (AC-powered) suction pump, a regulator and gauge, one or more collection canisters, plastic tubes connecting the components to each other, and an overflow protection and/or bacteria filter. The vacuum capability should be at least 400 mm Hg; free flow rates may be as high as 35 litter/min. The system is mainly used when suction from a central vacuum system is not available or appropriate.	I

27	10219	Tracheal suction system	Гуурсан хоолойн сорох систем	An assembly of devices designed to evacuate obstructive secretions, gas, liquids (e.g., blood, vomitus), and/or foreign bodies from the trachea. It generally consists of a mains electricity (AC-powered) suction pump, a pressure regulator and gauge, one or more collection canisters, plastic tubes connecting the components to each other, and an overflow protection and/or bacteria filter. The typical vacuum level is from 80 to 120 mm Hg to reduce the risk of trauma; free flow rates may be higher than 25 L/min. The system is used to remove secretions and to maintain the airway of an intubated patient; it is mainly used when suction from a central vacuum system is not available or appropriate.	I
28	10223	Wound suction system, electric	Шарх сорох систем, цахилгаан	An assembly of devices designed to evacuate gas, liquid, tissue and/or other debris from a wound by means of suction. It generally consists of a mains electricity (AC-powered) suction pump, a regulator and gauge, one or more collection canisters, plastic tubes connecting the components to each other, and an overflow protection and/or bacteria filter. The system is intended to promote wound healing, and used mainly when suction from a central vacuum system is not available or appropriate.	I
29	10226	Atomizer, non-ventilatory	Атомизатор, агааржуулалтгүй	A non-powered, non-ventilatory device intended to provide liquid medication in an aerosolized airborne form for a patient to breathe. It is typically hand-operated. Unlike a nebulizer this devices lacks a baffle, therefore the particle size of the aerosol is not stabilized.	I
30	10243	Infant care kit	Нярайн асрах иж бүрдэл	A portable collection of devices and supplies designed to assist in the care of an infant/baby that typically includes two or more of the following: a thermometer, medical measuring spoon/dropper, nasal aspirator, irrigation saline solution, a teether, and nail clippers. This is a reusable device.	I
31	10279	Active-support bandage	Идэвхтэй туслах боолт	An elastic fabric (e.g., polyamide, Lycra) designed to provide support or local pressure to a part of the body, especially a joint, while allowing movement. It may have various configurations (e.g., long flat strip, tubular) to accommodate various body parts (e.g., ankles, knees, wrists, neck). This is a reusable device.	I

32	10281	Gauze bandage, strip	Самбай боолт, тууз	A piece or strip of transparent fabric made of open weave and differing degrees of fineness used to cover and protect wounds. This is a single-use device.	I
33	10284	Pressure bandage, non-latex, single-use	Даралтын боолт, латексгүй, нэг удаагийн	A strip or roll of fabric or plastic material (non-natural rubber latex) intended to be applied to and compress a local area of the body for one or more preventative/therapeutic applications (e.g., prevent oedema, support injuries associated with minor trauma, treat disorders of venous return). It may be described as a sports tape intended for support while allowing movement, or described as a compression bandage; it is not intended to be used in association with open wounds. It is intended for use in the home or healthcare facility. This is a single-use device.	I
34	10286	Scultetus bandage	Scultetus боолт	A fabric or plastic material, designed with many tails and an attached central piece, that is typically applied to injuries of the abdomen or thorax. The tails are overlapped; the outer two are tied or pinned and act to secure the others. It is designed to be opened or removed with minimal disturbance of the bandaged part of the body. This is a single-use device.	I
35	10289	Traction bandage	Таталтын боолт	A large strip of fabric or plastic material intended to be used to assist in exerting desirable tensile (pulling) forces on the body (traction). This is a single-use device.	I
36	10297	Metabolic measurement trolley	Бодисын солилцоог хэмжих троллейбус	A cart designed to accommodate equipment necessary to measure metabolic energy expenditure. This may also include cardiovascular and respiratory function measurements when the patient is at rest and/or during exercise. This trolley (cart) will typically hold devices such as oxygen (O2) and carbon dioxide (CO2) analysers, airflow measurement devices, controls and a computer system that processes the measurements and provides the required information. It will typically be used to assess the status of patients in the intensive care unit (ICU), burn treatment unit, and accident and emergency (A&E) unit.	I

37	10298	Bowl/basin stand	Сав/савны тавиур	A device that typically consists of a framework designed to support a bowl or basin in a recess at the top of the device. The stand may be stationary or mobile and is typically used in operating theatres, examination rooms, accident and emergency (A&E) rooms, or bedside.	I
38	10304	Bath boot	Усанд орох гутал	A device in the form of above-the-ankle footwear designed to cover bandages, casts or other dressings on the feet and lower legs for their protection while bathing or showering. The device is made of waterproof materials and will have non-slipping soles. This is a reusable device.	I
39	10306	Bathing pillow	Усанд орох дэр	A cushion, made of waterproof materials, designed to be used to support a patient while bathing. This is a reusable device.	I
40	10316	Portable sitting bathtub	Зөөврийн суудалтай ванн	A high-walled body bathing (washing) receptacle designed to be easily moved (e.g., it may be a foldable construct or may be readily dismantled and packed for transport). It is typically filled with warm water to accommodate an occupant for bathing in an upright seated position; it does not have sufficient length to allow reclining of the body and extension of the legs. The device is typically used in settings where there is no access to conventional bathing facilities (e.g., field military hospitals, isolated dwellings).	I
41	10326	Bed board	Орны самбар	A flat, stiff device designed to increase the firmness of a bed's mattress to provide an appropriate rest surface for the user. It is typically placed under the mattress of the bed and is available in a variety of sizes and thicknesses; some may be foldable for easier transportation and/or storage. It is made of firm materials such as hard plastic or wood and is typically used for persons with spinal disorders/problems.	I
42	10335	Bedpan liner	Орны доторлогоо	A device intended to be fitted into and line a bedpan, or related device, to collect waste during use and thereby function as a disposable physical barrier to reduce/prevent cross-contamination between patients using the bedpan. It is typically designed as a shaped bowl-like container with a rim made of disposable materials. This is a single-use device.	I
43	10336	Bedpan rack	Орны тавиур	A rack designed for storing and/or transporting bedpans.	I

44	10338	Bedpan warming cabinet	Орны халаагуурын шүүгээ	A mains electricity (AC-powered) heating device designed to warm and store clean bedpans that are ready for use. It typically consists of a heat insulated enclosure with a door, shelves or hooks for placement of the bedpans, heating element(s), a thermostat and operating controls. This is a cabinet that is built into the room construction (recessed into the wall) so that it does not take any floor space of the utility room.	I
45	10340	Bedpan, fracture	Оронд хэрэглэх хөвч, хугаладаг	A device used by a bedridden patient as a receptacle for urine and faeces and which is designed to be used by a patient whose hips have been plastered. This is a reusable device.	I
46	10348	Flotation therapy bed, adult	Флотацийн эмчилгээний ор, насанд хүрэгчид	A mains electricity (AC-powered) bed designed to minimize pressure points on a patient's body by providing contact with as much of the body surface as possible, typically through a mattress that contains a large volume of constantly moving media, e.g., water, air, or mud that lifts the patient to simulate a floating effect. It is used in cases of decubitus ulcers or where a patient has little remaining body fat and the displacement of body weight is vital for treatment and/or comfort. It can also be used for the treatment badly burned patients and/or to aid circulation. The device may allow for the regulation of mattress temperature to enhance treatment.	I
47	10363	Ventilation rocking bed	Агааржуулалтын эргэдэг ор	A mains electricity (AC-powered) bed intended for temporary use to help improve patient ventilation (breathing) by repeatedly tilting the patient, thereby using the weight of the abdominal contents to move the diaphragm.	I
48	10383	Bicycle ergometer	Унадаг дугуйн эргометр	A device intended to be used to provide a quantitative measurement of the rate at which work (energy) is performed by a muscle or group of muscles under controlled conditions. It is operated by a person using their legs, usually the patient, undergoing assessment, treatment, training, or rehabiltation and measures this related muscle activity at defined workloads.	I

49	10385	Bicycle exerciser	Унадаг дугуй дасгалын төхөөрөмж	An exercise apparatus designed to provide the same physical activity of pedalling a bicycle while remaining stationary, primarily to increase cardiovascular endurance by keeping the heart and respiration rates elevated over a continuous period; it may also promote lower-body, stomach, arm, and back muscle strength. The device typically consists of a bicycle-like frame mounted on struts, pedals geared via a chain or belt to a variable resistance, handlebars, with a fixed seat or attachment for a wheelchair. It may include workout program modes to adjust the resistance level, a monitor to display the workout time, distance, speed, calories burned, and heart rate.	I
50	10386	Bile collection bag	Цөс цуглуулах уут	A plastic sac intended to be used to collect bile from a duodenal drainage tube. This is a single-use device.	I
51	10405	Seizure bite block	Хазуулсан таталтын блок	A non-sterile device inserted into a patient's mouth for the prevention of oral tissue damage (e.g., the teeth, lips, tongue and buccal mucosa) typically when the patient has convulsions (a seizure) or is undergoing an electroconvulsive therapy (ECT) that will cause nausea or can cause him/her to bite their jaws together. It will also secure a free flow for air and vomit. This is a single-use device.	I
52	10406	Bladder irrigation kit	Давсагны усалгааны иж бүрдэл	A collection of sterile devices designed for the infusion of fluids used to flush and evacuate the bladder of urine and other particulate matter. It typically includes tubing, connectors, a syringe, a roller clamp and other items used to flush the bladder. It may also be indicated for use in such procedures as a cystoscopy or a transurethral resection (TUR) as a means of continuous bladder irrigation. This is a single-use device.	I

53	10408	Blade jar	Иртэй сав	A cylindrical vessel designed for holding various types of sterile blades (e.g., blades which are a part of a cutting instrument such as scalpel blades, razor blades) in a clean container to reduce the possibility of contamination and ready for use. It is typically made of high-grade stainless steel, glass, or less frequently sterilizable plastic material (e.g., polypropylene). It will have a wide or weighted base to give it stability and a tightly sealed cover (lid). It is typically used in an examination room, or a doctor's surgery. This is a reusable device.	I
54	10414	Blanket warming cabinet, steam-heat	Хөнжил дулаацуулах кабинет, уур-дулаан	A mains electricity (AC-powered) device designed to warm blankets with steam heat. It is typically a high capacity (e.g., 0.2 to 0.5 m3) unit with appropriate perforated shelves for blanket positioning, avoiding contact with very hot surfaces to prevent scorching. Steam is usually circulated to heat blankets in a temperature range from 30 to 90° C (90 to 200° F).	I
55	10415	Bed blanket, reusable	Ор хөнжил, дахин ашиглах боломжтой	A large piece of fabric or fabric-like material used to cover a patient/person to insulate body heat for warmth. It is typically used as a bed covering, but may be used for other purposes (e.g., as a wrap for warmth and comfort). The device is laundered for cleaning between periods of use. This is a reusable device.	I
56	10416	Rescue blanket, reusable	Аврах хөнжил, дахин ашиглах боломжтой	A large thin sheet of material specially designed to keep a person warm and to prevent the further loss of body heat in an emergency rescue situation. It may be designed as a flat whole-body wrap, blanket or poncho and is typically used by emergency medical services (EMS) and typically includes a heat-reflecting metal surface [e.g., aluminium (Al)] to help retain body heat. This is a reusable device.	I
57	10417	Infant blanket, reusable	Нярайн хөнжил, дахин ашиглах боломжтой	A piece of fabric material intended to be used to wrap newborns/infants to retain their body heat. Commonly known as a baby blanket, it is available in a variety of fabrics (e.g., wool, cotton, or synthetic materials) and textures (e.g., cellular or smooth). This is a reusable device after appropriate cleaning.	I

58	10455	Bone cutter	Яс зүсэгч	A strongly constructed, hand-held, surgical instrument designed to separate a bone into two parts through a cutting action. It typically consists of an instrument having one or two sharp robust blades that close over the bone and cut it. It is available in various designs: 1) a pliers-like design with elongated blades, or 2) twin angled blades attached to strong, sprung (self-opening), pivoted or multi-pivoted handles; that, when squeezed together, close the blades so that they cut entirely through the bone. Also known as bone shears, it is mainly used in orthopaedic surgical procedures and oral surgery. This is a reusable device.	I
59	10458	Orthopaedic bone staple driver	Ортопедийн ясны үндсэн драйвер	A hand-held surgical instrument designed to impart force on a bone staple, or on another instrument, to insert the bone staple typically into fractured bone. The distal end is typically shaped to mate with the bone staple. The proximal end is designed to absorb and transmit an impact force. It is typically made of high-grade stainless steel or titanium (Ti). This is a reusable device.	I
60	10459	Bone wax	Ясны лав	A waxy stick, paste, sauve or ointment used to block bleeding from bones during surgery. Earlier forms were made from purified beeswax, but modern forms can be made from synthetic waxes. This is a single-use device.	I
61	10480	Maternity brassiere	Жирэмсний хөхний даруулга	A woman's undergarment designed to support the breasts when nursing, typically with a flap at the front that can be opened to allow nursing without garment removal. This is a reusable device.	I
62	10481	Postsurgical brassiere, non-antimicrobial	Хагалгааны дараах даруулга, нянгийн эсрэг үйлчилгээтэй	A woman's undergarment designed to support and/or contour the breast(s) after surgical intervention (e.g., thoracic surgery, mastectomy, lumpectomy); it may also be intended for use during medical treatment (e.g., chemotherapy). It may also be referred to as bra, and is specifically designed for patient support/comfort in the home or healthcare facility; it does not include antimicrobial features. This is a reusable device.	I
63	10483	Breast binder, single-use	Хөхний биндэр, нэг удаагийн	A fabric wrap intended to be applied to the breast(s) for soft tissue support, typically after surgery; it is not a brassiere (bra). This is a single-use device.	I

64	10484	Nipple pad/ring, single-use	Хөхний толгой/цагираг, нэг удаагийн	A device intended to be worn directly over the breast/nipple of a nursing woman between breast feedings to help protect the nipple from chafing, due to friction from clothing, and/or to treat sore/cracked nipples; it may also be intended to absorb leaking breast milk. It may be in the form of a fabric or cotton pad (commonly known as a nursing pad), a dome-shaped gel (e.g., hydrogel) cover, or a ring. This is a single-use device.	I
65	10516	Burn kit, non-medicated	Түлэнхийн хэрэгсэл, эмгүй	A collection of devices designed to treat first or second degree burns typically as first aid therapy by emergency medical services (EMS); it does not include pharmaceuticals. It typically includes burn dressings, burn gels, gauze, cold packs, adhesive tapes, and gloves; it may include additional devices such as scissors and masks. This is a single-use device.	I
66	10520	Cranial bur, reusable	Гавлын шар, дахин ашиглах боломжтой	A rotary cutting device consisting of a shaft of high-grade steel and a cutting head of hard metal and/or diamond material with fluting or cutting planes of various shapes at the working end and which is designed to fit into an appropriate powered handpiece that provides the rotation allowing the user to excavate soft or hard skull tissue. This is a reusable device.	I
67	10522	Podiatric bur, reusable	Хүүхдийн шар, дахин ашиглах боломжтой	A rotary abrasive device typically used by a podiatrist intended to debride excrescences and treat conditions such as heavy toenails and/or plantar calluses. It consists of a well-differentiated head of various shapes (e.g., cone, cylinder, inverted cone, pear) made of hard materials (e.g., diamond, metal carbide), and a tapered, notched or elongated proximal end intended to fit into an appropriate powered handpiece (not included); it may be composed of two separate pieces. This is a reusable device.	I

68	10531	Bedside cabinet	Орны дэргэдэх шүүгээ	A furniture-like device designed to function as a console by the patient's bed typically containing storage shelves, open storage space and drawers where the patient can keep his/her personal effects. It may have facilities for, e.g., a radio and/or a nurse call system button. This cabinet will also be used by the hospital staff to put out, e.g., medications, drinks, or a denture holder. Some types may have an integrated adjustable table top.	I
69	10532	Dental cabinet	Шүдний кабинет	A furniture-like chairside device designed for use in the dental clinic or during surgery for the storage and display of dental instruments and other devices/products to facilitate their use during dental procedures.	I
70	10535	Medicine cabinet	Эмийн шүүгээ	A furniture-like device designed for storing and preparing medicines. It will typically have shelves, drawers, narcotics locker, and may have other facilities, e.g., sinks or work counters. Some may even have a small built-in refrigerator.	I
71	10540	Warming chamber	Халаалтын камер	A mains electricity (AC-powered) chamber designed to warm various items prior to use, e.g., bags of irrigation or intravenous (IV) solutions, blankets, or clothing to cover or put onto a patient, e.g., in an operating theatre, or for the personnel themselves to wear. This device may also be used in a laboratory.	I
72	10551	Ophthalmic fundus camera	Нүдний ёроолын камер	An electrically-powered optical device intended to be used to create digital colour photographic images/video of the ocular fundus (interior eye surface opposite the lens) through the pupil, to aid in diagnosing and monitoring retinal pathology; it may also be used for images/video of the anterior chamber. The image/video is typically transferred to a computer for display on its screen and/or for storage in a database. This device is also known as a retinal camera.	I
73	10552	Camera, identification	Камер, таних тэмдэг	Photographic cameras designed for recording patient identification and related information (e.g., date, time) on a radiographic film or film cassette.	I
74	10558	Oscilloscope camera	Осциллограф камер	A device intended to be used to photograph the display screen of an oscilloscope. The device can be hand-held or mounted on the oscilloscope screen to photograph an area of the screen allowing the oscilloscope user to have a permanent copy of the image.	I

75	10598	Cardiac catheterization kit	Зүрхний катетержуулалтын иж бүрдэл	A collection of sterile devices designed to provide a pathway for the introduction of a device(s) (e.g., a cardiac catheter or a pacing lead) into the coronary sinus, the coronary vasculature, and the chambers of the heart. It may also be used for the percutaneous visualization of cardiac anatomy or to provide temporary occlusion during venography. The collection typically includes items such as an introducer needle or cannula, a cardiac introducer sheath or guide catheter, a dilator/obturator, a guidewire, syringes, a scalpel, and a catheter slitter. This is a single-use device.	I
76	10614	Direct Fick cardiac output unit	Шууд Фик зүрхний гаралтын нэгж	A unit that measures blood flow from the heart using the direct Fick method. This method calculates cardiac output as the quotient of total body oxygen (O2) consumption divided by the difference in oxygen content of arterial blood and mixed venous blood; all variables, including mixed venous oxygen content, are measured and reproduced by this device. Note: (Fick's law of diffusion: The principle that a substance put into a solution will tend to diffuse towards constant concentration throughout the solution).	I
77	10635	Carts	Тэрэг	A conveyance constructed for the storing and, or transporting of medical devices and goods within the area of a hospital/healthcare institution. It can be designed either to be hand-pulled, or linked together and pulled by a truck or both. It is typically closed.	I
78	10642	Isolation room trolley	Тусгаарлах өрөөний троллейбус	A small wheeled cart, that may have shelves and/or drawers, used to store medical equipment and supplies for use in an isolation room.	I
79	10647	Cardiopulmonary resuscitation cabinet, equipped	Зүрх судасны сэхээн амьдруулах кабинет, тоноглогдсон	An enclosed mobile cart designed to store/transport devices and supplies used in emergency resuscitation procedures. It typically consists of a shelf/drawer cupboard structure on wheels that contains a defibrillator, electrocardiograph (ECG) monitor, pulmonary resuscitator, backboard for external cardiac compression, surgical supplies, drugs, and various other instruments and accessories necessary to initiate cardiopulmonary resuscitation (CPR).	I

80	10667	Cast boot	Дамжуулах ачаалах	A boot-like device designed to be attached around a leg cast to protect and support the cast, and to assist with patient mobility. This device is generally equipped with a waterproof covering, an outer sole for walking, and closures for easy application and removal. This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	I
81	10668	Cast shoe, reusable	Цутгамал гутал, дахин ашиглах боломжтой	A footwear designed to be worn over a foot that is encased in a cast in order to protect the cast material and add stability for the patient while ambulating. Its foot bed provides comfort when ambulating and it may or may not protect the toes. It is available in a variety of designs and sizes and can be typically used both indoors and outdoors; some types may be used without a cast, e.g., in the case of a toe fracture. This is a reusable device.	I
82	10669	Cast stockinette	Цутгамал шошго	A knitted, seamless tube of material, typically cotton, designed to stretch and fit any contour of the body. It is typically used as padding under a cast or splint. This is a single-use device.	I
83	10671	Cast sock	Цутгамал оймс	A device in the form of a sock that is designed to be worn over the toes of a foot encased in a cast. This can be to keep them warm and/or for privacy (to conceal the toes when in company with other people). This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	I
84	10672	Cast walking heel	Цутгамал алхах өсгий	A hard rubber device designed to be incorporated directly into the sole of a cast to support the patient while walking. This is a single-use device.	I
85	10676	Catheter care kit	Катетер арчилгааны хэрэгсэл	A collection of sterile devices designed to clean or otherwise maintain catheter patency. This is a single-use device.	I
86	10789	Blood donor chair/couch	Цусны донорын сандал/буйдан	A mains electricity (AC-powered) device used to position the patient in such a manner that a technician/nurse has easy access to the patient's arm for drawing blood. The armboard, that is attached to the chair, typically has lateral and height adjustments so that the patient's arm can be positioned in a location that is easily accessible to whoever is drawing the blood sample. This chair is electrically motorized and can be adjusted so that the donor can lie in a reclining position.	I

87	10790	Cardiopulmonary rehabilitation chair, manual	Зүрх, уушигны нөхөн сэргээх сандал, гарын авлага	A manually-operated device designed to support a cardiac/pulmonary patient in a seated position and to facilitate their placement in an optimal posture for rehabilitation and mobilization. It typically includes an adjustable headrest, back rest, and arms; it may have a design that permits easy patient monitoring. Some types permit limited indoor transportation and/or include a table for patient use (e.g., dining, writing) and safety belts. The device is widely used in acute care settings, and for short- and long-term rehabilitation; it is typically intended for patients with chronic cardiac diseases that benefit from being out of bed, such as those with congestive heart failure.	I
88	10795	Flotation therapy chair	Флотацийн эмчилгээний сандал	A mains electricity (AC-powered) specialized device designed to support a patient in a seated position and minimize pressure points on the patient's body. This is achieved by creating chair contact with as much of the body surface as possible, typically through a series of inflated cushions that simultaneously lift the patient and simulate floating. It is used in cases of decubitus ulcers or where a patient has little remaining body fat and the displacement of body weight is vital for treatment and/or comfort.	I
89	10796	Stand-up chair, electric	Босоо сандал, цахилгаан	An electrically-powered device designed to support a patient with a disability (e.g., geriatric, injured, disabled) in a sitting posture and helps the person via its self-raising mechanism to both to sit down from a standing position and stand up from a sitting position. The electrically-powered features may include a seat that can be elevated and tilted forward to help the person stand, and/or a seat composed of several articulated sections that tilt to facilitate the person's activities and comfort. It is neither a stander (which is intended to support a patient in a prolonged standing position) nor a wheelchair.	I
90	10797	Paediatric chair	Хүүхдийн сандал	A device specially designed to support a child in a sitting posture. Typically included in this group of devices are high chairs for infants, and small-size and/or adjustable chairs suited for use in a child's environment (e.g., a paediatric department in a hospital or in a school).	I

91	10816	Thoracic binder	Цээжний холбогч	A strip or roll of fabric or plastic material designed to support the ribs and chest. This is a single-use device.	I
92	10825	Orthopaedic chisel	Ортопедийн цүүц	A hand-held, single-blade surgical instrument, bevelled on one side, designed to cut and shape bone during orthopaedic surgery. It is hand-held by the operator who uses a surgical mallet or hammer to manually impart a force to the proximal end of the instrument. The distal end (the cutting or shaping edge) is sharp, flat or curved [(concave) - also known as a hollow blade] in design. It is either entirely made of metal (e.g., high-grade stainless steel) or has a metal blade with a handle made of synthetic material (e.g., Tufnol). This is a reusable device.	I
93	10827	Mastoid chisel	Мастоид цүүц	A single-bladed, surgical instrument, bevelled on one side with a flat cutting edge that is used to cut and shape the mastoid process (the large projection of the temporal bone of the skull found immediately behind each ear) during ear/nose/throat (ENT) surgery. It is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. It is typically a one-piece instrument made of high-grade stainless steel. This is a reusable device.	I
94	10828	Nasal chisel	Хамрын цүүц	A single-bladed, surgical instrument, bevelled on one side that is used to cut and shape the nasal bones during ear/nose/throat (ENT) surgery. It is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. The distal end (the cutting or shaping edge) is sharp, often flat, but can be curved (concave) in design. It is typically a one-piece instrument made of high-grade stainless steel. This is a reusable device.	I

95	10869	Circumcision clamp, reusable	Хөвч хөндөх хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed for the controlled removal of the foreskin of the penis during circumcision. It is typically made of high-grade stainless steel and can have various designs, e.g., the Bell clamp. The foreskin is pushed over the bell-shaped protection rod and the glans placed into it. A screw mechanism is tightened so that the foreskin is annular compressed and is cut-off using, e.g., a scalpel, following the compression ring. This is a reusable device.	I
96	10872	Patent ductus clamp	Патент сувгийн хавчаар	A hand-held manual surgical instrument designed for the temporary, atraumatic compression of the patent ductus arteriosus (PDA) in newborn or premature infants, and small children. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and the working end typically has long, curved blades. It is used to occlude either end of the ductus arteriosus prior to permanent closure (e.g., suturing) to enable normal cardiac circulation. This is a reusable device.	I
97	10873	Peripheral vascular clamp	Захын судасны хавчаар	A hand-held manual manual surgical instrument designed to directly compress a peripheral blood vessel typically for haemostasis (arrest or prevention of bleeding) during a procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it has long, slender blades at the working end that are either straight or angled. The device is available in various sizes. This is a reusable device.	I
98	10876	Umbilical cord clamp, reusable	Хүйн хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to temporarily compress the umbilical cord immediately after birth. It is used before cutting or ligating (e.g., with a clip) the cord, and is intended to enable aseptic haemostasis. The design may incorporate features such as serrations on the contact area and/or a security lock. This is a reusable device after appropriate disinfection/sterilization.	I
99	10895	Surgical clip remover, reusable	Мэс заслын хавчаар арилгагч, дахин ашиглах боломжтой	A scissors- or tweezers-like surgical instrument with two blades joined at their proximal end or midpoint intended to be used to for grasping, opening, and removing a tissue clip. This is a reusable device.	I

100	10904	Surgical instrument clip	Мэс заслын багажны клип	A device designed to hold surgical instruments together; typically those with ring handles. This can be for sterilization, storage purposes, and/or to keep surgical instruments used for a particular procedure together prior to being lain out for surgery. It is typically designed like a very large safety pin (i.e., an elongated spring wire clasp with a locking catch onto which the instruments are threaded, usually by the ring handle). It is typically made of stainless steel or chromed metal. This is a reusable device.	I
101	10906	Eyeball tissue retractor, reusable	Нүдний алим татагч, дахин ашиглах боломжтой	An ophthalmic surgical instrument intended to be used explicitly for the temporary mechanical retraction/dilatation of tissues of the eyeball (e.g., iris, sclera) during ophthalmic surgery. It may be a hand-held hook-like device or a self-retaining device. It is typically made of high-grade stainless steel. This is a reusable device.	I
102	10907	Nose clip, single-use	Хамрын хавчаар, нэг удаагийн	A device intended to be used to compress the nose externally, to ensure that airflow is exclusively conducted through the mouth during examinations of the pulmonary function (e.g., spirometry), and/or to stop nosebleeds (epistaxis). It is typically constructed of plastic with rubber or foam tips. This is a single-use device.	I
103	10908	Surgical penile clamp	Бэлэг эрхтний мэс заслын хавчаар	A manual surgical instrument with two blades that are joined at their midpoint, or made of a single alpha-shaped part, intended to stop blood flow to the penis. This is a single-use device.	I
104	10960	Colposcope	Кольпоскоп	An electrically-powered instrument intended to be used for the visual examination and treatment of the female genitalia. It is placed directly at the opening of the vagina which is held open with an inserted speculum during colposcopy. The instrument has a light source and magnifying lenses that allow the physician to view the interior of the vagina, particularly the uterine cervix. This device is used to check for cervical cancer typically after an abnormal Papanicolaou test (PAP) or as a follow up procedure to view an abnormal area seen during an earlier gynaecological examination. During colposcopy, samples of tissue can be taken from the cervix for testing.	I

105	10969	Intermittent venous compression system	Завсарлагатай венийн шахалтын систем	A system used for the noninvasive treatment and prevention of venous disorders and sequelae such as oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE). It functions by intermittently applying pressure to a patient's arms or legs to promote venous blood flow at timed intervals. This is achieved through the cyclical inflation and deflation of a single-chambered stocking, sleeve, or suit applied to the extremities. The system typically consists of a compression pump, control and timing mechanism, tubing, and pneumatic stocking(s) or suit.	I
106	10986	Conductive apron	Дамжуулагч хормогч	A garment designed to prevent its wearer from acquiring a higher electrical potential than the surroundings to protect the wearer and equipment from potential hazards caused by static electricity discharge. It is intended to be worn by healthcare staff and is made of a conductive material that prevents its build-up of static electricity. This is a reusable garment.	I
107	10992	Floor/equipment/cloth electrical conductivity tester	Шал/тоног төхөөрөмж/даавууны цахилгаан дамжуулах чанарыг шалгагч	A battery-powered device designed to measure the conductivity (or its inverse, resistivity) of conductive surfaces on the floor, equipment, and/or garments. It typically consists of an instrument that can measure conductivity from a few to several hundred mA (i.e., from hundreds of Ohms to some mega Ohms) at several voltage levels (e.g., 90V, 500V); and appropriate probes according to the surface to be measured (e.g., heavy, wide-surface probes for floor surface measurements). The device is used to measure conductivity on the floor and equipment surfaces in surgical rooms, in sheets, and personnel garments (e.g., gowns) of surgical staff to help prevent potentially explosive situations.	I

108	10994	Shoe electrical conductivity tester	Гутлын цахилгаан дамжуулах чанарыг шалгагч	A battery-powered device designed to measure the conductivity (or its inverse, resistivity) of shoes. It typically consists of an instrument that can measure conductivity from a few to several hundred mA (i.e., from hundreds of Ohms to some mega Ohms) and two metal plates intended to support the wearer, who stands with a foot on each. Conductivity is usually measured from one plate to the other through both shoes and the wearer's body. The device is used to assess personnel-to-floor conductivity before personnel enter operating rooms and other potentially explosive environments.	I
109	11010	Electronic gravity infusion controller	Цахим хүндийн хүчний дусаах хянагч	An electrically-powered device intended to be used to control and monitor the gravity infusion of intravenous (IV) fluids, providing an alarm (visible/audible) when pre-set limits are exceeded. It is available in two main configurations: 1) a device with an electronic flow sensor (drop counter) that monitors/measures the amount of fluid that passes through the infusion line; or 2) a device that measures the weight of the fluid container and may assist in bolus administration. The predetermined values may be selected by the user, and the device may display flow rate, total volume, and may record data. Some types can be used during arthroscopic procedures.	I
110	11028	Cotton ball	Хөвөн бөмбөг	A device designed as an absorbent, non-sterile spherical mass of cotton or man-made fibres used as a swab to apply medications to or remove fluid/liquid from various parts of the body. It is used within the healthcare sector or the home and is normally available [non-prescription] over-the-counter (OTC). This is a single-use device.	I
111	11049	Infant bed crib top	Нялхсын ор дэр	A covering made of a metallic, plastic, or metallic/plastic combination structure designed for secure/permanent attachment to the top of an infant bed (i.e., a cradle or crib) to protect the infant from accidental damage. Commonly called a crib top, it is typically a rigid structure with a flexible, transparent plastic (e.g., vinyl) covering around it forming a canopy that encloses the bed.	I

112	11062	Crutch pad	Суга таяг	A formed piece of non-slip material (e.g., rubber, glycerin gel, sheepskin) designed to be attached to a part of a crutch to enable firm and comfortable support during use of the crutch, e.g., for use with an axillary crutch or elbow crutch. A crutch will typically be initially provided with the necessary padding, this meaning that this device includes products meant as replacement parts or for additional crutch padding. This is a reusable device.	I
113	11090	Cubicle curtain, reusable	Тасалгааны хөшиг, дахин ашиглах боломжтой	A hanging screen designed to separate a room or a part of a room or cubicle to provide temporary privacy for the occupant. It is used around a bed, in front of a cubicle, or in front of a window. This is a reusable device.	I
114	11095	Foot cushion	Хөлний дэр	A soft pillow or pad used to provide support and comfort to the user's feet, often during the treatment and/or prevention of musculoskeletal or circulatory disorders. The device may simply be used to alleviate pressure on the heels while the patient is sitting, or to slightly elevate the feet to reduce pressure and improve blood circulation in the lower extremity for the prevention of pressure sores and ulcers.	I
115	11100	Wheelchair seat cushion	Тэргэнцэрийн суудлын дэр	A padded device designed to provide support, comfort, and assistance to the occupant of a wheelchair typically by improving posture, providing back and/or side support, compensating for seat height, relieving stress points, and providing pressure alleviation for the buttocks, lumbar region, and the legs, and/or by providing an antislip mechanism. The device is typically situated behind the lower lumbar region of the back or under the buttocks and/or legs while the occupant is seated. This is a reusable device.	I
116	11130	Electrode conductive skin pad, single-use	Электрод дамжуулагч арьсны дэвсгэр, нэг удаагийн	A noninvasive conductive material designed to facilitate electrical conduction between an external electrode (e.g., paddle-type defibrillator electrode) and the skin surface. It is available in various forms such as a thickened gel or polymer medium reinforced by a non-woven material, an adhesive pad/patch, or an absorbent material (e.g., felt) intended to be soaked in a conduction fluid. This is a single-use device.	I

117	11155	Rubber dam, Hevea-latex	Резин далан, Hevea-латекс	A sheet of elastomeric material made of Hevea natural rubber latex (NRL) that is punched with holes and placed over the teeth during dental procedures. It can have a variety of functions such as: 1) to isolate the field of operation from the rest of the oral cavity; 2) to eliminate saliva; 3) to prevent the patient swallowing liquid/dental material; 4) to protect soft tissue from harmful solutions; and 5) to reduce risk of infection. This is a single-use device.	I
118	11158	Dental floss	Шүдний утас	A string-like device formed as thread or tape, used for the removal of plaque and/or debris from the proximal surfaces of teeth and the gingival surfaces of fixed prostheses. It is typically made of a synthetic fibre. After application, this device cannot be reused.	I
119	11169	Cup, denture	Аяга, хиймэл шүд	Thin rubber disks, usually with a hole in their centre to fit over a button that is larger than the hole; when applied on the tissue surface of a denture, the cup adheres to the mucous membrane through suction.	I
120	11171	Denture repair kit, professional	Хиймэл шүд засах иж бүрдэл, мэргэжлийн	A collection of devices used in dentistry by a dentist or dental laboratory technician to repair cracks or breaks in a denture. It will contain the necessary materials and components, e.g., resins, adhesives/glues, mixing utensils, and an applicator. This is a single-use device.	I
121	11172	Preformed complete denture	Урьдчилан бэлтгэсэн бүрэн хиймэл шүд	A prefabricated plastic plate designed to fit over an edentulous maxillary or mandibular alveolar ridge; an entire complement of artificial teeth from one arch is added to create a full denture. It is available in several standard sizes that can be contoured to custom fit the patient's ridge.	I
122	11177	Skin abrasion unit	Арьс үрэлтийн нэгж	A mains electricity (AC-powered) device used for the removal of the skin surface by abrasion (applied by some kind of rotating abrasive tool, e.g., a wire brush or emery disc). It may be used during plastic surgery and can be used for treatments such as the removal of scars, tattoos, pigmented nevi, fine wrinkles, or other irregularities of the skin. This group of devices may reflect old technology.	I

123	11179	Dermatome handpiece, electrically-powered	Цахилгаанаар ажилладаг дерматом гар багаж	An electrically-powered, hand-held surgical instrument designed to cut from the body (harvest) thin donor slices of skin for skin grafting, or to excise small skin lesions, using a dedicated insertable blade (not included). This is a reusable device.	I
124	11182	Dermal hygrometer	Арьсны гигрометр	A mains electricity (AC-powered) electronic device intended to measure the moisture level of the skin (i.e., stratum corneum) through the measure of electrical resistance across the surface. It typically consists of a measurement processing unit which includes a display to which a measuring probe is attached. It may be used for a variety of applications including analysis of hydration levels, water holding capacity, cosmetics, and conditions associated with excess sweating.	I
125	11202	Device operating status label/tag, reusable	Төхөөрөмжийн ажиллагааны төлөвийн шошго/шошго, дахин ашиглах боломжтой	A label or a tag intended to indicate the operating/calibration status (e.g., calibrated, repair required, out of service) and/or sterility record of the device to which it is attached; it does not include any additional functionality and does not include a sterilization process indicator. It is typically constructed from a durable material and may be designed to a specific standard. This is a reusable device.	I
126	11239	Adult nappy	Насанд хүрэгчдийн живх	A disposable undergarment (a nappy or diaper) composed of absorbent material and worn between the legs used to collect urine and faeces from an incontinent adult patient. This is a single-use device.	I
127	11255	Mitral valve dilator	Митрал хавхлагын өргөсгөгч	A hand-operated surgical instrument with specially designed expanding blades designed to dilate mitral stenosis during mitral valve surgery. It typically has forceps-like handles that include an adjustable, self-retaining mechanism to hold the blades at the desired expanded position. It is typically made of high-grade stainless steel and is available in various sizes. This is a reusable device.	I
128	11256	Common bile duct dilator	Нийтлэг цөсний сувгийг тэлэгч	A hand-held manual surgical instrument designed to dilate the common bile duct, i.e., the union of the cystic and hepatic ducts. It typically consists of a slender hollow or solid body instrument made of metal or plastic in a cylindrical form. It is available in a variety of sizes (diameters) and flexibilities. This is a reusable device.	I

129	11260	Nasal dilator	Хамрын өргөсгөгч	A surgical instrument intended to dilate nasal structures/passages during ear/nose/throat (ENT) procedures. It typically consists of a slender and cylindrical body, hollow or solid, made of metal or plastic and available in a variety of sizes and flexibilities. This is a reusable device.	I
130	11261	Pulmonary dilator	Уушигны өргөсгөгч	A surgical instrument used during a surgical procedure to enlarge or open/clear a pulmonary structure. This is a reusable device.	I
131	11262	Rectal dilator, reusable	Шулуун гэдсийг тэлэгч, дахин ашиглах боломжтой	A surgical instrument designed to dilate the anal sphincter and canal when the size of the anal opening may interfere with its function or the passage of an examining instrument. This is a reusable device.	I
132	11263	Tracheal surgery dilator, reusable	Гуурсан хоолойн мэс засал өргөсгөгч, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used during surgical intervention of the trachea to dilate tracheal structures/passages, typically during the creation of a tracheostoma and/or for expanding the margins of a tracheostoma to assist in the insertion of a tracheostomy tube. It can be of various designs and sizes, e.g., a slender hollow or solid body made of metal, plastic or other suitable material in a cylindrical form, or a scissors-like instrument that when activated by closing the two ringed-handles, two or three blunted curved prongs expand in opposite directions. This is a reusable device.	I
133	11264	Fallopian tube dilator	Фаллопийн хоолойг тэлэгч	A surgical instrument used for the mechanical augmentation (stretching and enlarging) of the internal lumen of the Fallopian tube during a gynaecological/obstetrical procedure. It is a rod-like device with a long, slender, hollow or solid body and a rounded nose at its distal end, that is available in a variety of sizes and typically made of metal. This is a reusable device.	I

134	11265	Urethral dilator, reusable	Шээсний сүв өргөсгөгч, дахин ашиглах боломжтой	A slender, solid or hollow, flexible or semi-flexible, surgical instrument designed to dilate the urethra, mainly to treat strictures of the urethra, to facilitate the extraction of stones (renal calculi), and/or to facilitate catheter placement. It is typically made of metal or plastics and is available in a range of sizes; it may include a mechanical expanding mechanism. The device may also include a dial to show the degree of expansion of the urethra and as such is usually considered a urethrometer. Urethral bougies are also used for urethral dilatation. This is a reusable device.	I
135	11266	Fixed-diameter cervical dilator, reusable	Тогтмол диаметртэй умайн хүзүүг тэлэгч, дахин ашиглах боломжтой	A rod-like, solid surgical instrument designed to dilate the cervical canal after its insertion through the cervical os. Commonly known as a uterine dilator, it is typically made of metal or plastic material and has a tapered, rounded distal tip. It may have one diameter or two different size diameters, one at each end of the instrument. The device is typically available in a set of graduated sizes that are applied in succession. It is used to allow the passage of a curette or other instruments into the uterus and/or enlarge the uterus prior to surgical intervention by pressing on the inner walls of the uterus. This is a reusable device.	I
136	11267	Vaginal dilator	Үтрээний өргөсгөгч	A firm rod-like instrument designed to mechanically enlarge the vagina during examination, treatment, and/or during surgical procedures. It can also be inserted into the vagina and worn for prescribed periods to maintain vaginal patency after surgery (e.g., transgender vaginoplasty) or radiation treatments, or to stretch the vaginal orifice (the introitus) when it is unusually narrow due to a birth defect or vaginismus (the inability of the vaginal sphincter to relax). The device is typically available in a set of graduated sizes and the user is typically instructed to begin with the smallest diameter, increasing in size until satisfactory patency is achieved. This is a reusable device.	I

137	11268	Vascular dilator, reusable	Судасны өргөсгөгч, дахин ашиглах боломжтой	A hand-held surgical instrument designed for insertion into a blood vessel (the vasculature) to unblock, enlarge or measure the internal diameter of the vessel during a surgical intervention. It is a rod-like device with a long, slender, body that terminates with a bulbous, cylindrical distal tip of various shapes and sizes. Commonly known as a vessel dilator or vascular probe, it is available in a variety of sizes (diameters and lengths) and flexibilities. It is typically made of metal or plastic materials. This is a reusable device.	I
138	11289	Dissection kit	Диссекцийн иж бүрдэл	A collection of various instruments and materials intended to be used to perform dissections. This is a reusable device.	I
139	11290	Open-surgery dissector	Нээлттэй мэс заслын диссектор	A hand-held surgical instrument, usually spoon-shaped or rounded at the working end, used to separate a soft tissue or body structure from another. It is used in general or plastic surgery and is usually designed with a handle which continues into a shaft that terminates at the distal end with a tip. The tip may be pointed or flat, sharp or blunt, and angled or straight from the shaft. It is made of high-grade stainless steel, comes in various shapes and sizes. This is a reusable device.	I
140	11291	Distractor	Анхаарал сарниулагч	A hand-operated, surgical instrument that is used to pry joint surfaces apart and to hold them in that position to enable a surgical procedure to take place. This device may also be used on a long bone in lengthening procedure, i.e., in leg lengthening where the limbs are of unequal length, in which case it is usual for it to be attached to the bone with pins. In this latter indication an external fixation device may be used. It can also be used for spinal stabilization, or maxillofacial (intraoral) procedures. This is a reusable device.	I
141	11297	Douche kit	Douche иж бүрдэл	A packaged collection of items used in combination with a douche unit or device in order to provide treatment to a given part or area of the patient's/user's body. This is a single-use device.	I

142	11301	Closed-wound/centesis drainage receptacle	Хаалттай шарх/центезийн ус зайлуулах сав	A sterile container designed to be connected to an invasive drain/drainage catheter (not included) to collect fluids or purulent material being removed during drainage of a body cavity, a closed-wound, and/or the bile duct; it is not intended for drainage of cerebrospinal fluid (CSF) or blood. It is typically in the form of a bottle, bag, or bulb with fluid volume markers, and might include a hand-operated pump (e.g., suction bulb) and tubing; it does not include any invasive components or powered devices. This is a single-use device.	I
143	11305	Closed-wound drain, non-bioabsorbable	Хаалттай шархны суваг, био шингэдэггүй	A tube-like, non-bioabsorbable device designed to establish a channel for the removal of fluid or purulent material from a closed-wound or an infected area, typically used with a closed drainage system that applies a low negative pressure through the drain lumen. It is typically made of silicone and comes in various designs/sizes for a variety of surgical applications (e.g., orthopaedic, plastic/reconstructive, neurological, gynaecological, thoracic, cardiovascular, general surgery). It might include disposable devices dedicated to drain insertion/function (e.g., sharp trocar blade, connector), however it does not include any fluid collection bags/containers. This is a single-use device.	I
144	11313	Dressing jar	Хувцас солих сав	A cylindrical vessel designed to keep dressings and bandages in a clean container (environment) and ready for use. It is typically made of high-grade stainless steel, glass, or less frequently sterilizable plastic material (e.g., polypropylene) and will have a tightly sealed cover (lid). It is used in, e.g., an examination room, a doctor's surgery, or where surgical procedures are performed in the hospital. This is a reusable device.	I

145	11321	Synthetic polymer liquid barrier dressing	Синтетик полимер шингэн саадтай боолт	A liquid preparation, typically sterile, composed of synthetic polymer materials that form a thin protective film, after evaporation, when applied to the skin. The film may help to reduce skin exposure to external contaminants, protect the skin in sensitive areas (e.g., around a stoma), augment the adherence of medical adhesives, and/or provide a protective interface when removing medical adhesives. The device may be presented as a wipe, swab, or spray. After application, this device cannot be reused.	I
146	11325	Dressing, nonadherent	Наалт, үл нийцэх	A sterile wound covering designed not to stick (i.e., adhere) to the secretions/exudates from a wound, thereby decreasing the potential for trauma to the wound and/or causing discomfort upon dressing removal. It is available in various forms (e.g., single-layered fine mesh, multi-layered pad), and may be impregnated with a therapeutic substance (e.g., an antibiotic ointment). Its nonadherent properties typically come from a material coating (e.g., silicone or petrolatum). It is used as a primary or secondary dressing in combination with other products for postoperative wounds, ulcers, burns, skin grafts, minor cuts, abrasions, lacerations, or puncture sites. This is a single-use device.	I
147	11346	Driver/extractor, bone nail-pin	Жолооч / олборлогч, ясны хадаас	A surgical driver/extractor designed to insert and extract nails and/or pins into or from bones by applying linear force or torque during orthopaedic procedures. Lots more text supplied but not included. AF.	I
148	11371	Ear canal irrigation kit, single-use	Чихний сувгийн усалгааны хэрэгсэл, нэг удаагийн хэрэглээ	A collection of items intended to be used to flush cerumen (ear wax) out of the ear canal during an ear/nose/throat (ENT) procedure. It consists of a manual syringe and other accessory items. This is a single-use device.	I
149	11391	Eikonometer	Эйконометр	An ophthalmic instrument for diagnosing aniseikonia, a condition in which the image of an object as seen by one eye differs in size or shape from that seen by the other.	I

150	11425	Electrode conductive medium	Электрод дамжуулагч орчин	A non-sterile substance intended to be used as a medium for the efficient transmission of electrical signals between an electrode and the body, and for the reduction of the isolation properties of the skin. It is typically in the form of a gel, paste, spray or cream and is usually used in electrocardiography, defibrillation and diathermy. After application, this device cannot be reused.	I
151	11436	Cystoscopic electrode	Цистоскопийн электрод	A sterile electrical conductor intended to be placed in contact with the bladder to stimulate it and/or record its electrical activity for diagnostic examination. This is a single-use device.	I
152	11440	Analytical scalp electrode, single-use	Аналитик хуйханд зориулсан электрод, нэг удаагийн хэрэглээ	A noninvasive electrical conductor designed to be attached to the scalp surface of a patient to transmit changes in the electrical potential of various areas of the brain for recording/monitoring by a connected parent device [i.e., an electroencephalograph (EEG), sleep, or evoked potential recording device]. It typically consists of a small cup/disk with a conductive surface (e.g., tin, gold, conductive plastic) and a length of insulated connecting wire; it may be available as a set of multiple electrodes (e.g., EEG electrodes) however it is not a preconfigured EEG cap. This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	I
153	11441	Electromyographic needle electrode, single-use	Электромиографийн зүү электрод, нэг удаагийн	A sterile electrical conducting device designed to be inserted percutaneously into muscle or nerve tissue to detect bioelectrical signal activity. It is a needle-like device (a needle electrode with an electrical connector at the proximal end) that is connected to an electromyograph (EMG) with a dedicated cable/lead. The EMG records the electrical signals and converts them into a readable graph format; it is not primarily intended for nerve stimulation. This is a single-use device.	I

154	11442	Electronystagmograph electrode	Электронистагмографы н электрод	An electrical conductor that is applied around the orbit to transmit electrical signals during evaluation of the rapid lateral back and forth movement of the eye (nystagmus). Several of these devices will be typically attached to the skin, e.g., above and under the eye and connected to an electronystagmograph (ENG) that records the electrical activity. This is a single-use device.	I
155	11444	Electroconvulsive therapy system electrode/lead, single-use	Цахилгаан цочроох эмчилгээний системийн электрод/хар тугалга, нэг удаагийн хэрэглээ	A wire insulated with non-conductive material except at the electrode at its distal end, that is applied to a patient's head to transmit an electrical charge from an electroconvulsive therapy (ECT) system console/generator to the brain during electroconvulsive therapy (also known as electroshock therapy). This is a single-use device.	I
156	11452	Nasopharyngeal electrode	Хамар залгиурын электрод	An electrical conductor intended to be temporarily placed in the nasopharyngeal region to record electrical activity. This is a single-use device.	I
157	11460	Electroretinograph electrode	Электроретинографын электрод	A non-sterile electrical conductor intended to be applied adjacent to the eye to transmit an electrical signal during an evaluation of the eye's retina. It is typically in the form of a conductive thread that is laid along the lower eyelid in contact with the tear film and cornea. The general device that records this electrical activity is the electroretinograph (ERG). This is a single-use device.	I
158	11461	Sweat-induction iontophoresis system electrode, single-use	Хөлс индукцийн ионтофорезийн системийн электрод, нэг удаагийн хэрэглээ	A dedicated, non-sterile, active, electrical conductor that is a component of a sweat-induction iontophoresis system, for transcutaneous delivery of water-soluble electrolytic substances containing a sweat inducing agent (typically pilocarpine). It typically consists of skin contact portion, which may accommodate or include the sweat inducing agent, a lead wire which connects to a sweat-induction iontophoresis system generator, and may include the return electrode/contact. This is a single-use device.	I

159	11487	Electrostatic voltage detector	Цахилгаан статик хүчдэл мэдрэгч	An instrument designed to indicate the presence of static electricity in objects and the surrounding atmosphere. It typically uses a probe that is sensitive to electrostatic charges and able to detect the quantity and polarity of electrostatic charges. The device provides results on a meter or on a digital read out.	I
160	11507	Neurosurgical bone flap elevator	Мэдрэлийн мэс заслын ясны лифт	A hand-held, manually-operated surgical instrument used to pry up, lift, and position a bone flap in a neurosurgical procedure upon the skull. Also known as a bone flap elevator it is typically a one-piece instrument that consists of a robust, long, round-nosed, dull blade at the distal working end and a handle at the proximal end. It is typically made of high-grade stainless steel. This is a reusable device.	I
161	11522	Emesis bowl, reusable	Бөөлжих аяга, дахин ашиглах боломжтой	A device designed as a receptacle for vomit or oral secretions, typically from an immobile patient (e.g., one confined to bed, chair, or wheelchair). It is typically shallow and kidney-shaped, and therefore commonly known as a kidney bowl or basin. It is typically made of high-grade stainless steel or durable plastic materials, and is also commonly used to hold and transport medical/surgical materials or instruments for a procedure. This is a reusable device.	I
162	11578	Endoscope-light transformer	Дурангийн гэрлийн трансформатор	A constant-voltage transformer designed to deliver energy to the lamp (e.g., halogen) of some rigid endoscopes (e.g., otoscopes, ophthalmoscopes) and illuminators (e.g., laryngeal, nasopharyngeal). It is connected to the mains electricity voltage (e.g., 120 V, 240 V) at the input and delivers a low voltage (e.g., 2.5 V) at the output. The device is intended to deliver a steady voltage to endoscopic lights to provide constant illumination during medical/surgical procedures.	I
163	11583	Enema tip, single-use	бургуйны үзүүр, нэг удаагийн	A device intended to be connected to an enema tube to facilitate delivery of an enema solution into the rectum; it is not intended to be used during colonic irrigation. It is typically designed as a one-piece, synthetic polymer, moulded nozzle that may have a slight bulb shape at the distal end to improve retention in the rectum. This is a single-use device.	I

164	11588	Incontinence sensor/alarm	Шээс задгайрах мэдрэгч / дохиолол	A electrically-powered electronic device intended to provide an audible, visible and/or tactile signal to alert the patient or a caregiver when a small quantity of urine and/or faeces incontinently released is detected by a sensing mechanism (e.g., a sensor pad or detector). It is typically used in the treatment of nocturnal bedwetting (enuresis) in a child or a person with a disability, and may be used in the home or a healthcare facility.	I
165	11606	Ether anaesthesia dropper	Эфирийн мэдээ алдуулалтын дусаагуур	A clear glass container filled with ether intended to be used to dispense the ether onto a cloth or mesh which is held over a patient's nose and mouth, creating a large surface area, to anaesthetize the patient through room air vaporization of the ether. This device reflects old technology that may be used under certain circumstances. This is a reusable device.	I
166	11625	Arm exerciser	Гарны дасгалын төхөөрөмж	A device designed to provide variable resistance to the movement of the upper extremity in order to maintain, develop, or restore arm muscle strength and endurance.	I
167	11627	Exerciser, chest	Дасгалын төхөөрөмж, цээж	A device designed to provide isokinetic resistance to the contraction of the chest muscles in order to maintain, develop, or restore chest muscle strength.	I
168	11628	Exerciser, finger	Дасгалын төхөөрөмж, хуруу	A device designed to provide resistance to bending fingers at certain joints in order to increase muscle strength, range of motion of muscle tendon, dexterity, and coordination.	I
169	11629	Exerciser, hand	Дасгалын төхөөрөмж, гар	A device designed to provide resistance to the squeezing of the hand into a fist in order to increase the strength of the hand, fingers, wrist, and forearm muscles.	I
170	11634	Exerciser, respiratory	Дасгалын төхөөрөмж, амьсгал	A device that indicates a patient's breathing volume or flow and provides an incentive to the patient to improve his or her ventilation. This is a reusable device.	I
171	11636	Exerciser, shoulder	Дасгалын төхөөрөмж, мөр	A device designed to provide variable resistance to the movement of the shoulders in order to maintain, develop, or restore shoulder muscle strength and endurance.	I

172	11638	Trapeze bar exerciser	Трапец бар дасгалын төхөөрөмж	A full-body exercise apparatus designed to improve the range of motion around the joints by stretching the major muscle groups in the body using bars. It may consist of short moveable bars that hang from springs supported by a metal frame installed on a horizontal table, or of trapezoid-like steel bars that hang from chains supported by a metal frame attached to a bed; both assist in stretching exercises of the upper limbs, trunk, and lower limbs, and also help users to change position in bed. The device is mainly intended to improve the flexibility of muscles; it can also increase muscle strength, balance, and coordination, and/or increase cardiovascular endurance.	I
173	11653	Eye wash cup	Нүд угаах аяга	A receptacle designed to fit around the eye socket and which is filled with warm water or an eyewash solution and placed over the eye to allow the liquid to wash the affected eye. It is typically used as a first line measure when dust or other particles have inadvertently entered the eye. It is usually made of plastic, glass or a ceramic material and is intended for use in the home, in a clinical setting, or for hospitalized or institutionalized patients. This is a reusable device.	I
174	11655	Eye irrigation kit	Нүдний усалгааны иж бүрдэл	A collection of items that includes a solution [typically sterile sodium chloride and buffer (the eyewash)] and an application syringe or cup intended to be used to flush the eye of irritating particulates/chemicals, or to help stimulate tired eyes. Dressings, gloves, and other supplies may also be included. This is a single-use device.	I
175	11661	Eye pad	Нүдний дэвсгэр	A cushion-like device made of various materials (e.g., gauze, cotton) intended to protect the eye or to absorb eye secretions. This is a single-use device.	I

176	11675	Enteral feeding bag/bottle	Хооллох уут / шил	An empty pouch or bottle made of plastic or glass intended to contain a fluid of nutrients for administration to a patient through an enteral tube that provides direct access to the stomach, duodenum, or jejunum; it is not intended for intravenous (IV) administration. It may be composed of one or more chambers and might be provided with a short length of tubing; however, it does not include other associated items (e.g., clamp, spike) [i.e., not an enteral feeding set] and is not intended to be directly connected to the invasive feeding tube. This is a single-use device.	I
177	11684	Fenestrometer	Фенестрометр	Instrument used primarily for measuring eardrum performance, (e.g., during myringotomy).	I
178	11702	Bone file	Ясны хөрөө	A hand-held, manually-operated, instrument that has various forms of fine ridged cutting surfaces along part of or all of its working end that is used for cutting and smoothing (filing) bone tissue. It is made of high-grade steel and may be a one-piece instrument with a handle at the proximal end. The distal end may be flat or profiled (e.g., flat on one side and convex on the other). This device is typically used in orthopaedics, plastic surgery and dentistry. This is a reusable device.	I
179	11703	Callous file/rasp, reusable	Дахин ашиглах боломжтой, дуугүй файл/расп	A hand-held manual instrument with a surface(s) of coarse and/or fine grooves or teeth at the distal working end designed to be rubbed back and forth over the skin to remove callouses (i.e., hardened and thickened protrusions of skin commonly known as hard skin). This is a reusable device.	I

180	11711	Non-respiratory device ambient air filter	Амьсгалын аппаратын бус орчны агаар шүүгч	A filter designed to be installed in a non-respiratory device to clean the ambient air that passes through it to facilitate device operation/management. It is composed of tightly woven materials which remove particulates/impurities and, depending on how the device is installed, reduce the concentration of impurities to or from the air. It is typically used in devices that draw in ambient air for use as part of their function (e.g., to cool electrical motors, liquidize air as in a flotation therapy bed, wash/disinfect surgical instruments), or devices that, having used the air as a drive gas, exhaust it into a room via the filter. After installation, this device cannot be reused.	I
181	11719	Finger-stall	Хурууны зогсоол	A device intended to be worn on an examiner's finger to prevent contamination between patient and examiner. This is a single-use device.	I
182	11744	Respiratory gas flow timer	Амьсгалын замын хийн урсгалын таймер	An electronic device intended to measure the length of time of gas circulation, typically compressed gases delivered at a fixed pressure through a section of conduit or pipe. This device usually consists of a housing containing the electronics and measuring device(s), an input and output port for circulation of the measured gas and an analogue or digital time display that shows the elapsed time in discrete intervals (e.g., 0.10 hours) up to several hours. It is mainly used to measure the time of respiratory gas delivery [e.g., compressed medical air or oxygen (O2)] during emergency, chronic pulmonary illness, or tests; some gas flow timers are combined with gas flowmeters.	I
183	11751	Dressing, high-absorbent, fluff	Наалт, өндөр шингээлттэй, хөвсгөр	A pad composed of a loose, soft, downy mass of cotton that is used to cover wounds and absorb exudates. This is a single-use device.	I
184	11772	Footstool	Хөлийн сандал	A platform, with or without legs, designed for a person to stand upon to compensate for differences in height or to place the feet/legs upon for rest/support when seated. It may be conductive to reduce the risk of static electricity when used in areas such as examination rooms or operating theatres, or non-conductive.	I

185	11775	Open-surgery biopsy forceps, reusable	Нээлттэй хагалгааны биопсийн хямсаа, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to obtain soft-tissue biopsy specimens from an open surgical wound or from within/near a large natural orifice (e.g., vagina, rectum) for histopathological examination; it is not intended for endoscopic or catheterized access. It is a metallic forceps-like instrument with a distal mechanism designed to bite/punch the biopsy sample and hold it for extraction when the handles are squeezed together. It is not designed for cutting bone (i.e., not a rongeur). This is a reusable device.	I
186	11777	Dressing forceps	Наалтын хямсаа	A hand-held manual surgical instrument designed to apply or manipulate a dressing on tissue during a surgical intervention. It typically has two main designs: 1) a self-retaining, scissors-like design with ring handles with the working end having a variety of blade designs, e.g., straight, angled, or curved with grooves and serrations to provide grip; and 2) tweezers-like design (may be a micro/fine instrument) with two conjoined blades with serrated tips at the working end. It is made of high-grade stainless steel and is available in various sizes. This is a reusable device.	I
187	11782	Gallbladder forceps, self-retaining	Цөсний хүүдийн хямсаа, өөрийгөө тогтооно	A surgical instrument used for grasping and manipulating the gallbladder during a surgical intervention. It typically has a scissors-like, self-retaining, design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have grasping blades that are shaped as oval or triangular rings. The blades are serrated to provide extra grip on the gallbladder. This is a reusable device.	I

188	11785	Intestinal forceps	Гэдэсний хямсаа	A hand-held manual surgical instrument designed for the atraumatic holding/grasping and/or compression of intestinal structures, tissues, and some organs during a surgical procedure. It typically has two main designs: 1) a self-retaining, scissors-like design with ring handles; or 2) a large tweezers-like design with straight blades that are conjoined at the proximal end. It is available in various sizes and the working end can terminate in a variety of blade designs (e.g., loops or triangles that have parallel grooves or serrations for grip, or inward curved profiles to grasp over or around). It is made of high-grade stainless steel. This is a reusable device.	I
189	11787	Lung forceps	Уушгины хямсаа	A hand-held manual surgical instrument designed to atraumatically grasp, manipulate, or support the lung during a surgical intervention. It typically has a scissors-like, self-retaining, design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will have grasping blades that are shaped as oval rings or triangular-shaped loops that may be serrated to provide better grip on the lung tissue. This is a reusable device.	I
190	11791	Dressing/utility forceps, scissors-like, reusable	Наалт/хэрэгслийн хямсаа, хайч шиг, дахин ашиглах боломжтой	A hand-held manual instrument designed primarily for non-dedicated grasping of devices, sponges and/or dressings during a procedure; it is neither intended for tissue manipulation nor endoscopic use. It has a scissors-like hinged design with ring handles and blades (non-cutting) that may be available in a range of sizes or designs. It may be intended for use at a specific anatomy. This is a reusable device intended to be sterilized prior to use.	I
191	11792	Sterilizer transfer forceps	Ариутгагч дамжуулах хямсаа	A hand-held, scissors-like, manual surgical instrument whose blades, distal to the pivot point, form open circles, loops, or ellipses designed to grasp and handle sterile instruments, packages, or implants, especially directly from a sterilizer. It is typically made of high-grade stainless steel. This is a reusable device.	I

192	11798	Utility forceps, reusable	Хэрэглээний хямсаа, дахин ашиглах боломжтой	A hand-held manual surgical instrument used for general-purpose grasping/picking up of other devices/objects typically with the intention of maintaining a sterile condition or avoiding direct hand contact because of unhygienic/unfavourable conditions. It typically has a scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have grasping blades that are elongated or shaped as large oval or triangular rings. The blades are usually serrated to enhance grip on the objects being picked up. This is a reusable device.	I
193	11799	Forceps jar	Хавчаартай сав	A tall, slender, cylindrical vessel designed for holding various types of forceps prior to and during a surgical intervention or an examination in an operating room (OR) or examination room. It is typically made of high-grade stainless steel or sterilizable plastic material (e.g., polypropylene) and will have a wide or weighted base to give it stability. It may have a hinged lid with a semicircular notch in its forward edge so that the handles of the forceps can protrude. The jar may hold a disinfecting solution while in use. This is a reusable device.	I
194	11802	Forensic evidence kit	Шүүх эмнэлгийн нотлох баримтын багц	A tray, kit or set that contains all of the necessary instruments, specimen collection and processing materials for forensic evidence. This is a reusable device.	I
195	11850	Gasometer	Газометр	A calibrated container that is usually balanced over water and intended to measure lung gas volumes. Also known as a wet spirometer. This device reflects old technology.	I
196	11880	Autopsy glove	Задлан шинжилгээний бээлий	A device worn over the hands of a pathologist that acts as a barrier of protection specifically for autopsy procedures. This is a single-use device.	I

197	11885	Utility glove	Хэрэглээний бээлий	A hand-worn device intended to be used by healthcare personnel to protect the hands from contamination and/or injury during paraclinical/non-clinical activities (e.g., handling waste, instrument reprocessing). It may be available in a variety of forms or with specific attributes (e.g., rubber, reinforced, heat resistant, with extended sleeve), however is not intended to protect from extreme cold/cryogenic temperatures (i.e., not a cryogenic safety glove). This is a reusable device.	I
198	11894	Gonioscope	Гониоскоп	A device intended to be used to examine the angle of the anterior chamber of the eye and for demonstrating ocular motility and rotation.	I
199	11902	Surgical gown, reusableI	Хагалгааны халат, дахин ашиглах боломжтой	A garment intended to be worn by healthcare staff over a scrub suit to cover the arms, trunk, and upper legs, during a surgical procedure; it may be fluid resistant or impervious to fluids. Also known as an operating room (OR) gown, it is used during surgical procedures to help protect both the patient and operating room personnel from the transfer of microorganisms, body fluids, and particulate material. This is a reusable garment intended to be laundered after each use.	I
200	11905	Patient gown, reusable	Өвчтөний халат, дахин ашиглах боломжтой	A garment made of natural and/or synthetic materials (e.g., cloth, plastic) intended to be worn by patients in a clinical setting (e.g., during hospitalization, during examination in a doctor's office). A patient gown is usually short-sleeved and is closed by ties at the back/side of the garment. This is a reusable garment.	I
201	11937	Gustometer	Густометр	A battery-powered device intended to measure the threshold of a patient's taste by applying a variable direct current to the tongue. One electrode is placed on the tip of the tongue or at another midline point, e.g., the nose, and the other electrode, usually the anode, is applied to various points on the sides of the tongue. The threshold current used to detect an acid taste should be approximately equal on the two sides of the tongue.	I

202	11950	Percussion hammer, manual, reusable	Цохилтот алх, гарын авлага, дахин ашиглах боломжтой	A hand-held manual instrument designed to be used by an examining physician to gently tap near a patient's joints to test reflexes (e.g., patellar, ankle reflexes). It consists of a handle and shaft typically made of stainless steel, and has a head that may be ring, wedge, or dome shaped and is made of a soft material (e.g., rubber or plastic). Some devices may be fitted with a spike, brush, or other detachable component at the proximal end that can be used for neurological examinations. This is a reusable device.	I
203	11961	Face splash shield, single-use	Нүүрний уснаас хамгаалах хамгаалалт, нэг удаагийн	A clear, transparent guard intended to provide full face cover, to protect (shield) the healthcare worker from blood and other body fluid splashes while performing a clinical or laboratory procedure. It is commonly known as a splash shield. This is a single-use device.	I
204	11963	Headlight	Гэрэл	A device (a lamp and headband), designed to be worn on an operator's head. It is mounted on a headband or a helmet frame and situated on the user's forehead providing light directly into the field of vision during surgical, diagnostic, or therapeutic procedures. The light typically consists of a magnifying lens, a reflector and a connection for the fibreoptic cable to transfer cold-light from a light source or electrical power from a battery pack.	I
205	11977	Heart sound simulator	Зүрхний дууны симулятор	An instrument designed to electronically produce normal heart sounds and murmurs, imitating the timing, pitch, and quality of actual heart sounds, to train healthcare personnel to recognize the sounds.	I
206	11989	External electric-heating core temperature regulation system pad	Гаднах цахилгаан-халаалтын үндсэн температурыг зохицуулах системийн дэвсгэр	An electrically-heated underlay or overlay intended to provide heat under or over a patient as part of an external electric-heating core temperature regulation system intended to elevate a patient’s core body temperature, typically in surgical and intensive care settings. The underlay/overlay typically contains electrical heating elements or cables supplied with energy by a dedicated control unit. The underlay/overlay is available in a variety of lengths, widths, and thicknesses to accommodate body size and application (e.g., adult/paediatric, full-/partial-body). This is a reusable device.	I

207	11991	Heel stirrup	Өсгийтэй дөрөө	A device intended to be used during a medical/surgical procedure to steadily hold a patient's foot (feet) by cradling the heel or the whole foot. It is typically attached to an operating table, examination table, or treatment chair and is considered an accessory to these devices. This device is typically constructed of metal and plastic and used in pairs mainly for patients in lithotomic position for obstetrical, urological, colonic, or rectal procedures. This is a reusable device.	I
208	12030	Ether anaesthesia hook	Эфирийн мэдээ алдуулалтын дэгээ	A hook-like metallic device designed to be positioned in a patient's mouth to deliver vaporized ether for inhalation anaesthesia. This is a reusable device.	I
209	12032	Intrauterine device removal hook, reusable	Умайн доторх төхөөрөмжийг зайлуулах дэгээ, дахин ашиглах боломжтой	A hand-held manual instrument intended to be used by a physician for the extraction of an intrauterine device (IUD). The proximal end forms a handle which may vary in shape and which tapers toward the distal end to form a hook. It is typically made of high-grade stainless steel. This is a reusable device.	I
210	12036	Eye muscle hook, reusable	Нүдний булчингийн дэгээ, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to be used to locate and hook extraocular muscles, typically during strabismus correction surgery. It is a slender instrument with a bent blunt distal end and a handle, available in several sizes; some hooks with a very fine shank are designed to allow suture placement behind the hook, providing greater suture security (i.e., better muscle attachment). It is not designed for intraocular use. This is a reusable device.	I
211	12042	Hot water bottle	Халуун усны сав	An empty flexible container, typically with a relatively narrow neck, that is usually filled with either hot or cold water, intended to apply heat or cold therapy to an area of the body. This is a reusable device.	I

212	12082	Ice bag	Мөсөн уут	A flexible container (a bag) designed to be filled with ice to provide dry cold therapy to a limited external surface area of the body. It is typically made of plastic or rubber materials with a detachable cap that can be threaded or fixed to the bag once it is filled with ice. It may include a holder or attachments to facilitate fixing or holding the device in place against the body surface of the patient. It can be used to alleviate pain and/or promote healing in minor injuries of the body, e.g., after minor surgery, bruises, tissue swelling, or for application around the neck or limbs. This is a reusable device.	I
213	12094	Ankle immobilizer	Шагайны хөдөлгөөнгүйжүүлэгч	A non-rigid device, usually made of a fabric, used to temporarily render the ankle immovable to support the healing of an injury or surgical wound. This is a reusable device.	I
214	12095	Arm immobilizer	Гарны хөдөлгөөнгүйжүүлэгч	A non-rigid device, usually made of a fabric, used to temporarily render the arm immovable, typically at the shoulder and elbow, to support healing of an injury or a surgical wound. This is a reusable device.	I
215	12096	Elbow immobilizer	Тохойны хөдөлгөөнгүйжүүлэгч	A non-rigid external device, usually made of a fabric, used to temporarily render the elbow immovable to support healing of an injury or a surgical wound. This is a reusable device.	I
216	12097	Infant limb immobilizer, reusable	Нярай хүүхдийн мөчний хөдөлгөөнгүй, дахин ашиглах боломжтой	A non-rigid device, usually made of a fabric and/or plastic materials, used to temporarily render parts of an infant's body immovable, e.g., the arms and/or feet while the patient undergoes therapeutic or diagnostic interventions. It will typically be used to prevent the patient from interrupting an intravenous (IV) infusion, pulling out a catheter, or interfering with wound care. This is a reusable device.	I
217	12099	Knee immobilizer	Өвдөгний хөдөлгөөнгүйжүүлэгч	A rigid external support used to temporarily render the knee immovable, either preoperatively or following injury or arthroscopy. This is a reusable device.	I
218	12101	Shoulder immobilizer/orthosis, reusable	Мөрний хөдөлгөөнгүйжүүлэгч/ортез, дахин ашиглах боломжтой	A prefabricated (non-customized) non-rigid wearable device designed to support, align, and/or temporarily immobilize the shoulder joint to support the healing of an injury or surgical wound. It will typically consist of straps, buckles, fasteners, or be in the form of a sling. This is a reusable device.	I

219	12102	Wrist immobilizer, reusable	Бугуйны хөдөлгөөнгүй, дахин ашиглах боломжтой	A rigid external support designed to temporarily render the wrist immovable as therapy for non-displaced fractures, strains, sprains, and muscle injuries of the wrist. The rigid support typically includes a wrap which may be held in place with a fastener such as Velcro; it is available in a variety of sizes. This is a reusable device.	I
220	12143	Instrument tray, reusable	Багажны тавиур, дахин ашиглах боломжтой	A container intended to provide a suitable platform for placing/containing many medical/surgical/dental instruments and related items for use during a clinical procedure; it might, in addition, be used during, but not dedicated to, reprocessing/sterilization procedures. It is a receptacle in one of a variety of designs, typically with moulded positions for placing the instruments; it might include a lid and/or removable identification tags. This is a reusable device.	I
221	12223	Bucket liner	Шанаганы доторлогоо	A device used to line a bucket in order to create a barrier to contamination and serve as the basis for preventing cross-contamination, reducing cleaning requirements, and protecting the bucket surface finish. This liner will typically be used in swab buckets, commonly known as kick buckets. This is a single-use device.	I
222	12229	Kinesthesiometer	Кинестезиометр	A mechanical instrument used to test a patient's degree of muscles sensation in an extremity (e.g., an arm) in response to movement, weight, and position. Kinesthesia is the sense by which postion, weight, and movement are perceived.	I
223	12234	Blade, knife	Хутга, ир	A cutting device made of a flat piece of metal, usually stainless steel, with an edge designed for various cutting purposes. This device is designed to be attached either to a handle or to another device.	I
224	12235	Scalpel handle, reusable	Скальпель бариул, дахин ашиглах боломжтой	A device that is an interchangeable component of a scalpel and that functions as a handle designed to mount a compatible blade. This device with the blade become a single-bladed surgical instrument intended to be used by a physician for cutting or dissecting tissue. The device is typically made of metal (e.g., stainless steel or brass). This is a reusable device.	I

225	12236	Surgical instrument interim-placement holder, single-use	Мэс заслын багажийн завсрын баригч, нэг удаагийн	A device intended to be used in the operating room (OR) by staff to safely hold a hand-held, manual, surgical instrument(s) [e.g., needle, scalpel, scissors, robotic system instrument hand-held remote controller] when not in use during surgery, to avoid damage to the instrument, maintain its sterility, and/or for temporary storage (e.g., to enable easy transfer/handling of the instrument at reduced risk of injury). It is available in various forms (e.g., rack, puncture cushion, telescopic tube, magnetic mat), and may be attached to a surgical drape; it is not a numbered tray and is not intended for counting of sharps. This is a single-use device.	I
226	12245	Ear knife	Чихний хутга	A hand-held manual surgical instrument intended to cut and dissect tissues of the ear during a surgical intervention. It is typically designed as a one-piece instrument with a sharp, single-edged, cutting blade at the distal end; this is normally quite small and may be of various shapes, and has a long slender shaft with a handle at the proximal end. It is normally made of high-grade stainless steel. This is a reusable device.	I
227	12250	Paraffin wax knife	Парафин лав хутга	A dedicated instrument designed to cut paraffin wax blocks. It will typically consist of a sturdy blade made of hard metal (e.g., beryllium copper) that retains heat well, and a shank that is permanently attached to a hand-held heat source. The heat, which may be regulated, penetrates into the blade from the heat source (e.g., electrical) through the shank. This device is used to cut/handle paraffin in clinical laboratories (histology and pathology embedding) and for other paraffin applications (physical therapy). This is a reusable device.	I
228	12253	Skin grafting knife	Арьс залгах хутга	A hand-held, one-piece, manual surgical instrument designed to cut donor-site skin strips intended for grafting. It has a knife-like design with a flat broad blade and a sharp cutting edge; it is usually made of stainless steel. This device may reflect old technology. This is a reusable device.	I

229	12255	Tonsil knife	Гүйлсэн булчирхайн хутга	A hand-held manual surgical instrument intended for the removal of the tonsils during a surgical intervention. It is typically designed as a one-piece instrument with a sharp, single-edged, scythe-like, cutting blade at the distal end (the internal radius of the curve has the cutting edge) which is normally quite small; it has a very long and slender shaft with a handle at the proximal end. It is normally made of high-grade stainless steel. This is a reusable device.	I
230	12276	Fixed examination/treatment room light	Тогтмол үзлэг/эмчилгээний өрөөний гэрэл	A fixed device intended to provide light to illuminate a site of patient examination and/or treatment. It typically consists of one or more light bulb(s) and, depending upon the design, reflectors or mirrors which focus and reflect the light. The device can be fixed to a ceiling, wall, or supported on a mobile mount. It can also be part of an operating light system consisting of more than one light head.	I
231	12282	Operating room light	Мэс заслын өрөөний гэрэл	A device designed to provide a specialized source of light for illumination of a site of medical intervention. It provides a high intensity, high colour rendering field of light that minimizes shadows and the emission of heat. It typically consists of an individual light head with more than one light source which may include halogen bulbs or light-emitting diodes (LEDs), reflectors, mirrors and a mechanism to adjust the focus. This device is usually mounted to the ceiling or wall of an operating room (OR) and the mount may be included. It can be part of an OR light system comprising more than one light head.	I
232	12304	Oral lavage system	Амаар угаах систем	An assembly of devices intended for automated or semi-automated irrigation and washing of tissue/debris from teeth, gums, and other parts of the oral cavity (e.g., tongue) through application of pulsed jets of non-medicated liquids (e.g., mouthwash, water), to maintain oral hygiene; it may in addition be intended for nasal lavage. It consists of a central mains electricity (AC-powered) unit with a reservoir and pump, and a number of hand-held applicators, each typically designed to clean a specific oral anatomy (e.g., tongue, braces, gum line). It is normally available [non-prescription] over-the-counter (OTC) for use in the home and dental office.	I

233	12313	Leg bath	Хөл банн	A mains electricity (AC-powered) device designed to be filled with water to provide therapeutic heat treatment specifically to the legs. It typically consists of a unit with a wide stable base that stands on the floor and includes a deep receptacle in the centre for the user to place one or both legs (water typically reaches to top of lower legs). It has a heating element with thermostat that heats the water to a selected temperature. The device is intended to be used by a patient who has lower-leg disorders; it may be more convenient to use than a full-body bath. It is typically used to relieve pain in leg muscles and from leg ulcers.	I
234	12318	Lens expressor	Линзийн экспрессор	A manual ophthalmic surgical instrument designed for pressing or squeezing the natural lens from the eye. It is typically a hand-held device with the working end configured as a hook, ring, or other appropriate shape. This is a reusable device.	I
235	12319	Lens loop, reusable	Линзний гогцоо, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument designed for eye lens extraction and gentle manipulation and/or irrigation of eye tissues during an ophthalmic surgical procedure. It typically consists of a small wire loop (frequently serrated) at the distal tip and a handle for easy manipulation; it may also include a channel (e.g., a cannula) which is connected to an external irrigator for irrigation of the eye. This is a reusable device.	I
236	12326	Manually-adjusted lensmeter, line-powered	Гараар тохируулсан линз хэмжигч, шугамаар ажилладаг	A mains electricity (AC-powered) ophthalmic instrument designed to measure the focusing power (dioptric power) and other optical characteristics of a spectacle lens, contact lens, or prism through manual adjustments to the instrument performed by the operator. Alternating current provides power for illumination [e.g., with a light-emitting diode (LED)] to make the measurements which are read directly through the optics.	I

237	12330	Mobile patient lifting system, electrically-powered	Цахилгаанаар ажилладаг хөдөлгөөнт өвчтөн өргөх систем	An electrically-powered, mobile assembly of devices designed to enable one person to lift and move an incapacitated patient or a person with a disability safely and with minimal physical effort. Also known as a patient hoist, it typically consists of a support base on wheels with a motorized lifting mechanism, mast, boom/lifting arm(s), swivel bar, a patient holding device (e.g., a sling, holder or a frame). It is typically used to lift and move the occupant in a sitting or semi-sitting position over short distances within the treatment facility, e.g., from a bed to a bathroom.	I
238	12351	Reflective dental room light	Шүдний өрөөний цацруулагч гэрэл	A mains electricity (AC-powered) device designed for use in dentistry to project an intense and focused beam of light typically into or around the oral cavity of a patient to illuminate the site of a dental examination or procedure. It is constructed as a curved reflector with a dedicated central light bulb that produces and focuses the light, an outer housing with handles for dental staff to hold when manoeuvring the light head, and a jointed support arm. This device may be incorporated into a dental delivery system or be fixed separately to the ceiling or other support.	I
239	12352	Fibreoptic dental light	Шилэн кабелийн шүдний гэрэл	A mains electricity (AC-powered) device designed for use in dentistry to project an intense and focused beam of light directly into or around the oral cavity of a patient via a fibreoptic cable to illuminate the site of a dental examination or procedure. The illumination is produced by the light source of the device, a dedicated light bulb, and is transmitted via the fibreoptic cable which is attached to a dental handpiece held, or a headband worn, by dental staff. This is a reusable device.	I
240	12377	Lithometer	Литометр	Instrument for measuring calculi. Calculus (plural: Calculi) is an abnormal concretion occurring within the body and usually composed of mineral salts. Typically found in the urinary ducts.	I

241	12379	Lithotrite	Литотрит	A hand-held manual surgical instrument designed for the mechanical crushing of renal stones (calculi) in the urinary tract and/or bladder. It is typically designed with a sturdy pair of jaws at the distal end that are placed over and crush the stone when the operator applies pressure to the handles at the proximal end; the jaws close, grasp and crush the stone. Some types may employ a screw spindle which the operator can rotate to augment the crushing force. The instrument may be used endoscopically and may include a port for irrigation to provide a clear visual field. This device reflects old technology. This is a reusable device.	I
242	12408	Lung physical simulator	Уушигны физик симулятор	A mechanical device intended to simulate/mimic the human lung(s) by imitating its physical properties. This device, commonly known as a test lung, may be a simple ventilation bag filled with foam rubber, or a complicated device, usually mechanical, that can be adjusted to imitate, e.g., change in compliance, airway restrictions, lung perforation. It is intended to be used by a healthcare provider in a clinical setting for the purpose of, e.g., maintenance, testing, user control of a ventilator and for the education of clinical staff.	I
243	12442	Corneal marker, single-use	Эвэрлэгийн маркер, нэг удаагийн хэрэглээ	A manual instrument intended to be used to ink mark corneal tissue prior to an ophthalmic surgical procedure. It is a pen-like device typically with a weighted self-levelling mechanism. This is a single-use device.	I
244	12500	Medical bag	Эмнэлгийн цүнх	A portable, durable, hand-held container of plastic, fabric, or leather designed for transportation of small medical devices, instruments, and/or supplies. It typically includes attachments for easy handling and mechanisms for closure and/or locking; it may have the internal space appropriately configured according to the intended contents (e.g., stethoscopes, sphygmomanometers, drugs). It may be dedicated for a variety of purposes and/or users, including specialization for physicians, nurses, first aid providers, or paramedics. This is a reusable device.	I

245	12501	Medical chart holder	Эмнэлгийн карт эзэмшигч	A device, typically a flat plate of defined dimensions, used to attach, hold, and display a patient's medical chart. It can be, e.g., attached to the bed, stored in a filing cabinet, used in the operating room (OR) by anaesthesia personnel and/or used hand-held.	I
246	12505	Medicine cup, single-use	Эмийн аяга, нэг удаагийн	A cup specially designed for administering medicine to patients or disabled persons. It is made of disposable plastic and will typically have graduated markings to facilitate providing specific doses of medication. It may be used both for tablets and fluids. This is a single-use device.	I
247	12506	Oral medicine dropper	Амны хөндийн эмийн дусаагуур	A device designed for aspirating a small volume of liquid medicine so that it can be dispensed in single drops into a patient's mouth, typically an infant or small child. It is typically designed as a hollow tube, open at both ends, with an aspiration bulb attached to the proximal end and a narrow opening at the distal end. It is usually made of glass or plastic with a rubber teat. This is a reusable device.	I
248	12507	Medicine tray	Эмийн тавиур	A tray designed to hold supplies and provide a platform for organizing, preparing, and administering medication. It can hold items, e.g., medication cups, syringes, medication cards, alcohol swabs, needle destruction devices and disposal bags. This is a reusable device.	I
249	12534	Micromanipulator	Микроманипулятор	A device that is designed to convert large movements (normal hand movements) into small (micro) movements for the purpose of providing extreme precision. It is typically used in, e.g., micro and laser surgery, work under a microscope, microinjection, gene manipulation, manipulation of fine instruments or dissection of minute objects. This is a reusable device.	I

250	12535	Medical equipment/instrument drape, single-use	Эмнэлгийн тоног төхөөрөмж/багаж хэрэгсэл, нэг удаагийн	A flexible polymer sheet/bag/sleeve designed to form a protective water-resistant enclosure around a piece of medical equipment/instrument (e.g., C-arm, surgical laser/camera/microscope, examination table/chair) and/or components (e.g., cables, tubes, headrest). It is intended as a hygienic barrier to protect the equipment/instrument from soiling and/or contamination when used inside, or within the vicinity of, a hygienic area; it may have patient contact, however it is not intended to be introduced into a body cavity (noninvasive). It is neither a dedicated handle cover, device cap nor an ultrasound transducer cover. This is a single-use device.	I
251	12538	ENT surgical microscope	Чих хамар хоолойн мэс заслын микроскоп	A light (optical) magnification instrument designed to magnify minute structures (e.g., nerves, vessels) in the performance of ear, nose, and/or throat (ENT) surgery requiring high magnification and adjustable focusing. It typically consists of a stereo microscope (standard or modified) and a mobile floor stand or wall or ceiling mount. It is usually held by an adjustable arm attached to the support mechanism and equipped with motorized focusing, adjustable magnification systems (manual, zoom, or both), backup lamps, and inclined tubes. Dual- or multiple-observation capability and the optical integration of still, motion picture, and TV cameras are common features.	I
252	12551	Obstetrical mirror	Эх барихын толь	A device with a surface sufficiently polished to reflect enough undiffused light to allow the patient to view an obstetrical examination or view the birth of her infant.	I
253	12552	Posture mirror	Биеийн толь	A device with a surface designed to reflect undiffused light to form an image of the human body standing before it in an upright position for the purpose of examining posture (e.g., to help diagnose scoliosis).	I
254	12570	Moleskin	Молескин	An adhesive material with a soft surface texture used to alleviate skin abrasion due to friction from shoes or clothing. This is a single-use device.	I

255	12585	Bed occupancy alarm, battery-powered	Орны түгжрэлийн дохиолол, батарейгаар ажилладаг	A battery-powered device designed to provide a restraint-free method of monitoring the occupant of a bed (e.g., a geriatric patient, an Alzheimer's disease or dementia patient, or a disabled person) who is at risk of vacating the bed unattended and falling; in such an event it will activate a sound and/or visual signal to alarm the staff. The device is typically used with connected sensor pads that are placed strategically under the patient.	I
256	12609	Eye movement analysis system	Нүдний хөдөлгөөний шинжилгээний систем	An assembly of mains electricity (AC-powered) devices designed to measure, evaluate and record the movement of the eyes. The device is intended to measure ocular dynamics, typically measuring both horizontal and vertical eye movements. This device can include a stimulus source (e.g., a light bar), a sensing device (e.g., video or infrared cameras), a computer, and a recorder. Some systems may include cameras and/or eyelid trackers mounted on spectacles or headbands.	I
257	12695	Nail clippers, reusable	Хумсны хайч, дахин ашиглах боломжтой	A hand-held device designed specifically for trimming the nails of a patient. Also known as a nail cutter, it is a robust instrument comprised of two hinged cutting blades that are conjoined at the handle end of the device. The blades are sprung to hold them apart when not activated; when activated, the two blades are pressed together in a chopping motion to bite off (clip) the nail that has been positioned between them. It is not a pair of nail scissors. This is a reusable device.	I
258	12696	Orthopaedic inorganic implant inserter/extractor, reusable	Ортопедийн органик бус имплант суулгагч/ олборлогч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed for the surgical insertion and/or extraction of a non-tissue based (inorganic) orthopaedic implant (e.g., a bone nail, spiral blade, or bone fixation plate). It is an instrument in a one-piece or modular configuration with a region that will attach/fit/lock to part of the implant, and typically features either a mechanism to apply a striking force (e.g., on a pad/flange) a mechanism for twisting (screwing) (e.g., T-handle), or a plunger mechanism to deploy a guide to drive the implant into place. This is a reusable device.	I

259	12699	Nasal haemostatic balloon	Хамрын цус тогтоогч бөмбөлөг	A device consisting of a hollow rubber or rubber-like structure, expandable with either liquid or air, intended to be used to control nose bleeding (epistaxis) of the anterior or posterior nasal cavity. It is applied during an ear/nose/throat (ENT) intervention and can also be used to treat glue ear in children, and/or to support the structure and patency of the nasal canal. This is a single-use device.	I
260	12709	Nasopharyngoscope	Насофарингоскоп	A lighted, telescopic endoscope for use in examination of the nasopharynx and the pharyngeal end of the auditory tube.	I
261	12710	Nasoscope	Насоскоп	Electrically lighted instruments for inspecting the nasal cavity.	I
262	12726	Suturing needle holder, reusable	Оёдлын зүү эзэмшигч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to grasp a suture needle when pushing/pulling the needle and attached suture through tissue during suturing. It is typically made of metal and has short serrated jaws at the distal end to provide better grip of the needle. It is available in a wide variety of sizes and designs, such as: 1) a self-retaining, scissors-like design with ring handles at the proximal end; 2) a tweezers-like design with bowed, hinged handles that are operated by squeezing them together; and 3) a heavy-duty pincer-like design. Some types may utilize inserts made of hard materials (e.g., carbide) and include scissor blades. This is a reusable device.	I
263	12727	Needle introducer	Зүү таниг	A device that typically uses a spring-loaded mechanism to drive a hypodermic needle into a patient to a predetermined depth below the skin surface to perform therapeutic or diagnostic procedures. This is a single-use device.	I
264	12789	Obturators	Обтураторууд	A solid wire or rod, made of metal or plastic, which is inserted into a vessel's lumen, a cannula, an opening, or a needle for the purpose of filling out the opening of the lumen and in some cases for stiffening the device into which it has been inserted. The device group also applies to the object that actually performs the closing or to an appliance which closes a cleft or fissure of the palate.	I

265	12796	Olfactometers	Олфактометр	A device used to qualitatively or quantitatively measure a person's sense of smell. It typically consists of a rack of small bottles containing different odours, or a sliding test tube device. It is typically used after an injury to the head which can affect a patient's sense of smell.	I
266	12800	Oncometer	Онкометр	An instrument intended to be used to measure the size and configuration of various organs or parts of the body (e.g., the kidney or spleen).	I
267	12804	Ophthalmodiaphanoscope	Офтальмодиафаноскоп	An ophthalmic instrument for examining the back of the eye (retina) by transillumination through the buccal cavity.	I
268	12805	Ophthalmodiastimeter	Офтальмодиастиметр	An ophthalmic instrument for determining the proper distance at which to place prescription lenses for the two eyes.	I
269	12810	Ophthalmoleukoscope	Офтальмолейкоскоп	An ophthalmic device intended to be used for testing colour perception by means of colours produced by polarized light.	I
270	12811	Bench-top keratometer	Вандан дээрх кератометр	A bench-top, mains electricity (AC-powered) ophthalmic instrument designed to measure the curvature of the anterior surface of the cornea, particularly for determining the presence, extent, and axis of astigmatism (an error of refraction in the eye due to the cornea being unequally curved in different directions, so that rays of light in different meridians cannot be brought to focus together on the retina). It actually measures the radius of curvature in millimetres but typically displays it in dioptres. It is used mainly for contact lens fitting and for intraocular lens power determination prior to cataract surgery. This device is also known as an ophthalmometer.	I
271	12817	Ophthalmoscope, direct	Офтальмоскоп, шууд	A hand-held ophthalmic instruments used to examine the interior of the eye allowing the examiner to clearly see the details of the retina and other structures/media (cornea, aqueous, lens, and vitreous). The device consists of, a built-in light that is directed by the examiner through the pupil to illuminate the interior of the eyeball, a mirror with a single hole through which the examiner will view, and a dial containing several lenses of different powers that can be alternated by the examiner whilst viewing. It produces an upright, or unreversed, image of approximately 15 times magnification. This device can be mains- or battery-powered.	I

272	12820	Automated ophthalmotropometer	Автомат офтальмотропометр	An automated ophthalmic instrument designed to measure the degree of misalignment of the eyes (strabismus) by measuring light reflected from the corneas.	I
273	12821	Optometer	Оптометр	An ophthalmic device used for measuring the power and range of vision. Also known as an Accommodometer [meaning the measurement of the accommodation of the eye - its ability to adjust (focus) to variable distances].	I
274	12822	Optomyometer	Оптомиометр	An ophthalmic device used in measuring the power of the ocular muscles.	I
275	12825	Orange stick	Улбар шар өнгийн саваа	A soft piece of wood used in bridges or crowns with the force of biting pressure. This is a single-use device.	I
276	12839	Oscilloscope	Осциллограф	A mains electricity (AC-powered) instrument designed to electronically test another electrical device by examining electrical signals that vary with time. It makes visible an instantaneous value of one or more rapidly varying electrical quantities as a function of time, or of other electrical or mechanical qualities. It typically includes a cathode-ray tube (CRT) or a liquid crystal display (LCD) or light-emitting diode (LED) screen and an operating panel for instrument adjustment. The device displays the exact wave shape of an electrical signal and measurements made which can be presented as analogue and/or as an alpha-numeric data.	I
277	12844	Orthopaedic osteotome	Ортопедийн остеотом	A chisel-like, one-piece manual surgical instrument designed to cut and/or shape bone by percussion during an orthopaedic procedure. It is hand-held by the operator who uses a surgical mallet or hammer to manually impart a force to the proximal end of the instrument. The distal end (the cutting or shaping edge) is sharp, often flat, but can be curved (concave) in design, and is typically bevelled on both sides with sloping curves. It is either entirely made of metal (e.g., high-grade stainless steel) or has a metal blade with a handle made of synthetic material (e.g., Tufnol). This is a reusable device.	I

278	12846	Plastic surgery osteotome	Хуванцар мэс заслын остеотом	A surgical, chisel-like, instrument designed to cut and/or shape small bones and/or cartilage during plastic surgery. It is hand-held by the surgeon who will typically use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. The distal end (the cutting or shaping edge) is sharp, often flat, but can be curved (concave) in design, and is typically bevelled on either side with sloping curves. This device will be made of high-grade stainless steel and be used for plastic surgery procedures (e.g., to shape nasal cartilage). This is a reusable device.	I
279	12849	Otoscope, direct	Отоскоп, шууд	An electrically-powered, hand-held device designed for examination of the outer ear canal and tympanic membrane (eardrum) by direct viewing through the ear opening. It consists of a main unit (commonly referred to as the head) with a built-in light source intended to illuminate the interior of the ear canal with a detachable cone-shaped tube (speculum) inserted in the ear canal; it may facilitate the application of air pressure for pneumatic otoscopy. A dedicated power supply handpiece and/or an insufflation bulb may be included with the head.	I
280	12875	Oxygen administration tubing	Хүчилтөрөгч дамжуулах хоолой	A length of flexible noninvasive tube, typically a small bore, thick-walled, anti-kink tubing (to prevent blockage) intended for the delivery of a pure oxygen (O2), or an O2 enriched gas, to a mask or nasal cannula (not included), during delivery of dry O2 to the patient. The tubing is typically available in standard coil lengths and is cut by clinical staff to appropriate lengths to create an extension or connecting piece. This is a single-use device.	I
281	12935	Percussion pad	Цохилтот дэвсгэр	A non-sterile device intended to be placed on a patient's body for the purpose of percussion (the act of striking the body, typically with the examiner's fingertips, as an aid in diagnosing the condition of the underlying organs by the sound obtained). This is a reusable device.	I

282	12950	Pressure algesimeter	Даралтын алгезиметр	A manual instrument designed to measure a patient's sensitivity to pain (pain threshold) by applying a painful, calibrated mechanical force to the skin. It typically consists of a sharp needle, a blunt tip, and a strain gauge; the pressure needed to feel the pain produced by the sharp point of the needle, as measured by the pressure exerted on an adjacent blunt tip in unaffected areas, is used to determine the pain threshold (15 grams is considered typical). The device is typically used to evaluate the effects of pain after the use of analgesics and/or during diagnosis or treatment of nerve injuries and neuropathies. This is a reusable device.	I
283	12955	Papanicolaou smear kit	Папаниколау түрхэцийн иж бүрдэл	A packaged collection of instruments, equipment, and reagents required to obtain a cytology sample from the cervix and perform a Papanicolaou test (PAP). Commonly known as a Pap smear or Pap test the cells are typically smeared onto a microscope slide or mixed in a liquid fixative for microscopic examination. A Pap test is usually done as part of a woman's regular pelvic examination. This is a single-use device.	I
284	12963	Pass-through cabinet	Дамжуулах кабинет	A specially designed cabinet, typically built-in, that facilitates the direct passage of goods, instruments, sets and kits from one zone to another zone without the personnel having to physically cross the boundaries themselves [e.g., from a supply trolley or loading bay into an operating room (OR)].	I
285	12980	Pelvimeter	Аарцаг хэмжигч	A measuring device used to determine the pelvic dimensions. This is typically the internal/external measurement of the pelvis, its diameters and capacity and is usually used in conjunction with gynaecological treatment/intervention. This is a reusable device.	I

286	12990	Amniotic membrane perforator, reusable	Амнион мембраны цоолбор, дахин ашиглах боломжтой	A surgical instrument used to rupture the amniotic membrane (i.e., the amnion - the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid) to assist in childbirth, without causing injury to the mother or foetus. It is typically long and shaft-like, and terminates in a rounded nose with a sharp hook. It is typically made of high-grade stainless steel or durable plastic materials, and may be straight or curved to follow the natural contours of the birthing canal into which it is inserted. Amniotic membrane rupture may also be performed using an amniotome or forceps and/or a trocar. This is a reusable device.	I
287	12991	Ear lobe perforator	Чихний дэлбээ цоолборлогч	An instrument used to pierce the lobe of the ear auricle (i.e., ear lobe) to create a hole in its tissue. It is typically designed as a device with a mechanism that forces a sharpened point (usually a starter earring) through the ear lobe by applying pressure to the handgrip. Although this device is primarily designed to piece the ear lobe, it can be used to pierce the ear cartilage and/or other parts of the body for, e.g., body piercing ornamentation purposes. This is a reusable device.	I
288	12996	Perineal irrigation kit	Перинй усалгааны иж бүрдэл	A collection of sterile devices designed to flush the perineal area. It typically includes a syringe and other items needed for this procedure. This is a single-use device.	I
289	13039	Middle ear pick	Дунд чихний сонголт	A fine, hand-held manual surgical instrument intended to be used to manipulate the structures of the middle ear (e.g., the stapes). It is typically comprised of a proximal handle that tapers to a shaft which terminates in a fine distal tip bent at 90 degrees to the shaft. This is a reusable device.	I
290	13088	Portable reclining bathtub	Зөөврийн хэвтээ ванн	A bathing (washing) receptacle designed to be easily moved (e.g., it may be readily dismantled and packed for transport). It is typically filled with warm water to accommodate the occupant's full body for bathing in a seated or reclined position. The device is typically used in settings where there is no access to conventional bathing facilities (e.g., field military hospitals, isolated dwellings).	I
291	13090	Body posture chart	Биеийн байрлалын график	A chart showing one or more typical postures of the body. It may be used for demonstrating a specific problem to a patient, as well as for educational and training purposes.	I

292	13100	Intravenous pressure infusor, manual, reusable	Судсаар хийх даралтат инфузор, гарын авлага, дахин ашиглах боломжтой	A manually-operated device designed to increase/control the rate of an intravenous (IV) solution given to a patient by manually applying pressure directly to the infusion bag. It is typically a flexible inflatable bag/cuff with a pocket to hold the infusion bag; it may include a squeeze bulb, mechanical screw, or spring mechanism to create the pressure. This is a reusable device.	I
293	13116	Electronic thermometer probe cover	Электрон термометрийн датчик бүрхэвч	A device intended to be used as a physical barrier between the patient and the probe of a thermometer that uses electronics to create the measurement, e.g., a tympanic (in-the-ear) or electronic (body) thermometer, to prevent cross-contamination between patients. This is a single-use device.	I
294	13120	Ophthalmic surgical probe, reusable	Нүдний мэс заслын датчик, дахин ашиглах боломжтой	A slender, rod-like, hand-held manual surgical instrument intended to be used during an ophthalmic procedure to explore, measure, and/or manipulate ocular tissues (e.g., retraction/manipulation of intraocular structures, lens nucleus splitting, removal of foreign bodies in the eye, LASIK flap lifting); it is neither intended to cut tissue nor hook muscles. It is available with a variety of tip shapes including blunt bulbous, hook and T-shape, and the shaft may be straight or bent; it is made of flexible or rigid metallic and/or synthetic polymer material. This is a reusable device.	I
295	13180	Orthopaedic prosthesis implantation positioning instrument, reusable	Ортопедийн протез суулгах байрлал тогтоох хэрэгсэл, дахин ашиглах боломжтой	A hand-held surgical instrument intended to be used during implantation of an orthopaedic prosthesis, either manually or as a computer-assisted surgery (CAS) device, to aid in the navigation/placement of the prosthesis or other instruments [e.g., drill sleeves and guide wires (Kirschner wires), patella saw guide]. It may be used for the following applications: 1) to hold/align/fix/guide other instruments, prostheses, or prosthesis components; 2) to provide relative position landmarks; 3) to ascertain correct spatial orientation or limb alignment; and/or 4) as an interface (non-adaptive) between prosthesis components. This is a reusable device intended to be sterilized prior to use.	I

296	13232	Corneoscleral punch	Эвэрлэгийн цохилт	A hand-held, manual ophthalmic surgical instrument designed to excise a segment of tissue (frequently in the form of a disc) from the sclera or cornea of a patient or from grafts taken from cadaver donors. It typically has a set of sharp, hollow tips at the distal end (a rotary mechanism that may be either integral or an attachment) operated by squeezing a two-part handle. The device is used mainly to perform ophthalmic graft implantations or, less frequently, to obtain grafts from the sclera of cadaver donors. This is a reusable device.	I
297	13274	Video cassette recorder	Видео кассет бичигч	A mains electricity (AC-powered), electronic, device designed to receive and store both image and sound on a magnetic video tape (a standard video cassette) as electronic signals. During recording, the inputs of the recorder's electronic circuitry and recording heads are connected to a video signal source (e.g., video or television camera). The information is retrieved through playback heads (that typically are an integral part of the recorder), and the output is connected to an appropriate monitor or is fed into another device for further manipulation. This is a general-purpose recording/playback device and is commonly called a VCR (video cassette recorder).	I
298	13287	Bone raspatory	Ясны рэспатори	A hand-held, manually-operated, surgical instrument with a profiled, forward-scraping edge (sharp or blunt, sometimes double-sided) used to elevate and/or detach the periosteum (membrane of fibrous connective tissue tightly surrounding bone) from the underlying bone by a pushing action usually applied along the longitudinal axis of the bone. It is typically a one-piece instrument made of high-grade stainless steel; it is available in a wide variety of sizes and blade designs [e.g., slender or robust, curved, spoon-shaped, or flat (chisel-like)]. This is a reusable device.	I

299	13291	Plastic surgery file/rasp	Хуванцар мэс заслын файл/расп	A hand-held manual surgical instrument with a surface(s) of coarse and/or fine grooves or teeth at its working end(s) designed to scrape and smooth the surface of hard tissues (e.g., bone, cartilage) during plastic surgery (e.g., rhinoplasty, face lifting). It is typically a one-piece instrument which resembles a coarse or fine file, but with sharp cutting projections instead of lines and often double-ended with a central handle; it is made of metal [e.g., stainless steel, titanium (Ti)]. This is a reusable device.	I
300	13299	Power line receptacle tester, electrical	Цахилгаан шугамын савны шалгагч, цахилгаан	An electronic instrument designed to measure and assess the electrical characteristics of a power line receptacle (e.g., an electrical wall receptacle or electrical wall socket). It is typically a plug-in device that can detect open (e.g., ground, live, neutral) lines and inverted connections (e.g., live on neutral); it usually includes a display and/or visual and audible alarms to indicate correct/faulty wiring and open connections. The device is used to assess the electrical characteristics of the most common healthcare facility electrical wall receptacles; some can also determine the tripping current of ground fault circuit interrupters by injecting a variable leakage current.	I
301	13300	Power line receptacle tester, mechanical	Цахилгаан шугамын савны шалгагч, механик	A mechanical instrument designed to measure and assess the mechanical holding force between the outlets in a power line receptacle (e.g., an electrical wall receptacle or electrical wall socket) and the male connector of a plug. It typically includes a tension-measuring device to assess the force and a display to show whether the measured value is over a predetermined safety value. The instrument is used mainly to assess the holding force of the ground connection. It is intended to be used by a healthcare provider (i.e., clinical technician or hospital electrician) in a clinical setting.	I
302	13314	Refrigerator alarm	Хөргөгчний дохиолол	A mains electricity (AC-powered) device that activates sound and/or visual alarm signals when pre-set temperature limits are exceeded in a refrigerator intended for medical purposes.	I

303	13316	Morgue refrigerator	Моргын хөргөгч	A mains electricity (AC-powered) refrigerator specially designed for the proper storage of cadavers undergoing autopsy.	I
304	13340	Line cord resistance tester	Шугамын утас эсэргүүцэл шалгагч	An instrument designed to measure resistance to the direct current (DC) of a circuit conductor. It may consist of a simple unit that detects continuity and shows the results using lighted displays [(e.g., light-emitting diodes (LEDs)], or use a four-terminal technique to measure resistance (e.g., in milliohms) and display the numeric results; it typically includes a DC power supply (e.g., a battery). The device may include visual or audible signals that are activated when the circuit is open and/or the resistance is under a predetermined value. It is used to determine the continuity of conductors and other low resistances such as the contact resistance in electrical receptacles.	I
305	13356	Wheelchair/chair/stander occupant restraint/support	Тэргэнцэр/сандал/зогсогчийг хязгаарлах/тусламж	A rigid or non-rigid device, typically a strap, belt, bar, harness or vest designed to be attached to a wheelchair/chair/stander and/or its occupant to stabilize the occupant’s position for prevention of slips and/or falls from the appliance and/or to provide postural support. Some types may also be used to secure a wheelchair occupant in a wheelchair while travelling in a motor vehicle. This device may also include the extensions needed to attach this device and may be available in various sizes.	I
306	13369	Skin treatment/dressing-supportive limb/finger bandage, single-use	Арьс эмчилгээ/боох-дэмждэг мөч/хурууны боолт, нэг удаагийн	An elastic, tubular device intended to be worn over/around the limb (arm/leg) and/or finger of a patient affected by a skin condition/disorder (e.g., eczema, wound, fragile skin) to protect the skin typically after treatment with a medication (e.g., ointment, cream), and/or to support a dressing over a wound/injury; it is not designed for tissue support/compression. It is typically made of non-allergenic natural materials or a composite (e.g., viscose/nylon/elastane), and intended for use in the home and healthcare facility. This is a single-use device.	I

307	13371	Viscera retention paddle	Дотор эрхтнийг хадгалах сэлүүр	A sterile, hand-held, flat device designed to be temporarily placed within a body cavity to retain and protect organs (i.e., viscera) while the surgeon performs a suturing procedure (typically internal wound closure). It is in the form of a thin, flexible, synthetic polymer paddle that may have an attached cord that remains outside the body to assist in device removal prior to external wound closure. This is a single-use device.	I
308	13372	Retinoscope	ретиноскоп	An ophthalmic device used to measure the refractive errors of the eye through the projection of a beam of light into the eye and the observation of the movement of the illuminated area on the retina surface and of the refraction of the emergent rays. Also know as a skiascope and the method as sciascopy.	I
309	13375	Abdominal retractor, hand-held	Хэвлийн татагч, гар барих	A surgical instrument designed to be held by the surgeon or assistant to separate the margins of an abdominal incision, typically during deep surgery, to expose or access organs or tissues for examination or intervention. The instrument consists of a blunt-edged, non-adjustable flat blade that curves near the distal tip, with a solid handle at the proximal end. The surgeon or assistant uses this instrument to manually pull the edge of the incision open. It is made of high-grade stainless steel and is available in a variety of blade lengths. This is a reusable device intended to be sterilized prior to use.	I
310	13378	Brain decompression retractor	Тархины даралтыг бууруулагч	A hand-held manual surgical instrument designed for temporary atraumatic separation and drawing aside of brain tissue during neurosurgical procedures by opening a corridor to the trigeminal nerve, exposing any vessel that causes compression on the nerve. It is typically made of high-grade stainless steel and includes a loop handle attached to a curved blade (e.g., Cushing decompression retractor) at the working end. The device is used in procedures performed to relieve abnormal compression (e.g., by inserting a sponge) of a cranial nerve. This is a reusable device.	I

311	13380	Hand-held dental retractor	Шүдний гар татагч	A hand-held, non-self-retaining dental instrument intended to be used to manually displace soft tissues of the oral cavity to improve their visualization and access, and to afford them protection during oral surgical procedures. It is typically a metallic device and includes a shaped/hooked blade with a handle/holding portion. This is a reusable device.	I
312	13381	Ophthalmic incision retractor	Нүдний зүслэг татагч	An ophthalmic surgical instrument used for drawing aside the margins of an incision made in the eye and its related structures during a surgical procedure. It typically has a self-retaining, dual arm design with curved hooks or blades at the distal end that grasp the tissue to be held apart. The proximal end is typically conjoined and will have an adjustable mechanism by which the working end is held in an expanded position. It is made of high-grade stainless steel and is available in various sizes and designs. This is a reusable device.	I
313	13384	Laminectomy retractor, self-retaining	Гоо сайхны мэс заслын ретрактор, өөрөө хадгалдаг	A self-locking, surgical instrument, used for separating the edges or drawing aside the margins of a surgical incision to permit excision of the lamina of the vertebral posterior arch; this can be necessary to expose a portion of the spinal cord for removal of a tumour, relief of pressure due to a fracture, or disc protrusion. The instrument may resemble a large pair of scissors with wide-angle blades which have fenestrated curved hooks, often terminating in sharp points, at the distal end to grasp the tissues. It is usually made of stainless steel and comes in a variety of designs. This is a reusable device.	I
314	13387	Plastic surgery retractor, self-retaining	Хуванцар хагалгааны татагч, өөрөө хадгалдаг	A self-locking, surgical instrument, used for separating the edges or drawing aside the margins of a surgical incision, tissue or other body parts to expose or access underlying anatomical structure during a plastic surgical procedure. The instrument may resemble a pair of ring-handles scissors or a hinged device with two legs with wide-angle blades which have fenestrated curved hooks often terminating in sharp points at the distal end to grasp the tissue. It will retain the set open position. It is made of high-grade stainless steel and comes in a variety of designs. This is a reusable device.	I

315	13388	Rectal retractor	Шулуун гэдэсний татагч	An instrument for drawing back the tissue that forms the walls of the anal canal. This is a reusable device.	I
316	13392	Vaginal retractor, self-retaining	Үтрээний татагч, өөрөө хадгалдаг	A self-locking, surgical instrument, used for separating the edges of the vagina and holding back the tissue allowing a surgical intervention or examination. The instrument may resemble a large pair of scissors or have an open circle design with pointed, blunted, or wire-like blades or claws that grasp and part the tissue of the vaginal opening. It is typically made of stainless steel and comes in a variety of designs. This is a reusable device.	I
317	13393	Vessel retractor	Судасны ретрактор	A hand-held, surgical instrument used for separating/drawing aside vascular structures to permit examination or intervention during a surgical procedure. It is typically a shaft-like instrument with an inwardly curved, saddle hook at the distal end and a handle at the proximal end. It may also be known as a vein retractor. It is made of high-grade stainless steel. This is a reusable device.	I
318	13399	Ring cutter	Бөгж таслагч	A manually-operated instrument designed for cutting rings and other jewellery from fingers or other body appendages (e.g., the penis) when difficult to remove by other means. It is typically a scissors-like instrument that brings a serrated cutting wheel blade to bear on a thin support which is slipped beneath the ring or item to be removed; the operator rotates the cutting wheel manually by turning an attached handle. This is a reusable device.	I
319	13414	Cotton roll	Хөвөн, ролл	A device usual made of medical cotton or sometimes man-made fibres which has a general-purpose use throughout hospitals and other parts of the healthcare sector. It may be sterile or non-sterile. This is a single-use device.	I

320	13418	Neurosurgical rongeur	Мэдрэлийн мэс заслын чиглүүлэгч	A hand-held manual surgical instrument designed with a cutting/biting action used for the removal of bone, e.g., pieces of the skull, during a neurosurgical intervention. It is a strongly constructed instrument that has a forceps or pliers-like design terminating at the distal end with sharp-edged, scoop-shaped jaws attached to strong, sprung (self-opening), pivoted or multi-pivoted handles that, when squeezed together, close the jaws to bite (cut) through the bone. It is available in various sizes and is made of high-grade stainless steel and designed to withstand the forces which are applied. This is a reusable device.	I
321	13457	Autopsy scale	Задлан шинжилгээний жин	A scale specially designed for use in weighing organs and other anatomical parts during autopsy procedures.	I
322	13459	Blood weighing scale	Цусны жин	A mains electricity (AC-powered), electronic device specially designed to provide the precise weight of blood.	I
323	13481	Bandage scissors, reusable	Боолт хайч, дахин ашиглах боломжтой	A hand-held manual instrument intended to be used to cut bandages and cloth. Typically a robust instrument, it comprises two pivoted blades provided with finger and thumb holes in the handles. The distal end of the blades may be different shapes and are usually rounded for safety; one blade may extend in front of the other and have an olive tip that is placed under the bandage. It is typically made of high-grade stainless steel and some may use carbide inserts for the cutting edge. This is a reusable device.	I
324	13482	Cardiovascular scissors	Зүрх судасны хайч	A hand-held surgical instrument used to cut cardiovascular tissue during surgery. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; the blades may have different shapes. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I

325	13486	Corneal scissors, reusable	Эвэрлэгийн хайч, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument intended to be used to cut corneal tissue (e.g., during cataract extraction surgery, corneal transplant surgery). It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of metal and is available in various designs and sizes; some designs may additionally be used for cutting sutures and drapes. This is a reusable device.	I
326	13487	Enucleation scissors, reusable	Энуклеяцийн хайч, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument intended to be used to cut tissue during surgery involving enucleation of the eye and/or its related structures (i.e., the removal of the eyeball to, e.g., remove a malignant tumour or to relieve intolerable pain in a blind eye). It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; some designs may additionally be used for cutting sutures and drapes. This is a reusable device.	I
327	13489	Ophthalmic suture scissors	Нүдний оёдлын хайч	A hand-held, manual, ophthalmic surgical instrument intended to be used to cut suture during eye surgery. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the fine blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. This is a reusable device intended to be sterilized prior to use.	I

328	13490	Ophthalmic tenotomy scissors	Нүдний тенотоми хайч	A hand-held ophthalmic instrument used to cut and/or divide tendon tissue in the eye during surgery, typically to correct a deformity. It comprises two pivoted blades that usually have finger and thumb ring-handles, and which cut with a shearing action (i.e., the fine blades cut when the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. This is a reusable device.	I
329	13492	Dissection scissors	Задлан шинжилгээний хайч	A hand-held manual instrument designed to cut tissue during dissection and/or autopsy. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
330	13495	Nasal scissors	Хамрын хайч	A hand-held, manual, surgical instrument used to cut tissue during ear/nose/throat (ENT) or plastic surgery in or on the nose and its associated structures. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes, usually having slender, pointed blades set at an angle to the handles. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
331	13496	Neurosurgical scissors	Мэдрэлийн мэс заслын хайч	A hand-held manual surgical instrument designed to cut tissue (e.g., dura mater, neural soft-tissue) during neurosurgery. It comprises two hinged blades of micro design that cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of metal and is available in various designs. This is a reusable device.	I

332	13500	Plastic surgery scissors	Гоо сайхны мэс заслын хайч	A hand-held surgical instrument used for plastic surgery procedures to cut tissue. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; the blades may have different shapes. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
333	13501	Rectal scissors	Шулуун гэдэсний хайч	A hand-held manual surgical instrument designed to cut tissue during rectal surgery. Also known as bowel scissors, it comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; rectal scissors typically have particularly long handles for good penetration. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
334	13502	Suture scissors	Оёдлын хайч	A hand-held surgical instrument used during surgery to cut suture or ligature material, i.e., to divide lengths or remove excessive/unwanted ends. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically metallic and is available in various designs and sizes; the blades may have different shapes, e.g., they can be curved or straight with a hook-like tip to capture the suture/ligature as it is cut. It is not a dedicated ophthalmic device. This is a reusable device.	I

335	13504	Thoracic scissors	Цээжний хайч	A hand-held surgical instrument used to cut tissue in the thoracic cavity. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available with long handles especially for deep operation procedures; the blades may be curved or straight and have different sizes. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
336	13507	Sclerotome	Склеротом	A hand-held manual ophthalmic surgical instrument that is knife-like in design and intended to be used to incise the sclera (opaque tissue visible anteriorly between the eyelids as "the whites of the eye") during a sclerotomy. This device is typically made of high-grade stainless steel. This is a reusable device.	I
337	13509	Gallstone scoop	Цөсний чулууны халбага	A hand-held manual surgical instrument designed for the removal of gallstones. It is typically made of high-grade stainless steel and has a very long, thin, malleable (bendable) working end that terminates in a small spoon-like scoop. At the proximal end is a handle used by the surgeon to manipulate and operate the instrument during the removal procedure. It can have a variety of scoop designs. This is a reusable device.	I
338	13514	Bedside screen	Орны хажуугийн дэлгэц	A frame-like device designed to create a partition in order to conceal a patient in a bed or examination table during medical procedures or solely for privacy. It is typically a foldable device that can be stored when not in use, and unfolded and positioned around the area to be cordoned off. It may or may not have wheels.	I
339	13527	Scrub suit, reusable	Ажлын хувцас, дахин ашиглах боломжтой	A two-piece garment designed to be worn by healthcare staff to facilitate hygienic conditions typically in areas where surgery is performed. It typically consists of a shirt and pants composed of cloth and is intended to provide a barrier to help prevent cross-contamination of infectious agents between staff and patients. This is a reusable garment intended to be laundered after each use.	I

340	13532	Mastoid searcher	Мастоид хайгч	A slender, rod-like, hand-held manual surgical instrument made of flexible metal, typically with a blunt bulbous tip that is bent at a right angle to the shaft, that is used for exploring the mastoid process (the large projection of the temporal bone of the skull found immediately behind each ear) during ear/nose/throat (ENT) surgery. It is used to probe the cavities of the mastoid, in particular, the mastoid antrum which communicates with the middle ear. This is a reusable device.	I
341	13543	Pylorus separator	Пилорус тусгаарлагч	A hand-held, manually-operated, surgical instrument in the form of a pair of forceps used to part the pylorus (the distal end of the stomach), or other gastrointestinal structures, from adjacent structures during a surgical procedure. It is typically made of high-grade stainless steel. This is a reusable device.	I
342	13544	Toe separator	Хөлийн хуруу тусгаарлагч	A foot-worn device designed to space the toes of the foot to relieve pain, pressure/friction between toes, and/or to facilitate realignment of the toes to a natural position. It is made of soft materials (e.g., silicone, polymer gel) and may be available in a variety of forms (e.g., circular channels moulded together, small disks, half moon shape); some types are in addition intended to protect and/or reduce bunion or Tailor’s bunion formation. This is a reusable device.	I
343	13551	Knife sharpener	Хутга ирлэгч	A mains electricity (AC-powered) device used to create or re-establish a thin, keen edge and/or fine point on an instrument used to cut, e.g., a knife or a reusable scalpel.	I
344	13552	Needle sharpener	Зүү үзүүрлэгч	A mains electricity (AC-powered) device intended to be used to create or re-establish a thin, keen edge or fine point on an instrument used to puncture (e.g., a needle).	I
345	13565	Bunion shield	Бамбай	A pad designed to protect a bunion that has formed on the base of the big or little toe. It is typically ring-shaped, made of a thick material and worn over the bunion. This is a single-use device.	I
346	13570	Wound shield	Шархны бамбай	A mechanical shield that is designed to form a protective structure over a wound. It may be cage-like and will allow exposure to air and permit access to the injured area while protecting against accidental damage. This is a single-use device.	I

347	13575	Shoe cover, conductive, non-sterile	Улавч, дамжуулагч, ариутгадаггүй	A non-sterile device made of conductive material designed to reduce the risk of static electricity build-up and intended to be used as a physical barrier on a shoe to prevent cross-contamination between the shoe and the environment. This is a single-use device.	I
348	13576	Medical shoe	Эмнэлгийн гутал	A footwear designed as a washable shoe available in various forms intended to be worn in pairs in a medical setting. It is typically used in areas such as examination rooms or operating theatres and may be conductive, to reduce the risk of static electricity, or non-conductive. This is a reusable device.	I
349	13578	Conductive shoe	Цахилгааны хамгаалалттай гутал	A footwear designed as a shoe to prevent the wearer from acquiring a higher electrical potential than the surroundings. The shoe is intended to be worn in pairs, and used in rooms with conductive floor covering. It is made of a conductive material.	I
350	13583	Shroud kit	Бүрхүүлийн иж бүрдэл	A collection of items that includes a sheet-like garment and other equipment intended to be used to prepare a corpse for burial. This is a single-use device.	I
351	13607	Sitz bath chair	Усанд орох сандал	A dedicated device designed to be sat upon by a patient in a powered sitz bath for external hydrotherapy to relieve pain or pruritus and to accelerate the healing of inflamed or traumatized tissues of the perianal and perineal areas. The seat of the device is typically open allowing jets of water to reach the sacral, coccyx, rectum, groin and vaginal areas. The device is also typically designed with a back rest, armrests, and a frame in soft plastic [e.g., polyethylene (PE)] materials to prevent undue pressure to the skin during therapy; it may be adaptable for a person with a disability.	I

352	13609	Sitz bath, powered	Суудлын ванн, цахилгаантай	A mains electricity (AC-powered) tub filled with water, that is heated by its heating elements and circulated by its agitators, intended for use in external hydrotherapy to relieve pain or pruritus and to accelerate the healing of inflamed or traumatized tissues of the perianal and perineal areas. The patient immerses only the hips and buttocks, keeping the legs outside of the tub, or sits on a dedicated chair placed inside the tub. It is typically used to maintain patient hygiene and to alleviate pain and discomfort caused by haemorrhoids, uterine cramps, labour, and/or other diseases of the pelvic, abdominal and perineal area (e.g., prostate, bladder, bowel, vaginal disorders).	I
353	13614	Skin graft mesher	Арьс шилжүүлэн суулгах торон	A manual surgical device used to perforate a skin graft (a section of donor skin from another part of the patient's body) with a pattern of lacerations (cuts) before the skin is grafted to the area being treated on the patient. The skin may be placed on a skin graft carrier to better support it and will typically be run through an instrument with a row of cutting wheels, or be subjected to a rolling drum with a handle and cutting blades, to improve graft stretch and permeability and facilitate graft conformity and healing. This is a reusable device.	I
354	13620	Oxygen therapy sleeve, topical	Хүчилтөрөгчийн эмчилгээний ханцуйвч, сэдэвчилсэн	A device designed as a flexible sheath that is used to apply oxygen (O2) enriched gas to a topical surface area of the skin to assist in a healing process. It is usually sealed around a limb or covers part of the body below the head. This is a reusable device.	I
355	13622	Suspension arm sling	Гарын сойлт	A non-sterile hanging triangular-shaped loop, suspended from a patient's neck/shoulder, typically intended to support an injured arm and limit its range of motion, or immobilize it, during the period of healing. It is typically fashioned from a single sheet of textile material by tying/fastening the ends. This is a reusable device intended for single-patient use.	I
356	13623	Knee sling	Өвдөгний оосор	A hanging band, typically suspended from an overhanging structure, intended to be used to cradle a knee to support and limit the range of motion of an injured knee/leg during healing. This is a single-use device.	I

357	13624	Leg sling	Хөлний оосор	A collection of non-sterile bands/straps typically suspended from the user's waist and neck/shoulder, and terminating around an injured leg, intended to support and immobilize the leg during the healing process. This is a single-use device.	I
358	13629	Emergency kit, snake bite	Яаралтай тусламжийн хэрэгсэл, могойд хазуулсан	A convenient collection of the necessary instruments, pharmaceuticals, and other items used in an emergency to treat a snake bite. This device is intended to remove venom from a localized area of the skin by the application of suction or an appropriate chemical. This is a single-use device.	I
359	13632	Tonsil snare	Гүйлсэн булчирхайн урхи	A manual surgical instrument inserted into the oral cavity to remove the tonsils during ear/nose/throat (ENT) surgery. It typically consists of a cannula-like tube with two stationary and one sliding finger rings designed to position and tighten a loop of thin, flexible wire (the snare) around the root of the tonsil to be removed. It is intended for mechanical cutting only (i.e., not through electrical ablation). This is a reusable device.	I
360	13634	Fracture sock	Хугарлын оймс	A device designed for lower extremity undercast use for post fracture plaster and/or plastic bracing. It typically consists of a knitted piece of stretchable fabric (e.g., acrylic, cotton, Lycra) that is tapered from a wide top to a narrowed end at the toes and usually includes a wider heel pocket. It is available with above or below the knee length; each type may have open toe or full foot design. This is a single-use device.	I
361	13635	Stump sock	Хожуул оймс	A sleeve designed to be worn over a residual limb to improve contact between the stump and the socket interface of an external limb prosthesis/orthosis to: 1) provide a cushion for the alleviation of friction; 2) enable a more comfortable and stable use of the prosthesis/orthosis; and 3) function as an aid in the daily fitting of the prosthesis by an amputee patient. It is typically made of textile materials (e.g., wool, cotton). This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	I
362	13637	Solution bowl	Уусмалын аяга	A bowl designed and used to store, mix or collect an unspecified solution in. It is typically made of high-grade stainless steel or durable plastic materials. This is a reusable device.	I

363	13643	Urethral sound, reusable	Шээсний сувгийн дуу чимээ, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to explore and measure the urethra. It is a slender hollow or solid cylindrical instrument made of metal or plastic typically with graduations of length displayed along its working end. It is typically available in a range of sizes and flexibilities. This is a reusable device.	I
364	13644	Uterine sound, reusable	Умайн дуу чимээ, дахин ашиглах боломжтой	A hand-held manual instrument designed to measure and/or explore the internal depth or length of the uterus, cervix, and/or vagina. It is a slender hollow or solid cylindrical instrument made of metal or plastic typically with graduations of length displayed along its working end. It is typically available in a range of sizes and flexibilities. This is a reusable device intended to be sterilized prior to use.	I
365	13673	Spine board	Нурууны самбар	A flat, stiff device intended to be placed under a patient (the patient is usually strapped to this device) to ensure spinal immobilization when a spinal injury is suspected. This device is often used in combination with a head/neck immobilizing device that is also typically fixed or strapped to it. It is typically used after serious accidents and for transport of the patient on a stretcher. It is typically made of x-ray translucent/non-ferromagnetically active materials that allow x-ray and magnetic resonance imaging (MRI) and comes in various sizes. This is a reusable device.	I
366	13692	Sponge bowl, reusable	Хөвөн аяга, дахин ашиглах боломжтой	A receptacle specifically designed to store and/or collect sponges; it may be used to collect sponges during a surgical procedure. It is typically made of stainless steel and can be used for multiple patients after appropriate sterilization. This is a reusable device.	I
367	13693	Surgical sponge-counting rack	Хагалгааны хөвөн тоолох тавиур	A device in the form of a vertically-mounted rack intended to be used in the operating room (OR) to maintain the count of surgical sponges/swabs during a surgical procedure, typically to prevent these items from being inadvertently left in a patient. It is a rack/holder with hooks/pockets upon which soiled sponges/swabs may be arranged; it may be used in conjunction with an associated counting bag (not included). This is a reusable device.	I

368	13698	Dissection sponge	Задлах хөвөн	A sterile device intended to be used for blunt tissue dissection during a surgical procedure (e.g., from gross dissection to delicate neurological surgery). It typically consists of a small sponge made of hard but absorbent material (e.g., cotton twill, gauze, rayon) and frequently including an x-ray radiopaque element; some types include a hole in the centre to facilitate manipulation with forceps. It is available in a wide range of sizes and shapes (e.g., rosebud, peanut, cherry, round, Kittner). This is a single-use device.	I
369	13700	Sponge, gauze	Хөвөн, самбай	A device made primarily of gauze that is applied to a surgical incision, other skin wound, or an internal structure to control bleeding, absorb fluid, or protect organs from abrasion, drying, or contamination. This is a single-use device.	I
370	13701	Germicidal sponge	Нян устгах хөвөн	A device impregnated with an antimicrobial agent and intended to be applied to a surgical incision, other skin wound, or an internal structure to control bleeding, absorb fluid, and to protect against contamination. This is a single-use device.	I
371	13702	Neurosurgical sponge	Мэдрэлийн мэс заслын хөвөн	A sterile absorbent material intended to be used on the brain to remove blood and other fluids during an operation. This is a single-use device.	I
372	13704	Ophthalmic sponge	Нүдний хөвөн	A device made of absorbent material, e.g., gauze, cotton or cellulose, intended to be used to absorb excess fluid produced by the eye during microsurgical procedures and ophthalmic surgery such as cataract surgery and laser assisted in situ keratomileusis (LASIK) procedures. Some types can be used as an eyelid and lash guard and are typically shaped for use in conjunction with an eye speculum. This is a single-use device.	I

373	13708	Cast spreader, reusable	Цутгамал тараагч, дахин ашиглах боломжтой	A hand-operated instrument with specially designed blades intended to separate and spread hardened plaster, i.e., plaster that has already formed a cast around a patient's limb or body part. It is designed like large forceps with flat, outer-edge serrated blades that may be exchangeable and which are wedge-shaped (thin at the working end). The blades are intended to be prised between cut plaster so that when the device handles are squeezed the cast separates. It is typically made of high-grade stainless steel. This is a reusable device.	I
374	13709	Rib spreader, reusable	Хавирга тараагч, дахин ашиглах боломжтой	A self-locking surgical instrument designed to force apart two adjacent ribs to permit examination or intervention in the thoracic cavity. This device will typically have two interchangeable blades at the distal end that hook over the ribs to be parted, and a ratchet mechanism along its horizontal bar to adjust the blades and maintain its set position once it has been set. It is also known as a rib retractor and is available in various designs and sizes. It is typically made of high-grade stainless steel but types used for paediatrics may be made of corrosive resistant aluminium (Al). This is a reusable device.	I
375	13725	Physical therapy steam bath	Физик эмчилгээний уурын банн	A device designed to apply hot steam as a physical therapy to a patient. The device may be designed to nearly fully enclose the patient, such as a cabinet or similar structure where only the head protrudes from the device and is excluded from treatment. The device has a heat regulating mechanism to safeguard against creating an excessively hot environment within the enclosure.	I

376	13730	Device sterilization/disinfection container, reusable	Төхөөрөмжийг ариутгах/халдваргүйжүүлэх сав, дахин ашиглах боломжтой	A receptacle designed to hold wrapped and/or unwrapped medical/dental devices in a chemical washer/disinfector and/or sterilizer during the washing/disinfection and/or sterilization cycle(s). It may be designed as a tray to allow full or partial immersion of the devices in a liquid disinfectant, or as an enclosed box to prevent contamination once the sterilization process is finished. The container may also be used for transport and storage of the processed devices, and may have features such as an expiry date label, breathing filter, built-in slots or inserts to hold instruments, and stacking capabilities. This is a reusable device.	I
377	13732	Biological sterilization indicator	Биологийн ариутгалын үзүүлэлт	A sterilization indicator consisting of a standardized, viable population of microorganisms (e.g., bacterial spores known to be resistant to the mode of sterilization being monitored) that will display a change when exposed to an effective sterilization outcome indicating that sterilization parameters have been met. This is a single-use device.	I
378	13735	Sterilization packaging, single-use	Ариутгалын савлагаа, нэг удаагийн	A device, typically in the form of a paper sheet, envelope, bag, wrap, or similar, intended to be used to contain medical devices that are to be sterilized. It is designed to allow sterilization of the enclosed medical device and also to maintain sterility of the device until the packaging is opened for use of the device, or until a predetermined shelf date is expired. This is a single-use device.	I
379	13755	Mechanical external stethoscope	Механик гадаад чагнуур	A non-powered, external listening device designed to be placed on the patient’s skin to listen sounds from the arms, heart, lungs, and/or gastrointestinal tract. It typically comprises a membrane at the listening head connected by a split "Y" tube to the headgear with ear olives that are placed into the user’s ears. This is a reusable device.	I
380	13796	Stool cover	Мэс заслын сандлын бүрээс	A non-sterile device made of a pliable material used as a disposable physical barrier that is placed on or over a stool to prevent cross-contamination between the person sitting on the stool and the stool. It will typically be shaped to fit the seat or all of the stool. This is a single-use device.	I

381	13809	Strap	Боолт	A strip of cloth or other material of uniform breadth used for securing a device or stabilizing/holding together a bone or other body part. It has a fastening mechanism, e.g., Velcro and is capable of adjustment.	I
382	13810	Clavicle orthosis	Эгэмний ясны ортоз	A prefabricated (non-customized) wearable device intended to be worn over the shoulders of a patient to provide support and protection to a clavicle bone which has been fractured or injured. It incorporates padded straps that loop over each shoulder, under each arm, and around the back (e.g., figure-of-eight harness). This device may also be used to improve the patient's posture. This is a reusable device.	I
383	13818	Portable stretcher	Зөөврийн дамнуурга	A manual device in the form of a portable lightweight platform or sheet with handles on which a patient can be carried in an emergency from an area inaccessible to a conventional ambulance stretcher. It may be designed as a folding stretcher, rescue backet, spine board, or evacuation sheet, and may include patient straps to secure/stabilize the patient. This is a reusable device.	I
384	13834	Bronchial tube stylet	Гуурсан хоолойн зонд	A sterile thin metallic wire or flexible rod designed for insertion into the lumen of a bronchial tube and/or catheter to stiffen and/or maintain the shape of the structure. The device may be used during the complete procedure of bronchial intubation or only during the initial introduction of the bronchial tube/catheter. This is a single-use device.	I
385	13836	Needle stylet	Зүүний зонд	A device made of a thin wire or thin flexible rod that is intended to be inserted into the lumen of a needle to render it stiff and maintain the shape or patency of the needle, or to clear the lumen of the needle. It is available in various wire lengths and diameters, and will typically have a plastic knob at the proximal end. This is a single-use device.	I

386	13837	Peritoneal catheter stylet	Хэвлийн хөндийн катетерийн хэв маяг	A thin wire/rod intended to be inserted within the lumen of a peritoneal catheter (e.g., peritoneal dialysis catheter, peritoneal drainage catheter, peritoneal lavage catheter, abdominal fluid shunt system peritoneal catheter) to stiffen/maintain the shape of the catheter to assist introduction; it may also be intended to assist insertion of a bladder catheter used for drainage of fluid from the peritoneal cavity to the bladder. It is intended to be removed once the catheter is in place. This is a single-use device.	I
387	13839	Urological catheter stylet, transurethral	Урологийн катетер стилет, трансуретрал	A sterile, metal wire or flexible rod, typically with a plastic knob at the proximal end, intended to be inserted into the lumen of a urological catheter or cannula (not included) to increase stiffness sufficiently to facilitate manipulation/introduction into the urethra or ureter (via the urethra); it is not intended to assist introduction of a percutaneous catheter. It is available in various lengths, diameters, and degrees of rigidity. This is a single-use device.	I
388	13886	Surgical packing	Мэс заслын савлагаа	A sterile gauze (surgical packing), usually provided on a roll, that is used to fill surgical incisions that must heal in a controlled manner, usually internal to external. The gauze may be of various widths, e.g., 1/4 inch, 1/2 inch, and may be impregnated with other compounds, e.g., petroleum jelly or povidone iodine. This is a single-use device.	I
389	13894	Suture removal kit	Оёдол арилгах хэрэгсэл	A collection of various sterile instruments, dressings, and pharmaceuticals designed to remove sutures from a patient. It typically includes a disinfectant, scissors, forceps, gauze and bandages. This is a single-use device.	I
390	13895	Operative-site suture holder	Хагалгааны талбайн оёдол эзэмшигч	A device designed to hold suture threads to facilitate their manipulation, positioning and differentiation around the operative site during a surgical procedure. It typically has a circular, oval, or curved shape with grooves or other connecting elements, and is stabilized by attachment to a surgical drape; it may also be attached to an invasive surgical retractor. This is a single-use device.	I

391	13913	Antiseptic skin swab	Антисептик арьсны арчдас	A device that is pre-soaked with an antiseptic and intended to inhibit the growth of microorganisms on the skin; it may also include an anaesthetic to alleviate pain. It is typically designed as a sterile cotton swab (a pledget) on a plastic stick and used in the hospital environment, in the home, or carried for first aid to prevent infection and provide temporary pain and itching relief associated with minor cuts, scrapes, or burns. This is a single-use device.	I
392	13946	T-binder	Т-холбогч	Two strips of fabric or plastic attached at right angles in the shape of the letter "T" used to retain dressing, especially on the perineum. It is also known as a T-bandage. This is a single-use device.	I
393	13951	Anaesthesia instrument table	Мэдээ алдуулах хэрэгслийн ширээ	A flat surface (e.g., metal, plastic) usually supported by a moveable swivel caster base designed for the anesthetist to organize and display instruments used during general-anaesthesia surgical procedures. It typically includes shelves, drawers, and instrument trays.	I
394	13953	Autopsy table	Задлан шинжилгээний хүснэгт	A table specially designed to provide a working surface for postmortem examination and whole body dissection, to collect and drain fluids discharged from the cadaver and also to facilitate table cleaning and decontamination to prevent the accumulation of microorganisms. It will typically have an appropriate top surface, smooth and polished, e.g., stainless steel, with no crevices, screws or rivets, and that has raised rims, rounded corners, and a flat surface that slopes toward a table or sink drain.	I
395	13958	Table, examination/treatment, general-purpose	Хүснэгт, үзлэг/эмчилгээ, ерөнхий зориулалт	A general-purpose table for examination and/or treatment that may be fitted with some basic functions, e.g., raise, lower or tilt, and is used in, e.g., examination rooms or doctors' surgeries.	I

396	13959	Instrument table	Багажны ширээ	A table used for laying out sterile surgical instruments, sutures, and other utensils/items required during an operation or intervention. It is designed to include an appropriate, e.g., stainless steel, top or surface with no crevices, screws or rivets, and most tables include telescoping pedestals for height adjustment and swivel caster bases. This table is used in the so-called "sterile area" of the operation site and in some cases may be attached to the operating table.	I
397	13960	Obstetrical table, line-powered	Эх барихын ор, шугамаар ажилладаг	A mains electricity (AC-powered), adjustable table designed to support a woman's body in an appropriate position during labour and delivery and in other examination/treatment procedures related to pregnancy. This device will typically include, e.g., a motorized raise/lower function, leg holders (stirrups), traction handles, a receptacle for afterbirth and wheels for transport to the various birthing rooms.	I
398	13964	Physical therapy table, non-powered	Физик эмчилгээний ор, цахилгаангүй	A dedicated device specifically designed for use in physical therapies. It is a non-powered device that has manually-adjustable table top functions for height and position, including vertical tilting from supine to upright. It will typically incorporate foot supports, straps and exercisers (e.g., pulleys or rotators, arm slings, and leg exercisers). This device is designed for treatment of diseases using therapeutic exercises and massage, e.g., to enhance blood circulation to the lower limbs in patients with neurological disorders (e.g., spinal cord injury) and also to aid in muscle training and sense of balance.	I
399	13967	Traction table	Татлагын ор	An orthopaedic table designed to support the body of a patient and perform traction procedures (e.g., lumbar, cervical). It usually includes interchangeable accessories, typically head halters, pelvis belts, and traction boots.	I

400	13969	Operating table, urological	Мэс заслын ор, урологийн	A complete mobile operating/examination table specially constructed for urological operations. Commonly known as a transurethral resection (TUR) table, its top surface consists of a flat section with a headrest, possibly traction handles, and either powered or manually adjustable leg holders as an integral part of the table or attached to its side rails. It may include irrigation containers and supports the patient's body during urological examinations, cystoscopic procedures and both transurethral and open surgery of the urinary tract. This device may be powered by hydraulics, mains electricity (AC-powered), or an internal rechargeable battery pack and may be raised, lowered and tilted.	I
401	13970	Tachistoscope	Тахистоскоп	An ophthalmic device designed to flash words or images at different speeds, for the purposes of ophthalmic diagnostic testing.	I
402	13983	Umbilical cord tape	Хүйн тууз	A thin, flat strip of synthetic and/or natural material which is used as a tie or suture around the umbilical cord of a newborn infant after severance from the placenta. It typically consists of a braided strip of cotton thread and or spun polyester yarn and comes in a variety of sizes. This is a single-use device.	I
403	13997	Thyroid tenaculum	Бамбай булчирхайн тенакул	A hand-held manual surgical instrument with hooks at the distal end designed for grasping and/or manipulating the thyroid during a surgical intervention or examination of the thyroid and surrounding structures. It typically has a scissors-like, self-retaining design with ring handles and is made of high-grade stainless steel. It is available in various sizes. This is a reusable device.	I
404	13998	Uterine tenaculum	Умайн булчин	A hand-held manual surgical instrument with hooks at the distal end used for grasping and/or manipulating uterine tissue during a surgical intervention or examination of the uterus and associated structures (e.g., cervix). It typically has a scissors-like, self-retaining design with ring handles and is made of high-grade stainless steel. It is available in various sizes. This is a reusable device.	I

405	13999	Tenotome	Тенотом	A small, narrow-bladed knife mounted on a slender handle; usually used to cut a tendon. This term may also be applied to fine scissors, often adapted with a spring-like mechanism to keep the scissors open, used to cut tendons. This is a reusable device.	I
406	14025	Thermometer kit	Термометрийн багц	A collection of devices intended to be used to eliminate the reprocessing, reduce the risk of breakage and cross-contamination, and reduce the variance caused by the use of more than one thermometer per patient. It typically includes a thermometer [e.g., a mercury (Hg) or alcohol thermometer] for measuring human body temperature; and other components such as holders, cases, vials, or sheaths. This is a reusable device.	I
407	14027	Thermometer shaker	Термометрийн сэгсрэгч	An electrically-powered device used for shaking a thermometer of the capillary type in order to bring the reading (the level of the fluid in the capillary tube) to a low point prior to the thermometer being reused.	I
408	14066	Tongue depressor, surgical	Хэлний дарангуйлагч, мэс заслын	A hand-held surgical instrument designed to displace and maintain the tongue in a fixed position, usually by depressing it towards the floor of the mouth. It is typically a metallic (e.g., high-grade stainless steel) device either with a straight shape, or more frequently smoothly bent at its center (e.g., to a 90º arch). The proximal end is used as a handle, while the distal end (usually serrated and may include holes) is used to depress the tongue. The device is used in oral surgery (e.g., during tonsillectomy). This is a reusable device.	I
409	14070	Tonsillectome	Тонзиллектом	A hand-held manual surgical instrument designed to remove tonsils during a toncillectomy. It can be designed as either a flexible loop for grasping and holding the tonsil or a metal frame which holds and guides a sliding knife blade (a guillotine). The loop type holds the tonsil so it may be surgically cut with a knife. The frame type has a variety of designs of manual cranks that operate the sliding knife blade which cuts off the tonsil. This is a reusable device.	I
410	14077	Surgical towel	Мэс заслын алчуур	A sterile cloth used in the operating room (OR) to absorb extraneous fluids. This is a single-use device.	I

411	14082	Tracheal tube cuff	Гуурсан хоолойн ханцуйвч	A balloon-like device that is used to surround the distal end of an endotracheal (ET) tube or a tracheostomy tube that does not have the cuff built-in as an integral part of the product design and provides a seal between the tube and wall of the trachea. It may be filled with fluid during hyperbaric chamber procedures. This is a single-use device.	I
412	14090	Tracheostomy care kit, single-use	Трахеостомийн эмчилгээний иж бүрдэл, нэг удаагийн хэрэглээ	A collection of sterile devices and supplies intended to be used for the maintenance of a tracheostomy (i.e., removal and cleaning of tracheostomy tube prior to reinsertion). It typically includes towels, gauze, swabs, cleaning brush, and gloves. This is a single-use device.	I
413	14093	Tracheostoma button	Трахеостома товч	A hollow device intended to be used routinely by a patient to prevent the narrowing of a tracheostoma during intermittent use of their tracheostomy or laryngectomy tube. It is a cylindrical synthetic polymer device designed for minimal intrusion beyond the tracheostomal orifice into which it is placed. This is a reusable device.	I
414	14094	Tracheostomy tube cuff	Трахеостомийн хоолойн ханцуйвч	A sterile inflatable balloon-like device surrounding a tracheostomy tube used to provide a seal between the tube and the trachea for the ventilation of a subglottic stenosis patient. This is a single-use device.	I
415	14144	Tremograph	Тремограф	A mains electricity (AC-powered) device for recording involuntary trembling or quivering (tremors). It includes a sensor for finger, hand or arm motion in various resting positions. The movement can be recorded directly, using a recording pen or with an electric transducer for more sensitive recording. This device is useful in the diagnosis of certain movement disorders, such as essential tremor and tremor in Parkinson's disease.	I
416	14147	Bone trephine, reusable	Ясны трефин, дахин ашиглах боломжтой	An orthopaedic surgical blade designed to cut and remove circular sections of bone, typically for biopsy or percutaneous bone graft harvesting. It is typically a hollow cylinder with a circular, saw-like serrated working edge. It is an exchangeable device that may be attached to a manually-operated handle or to a powered rotary surgical handpiece. The device is typically made of high-grade stainless steel. This is a reusable device.	I

417	14148	Corneal trephine, reusable	Эвэрлэгийн трефин, дахин ашиглах боломжтой	An ophthalmic surgical blade designed to cut and remove circular sections of the cornea (corneal buttons) and/or sclera from a patient to prepare for graft implantation, or from cadaveric donors to obtain grafts. It is typically a sharp, beveled, hollow cylinder, of different diameters, having a circular, saw-like working edge. It is an exchangeable device that may be attached to a manually rotated handle or to a powered rotary surgical handpiece. This device is typically made of high-grade stainless steel. This is a reusable device.	I
418	14152	Cranial trephine, reusable	Гавлын трефин, дахин ашиглах боломжтой	A neurosurgical blade used to cut/remove circular sections of the skull vault (calvarium) to provide access to the interior, for the insertion of a catheter, a neuroscope for diagnosis or treatments such as, to alleviate intracranial pressure (ICP), obtain cerebrospinal fluid samples, inject radiopaque dyes. It may be used to make several holes for the removal of a bone flap. It is typically a hollow cylinder with a circular, saw-like serrated working edge and a centre drill for guidance. It is an exchangeable device that may be attached to a manually-rotated handle or to a powered rotary surgical handpiece. This device typically made of high-grade stainless steel. This is a reusable device.	I
419	14155	Laparoscopic trocar	Дурангийн трокар	A rigid, surgical instrument with a sharp pyramidal or conical point used to puncture the abdominal wall to facilitate the introduction of a laparoscope in the abdominal cavity. It is typically assembled and used together with a compatible sleeve, filling its lumen, thereby allowing the introduction of this assembly. Following puncture, the trocar is withdrawn providing an access port to the cavity. This is a reusable device.	I
420	14156	Amniotic trocar	Амнион трокар	A rigid, surgical instrument with a sharp pyramidal or conical point, used to puncture the maternal abdominal wall through to the amniotic cavity to permit direct visualization of the foetus and the amniotic fluid using an endoscope. Following puncture, the trocar is withdrawn providing a working channel to the cavity. This is a reusable device.	I

421	14159	Gallbladder trocar	Цөсний хүүдий трокар	A rigid, surgical instrument with a sharp pyramidal or conical point used to percutaneously puncture the abdominal wall providing access to the gallbladder through a catheter or cannula. It is frequently assembled and used together with a compatible cannula or catheter (i.e., filling its lumen), thereby facilitating the introduction of this assembly. The trocar is withdrawn after puncturing, providing a working channel to the gallbladder. This is a reusable device.	I
422	14187	Rectal/colonic irrigation nozzle, single-use	Шулуун гэдэсний/ бүдүүн гэдэсний усалгааны цорго, нэг удаагийн	An invasive luminal device intended to be inserted into the rectum and/or colostomy site for the administration of irrigation fluid into the rectum and/or large intestines during a rectal irrigation, colonic lavage, enema, and/or colostomy site irrigation procedure. Available in a variety of designs, it may be referred to as a cone, tip, speculum, or rectal catheter, and may include an inflatable balloon for retention. This is a single-use device.	I
423	14189	Culture tube	Сорьц хадгалах хоолой	A sterile glass or plastic tube-like container used to hold a culture specimen. This is a single-use device.	I
424	14194	Enema tube	Бургуйн гуурс	A non-sterile, length of tubing that is used as a conduit between the enema bag and the enema tip for the delivery of the enema solution into the rectum. It is typically a thick-walled tube and connects to the enema bag at one end and to the enema tip at the other. This is a reusable device.	I
425	14227	Rectal tube	Шулуун гэдэсний гуурс	A non-sterile, hollow cylinder that is inserted into the rectum for the administration of enemas and medications. It may be radiopaque for use in barium enema administration; it's open distal tip is of various configurations and typically has a small lateral opening (side eye). This is a single-use device.	I
426	14230	Tube, stomach evacuator	Хоолой, ходоодны нүүлгэн шилжүүлэгч	A hollow device with a single lumen that is passed through the mouth and is used for the removal of stomach contents. This is a single-use device.	I

427	14239	High-pressure medical gas hose	Өндөр даралтын эмнэлгийн хийн хоолой	A length of flexible tube intended to deliver and withstand gases under very high pressure, e.g., greater than 200 bar/3000 pounds per square inch (psi). It may be composed of any of several malleable or semi-rigid materials (e.g., plastic, rubber, or nylon), and braided with cotton wool and/or stainless steel. It is typically used to transport high pressure compressed medical gas to a pressure regulating device. It is available in various lengths, including standard coil lengths. This is a reusable device.	I
428	14286	Urethral bougie, reusable	Шээсний суваг, дахин ашиглах боломжтой	A rod-like manual surgical instrument designed to explore the urethra and/or to dilate a urethral and/or urinary meatus stenosis. It is designed with a semi-rigid tapered shaft that terminates at the distal end in a small bulbous tip (an olive) and it typically has a handle at the proximal end. It may be hollow to enable passage of other slender devices. This is a reusable device.	I
429	14288	Urethrometer	Уретрометр	A dedicated device that is inserted into the urethra and is used to dilate this duct and provide a measurement showing the degree of expansion. The measurements are typically shown on a dial. This is a reusable device.	I
430	14290	Urinal cover	Шээсний хоолойн бүрхэвч	A non-sterile device used as a physical barrier on a urinal to prevent human contamination. This is a single-use device.	I
431	14292	Urine-sampling urethral catheterization kit	Шээсний дээж авах шээсний сувгийн катетержуулалтын иж бүрдэл	A collection of sterile devices and supplies intended to be used by a healthcare provider to insert a urinary catheter into the bladder of a patient via the urethra and immediately collect a sample of urine (e.g., for a diagnostic test), followed by removal of the catheter. Components typically include sterile materials for prepping the patient (e.g., drape, germicide, under pads, gloves, cotton or rayon balls), as well as the supplies needed for catheter insertion (e.g., urinary catheter, lubricant) and urine collection (e.g., a sterile urine specimen collection cup, pouch, or bag). This is a single-use device.	I
432	14297	Urinary drainage unit	Шээс ялгаруулах төхөөрөмж	A set of components, e.g., a bag and tube, designed to collect urine from a catheterized patient. This is a single-use device.	I

433	14302	Urine strainer	Шээс шүүгч	A device designed to collect stones (calculi) from urine during normal micturition (urination). It is typically designed as a sieve-like container with handles for holding and emptying, and is typically mounted into a funnel/holder system that may be attached to a dedicated treatment table or chair. The collected stones are typically sent to the clinical laboratory for examination and composition determination to facilitate patient diagnosis and/or therapy. This is a reusable device.	I
434	14322	Vagina moulding kit	Үтрээний хэвний иж бүрдэл	A collection of devices and supplies intended to make a mould and/or cap of the vagina. It typically includes a thermosetting resin, an injector or other means (e.g., syringe) to apply the resin, and one or more rims with different inner diameters to fit the cervical canal. Kits intended to make cervical caps in situ also include appropriate shells to fit the rims. Vagina moulds may be intended for local application of therapeutic drugs or for diagnostic purposes by examining the vagina contour; kits intended for manufacturing in situ caps are used to provide a custom-made contraceptive device.	I
435	14339	Valvulotome	Валвулотом	A hand-held manual surgical instrument designed for cutting an anatomical valve or valves in situ (e.g., to slit a heart valve or to cut the valves within a vein to allow blood flow in the opposite direction). It is typically a flexible, plastic-coated metal shaft with a proximal handle and an extremely sharp cutting edge at the distal tip (e.g., the distal tip may terminate in a blade which is curved at 90 degrees to the shaft, or an assembly of several thin helicoidal blades that are rotated). This is a reusable device.	I

436	14345	Vectorcardiograph	Векторкардиограф	An electrocardiograph (ECG) used for recording the sequence of changes in magnitude and direction (vector) of the electric potentials in a complete cardiac cycle. In some types the electric signals are shown on an oscilloscope screen as a loop that represents the two-dimensional projection of the tip of all the instantaneous electrocardiographic vectors. The graphic representation (a vectorcardiogram) is usually a photograph of the loop. Vectorcardiograms may also be obtained from electrocardiographic signals using computer techniques and graphical plotters. This device is used in diagnosing abnormal and pathologic conditions of the heart.	I
437	14367	Vessel depressor	Судасны дарангуйлагч	A hand-held manual surgical instrument designed to displace tissue to facilitate examination of the surrounding area during vessel surgery. It is typically a double-ended device, that can be of various sizes and shapes (e.g., flat, curved, spoon-shaped, or fenestrated) with the working ends slightly angled to improve tissue manipulation and visibility. It is usually made of high-grade stainless steel. This is a reusable device.	I
438	14379	Viscerotome	Висцеротом	A hand-held manual surgical instrument designed for obtaining specimens of liver or other organs from cadavers by simple puncture without performing a general autopsy. It is designed as a punch, but this is in a wider sense, being shaped as a long stylet-like cutter. This is a reusable device.	I
439	14380	Visual field plotter	Харааны талбайн плоттер	An ophthalmic device designed to measure and record the viewing range and sensitivity of the fixed eye. The device is used to test for sensitivity to light, sensitivity to colour, and the ability to detect and recognize objects and patterns.	I
440	14389	Voltmeter	Вольтметр	A battery-powered electronic instrument designed to measure electrical potential difference, or voltage. Its scale may be graduated in volts or related smaller or larger units. It has typically one electrical probe or two electrical leads that are held against the conducting elements where the operator wants to take a voltage measurement. When voltage is detected current is sent to a base unit where the voltage is displayed on a meter.	I

441	14413	Washer/sterilizing unit	Угаагч/ариутгах төхөөрөмж	An automatic or semi-automatic washing machine for cleaning and sterilizing to provide a high level of disinfection that is nearly sterile. Reusable medical/surgical instruments and utensils that have become contaminated with blood, cellular debris, and other organic substances. It typically administers wash cycles with hot/cold water and detergent, followed by a steam cycle to heat and further loosen gross soil. Several water rinsing cycles follow, which may include steam injection. The final cycle involves sterilization with steam (moist heat).	I
442	14424	Waste receptacle	Хог хаягдлын сав	A device used in the collection, destruction and/or rendering harmless of hospital waste, e.g., syringe needles, body fluids or disposable waste from medical procedures.	I
443	14426	Contaminated waste container	Бохирдсон хог хаягдлын сав	A container made of metal, hard plastic and/or cardboard designed for the safe deposit, collection and storage of contaminated and/or otherwise hazardous biological materials (e.g., waste products containing or having been in contact with human blood, sputum, urine and/or faeces). It is not intended to exclusively contain sharps or for in vitro diagnostic purposes. It is typically used with a disposable liner and has a self-closing lid. It is typically identified with a contaminated material symbol on its labelling. The contents will be sent to disposal usually by incineration. This is a reusable device.	I
444	14427	Kick bucket	Дугуйтай хувин	A device typically made of stainless steel that is used as a receptacle for refuse in an operating room (OR) or treatment room where surgery is performed. The refuse is typically packaging, plastic coverings, or cotton balls. Surgical sponges are not generally thrown into this device as they should be accounted for and collected on a special rack until the end of the intervention. The device is typically mounted in a low stand with wheels so that it may be easily moved with a kick of the foot, hence the name "kick bucket". A liner is usually used to improve hygiene.	I

445	14429	Hydro-massage turbine	Гидромассаж турбин	A mains electricity (AC-powered) device with a motor and impeller designed to be submerged in a water bathtub to aerate and circulate the water (whirlpool effect) for hydrotherapy, typically therapeutic massage for patients with musculoskeletal conditions.	I
446	14450	Hydrotherapy bath/tank	Усан эмчилгээний банн / сав	A bathtub or tank designed to be filled with warm water and occupied by a patient for the application of various forms of physical hydrotherapy such as water jet massage or aquatic exercise, typically to help treat musculoskeletal pain and stiffness or for physical rehabilitation; it is not dedicated to flotation therapy. It may have built-in water jet nozzles or an external heating/pump system to heat and circulate the water (whirlpool effect). This device is intended to be used in a healthcare facility.	I
447	14462	Wound irrigation kit	Шарх усалгааны иж бүрдэл	A collection of noninvasive devices intended to be used by a healthcare professional to irrigate/cleanse an acute, chronic, or surgical wound. It consists of multiple items which typically include an irrigation instrument (e.g., syringe, bulb), wipes, towel, drape and/or irrigation solution. This is a single-use device.	I
448	14465	Wrist binder, single-use	Бугуйн боолт, нэг удаагийн	A dedicated strip/roll of fabric or polymer material designed to be wrapped around the wrist to support the wrist joint. It does not include a rigid support (i.e., not a wrist immobilizer) and is not a tubular support bandage. This is a single-use device.	I
449	14473	X-ray film cassette holder	Рентген хальсны кассет эзэмшигч	A device designed to position and hold the cassettes containing x-ray film during medical or dental imaging or radiation therapy procedures. It is used in conjunction with multiformat cameras and diagnostic imaging and radiation therapy modalities, e.g., nuclear medicine systems, ultrasound, computed tomography (CT), or magnetic resonance imaging (MRI).	I
450	15024	Obstetrical birthing chair	Эх барихын сандал	A manually-operated device that allows a woman to give birth in a seated position. It is compatible with obstetrical practices and, typically, can be adjusted to accommodate the lithotomy position.	I

451	15026	Moist-cold pack	Чийглэг хүйтэн савлагаа	A non-sterile device intended to be temporarily applied to a particular area of the body surface to provide moist cold. It typically consists of a disposable pad/pack/towel that includes an overlapping of several layers of fabric (e.g., gauze, cotton) and is intended to apply moist cold to the tissues after immersion in cold water and freed from excess moisture; it is not a compression bandage. It is typically used for temporary vasoconstriction of superficial blood vessels to help control bleeding, to inhibit inflammation and microbial activity in the early stages of infection, and to prevent/control oedema after strains or contusions. This is a single-use device.	I
452	15032	Electroencephalography telephone transmitter/receiver system	Электроэнцефалографийн утасны дамжуулагч/хүлээн авагчийн систем	An assembly of devices designed to transmit and receive electroencephalographic signals through telephone lines or the Internet. It typically includes at the transmitting site an electronic device (e.g., a modem) that modifies signals from medical devices such as electroencephalography (EEG) monitors or recorders for transmission through telephone lines; at the receiving end a receiver processes the incoming signal and provides an output signal for display, recording, and/or for further transmission and processing by healthcare information systems. The system is typically used to send signals from patient homes, doctor’s offices, and/or remote locations to healthcare facilities.	I
453	15038	Rib guillotine	Хавирганы гильотин	A manually-operated surgical instrument designed to cut transversely (i.e., transect) one or more ribs during a surgical procedure that requires the opening of the thoracic cavity. It typically consists of a robust metal frame through which runs a sliding blade which is moved by the device operator (e.g., through a squeezing action). It is made of high-grade stainless steel and may be available in various shapes and sizes. This is a reusable device.	I

454	15041	Umbilical ligator	Хүйн холбогч	A surgical instrument used to apply a ligature, e.g., a rubber band, to the umbilical structures. It is typically made of high-grade stainless steel and consists of a long shaft with a profiled clamp or grip at the distal end for holding the ligature and a handle or handles at the proximal end to mechanically operate the distal clamp or grip and release the ligatures. This is a reusable device.	I
455	15047	Gauze packer	Самбай савлагч	A hand-held, surgical instrument used for introducing and packing gauze or dressings into body cavities. This is a reusable device.	I
456	15053	Wheelchair-accessible platform scale	Тэргэнцэрт зориулсан тавцангийн жин	An electronic device designed to measure the weight of a wheelchair occupant who is unable to vacate their wheelchair; it may in addition be intended to function as a patient stand-on scale. It is designed as a floor-standing or floor-integrated platform whereby the known weight of the wheelchair is subtracted from the total measured weight to provide the weight of the wheelchair occupant; it is not designed to weigh a bed/stretcher.	I
457	15056	Shoe cover	Гутлын бүрээс	A loose fabric covering intended to be placed over a shoe to create a physical barrier to maintain hygiene and prevent cross-contamination of microorganisms, body fluids, and particulate material between the shoe and the environment, or a patient and staff. It is typically used in areas such as examination rooms or operating theatres and may be conductive, to reduce the risk of static electricity, or non-conductive. This is a single-use device.	I
458	15058	Rigid optical sigmoidoscope, reusable	Хатуу оптик сигмоидоскоп, дахин ашиглах боломжтой	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the sigmoid colon (the distal S-shaped part of the large intestine leading to the rectum). It is inserted through the anus during sigmoidoscopy or proctosigmoidoscopy. The anatomical images are illuminated by a built-in or external light source and can be viewed by the user through relayed lens optics or a fibreoptic bundle. This device is typically used to examine the structures and lining of the sigmoid colon and for indications of altered bowel habit, colonic cancer, or polyps. This is a reusable device.	I

459	15065	Suturing system, automatic	Оёдлын систем, автомат	An assembly of devices designed to apply conventional sutures to tissues with reduced operator intervention. It typically consists of equipment with a suture delivery mechanism, frequently including needles; a suture carrier accessory (e.g., a reel); and an attachment to manipulate the equipment and control the suture delivery. The system is available in a variety of configurations according to the type of suture to be delivered and the place of suture application. This is a reusable device.	I
460	15076	Rigid intubation laryngoscope, reusable	Хатуу интубацийн ларингоскоп, дахин ашиглах боломжтой	A hand-held device intended to be used by anaesthesia/emergency service personnel to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It has a handle containing batteries to power its light (a small built-in light bulb or fibreoptic light) for airway illumination, and a curved or straight blade of various designs and lengths that can be hinged/interchanged or integral. Some types can be magnetic resonance imaging (MRI) compatible. This is a reusable device.	I
461	15078	Laboratory apron	Лабораторийн хормогч	A garment designed to be worn by a person in the laboratory for protection from soiling or spills on the ventral (front) aspect of the body during the course of work or a procedure. It is typically made of materials resistant to substances or agents found in a laboratory. This is a reusable device.	I
462	15107	Tissue flotation bath	Эдийг хөвөх банн	A mains electricity (AC-powered) heated water bath designed to flatten out (eliminate wrinkles and distortions) and dry (solidify) tissue specimens during preparation of paraffin wax embedded specimens for use in histopathology, clinical, chemical and bacteriological laboratories, the tissue specimens having been previously cut in a microtome. The tissue specimens float onto the surface of the temperature-controlled water. Some types may include an illuminated background to enable the specimens to be easily seen.	I

463	15111	Burette	Бюрет	A device that is constructed as a graduated glass tube, possibly with an end-tap for measuring small volumes of liquid in chemical analysis.	I
464	15129	Scanning-light densitometer	Сканнердах гэрлийн нягт хэмжигч	A laboratory instrument designed to determine the optical density of patterns found on the media (e.g., cellulose membranes) commonly used in biotechnology tests. It is a device assembly that typically includes a light source, a monochromator, devices to provide sample motion or analysis over a given area, optical systems to direct and regulate light waves, and a photodetector; it may include computer capabilities for the analysis of densitometric patterns. The instrument is typically used to assess the developed pattern or protein fractions on cellulose-acetate membranes after electrophoresis (electrophoretogram) as well as the results of thin-layer chromatography tests.	I
465	15133	Laboratory diluter	Лабораторийн шингэлэгч	A mains electricity (AC-powered) laboratory instrument designed to make reliable and accurate dilutions of a sample and reagent (or diluent) solutions.	I
466	15134	Paraffin wax dispenser	Парафины лав түгээгч	A mains electricity (AC-powered) unit that is used in the laboratory to contain and dispense (dose) specified amounts of liquid paraffin wax, typically for histological tissue preparation. It will typically be designed with features such as a large capacity (e.g., 4 litres), thermal insulation, temperature controls and temperature measuring/regulating mechanisms, a heated tap (faucet) for the tapping of the wax, whilst avoiding wax solidification.	I
467	15139	Laboratory evaporator	Лабораторийн ууршуулагч	A mains electricity (AC-powered) device that is used in the laboratory to make a concentrate of fluids through the process of evaporation. It typically consists of a glass container in which the fluid to be concentrated is placed, a heating source applied to the container, temperature controls, condensate traps, and possibly a rotational mechanism to rotate the container so that the fluid is evenly heated.	I

468	15145	Basic laboratory freezer	Лабораторийн үндсэн хөлдөөгч	A mains electricity (AC-powered) freezer designed for the storage of laboratory products, samples, test materials, chemicals or reagents that require low temperatures, usually in the range from -10° to -55° Celsius. It will typically have a corrosion resistant (typically stainless steel) interior minimizing the risk of adulteration, contamination, and/or corrosion of the contents and a shelving configuration appropriate for storage/easy localization of the products. It will typically be programmable, have defrost capabilities, built-in alarm system to warn against temperature variations and a recorder to record events.	I
469	15154	Mortuary lift	Шарил өргөх	A mobile lifting device used to lift and transfer a corpse from a stretcher to the autopsy table or refrigerator and vice versa.	I
470	15172	Explosion-proof refrigerator	Дэлбэрэлтээс хамгаалсан хөргөгч	A mains electricity (AC-powered) laboratory device designed to store flammable liquids and volatile solvents at temperatures between 1 and 10° Celsius (34 and 50° Fahrenheit), and to prevent ignition of flammable materials (vapours and/or gases) inside and/or outside the unit. The motors, switches, and thermostats of the device are insulated to prevent arcing that can ignite flammable air-vapour mixtures. The device must be hardwired directly to a power source by rigid metal wires rather than connected by cord-and-plug assemblies; it is usually available in upright and undercounter configurations.	I
471	15175	Laboratory scale, electronic	Лабораторийн жин, электрон	An electronic instrument designed for general use in the clinical laboratory to determine the weight of bulk materials, solutions, or large discrete objects when it is not necessary to have the accuracy of a laboratory balance, when the weight is beyond the range of a laboratory balance, or to weigh specimens under special conditions (e.g., in fume hoods). It includes appropriate top surfaces, trays, or platforms. Its capacity may range from 0.5 to 200 kg (1 to 440 lb), with a readability between 1 to 100 g (0.0025 to 0.25 lb).	I

472	15178	Laboratory shaker	Лабораторийн сэгсрэгч	An electromechanical device, typically used in the laboratory or a blood bank, designed to shake/stir samples or mixtures with a rapid and forceful movement. It is used to provide a rapid mixing or to prevent substances comprised of different components from separation or sedimentation because of their different densities. It may be designed to secure single and/or multiple specimen containers (e.g., test tube, microplate) or specimen container holders during the shaking cycle; some types may have selectable agitation frequencies. It may also have a heating function to allow for temperature control of samples.	I
473	15180	Autopsy/dissection sink system	Задлан шинжилгээ / задлах угаалтуур систем	An assembly of devices designed to collect and drain fluids discharged from a cadaver during autopsy and/or dissection procedures. It typically permits the direct collection of the fluids from the dissection/autopsy table without additional manipulation of the cadaver. It typically consists of one or more seamless (without crevices) stainless steel bowls, one or more taps (faucets) supplying hot and cold water, a vacuum aspirator, soap dispensers, and appropriate tubing for drainage. It may also include sponge bowls to rinse and drain organs and/or instruments, exhaust ducts for connection to the building ventilation system, drawers for instruments and supplies, and electrical outlets.	I
474	15186	Test tube rack	Туршилтын хоолойн тавиур	A non-sterile device designed to hold test tubes in an upright and secured position. It is typically made of metal and/or plastic and consists of a base plate upon which it stands and second plate containing a mesh (grid of square slots) or round holes which is supported at a given height with spacers or diving walls. It is typically used in a clinical laboratory. This is a reusable device.	I

475	15197	Pipette washer	Пипетк угаагч	A mains electricity (AC-powered) machine designed for automatic removal of dirt and/or stains (i.e., washing) from pipettes (e.g., serological pipettes). It typically consists of a stainless steel or plastic washing compartment resistant to high water temperatures and corrosive chemicals, and appropriate pipette containers/holders. It performs a cycle of operations typically including water prewash, enzyme treatment, detergent wash, chemical wash, and cold and/or heated rinse; the process usually includes mechanical removal of contaminants by scrubbing and/or intermittent siphoning to produce a turbulent fill-and-empty cycle on the pipettes; some include drying capabilities.	I
476	15271	Electrocardiography telephone transmitter/receiver system	Электрокардиографийн утасны дамжуулагч/хүлээн авагчийн систем	An assembly of devices designed to transmit and receive electrocardiographic signals through telephone lines or the Internet. It typically includes at the transmitting site an electronic device (e.g., a modem) that modifies signals from a medical device such as an electrocardiograph (ECG) monitor or recorder for transmission through telephone lines; at the receiving end a receiver processes the incoming signal and provides an output signal for display, recording, and/or for further transmission and processing by healthcare information systems. The system is typically used to send signals from patient homes, doctor’s offices, and/or remote locations to healthcare facilities.	I
477	15276	Ampule	Ампул	A small, hermetically-sealed, bulbous glass vessel (container) used to preserve the sterility/quality of its contents. It typically holds pharmaceuticals for hypodermic injection, accessed by snapping- or cutting-off the head of the device. This is a single-use device.	I
478	15281	Surgical scrub sponge	Мэс заслын скраб хөвөн	A hand-held device that includes an absorbent, porous material designed to wash the skin of the arms, hands, and the fingernails in preparation for a medical/surgical procedure. It is typically multilayered and impregnated with an antimicrobial solution. This is a single-use device.	I
479	15288	Entoptoscope	Энтоптоскоп	An ophthalmic instrument for examining the media of the eyes, to ascertain their transparency.	I

480	15311	Image display monitor mount	Зургийн дэлгэцийн мониторын бэхэлгээ	A dedicated mount onto which a visual display unit (VDU), e.g., a patient monitor, can be placed and secured so that it is safely mounted in a position suitable for viewing. This device will provide for adequate vertical and horizontal adjustment possibilities and will be manufactured for hospital use. In some situations a television set may be mounted instead. It will typically be affixed to a wall, ceiling, or the top of, or into, a medical device or system.	I
481	15313	Culdocentesis kit	Кулдоцентезийн иж бүрдэл	A collection of devices consisting of the various instruments, dressings, and pharmaceuticals, necessary to perform a culdocentesis procedure. This is a reusable device after the consumable devices have been replenished.	I
482	15319	Dressing, skin graft, donor-site	Боолт, арьс шилжүүлэн суулгах, донор-сайт	A nonabsorbent, nonadherent sheet composed of mylar or other material, designed to cover and protect a variety of wounds including burns, skin grafts, and donor sites.	I
483	15321	Skin topical coupling gel	Арьсны сэдэвчилсэн холбох гель	A medium designed to be applied to a patient's unbroken skin surface (excludes the eye surface) to provide a coupling between an analytical or therapeutic device (e.g., ultrasound transducer, optical glucose monitoring system, transcutaneous electrical stimulator) and the patient, allowing for the emission and reception of energy/signals (e.g., electrical current, light) that pass through the skin during an examination or treatment. It is in the form of a fluid-like gel that may also assist in moving the parent device smoothly over the skin. It may be used by a healthcare professional in a clinical setting and layperson in the home. After application, this device cannot be reused.	I
484	15325	Patient positioning vacuum pad	Өвчтөний байрлал тогтоох вакуум дэвсгэр	A device designed to position and immobilize parts of the patient (e.g., head, extremities) typically during therapeutic interventions or patient transportation. The device immobilizes a body part by encompassing it and then applying a vacuum. The device is typically an airtight soft pillow case type of covering made of flexible materials, e.g., plastic or rubber. When sealed, this device retains the shape of the part that it encompasses until the vacuum is released.	I

485	15580	Extractor, foreign body, superficial tissue	Экстрактор, гадны биет, өнгөц эд	A surgical device, e.g., a magnet or mechanical grasper, that is used to extract foreign bodies from superficial tissue, e.g., the skin/superficial fascia, with minimum trauma to that tissue. This is a reusable device.	I
486	15593	Bed pillow, reusable	Орны дэр, дахин ашиглах боломжтой	A sealed fabric case (e.g., cotton, pure wool) stuffed with soft material (e.g., down, polyester, foam, buckwheat husks) designed to support the head especially during rest and sleep in bed; it can also be used to support another part of the body to provide comfort (e.g., behind the back when in a sitting position, under a leg for support). It may or may not be used with a pillowcase and is laundered for cleaning between periods of use. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites; it is not dedicated to specialized applications/therapies. This is a reusable device.	I
487	15615	Central vacuum pump	Төвийн вакуум насос	An electrically-powered device intended to generate a vacuum in a large central tank that is typically placed in the technical auxiliary area of a healthcare facility and which will serve the facility’s central vacuum system. This vacuum is typically used to power connected suction systems or other vacuum-powered devices (e.g., in a clinical laboratory); it is not dedicated to a clinical speciality.	I
488	15620	Intravenous track/carrier system	Судсаар хийх зам/тээвэрлэгч систем	An assembly of metallic and hard plastic structures (tracks) and sliding devices (carriers) that are affixed to the ceiling and used to provide the transport and displacement mechanism for intravenous (IV) ceiling-mounted poles and/or hangers from which various fluid delivery devices (bags or bottles) can be suspended for the administration of intravenous (IV) fluids/medication to the patient. This device is mainly used in healthcare areas where administration of IV fluids is frequent and/or the use of the floor space is critical.	I
489	15621	Microsurgical instrument	Бичил мэс заслын багаж	A surgical device designed to perform delicate surgical procedures, e.g. within or around the eye.	I

490	15622	Uterine injector	Умайн тарилга	A hand-held manual device designed to inject/administer liquids into the uterus and/or fallopian tubes, typically contrast medium during radiographic procedures to evaluate tubal patency. It is typically used in conjunction with an appropriate intrauterine catheter which may be manipulated through an external mechanism. The injector may be used to manipulate or reposition the uterus during diagnostic and/or surgical procedures. This is a reusable device.	I
491	15623	Contact lens remover	Контакт линз арилгагч	A hand-held ophthalmic device used to remove contact lenses from the eye. This is a reusable device.	I
492	15624	Tracheostomy tube dressing	Трахеостомийн хоолойн боолт	A pad designed to conform around a tracheostomy tube at its insertion site to provide protection for the skin and/or to absorb secretions. It is typically designed with a slit or hole to facilitate tube fitting. This is a single-use device.	I
493	15632	Tinnitus masker analyser	Чихний шуугианыг дарагч анализатор	An emitter (a sound generator) used by an audiologist to adjust a tinnitus masker (a technical aid) for the individual user. It emits a buzz (broad-band noise) or clicks (intermittent sound).	I
494	15639	Paper, recording	Цаас, бичлэг	A device prepared from a thin sheet of fibrous material specially produced for recording the output of devices measuring physiologic parameters, e.g., electrocardiogram (ECG), electroencephalogram (EEG), or for ultrasound imaging.	I
495	15643	Instrument/equipment drape, reusable	Багаж/тоног төхөөрөмжийн хөшиг, дахин ашиглах боломжтой	A device made of natural or synthetic materials, or both, that is typically sterile and used as a protective covering for various surgical and/or non-surgical instruments/equipment [e.g., a surgical tray, an operating room (OR) equipment table, an endoscope, and endoscopic instruments], to provide and maintain a barrier against contamination in various clinical settings. This is a reusable device.	I

496	15652	Loupe	Луп	A convex lens with a built-in electrical light source intended to be used to concentrate light upon and magnify an object(s) being viewed. It can be used for a variety of purposes including examination of objects in the laboratory or clinic, to perform minor surgery, or to assist persons with weak eyesight. The loupe is typically mounted on the end of an adjustable arm (e.g., a flexible tube or an articulating arm) which is attached to a stable base or clamped to a surface worktop.	I
497	15660	Overbed light	Орны дээгүүр гэрэл	A mains electricity (AC-powered) device which is mounted typically directly above the bed and which is used to provide personal lighting to that particular bed site. It may have an adjustable arm (holder) to facilitate movement by the patient or nursing staff for, e.g., reading purposes. This lighting may also add to the general lighting of the room.	I
498	15670	Bone forceps	Ясны хямсаа	A surgical instrument with strong blades and teeth used for grasping, cutting, or crushing bone. This is a reusable device.	I
499	15672	Tonsil forceps	Гүйлсэн булчирхайн хямсаа	A hand-held manual surgical instrument designed for seizing, grasping, and manipulating the tonsils during an ear/nose/throat (ENT) surgical intervention, typically during tonsillectomy. It typically has a scissors-like, self-retaining, design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have grasping blades that are curved in various shapes and/or terminate in oval rings or small toothed triangles. The blades are typically heavily serrated to provide extra grip on the tonsil tissue. This is a reusable device.	I
500	15674	Ear lobe punch	Чихний дэлбээний цохилт	A hand-held manual surgical instrument designed to excise a segment of tissue (frequently in the form of a disc), typically cartilage, from the ear lobe and sometimes from surrounding anatomic structures. It typically includes a mechanism for excision (e.g., a jaw) at the distal end operated with ring-like handles. This is a reusable device.	I

501	15675	Mastoid retractor, self-retaining	Мастоид татагч, өөрөө хадгалдаг	A self-locking, surgical instrument, used for separating the edges or drawing aside the margins of a surgical incision to permit access to the mastoid process (the large projection of the temporal bone of the skull found immediately behind each ear) during ear/nose/throat (ENT) surgery. The instrument may resemble a pair of ring-handles scissors or a device with two conjoined legs with wide-angle blades which have fenestrated curved hooks often terminating in sharp points at the distal end to grasp the tissue. It will retain the set open position. It is usually made of high-grade stainless steel and comes in a variety of designs. This is a reusable device.	I
502	15676	Nasal snare, reusable	Хамрын урхи, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be inserted into the naris for the removal of tissue, typically polyps, tumours, and other abnormal tissue from the nasal cavity during ear/nose/throat (ENT) surgery. It typically consists of a cannula-like tube with two stationary and one sliding finger rings designed to position and tighten a loop of thin, flexible wire (the snare) around the tissue to be removed. It is intended for mechanical cutting only (i.e., not through electrical ablation). This is a reusable device.	I
503	15677	Uterine elevator	Умайн цахилгаан шат	A hand-held surgical instrument used to lift and manipulate the structure of the uterus to facilitate examination and surgery on this organ and/or the surrounding organs/tissue during a surgical intervention. It is typically a single-ended device with a blunted blade or hook with no cutting edges that can be of various shapes and a handle at the proximal end. It is usually made of high-grade stainless steel. This is a reusable device.	I

504	15682	Centrifuge bucket/tube holder	Центрифугийн хувин/хоолой эзэмшигч	A cylindrical or bucket-like device designed as a removable component of a centrifuge rotor head intended to safely contain (hold) a laboratory test tube or centrifuge tube containing a sample/specimen while the centrifuge is being operated at high speeds. It is typically made of metal or a strong synthetic polymer, has one or multiple positions for holding the sample/specimen tubes, and is open at the proximal end for their insertion. A protective screw-top cap or lid may be included to contain the contents of one or more sample/specimen tubes in the event of breakage. This is a reusable device.	I
505	15695	Acupuncture chart	Зүү эмчилгээний график	A pictorial representation of the human anatomy that indicates acupuncture points and their associated effects, used as a reference or for acupuncture training purposes.	I
506	15699	Heel stirrup cover	Өсгийтэй дөрөөний бүрээс	A sterile device used for the protection of a heel stirrup (a dedicated foot holder) against unhygienic conditions. It will create a physical barrier between the patient's foot and the heel stirrup. The device is used mainly for patients in lithotomic position for obstetrical, urological, colonic, or rectal procedures. This is a single-use device.	I
507	15702	Walking aid tip	Явган явахад туслах зөвлөмж	A device designed as a formed piece of non-slip material (e.g., rubber or suitable plastic) that is attached to the ground-contacting end of a walking aid (e.g., a walking stick, crutch, or walking frame) to promote a secure purchase to the contact surface (ground or floor surfaces) thereby increasing the safety factor. This is a reusable device.	I
508	15712	Rubber dam clamp	Резинэн далан хавчаар	A dental device with a buccal and lingual wing, or flange, used to anchor a rubber dam down to the cervical region of an exposed tooth. This device comes in a variety of shapes, sizes, and designs for various situations. It is typically made of spring metal and has bevelled jaws that contact the tooth, and a bow that connects the jaws. This is a reusable device.	I

509	15713	Dental rongeur	Шүдний ронжер	A hand-held manual dental instrument intended to be used to remove the sharp edges of the alveolar crest of bone following tooth extraction. It has a forceps or pliers-like design terminating at the distal end with sharp-edged, scoop-shaped jaws attached to strong, sprung (self-opening), pivoted or multi-pivoted handles that, when squeezed together, close the jaws that bite (cut) through the bone tissue. It is made of high-grade stainless steel. This is a reusable device.	I
510	15723	Ophthalmic chair, line-powered	Нүдний сандал, шугамаар ажилладаг	A mains electricity (AC-powered) device designed to position a patient in a seated or reclined posture for easy access and patient comfort during an ophthalmic examination, treatment, or surgical intervention. It will typically have powered raise/lower functions and may be freestanding or connected to another device or system. It is not designed to position the patient completely horizontally during surgery (i.e., it is not an operating table).	I
511	15726	Radiographic stretcher	Радиографик дамнуурга	A manually-operated device consisting of a radiation translucent platform mounted on a wheeled frame designed to transport and support a recumbent patient during the acquisition of radiographic images. It may include various accessories (e.g., slots and cassette-support attachments). It is commonly used in emergencies to produce the first diagnostic images of a patient when there is little time for conventional protocol (e.g., in cases of serious patient trauma or during a large-scale catastrophe).	I
512	15732	Birthing bed/table, powered	Төрөх ор/ширээ, цахилгаантай	An electrically-powered, adjustable device designed to support a pregnant woman's body in an appropriate position during labour and delivery, and may in addition be intended for other obstetrical examination or treatment procedures. This device may be referred to as a birthing/obstetric bed, table, couch, or chair, and will typically include, leg holders (stirrups), traction handles, a receptacle for afterbirth, and have facilities for the attachment of different accessories.	I

513	15733	Surgical scrub station	Мэс заслын скраб станц	A mains electricity (AC-powered) device used by surgeons and other medical staff for the thorough cleaning/scrubbing of their hands, fingernails and arms before surgery or other procedures that require a high level of hygiene by participating personnel in order to reduce/prevent the transmission of infection to a patient. It typically consists of one or more stainless steel sinks with a seamless construction (i.e., without crevices) that are integrated in a unit that includes several taps (faucets) supplying hot and cold water, water filters, temperature and/or time controls, soap and brush dispensers and some may also include ultraviolet lamps.	I
514	15735	Catheter holder	Катетер эзэмшигч	An external device placed over a catheter or needle inserted into a vein to protect the site and to help prevent inadvertent removal of the intravenous device. This is a single-use device.	I
515	15737	Rhinomanometer, manual	Риномanометр, гарын авлага	A manual device used for the measurement of the airflow and variations in air pressure within the patient's nasal passages, e.g., for the calculation of the nasal space during ear/nose/throat (ENT) assessment/treatment. It will be used to quantify the amount of nasal obstruction/congestion. This device is of a simple manometer design.	I
516	15743	Specimen container mailer, insulated	Сорьцын савны шуудан, тусгаарлагчтай	A non-sterile tube, box, or envelope designed to transport a specimen container/receptacle by mail and to provide protection and insulation for the container and its specimen content. It can be used for mail services internal or external to healthcare facilities. It includes insulation intended to provide a thermal barrier between the specimen and the environment to preserve temperature-sensitive samples. The device is also intended to protect the specimen container (e.g., glass vial, bottle, tube, or slide) from adverse conditions that could cause breakage. This is a single-use device.	I

517	15750	Pill crusher/splitter	Эмийн бутлуур / задлагч	A hand-held device designed for crushing or splitting in two medication in the form of a tablet for easier ingestion by a patient who cannot swallow the tablet whole. It is designed for convenience to be carried in the user's pocket or handbag (purse) and typically consists of several pieces that can be easily assembled by the user to crush or split the pill (tablet) by screwing the two main body parts against each other. This is a reusable device.	I
518	15752	Infant heat shield	Нярайн дулааны хамгаалалт	A protective guard intended to be used to reduce heat loss due to insensible water loss, i.e., evaporation, during the radiant warming of primarily premature infants. This is a single-use device.	I
519	15764	Foot-switch cover, sterile	Хөлийн унтраалгатай таг, ариутгасан	A sterile shield, typically made of plastic in the form of a bag, placed over a foot-switch to protect the foot-switch from contamination, and to prevent potential cross-contamination between users. When used in the operating room (OR) it will provide the additional benefit of protecting the foot-switch from excessive contact with fluids that have spilled onto the floor. This is a single-use device.	I
520	15772	Surgical instrument maintenance lubricant	Мэс заслын багажийн засвар үйлчилгээ тосолгооны материал	A non-sterile solution intended to be applied to a surgical instrument prior to sterilization for purposes of lubrication/maintenance (e.g., to prevent moving or mating parts from sticking together during use, inhibit corrosion, and to improve longevity of the instrument); it is not dedicated to a particular type of surgical instrument. It may be a water-soluble solution, commonly known as instrument milk because of its white colour when mixed with water, in which the instrument is immersed, or it may be a spray that is sprayed onto the instrument. After application, this device cannot be reused.	I
521	15774	Cast cutter blade	Цутгамал зүсэгч ир	A surgical cutting device intended to be used with a cast removal tool (cast cutter) to provide the cutting edge for cutting through cast material so that this can be removed from the patient. It is formed as a thin, rounded, half moon-like, or circular blade with serrated teeth around its cutting edge. This is a reusable device.	I

522	15778	Clamp jaw cover	Эрүүний тагийг хавчих	A device used in pairs that are placed/fitted onto the distal working end (the jaws) of a surgical instrument (e.g., vascular clamps, forceps) to improve atraumatic grip and pressure distribution when clamping an artery or a vein. It is typically a long cylindrical polymer tube available in various sizes. This is a single-use device.	I
523	15779	Animal cage	Амьтны тор	An enclosure designed for confining and/or transporting animals typically consisting of either a lattice or solid structure. It can be made of wire, wood, plastic, and/or metal bars and constructed in different sizes depending upon the animal it is to contain and the intended use, e.g., small for laboratory testing, larger for research/living quarters. Animal cages will be used for, e.g., mice, rats, guinea pigs, rabbits, cats, pigs.	I
524	15787	Sphincteroscope	Сфинктероскоп	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the anal sphincter. It is inserted into the body through the anus during a proctological procedure. The inserted portion is very short in length and large in diameter, and an obturator is typically inserted into its lumen to assist the insertion. The anatomical images are usually viewed by direct vision. This device is used to examine/diagnose patients suffering abnormal functioning of the sphincter, internal haemorrhoids, or anal fissures. This is a reusable device.	I
525	15799	Food tray, reusable	Хоолны тавиур, дахин ашиглах боломжтой	A tray which is designed to carry and serve dishes of food. It may also be used to collect dirty dishes or gather up other similar items. Some types may be colour-coded to clearly show the different patient dietary meals placed and served upon them. This is a reusable device.	I

526	15800	Dissection forceps	Задлах хямсаа	A surgical instrument used to facilitate grasping, manipulation, compression or joining of tissue during dissection and/or autopsy. It typically has two main designs: 1) a self-retaining, scissors-like design with ring handles with the working end having a variety of blade designs, e.g., straight, angled, or curved with parallel grooves or serrations to provide grip; and 2) tweezers-like design (may be a micro/fine instrument) with two conjoined blades with serrated tips at the working end. It is made of high-grade stainless steel and is available in various sizes and may have carbide inserts at the working end. This is a reusable device.	I
527	15819	X-ray film cutter	Рентген хальс таслагч	A device to trim x-ray film, or film from other imaging modalities to a desired size or shape. The device can be either manual or powered.	I
528	15826	Diplopiometer	Диплопиометр	An ophthalmic device intended to be used to diagnose diplopia, a visual symptom in which a single object is perceived by the visual cortex as two objects rather than one.	I
529	15827	Soap dispenser	Саван савлагч	A device designed to contain soap, either as a liquid or as a bar of soap, that will provide the user with a portion of soap (it dispenses either a squirt of the liquid soap or one bar of soap) each time it is activated by the user. When empty it can be refilled. This is a reusable device.	I
530	15828	Drying rack, non-dedicated	Хатаах тавиур, зориулалтын бус	A non-dedicated device (a rack) designed to hold other devices, e.g., bottles, clothes or endoscopes, for drying.	I
531	15836	Hamper cover, single-use	Садааны таг, нэг удаагийн	A device made of disposable materials that is used together with a hamper and is used to conceal and/or isolate the contents of the hamper. It is used in healthcare facilities to contain bad odours and/or airborne contamination of the contaminated contents within the hamper during, e.g., collection and transport. This is a single-use device.	I
532	15837	Hamper liner	Садааны доторлогоо	A device used to line the inside of a hamper in order to create a barrier that will prevent cross-contamination between the used contents (e.g., used disposable products and/or laundry) and the hamper. It will typically consist of a plastic or fabric bag of suitable strength and dimensions. This is a single-use device.	I

533	15839	Hamper	Бохирын уут	A device designed as a container used for the temporary collection and storage of used disposable products and/or dirty laundry. It typically consists of a ventilated basket (e.g., wicker, moulded plastic) with a cover and will have an internal disposable liner (e.g., a dedicated plastic bag) to keep the hamper from being soiled and facilitate the removal of the contents. The device will typically be fitted with wheels (castors) for easy movement.	I
534	15841	Public address paging system	Нийтийн хаягийн хуудасны систем	An assembly of loudspeakers installed throughout a building complex, e.g, a hospital or an institution, designed to page (draw attention to) personnel, patients, and visitors. The system typically consists of strategically situated loudspeakers and one or more centrally placed transmitters in command posts into which the verbal command is spoken and disseminated over the loudspeakers. This is also known as a Tannoy system.	I
535	15863	Voltage alarm	Хүчдэлийн дохиолол	An electronic device that provides a warning signal, visual and/or audible, when pre-set limits of voltage are exceeded in a source of electric current. It is typically used to monitor the performance and adequacy of batteries or other volatile sources of electric current.	I
536	15896	General-purpose casework	Ерөнхий зориулалтын кейс	Furniture consisting of different units, e.g., cabinets, shelves, racks, worktops, combined and installed in a healthcare facility to provide users with a general-purpose functional work and storage place. This will also separate the floor/room area creating a practical discrete working environment for the staff. The units are used to store materials, supplies, devices, records, samples, and other items. This furniture is usually modular and constructed using thicker panels and more long-lasting surface finishes than ordinary office/domestic furniture.	I

537	15897	Laboratory casework	Лабораторийн кейс	Furniture consisting of different units, e.g., cabinets, shelves, racks, worktops, combined and installed in a laboratory healthcare facility to provide users with a functional work and storage place. This will also separate the floor/room area creating a practical discrete working environment for the staff and/or patients. The units are used to store materials, supplies, devices, records, samples, and other items. This furniture is usually modular and constructed using thicker panels and more long-lasting surface finishes than ordinary office/domestic furniture.	I
538	15899	Nursing station casework	Сувилахуйн станцын ажил	Furniture consisting of different units, e.g., cabinets, shelves, racks, worktops, combined and installed in a hospital/healthcare facility to provide users with a functional work and storage place. This will also separate the floor/room area creating a practical discrete working environment for the staff and/or patients. The units are used to store materials, supplies, devices, records, samples, and other items. This furniture is usually modular and constructed using thicker panels and more long-lasting surface finishes than ordinary office/domestic furniture.	I
539	15900	Patient room casework	Өвчтөний өрөөний хэргийн ажил	Furniture consisting of different units, e.g., cabinets, shelves, racks, worktops, combined and installed in a hospital/healthcare facility to provide users with a functional work and storage place. This will also separate the floor/room area creating a practical discrete patient area and working environment for the staff. The units are used to store materials, supplies, devices, records, samples, and other items. This furniture is usually modular and constructed using thicker panels and more long-lasting surface finishes than ordinary office/domestic furniture.	I

540	15901	Pharmacy casework	Эмийн сангийн хэрэг	Furniture consisting of different units, e.g., cabinets, shelves, racks, worktops, combined and installed in a pharmacy facility to provide users with a functional work and storage place. This will also separate the floor/room area creating a practical discrete working environment for the staff and/or customers. The units are used to store materials, supplies, devices, records, samples, pharmaceuticals and other items. This furniture is usually modular and constructed using thicker panels and more long-lasting surface finishes than ordinary office/domestic furniture.	I
541	15909	Shower curtain, antimicrobial	Шүршүүрийн хөшиг, нянгийн эсрэг үйлчилгээтэй	A piece of waterproof or water-resistant drapable material that is hung as a screen at the front of or around an open shower to contain the water within the cubicle/space. It is coated or impregnated with an antimicrobial agent to help prevent bacterial/fungal growth and cross-contamination. It is usually moved horizontally to allow entry/exit of the person using the shower. This is a reusable device.	I
542	15911	Shower curtain, reusable	Шүршүүрийн хөшиг, дахин ашиглах боломжтой	A piece of waterproof or water-resistant drapable material intended to be hung as a screen at the front of or around an open shower to contain the water within the cubicle/space; some types are coated or impregnated with an antimicrobial agent. It is usually moved horizontally to allow entry/exit of the person using the shower. This is a reusable device.	I
543	15914	Eye bank freezer	Нүдний банкны хөлдөөгч	A mains electricity (AC-powered) device designed for storing eye tissue, e.g., corneas, in the temperature range below 0° Celsius.	I
544	15920	Eye bank refrigerator	Нүдний банкны хөргөгч	A mains electricity (AC-powered) refrigerator specially designed to store eye tissue, typically from a human source, at a suitable temperature level for this purpose. This device may be, e.g., equipped with a temperature alarm and locking mechanism to keep out unauthorized personnel.	I

545	15921	Food refrigerator, reach-in	Хоолны хөргөгч, нэвтрэх боломжтой	A mains electricity (AC-powered) device designed to store food products under controlled refrigerated conditions, ideally about 1.7 to 3.3° Celsius (35 and 38° Fahrenheit), to prolong their edible state. It is a unit with shelves, drawers, and a door that is opened to reach in and place or remove contents. It may include a smaller compartment in which food is stored in a frozen state.	I
546	15922	Food refrigerator, walk-in	Хоолны хөргөгч, дотуур байр	A mains electricity (AC-powered) device with a cabinet-like storage compartment large enough to permit a person to enter, and designed for storage of food products at temperatures typically between 4° and 10° Celsius (39° and 50° Fahrenheit). It typically consists of a chamber made with a corrosion-resistant or corrosion-proof (typically stainless steel) interior, minimizing the risk of adulteration and/or contamination of contents; internal shelving appropriate for storage, easy location, and handling of food products; a compressor, condenser, evaporator, and tubing; temperature sensors, controls, and possibly alarms.	I
547	15927	Direction/information sign	Чиглэл/мэдээллийн тэмдэг	A device intended to provide visual information on directions and/or site identification within a healthcare facility or other sites. A sign will typically be manufactured using words, letters, symbols, and/or pictures to convey the information content (e.g., "Exit", "Examination room", "Mammography", "Reception", "Temperature scanning station"). It is used throughout healthcare facilities or other environments (e.g., workplaces) to provide visual information to staff, patients, and/or visitors.	I
548	15928	Safety sign	Аюулгүй байдлын тэмдэг	A device intended to provide visual information on safety warnings, e.g., biological, chemical, radioactive and/or other hazardous or potentially hazardous conditions within a healthcare facility. A sign will typically be manufactured using words, letters, symbols, and/or pictures to convey the information content (e.g., "X-ray in use", "Radiation", "Isolation room", "Pressurized gas"). It is used throughout healthcare facilities to provide visual information on safety to staff, patients, and/or visitors.	I

549	15930	Antimicrobial wall covering	Нянгийн эсрэг ханын бүрээс	A non-conductive material that is resistant to the accumulation and growth of bacteria on its surface, intended to be applied to the walls of rooms that require a high degree of asepsis such as operating theatres, special laboratory rooms, or pharmaceutical production facilities.	I
550	15931	Laundry washing machine	Угаалгын угаалгын машин	A mains electricity (AC-powered) machine for fully or semi-automated washing of clothes and linen which are washed and rinsed under controlled temperature conditions using the appropriate washing program and detergent(s). The washing program can include several phases, e.g., rinsing, washing, spinning. This device is typically used in hospital or institution launderettes.	I
551	15934	Examination/treatment room sink system	Үзлэг/эмчилгээний өрөөний угаалтуур систем	An assembly of devices primarily designed for use by healthcare personnel for cleaning their hands in hospital examination rooms, medical and dental offices, and in nurse stations. It typically consists of one or more seamless (without crevices) stainless steel or porcelain bowls, one or more taps (faucets) supplying hot and cold water, and appropriate tubing for drainage. It may include electrical outlets and/or drawers for instruments and supplies storage. It is used to reduce/prevent the transmission of cross-infection to patients and is usually available in stand-alone or wall-mounted configurations.	I
552	15935	Laboratory sink system	Лабораторийн угаалтуур систем	An assembly of devices designed for the cleaning and manipulation of laboratory devices, instruments, and supplies. It typically consists of one or more bowls (e.g., made of epoxy resin or glazed porcelain) that are non-absorbent and resistant to acids, salts, and solvents. It will have a seamless (without crevices), rounded-corner construction and include one or more taps (faucets) supplying hot and cold water, soap dispensers, and appropriate tubing for drainage. It may also include exhaust ducts for connection to the building ventilation system and a waste bin. It is available as a stand-alone unit or more frequently, mounted onto or built into a standard laboratory cabinet.	I

553	15936	Surgical scrub sink system	Мэс заслын скраб угаалтуур систем	An assembly of devices for the thorough cleaning/scrubbing of the hands, fingernails, and arms before surgery or other procedures that require a high level of hygiene by participating personnel, in order to reduce/prevent cross-infection to a patient. It typically consists of one or more stainless steel bowls with a seamless construction (i.e., without crevices) and includes one or more taps (faucets) supplying hot and cold water, automatic on/off function for the tap(s), temperature and/or time controls, and soap dispensers. It is used by surgeons and other medical staff before approaching the designated sterile area [e.g., the operating room (OR)] or patient.	I
554	15943	Tray conveying system	Тавиур дамжуулах систем	An assembly of mains electricity (AC-powered), electromechanical devices, designed to continuously transfer trays from one place to another to serve as a transport medium for items placed on the trays. Integrated trays may be stationary or they may tilt to deposit their contents at a particular destination.	I
555	15962	Patient bed chart	Өвчтөний орны хүснэгт	A medical chart designed to provide a record of all the clinical data on a particular patient, or only a simplified graphic representation of some variable in pulse, temperature, and respiration, during hospitalization. It is produced from the notes made by hospital/clinical staff on a regular basis and may be used in a variety of settings, e.g., bedside on the wards, in the operating room (OR), or in the intensive care unit (ICU).	I
556	15977	Fistula scissors	Фистул хайч	A hand-held manual surgical instrument designed to cut or lance a fistula during a surgical procedure. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a piercing/shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. The distal end of the blades may have different shapes. This is a reusable device.	I

557	15985	Laboratory ware dryer	Лабораторийн багаж хатаагч	A mains electricity (AC-powered) device typically used in the laboratory to dry laboratory ware that has been washed for reuse, e.g., beakers, containers, jars. This device may reflect old technology since modern washing machines would incorporate this feature as part of the washing/drying cycle.	I
558	15986	Television set mount	Телевизийн угсралт	A mount on which a television set is placed and secured so that it is safely mounted in a position suitable for viewing. This device will typically provide for adequate vertical, horizontal, and tilt adjustment possibilities and will be manufactured to medical grade standards for hospital/institutional use. It will typically be affixed to a wall, ceiling, or the top of, or into, a piece of suitable furniture.	I
559	16006	Angiographic drape	Ангиографийн хөшиг	A flexible, protective covering made of natural or synthetic materials, or both, designed to be used on patients during an angiographic procedure to control microbial and substance (e.g., blood, contrast material) contamination of the patient entry field. It may be specific for brachial or femoral procedures, and may include a window(s) for viewing and/or a trough to collect spilled substances. This is a single-use device.	I
560	16021	X-ray film storage unit	Рентген хальс хадгалах төхөөрөмж	A unit comprising, e.g., cabinets, bins, drawers, boxes or safes, designed to store x-ray film in a manner that prevents unintended exposure to room light. It can be a freestanding device or it can be a component of a radiographic interlocking darkroom. In the case of interlocking systems, the unit is designed to prevent unintended film exposure by incorporating a limit switch (interlock) that automatically turns off the lights, or prevents entry when the film is in a position that can be exposed.	I

561	16023	Mobile sink system	Зөөврийн угаалтуурын систем	An assembly of devices designed for use by healthcare personnel, patients, or other persons for hand washing, and without installation to external water supplies and/or drainage. It typically consists of a structure made of plastics, metals, or a combination of these materials, and usually includes a fresh water tank, a waste water tank, tubing, and taps (faucets); it may also include a soap dispenser, a paper towel rack, and an electrically-powered water pump. A portable sink is used in field work, during emergencies, in mobile medical facilities and shelters, and for personal hygiene of persons with a disability that cannot move from a location.	I
562	16025	Eye spud	Нүдний зонд	A hand-held, manual, ophthalmic surgical instrument intended to be used to remove a foreign body/object embedded in or adhering to the surface of the eye globe. It is typically made of high-grade stainless steel, and designed with a fine handle at the proximal end and a thin concave blade with a rounded nose at the distal end. The ophthalmologist uses this tip to remove the foreign body/object. This is a reusable device.	I
563	16034	Electroglottograph	Электроглоттограф	A graphic recorder designed for recording the changes in electrical potential or impedance, using a sensor, resulting from movement of the vocal cords during respiration and phonation. It is intended to be used to asses the degree of closure of the vocal cords during treatment of voice disorders and in the study of the laryngeal mechanism.	I
564	16066	Spectacle lens foil	Нүдний шилний тугалган цаас	A thin plastic film applied to the lens of existing spectacles (eyeware) to partially or totally block light. It is typically available in sheets and is manually cut with scissors to an intended size and shape; it is subsequently applied to the interior or exterior of the lens, usually using only water for attachment. The device is often used for children and is intended to be used prophylactically (e.g., to prevent amblyopia -- impairment of vision without apparent disease) and/or therapeutically [e.g., to treat squinting, double vision (diplopia), and problems due to absence of a natural lens (aphakia)]. After application, this device cannot be reused.	I

565	16094	Finger/thumb prosthesis	Хуруу/эрхий хурууны протез	An artificial substitute for a missing finger or thumb. It is a custom-made device typically made of silicone and detailed with appropriate skin colour, nail, and hair. The device is purely cosmetic or may provide counter-support when grasping, however it is not intended to perform functional movements.	I
566	16156	Aneroid manual sphygmomanometer	Анероид гарын авлагын даралт хэмжигч	A device designed to measure blood pressure consisting of an inflatable cuff that fits around a limb (arm or thigh), an inflation bulb for controlling the air pressure within the cuff, an aneroid manometer, and tubing. The aneroid manometer consists of a metal bellows, which expands as the pressure in the cuff increases, and a mechanical amplifier that transmits this expansion through a lever to an indicator needle, which rotates around a circular, calibrated scale. The manometer may be mounted to a wall, placed on a table, or hand held (portable); blood pressure measurement is taken in conjunction with a stethoscope.	I
567	16158	Mercury manual sphygmomanometer	Мөнгөн усны гарын авлагын даралт хэмжигч	A device designed to measure blood pressure consisting of an inflatable cuff that fits around a limb (arm or thigh), an inflation bulb for controlling the air pressure within the cuff, a mercury manometer, and tubing. The mercury manometer consists of a reservoir containing mercury (Hg) and a graduated column in which the mercury rises and falls in response to pressure in the cuff. The manometer may be mounted to a wall or placed on a table and is considered the gold standard for measuring blood pressure because it remains calibrated; blood pressure measurement is taken in conjunction with a stethoscope.	I
568	16160	Anaphylaxis kit	Анафилаксийн иж бүрдэл	A collection of instruments, pharmaceuticals (e.g., epinephrine), airway tubes, and other items intended to be used in an emergency to treat a patient who has gone into anaphylactic shock resulting from an allergic reaction and typically exhibiting shortness of breath, rash, wheezing, and/or hypotension. This is a reusable device.	I

569	16168	Flotation therapy bed, neonatal	Флотацийн эмчилгээний ор, нярайн	A fixed (non-adjustable) device designed with a mattress or cushions containing air, water, gel, or other appropriate material used for the continuous care of newborns, and sick and/or premature babies. It has a size to suit such patients and provide environmental conditions (e.g., softness, illumination levels) appropriate for a neonate, as well as good working conditions for the healthcare staff; the bed is frequently mounted on wheels and may include or permit attachments for/to a baby warmer.	I
570	16174	Manual-inflation electronic sphygmomanometer, non-portable	Гараар инфляцитай электрон даралт хэмжигч, зөөврийн бус	An electrically-powered device designed to noninvasively measure blood pressure using a manually-inflated cuff that typically fits around a limb (arm or thigh). It typically displays current heart rate and mean arterial pressure in addition to systolic and diastolic blood pressures; it may have memory to store blood pressure values and may sound an alarm if blood pressure exceeds pre-set limits. This device is not designed to be portable and is typically used bedside.	I
571	16176	Body exhaust system	Биеийн яндангийн систем	An assembly of clothing items, often including a helmet, with accessory evacuation devices that permit recovery of shed body particles. The system is typically worn by surgical staff (e.g., for orthopaedic procedures) in order to provide an ultraclean environment for the patient.	I
572	16181	Dental articulation paper	Шүдний үений цаас	A strip or sheet of suitable material coated with pigment and used for marking areas of contact between opposite teeth, restorations or appliances. This is a single-use device.	I
573	16187	Dental appliance fabrication material, ceramic	Шүдний аппарат үйлдвэрлэх материал, керамик	A dental material made of ceramic materials (e.g., zirconium oxide) intended to be used to manufacture a final dental appliance/prosthesis (e.g., a dental implant, removable dentures, crown, bridge) for patient use. It is used to create implantable and removable restorations using manual or computer-aided design/computer-aided manufacturing (CAD/CAM) technology. After application, this material cannot be reused for fabrication.	I
574	16189	Dental casting wax	Шүдний цутгах лав	A waxy dental material used to make patterns in the production of fixed dental prosthetic restorations by the "lost-wax" casting technique. After application, this device cannot be reused.	I

575	16195	Dental matrix band, reusable	Шүдний матрицын тууз, дахин ашиглах боломжтой	A band or strip of strong material (typically stainless steel or transparent polyester) or a short tube that is used to form a mould around a tooth for the insertion of restorative materials. The device is held snugly around the tooth by a matrix retainer or tensioned around the tooth using a dedicated mechanical tensioning device. This is a reusable device.	I
576	16197	Mouth gag, non-adjustable	Ам тэлэгч, тохируулах боломжгүй	A mechanical device without adjustable parts intended to be placed between the teeth of the upper and lower jaws of a patient to maintain an open oral cavity, typically during emergent placement of an artificial airway or for an oral surgical intervention. It is designed to be inserted between the teeth to force the jaws apart and may be in the form of a wedge block, wedge screw, or sprung wedge. Depending on the design it may also be referred to as a jaw spreader, oral wood screw, or mouth prop. This is a reusable device.	I
577	16205	Dental x-ray film holder, reusable	Шүдний рентген хальс тогтоогч, дахин ашиглах боломжтой	A device designed to hold x-ray film while a dental x-ray is being taken and that enables insertion, positioning, stabilization, and removal of the x-ray film for either extraoral or intraoral dental imaging procedures. This is a reusable device.	I
578	16207	Hot/cold pack holder	Халуун/хүйтэн савлагаа эзэмшигч	A device used to hold a hot or cold pack in the required position against the area of the body to be treated whilst exerting some pressure to the pack and the site. This is a reusable device.	I
579	16209	Ophthalmic tissue forceps, reusable	Нүдний эдийн хямсаа, дахин ашиглах боломжтой	A hand-held ophthalmic surgical instrument designed to grasp, manipulate, compress, pull, or join eye and/or surrounding tissues during a surgical intervention. It is typically: 1) a one-piece instrument with a tweezers-like design having two conjoined blades with serrated tips at the working end; or 2) an instrument tip, with grasping blades at the distal end, that is inserted into a dedicated handle through which the blades are operated. It is typically made of high-grade stainless steel and plastic materials, and is available in various sizes. This is a reusable device.	I

580	16210	Hand/finger splint, single-use	Гар/хурууны чигжээс, нэг удаагийн	A prefabricated (non-customized) wearable rigid or semi-rigid device intended to immobilize an injured/diseased hand and/or finger to support, align or prevent injury during the healing process. It is applied externally to the hand/finger/wrist and typically held in place with self-retaining fasteners (e.g., Velcro bands) or bandage wraps. This is a single-use device.	I
581	16216	Cubicle curtain, single-use	Кабик хөшиг, нэг удаагийн	A hanging screen designed to separate a room or a part of a room or cubicle to provide temporary privacy for the occupant. It is used around a bed, in front of a cubicle, or in front of a window. This is a single-use device.	I
582	16219	Hypothermia-prevention cap	Гипотермиас урьдчилан сэргийлэх таг	A head covering in the form of a cap intended to be worn by a patient typically during conditions of low body temperature and/or long surgical procedures to minimize loss of body heat from the head. It typically includes a heat-reflecting inner metal surface to facilitate retention of body heat. This is a single-use device.	I
583	16221	Walker tray	Алхагч тавиур	A metal or plastic platform designed to be attached to a wheeled walker upon which a user may place objects or perform an activity.	I
584	16224	Suture cutter, reusable	Оёдлын утас таслагч, дахин ашиглах боломжтой	A dedicated hand-held surgical instrument designed for cutting sutures. It will typically have a protected scalpel-like blade which may be fixed or have a scissors-like cutting action. This is a reusable device.	I
585	16240	Laparoscope holder	Лапароскоп эзэмшигч	A device intended to be used to hold, maintain in a desired position, and allow positional adjustment of, a laparoscope and associated instruments/devices during laparoscopy; it may also be intended to hold/position other surgical devices (e.g., retractors, manipulators) during other endoscopic or open surgical procedures. It typically consists of joints, rigid or semi-rigid arms, instrument holding and locking mechanisms, and a clamping mechanism for fixation to a stable object (e.g., the operating table).	I
586	16283	Drying rack, thin-layer chromatography plate	Хатаах тавиур, нимгэн давхаргатай хроматографийн хавтан	A dedicated rack designed to hold thin-layer chromatography (TLC) plates during the drying process.	I

587	16308	Tongue scraper, single-use	Хэл хусагч, нэг удаагийн	A non-sterile device designed to scrape the upper surface of the tongue to promote oral hygiene (e.g., to remove plaque, food debris, and bacteria, and to prevent bad breath). It is normally available [non-prescription] over-the-counter (OTC). It is typically made of plastic and is available in a variety of designs (e.g., a U-shaped band or a T-shaped instrument), and has a scraping ridge that is manually pulled over the surface of the tongue. This is a single-use device.	I
588	16309	Foot arch tracing unit	Хөлийн нуман мөрийг тогтоох төхөөрөмж	A unit for tracing the outline of the arch of the foot or footprints.	I
589	16317	Visual paging system	Визуал пейжерийн систем	An assembly of visual signals, e.g., panels of lighted numbers or coloured lights, installed within a building complex, e.g., a hospital department or an institution, designed to page (summon) personnel with some form of room status information. Typically it is used as an operating room (OR) status marker system to indicate the status the OR, e.g., occupied/vacant/needs cleaning, whereupon the correct personnel can react.	I
590	16320	Pathological waste incinerator	Эмгэг судлалын хог хаягдлыг шатаах зуух	A device designed for the destruction of pathological debris by burning under controlled conditions. It may be installed in the vicinity of the pathology department and will typically not have a capacity to incinerate large volumes of materials.	I
591	16321	Single-administration urethral catheterization kit, staff-applied	Нэг удаагийн шээсний сүвний катетержуулалтын иж бүрдэл, ажилтнуудад хэрэглэнэ	A sterile collection of devices and supplies intended for one-time insertion of a straight catheter into the urinary bladder via the urethra in order to drain urine from the bladder when needed or at scheduled intervals (i.e., intermittently) by a healthcare professional. Typical components include material for prepping the patient (e.g., sterile drape, germicide, underpad, gloves, cotton/rayon balls, forceps) as well as the supplies needed for catheter insertion (e.g., lubricant, catheter) -- urine collection pouches or bags are not included. The included catheter is removed after each void. This is a single-use device.	I

592	16327	Laboratory environmental chamber	Лабораторийн хүрээлэн буй орчны танхим	A mains electricity (AC-powered) laboratory chamber where climatic conditions can be simulated so that sample materials can be observed and changes to these can be registered. Variables including light, temperature and relative humidity can be adjusted. The cabinet is provided with an observation window, and may be mobile.	I
593	16339	Ethylene oxide dosimeter	Этилен ислийн дозиметр	A non-sterile device designed to monitor by measuring the cumulative exposure an individual, usually a healthcare provider, has been exposed to ethylene oxide (ETO). The device is usually worn on the person or placed on a surface exposed to the environment contaminated by ethylene oxide. This will typically be in sterilizing departments where ethylene oxide is used as a sterilizing agent. This is a reusable device.	I
594	16340	Cast cutter, electrically-powered	Цутгамал таслагч, цахилгаанаар ажилладаг	A hand-held, electrically-powered device designed for cutting the plaster or synthetic material used to form casts typically during the removal process. The proximal end is usually cylindrical, forming the handle of the device, whilst the distal end terminates in a rounded, half moon-like, or circular blade capable of cutting the material used to form casts. The cutting capability of the blade is provided by an electric motor in the handle which vibrates or rotates the blade. Cutting is effected by vibration or rotation rather than sawing.	I
595	16341	Cast cutting shears	Цутгамал хайч хайч	A large, scissors-like, hand-held instrument whose blades distal to the pivot point terminate in various jaw configurations, capable of cutting heavy layers of plaster or synthetic material used to form hardened casts, i.e., that which has already been used to form a cast around a patient's limb or body part. The tip of one of the distal blades forming the scissors-like cutting mechanism is usually rounded along it bottom edge to prevent injury to the patient as the cast is cut. This device is typically made of high-grade stainless steel and will usually be provided with a spring mechanism to assist in opening the jaws. This is a reusable device.	I

596	16342	Anomaloscope	Аномалоскоп	A mains electricity (AC-powered) ophthalmic instrument used to test a patient for abnormal red/green colour vision by differentiating the red/green colour vision defects. It typically consists of two different light sources, one that permits the mixing of proportions of red and green and the other is a standard yellow colour which can be brightness adjusted. These are viewed and subsequently matched by the patient and according to the match, red- versus green-blindness, dichromacy versus anomalous trichromacy, and the severity of colour deficiency can be established. This device may be connected to a computer with dedicated application software.	I
597	16343	Antistammering device	Бөглөрөхөөс сэргийлэх төхөөрөмж	A device designed to electronically generate a noise when activated or when it senses the user's speech. This device is intended to prevent the user from hearing the sound of his or her own voice and to minimize the user's involuntary hesitative or repetitive speech.	I
598	16345	Exophthalmometer	Экзофтальмометр	An ophthalmic instrument used to measure the degree of exophthalmos (abnormal protrusion of the eyeball). It may be designed in the form of a ruler, gauge, or calliper. This is a reusable device.	I
599	16349	Instrument transport trolley system	Багаж тээврийн троллейбус систем	A combination of carts and/or portable containers designed for safe storage, handling, and transportation of reusable clinical instruments (typically endoscopes or surgical instruments) between the operating and central sterilization rooms. It typically consists of an instrument trolley (cart) with containers; smaller systems may consist of portable closed trays or boxes with gasket seals and/or filters.	I
600	16350	Dental impression tray, single-use	Шүдний хэвний тавиур, нэг удаагийн	A horseshoe-shaped receptacle made of metal or plastic designed to carry dental impression material to the mouth, to confine the material in opposition to the surfaces to be recorded (e.g., teeth and gums), and to control the impression material while it sets to form an impression. The device is used mainly to facilitate the manufacturing of custom dental prostheses (e.g., dentures). This is a single-use device.	I

601	16352	Gingival retraction kit	Буйл татах иж бүрдэл	A collection of sterile dental instruments and other items used to hold off the gingiva during abutment preparation. This is a single-use device.	I
602	16370	Dental wedge, reusable	Шүдний шаантаг, дахин ашиглах боломжтой	A small, dental device intended to be introduced between two adjacent teeth for slight separation during a dental procedure. It is typically used during the placement of a filling material, or to stabilize and support other devices (e.g., a matrix band and/or rubber dam). It may include a removable shield intended to protect the healthy tooth/teeth from damage by the instruments. This is a reusable device.	I
603	16379	Bleeding time kit	Цус алдах цагийн багц	A collection of sterile devices intended to be used to determine the length of time it takes a patient to stop bleeding after a calibrated slice or prick wound is made on the underside of the forearm. It typically includes a scalpel or lancet, blotting paper, template, and timing device. This is a single-use device.	I
604	16400	Middle ear chisel	Дунд чихний цүүц	A single-blade bevelled surgical instrument intended for use in cutting or contouring the bones of the middle ear, otological microsurgery, stapedotomy, and related ear/nose/throat (ENT) surgery. It is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. The distal end (the cutting or shaping edge) is sharp and can be either straight or angled. It is typically a one-piece instrument made of high-grade stainless steel. This is a reusable device.	I
605	16438	Microscope light source	Микроскопын гэрлийн эх үүсвэр	A mains electricity (AC-powered) device that is exclusively designed to provide a microscope with an external source of light to light up the viewing field which may be, e.g., directly under the magnification system (a slide) or a field of surgical intervention. This device may be a simple lamp, or utilize fibreoptic cables to carry a cold light forward to the site. If the light source is built-in, then it shall be considered as part of the parent device and the product identification will then follow that of the parent device.	I

606	16449	Cannula clamp	Сувгийн хавчаар	A hand-held manual instrument designed to grasp or compress a cannula. The compression may progress to the point that the cannula is no longer patent. The device is frequently used for temporary partial or complete closing of the cannula in procedures such as cardiopulmonary bypass, haemodialysis, and oral surgery. This is a reusable device.	I
607	16460	Dental amalgam condenser, reusable	Шүдний амальгам конденсатор, дахин ашиглах боломжтой	A hand-held manual dental instrument intended for packing amalgam or direct filling gold (Au). It may be smooth or serrated in design and flat or curved in shape. This is a reusable device.	I
608	16463	Basic crimper	Үндсэн шахагч	A hand-held manual device designed to compress (pinch) a non-patient-contact sealing device (e.g., a clip or crimping ring of metal applied apart from the body) to reduce its size (diameter) and create a tight seal on objects being clamped or held together. This is performed by the application of force on the grip of the crimper's handles by the operator. This is a reusable device.	I
609	16464	Dental cusp	Шүдний зуулт	A device designed to provide an artificial projection on the chewing surface of the tooth to achieve a proper bite.	I
610	16465	Orbital depressor, reusable	Орбитын дарагч, дахин ашиглах боломжтой	A hand-held ophthalmic surgical instrument designed for extra-orbital displacement of the sclera to facilitate examination/treatment of the surrounding area in the orbital cavity during eye surgery; it does not provide illumination. Sometimes referred to as a scleral depressor, it is often a double-ended device of various sizes and shapes (e.g., flat, curved, spoon-shaped, or fenestrated) with the working end(s) slightly angled to improve organ/tissue manipulation. It is usually made of metal. This is a reusable device.	I
611	16469	Manual expandable cervical dilator	Умайн хүзүүг тэлэх гарын авлагын аппарат	A forceps-like surgical instrument designed to manually dilate the cervical canal after its insertion through the cervical os. It is typically constructed with two pivoted handles and opposing blunted blades that expand outward when the handles are manually squeezed, and possibly locked, dilating the cervical canal. This process is used to allow the passage of a curette or other instruments into the uterus. This is a reusable device.	I

612	16473	Dental amalgam mercury dispenser	Шүдний амальгам мөнгөн ус түгээгч	A device with a valve intended to measure and dispense into a mixing capsule a predetermined amount of dental mercury in droplet form which is to be used to produce amalgam filling material. This device is manually activated by the operator.	I
613	16474	Surgical microscope drapes, reusable	Хагалгааны микроскопын хөшиг, дахин ашиглах боломжтой	A device made of natural and/or synthetic materials intended to be used as a protective covering for a surgical microscope to prevent its cross-contamination with the surgical field during a surgical procedure. This is a reusable device.	I
614	16476	Nystagmus inducing optokinetic drum	Нистагмусыг өдөөдөг оптокинетик хүрд	A drum-like ophthalmic device covered with alternating white and dark stripes or pictures. The device is rotated in front of the patient's eyes and is intended to elicit nystagmus (involuntary rapid movement of the eyeball). This is used to diagnose the patient and is particularly useful for babies and children who cannot communicate, e.g., if nystagmus cannot be induced, this suggests that the child suffers from impaired vision or blindness.	I
615	16477	Fire blanket	Галын хөнжил	A large piece of fabric material specially designed for wrapping around a person or an object for either protection from fire or to extinguish the flames if the person/object is on fire. This device is manufactured with a certain degree of fire resistance to inhibit its spread and is typically available in a container that can be placed at strategic points in a building.	I
616	16480	Dental elevator, tooth/root	Шүдний цахилгаан шат, шүд / үндэс	A hand-held, manual, dental surgical instrument intended to be used as a lever during the extraction of a tooth or retained roots. It is typically a one-piece instrument with a strong but slender blade at the distal working end, or it may be double-ended with a central handle. It is available in a variety of sizes and blade designs and is pushed in between the gums and the tooth exterior to loosen the tissue surrounding the tooth. Sometimes this can be enough to loosen and extract the tooth without the use of other instruments. This is a reusable device.	I

617	16493	Tissue trolley	Эдийн тэргэнцэр	A laboratory cart designed to transport and/or store tissue specimens for pathological analysis. This trolley (cart) typically includes a set of wire storage shelves to accommodate containers with a preservation liquid (e.g., formaldehyde) in which the pathological samples (typically organ samples/parts) are immersed. Some kind of spill proof containment of the preservation liquid will usually be provided in the design.	I
618	16497	Reverse-image mirror	Урвуу дүрс бүхий толь	A device designed to reflect the reverse image of an object placed in front of it. A typical use for this device will be to reflect in reverse characters displayed on an eye chart while testing eyesight. This is a reusable device.	I
619	16500	Compression/pressure glove	Шахах/даралтын бээлий	A device in the form of a short or long glove intended to tightly fit over the hand(s) to apply compression/pressure (i.e., graduated or even-force), typically to control oedema, swelling and/or scarring due to arthritis or injuries, and/or to manage lymphoedema; it is not a strip/roll binder, shirt or tubular support bandage. It is typically made of cotton or synthetic elastic material (e.g., Lycra and Spandex) and may be available with openings for fingers and/or with integrated sleeves that may reach the wrist, elbow, or axilla; it does not include antimicrobial features. This is a reusable device.	I
620	16501	Gas cylinder	Хийн цилиндр	A device designed as a cylinder used to hold and store medical-grade gases or non-medical gases, or mixes of gases under safe conditions at high pressure, e.g., 50 - 200 Bar. This device will include a valve stem and an opening/closing valve and will be graded according to size (capacity) and colour coded according to the gas or gas mixture content. A cylinder may be manufactured from molybdenum steel, aluminium or other ferrous or non-ferrous materials. It must be used together with a pressure reduction valve in order to achieve a desired working pressure. This is a refillable and reusable device under strict manufacture procedures.	I

621	16513	Adult whole-body immobilizer	Насанд хүрэгчдийн бүх биеийг хөдөлгөөнгүй болгодог	A non-rigid device, usually made of a fabric and/or plastic materials, used to temporarily render an adult's whole body immovable (strait-jacket effect) while the patient undergoes therapeutic or diagnostic interventions. This is a reusable device.	I
622	16514	Barium enema kit	Барийн бургуй иж бүрдэл	A packaged collection of items used to deliver a suspension of barium into the colon via the rectum to function as a contrast agent for radiological examination of the bowel. This is a single-use device.	I
623	16519	Kidney forceps	Бөөрний хямсаа	A hand-held manual surgical instrument designed for grasping and elevating a kidney during a surgical intervention. It typically has a scissors-like, self-retaining, design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will have grasping blades that are shaped as very large profiled oval rings or semi-open loops. This is a reusable device.	I
624	16520	Tonsil scissors	Тонзил хайч	A hand-held surgical instrument used to cut tonsil tissue during ear/nose/throat (ENT) surgery. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. The distal end of the blades may have different shapes and are typically round-nosed to prevent inadvertent trauma. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
625	16529	Medication spray bottle	Эмийн шүршигч сав	An empty, flexible squeeze-container with a spray nozzle used to deliver medication in an atomized form, e.g., nasal spray. This is a single-use device.	I
626	16532	Autopsy station	Задлан шинжилгээний станц	An autopsy station is a collection of devices providing the complete facilities for carrying out autopsy procedures. It will typically include the table, side tables for instruments and organs, cabinets for storing instruments, preservation containers, cameras, other utensils, built-in supply unit for gas, electricity and water. It may also include other facilities, e.g., lighting, dictation or recording devices.	I

627	16535	Liquid nitrogen container	Шингэн азотын сав	An empty, thermally insulated container intended to hold a certain amount of liquid nitrogen (LN2) and which together are intended for the instant freezing and storage of sample material. It is designed for the safe storage of the liquid nitrogen and the samples and has a long nitrogen holding time (retards the evaporation of the nitrogen). It will have a large neck opening for easy access to the samples and typically handles to assist in moving/transport of the container. It may be equipped with an electronic temperature deviation alarm.	I
628	16538	Cryogenic temperature control unit	Криоген температурын хяналтын нэгж	A mains electricity (AC-powered) device designed to keep temperatures in a container between pre-established limits well below the freezing point of water [i.e., cryogenic temperatures, below -130° Celcius (-202° Fahrenheit)]; typically from -150° to -200° Celsius (-238° to -328° Fahrenheit). The device usually includes temperature sensors, thermometers, a display, connecting cables, and sometimes microprocessors and alarms. It is mainly used in healthcare facilities for containers used for preservation of biological tissues (e.g., embryos, bone), in cryosurgical units, and in blood bank cryogenic freezers (e.g., to store red blood cells).	I
629	16540	Laboratory distillation unit, solvent	Лабораторийн нэрэх нэгж, уусгагч	A mains electricity (AC-powered) device used for the separation of the components (solvents) in a mixture of fluids using the process of distillation (selective evaporation). This process may be used to purify one of the components.	I
630	16581	Contact lens case	Контакт линзний хайрцаг	A container, typically made of plastic, designed for the storage of contact lenses when the lenses are not being used by the owner. This is a reusable device.	I
631	16612	Ethylene oxide cartridge	Этилен ислийн хайрцаг	A device in the shape of a small, sealed, cylinder containing pressurized ethylene oxide (ETO) gas that is intended to be inserted into a parent device; this typically being an ETO sterilizer, where the cartridge is perforated and its gas content serves as the sterilizing medium. This is a single-use device.	I

632	16616	Medicine bottle	Эмийн лонх	An empty glass or plastic container, typically with a relatively narrow neck and a lid/cap, intended to be used to store medication so that it retains its viability. This is typically a single-patient device that is reused until the contents are exhausted.	I
633	16617	Medicine bottle cap	Эмийн савны таг	A sturdy covering designed to close off and seal the top of a medicine bottle providing protection from the external environment. It will typically consist of a plastic cover that may include a glued or cemented liner/seal, e.g., rubber or plastic. Some devices are threaded for screwing on to the bottle. Medicine bottle caps are frequently made with a built-in safety feature locking mechanism making them child proof, e.g., require a push-down/screw action to open. This device is reusable until the contents of the bottle are exhausted.	I
634	16619	Oral care swab, sterile	Амны хөндийн арчилгааны арчдас, ариутгасан	A sterile device designed as a piece of pre-treated, absorbent material on a wooden, paper, or plastic stick and intended to moisten and clean a patient's oral cavity to maintain normal mouth patency and hygiene. It is commonly used on intensive care and long-term care patients to administer moisture, mouthwash, or medications to improve the physical condition of the oral cavity and possibly help reduce the incidence of patient infection. It is typically applied to the patient by nursing staff in hospitals and institutions, or attendants in homecare settings. This is a single-use device.	I
635	16621	Pressure monitoring tubing extension set	Даралт хянах хоолойн өргөтгөлийн багц	A collection of tubing and connectors intended to establish an extension of tubing where the length of the tubing in a standard pressure monitoring tubing set is insufficient. It will have physical characteristics appropriate for preserving, to the extent possible, the waveform and fidelity of the measured pressure. This is a single-use device.	I

636	16627	Medication transfer needle, non-filtering/non-vented	Эмийн шилжүүлгийн зүү, шүүлтүүргүй / агааржуулалтгүй	A slender, rigid, sharp or blunt metal tube intended to be attached to a syringe and typically used in the pharmacy to aspirate and transfer fluid medication from a vial/ampule to another container for medication preparation or other purposes. It consists of a short needle sufficient to penetrate the vial stopper and extract all the medication. It is typically of 20 gauge to provide a high-flow rate with minimum coring. It does not include a filter or a back-pressure venting feature. This is a single-use device.	I
637	16628	Medication transfer needle, vented	Эмийг шилжүүлэх зүү, агааржуулалттай	A slender, rigid, sharp or blunt tube intended to be attached to a syringe and typically used in the pharmacy to aspirate and transfer fluid medication from a vial/ampule to another container for medication preparation or other purposes. It includes a thin channel cut along its outer surface forming an integral vent that relieves any back pressure in the vial during the transfer of medication [e.g., transfer of drugs from vials to intravenous (IV) bags, filling vials] to help minimize risk of contamination; it does not include a filter. This is a single-use device.	I
638	16635	Freon gas cartridge	Фреон хийн хайрцаг	A device in the shape of a small sealed cylinder, containing pressurized Freon gas, intended to be inserted into a parent device where it is perforated so that its gas content can serve a specific function (e.g., a source of power or a refrigerant). The effect of the gas has a direct impact upon the functional use of the parent medical device (e.g., an antishock unit, a tourniquet unit, or a cryo-unit). The cartridge is discarded when it is empty of Freon gas.	I
639	16646	Ear canal impression tray	Чихний сувгийн даралтын тавиур	A device intended to hold and confine the impression material in opposition to the surfaces to be recorded, and to control the impression material while it sets to form the impression of the ear canal. It is typically made of metal or plastic materials. This is a reusable device.	I

640	16701	Dental restoration retention pin kit	Шүдний нөхөн сэргээх зүү иж бүрдэл	A collection of various dental instruments, devices and materials intended for the insertion of permanent pins in healthy dentin to provide retention and/or stabilization of dental restorations such as fillings and crowns. It is typically presented as a kit and contains, e.g., retention pins of incrementing sizes, a selection of dental drills, and the necessary instruments to facilitate the procedure. This is a reusable device.	I
641	16754	Electrocardiographic recording paper	Зүрхний цахилгаан бичлэгийн хэвлэх цаас	A device prepared from a thin sheet of fibrous material, typically with preprinted graphics and designed for recording the output of an electrocardiograph (ECG), or other device, in the form of measured physiologic parameters as an electrocardiogram (ECG). This is a single-use device.	I
642	16755	Echocardiographic recording paper	Эхокардиографийн бичлэгийн цаас	A device prepared from a thin sheet of fibrous material, typically with preprinted graphics and designed for recording the output of an echocardiograph, typically from a cardiovascular ultrasound imaging system or other device, in the form of measured physiologic parameters as an echocardiogram. This is a single-use device.	I
643	16756	Electroencephalographic recording paper	Тархины цахилгаан бичлэгийн хэвлэх цаас	A device prepared from a thin sheet of fibrous material, typically with preprinted graphics and designed for recording the output of an electroencephalograph (EEG), or other device, in the form of measured physiologic parameters as an electroencephalogram (EEG). This is a single-use device.	I
644	16759	Room humidifier	Өрөөний чийгшүүлэгч	A mains electricity (AC-powered) device intended to add moisture to ambient air, typically to prevent dryness of a patient's airways. This is a stationary device designed to be placed in one location in a room, typically in a hospital, institution, home, or office environment; it can be physically lifted and moved to another position or room. It typically consists of an electric motor, a reservoir for water, an atomizer to produce large mist particles, and a flow diverter. The water reservoir is periodically topped up with clean (preferably purified) water. Moisture is released directly into the room's atmosphere.	I

645	16761	Infant feeding bottle nipple, reusable	Нярай хүүхдийн хөхний толгой, дахин ашиглах боломжтой	A soft projection, usually rubber, designed to attach to the open end of an infant feeding bottle. It has a hole(s) in the tip to permit the passage of fluid, e.g., milk, during the process of feeding an infant. This is a reusable device.	I
646	16772	Laboratory water bath/shaker	Лабораторийн усан ванн/сэгсрэгч	A mains electricity (AC-powered) device designed with a heating element, thermostat and an automated shaking mechanism to heat and shake its contents (i.e., the water and objects placed therein, e.g., bottles containing cultures or trays of gel). This device has an eccentic agitation arm that rotates at speed ranges of, e.g., 25 - 400 revolutions per minute (rpm) to create the agitation. It may incorporate a range of features such as automatic water replenishment, heating and/or cooling, automatic motion acceleration to avoid unwanted splashing.	I
647	16779	Suction/irrigation tubing, single-use	Сорох/усалгааны хоолой, нэг удаагийн	A length of flexible noninvasive tube, typically made of synthetic polymer material(s), intended to interface between suction and/or irrigation devices (e.g., catheters, pumps, collection bottles) during a medical/surgical procedure (not dedicated to ophthalmic use); it might additionally be intended for use during reusable device reprocessing. The tubing may be provided in rolls from which required lengths are cut, or may be provided in predetermined lengths with connectors; it does not include additional associated items such as a clamp, spike, or bag (i.e., not a tubing set). This is a single-use device.	I
648	16787	Skin staple remover, reusable	Арьсны үндсэн арилгагч, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used to remove skin staples after the healing process has progressed sufficiently to permit the borders of the wound or incision to remain together without assistance. It is made of metallic or synthetic polymer materials with blades at the distal end designed for grasping, opening, and removing surgical staples. This is a reusable device.	I
649	16799	Enteral feeding tubes, enterostomy	Enteral хооллох хоолой, энтеростоми	A hollow device constructed of flexible plastic that is surgically placed into the stomach, duodenum, or jejunum for the purpose of providing enteral nutrition. This is a single-use device.	I

650	16800	Vision testing/training chart	Алсын хараа шалгах/сургалтын хүснэгт	An ophthalmic chart or card printed with various symbols (e.g., letters, pictures or dots) intended to be used for testing visual acuity (e.g., Snellen chart) or testing and/or training accommodation and/or convergence or other amenable ophthalmic functions. The chart/card may be held in front of the patient or placed on a table or wall and may have specific user instructions depending on specific use. This is a reusable device.	I
651	16807	Pharmaceutical fluid-dispensing system	Эмийн шингэн хуваарилах систем	An assembly of devices used in a hospital and/or other healthcare facility to dispense fluids by combining in a given ratio several liquid components from a set of source containers into a container with the final product (i.e., it compounds drugs according to a specified medical prescription). It is typically a mains electricity (AC-powered) automated or semi-automated device that includes a set of standardized source liquid containers each attached with tubes to a compounding device which output is in turn attached to the final liquid container. It may also include a control panel to facilitate the introduction of manual or barcoded mixing and/or checking instructions.	I
652	16808	Blood gas tonometer	Цусны хийн тонометр	A mains electricity (AC-powered) instrument used to determine the partial pressure of a gas. This device is used to perform quality control tests for blood gas analysers.	I
653	16809	Ophthalmic tonometer, battery-operated	Нүдний тонометр, зайгаар ажилладаг	An ophthalmic, battery-powered, measuring instrument designed for determining the intraocular pressure (IOP) by exerting an external force against the eye which provides a reading of the resistance of the tunica of the eye to deformation (the extent of corneal indentation) which is expressed in millimetre(s) of mercury (mmHg). This hand-held device (known as a contact type, e.g., a Perkins tonometer) is often used for, e.g., the examination of postoperative, bedridden and paediatric patients.	I

654	16821	Anaesthetic gas scavenging evacuation hose	Мэдээ алдуулагч хий зайлуулах хоолой	A length of flexible tube intended for the controlled extraction of unwanted anaesthetic gases from an anaesthetic gas scavenging system (AGSS) to prevent polluting the work environment. It has a cross-sectional inner diameter larger than tubing used for low-flow anaesthetic gases for less resistance to facilitate the extraction process. It is colour-coded and used to connect the AGSS and the hospital/institution ducting system. It is made of synthetic polymer material(s) that is reinforced (e.g., with woven polyester) and is available in standard coil lengths. It can be used to evacuate other types of gas/air pollutants (e.g., from bone cement preparation). This is a reusable device.	I
655	16822	Pipette tip	Пипеткийн үзүүр	A device formed as a pointed cylindrical tip that is attached to the dispensing opening of a pipette or a dispenser and where the required volume of liquid is drawn for delivery to the target receptacle. It may show a gradient scale or not and is usually made of plastic but may also be made of glass. This is a single-use device.	I
656	16825	Syringe tip cap	Тариурын үзүүрийн таг	A device intended to cover the tip of a syringe (without a needle) in order to prevent the leakage of syringe contents and to maintain content sterility until the syringe is used. This device is typically constructed of plastic. This is a single-use device.	I
657	16837	Sequential venous compression system	Дараалсан венийн шахалтын систем	A system used for the noninvasive treatment and prevention of venous disorders and sequelae such as oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE). It functions by applying sequential pressure to a patient's legs to promote venous blood flow. It consists of a compression pump, control/timing mechanism, tubing and has pneumatic stockings, sleeves, or a suit with several chambers that inflate and deflate sequentially in a pattern beginning at the foot or ankle and continuing to chambers around the calf and thigh. In some systems, each chamber reaches the same pressure but at different times, while others apply greater pressure distally which gradually diminishes higher up.	I

658	16843	Therapeutic ultrasound tester	Эмчилгээний хэт авиан шалгагч	An instrument designed to assess the output characteristics of physical therapy ultrasonic devices and other continuous pulsed operation therapeutic ultrasound devices. It is typically designed to measure at a few fixed frequencies, e.g., one and three megahertz (MHz), or in a continuous range of frequencies from 0.5 to 5 MHz. The results are expressed in power units (Watts) or intensity (power/area, typically Watt/cm2) in a range from 1 to 30 Watt. It is intended to be used by a healthcare provider (e.g., clinical technician) in a clinical setting.	I
659	16859	Dissection board	Задлах самбар	A flat, stiff device on which an object (a human or animal body or body part) is placed for support during dissection procedures. This is a reusable device.	I
660	16866	Dressing-fixation skin adhesive tape, non-silicone	Арьсанд наалдамхай тууз, силикон бус боолт	A long and narrow flexible band of non-silicone-based material (e.g., fabric, plastic, paper) coated on one or both sides with a pressure-sensitive adhesive, intended to non-invasively adhere to the skin surface to fix a dressing in place or attach objects (e.g., catheter, lamp); it might have hypoallergenic and/or waterproof properties. This is a single-use device.	I
661	16897	Waterproof shoe cover	Ус нэвтэрдэггүй гутлын бүрээс	A device made of a waterproof material intended to be used as a physical barrier on a shoe to protect the shoe from liquid contamination. This is a single-use device.	I
662	16902	Computer interface	Компьютерийн интерфейс	A device that can be hardware and/or software used to connect a computer or computerized medical device(s) to other devices or a network.	I
663	16906	Stair chair	Шатны сандал	A device in which a disabled or infirm person sits in order to be manually transported by attendants/nursing staff up or down a flight of stairs. The device is typically constructed with hand bars, locking/opening bars or straps, and reinforced legs, with or without wheels, to facilitate patient transport on stairs. The device is typically used in emergency situations.	I

664	16917	Bed conversion kit, electrical	Ор хувиргах хэрэгсэл, цахилгаан	An electrical power kit designed to convert the operation of a bed from, e.g., manually-operated to electrically-powered, typically from the mains electricity (AC-powered) line. This kit can include an electric motor, gears, controls, cords, and appropriate connectors. Bed power kits are used for conversion of an otherwise mechanically (manually) operated bed into a power operated bed.	I
665	16918	Perimeter, automatic	Периметр, автомат	A mains electricity (AC-powered), automatically operated, diagnostic, ophthalmic instrument intended for assessing the extent of the patient's peripheral visual field. Small luminous points (spots) are automatically displayed in various random positions and patient response is automatically recorded. The print-out (chart) then shows the resulting curve of the visual field. Such types include Humphrey perimeters.	I
666	16919	Perimeter, manual	Периметр, гарын авлага	A mains electricity (AC-powered), manually-operated, diagnostic ophthalmic instrument intended for assessing the extent of the patient's peripheral visual field. Small luminous points (spots) are displayed by manual operation in various random positions and patient response is recorded. A preprinted card (chart) is marked to show the resulting curve of the visual field. Such types include Goldmann perimeters.	I
667	16932	Petechiometer	Петехиометр	A hand-held, manually-operated device intended to measure capillary fragility/haemorrhagic tendency by controlled induction of petechiae (broken capillary blood vessels typically 1-2 mm in diameter) and subsequent observation of the results (i.e., petechia count). It is typically in the form of a suction cup/plunger mechanism with a magnifying glass.	I
668	16933	Constant-voltage transformer	Тогтмол хүчдэлийн трансформатор	A device designed to deliver a fixed, predetermined voltage that is one of a limited range of input voltage variations. The device receives a fluctuating input voltage and transforms this fluctuating voltage into a steady (constant) output helping to avoid such fluctuations which are present in the electrical system. These fluctuations may be known as spikes, and can be harmful to devices with sensitive electronics. This device may be inserted into new or existing electrical systems.	I

669	16936	Uninterruptible power supply system	Тасралтгүй цахилгаан хангамжийн систем	An assembly of static devices, commonly known as an uninterruptible power supply (UPS), that is connected to the line power system of a hospital or institution to provide an independent continuous supply of electrical power, without delay, whilst the backup generators start. It will supply selected areas of high importance [i.e., operating theatres, the intensive care unit (ICU), the information technology (IT) department] for a limited period of time during the failure of the mains electricity (AC-power) supply. It will consist of a large set of dedicated batteries, battery chargers, and electronics that monitor and switch over to this system when a failure in the line-power has occurred.	I
670	16937	Photographic paper	Гэрэл зургийн цаас	A device prepared from thin sheet of fibrous material that has been specially produced for recording the output of an image in the form of a photograph. Different methods for reproducing the images upon the paper may be utilized. This is a single-use device.	I
671	16939	Spine punch	Нуруу нугасны цохилт	A hand-held manual surgical instrument designed to excise a segment of tissue (typically in the form of a thin disc of several millimetres in diameter) from the spinal cord and/or associated tissues. It is typically made of metal and includes a moveable two-part cutting mechanism at the distal end operated by an articulated handle. The device may have mechanisms designed for straight, downward, or upward cutting; it may be dedicated to perform anterior cervical discectomy and/or laminectomy. This is a reusable device.	I
672	16971	Darkroom film bin, diagnostic imaging	Харанхуй өрөөний хальсан сав, оношлогооны дүрслэл	A light-proof holder or container designed to be used in a darkroom setting to store unexposed x-ray or other kinds of radiographic film in order to facilitate user access to opened sheet film but to prevent inadvertent exposure prior to the film being loaded into a cassette. It can be a locking or a non-locking unit and can be configured to hold different sizes of radiographic or x-ray film. It may be of drawer or chest designs.	I

673	16977	Artificial heart, temporary	Хиймэл зүрх, түр зуурын	A sterile prosthetic device implanted in the thorax or abdomen that typically consists of an implantable metallic and plastic mechanism that includes one or more pumps working as artificial ventricles to circulate blood, and an electrical or air driven external power unit that is connected to the pumps through transcutaneous electrical wires or pneumatic drive-lines entering the patient's chest. The power unit is attached to the patient and includes a battery and/or a pneumatic console. This device is used mostly as a bridge to heart transplantation.	I
674	16986	Automatic-inflation electronic sphygmomanometer, portable, finger	Автомат инфляцитай электрон даралт хэмжигч, зөөврийн, хуруу	An electrically-powered device designed to noninvasively measure blood pressure using a self-contained software program that regulates automatic finger-cuff inflation and measurement cycles. The cuff detects minute arterial volume changes in conjunction with an inflatable bladder which exerts pressure (counterpressure) just sufficient to equal the arterial pressure. The device typically displays current heart rate in addition to systolic and diastolic blood pressures. This device is designed to be portable (e.g., hand-held or carried in a pouch) and is often used for emergency services or home blood pressure monitoring.	I
675	17102	X-ray film storage envelope	Рентген хальс хадгалах дугтуй	A thick paper envelope configured to form a flat container/holder specifically designed for the storage and transport of images recorded on x-ray film. It is usually of a size to contain sheet film (35 x 43 cm), but is also available in sizes designed to accommodate specialized x-ray film formats, e.g., those used in chiropractic, paediatric or mammography imaging applications.	I
676	17105	Walking aid handgrip	Алхах туслах бариул	A device designed to help a person using a walking aid to grasp the walking aid (e.g., a walking stick, cane, crutch, walking frame or rollator) securely. Included are adjustable grips, grips with antislip material and grips of special material such as foam. This is a reusable device.	I

677	17115	Noninvasive device battery charger	Инвазив бус төхөөрөмжийн зай цэнэглэгч	An electrically-powered device designed to supply an electrical charge, via a direct/wired or wireless connection, to the battery of a noninvasive device to recharge it for operation; it is not intended to receive data from and transmit data to other devices (i.e., not a transceiver). It is typically in the form of an electronic circuitry housing with a cable.	I
678	17119	Phorometer	Форометр	An ophthalmic instrument intended to be used to measure heterophoria (deviation of the eyes from parallelism) consisting usually of Maddox rods and rotary prisms mounted on a phoropter or trial frame.	I
679	17129	Analytical balance chamber	Аналитик жин танхим	A device designed to accommodate an analytical balance isolating it from the general laboratory environment and minimizing air drafts and dust in order to preserve the accuracy of the balance especially for very lightweight measurements. It will typically consist of transparent plastic or glass sides and top forming the closed chamber. This device may be an integral part of an analytical balance.	I
680	17134	Microscope slide dryer	Микроскопын слайд хатаагч	A mains electricity (AC-powered) device typically used in the laboratory to dry many microscope specimen slides that have been treated, e.g., coated and/or stained with specimen material. This device will advance the drying time of the coating/solution/stain placed on the slide so that it can be further handled with safety to both the specimen and the user.	I
681	17135	Mortuary rack	Шарил хадгалах тавиур	A shelving system used to place and keep corpses which are typically placed on standard steel body trays. It is installed within a morgue refrigerator or chamber.	I
682	17136	Dissection table	Задлах хүснэгт	A device intended to provide a working surface for the examination and dissection of organs and other anatomic parts mostly during postmortem pathologic investigations and for demonstration purposes.	I

683	17137	Hand/wrist continuous passive motion exerciser	Гар/бугуйны тасралтгүй идэвхгүй хөдөлгөөний дасгал	A mains electricity (AC-powered) device designed to continuously move the metacarpal/interphalangeal joints (e.g., flexion and extension) without patient assistance during continuous passive motion (CPM) exercise therapy usually following surgery or trauma to the joints. It typically consists of a motorized carriage with straps to hold and move the hand/wrist, and an electrical control unit for the healthcare professional to set the variable range of motion and motion speed; digital displays, manual/automated safety capabilities, and other features may also be included. CPM is believed to stimulate articular tissues and circulation of synovial fluid, and to reduce joint oedema.	I
684	17142	Infant head cap	Нярайн толгойн малгай	A small covering designed as a cap intended to be worn by a patient in infancy (an infant). It is primarily used to prevent loss of heat from the head and is typically made of fabric materials, e.g., cotton. This is a reusable garment.	I
685	17156	Pharmacy refrigerator	Эмийн сангийн хөргөгч	A mains electricity (AC-powered) fridge designed for the storage of pharmaceutical products [e.g., medications, live virus vaccines] at refrigerated temperatures (1 to 6 °C). It may be provided with a built-in alarm system that warns against unexpected temperature variations.	I
686	17157	Laboratory refrigerator, basic	Лабораторийн хөргөгч, үндсэн	A mains electricity (AC-powered) refrigerator specially designed to maintain the cold temperatures required for the storage of samples, specimens, cultures, and other laboratory preparations. It will typically have a corrosion resistant (e.g., stainless steel) interior to minimize the risk of adulteration, contamination, and/or corrosion of contents; include a glass door and internal shelving for easy set-up of instrumentation and chromatography devices within the chamber. It will typically include sensors, controls and monitors, forced-air circulation and a built-in alarm system that warns against unexpected temperature variations as well as a recorder to record events.	I

687	17158	Laboratory refrigerator, chromatography	Лабораторийн хөргөгч, хроматографи	A mains electricity (AC-powered) refrigerator specially designed for use in chromatography tests typically at temperatures between 1 and 10° Celsius. It will typically have a corrosion resistant (e.g., stainless steel) interior to minimize the risk of adulteration, contamination, and/or corrosion of contents; include a glass door and internal shelving for easy set-up of instrumentation and chromatography systems within the chamber providing full access to the chromatography equipment. It will typically include sensors, controls and monitors, forced-air circulation and a built-in alarm system that warn against unexpected temperature variations as well as a recorder to record events.	I
688	17175	Radiology information system	Радиологийн мэдээллийн систем	A dedicated computerized radiology information system (RIS) designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of radiology services and facilities. It may be used for patient scheduling and generation of work lists for specific radiological systems, and in conjunction with a picture archiving and communication system (PACS). The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
689	17187	Voice synthesizer/digitizer	Дууны синтезатор/тоонжуулагч	An assistive device designed to deliver voice output based either in the reproduction of previously-recorded natural speech and/or on an electronic synthesized voice following a pre-established set of pronunciation rules. It typically consists of an electronic unit with a keyboard and screen; the keyboard may include letters, symbols, or both. The device is often customized to meet the user’s needs and is mostly used by patients with disabilities that partially or totally impair voice capabilities, including chronic progressive diseases.	I

690	17198	Pillow speaker	Дэр чанга яригч	A loudspeaker intended to be used by a patient when lying in bed or resting in a chair by putting it close to their ear or between a pillow and their ear. It is typically designed as a small pillow-like device that contains a loudspeaker and that has a cable and a connector for connection to a radio, television, or other sound-emitting device with a Jack plug sound outlet. The sound level is regulated by the user with an adjustable control. It is typically used to create a relaxing atmosphere with music, for entertainment (e.g., to listen to the radio), and to aid sleep and relieve tinnitus.	I
691	17200	Anatomy chart	Анатомийн диаграм	A pictorial representation of the structure and form of the human body, in part or in total. It may be used as a reference during diagnosis or treatment, as well as for educational and training purposes.	I
692	17201	Exerciser, back	Дасгалын төхөөрөмж, нуруу	A device used to train, strengthen or rehabilitate the back muscles.	I
693	17223	Bedside information system	Орны дэргэдэх мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the provision and utilization of administrative and clinical information at the patient's bedside. The system will typically provide healthcare staff with the ability to access and submit electronic patient data. It consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
694	17230	Tourniquet cuff, reusable	Турникет ханцуйвч, дахин ашиглах боломжтой	A band-like device that is applied around an extremity (arm or leg) and connected to a tourniquet unit to apply a controlled pressure to restrict blood circulation and prevent normal blood flow to or from the distal area during a surgical intervention or serious injury. The tourniquet unit is used to provide the pressure within the cuff and display the pressure applied. The cuff usually comprises a dual-chamber allowing for alternation of the pressure site to avoid tissue damage or necrosis. This is a reusable device.	I

695	17243	Surgical laser drape	Мэс заслын лазер бүрээс	A device made of natural and/or synthetic materials intended to be used as a protective covering for a surgical laser to prevent its cross-contamination with the surgical field during a surgical procedure. This is a reusable device.	I
696	17249	Glutaraldehyde dosimeter	Глутаральдегидийн дозиметр	A non-sterile device designed to monitor by measuring the cumulative exposure an individual, usually a healthcare provider, has been exposed to glutaraldehyde. The device is usually worn by personnel or placed on a surface exposed to an environment polluted by glutaraldehyde. This is a reusable device.	I
697	17250	Spirometer/pulmonary function analyser syringe	Спирометр/уушигны үйл ажиллагааны анализатор тариур	A device consisting of a barrel (cylinder) with plunger/piston intended to be used for injecting small volumes of accurately measured amounts of gas into a spirometer, pulmonary function analyser, or other diagnostic pulmonary measuring/testing device for calibration or reference. It is typically a glass or plastic cylinder (barrel) and steel plunger (piston) with a finely graduated scale along the length of the cylinder. This is a reusable device.	I
698	17252	Endarterectomy loop puller	Endarterectomy гогцоо татагч	A hand-held manual surgical instrument designed to be used together with an endarterectomy loop (a special wire loop) that is inserted into the lumen of an artery to grip and shear atherosclerotic deposits (i.e., thickened atheromatous tunica intima) from the lumen of the artery (i.e., endarterectomy). This device is used to help the operator manually pull the loop through the main arteries of the body, e.g., the carotid artery. It usually includes a freely rotational handle to avoid the inducement of torsion forces upon the loop and may include a shear force gauge to limit the pulling force applied to the loop. It is typically made of high-grade stainless steel. This is a reusable device.	I
699	17407	Balance weight	Жингээ тэнцвэржүүлэх	A precision countermeasure that is manufactured to an exact unit of weight used to balance the weight of an object typically on a mechanical balance, to produce a quantified measurement of the object.	I

700	17421	Hyperhidrosis iontophoresis system	Гипергидроз ионтофорез систем	An assembly of electrically-powered devices intended to be used to transport ions in tap water (water from a faucet) and/or a water solution (e.g., glycopyrrolate and aluminium chloride) to the sweat ducts of heavy sweating areas of the body (e.g., hands, underarms, or feet) in patients that suffer from excessive perspiration (hyperhidrosis) to help minimize or stop sweating. Hyperkeratotic plugs develop in the sweat ducts as a result of the currents and hyperhidrosis is controlled.	I
701	17426	Antrotome	Антротом	A hand-held manual surgical instrument intended to be used to make an incision in an antrum, a nearly closed cavity or chamber, particularly one with bony walls (e.g., the mastoid antrum). This is a reusable device.	I
702	17428	Semi-permeable film dressing	Хагас нэвчилттэй хальсан боолт	A sterile, transparent, semi-permeable (i.e., impermeable to fluids, permeable to vapours and gases) covering applied to wounded or diseased tissue to provide protection (e.g., from dirt, water) and/or promote healing. It is typically a thin, clear film that may be covered on one side with a pressure-sensitive adhesive. It may be applied directly to tissue or used in combination with other dressings, such as gauze, to protect postsurgical incisions and minor wounds, cuts, scrapes, burns, skin tears, or blisters. It may also be used to secure to skin other devices such as intravenous catheters, infusion ports, tubing, or arterial catheters. This is a single-use device.	I
703	17433	Infant warmer	Нярайн халаагуур	A mains electricity (AC-powered) mobile device that contains an infrared (IR) heating element(s) designed to emit controlled, evenly distributed overhead heat to the body of a newborn/infant patient requiring supplemental heat. This device is equipped with wheels so that it can easily be moved to different areas of a room, ward, or department.	I

704	17435	Autopsy suction system	Задлан шинжилгээний сорох систем	An assembly of devices designed to evacuate large volumes of gas, liquid, tissue and/or other debris from a surgical site by means of suction during autopsies and/or other postmortem procedures. It generally consists of a mains electricty (AC-powered) suction pump, a pressure regulator and gauge, one or more large capacity collection canisters, plastic tubes connecting the components to each other and frequently with an autopsy/dissection station, and an overflow protection and/or bacteria filter. The system is mainly used when suction from a central vacuum system is not available or appropriate.	I
705	17436	Laboratory thermometer	Лабораторийн термометр	An electronic measuring instrument used in the laboratory to measure and establish the level of a temperature in an object, matter, or medium. It is designed for use in the laboratory for temperatures over a wide or particular range. It will have a high degree of accuracy and typically use a thermistor sensor for uptake of the measurement. It is typically used to verify that: 1) devices, e.g., water baths, heated cells or refrigerators, operate within the prescribed temperature limits; and 2) material, e.g., liquids, gases or semi-solids, have reached a desired temperature.	I
706	17439	Stereo light microscope	Стерео гэрлийн микроскоп	A magnification instrument designed with a standard microscope configuration with the object viewed through two observation objectives and oculars from above to provide a three-dimensional (3-D) view of the object under low magnification by transmitted light (typically no more than 60x). It is used in laboratories and for research, particularly for dissection, and 3-D viewing of large or living specimens. It consists of a stand that supports the main components, an ocular body in which the eyepieces are mounted, a nosepiece to support the objectives, a specimen stage, a condenser to focus the light on the specimen, and a source of light [e.g., tungsten (W), halogen] and light port.	I

707	17440	Inverted-stage light microscope	Урвуу үе шаттай гэрлийн микроскоп	A magnification instrument designed with illumination placed at the top with the stage (the specimen platform) below, and the optics on the bottom for microscopic study of large specimens by transmitted light. It is typically used in the laboratory for investigation and research. The device consists of a stand that supports the main components, an ocular body in which the eyepieces are mounted, a specimen stage, a condenser to focus the light on the specimen, and a source of light. It is typically used for the examination of tissue cultures in all types of culture vessels (e.g., Petri dishes, culture bottles) and also in microtest and microplates.	I
708	17449	Breathing circuit dryer, closed	Амьсгалын хэлхээний хатаагч, хаалттай	An electrically-powered cabinet designed to dry the interior of breathing circuit equipment (e.g., hoses, bags, masks) after washing, to prevent bacterial growth and equipment deterioration. The cabinet is designed to operate with closed doors, but may operate with open doors.	I
709	17460	Neonatal electrocardiographic electrode	Нярайн электрокардиографийн электрод	A non-sterile electrical conductor applied to a neonatal patient to transmit electrical signals from the body surface to a data measuring/display device (typically an electrocardiograph, patient monitor, or patient monitoring system) to produce an electrocardiogram (ECG). This is a single-use device.	I
710	17464	Lens tinting unit	Линз будах төхөөрөмж	A mains electricity (AC-powered) bath used in ophthalmic work, containing hot water and soluble dyes into which plastic spectacle lenses are immersed in order to impart a tint to the lenses.	I
711	17500	Scalp retractor	Хуйх татагч	A surgical instrument intended to withdraw an incised scalp to expose the skull during a surgical procedure. It is typically made of high-grade stainless steel. This is a reusable device.	I
712	17506	Gel warmer	Гель халаагуур	A portable, mains electricity (AC-powered) device intended to be used to prewarm gels (e.g., ultrasonic coupling gels, vaginal exploratory gels) prior to patient application. It is typically a tabletop device that includes a recess or a well for placement of a gel container, a heating element, a thermostat, and operating controls.	I

713	17507	Bone tap, reusable	Ясны цорго, дахин ашиглах боломжтой	A surgical instrument designed for cutting internal threads into bone, so that the threads facilitate the insertion of bone screws (not included). The screws may be used to anchor bone fragments, fixtures and/or other devices to the bone. It is typically manually rotated and consists of a metal shaft with a helical thread which may be cannulated or intersected with longitudinal cutting grooves. This is a reusable device.	I
714	17508	Video printer	Видео хэвлэгч	A device designed for making printed (hard) copies of medical video images. These can be taken by digital cameras or image processing results of different imaging devices or systems [e.g., ultrasound (US), magnetic resonance imaging (MRI), computed tomography (CT) or radiographic images].	I
715	17512	Infant oral pacifier	Хүүхдийн амны хөндийн хөхүүл	A device, designed as an artificial teat, intended to be placed in the mouths of irritable or teething infants to quiet/pacify them. This is a reusable device.	I
716	17520	Lavage unit, uterine	Угаах хэсэг, умай	A device that is specially designed for use in the uterus, typically to facilitate harvesting of fertilized ova from the uterus. This is a reusable device.	I
717	17523	Cast cutter, pneumatic	Цутгамал зүсэгч, пневматик	A hand-held, pneumatically-powered instrument designed for cutting the plaster or synthetic material used to form casts. Its proximal end is usually cylindrical forming the handle of the device; the distal end of the instrument terminates in a rounded, half moon-like, or circular blade. The cutting capability of the blade is provided by a pneumatic motor in the handle which vibrates or rotates the blade. Cutting is effectuated by vibration or rotation rather than sawing.	I

718	17526	Thermoplastic-moulding water bath	Термопластик хэлбэрийн усан банн	A mains electricity (AC-powered) water bath specifically designed for the warming/heating of mouldable plastic materials (thermoplastics) used to create body positioning and body fixation devices, splints, and orthotic devices. It will typically consist of a large water holder (pan) that is temperature-regulated from, e.g., room temperature to 100° Celsius, temperature controls, thermometer/thermostats, timer. Sheets or pre-cut pieces of thermoplastic materials are placed into the water with the temperature set according to the material specifications so that these become soft enough to mould to the required shape.	I
719	17528	Laboratory apron rack	Лабораторийн хормогч тавиур	A rack designed to hold aprons used in the clinical laboratory.	I
720	17531	Chair occupancy alarm, battery-powered	Сандал суудлын дохиолол, батарейгаар ажилладаг	A battery-powered device designed to provide a restraint-free method of monitoring the occupant of a chair (e.g., a patient, geriatric, an Alzheimer's disease or dementia patient, or a person with a disability) who are at risk of vacating the chair unattended and falling; in such an event it will activate a sound and/or visual signal to alarm the staff. The device is typically used together with connected sensor pads that are placed strategically under the patient. It may also be used for a wheelchair.	I
721	17543	Inserter	Оруулагч	An instrument used to insert (put, introduce, or implant) one thing into another. Inserters can be designed for use in the assembly of other devices or to place-position implants in the body. An inserter's design and function depend upon its specific intended use.	I
722	17551	Ventilator mount, fixed	Агааржуулагчийн бэхэлгээ, суурин	A device that is used to attach a ventilator to a bed or wall. It may or may not include jointed arms to allow for positioning of the ventilator to proximity of the patient when is use, and for a storage position when not in use.	I

723	17552	Lice comb, manual	Бөөсний сам, гарын авлага	A hand-held manual device with specially-designed teeth (tines) spaced with precision and intended to be systematically drawn through the hair, typically following the contour of the scalp, to expose and remove human head lice (Pediculus humanus capitis) and their eggs (nits) from the hair and scalp of an infested person. It is normally available non-prescription and over-the-counter (OTC). This is a reusable device.	I
724	17554	Electroencephalographic electrode cap, single-use	Электроэнцефалографийн электродын таг, нэг удаагийн хэрэглээ	An array of analytical scalp electrodes preconfigured within a head-worn device designed for the rapid placement and appropriate positioning of the scalp electrodes during electroencephalography (EEG). It typically consists of a cap-like device with integrated scalp electrodes, and shielded lead wires that terminate into a connector that mates with a separate cable. The device eliminates the need to glue or paste individual electrodes to the patient’s scalp. This is a single-use device.	I
725	17572	Body temperature ambulatory recorder	Амбулаторийн биеийн температур хэмжигч	An electrically-powered device intended for 24-hour recording of a patient's temperature, which can provide trend information for use in a diagnosis. The patient is connected to and wears the device while he or she performs normal daily activities. The recorded measurements are intended to provide data for analysis.	I
726	17576	Tooth preservation kit	Шүд хамгаалах хэрэгсэл	A convenient collection of sterile devices/supplies designed to preserve and transport a tooth that has been knocked out (i.e., avulsed) so it can be reimplanted. It typically includes instruments, pharmaceuticals/preserving solutions, a container (e.g., a vial or cup with a plastic net inside to hold the tooth suspended in the preservation solution), and swabs/bandages. It is used to avoid tooth cell crushing and/or dehydration by immersing the tooth in a pH balanced solution compatible with periodontal cells, and is typically used in field emergency situations after traumatic knock out of teeth. This is a single-use device.	I

727	17584	Rigid endoscopic sponge/swab forceps	Хатуу дурангийн хөвөн/арчдас хямсаа	A manual instrument designed to grasp a pledget swab at the distal end to obtain cytological specimens and/or to perform blunt dissection during gynaecologic and/or other (e.g., cholecystectomy) laparoscopic procedures. It is a hand-held instrument typically with scissors-like handles that may include a ratchet mechanism; a long slender shaft; and strong jaws at the working tip with inward facing tongs at the end of the jaws for safety. This is a reusable device.	I
728	17593	Low-air-loss bed	Агаарын алдагдал багатай ор	A mains electricity (AC-powered) bed that permits a controlled release of air through its dedicated mattress and is used for tissue pressure management during patient confinement in a hospital acute care department and nursing homes. The device consists of a mattress made of a series of connected air inflated pillows upon which the patient lies, a compressor with a feed system, filters and a built-in control unit.	I
729	17595	Intubation teeth protector	Интубацийн шүд хамгаалагч	A sterile curved device designed to fit over the upper and lower sets of teeth to protect them from damage during endotracheal (ET) tube intubation procedures. Such protection can be required when the patient is resisting the intubation by clenching their teeth which can be damaged against the metal or plastic blade of the intubation laryngoscope, and/or if the patient has bad teeth that are liable to inadvertent damage, and/or if this is normal hospital procedure to counter liability claims. This is a single-use device.	I

730	17608	Orchidometer	Орхидометр	A device designed to accurately determine the size of the testes. It is typically designed as a group of plastic or wooden oval-shaped beads graded in size, or a chart made of plastic with the various sizes of testis imprinted upon it that enables the examiner to gauge, by comparison, the size of a testicle; some gauges may be numbered denoting a calculated volume. Discrepancy of testicular size with other parameters of maturation can be an important indicator, e.g., small testes can indicate either primary or secondary hypogonadism, while large testes (macroorchidism) can indicate a common cause of mental retardation, fragile X syndrome. This is a reusable device.	I
731	17614	Exhaled-gas oesophageal intubation detector	Амьсгалах улаан хоолойн интубацийн детектор	A device designed to verify proper endotracheal (ET) tube placement by detecting/assessing exhaled carbon dioxide (CO2) during airway management to confirm correct intubation for appropriate ventilation; it may additionally be intended to confirm placement/ventilation when using a laryngeal mask airway and/or face mask. It is intended to be connected to the intubation device and/or ventilator breathing circuit (e.g., the T-piece connector or hose). It typically functions through colorimetric CO2 detection using a chemical reaction based and/or paper indicator that changes colour based on the approximate CO2 concentration. This is a single-use device.	I
732	17631	Single-side-support walking frame	Нэг талын тулгууртай алхах хүрээ	A mobility aid in the form of a waist-high framework and a handgrip with two legs designed to provide a stable support to only one side of the user, e.g., a person with a disability, a geriatric or an infirm person; it may also be used during rehabilitation. It is typically constructed of lightweight metal, plastic and rubber materials in the shape of an "A" or and inverted "U" frame with a cross-strut or struts that keep the two feet apart providing stable contact with the ground. It is held by the user's hand to provide an optional form of support for standing and ambulating for a user needing more support than that provided by a walking stick (a cane) and who do not require a crutch.	I

733	17633	Urethrotome	Уретротом	A surgical instrument designed like a long catheter or thin flexible endoscope shape with a lateral moveable small knife at the distal end which is used for incising strictures in the urethra, (the duct by which urine is discharged from the bladder). This operation may be performed either "blind", where the surgeon cannot see the site, or with the help of endoscopic instruments. Some device designs may incorporate an optical channel for endoscopic visual control. This is a reusable device.	I
734	17650	Laser beam eye protector, staff	Лазер туяа нүд хамгаалагч, ажилтан	A protective device that is designed to be used by the surgical staff in an operating or treatment room where a laser is being used, in order to protect their eyes from injury during the laser surgery. It will typically be designed as goggles or special spectacles containing a filter glass that provides adequate visual transmission with high optical density (attenuation) for the specified laser wavelength which they will be using.	I
735	17653	Infant scale liner	Нялхсын масштабын доторлогоо	A device intended to be used to line the weighing platform/bowl of a set of scales used for weighing infants/babies. It is a thin disposable underlay (pad) used when placing an infant onto the weight scale. This is a single-use device.	I
736	17668	Stair-climbing exerciser, powered	Шатаар авирах дасгалын төхөөрөмж хөдөлгүүртэй	An electromechanical exercise apparatus designed to simulate the motion of climbing stairs primarily to increase cardiovascular endurance by keeping heart and respiration rates elevated over a continuous period (aerobics); it also promotes lower-body muscle strength. It may consist of moveable staircases, or steppers (also known as climbers) consisting of foot pedals or platforms with an electric motor drive system, and with side handrails and/or front handlebars. It usually includes workout program modes to adjust the resistance level, a monitor to display workout time, distance, speed, calories burned, and heart rate; and handlebars with grip pulse sensors or wireless heart rate tools.	I

737	17674	Tendon approximator	Шөрмөсний ойролцоологч	One of a pair or set of surgical instruments intended to be used to grasp the torn or resected portions of a tendon to hold the portions in apposition for the purpose of reattaching one portion to the other in order to repair the structure. Also, an instrument used to grasp a tendon, or separated parts of a tendon, to position it in a surgical opening. This is a reusable device.	I
738	17675	Vessel approximator	Судасны ойролцоологч	One of a pair or set of surgical instruments used to grasp the torn or resected portions of a vessel to hold the portions in apposition for the purpose of reattaching one portion to the other in order to repair the structure. The instrument is also used to grasp a vessel, or separated parts of a vessel, to position it in a surgical opening. This is a reusable device.	I
739	17691	Bunsen burner	Бунсен шарагч	A device that enables the safe burning of a continuous stream of gas without the risk that the flame will travel back down the tube of the gas source. This device is typically used in the laboratory for heating substances in a beaker/crucible or for cleaning utensils.	I
740	17707	Hydrotherapy treadmill	Усан эмчилгээний гүйлтийн зам	A specially designed mains electricity (AC-powered) exerciser (i.e., treadmill) for use partially immersed in water, e.g., in a hydrotherapy tank, to provide additional resistance to the walking exercise without increasing the impact and/or stress on the patient's joints. It consists of an endless, continuous tread (e.g., a shock absorbing rubber belt rotating on rollers) that can be set to rotate at varying speeds, electric motors, and a controller to regulate speed, elevation, and display related data. An emergency stop button will typically be incorporated. All materials used will be corrosion resistive and all electrical components will fulfil the electrical safety standard required.	I

741	17711	Medical device pressure test meter	Эмнэлгийн төхөөрөмжийн даралт хэмжигч	An electrically-powered electronic instrument designed to measure and establish the degree of positive or negative pressure (pneumatic or hydraulic) found in a medical device, piece of equipment, or system. It is connected to the device, equipment, or system with the unknown pressure via a hose or connector and the pressure is sensed by this device and converted into a digital pressure reading displayed in one of several units, e.g., mmHg, cmH2O, or pascal. It is typically used by a healthcare provider (i.e., clinical technician) in a clinical setting.	I
742	17714	Phototachometer	Фототахометр	A hand-held, battery-powered instrument that uses a photosensor to measure and establish the rotational speed of a rotating device or device component (e.g., an electrically-powered motor), avoiding physical contact with the spinning object. The user points the device's photosensor at the rotating object and a reading, typically in revolutions per minute (rpm), will appear on the digital display. The device may be able to convert and display results in other units such as foot/second or inches/second. It will typically be able to store a number of readings within its memory.	I
743	17718	Vascular compressor, external	Судасны компрессор, гадаад	A thin, gently curved sheet of radiolucent plastic used for external compression of the internal spermatic vein to prevent distal flow of a sclerosing agent. The device is also used in the compression of additional veins, bypass grafts, and fistulas during angiographic procedures. This is a single-use device.	I
744	17726	Power line receptacle tester, electromechanical	Цахилгаан шугамын савны шалгагч, цахилгаан механик	An electromechanical instrument designed to measure and assess both the electrical characteristics of a power line receptacle (e.g., an electrical wall receptacle or electrical wall socket) and the mechanical holding force between the ground outlet in the wall receptacle and the male ground connector of the plug. The device in its most simple form may include, e.g., a prong which is plugged into the ground receptacle to measure tension, and a display. It is intended to be used by a healthcare provider (i.e., clinical technician or hospital electrician) in a clinical setting.	I

745	17744	Penile vacuum device	шодойн вакуум төхөөрөмж	A device that is applied externally to the penis for the management of erectile dysfunction (ED) (commonly known as impotence) to achieve selective penile tumescence and rigidity adequate for vaginal intercourse. It is typically a two-component device consisting of: 1) a manually-operated, vacuum pump/sleeve which is applied over the flaccid penis and used to create a vacuum to achieve tumescence through an up and down movement along a vacuum tube; and 2) a constriction ring used in conjunction with the pump and placed upon the penis to maintain the erection. The ring remains on the penis for a recommended period of time. This is a reusable device.	I
746	17792	Exerciser, climbing	Дасгалын төхөөрөмж, авирах	A device used to simulate climbing as a form of exercise to provide the user with exercise of the muscle groups that are involved in climbing, e.g., leg and arm muscles.	I
747	17794	Pillow, lumbar	Дэр, бэлхүүс	A cushion designed to support the loins, or lower back (lumbar).	I
748	17802	Mastication muscle exerciser	Зажлах булчингийн дасгалын төхөөрөмж	An intraoral mechanical exercise apparatus intended primarily to strengthen and rehabilitate the jaw muscles of mastication of a patient who has pain in, or disorders of, the temporomandibular joint (TMJ), typically through repetitive biting against resistive forces provided by the device. This is a reusable device.	I
749	17803	Infectious waste absorbent	Халдвартай хаягдал шингээгч	A chemical product intended to be used to treat infectious fluids (e.g., blood, vomit, or urine) that contaminate a site. It is provided in liquid (spray), powder, or granulated form, and it typically absorbs, encapsulates, and disinfects the waste to render it harmless. The liquid waste is typically solidified as a final product and can thereafter be treated as ordinary waste. After application, this device cannot be reused.	I
750	17812	Needle guard	Зүү хамгаалагч	A cap/cover intended to be extended over a used needle (attached to a syringe/autoinjector or not) to prevent accidental needle sticks, typically during removal of the needle. It is typically a plastic housing with appropriate shielding to prevent injury upon application, and is typically disposed of with the needle; it is not the needle cap provided with the needle. This is a single-use device.	I

751	17817	Stairlift, platform	Шатны өргөлт, тавцан	A mains electricity (AC-powered) device designed with a platform typically used to accommodate a user sitting in their wheelchair to be transported up and down a staircase. This electromechanical device is typically attached to one or more rails which follow the shape and angle of the staircase, but may be affixed in another manner. It will typically be installed in public venues, institutions, and for home-use.	I
752	17819	Wheelchair/occupant lift	Тэргэнцэр / зорчигчийн өргөгч	A mains electricity (AC-powered) device designed for moving (lifting) a wheelchair and the seated occupant from one level to another to provide a means of vertical access. It typically consists of a platform, with no roof, onto which the patient wheels the wheelchair, using controls to move up or down; the lift does not move within a lift shaft. The lift is designed for use in buildings such as hospitals, homes, offices, and stores.	I
753	17823	Pipette calibrator	Пипетк калибратор	A device used to verify the volume delivery of pipettes and diluters. This device may use mechanical or electronic methods to achieve the calibration. It is intended to be used by a healthcare provider (e.g., a laboratory technician) in a clinical setting.	I
754	17824	Pipette safety mouthpiece	Пипеткийн аюулгүй амны хөндий	A reusable device that is attached to the end of a user-induced pipette so that the user can place this between his or her lips in order to extract air from the pipette by sucking and creating a partial vacuum in the pipette so that the required volume of liquid is picked up. This device can be exchanged between the pipettes being used and provide the user with a degree of hygienic safety. This is a reusable device. This group of devices reflects old technology.	I
755	17826	Colonoscope stiffener	Колоноскоп хатууруулагч	A dedicated stiff wire that is inserted into a flexible colonoscope to allow the physician to increase the stiffness of the colonoscope when extra rigidity is required during a colonoscopy. This is a reusable device.	I

756	17831	Assistive automobile driving/engine control component, powered	Туслах автомашин жолоодох/хөдөлгүүрийн удирдлагын бүрэлдэхүүн хэсэг, хөдөлгүүртэй	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the driving and engine controls of the vehicle (excluding the steering) so that it can be used by a person with a disability. It will provide electronic/electrically-powered or servo engine-powered adaptations for operating the accelerator, brake, clutch or changing of gears of the vehicle to increase their accessibility and functionality.	I
757	17844	Dental articulation paste/solution	Шүдний үе мөчний оо/уусмал	A substance intended to characterize the contact relationship between the maxillary and the mandibular teeth during occlusion, and between interproximal surfaces, to help determine the proper seating of full or partial dentures, crowns and bridges, and to program and/or assess progress of orthodontic treatment. It may include one or more substances (e.g., wetting spray, silicone paste, drying liquid that turns into a removable film) and is designed to be applied to the teeth or a restorative prosthesis to show the contact surfaces in situ or on a substrate (e.g., impression material) that displays visible marks when the patient bites. After application, this device cannot be reused.	I
758	17845	Partial denture	Хэсэгчилсэн хиймэл шүд	A custom-made, removeable, artificial replacement for one or more, but not all, teeth in the lower or upper jaw (mandible or maxilla) in a partially edentulous patient. It typically includes clasps of metal or plastic that clip onto remaining teeth for retention and stabilization. It can be made of a variety of materials including polymers [polymethylmethacrylate (PMMA), polycarbonate (PC)], acrylic, ceramics, and/or metals [e.g., base metal alloys or titanium (Ti)]. Also known as a removable partial denture (RPD).	I

759	17864	Mammography mobile medical facility	Маммографийн явуулын эмнэлгийн байгууллага	A vehicle, e.g., a van, trailer, or other mobile enclosure, that is equipped with a diagnostic mammographic x-ray system, the related instrumentation, and shielding. It is typically driven or towed between various geographical locations and used as a freestanding mobile mammography unit. It will include special mounting and stabilization components for the installed imaging systems, e.g., film processors, telemedicine systems, picture archiving and communication system (PACS). Power sources to ensure its function are included.	I
760	17890	Endodontic filling material condenser	Эндодонтийн дүүргэгч материалын конденсатор	A dental instrument that uses heat to condense an endodontic filling material in a root canal, in the axial/lateral direction. The working part is typically cylindrical or tapered, and circular in cross-section. A condenser is commonly used to function as a plugger or spreader. This is a reusable device.	I
761	17895	Cardiopulmonary stress exercise trolley	Зүрх судасны стресс дасгалын троллейбус	A cart that accommodates an ergometer (e.g., a static bicycle or treadmill) and the necessary equipment to measure metabolic energy expenditure and cardiovascular/respiratory function during exercise. This trolley (cart) is used for periodic assessment of the patient's progress in cardiac and pulmonary rehabilitation programs to determine energy expenditure levels.	I
762	17899	Ophthalmic irrigation/infusion/aspiration cannula, non-illuminating, reusable	Нүдний усалгаа/дусаах/сорох суваг, гэрэлтүүлдэггүй, дахин ашиглах боломжтой	A rigid or semi-rigid tube (non-illuminating) designed to be inserted into the eye to facilitate infusion, irrigation, and/or aspiration of fluids/gases during ophthalmic surgery (e.g., phacoemulsification, vitreoretinal surgery, sub-Tenon’s anaesthesia, capsule polishing). It is a single- or multi-lumen device, typically made of high-grade stainless steel, and may include a length of flexible tubing. It may be blunt, or include a sharp angled tip/hook (e.g., irrigating cystotome for capsulotomy), however it does not have a sharp bevelled end for initial puncture of the eye (i.e., not a needle). This is a reusable device intended to be sterilized prior to use.	I

763	17912	Ejaculation electrical stimulation system	Дур тавих цахилгаан өдөөх систем	An assembly of devices intended to apply electrical stimuli to the nerves that control ejaculation. This system usually consists of an electrode probe, typically inserted into the patient's rectum, and a connected pulse generator. It is typically used in neurologically impaired males to obtain semen for assisted reproduction.	I
764	17947	Video assistive reading device	Видео уншихад туслах төхөөрөмж	An electrically-powered device designed to assist a visually-impaired person with reading/viewing by capturing video images of the text/object and enlarging/magnifying them onto a monitor/television screen [a visual display unit (VDU)]; It may include text-to speech functionality.	I
765	17962	Commode back rest	Коммодын нурууны амралт	A device intended to be mounted onto a commode to provide back support to a disabled person while sitting to use the toilet.	I
766	17966	Cryogenic safety glove	Криоген хамгаалалтын бээлий	A device worn on the hands of the user in order to protect them from adverse contact when dealing with any cryogenic devices/equipment. This device will provide adequate insulation against the extreme low temperatures that are dangerous for skin contact. This is a reusable device.	I
767	17976	Lifting seat cushion	Өргөх суудлын дэр	An electrically-powered cushioned device designed to be placed on a chair or other surface for sitting, and to help lift its occupant to stand from the sitting position; it is typically used by elderly or disabled patients who have difficulty rising from a seated position. It may be in the form of a portable, two-piece, hinged structure with a mechanism that lifts the seating surface mechanically (e.g., by springs), or in the form of an inflatable cushion with an integrated pump. It is normally available [non-prescription] over-the-counter (OTC) for use in the home and healthcare facility.	I

768	17977	Medical equipment handle cover, single-use, non-sterile	Эмнэлгийн тоног төхөөрөмжийн бариулын бүрээс, нэг удаагийн, ариутгагдаагүй	A non-sterile device designed specifically to cover the handle of a piece of medical equipment (e.g., examination/treatment light) to provide a hygienic barrier between the handle and the hand of a healthcare professional. It is typically a polymer device designed for attachment to a handle and may in addition provide grip for improved manipulation of the handle; it is not designed to cover other equipment components. This is a single-use device.	I
769	17982	Standing frame	Байнгын хүрээ	A stationay frame-like device designed to be used by a person with a disability, a paraplegic, or a patient who has suffered a stroke, to help them achieve an upright standing position. It can be used to help the user in regaining balance when learning to stand.	I
770	17988	Antiseptic skin towelette	Антисептик арьсны алчуур	A device that is pre-soaked with an antiseptic and intended to inhibit the growth of microorganisms on the skin; it may also include an anaesthetic to alleviate pain. It is typically designed as a small, absorbent, sterile cloth, usually made of cotton, that is pre-treated and sealed in an individual package. It is used in the hospital environment, in the home, or carried for first aid to prevent infection and provide temporary pain and itching relief associated with minor cuts, scrapes, or burns. This is a single-use device.	I
771	18007	Personal paging system	Хувийн пейжерийн систем	An assembly of electronic communication devices installed throughout a building complex, e.g, a hospital or an institution, designed to page (summon) the individual persons who have been allotted the system receivers (the pagers) which are carried upon their person allowing them to ambulate from their normal workplace or station and still remain available for communication between a person needing to communicate with them. The system typically consists of strategically situated transmitters and individually distributed receivers (the pagers). Some types may include an integrated intercom system for direct verbal communication.	I
772	18008	Exerciser, neck	дасгалын төхөөрөмж, хүзүү	A device, e.g., a compressible ball with an attached pressure gauge, used to train, strengthen, or rehabilitate the neck muscles.	I

773	18012	Shock-transfering hip protector	Цочрол дамжуулдаг хонго хамгаалагч	A mechanical guard worn externally over the bony prominence of the hip (greater trochanter) intended to protect against hip (neck of femur) or femoral shaft fractures by transferring the force of a patient's fall to the soft tissues of the thigh. It is designed in the form of a shell-like pad, typically with heat-transferring vents, made of firm materials (e.g., plastic). The device is typically held in place by modified underpants or by specialized side pockets on hip protection trousers. This is a reusable device.	I
774	18020	Cross-country skiing exerciser	Гүйлтийн цанын дасгалын төхөөрөмж	A mechanical exercise apparatus designed to provide exercise by simulating the motions of cross-country skiing primarily to increase cardiovascular endurance by keeping the heart and respiration rates elevated over a continuous period (aerobics); it also promotes lower- and upper-body muscle strength. It typically consists of a pair of ski-like sliding footpads mounted on two rails, and two handlebars or a rope-and-pulley device that simulate ski poles. The device often includes a monitor for displaying workout feedback such as time, speed, distance, calories burned, and heart rate.	I
775	18021	Dermatoscope, optical	Дерматоскоп, оптик	An electrically-powered, hand-held instrument intended to be used for the direct microscopic examination of the external skin layers. The device has a built-in light source and magnification system that provides the user with the visualization of the structures of the epidermis and epidermal-dermal junction during dermatoscopy (also known as dermascopy). Oil may be applied to the skin to enhance skin transparency. This device is commonly used for the examination of skin structures and to assess abnormal colour and pattern changes of pigmented skin lesions (e.g., spongy birth marks, malignant melanoma).	I
776	18033	Surgical mist irrigation tip	Мэс заслын манантай усалгааны үзүүр	A device that is designed to deliver a combined stream of air and mist to clear blood from a specific area of a surgical site. This device is a special perforated tip which can be affixed to an appropriate kind of tubing that delivers the rinsing fluids. This is a single-use device.	I

777	18034	Endoscopic video image processing unit	Дурангийн видео дүрс боловсруулах төхөөрөмж	An electrically-powered device designed to receive and process the electronic signals sent from a video endoscope or endoscopic video camera; it does not include the endoscope nor light source and is not designed to control the endoscope. It may have additional features which compensate for/enhance the colour and light qualities provided. The resulting picture images are sent to and shown on a visual display unit (VDU), typically to assist the endoscope operator with an ongoing intervention and often to allow the patient visualization of the process; the images can be recorded on a video recorder or stored on computerized media.	I
778	18039	Glove liner	Бээлий доторлогоо	A cloth glove intended to be worn as a liner underneath rubber, plastic, or latex gloves (examination or surgical) to minimize the risk of allergic reactions, rashes, and other skin irritations, or to reduce the risk of sharps injuries. This is a single-use device.	I
779	18040	Medical gas pipeline system air dryer, refrigerating	Эмнэлгийн хий дамжуулах хоолойн систем агаар хатаагч, хөргөгч	A mains electricity (AC-powered) component of a medical gas pipeline system designed to remove moisture from medical air using refrigeration (i.e., cold temperature) techniques. It typically consists of a refrigerant heat exchanger, a mechanical condensate separator, and an automatic drain trap. The device may be equipped with filters for removing liquid, oil, aerosols, and mists; and with purifiers for removing solid and liquid particles and gaseous impurities such as carbon monoxide (CO).	I

780	18041	Medical gas pipeline system air dryer, desiccating	Эмнэлгийн хий дамжуулах хоолойн систем агаар хатаагч, хатаах	A mains electricity (AC-powered) component of a medical gas pipeline system designed to remove moisture from medical air using dynamic desiccant adsorption techniques. It typically includes a set of desiccants (e.g., a bed of desiccant cores) in which the adsorption process is performed; frequently, the compressed air to be dried passes through a rotor while the desiccant removes water vapour directly from the air and holds it while the wheel rotates. The device may be equipped with filters for removing liquid, oil, aerosols, and mists; and with purifiers for removing solid and liquid particles and gaseous impurities such as carbon monoxide (CO).	I
781	18055	Logistics-management information system	Логистик-менежментийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of logistics management services (i.e., control of the flow of goods, services, and related information between points of origin and consumption). The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
782	18081	Bidet, fixed	Биде, зассан	A device designed as a low-mounted, plumbed-in, bathroom fixture for the purpose of washing and bathing the genitalia and the inner buttock and anus. It is typically fixed to the floor or wall and it consist of a bowl that resembles the shape of a toilet but is typically more elongated and often without a seat; although some types may include a seat, taps (faucets) for mixing hot and cold water and a douche to deliver a water spray. It is used to enhance personal hygiene after a visit to the toilet or when a person has soiled themselves.	I
783	18083	Bite registration rim	Хазуулсан бүртгэлийн хүрээ	A schematic model of the dental arch attached to a temporary or permanent base for recording jaw relationships. Bite rims can be individually made or adjusted to one patient from preformed devices. This is a single-use device.	I

784	18094	Airway protection face mask	Амьсгалын замыг хамгаалах нүүрний маск	A flexible, form-shaped device that is placed over the nose and mouth to provide respiratory protection. It prevents the wearer from inhaling dusts, mists, and other airborne particles, including tuberculosis (TB) bacteria, present in the environment. It is made of rubber, silicone, soft plastics and/or other materials that produce a soft, flexible mask that will create an airtight seal against the patient's face. The device typically includes ties or a headstrap and is available in a range of sizes. This is a reusable device.	I
785	18101	Physician-practice-management information system	Эмч-практик-удирдлагын мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data to support the administrative and clinical activities associated with the provision and utilization of physician services and office facilities. The system may be used to process insurance claims [e.g., for generation, electronic data interchange (EDI), referrals], prepare patient statements, schedule the physician's time, make patient appointments, and store and retrieve patient records. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
786	18107	Noninvasive blood pressure physical simulator	Цусны даралтын инвазив бус физик симулятор	An instrument designed to mimic the pressure variations acting on the cuff of noninvasive arterial blood pressure monitoring/measuring devices when placed on a patient's arm. It typically simulates blood pressure values (e.g., systolic, diastolic, mean) and abnormal states (e.g, hypertensive, hypotensive). It usually consists of an internal pump to generate the testing pressures, manometers, electronic circuitry, and a display. The device is used to test oscillometric noninvasive blood pressure monitors and electronic sphygmomanometers as a complete set including the transducer; some may also be used to test auscultatory sphygmomanometers.	I

787	18113	High-efficiency filter air cleaner, mobile	Өндөр үр ашигтай шүүлтүүр агаар цэвэрлэгч, хөдөлгөөнт	A mains electricity (AC-powered) device that uses a combination of a prefilter and a high-efficiency particulate air (HEPA) filter to remove 99.97% of particles greater than 0.3 microns. This device is frequently used to prevent the transmission of tuberculosis (TB) and other diseases caused by airborne pathogens. It is designed to be moved from one location to another.	I
788	18115	Electrostatic precipitation air cleaner, mobile	Электростатик хур тунадасны агаар цэвэрлэгч, хөдөлгөөнт	A mains electricity (AC-powered) device designed to filter the air by electrostatic precipitation. Positively charged ions are attracted to airborne particles as they are drawn through the device. The positively charged ions are then precipitated from the air when they are passed through a negatively-charged channel or series of plates. The efficiency of the device is dependent upon the particle migration velocity, collection field surface area, the distance through the collection field, and airflow rate. The device is designed for movement from one location to another.	I
789	18118	Home healthcare information system	Гэрийн эрүүл мэндийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of home healthcare services and facilities. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
790	18119	Cardiology information system	Кардиологийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of cardiology services and facilities. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
791	18124	Oxygen saturation/pulse rate electronic-signal simulator	Хүчилтөрөгчийн ханалт/импульсийн хурд электрон дохионы симулятор	An electronic instrument designed to simulate arterial oxygen saturation and/or pulse rate for testing and calibrating pulse oximeters, pulse oximeter probes and other related pulse oximetry devices.	I

792	18129	Manual bone mill	Гар аргаар ясны тээрэм	A manually-operated, non-patient-contact device intended to be used to grind bone into a slurry or a powder for use as a bone matrix for bone regeneration or bone grafting. This is a reusable device.	I
793	18132	Menstrual cup, reusable	Сарын тэмдгийн аяга, дахин ашиглах боломжтой	A cup-like receptacle placed by the user into the vagina to collect blood and cellular debris discharges during menstruation and discharges outside of the monthly menses. It is a small, soft device typically made of a biocompatible synthetic materials and is normally available [non-prescription] over-the-counter (OTC). It is typically removed from the vagina by pulling on a protruding stem or by insertion of a finger to catch its rim; depending upon design, it may or may not touch the cervix. The device can function as an alternative to tampons and may remain in situ during sexual intercourse. This is a reusable device.	I
794	18141	Eyelid weights	Зовхины жин	Devices used for lidloading to restore upper eyelid function.	I
795	18142	Eyelid weight, external	Зовхины жин, гадаад	An ophthalmic device that is applied to the outside of the upper eyelid to "lidload" the eyelid to restore upper eyelid muscle (musculus orbicularis oculi) function. This device can be used for: 1) the treatment of temporary facial paralysis caused by Bell's palsy, trauma, or a stroke; or 2) to determine the appropriate size of implantable eyelid weights prior to surgery. This device uses gravity to gently close the upper eyelid when blinking or when the eyelid muscle is relaxed, and is made of a heavy material (e.g., tantalum). It is worn just above the eyelashes, adhered to the skin with double-sided adhesive tape, and is coloured in a variety of skin shades (pink, tan, brown, dark brown).	I
796	18148	Birthing bar	Төрөх баар	A bar or rail-like apparatus intended to be used to assist women with positioning and support during labour.	I
797	18150	Durometer	Дурометр	A laboratory instrument intended to be used to determine the hardness of a material (e.g. tissue, plastic, or metal).	I
798	18170	Materials management system, decentralized	Материалын удирдлагын систем, төвлөрсөн бус	An automated, secured storage and distribution cabinet located throughout the hospital that controls patient supplies and information for supply management. This system is interfaced with the hospital information system for admissions, discharges, transfers, and billing.	I

799	18716	Nasal haemostatic catheter	Хамрын цус тогтоогч катетер	A tubular device intended to be inserted into the nose to control nose bleeding (epistaxis) by direct pressure. It is typically a single-lumen tube with a sponge attached near its distal tip, and may include an integral airway that allows the patient to breathe through the nose while the catheter is in place. Some designs consist of a double-lumen with a balloon attached to each distal end to be used simultaneously in both nasal cavities and can also be used to stabilize zygomatic arch fractures. This is a single-use device.	I
800	19032	Invasive pressure transducer electronic-signal simulator	Инвазив даралт хувиргагч электрон дохионы симулятор	A battery-powered instrument designed to mimic the electrical signals at the output of an invasive pressure transducer primarily to test the performance, trend, and alarm values of an electronic pressure monitor [e.g., arterial and venous blood pressure, intracranial pressure (ICP), oesophageal pressures]. The range of simulated pressures varies widely (e.g., from -500 to +500 mm Hg); either static pressures or time-varying (i.e., dynamic) pressures can be simulated. It does not test the transducer of the device being tested. It is intended to be used by a healthcare provider (e.g., clinical technician) in a clinical setting.	I
801	20652	Class-I biological safety cabinet	I зэрэглэлийн биологийн аюулгүй байдлын кабинет	A furniture-like device designed as a partial or total enclosure to provide a class I biosafety level (BSL) to the operator and the environment during the manipulation of microorganisms and other biological hazardous materials. It typically provides air aspiration/ventilation [e.g., laminar airflow (LAF)], a high-efficiency particulate air (HEPA) filter and/or carbon filter, and may have a hydrogen peroxide (H2O2) connection as some of the protective mechanisms. It is used for handling cell cultures and human pathogens (e.g., bacteria, viruses, parasites) and other biohazardous materials, extremely toxic agents (e.g., chemotherapy drugs), and also for tissue culture and tumour virus work.	I

802	30018	Wheelchair steering/control unit	Тэргэнцэрийн жолоодлого/хяналтын хэсэг	An electronic device used by a wheelchair occupant or attendant to guide the wheelchair's movements and direction of travel. This device may be operated by the occupant's hand, mouth, or signals provided by other means, or by the attendant as required. This device will include the installation package.	I
803	30021	Freestanding patient lifting system, electrically-powered	Бие даасан өвчтөн өргөх систем, цахилгаанаар ажилладаг	An electrically-powered, stationary (non-mobile) assembly of devices designed to enable one person to lift and move an incapacitated patient or a person with a disability safely and with minimal physical effort within an area limited by the lifting radius of the system. Also known as a patient hoist, it typically consists of a support base (non-fixed and freestanding on the floor) with a motorized lifting mechanism, mast, boom/lifting arm(s), swivel bar, and patient holding device (e.g., a sling, holder or a frame). Repositioning of the assembly may be achieved by lifting it to a new position/location.	I
804	30023	Domestic floor mopping assistive device	Гэрийн шал угаахад туслах төхөөрөмж	A device designed to be used by a person with a disability for the purpose of cleaning/washing floors. Included are, e.g., floor mops, pails, stands and floor-mop apparatus for wet use.	I
805	30024	Domestic floor polishing assistive device	Дотоодын шал өнгөлөх туслах төхөөрөмж	A mains electricity (AC-powered) device designed to be used by a person with a disability for the purpose of polishing certain floor coverings.	I
806	30025	Sewing/darning assistive device	Оёдол/оёдлын туслах хэрэгсэл	A tool designed to hold material in a fixed position while a person with a disability is sewing, darning or embroidering.	I
807	30026	Domestic refuse/waste disposal assistive device	Гэрийн хог хаягдлыг зайлуулах туслах төхөөрөмж	A non-electric-powered device designed to be used by a person with a disability person for the purpose of storing or disposing of waste material, e.g., a refuse (garbage) waste disposal container.	I
808	30028	Assistive sewing machine	Туслах оёдлын машин	A powered sewing device, commonly known as a sewing machine, that is specially designed or adapted to be used by a person with a disability to create or repair clothing or other items by machine sewing.	I
809	30029	Assistive knitting machine	Туслах сүлжмэлийн машин	An automated device specially designed to be used by a person with a disability to create knitted clothing or items.	I

810	30030	Non-adjustable assistive bed	Тохируулах боломжгүй туслах ор	A standard fixed bed designed to be used by a disabled person. It is non-adjustable but includes features such as extra height or a fixed handrail or fixed supports to facilitate disabled patient use.	I
811	30031	Manual assistive bed	Гарын авлагын туслах ор	A bed designed to be used by a disabled person and operated by the occupant or an attendant. It may have one or more sections of the mattress support platform that can be adjusted in height and/or angle. The adjustments are manually-operated by the person with a disability or by an attendant.	I
812	30032	Electrical assistive bed	Цахилгаан туслах ор	A mains electricity (AC-powered) bed designed for a person with a disability and operated by the occupant and/or an attendant using controls that activate electrically-powered motors that adjust the positioning of the mattress. It may have one or more sections of the mattress support platform that can be adjusted in height and/or angle.	I
813	30033	Bedding, reusable	Ор дэрний цагаан хэрэглэл, дахин ашиглах боломжтой	A sheet, blanket, pillowcase, duvet or duvet cover that is reusable after being laundered. For mattresses, pillows and sheets, see the appropriate generic device groups. This is a reusable device.	I
814	30034	Bed extension	Орны өргөтгөл	A device intended to be use to increase the length of a bed.	I
815	30035	Floor covering	Шалны бүрээс	A material intended to be used to cover the floor of a room where certain consideration must be taken to the degree of safety and/or hygiene required. It is typically used as a non-slip surface, a water-resistant surface, and/or an industrial surface in areas such as examination rooms or operating rooms; it may be conductive, to reduce the risk of static electricity, or non-conductive.	I
816	30036	Assistive passenger lift	Туслах зорчигчийн өргөгч	An elevator designed to be used and operated by a person with a disability and to accommodate their assistive devices (e.g., a wheelchair) which move in a vertically shaft (up and down) to provide a method of transport between two or more vertical levels (e.g., floors in a building and ship decks).	I

817	30038	Stairlift, chair	Шат, сандал	A mains electricity (AC-powered) lifting device with an attached seating unit to accommodate a person with a disability, a geriatric or an infirm person to be transported up and down a staircase in a sitting position. This electromechanical device is typically attached to one or more rails which follow the shape and angle of the staircase, but may be affixed in another manner. It will typically be installed for home-use and in public venues and institutions.	I
818	30039	Stairclimber	Шатны авирагч	A non-fixed mechanical device designed to transport a disabled or infirm person up or down stairs and can be controlled by an attendant/nursing staff, or the user.	I
819	30040	Portable ramp	Зөөврийн налуу зам	A portable sloping surface designed to bridge a limited gap between two levels. It is used to move objects or persons from one level to another level. The device would typically be used by a person with a disability in a wheelchair needing to move from one level to another in order to enter or exit a vehicle, e.g., an adapted van or a bus.	I
820	30043	Environmental assistive device, humidity-control	Хүрээлэн буй орчны туслах төхөөрөмж, чийгшлийн хяналт	A non-personal technical aid designed to protect a disabled or infirm person from adverse environmental exposure by controlling the humidity level in their living quarters. This device will provide a signal to a central monitoring station when the pre-set levels are exceeded.	I
821	30045	Hand-held magnifier	Гар томруулагч	A magnifying ophthalmic lens with a handle intended to enlarge text/images for a visually impaired patient/person. It is also known as a magnifying glass and can be made of solid plastic material or glass within a plastic or metal frame.	I
822	30047	Lens system, high magnification	Линзний систем, өндөр өсгөлт	An ophthalmic lens system used to provide magnification in cases of subjects with impaired vision, either in the form of a telescopic system for distance or near vision or a magnifier for near.	I
823	30048	Tinted spectacle lens, prescription, custom-made	Өнгөт нүдний шил, жороор, захиалгаар	An ophthalmic device made of a treated glass or plastic that is manufactured in accordance with a specific patient prescription and used to correct the refractive errors of that patient's eyesight, e.g., refractive ametropia (myopia, hyperopia and astigmatism), and to attenuate light radiation by absorption, reflection, or polarization. This device may require cutting to enable it to be mounted into a selected spectacle frame for patient wear.	I

824	30049	Braille computer keyboard	Брайл компьютерийн гар	A device designed to be used by a patient who is blind or visually impaired to operate a computer or other similar device through keyboard translation in Braille - a written language system of raised dots interpreted through touch.	I
825	30050	Portable Braille note-taking device, electronic	Зөөврийн брайль тэмдэглэл хөтлөх төхөөрөмж, электрон	A portable, battery-powered, electronic device designed to be used by a person who is blind or visually impaired enabling them to take notes in Braille writing (language system of raised dots). It typically has no display function.	I
826	30056	Abacus	Абакус	A manual counting device that uses beads that may be coloured and which are moved across parallel wires held within a frame. A user, trained in its application, can rapidly count numbers. This device is common in Asian countries. It may also be employed as a technique to assist a person with a disability to understand counting.	I
827	30057	Calculator software, programmable	Тооны машины програм хангамж, програмчлах боломжтой	A data program designed for use in, or together with, a programmable calculator so that this may function according to its intended purpose. This software program can be permanently installed, or exchanged as an upgrade. It may also be produced for installation in ordinary computers (e.g., tabletop or laptop) which then executes the product's intended use.	I
828	30059	Manual drawing/writing assistive device	Гараар зурах/бичих туслах төхөөрөмж	A device designed to be used by a person with a disability to enable them to manually draw lines, create precise geometric figures and write with precision. Included are, e.g., pens, pencils, brushes, drawing compasses, straightedges and rulers.	I
829	30060	Assistive signature guide/stamp/writing frame	Туслах гарын үсгийн гарын авлага/тамга/бичих хүрээ	A device designed to be used by a person with a disability to help them write a signature or hand written characters in the correct position or to produce their printed signature using a stamp.	I
830	30061	Drawing/writing aid, linear-positioning	Зураг/бичих тусламж, шугаман байрлал	A technical aid designed to be used by a disabled or infirm person to assist in the exact positioning of hand-written characters along a straight line in a confined area.	I

831	30062	Manual Braille writing/embossing device	Гараар брайл үсгээр бичих/товойх төхөөрөмж	A device designed to be used by a person who is blind or visually impaired, in order to enable them to manually reproduce embossed Braille (written language system of raised dots) characters on paper. It is typically in the form of a special stylus or stick.	I
832	30063	Assistive page-turning device	Туслах хуудас эргүүлэх төхөөрөмж	An electricity-powered, non-optical, device designed to assist a person with a disability or an incapacitated person/patient to turn the pages of, e.g., a book, whilst they are reading it. The page turning capability is prompted through a signal given by the user. It will usually be fixed to the bed, chair, or wheelchair of the user.	I
833	30064	Book support/holder	Номын дэмжлэг/эзэмшигч	A non-optical device designed to assist a person with a disability or an incapacitated person/patient by supporting/holding a book in a functional reading position whilst they are reading it. It will usually be fixed to the bed, chair, or wheelchair of the user or placed on a table in front of them.	I
834	30065	Assistive reading mask/typoscope	Уншихад туслах маск/типоскоп	A non-optical device designed to assist a person with a disability with reading. It is a frame which enables a limited area of text to be visible at one time making it easier for the user to retain his or her focus upon that section of text.	I
835	30067	Proctological operating table, electrohydraulic	Проктологийн мэс заслын ширээ, цахилгаан гидравлик	A mobile, mains electricity (AC-powered) hydraulic-mechanism table designed to support a patient during proctological procedures (i.e., diagnosis and treatment of the colon, rectum, anus, and/or the perineum). Its surface consists of sections that can be height-adjusted in relation to the section that supports the patient's trunk and the section supporting the knees (the patient is usually in a kneeling position to provide the surgeon with posterior access).	I
836	30068	General-purpose radio receiver	Ерөнхий зориулалтын радио хүлээн авагч	A radio set which may or may not have been adapted for use in a clinical environment. This device is used for the sending of and listening to information sent via a radio. This will typically be radio programs or music for the entertainment of hospital patients or institutionalized persons.	I

837	30069	Television set	Телевизийн багц	A mains electricity (AC-powered) device (television set) designed for the showing and viewing of broadcasted television programs, recorded video films, real-time uptake of televised situations, e.g., an operation or a patient/client secluded interview, or television games.	I
838	30071	Closed-circuit television system	Хаалттай хэлхээний телевизийн систем	An assembly of devices designed to create a closed-circuit television (CCTV) system which allows the monitoring of events taking place in a location or several locations for direct displaying and/or recording in a remote central location. It typically consists of several or many television receiver units (television sets) linked in a closed-circuit system together with strategically placed cameras for surveillance of, e.g., patient rooms, corridors, outside grounds or for the transfer of real-time uptake of televised situations, e.g., from an operating room (OR).	I
839	30074	Two-way radio receiver	Хоёр талын радио хүлээн авагч	A battery-powered, hand-held device designed for the transfer of dialogue (a closed discussion between two person) and which functions as a wireless telephone receiving and transmitting mainly one to one remote radio communication using radio signals. It is commonly called a "walkie talkie" and is used by, e.g., security personnel, ambulance personnel, healthcare personnel or a person with a disability capable of using such a device. Included are, e.g., citizens band (CB), family radio services (FRS), general mobile radio service (GMRS) and marine radios.	I
840	30075	Headphones	Чихэвч	A device that is worn on the head, typically fitting over both ears, but that may fit over one ear. It supplies the user with audio input increasing the sound volume of, e.g., television, radio, or a communication amplifier.	I

841	30076	Voice amplification system	Дуу өсгөх систем	An assembly of battery-powered, personal-worn, devices designed to amplify the loudness of the voice of a person with reduced vocal capacity (e.g., due to impairment of throat or chest muscles, partial paralysis of vocal cords, diminished lung capacity). It typically includes a dedicated microphone, an electronic amplifier, and a loudspeaker. Assemblies with special adaptors that are intended for use with an artificial larynx, a transoesophageal puncture tube, and/or other prostheses or implants are available. Some amplifiers are available as an integral part of an artificial larynx.	I
842	30077	Ear trumpet	Чихний бүрээ	A purely acoustic device shaped like a trumpet used to improve hearing sensation in persons with hearing impairment. The wider end of the device receives sound waves and channels them to the narrow end which is held at the entrance of the ear canal.	I
843	30078	Assistive sun blind opener/closer	Туслах нарны хаалт онгойлгогч/хаагч	A device designed to be used by a person with a disability to enable them to open and/or close a sun blind.	I
844	30079	Conveyor, vertical	Конвейер, босоо	A device designed as a mechanical platform to lift or lower objects like an elevator. It would typically be used by a disabled person needing a technical aid to move something from one level to another.	I
845	30085	Computer aid, signal indicator	Компьютерийн тусламж, дохионы үзүүлэлт	A device used by disabled or infirm persons to operate a computer. The device produces a signal to indicate to the user that a function has occurred in the computer.	I
846	30086	Smoke/fire alarm system	Утаа/галын дохиоллын систем	An assembly of electronic devices (e.g., alarms with connecting and interfacing components) integrated into a building, that automatically activate a signal (e.g., audio and/or visual) to indicate detection of smoke and/or extreme heat, as a warning of potential harm to occupants. A device with this capacity is typically used in all facilities occupied by people.	I

847	30087	Vulnerable patient home alert system	Эмзэг өвчтөний гэрийн дохиоллын систем	An assembly of electronic devices designed to provide an alarm signal to summon help when activated in response to a patient's need for urgent assistance or care (e.g., epileptic seizures, falls, low insulin levels). It typically consists of user- or sensor-activated wireless signal transmitters (e.g., patient-worn pendant, wall push-button, fall sensor) and alert communication devices (e.g., network interface, phone, pager). Also known as a personal emergency response system (PERS), it notifies caregivers, neighbours, or emergency medical services (EMS), and is intended for use in the home.	I
848	30089	Smoke/fire alarm, line-powered	Утаа/галын дохиолол, шугамд ажилладаг	A mains electricity (AC-powered) sensor placed in a building, that automatically activates a signal (e.g., audio and/or visual) to indicate detection of smoke and/or extreme heat, as a warning of potential harm to occupants. A device with this capacity is typically used in all facilities occupied by people. This device may function as an independent unit, or more typically be integrated into an emergency smoke/fire alarm system.	I
849	30090	Insulin alarm	Инсулины дохиолол	A battery-powered device designed to summon help by providing an alarm signal as a warning when automatically activated by the reaction in the patient caused through lack of insulin. This device is typically used by a person with a disability.	I
850	30092	Domestic mopping pail aid	Гэрийн угаагч хувингийн тусламж	A technical aid designed to be used by a disabled or infirm person for the purpose of house cleaning. It is a specialized pail that holds water and detergent used to clean floors. It may have a built-in mechanism to squeeze out excess liquid from the mop. Mop pail stands are raised platforms (with or without castors) onto which a mop pail can be fixed.	I
851	30093	Container opening aid	Савыг нээх тусламж	A device designed to be used by a person with a disability for the purpose of opening vessels that typically contain food or drink, e.g., cans, bottles, containers. Included are support plates for some opener designs.	I
852	30094	Timer switch	Таймер солих	A device used for controlling connected electrical devices that are programmed to function/operate at or between set intervals of time.	I

853	30096	Assistive manual gripping tongs	Туслах гарын авлагын хавчуур	A manually-operated device intended to be used by a person with a disability to lengthen (extend) their normal reach to enable them to reach, grasp, and pick-up objects at a distance.	I
854	30097	Assistive electric gripping tongs	Туслах цахилгаан хавчуур	A battery-powered device intended to be used by a person with a disability to lengthen (extend) their normal reach to enable them to pick-up, hold and sqeeze objects at a distance.	I
855	30099	Assistive object-positioning system, non-powered	Туслах объектын байрлал тогтоох систем, цахилгаангүй	A set of non-powered devices/components designed to be used by a patient with a disability to optimally position an object(s) [e.g., drinking straw, mobile phone, toothbrush] for easy access. The system includes positioning arm components (clamp, arm assembly), an object holding component(s), and may include a non-powered, non-clinical device which is intended to be positioned (e.g., drinking straw).	I
856	30100	Assistive rotating/sliding positioning system	Туслах эргэдэг/гулсах байрлал тогтоох систем	A set of devices/components that are combined together designed to be used by a person with a disability that allows rotating and sliding movements of objects that they choose to position to keep them accessible.	I
857	30101	Assistive lifting/tilting positioning system	Туслах өргөх/назайлтын байрлал тогтоох систем	A set of devices/components that are combined together designed to be used by a person with a disability that allows lifting and tilting movements of objects that they choose to position to keep them accessible.	I
858	30103	Assistive object fixation suction cup	Туслах объектыг засах сорох аяга	A device intended to be used by a person with a disability for the purpose of fixing an object being used by the person in a secure position. This device is designed as, e.g., a hollow concave disc which when pressed against a surface will stick to it because of the partial vacuum that has been created. Other objects can then be held using this device.	I
859	30104	Assistive object fixation non-slip pad	Туслах объектын бэхэлгээний гулсдаггүй дэвсгэр	A device intended to be used by a person with a disability for the purpose of fixing an object being used by the person in a locked or secure position. This device is configured as a pad with non-slip surfaces that is placed under an object to prevent it slipping or reduce the risk of slipping.	I

860	30105	Assistive object fixation screw-clamp	Туслах объектын бэхэлгээний шураг хавчаар	A device intended to be used by a person with a disability for the purpose of fixing an object being used by the person in a locked or secure position. This device holds or compresses one object against another by tightening a screw to increase the force of the clamp pressing on the objects.	I
861	30106	Assistive object fixation vice	Туслах объектыг засах туслах хэрэгсэл	A device intended to be used by a person with a disability for the purpose of fixing an object being used by the person in a locked or secure position. This device is designed as a vice and holds the object between two jaws which are closed together using a tightening mechanism, typically a lead screw that moves at least one of the jaws.	I
862	30107	Assistive object-fixation holder	Туслах объектын бэхэлгээний эзэмшигч	A non-powered device designed to be used by a patient with a disability, typically in the home, to hold an object (e.g., toothbrush, book, smartphone) in a fixed position. It may be in the form of a clip, clamp, non-slip pad, or static magnet, and may be used independently and/or intended to be used as the distal holding component of an assistive object-positioning system.	I
863	30108	Assistive tool fixation device	Туслах хэрэгсэл засах төхөөрөмж	A device intended to be used by a person with a disability for the purpose of fixing, securing, or holding a tool whilst the person is working with it. Specially adapted chucks for this purpose are included in this group of devices.	I
864	30109	Assistive object fixation magnet	Туслах объектын бэхэлгээний соронз	A device intended to be used by a person with a disability for the purpose of fixing an object being used by the person in a locked or secure position. This device is magnetic and designed in various configurations where the magnet provides the holding force.	I
865	30112	Chute conveyor	Дамжуулах хоолой	A smooth sloping or vertical channel designed to move goods or objects down to a lower level. It is typically used in technical support functions within a hospital, institution or the home of a person with a disability.	I
866	30113	Roller conveyor	Роллер конвейер	A channel designed to move objects from one place or position to another by using a series of passive rollers mounted in the channel. This may be movement on a level plane or with some incline. The device is typically be used by a person with a disability needing assistance to move objects.	I

867	30114	Belt conveyor	Туузан дамжуулагч	A mains electricity (AC-powered) device with a continuously rotating broad circular band on which goods/items are placed to transport them from one place to another. The movement may be horizontal or inclined. The device would typically be in technical support functions within a hospital but can equally be used by persons with a disability needing assistance to move objects.	I
868	30115	Dragline conveyor	Dragline конвейер	A device designed to be used by a person with a disability to move objects from one place to another using a single line. It is typically used on flat surfaces or the floor and typically includes a loop attached to the line which is placed over/around the object to be moved.	I
869	30116	Angle assistive measuring aid	Өнцгийн туслах хэмжих хэрэгсэл	A device designed to assist a person with a disability with measuring the degree of an angle either on or of an object.	I
870	30117	Environmental assistive device, ventilation-control	Хүрээлэн буй орчны туслах төхөөрөмж, агааржуулалт-хяналт	A non-personal technical aid designed to protect a disabled or infirm person from adverse environmental exposure by controlling the ventilation in their living quarters. This device will provide an automatic adjustment and possibly a signal to a central monitoring station when the pre-set levels are exceeded.	I
871	30119	Assistive climate-control device	Туслах цаг уурын хяналтын төхөөрөмж	A non-personal assistive device designed for persons with a disability to regulate the internal climatic conditions of a confined space (e.g., temperature, humidity, ventilation) in their living quarters. This device which may be, e.g., wall-mounted or in the form of a dedicated remote control, will provide an automatic adjustment and possibly a signal to a central monitoring station when the pre-set levels are exceeded.	I
872	30120	Assistive noise-reduction device	Дуу чимээг бууруулах туслах төхөөрөмж	A non-personal assistive device designed to protect a person with a disability from adverse environmental exposure by reducing an unacceptable level of noise in their living quarters. It may possibly help to absorb some of the adverse noise.	I
873	30121	Assistive vibration-reduction device	Чичиргээ багасгах туслах төхөөрөмж	A non-personal assistive device designed to protect a person with a disability from adverse environmental exposure by helping to control the vibration level in their living quarters. It may possibly help to absorb and dampen some of the adverse vibrations.	I

874	30124	Length assistive measuring aid	Уртыг хэмжих туслах хэрэгсэл	A device designed to assist a person with a disability with measuring the length of an object.	I
875	30125	Volume assistive measuring aid	Эзлэхүүнийг хэмжих туслах хэрэгсэл	A device designed to assist a person with a disability with measuring the containment capacity of an object.	I
876	30126	Mass assistive measuring aid	Массын туслах хэмжих хэрэгсэл	A device designed to assist a person with a disability with measuring the weight of an object (e.g., a specialized postal letter scale).	I
877	30127	Electrical-property assistive measuring aid	Цахилгаан эд хөрөнгийн туслах хэмжих хэрэгсэл	An electronic, portable device designed to assist a person with a disability with measuring the electrical characteristics of electrical equipment or fixtures.	I
878	30128	Atmospheric-pressure assistive measuring aid	Агаар мандлын даралтыг хэмжих туслах хэрэгсэл	A device designed to assist a person with a disability with measuring pressure in the environment (e.g., a specialized barometer).	I
879	30129	Assistive handicraft paper-folding device	Туслах гар урлалын цаас нугалах төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to assist them with paper-folding.	I
880	30131	Assistive handicraft creative textile device	Туслах гар урлалын бүтээлч нэхмэлийн төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to create crafts made of thread, fabric or another fibre-based material. Included are devices and materials used in, e.g., needlework, macramé, knitting and crochet.	I
881	30132	Assistive handicraft pottery device	Туслах гар урлалын вааран төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to assist them to create pottery.	I
882	30133	Assistive handicraft woodwork device	Туслах гар урлалын модон эдлэлийн төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to assist them with creating items made of wood.	I
883	30134	Assistive handicraft metalwork device	Туслах гар урлалын төмөр эдлэлийн төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to assist them with creating items made of metal.	I
884	30135	Assistive handicraft creative pictorial design device	Туслах гар урлалын бүтээлч зурган дизайны төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items, specially designed to be used by a person with a disability to assist them with creative pictorial design without the aid of a computer or other electronic means. Included are tools and equipment for painting, drawing, sketching and graphic art.	I

885	30136	Assistive illumination-control device	Туслах гэрэлтүүлгийг хянах төхөөрөмж	A non-personal assistive device designed for persons with a disability to regulate the level of lighting in their living quarters. This device which may be, e.g., wall-mounted or in the form of a dedicated remote control, will provide an automatic adjustment and possibly a signal to a central monitoring station when abnormal conditions are registered, e.g., lighting left on through the whole night or during daytime.	I
886	30137	Assistive writing paper/plastic	Туслах бичгийн цаас/хуванцар	Dedicated material (i.e., paper or plastic) designed to be used by a person with a disability to enable them to reproduce hard copies with special effects (e.g., embossed characters) that can be discerned through tactile recognition.	I
887	30139	Assistive drawing/painting application software	Туслах зураг/будах хэрэглээний программ хангамж	An individual software application program or group of programs, routines or algorithms designed to be used by a person with a disability enabling them to use a computer for the purpose of drawing and/or painting activities. It includes computer-aided design (CAD) software and software for colouring pictures.	I
888	30142	Radio receiver/television receiver adapting aid	Радио хүлээн авагч/телевиз хүлээн авагчийн дасан зохицох хэрэгсэл	A device used to modify (adapt) the function or operation of a standard radio or television receiver so that these can be used by a disabled person. Included in this GMDN code are, e.g. amplifiers, volume and tone controls, signal and impedance transformers and other aids for radio and television receivers.	I
889	30143	Recumbent spectacles	Хэвтээ нүдний шил	An optical/ophthalmic device that consists of prismatic lenses that is worn in front of the user's eyes to angle the field of vision enabling the user to read or watch television whilst lying in a supine position. This device will typically be used for a bedridden person.	I
890	30144	Assistive writing/drafting/drawing board	Туслах бичих/ноорог/зураг зурах самбар	A device designed to be used by a person with a disability for the purpose of holding or securing paper during writing, drafting, and/or drawing activities. It is typically a flat board, with clips or other paper securing mechanisms, which may be tilted or positioned to a suitable working position.	I

891	30147	Fixed ramp	Тогтмол налуу зам	A fixed sloping surface designed to bridge a limited gap between two levels. It is used to move objects or persons from one level to another level. The device would typically be permanently installed at a hospital, institution or at the home of a person with a disability using, e.g., a wheelchair, allowing them to move from one level to another and/or to gain access to a building entrance.	I
892	30153	Closed-circuit radio system	Хаалттай хэлхээний радио систем	An assembly of devices that typically consists of several or many radio receiver units linked in a closed-circuit system which may or may not have been adapted for use in a clinical environment designed to create a closed-circuit radio system used for sending information (e.g., radio programs or music for entertainment) to hospital patients or institutionalized persons.	I
893	30154	Assistive non-gripping reach extender	Туслах бариулахгүй гар сунгагч	A non-gripping device intended to be used by a person with a disability to lengthen (extend) their normal reach enabling him/her to move an object at a distance without gripping it.	I
894	30203	Laboratory pH electrode	Лабораторийн pH электрод	A clinical chemistry, electrolyte, electrode type biosensor, typically used in the laboratory for measuring pH. This is a reusable device.	I
895	30204	Oxygen electrode	Хүчилтөрөгчийн электрод	An electrochemical sensor that preferentially responds as a potentiometric indicator to oxygen ions.	I
896	30508	Assistive word processing application software	Туслах текст боловсруулах програм хангамж	An individual software application program or group of programs, routines or algorithms designed to be used by a person with a disability enabling them to use a computer for the purpose of word processing, i.e., writing, organizing and storing text. Included is mathematical and scientific notation, e.g., desktop publishing software, word processing software made for alternative control of accessories for word processors, and software for using Braille.	I

897	30877	Single-chamber venous compression system garment, reusable	Нэг танхимтай венийн шахалтын системтэй хувцас, дахин ашиглах боломжтой	An inflatable device in the form of a stocking, sleeve, or suit that is applied to the limbs externally to promote venous blood flow. As part of a compression system, the device applies pressure to the extremities through the intermittent inflation of a single-chamber. The resulting increased venous blood flow may help to treat/prevent oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE) in non-ambulatory patients or patients at risk. This is a reusable device.	I
898	30878	Compression/pressure sock/stocking, single-use	Шахах/даралтын оймс/оймс, нэг удаагийн	A garment in the form of a sock or stocking intended to fit tightly over the leg and foot to apply compression/pressure (i.e., graduated or even-force), typically for the treatment/prevention of a disorder(s) of circulation [e.g., venous insufficiency, deep vein thrombosis (DVT)]. It is not a strip/roll binder or tubular support bandage, and is not designed to cover the pelvis. It is typically made of elastic material (e.g., circular knit nylon/Spandex yarns) and may be referred to as a flight sock; it does not include antimicrobial features. It is intended for use in the home or a clinical setting. This is a single-use device.	I
899	30881	Phototherapy eye protector, reusable	Фото эмчилгээний нүд хамгаалах хэрэгсэл, дахин ашиглах боломжтой	A device worn to cover and protect the eyes of a patient or user from potentially harmful rays [e.g., ultraviolet (UV)] to which parts, or all, of their body is intentionally exposed during light therapy treatment. It will typically be designed as goggles, special spectacles, or a mechanical mask-like shield with properties to block or inhibit the transmission of rays to the eyes. It will come in a variety of sizes, e.g., premature infant, neonatal, child, and adult. This is a reusable device.	I
900	30883	Abdominal hernia truss, single-use	Хэвлийн ивэрхийн ферм, нэг удаагийн хэрэглээ	A device, typically in the form of a strap(s), designed to be worn over an abdominal hernia opening (weakness in the abdominal wall) to prevent protrusion of the abdominal contents and retain the reduced hernia within the abdominal cavity. It may be made from a variety or combination of various materials (e.g., elastic, canvas, or metallic). This is a single-use device.	I

901	30884	Hernia girdle	Ивэрхийн бүслүүр	An article of dress made of a firm or elastic material that tightly encircles the body to provide spinal hernia containment.	I
902	30890	Needle, injection, reusable	Зүү, тарилга, дахин ашиглах боломжтой	A slender, sharply-pointed metal tube used to penetrate the skin to deliver or withdraw fluids to or from a patient. This is a reusable device.	I
903	30894	Drawing-test cognitive function analysis device	Танин мэдэхүйн үйл ажиллагааны шинжилгээ хийх төхөөрөмж	A device designed for professional assessment of a patient's cognitive function by means of software-based analysis and interpretation of a drawing test (e.g., clock drawing test) performed by the patient. It consists of an electronic digital input device (e.g., pen with a built-in camera), and software; the results are typically combined with patient demographics to provide a summary report.	I
904	30895	Cause-and-effect assistive training device	Шалтгаан-үр дагаврын туслах сургалтын төхөөрөмж	A device designed to be used to assist a person with a disability with developing an understanding of cause and effect (i.e., what is the reason for something to happen and what will be the outcome should it happen).	I
905	30896	Educational test/evaluation device	Боловсролын тест/үнэлгээний төхөөрөмж	A device intended to be used by a person with a disability to test and evaluate their cognitive learning capabilities, abilities and potential, academically or vocationally. This does not include computerized media.	I
906	30907	Perceptual-discrimination/matching assistive training device	Ойлголт-ялгаварлах / тохирох туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to distinguish between, match, and categorize external stimuli. Included are vibrating chairs that convert different sounds into vibrations which can be felt by the patient, typically a deaf person, occupying the chair. It is used to educate a deaf person to realize that different sounds produce different vibrations and that these can be differentiated through touch.	I
907	30908	Perceptual-coordination assistive training device	Мэдрэхүйн зохицуулалтын туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to improve their ability to correctly process and coordinate external stimuli, especially those relating to concepts of space and time, spatial concepts, and eye-hand coordination.	I
908	30909	Chair, training, vibrating	Сандал, сургалт, чичиргээ	A chair specially designed for the training of deaf persons. Vibrations produced at a source are transmitted via the chair to the patient providing this person with a method of assimilation recognition.	I

909	30910	Speech assistive training device	Яриа туслах сургалтын төхөөрөмж	An electronic device designed to assist a person with a disability in developing the use of voice and speech, particularly in relation to the production and awareness of sounds. Included are devices for training in spoken language, S-, F- and Sch-indicators and acoustic spectral analysers.	I
910	30911	Reading assistive training device	Уншихад туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in developing reading skills, particularly strategy, approach, and performance.	I
911	30912	Assistive writing training device	Туслах бичих сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in developing writing skills, particularly strategy, approach, performance, and creativity.	I
912	30914	Finger spelling training device	Хурууны зөв бичгийн дүрмийг сургах төхөөрөмж	A device designed to be used by a deaf blind person for training and learning of an alternative communication technique through finger spelling (i.e., this is tactile communication).	I
913	30915	Sign language training device	Дохионы хэлний сургалтын төхөөрөмж	A device designed to be used by a deaf person for the training in alternative communication techniques and vocabulary to allow interpersonal communication by learning and using sign language (i.e., a visual language using their hands to form the signals that represent the language).	I
914	30916	Lip-reading training device	Уруул унших сургалтын төхөөрөмж	A device designed to assist deaf and hard of hearing (HH) person in the training of alternative communication techniques and vocabulary to allow interpersonal communication by learning lip-reading and enabling them to understand what other people say by looking at their lips, i.e., to lip-read.	I
915	30917	Cued speech training device	Cued ярианы сургалтын төхөөрөмж	A device designed to be used by a person with a disability for training and learning of an alternative communication technique through vocal language supplemented by signing (i.e., cued speech).	I
916	30918	Braille training device	Брайл үсгийн сургалтын төхөөрөмж	A device designed to be used by a person who is blind or visually impaired in order to assist them to read using Braille - a written language system of raised dots interpreted through touch. This will allow them interpersonal communication by using Braille.	I

917	30919	Non-Braille tactile symbols training device	Брайл үсгийн бус хүрэлцэх тэмдэгтийг сургах төхөөрөмж	A device designed to be used by a person with a disability for training of alternative communication techniques, in order to allow interpersonal communication by learning and using tactile symbols that are not based on the Braille system.	I
918	30920	Icon symbols training device	Тэмдэгтүүдийн сургалтын төхөөрөмж	A device designed to be used by a person with a disability for training of alternative communication techniques and vocabulary to allow interpersonal communication through the learning of simplified and formalized pictures which represent a message and/or information (i.e., icon symbols).	I
919	30921	Bliss communication training device	Bliss харилцааны сургалтын төхөөрөмж	A device designed to be used by a person with a disability for training and learning of an alternative communication technique with a special picture language called Bliss.	I
920	30922	Picture/drawing communication training device	Зураг/зургийн харилцааны сургалтын төхөөрөмж	A device designed to be used by a person with a disability for the training of alternative communication techniques and vocabulary to allow interpersonal communication by learning communication using pictures and drawings which illustrate the word or sentence to be communicated.	I
921	30923	Morse code assistive training device	Морзын кодын туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability for training of alternative communication techniques and vocabulary to allow communication by learning and the use of the Morse code alphabet (a coded alphabet in which each letter is represented by a specific sequence of sounds or of signals).	I
922	30926	Parallel bar exerciser, non-powered	Зэрэгцээ бариултай дасгалын төхөөрөмж, цахилгаангүй	An exercise apparatus designed to assist users in maintaining good walking posture, particularly a person with a disability, a paraplegic, or a patient who has suffered a stroke and is learning to walk. It typically consists of two parallel wooden or steel handrails each one supported by two poles and base plates; the user holds the bars, which may be manually height and width-adjustable, thus relieving his/her weight when walking. The device is intended to improve the user’s balance as well as coordination and flexibility; additionally, it can improve the muscle strength in the lower limbs.	I

923	30927	Finger/hand assistive training device	Хуруу/гар туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability for training of movement or strengthening their fingers and/or hands through repetitive finger/hand motion against resistance from elasticity or density. The device may also help improve finger/hand flexibility and coordination, and help improve wrist and forearm strength.	I
924	30928	Training aid, physical, arm/trunk/leg	Сургалтын тусламж, бие бялдар, гар / их бие / хөл	A device used for training for movement and balance and/or for strengthening the limbs and the trunk of the body. It will typically be used by a person with a disability or a patient that has suffered a stroke for rehablitation. This will be dedicated wall bars, trampolines, gymnasium mats and balance boards.	I
925	30931	Moisture chamber spectacles	Чийгийн камерын нүдний шил	A personal protective device used to shield the eyes of an individual by forming a semi-closed chamber around each eye to retain the natural eye moisture and help keep the eyes lubricated. It consists of a spectacle frame with a pair of spectacle lenses (typically made of plastic or glass) and enclosing shields attached to the sides of the frame to form the chambers. The spectacle lenses may be prescription or non-prescription. The enclosing shields are available in various designs and will fit tightly around the facial contours of the eye sockets. This device is used after an eye operation or for a person with sensitive eyes and/or skin around the eyes.	I
926	30935	Memory assistive training device	Ой тогтоолтод туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to enhance/develop their abilities to memorize and remember.	I
927	30936	Sequencing assistive training device	Дасгалын дэс дараалал тогтоох төхөөрөмж	A device designed to train a person with a disability to put items (e.g., words, actions, and numbers) in a meaningful order.	I
928	30937	Attention assistive training device	Анхаарал татахад туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to develop their ability to concentrate.	I
929	30938	Object-characteristic assistive training device	Объектын шинж чанартай туслах сургалтын төхөөрөмж	A device designed to train a person with a disability to understand concepts that characterize an object such as colour, size, and shape.	I
930	30939	Classification assistive training device	Ангилал туслах сургалтын төхөөрөмж	A device designed to train a person with a disability to use the concept of grouping related things together.	I

931	30940	Problem-solving assistive training device	Асуудлыг шийдвэрлэхэд туслах сургалтын төхөөрөмж	A device designed to be used to train a person with a disability in methods of solving problems.	I
932	30941	Inductive/deductive reasoning assistive training device	Индуктив/дедуктив үндэслэл гаргахад туслах сургалтын төхөөрөмж	A device designed to train a person with a disability in logical thinking when drawing conclusions from a set of facts and generalizing and interpreting them.	I
933	30943	Fundamental-counting assistive training device	Үндсэн-тоолох туслах сургалтын төхөөрөмж	A device designed to assist a person with a disability with the acquisition of the conceptual link between number of objects/figures and basic arithmetic operations (fundamental counting).	I
934	30944	Assistive written language coding/decoding training device	Туслах бичгийн хэлний кодчилол/код тайлах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them with learning the relationship between letters and their corresponding sounds.	I
935	30945	Time-concept assistive training device	Цаг хугацааны ойлголтын туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in the acquisition of the basic concepts of time.	I
936	30946	Money-concept assistive training device	Мөнгө-концепт туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in the acquisition of the basic concepts of the function of money.	I
937	30947	Units-of-measure assistive training device	Хэмжих нэгжийн туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in the acquisition of the concept of units of measure (e.g., litre, metre) and its application to the measurement of objects.	I
938	30948	Geometric shape assistive training device	Геометр хэлбэрийн туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in acquiring basic abilities in the recognition, naming, and comparison of the main characteristics of geometric shapes.	I
939	30949	Native-tongue assistive training device	Төрөлх хэлний туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to facilitate their ability to speak and understand their native language.	I
940	30950	Foreign-language assistive training device	Гадаад хэлний туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability for voice and speech training when learning a foreign language.	I

941	30952	Vocational assessment/guidance assistive training device	Мэргэжлийн үнэлгээ/удирдамжийн туслах сургалтын төхөөрөмж	A device or equipment designed to be used for testing and evaluating the abilities and interests of a person with a disability for an occupation, business or profession.	I
942	30953	General-job assistive training device	Ерөнхий ажилд туслах сургалтын төхөөрөмж	A device or equipment designed to help train a person with a disability to acquire the basic skills required in a broad spectrum of jobs (professions).	I
943	30954	Office/business-skill assistive training device	Оффис/бизнесийн ур чадварын туслах сургалтын төхөөрөмж	A device or equipment designed to teach a person with a disability to acquire basic office and business skills.	I
944	30955	Computing visual assistive software	Компьютерийн харааны туслах програм хангамж	A software application program designed to assist a person with a visual impairment to operate a computer, typically by providing magnification of the screen text/images and/or providing text-to-speech functionality.	I
945	30956	Telecommunications assistive training device	Харилцаа холбооны туслах сургалтын төхөөрөмж	A device or equipment designed to teach a person with a disability to acquire basic vocational telecommunication skills.	I
946	30958	Music assistive training device	Хөгжмийн туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in learning about general music theory, how to play a specific instrument, and/or how to sing.	I
947	30959	Drawing assistive training device	Зурах туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in learning about drawing and painting techniques.	I
948	30960	Drama/dance assistive training device	Драм/бүжгийн туслах сургалтын төхөөрөмж	A device designed to be used by a person with a disability to assist them in the acquisition of, and the exercise of, functional abilities allowing artistic expression in drama and dancing.	I
949	30962	Recreation assistive training device	Амралт зугаалгын туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to participate in leisure activities.	I
950	30963	Social-behaviour assistive training device	Нийгмийн зан үйлийн туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to interact and live in harmony with other individuals.	I
951	30964	Personal-safety assistive training device	Хувь хүний аюулгүй байдлын туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to identify external dangers and dangerous personal behaviour.	I

952	30965	Travel assistive training device	Аялалд туслах сургалтын төхөөрөмж	A device designed to help train a person with a disability to travel in society (e.g., using public transportation, maps, or timetables).	I
953	30967	Assistive mouse-control training device	Хулгана удирдахад туслах туслах төхөөрөмж	A device designed to help train a disabled person to control the function (operation) of a computer mouse to enable operation of a connected primary device, typically a computer.	I
954	30968	Assistive joystick-control training device	Туслах джойстик-хяналтын сургалтын төхөөрөмж	A device designed to help train a disabled person to control the function (operation) of a joystick to enable operation of a connected primary device (e.g., a wheelchair or a computer).	I
955	30969	Assistive switch-control training device	Шилжүүлэгчийг удирдахад туслах сургалтын төхөөрөмж	A device designed to help train a disabled person to control the function (operation) of a switch to enable activation of a connected primary device (e.g., lights, electronic devices such as televisions or computers, a wheelchair).	I
956	30970	Fixed-diameter cervical dilator set, reusable	Тогтмол диаметртэй умайн хүзүүг тэлэгч, дахин ашиглах боломжтой	A collection of rod-like, solid surgical instruments designed to dilate the cervical canal through sequential insertion of increasing-diameter instruments into the cervical os. Commonly known as uterine dilators, the instruments are typically made of metal or plastic material and have a tapered, rounded distal tip. The set is used to allow the passage of a curette or other instruments into the uterus and/or enlarge the uterus prior to surgical intervention by pressing upon the inner walls of the uterus. This is a reusable device.	I
957	30999	Ankle joint orthosis	Шагайны үений ортез	An externally applied orthopaedic device used as a component of a lower limb orthosis to allow or control motion of the ankle joint. This is a reusable device.	I
958	31020	Ear snare	Чихний хавх	A hand-held manual surgical instrument intended to be inserted through the outer ear canal or through a surgical incision in the ear to remove tissue, typically tumorous or damaged tissue, from the ear during ear/nose/throat (ENT) surgery. It typically consists of a cannula-like tube with two stationary and one sliding finger rings designed to position and tighten a loop of thin, flexible wire (the snare) around the tissue to be removed. It is intended for mechanical cutting only (i.e., not through electrical ablation). This is a reusable device.	I

959	31030	Temporary external lower-limb prosthesis assembly	Доод мөчний гадаад протезийн түр зуурын угсралт	A prefabricated assembly of prosthetic devices intended to temporarily replace, in part or total, one or more segment(s) and/or joint(s) of the lower limb after amputation (at any hip, knee, or ankle-foot level). Also referred to as an early walking aid, it is used for the early mobilization of lower-limb amputees prior to the fitting of a definitive prosthesis.	I
960	31032	Wig	хиймэл үс	A device intended to be used as an external artificial substitute for all of the scalp hair.	I
961	31033	Hairpiece/toupee	Үсний үсний засалт/тупа	A device intended to be used as an external artificial substitute for part of the scalp hair.	I
962	31041	Orthotic shoe, non-customized	Захиалгат бус ортотик гутал	A prefabricated (non-customized) footwear designed as a shoe intended to support, align, prevent, and compensate for or correct deformities of the feet to help improve function and/or for post-operative therapy. This is a reusable device.	I
963	31042	Orthotic shoe, custom-made	Захиалгат ортотик гутал	A footwear designed as a shoe intended to support, align, prevent, and compensate or correct deformities of the feet to help improve their function and/or body posture. The device is specifically produced to meet an individual's special requirements. Soft interface custom-made shoes are included.	I
964	31043	Orthotic shoe, adapted	Дасан зохицсон ортотик гутал	A footwear designed as a shoe intended to support, align, prevent, and compensate or correct deformities of the feet to help improve their function and/or body posture. The device is a standard shoe modified to meet an individual's special orthopaedic requirements.	I
965	31044	Bib/apron, adult, reusable	Биб/хормогч, насанд хүрсэн, дахин ашиглах боломжтой	A garment that is worn over the front of the body of an adult (e.g., a person with a disability or a geriatric) to protect their clothing and body from becoming soiled typically when feeding or being fed or from dribbling or from therapeutic social activities, e.g., arts and crafts. It can be made of textiles and/or plastic materials. This is a reusable device.	I
966	31045	Assistive shoes/boots	Туслах гутал/гутал	A device specially designed/adapted to be worn on the feet of a person with a disability for walking and activities (e.g., sport). It is typically constructed with features that facilitate easy donning, fastening, and removal (e.g., special shape, elastic laces).	I

967	31046	Assistive button hook	Туслах товчлуурын дэгээ	A device designed to assist a person with a disability to button and unbutton their clothing and shoes.	I
968	31048	Surgical drill chuck	Мэс заслын өрмийн патрон	A device designed to grip a cutting tool (normally a drill bit or other rotational cutting tool) using three adjustable jaws that are geared to be manually closed concentrically upon the cutting tool. It is attached (locked) to a surgical drilling machine which is usually powered, but may be manual. A special key is often used to close and tighten the jaws. Commonly known as a Jacobs chuck, it is typically made of high-grade stainless steel to resist the corrosive effects of sterilization processes. This is a reusable device.	I
969	31050	Assistive sock/pantyhose dressing device	Туслах оймс / дотуур өмдний хувцас солих төхөөрөмж	A device designed to assist a person with a disability to put on and take off their socks, stockings, and tights (pantyhose).	I
970	31051	Assistive shoehorn/bootjack	Туслах гутлын үүр / ачаалагч	A device designed as a modified shoehorn or bootjack to assist a person with a disability to put on and take off their footwear (shoes or boots).	I
971	31052	Assistive dressing/undressing hook/stick	Туслах хувцаслах/тайлах дэгээ/саваа	A device typically in the form of a hook with a handle, or a long stick with a handle and a hook at the distal end, designed to be used by a person with a disability to hook, fix, or grasp a garment to manoeuvre and adjust it while dressing or undressing.	I
972	31053	Assistive zip puller	Туслах цахилгаан товч	A device designed to assist a person with a disability to pull zip fasteners (zippers) on clothing or other personal items.	I
973	31056	Assistive toilet	Туслах бие засах газар	A special toilet designed to be used by a person with a disability and which includes features such as a raised toilet bowl and a built-in douche and/or air dryer for cleaning the user's bottom.	I
974	31057	Basic toilet seat	Ариун цэврийн өрөөний үндсэн суудал	A seat intended to be attached to a toilet bowl or toilet chair to provide conventional position, stability, and/or comfort to a seated occupant while toileting.	I
975	31058	Raised toilet seat, freestanding	Өргөгдсөн жорлонгийн суудал, бие даасан	A toilet seat fitted to a framework designed to stand on the floor over a standard toilet to enable a person with a disability to sit for toileting at an elevation above the conventional range for easier sitting and standing. The framework is easily removed from the toilet bowl for conventional toilet use.	I

976	31059	Raised toilet seat	Өргөгдсөн жорлонгийн суудал	A non-powered seat of fixed height designed to enable a person with a disability to sit on the toilet at an elevation above the conventional range for easier sitting and standing. It may be intended to attach to a standard toilet bowl or may be freestanding; it might also include armrests/bars to assist transfer.	I
977	31060	Toilet douching/air drying attachment	Ариун цэврийн өрөө угаах/агаар хатаах хавсралт	A mains electricity (AC-powered) device designed to be attached to a toilet (usually replaces a conventional toilet seat) to assist a person with a disability to clean their bottom by providing a spray of water, sometimes followed by a jet of air for drying. This device is commonly called a toilet bidet seat.	I
978	31061	Raised toilet seat, fixed	Өргөгдсөн жорлонгийн суудал, тогтмол	A seat designed to be permanently-fixed to a standard toilet bowl and intended to enable a person with a disability to sit on the toilet at an elevation above the conventional range for easier sitting and standing (included are plinths).	I
979	31062	Toilet armrest/back rest, mounted	Ариун цэврийн өрөөний гарын түшлэг/нурууны түшлэг, суурилуулсан	A device designed to be mounted (fixed) onto a toilet, toilet bracket, or on a wall behind a toilet, to assist a person with a disability to sit on and get off of the toilet by providing support for their arms and/or backs.	I
980	31063	Toilet paper tongs	Ариун цэврийн цаасны хавчаар	A pincer-like gripping device designed to enable a person with a disability to grasp and hold toilet paper to facilitate bottom wiping.	I
981	31064	Assistive toilet paper holder	Туслах ариун цэврийн цаасны тавиур	A device designed to hold toilet paper (e.g., a roll of toilet paper) to facilitate use of the paper by a person with a disability.	I
982	31065	Tracheostoma protector, reusable	Трахеостома хамгаалагч, дахин ашиглах боломжтой	A patient-worn device in the form of a patch, collar, or cloth designed to be fastened around the neck to protect a tracheostoma orifice against harmful external influences; it may also act as a tracheal air filter. It is typically made of textile or synthetic fabric materials and is regularly changed and cleaned; it is not intended to be used as a shower shield. This is a reusable device.	I

983	31066	One-piece intestinal ostomy bag, closed-ended	Нэг хэсэг гэдэсний остоми уут, хаалттай төгсгөлтэй	A plastic pouch designed to be attached with an adhesive to the skin around a faecal stoma and used as a receptacle for faeces following a colostomy [the stool (faeces) being generally well formed]. It is a one-piece device, typically having a self-adhesive flange, that is removed and disposed of when full. This is a single-use device.	I
984	31067	Multiple-piece intestinal ostomy bag, closed-ended	Олон хэсэгтэй гэдэсний остоми уут, битүү төгсгөлтэй	A plastic pouch designed to be attached around a faecal stoma for use as a receptacle for faeces following a colostomy [the stool (faeces) being generally well formed]. It consists of two or more separate parts including the pouch with a flange and a base plate, both having a flange locking mechanism. The base plate remains attached around the stoma, typically for 2 to 3 days, when the pouch is removed and replaced. This is a single-use device.	I
985	31068	One-piece urostomy bag	Нэг хэсэг уростомийн уут	A one-piece plastic pouch designed to be attached with adhesive to a patient's skin around a stoma to be used as a urine collection device in the management of urinary diversions. The entire device is removed when the bag is emptied. This is a single-use device.	I
986	31069	Multiple-piece urostomy bag, open-ended	Олон хэсэгтэй уростомийн уут, задгай	A plastic pouch composed of two or more parts [e.g., a barrier (wafer) and a pouch; both having flange/locking mechanisms] designed to attach to a patient's skin around a stoma for use as a urinary collection device in the management of urinary diversions. It has a non-return valve to prevent urine from pooling at the base of the stoma. It also has a drainage tap to permit the emptying of fluids. The barrier (wafer) remains attached around the stoma when the bag is removed/changed. This is a single-use device.	I
987	31071	Ostomy adhesive plate	Остоми наалдамхай хавтан	A non-sterile device that is applied and adheres to the skin to ensure the correct position of ostomy care devices and to protect the area from bodily waste contaminants. It is typically self-applied by the patient. This is a single-use device.	I

988	31072	Personal device holder, single-use	Хувийн төхөөрөмж эзэмшигч, нэг удаагийн	A portable, flexible device designed to hold a portable medical device (e.g., long-term recorder, portable oxygen equipment, urine collection bag, tracheostoma protector) during ambulation or sleep; it is neither designed to hold an invasive tube/catheter to the skin surface (i.e., not a catheter/tube holder), nor to house and protect a device from damage (i.e., not a rigid case/housing). It is typically designed as a bag, pouch, strap, belt, or clothing. This is a single-use device.	I
989	31073	Intestinal stoma shield/support belt, single-use	Гэдэсний стома бамбай/туслах бүс, нэг удаагийн хэрэглээ	A non-sterile plate, typically with a waist belt for attachment, intended to be placed over an enteric stoma (surgically-created artificial opening between the intestines and the body surface through which bodily waste is drained) to protect it from harmful external influences (e.g., knocks, friction), to reduce the risk of stomal herniation, or to help maintain adhesion of the base plate to the skin. Also known as a stoma protector it is usually attached by the patient to the base plate/wafer that retains the stomal bag, or might be placed directly over the stomal opening when the bag is removed; it may in addition include an attachable ostomy bag protector. This is a single-use device.	I
990	31075	One-piece intestinal ostomy bag, open-ended	Нэг хэсэг гэдэсний остоми уут, нээлттэй төгсгөлтэй	A plastic pouch designed to be attached around a stoma for use as a receptacle for intestinal output following a colostomy or ileostomy (effluent is typically of a fluid consistency). It is a one-piece device, typically having a self-adhesive flange, that is removed and disposed of in accordance with the clinician's instructions. The distal end of the pouch can be opened for drainage of the waste (average of 400-800 ml per day) and emptied several times per day. This is a single-use device.	I
991	31076	Multiple-piece intestinal ostomy bag, open-ended	Олон хэсэгтэй гэдэсний остомины уут, нээлттэй төгсгөлтэй	A plastic pouch designed to be attached around a stoma for use as a receptacle for intestinal output following a colostomy or ileostomy (effluent is typically of a fluid consistency). It consists of two or more separate parts including the pouch with a flange and a base plate, both having a flange locking mechanism. The distal end of the pouch can be opened for drainage of the waste and emptied, e.g., several times per day. This is a single-use device.	I

992	31084	Closed-ended urine collection bag, wearable	Битүү төгсгөлтэй шээс цуглуулах уут, өмсөх боломжтой	A flexible plastic pouch designed to connect to a urinary catheter and to be strapped to the leg of a patient to collect discharged urine; it is not designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility and is disposed of when full. This is a single-use device.	I
993	31085	Open-ended urine collection bag, wearable	Нээлттэй шээс цуглуулах уут, өмсөх боломжтой	A flexible plastic pouch designed to connect to a urinary catheter and to be strapped to the leg of a patient to collect discharged urine; it is designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility. This is a single-use device.	I
994	31086	Closed-ended urine collection bag, non-wearable	Битүү төгсгөлтэй шээс цуглуулах уут, өмсдөггүй	A flexible plastic pouch designed to connect to a urinary catheter to collect discharged urine from a patient; it is not designed with an opening for urine drainage. The device is not attached to the patient and is disposed of when full. This is a single-use device.	I
995	31087	Open-ended urine collection bag, non-wearable	Нээлттэй шээс цуглуулах уут, өмсдөггүй	A flexible plastic pouch designed to connect to a urinary catheter to collect discharged urine from a patient; it is designed with an opening for urine drainage. The device is not attached to the patient. This is a single-use device.	I
996	31091	Antislip aid, bath/shower	Халтиргаанаас хамгаалах хэрэгсэл, ванн/шүршүүр	A device, which is a technical aid, designed for a disabled or infirm person to prevent slipping while bathing or in the bathroom. This device would be used in the bottom of the bath or shower, or on the bathroom floor and includes devices such as mats, tape, or antislip self-adhering filaments.	I
997	31092	Bathing stretcher	Усанд орох дамнуурга	A manually-operated device consisting of a platform mounted on a frame designed to support a recumbent patient for bathing. It is designed to be submerged in an appropriate bath. The device is used primarily for a patient incapable of supporting themself in an upright position for bathing.	I
998	31093	Assistive personal body-washing device	Хувийн бие угаах туслах хэрэгсэл	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is a washing utensil, e.g., a washcloth, sponge, or brush that can have a purpose-made handle or grip. For grab rails, bath holders and grips, see the appropriate generic device group.	I

999	31095	Assistive personal body-drying device	Биеийг хатаах туслах төхөөрөмж	A device designed to be used by a person with a disability to assist him/her dry their body after bathing/washing. Included will be the devices and materials needed to achieve this.	I
1000	31096	Bath thermometer	Усанд орох термометр	A device designed for measuring the temperature of bath water, especially to ensure that it is not too hot to cause discomfort or tissue injury to the bathing patient. It is typically used for a person with a disability, a child, a geriatric, or other person who may have reduced sensitivity to temperature. It may be held in the bath water by the healthcare attendant or suspended, e.g., over the edge of the bath, for partial submersion in the bath water for the duration of the bathing session. This is a reusable device.	I
1001	31097	Assistive nail-brush	Туслах хумсны сойз	A device designed to be used by a person with a disability to assist them in scrubbing, cleaning and/or polishing their fingernails and toenails. It will typically have a suitable handle for the user to grip and rows of parallel semi-stiff bristles.	I
1002	31098	Assistive nail file/emery board	Туслах хумсны файл/эмери хавтан	A device designed to be used by a person with a disability to assist them with filing their fingernails or toenails and will typically have a suitable handle for the user to grip when performing this task.	I
1003	31099	Assistive nail scissors	Туслах хумсны хайч	A device designed to be used by a person with a disability to assist them with cutting or shortening their fingernails or toenails. It may be curved to suit the natural curvature of human nails. The toenail version will typically be more robust in its design to accommodate thick toenails. It comprises two pivoted blades that are usually provided with suitable handles for the user to grip and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed).	I
1004	31101	Assistive hair-washing/shampooing device	Үс угаах/шампунь угаах туслах төхөөрөмж	A device designed to be used by a person with a disability to assist them attend to their personal hair washing and shampooing needs. It will typically be an adapted or purpose-made device.	I
1005	31102	Assistive hairbrush	Туслах үсний сойз	A device designed to be used by a person with a disability to assist them in grooming their hair. It will typically be an adapted or purpose-made brush consisting off a head with rows of bristles or thin wires and a suitable handle for the user to grip.	I

1006	31103	Assistive hair-dryer	Туслах үс хатаагч	A mains electricity (AC-powered) hand-held device designed to be used by a person with a disability to assist them in drying and styling their hair. It will typically have handle grips, controls and interchangeable brush/comb/blowing heads that are adapted for this use.	I
1007	31104	Assistive manual toothbrush, reusable	Туслах гарын авлагын шүдний сойз, дахин ашиглах боломжтой	An instrument designed to be used by a disabled person to manually brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed; it may be designed with a grip adapted as an extension of the arm, hand, or finger. The device is normally used with toothpaste. This is a reusable device.	I
1008	31105	Assistive electric toothbrush	Туслах цахилгаан шүдний сойз	A battery-powered instrument designed to be used by a disabled person to brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed; it may be designed with a grip adapted as an extension of the arm, hand, or finger. The device provides automated bristle movement (e.g., rotary or vibratory) intended to augment brushing; it is normally used with toothpaste. The toothbrush head may be exchangeable. This is a reusable device.	I
1009	31109	Skin electrical conductance meter	Арьсны цахилгаан дамжуулах хэмжигч	An electronic instrument designed to determine a patient’s electrodermal activity (EDA) [also known as galvanic skin response (GSR), psychogalvanic reflex (PGR), skin conductance response (SCR)] by measuring the electrical conductance of the skin and the tissue path between electrodes placed on the surface of the body (e.g., hands, feet, head), whereby a small electrical current is typically applied. It is used to assess changes in psychophysiological indicators related to autonomic sympathetic activity and emotional states (e.g., fear, startle, pain); sudomotor dysfunction and subsequent reduced EDA have been associated with various conditions (e.g., neuropathy in diabetic patients).	I

1010	31112	Single-base walking stick	Нэг суурьтай алхагч таяг	A rod, typically made of wood or metal, with one leg/foot and a handgrip or curved handle and without forearm support used to assist a person with a disability to maintain their balance and support their weight while walking. It may be of fixed or adjustable length, and collapsible or non-collapsible.	I
1011	31113	Elbow crutch	Тохойн таяг	A staff-like mobility aid designed to assist a person with a disability to support their weight while walking. The device has one leg, a padded hand support at the level of the user's wrist, and a non-horizontal plastic or metal cuff that wraps around the forearm. The handgrip is typically made of non-slip material (e.g., rubber, glycerin gel, sheepskin). It may be adjustable in length and is typically made of metal [e.g., aluminium (Al), titanium (Ti)]. This device is commonly used by long-term crutch users because of its lightweight and energy preservation qualities.	I
1012	31114	Forearm support crutch	Бугуйг дэмжих таяг	A staff-like mobility aid used to assist a person with a disability to support their weight while walking. The device has one or more legs and a padded support or "trough" in a horizontal position for the user to rest the forearm. The hand wraps around a grip at the end of the forearm support. The device may be adjustable in length and is typically made of metal [e.g., aluminium (Al), titanium (Ti)]. This device is particularly suited to individuals who cannot rest their weight on their hands.	I
1013	31115	Axillary crutch	Суганы таяг	A staff-like mobility aid used to assist a person with a disability to support their weight while walking. The device has one leg, a padded hand support at the level of the user's wrist, and an under-arm (the armpit or axilla) padded platform. The pads are typically made of non-slip material (e.g., rubber, glycerin gel, sheepskin). The device may be adjustable in length and is typically made of wood or metal [e.g., aluminium (Al), titanium (Ti)].	I

1014	31116	Multiple-base walking stick	Олон суурьтай алхах таяг	A rod, typically made of wood or metal, with a tripod or quadripod base (three or four feet), and a handgrip and/or forearm support, used to assist a person with a disability to support their weight while walking. The multiple bases provide increased stability while walking. The device can be of fixed or adjustable length, and collapsible or non-collapsible.	I
1015	31118	Basic walking frame, non-foldable	Үндсэн алхах хүрээ, эвхэгддэггүй	A mobility aid in the form of a waist-high, non-foldable framework with handgrips and four, rigid, non-wheeled legs designed to provide a stable support to a person with a disability, a geriatric or an infirm person when standing or ambulating; it may also be used during rehabilitation. It is typically constructed of lightweight metal, plastic, and rubber materials and surrounds the front and flanks of the user. The user holds the handgrips and slightly lifts the device to reposition it in front of them for each forward step.	I
1016	31119	Handgrip disability-assistive walker, non-powered, non-foldable	Хөдөлгөөнгүй, эвхэгддэггүй гар бариултай алхагч	A non-powered, all- or partially-wheeled mobility aid in the form of a waist- or trunk-high, non-foldable framework with handgrips or hand-held frame and three or four legs, designed to provide a stable support for a patient with a walking disability, a geriatric, obese, or infirm patient when standing or ambulating; it might be used for rehabilitation. It is constructed of lightweight metal, plastic, and rubber materials in the shape of a mobile support structure which the patient holds and pushes in front of them as they walk. It is non-foldable and may include a braking mechanism; it may be width-adjustable and some types may include a seat on which the patient can rest.	I
1017	31120	Walking frame, wheeled, chair	Алхах хүрээ, дугуйтай, сандал	A mobility aid in the form of a hip-high scaffold, manipulated by the arms, with wheels and a seat/sling to support the body for seated walking. Included are walking bicycles. It can be of fixed or adjustable height/width, and collapsible or non-collapsible. It is typically made of lightweight metal or plastic.	I

1018	31121	Walking table	Алхах ширээ	An all-wheeled mobility aid in the form of a waist-high or chest-high, non-foldable framework with a supporting horizontal table or forearm supports (flat or gutter shaped) designed to provide a stable support to a person with a disability while standing or ambulating. The device is used by a person who needs to use both arms, possibly in combination with the upper body, to push it forward, and therefore provide them with limited mobility. It is constructed of lightweight metal, plastic, and rubber materials in the shape of a mobile support structure which the user pushes in front of them as they move forward.	I
1019	31122	Walking aid ice grip	Алхах туслах мөсөн бариул	A device designed as a single metal spike or a series of metal spikes or with non-slip material that is attached to the user's outdoor shoes, boots or to the ground-contacting end of their walking aid (e.g., a walking stick, crutch, or non-wheeled walking frame) to provide them with better stability when out walking in icy outdoor conditions and ultimately prevent them from falling. It is available in several designs. This is a reusable device.	I
1020	31124	Height-adjustable chassis assistive automobile	Өндөр тохируулгатай явах эд анги нь туслах автомашин	A combustion-engine, on-road vehicle (petrol or diesel) with enclosed driver/passenger seating accommodation and four wheels designed to be operated by a disabled person as a means of transportation, typically without the attendance of another person. It is typically a standard car or van with a height-adjustable chassis constructed by a manufacturer who specializes in making such vehicles. This floor lowering chassis modification enables the user to easily enter and exit the vehicle, especially when seated in a wheelchair. This vehicle will enhance the user's independence in medium- to long-range transportation.	I

1021	31125	Low-speed assistive automobile	Бага хурдтай туслах машин	A combustion-engine, on-road vehicle (petrol or diesel) with enclosed driver/passenger seating accommodation and four wheels designed to be operated by a disabled person as a means of transportation, typically without the attendance of another person. It is typically a standard car or van with a reduced speed feature incorporated by a manufacturer who specializes in making such vehicles. This vehicle will enhance the user's independence in medium- to long-range transportation.	I
1022	31127	Assistive automobile driving/engine control component, manual	Туслах автомашин жолоодох/хөдөлгүүрийн удирдлагын бүрэлдэхүүн хэсэг, гарын авлага	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the driving and engine controls of the vehicle (excluding the steering) so that it can be used by a person with a disability. It will provide mechanical adaptations for the user to manually operate the accelerator, brake, clutch or changing of gears of the vehicle to increase their accessibility and functionality.	I
1023	31128	Assistive automobile parking brake component	Автомашины зогсоолын тоормосны туслах бүрэлдэхүүн хэсэг	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the handbrake of the vehicle so that it can be used by a person with a disability. It will provide mechanical and/or electrical adaptations for operating the parking brake of the vehicle to increase its accessibility and functionality.	I
1024	31129	Assistive automobile steering system component, manual	Туслах автомашины жолооны системийн бүрэлдэхүүн хэсэг, гарын авлага	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the steering-wheel or steering-column of the vehicle so that it can be used by a person with a disability. It will provide mechanical adaptations for the user to manually operate the steering system of the vehicle, increasing its accessibility and functionality.	I
1025	31130	Assistive automobile secondary operation adaptor, manual	Туслах автомашины хоёрдогч үйлдлийн адаптер, гарын авлага	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the secondary controls of the vehicle [e.g., adjustable mirrors, central locking system, windscreen wipers (windshield wipers), indicators, lights, music system] so that it can be used by a person with a disability. It will provide mechanical adaptations for the user to manually operate these controls of the vehicle to increase their accessibility and functionality.	I

1026	31131	Assistive automobile seatbelt/harness	Туслах автомашины хамгаалалтын бүс/бүс	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt or replace the seatbelt functionality so that it can be used by a person with a disability. It will give the required degree of seatbelt safety and be adapted to suit the user of the vehicle providing a three-point or four-point seatbelt or belt vest ensuring his/her safety during travel.	I
1027	31132	Assistive automobile adaptive seat cushion	Туслах автомашины дасан зохицох суудлын дэр	A device intended to be used in a motor vehicle, e.g., a car or van, which is used by a person with a disability to sit on, to enable the vehicle to be either driven by that person or permit the person with the disability to enter, exist, or ride in the vehicle safely.	I
1028	31134	Assistive automobile wheelchair fastener	Автомашины тэргэнцэрт туслах бэхэлгээ	A device intended to be used in a motor vehicle, e.g., a car or van, which is built or adapted for use by a person with a disability. It is designed to restrain a wheelchair, usually occupied, in a secured locked position during the journey in the vehicle. This device is typically anchored to the vehicle floor.	I
1029	31135	Assistive automobile bodywork component	Автомашины кузовын туслах бүрэлдэхүүн хэсэг	A device used to modify a standard motor vehicle, e.g., a car or van, to adapt the bodywork of the vehicle so that it can be used by a person with a disability. It will provide modifications to the structure of the vehicle, e.g., provide a raised roof, enlarged windows or larger doors, to increase its accessibility, functionality, and/or comfort.	I
1030	31137	Assistive two-wheeled moped	Туслах хоёр дугуйтай мопед	A combustion engine, on-road, vehicle with two wheels mounted on a cycle-like frame upon which the user sits astride used to provide a person with a disability with a means of transportation, typically without the attendance of another person, and is designed to be operated by the user. It is typically a standard moped (denoted by the limited engine capacity, e.g., 50cc – 125cc) with the necessary modifications constructed by a manufacturer who specializes in making such vehicles. This vehicle will enhance the user's independence in short- to medium-range transportation.	I

1031	31138	Assistive three-wheeled moped	Туслах гурван дугуйт мопед	A combustion engine, on-road, vehicle with three wheels mounted on a cycle-like frame upon which the user sits astride used to provide a person with a disability with a means of transportation, typically without the attendance of another person, and is designed to be operated by the user. It is typically a standard moped (denoted by the limited engine capacity, e.g., 50cc – 125cc) with the necessary modifications constructed by a manufacturer who specializes in making such vehicles. This vehicle will enhance the user's independence in short- to medium-range transportation.	I
1032	31139	Assistive four-wheeled moped	Туслах дөрвөн дугуйт мопед	A combustion engine, on-road, vehicle with four wheels mounted on a cycle-like frame upon which the user sits astride used to provide a person with a disability with a means of transportation, typically without the attendance of another person, and is designed to be operated by the user. It is typically a standard moped (denoted by the limited engine capacity, e.g., 50cc – 125cc) with the necessary modifications constructed by a manufacturer who specializes in making such vehicles. This vehicle will enhance the user's independence in short- to medium-range transportation.	I
1033	31141	Assistive foot-propelled bicycle	Туслах хөлийн унадаг дугуй	A vehicle with two wheels mounted on a slender frame which the user with a disability sits astride and pedals with their legs to provide a means of transportation, typically without the attendance of another person. It is designed to be operated by the user. The vehicle will enhance the user's independence in short- to medium-range transportation.	I
1034	31142	Assistive foot-propelled tricycle	Туслах хөлөөрөө явдаг гурван дугуй	A vehicle with three wheels mounted on a slender frame which the user with a disability sits astride and pedals with their legs to provide a means of transportation, typically without the attendance of another person. It is designed to be operated by the user. The vehicle will enhance the user's independence in short- to medium-range transportation.	I

1035	31143	Assistive hand-propelled tricycle	Туслах гар ажиллагаатай гурван дугуй	A vehicle with three wheels mounted on a slender frame on which the user with a disability sits and powers by means of a handcrank mechanism with their hands and arms to provide a means of transportation, typically without the attendance of another person. It is designed to be operated by the user. The vehicle will enhance the user's independence in short- to medium-range transportation.	I
1036	31144	Assistive scooter, foot-propelled	Туслах скутер, хөлөөрөө явдаг	A mobility device with two main wheels attached to a footboard (sometimes with stabilizing wheels at the rear) and a steering handle directly connected to the front wheel, that is designed to be operated by a person with a disability who propels the device by pushing on the ground with one foot while standing on the footboard with the other. This device is used to enhance the user's ability for self-transportation in the local environment and/or to promote the user's physical/recreational activities.	I
1037	31145	Disability cycle, tandem/four-wheeled	Тахир дутуугийн мөчлөг, тандем / дөрвөн дугуйтай	A vehicle of four wheels and two or more seats mounted on a slender frame that is used to provide transportation for one or more disabled users, usually without the attendance of an able bodied person. The device is designed to be operated by disabled persons who pedal it for power. The device will enhance the user's independence in short- to medium-range transportation.	I
1038	31146	Assistive cycle adaptive component	Туслах мөчлөгийн дасан зохицох бүрэлдэхүүн хэсэг	A device that is added to a cycle (i.e., a bicycle, tricycle, or a tandem) to modify its function enabling its operation for a person with a disability. Included are, e.g., alternative seating, servo motors, or stabilizing side wheels (training wheels).	I
1039	31156	Wheelchair lights	Тэргэнцэрийн гэрэл	An electric illumination device that lights a wheelchair so that it may be seen and so that its occupant can see, primarily outside of daylight conditions. The device may be mounted, typically in pairs, for front (headlight) or rear (tail-light) use. This device also includes the installation package needed, but excludes the battery.	I
1040	31158	Wheelchair brakes	Тэргэнцрийн тоормос	A device consisting of a lever(s), spring(s), tyre contact pads, or other mechanism used to slow down, stop, and/or hold a wheelchair in a stationary position. This device also includes the necessary installation package.	I

1041	31159	Wheelchair bicycle connector	Тэргэнцэртэй дугуйн холбогч	A connecting device used to link a wheelchair to a bicycle so that the person pedalling the bicycle can pull the wheelchair.	I
1042	31160	Wheelchair wheel/tyre brush	Тэргэнцэрийн дугуй/дугуйн сойз	A device typically with a handle at one end and bristles at the other designed to be used by a wheelchair occupant to clean the wheels and/or tyres (tires) of a wheelchair.	I
1043	31162	Assistive pushchair	Туслах тэргэнцэр	A wheeled mobility device manually propelled by an attendant that consists of a open framework with one or more handle(s) designed to carry one or more person(s) with a disability in a seated or semi-lying (semi-recumbent) position.	I
1044	31163	Assistive pram	Туслах тэрэг	A wheeled mobility device manually propelled by an attendant that consists of a base platform enclosed by four sides used to carry one or more person(s) with a disability in a lying (recumbent) position.	I
1045	31164	Assistive sled/sledge	Туслах чарга/чага	A mobility device designed for use by a person(s) with a disability to convey themselves, or with the assistance of an attendant, over ice and snow. It is typically designed as a board fixed to two parallel runners and will enhance the user's ability for transportation in the local environment or recreational play and is typically used in countries with winter conditions.	I
1046	31165	Assistive kick sled	Туслах чарга	A mobility device designed for use by a person with a disability consisting of a chair fixed to two runners, with or without wheels, that is foot-propelled by a person standing on the runners behind the chair; this person can be the person with the disability or an attendant. This device will enhance the user's ability for transportation in the local environment and is typically used in countries with winter conditions.	I
1047	31166	Assistive crawler/mobility board	Туслах мөлхөгч/хөдөлгөөний самбар	A device used to provide a person with a disability with a means of mobility, typically without the attendance of another person. It is a wheeled device upon which the person lies or sits, enabling him/her to move around by pushing on the floor with their arms or legs. This device will enhance the user's ability for self-transportation in a local environment.	I

1048	31168	Exerciser, hand rails	дасгалын төхөөрөмж, гар хашлага	A device intended for medical purposes, e.g., to redevelop muscles, restore motion, rehabilitate or teach patients/persons who are unable to walk, to retain their balance or to perform other functions associated with walking. It can be attached to a wall or to free-standing rails for self-lifting. This device may be fixed, or mechanically or electrically adjusted.	I
1049	31171	White stick	Цагаан саваа	A tactile device in the form of a guide stick or cane, coated in a white in colour, that is used by a person with a visual impairment to self-orient and navigate by feeling landmarks and obstacles in the path of travel.	I
1050	31172	Assistive electronic orientation device	Туслах цахим чиг баримжаа олгох төхөөрөмж	A battery-powered device used by a person with a disability who has an impaired sense of orientation to help them determine a relative position in a certain area through electronically derived information.	I
1051	31173	Assistive acoustical orientation device	Туслах акустик чиг баримжаа олгох төхөөрөмж	A battery-powered device designed to be used by a person with a visual impairment that electronically produces a sound or a voice message to help them orientate. It is commonly known as a sound beacon.	I
1052	31174	Assistive orientation compass	Туслах чиг баримжаа олгох луужин	A device used by a person with a disability who has an impaired sense of orientation to assist them to self-orient by helping them determine their position relative to the cardinal points (north, south, east, and west) indicated by the device.	I
1053	31175	Tactile map	Мэдрэхүйн газрын зураг	A device used by a person with a disability who has an impaired sense of orientation, typically a person with impaired vision, to help them self-orient using this device through the feel (touch) of its tactile map projections.	I
1054	31176	Tactile orientation material	Мэдрэхүйн чиг баримжаа олгох материал	A device used by a person with a disability who has an impaired sense of orientation, typically a blind person, to self-orient in their surroundings, e.g., at home, work, and in the normal daily life of society. It consists of special tactile-material, including structured surfaces, to provide the user with information pertaining to their surroundings and function as signs to provide the user with known orientation points.	I

1055	31179	Food weighing/measuring aid	Хүнсний жинг хэмжих/хэмжих хэрэгсэл	A technical aid designed to be used by a disabled or infirm person for the purpose of weighing and measuring ingredients used in cooking and food preparation. It includes kitchen scales, diet scales, volume measures, volume measuring sets, cooking and meat thermometers, butter dividers, timers, and liquid level indicators.	I
1056	31180	Food cutting/chopping aid	Хүнс зүсэх/хагалах тусламж	A technical aid designed to be used by a disabled or infirm person for the purposes of dividing food, e.g. slicing machine, knives, cutting board, cheese slicer, egg divider, egg slicer, onion holder or grater.	I
1057	31181	Food cleaning/peeling aid	Хоол цэвэрлэх/хальслах тусламж	A technical aid designed to be used by a disabled or infirm person for the purposes of cleaning and/or peeling/coring food, e.g. potato brush, potato peeler (manual and electric), potato holder or coring knife.	I
1058	31182	Food baking aid	Хоол хийхэд туслах	A technical aid designed to be used by a disabled or infirm person for baking purposes, e.g. rolling pins, baking tins or baking dishes.	I
1059	31183	Food processing aid	Хүнс боловсруулахад туслах	A technical aid designed to be used by a disabled or infirm person for the purpose of modifying the form/consistency of food. Food mixers, food processors, manual and electric egg-beaters are included in this group of devices.	I
1060	31184	Food boiling/frying aid	Хоол буцалгах/хайруулхад туслах	A technical aid designed to be used by a disabled or infirm person for boiling/frying purposes. Frying-pans, egg boilers, coffee and tea makers, saucepan holders/handles, strainers, frying-pan covers, vegetable baskets, egg rings and frying tongs, pans, and other utensils used for cooking food are included in this group of devices.	I
1061	31185	Food heating aid	Хоол халаахад туслах	A technical aid designed to be used by a disabled or infirm person for cooking, heating, warming, baking food and drinks (includes cookers, ovens, microwave ovens, and electric cooking plates).	I

1062	31187	Assistive kitchen sink	Гал тогооны туслах угаалтуур	A specially adapted receptacle designed to be used by a person with a disability for the purposes of dish washing and other kitchen activities. It will typically enable access by users in a wheelchair/sitting position and will typically be height-adjustable. It will have one or more taps (faucets) supplying hot and cold water and a drain. The tap or taps are commonly placed to facilitate easy access for the user (e.g., on the front of the sink unit).	I
1063	31188	Assistive dish washing brush	Аяга таваг угаах туслах сойз	A hand-held device designed to be used by a person with a disability to assist them in the task of manually washing dishes through a brushing action.	I
1064	31189	Dish draining aid	Аяга таваг ус зайлуулах туслах	A technical aid designed to be used by a disabled or infirm person to allow water to drain from washed dishes or utensils.	I
1065	31190	Domestic water overflow assistive device	Ахуйн ус халихад туслах төхөөрөмж	A device designed to be used by a person with a disability for the purpose of safeguarding against the overflow of water from a sink.	I
1066	31191	Assistive dishcloth wringer	Туслах аяга таваг шахагч	A technical dish washing aid designed to be used by a person with a disability for the purpose of mechanically squeezing out residual liquid from a dishcloth or similar wet cloth.	I
1067	31192	Assistive dishwasher	Туслах аяга таваг угаагч	A mains electricity (AC-powered) dish washing machine designed to be operated and used by a person with a disability to wash and sanitize dishes and utensils used to serve, prepare, and eat food.	I
1068	31194	Assistive food/drink serving container	Туслах хоол/ундаа үйлчлэх сав	A device designed to be used by a person with a disability to serve the food or drink contained within it. Heated serving dishes and vacuum flasks are included in this group of devices.	I
1069	31195	Assistive food dispenser	Туслах хүнсний диспенсер	A device designed to be used by a person with a disability to measure out and dispense a predetermined amount of a food substance, e.g., sugar or oil. This is a reusable device.	I
1070	31196	Assistive liquid flow stopper	Туслах шингэний урсгалыг хязгаарлагч	A device designed to be used by a person with a disability to prevent them from pouring excess quantities of liquid, typically a beverage, out of the vessel. It is used in conjunction with the vessel containing the liquid. This is a reusable device.	I

1071	31197	Assistive cutlery	Туслах хутганы хэрэгсэл	A device designed as an eating utensil (e.g., a specialized knife, spoon, or fork) used by a person with a disability to cut food and/or to transfer food into their mouth. This is a reusable device.	I
1072	31198	Assistive drinking vessel	Туслах ундны сав	A device designed to be used by a person with a disability as a drinking container (e.g., specialized mug, glass, cup). Saucers are also included in this generic device group. This is a reusable device.	I
1073	31199	Food holding aid	Хоол хүнс хадгалах тусламж	A technical aid typically designed as a plate used by a disabled or infirm person to hold food when eating. Items, e.g., sandwich boards and warm water plates, are included in this generic device group.	I
1074	31200	Food guard	Хоолны хамгаалагч	A device designed to be fitted to a plate to provide a raised edge (a barrier) to prevent food from being pushed off of the plate when being eaten by a person with a disability. It is typically in the form of a raised curved edge and keeps the food within its confines on the plate while they are eating. This is a reusable device.	I
1075	31201	Assistive egg cup	Туслах өндөгний аяга	A device designed to be used by a person with a disability to hold a boiled egg allowing them to eat the egg without help from a care attendant.	I
1076	31205	Domestic dustpan/dustbrush assistive device	Гэрийн тоосны сав/сойдод туслах төхөөрөмж	A device designed to be used by a person with a disability for house dusting purposes.	I
1077	31206	Domestic wiping/brushing/dusting/ cleaning assistive device	Гэрийн арчих/сойз/тоос цэвэрлэх/цэвэрлэх туслах хэрэгсэл	A device designed to be used by a person with a disability for wiping/brushing/dusting purposes, e.g., cleaning furniture, windows or bench tops. Floorcloths are included in this group of devices.	I
1078	31207	Domestic vacuum cleaning assistive device	Гэрийн тоос сорогч цэвэрлэхэд туслах төхөөрөмж	A mains electricity (AC-powered) device designed to be used by a person with a disability for the purpose of removing dirt and dust from their abode through powered suction. The dirt is gathered in an internal storage container within or attached to the device. Included are vacuum cleaning robots.	I
1079	31208	Domestic dry carpet sweeping assistive device	Гэрийн хуурай хивс шүүрдэх туслах төхөөрөмж	A device designed to be used by a person with a disability to sweep a carpet through a brushing mechanism that lifts dirt into an internal storage container as the device is manually-pushed over the carpet.	I

1080	31209	Assistive scissors	Туслах хайч	A utensil used by a person with a disability to cut objects or materials, e.g., cloth, paper, string, or to prepare food in the kitchen. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes with different handle designs to accommodate different patient disability requirements.	I
1081	31210	Laundry ironing aid	Угаалгын индүүдэх хэрэгсэл	A technical aid designed to be used by a disabled or infirm person for the purpose of ironing freshly-laundered clothing or linens. It is an electrically-heated device and may accept water into a discrete chamber to provide steam to facilitate the process.	I
1082	31211	Laundry ironing-surface aid	Угаалгын индүүдэх-гадаргын тусламж	A technical aid designed to be used by a disabled or infirm person. It provides a flat, heat-resistant surface for ironing fabric. It may be height-adjustable.	I
1083	31213	Assistive laundry washing machine	Туслах угаалгын машин	An electrically-powered laundry appliance designed to be used by a person with a disability for the purpose of washing their clothes.	I
1084	31214	Assistive laundry wringer	Туслах угаалгын нунтаглагч	A technical laundry aid designed to be used by a person with a disability for the purpose of mechanically extracting water from wet washing through a squeezing or twisting action.	I
1085	31215	Assistive laundry clothes pegs	Угаалгын хувцасны туслах бэхэлгээ	A manually-operated laundry device designed to be used by a person with a disability to secure washing (clothes and other textile items) onto a clothesline for drying. Also known as a clothespin, it is typically designed as a clip or a forked device.	I
1086	31216	Assistive laundry spin-dryer	Угаалгын туслах хатаагч	An electrically-powered laundry appliance designed to be used by a person with a disability for the purpose of drying clothing by removing water from them through a spinning action before air drying.	I
1087	31217	Assistive laundry drying frame	Туслах угаалгын хатаах хүрээ	A technical laundry aid designed to be used by a person with a disability upon which they can hang wet or damp clothing for this to dry. It is designed as a framework with horizontal ribs or bars upon which the clothing is hung. It is typically foldable for convenient storage when not in use.	I

1088	31218	Assistive shoe cleaning device	Туслах гутал цэвэрлэх төхөөрөмж	A device designed to be used by a person with a disability to help them in cleaning their shoes. It may be in the form of a hand-held brush, a holder with cleaning bristles affixed to the floor, or a doormat.	I
1089	31219	Ergonomic workdesk, manual	Эргономикийн ажлын ширээ, гарын авлага	A manually-operated desk designed with ergonomic adjustments to provide improved personal work-position flexibility and to help prevent/reduce physical problems associated with sedentary work. It is intended to be used for work or training typically by patients with back problems or disabilities. It typically includes a mechanical height-adjustable worktop and may include tilting-functions or raised table edges; it is typically used for computer and writing work in an office, school, or home setting.	I
1090	31220	Assistive dining table	Туслах хоолны ширээ	A table designed to be used by a person with a disability for the purpose of dining. It will have features that take into consideration the requirements of such persons.	I
1091	31222	Coxit chair	Coxit сандал	A device (chair or seat) designed to support a disabled occupant in a seated position and which will, through its design, assist the person to stand from the seated position. It is typically designed with one or two tilting sections at the front edge, or it may have a saddle seat over which the person straddles their legs. Included is the arthrodesis chair.	I
1092	31225	Bedding support	Ор дэрний даавууны дэмжлэг	A device designed as an arched framework which is placed over the body or part of the body (e.g., the legs) of a bed-bound patient/person to be protect this area from the weight of the bedding (i.e., sheet, blankets, duvet) which cover the patient/person.	I
1093	31227	Bed shortening device	Ор богиносгох төхөөрөмж	A device that is used for reducing/shortening the length of the bed.	I
1094	31231	Assistive door opener/closer	Туслах хаалга онгойлгох/хаах	A device designed to be used by a person with a disability to enable them to open and/or close a door.	I
1095	31232	Assistive window opener/closer	Туслах цонх онгойлгогч/хаагч	A device designed to be used by a person with a disability to enable them to open and/or close a window.	I
1096	31233	Assistive curtain opener/closer	Туслах хөшиг онгойлгогч/хаагч	A device designed to be used by a person with a disability to enable them to open and/or close curtains.	I

1097	31248	Bronchoscopic biopsy curette, flexible, reusable	Бронхоскопийн биопсийн курет, уян хатан, дахин ашиглах боломжтой	A flexible device intended to be used through a flexible bronchoscope to obtain specimens of the bronchi for histological/pathological diagnosis during bronchoscopy. It is a type of biopsy forceps whose flexible insertion portion is made of a metal coil or a plastic tube, but where at the distal end terminates in a sharply-pointed scoop/receptacle for securing the biopsy. This is a reusable device.	I
1098	31254	Anaesthesia mask strap, reusable	Мэдээ алдуулах маск оосор, дахин ашиглах боломжтой	A band of material designed to hold an anaesthesia mask in position on a patient's face. It is typically wrapped around the patient's head and often affixed to a special stabilizing device (e.g., with hooks) located on the gas connection port of the mask. It is typically used for anaesthesia of long duration. This is a reusable device.	I
1099	31264	Airway tube forceps, reusable	Амьсгалын замын хоолойн хямсаа, дахин ашиглах боломжтой	A hand-held instrument used for grasping a tube [e.g., a catheter or an endotracheal (ET) tube] for its insertion and/or extraction into/from the airways, or for grasping obstructive objects for their removal from the airways. Commonly known as a Magill's forceps, it typically has a scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have grasping blades that have small ringed loops or S-shaped distal working ends. The blades are serrated to provide extra grip. It is typically used by emergency medical services (EMS). This is a reusable device.	I
1100	31266	Incentive spirometer	Урамшууллын спирометр	A hand-held, mechanical, breathing-muscle exerciser intended to be used in respiratory therapy to encourage and motivate deep-breathing manoeuvres, typically for the postsurgical treatment and prevention of atelectasis (lung collapse) and to help facilitate airway opening and clearing. It includes an indicator in a housing that rises in relation to patient inspiratory effort, performed via an attached tube and mouthpiece, to determine the maximum volume of gas which can be inspired [i.e., the inspiratory vital capacity (IVC)]. This is a single-patient device designed for use in a medical facility and in the home. This is a reusable device.	I

1101	31267	Flexible bronchoscopic biopsy forceps, reusable	Уян хатан бронхоскопийн биопсийн хямсаа, дахин ашиглах боломжтой	A flexible manual instrument intended to perform through a compatible bronchoscope to obtain specimens of the bronchi and/or the lungs during endoscopy for histopathological examination. It is typically constructed of a flexible metal coil or plastic tube whose distal end is equipped with a pair of scissors-like cups with a cutting edge around their rim which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the endoscope. This is a reusable device.	I
1102	31273	Cylinder/system medical gas pressure gauge	Цилиндр/системийн эмнэлгийн хийн даралт хэмжигч	A device designed to measure pressure in a section of a gas delivery system (e.g., gas source output, a section of the pipeline) and/or at the outlet of a medical gas cylinder. It typically includes a calibrated dial to read the pressure. A variety of gauges are available such as the Bourdon (Ashcroft) tube; the device is typically use to determine if the pressure is within a pre-established range.	I
1103	31278	Air/gas pressure transducer	Агаар/хийн даралт хувиргагч	A noninvasive electronic device designed to convert air or gas pressure signals into electrical signals for subsequent display or processing by a parent device (e.g., physiological data recorder, gastrointestinal motility analysis system). It may be a compact unit or included in an electrical cable, and receives pressure signals from connected pressure-measuring devices (e.g., urodynamic air-charged catheter, monitoring respiratory tubing).	I
1104	31283	Anaesthesia/respiratory gas flowmeter tester	Мэдээ алдуулах/амьсгалын замын хийн урсгал хэмжигч шалгагч	A device designed to determine the accuracy of an anaesthesia/respiratory gas flowmeter, or other respiratory equipment, by serving as a standard of gas flow measurement. Different types use different methods to measure the gas flow rate such as the use of a high-precision calibrated tube, or change in pressure caused by gas flow through an orifice. The device may be calibrated to indicate gas flow rate, e.g., when the outflow is open to the atmosphere or against a specific back pressure. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	I

1105	31309	Nebulizing system delivery set, single-use	Мананцар үүсгэгч систем хүргэх багц, нэг удаагийн	A collection of devices intended to be connected to a nebulizing system gas compressor or medical gas outlet to create/deliver an aerosol, usually medicated, to the patient's respiratory system. It includes a single-use nebulizing medication chamber, and typically flexible tubing with connectors and/or a mask [e.g., oxygen (O2) mask] or mouthpiece; pharmaceuticals are not included. This is a single-use device.	I
1106	31311	Room dehumidifier	Өрөөний чийгшүүлэгч	A mains electricity (AC-powered) device intended to remove moisture from the ambient air. This is a stationary device designed to be placed in one place in a room, typically in a hospital, institution, home, or office environment; it can be physically lifted/wheeled and moved to another position or room. It typically consists of an electric motor, an air/moisture filtration system, a reservoir for water collection and operating controls. The captured moisture is collected in the reservoir which is emptied on a regular basis, or which can drain directly via tubing into a drainage system.	I
1107	31327	Tracheal tube cuff spreader	Гуурсан хоолойн ханцуйвч тараагч	An instrument designed to install a tracheal tube cuff onto an endotracheal (ET) tube or a tracheostomy tube that does not have an integral cuff as part of the product design. This is a reusable device.	I
1108	31335	Bone curette, reusable	Ясны курет, дахин ашиглах боломжтой	A manual surgical instrument designed for cutting and excising bone tissue typically during an orthopaedic or a plastic surgery procedure. It is typically designed as a long, slender instrument with a handle at the proximal end and a concave, spoon-like tip which has a sharp edge, at the distal end, or it may be double-ended, and is used to facilitate the removal of the bone tissue without causing trauma to the surrounding muscles. It is typically made of high-grade stainless steel and is a common instrument of choice for the removal of the bone. This is a reusable device.	I

1109	31338	Nitrogen exhaled-gas-sample analyser	Азотын амьсгалсан хийн дээжийн анализатор	A mains electricity (AC-powered) instrument intended to measure the concentration of nitrogen (N2) in a gas-mixture sample exhaled by a patient to aid in determining the patient's ventilatory status (typically anatomic dead space and/or lung diffusing capacity). The device may also have the capacity to measure nitrogen in the environment. It usually measures using gas chromatography, mass spectrometry, or ultraviolet or infrared spectrometry.	I
1110	31341	Standing transfer platform, pneumatic	Байнгын шилжүүлгийн тавцан, пневматик	A pneumatically-powered device designed as a platform for use by healthcare professionals to assist in the physical moving (transfer) of a person with a disability in an upright (standing) position over a short distance on a horizontal plane, e.g., from one place to another within an institution or building. The device consists of wheeled platform with a low centre of gravity and a surrounding framework with body securing devices (e.g., belts, foot straps, knee pads) to hold the person being transferred in the standing position. It includes pneumatically-powered mechanisms to raise or lower the platform. It is not intended to mechanically assist standing nor facilitate gait.	I
1111	31343	Laryngotracheal anaesthesia applicator	Ларинготрахеаль мэдээ алдуулалтын түрхэгч	A non-sterile container (e.g., a spray bottle) that is prefilled with an anaesthetic agent and intended to be used to apply the agent to the oropharynx and upper airway, to relax laryngotracheal reflexes prior to an intervention [typically insertion of an endotracheal (ET) tube or other type of tracheal tube]. It is typically used on non-pharmacologically paralyzed patients where multiple reflexes (e.g., the gag reflex, glottic closure, vocal cord spasm, cough reflex, and bronchoconstriction) could make difficult or inhibit safe intervention. This is a single-use device.	I

1112	31362	Examination/treatment table, line-powered	Үзлэг/эмчилгээний ширээ, шугамаар ажилладаг	A mobile, mains electricity (AC-powered) motorized table designed for routine/minor medical examinations and/or treatment of the patient. It will typically consist of a framework or a large pedestal with a flat table top surface which consists of some articulated sections that can be adjusted into a raised position. The height of the table top surface will also be power-adjusted. It is typically used in examination rooms, endoscopy facilities, electrophysiology (EP) laboratories, or outpatient departments for minor interventions.	I
1113	31657	Blood flowmeter transducer, non-indwelling	Цусны урсгал хэмжигч хувиргагч, тогтворгүй	A device designed to be used together with a blood flowmeter for the continuous external (extravascular) measurement of a patient's blood flow. It may measure the blood flow either in a closed chamber that encompasses the transducer outside of the body or over the outside of a blood vessel (formed as an open circle which is slid over the vessel, having different diameters to fit different size blood vessels). It may function by using ultrasound or electromagnetic (EM) technologies. This is a single-use device.	I
1114	31667	Catheter orifice occluder	Катетерийн нүхний бөглөрөл	A plug-like device intended to be inserted into a catheter (e.g., Foley catheter), or a catheter-like invasive device, to prevent flow through one or more orifice(s) in the catheter; it may also be referred to as a catheter spigot or catheter tip occluder. This is a single-use device.	I
1115	31683	Electrocardiographic lead switching adaptor	Электрокардиографийн хар тугалга солих адаптер	A switching device to which electrocardiograph (ECG) limb and chest leads may be attached. It is used to connect various combinations of limb and chest leads to the output terminals in order to create standard lead combinations (e.g., leads I, II and III). This device will typically be used when the devices to be connected are from different manufacturer's, enabling them to mate together. This is a reusable device.	I

1116	31684	Operating table patient pressure distribution pad, reusable	Үйлдлийн ширээний өвчтөний даралтыг хуваарилах дэвсгэр, дахин ашиглах боломжтой	A cushion (e.g., gel-filled, foam) intended to be placed between an operating table mattress or a patient positioner (e.g., torso intraoperative positioner, perineal post) and the patient to distribute the patient's body weight over a large surface area, for the prevention of pressure sores and tissue necrosis on prominent parts of the patient's body when immobilized for extended periods during surgery. It is available in various dimensions and shapes to accommodate various body parts such as the buttocks, shoulders, heels, or the entire body (usually excluding the head). This is a reusable device.	I
1117	31691	Blood pressure alarm	Цусны даралтын дохиолол	An electronic device that receives signals from a blood pressure sensor and produces a sound and/or visual signal when pre-set upper or lower limits are exceeded.	I
1118	31698	Shower head adjustment adaptor	Шүршүүрийн толгойг тохируулах адаптер	A device designed to be used by a person with a disability to assist them to adjust the position (height and angle) of the shower head when they are taking a shower.	I
1119	31699	Pacemaker electrode analyser	Зүрхний аппаратын электродын анализатор	A device connected to an implanted pacemaker electrode/lead that supplies an accurately calibrated, variable pacing pulse for measuring the patient's pacing threshold and intracardiac R-wave potential.	I
1120	31700	External pacemaker analyser	Гадаад зүрхний аппаратын анализатор	An electronic instrument designed to test an external pacemaker to ensure compliance with performance specifications. The device connects to the output of the pacemaker to test any or all of the pulse generator's parameters including pulse duration, pulse amplitude, pulse rate, and sensing threshold. The device may be used to test the function of an external pacemaker periodically, after repair, or for training purposes.	I

1121	31723	Suction system filter, plume particulate	Сорох системийн шүүлтүүр, чавганы тоосонцор	A screening device intended to be installed within the suction tubing line of a suction system, or the suction tubing used with a central vacuum system, to extract particulates from the plume of smoke created typically through the use of various tissue-burning surgical devices (e.g., laser, electrosurgical diathermy device), to prevent clogging of the suction or vacuum system. It will typically have a hydrophobic membrane that retains the particulate/bacterial pathogens through a combination of mechanical, electrostatic, or other means. The device comes in various sizes and designs and can be made of translucent plastic, allowing for inspection when in use. This is a single-use device.	I
1122	31724	Tubular support bandage, non-latex, single-use	Хоолойн тулгуур боолт, латексгүй, нэг удаагийн	A tubular elastic non-latex fabric (e.g., polyamide, Lycra) sleeve intended to be externally worn on a limb to provide support or local pressure to a part of the body, especially a joint, for various preventative/therapeutic applications (e.g., support soft tissue injuries) while enabling movement. Sometimes referred to as a tubigrip, it may be designed to accommodate one or more anatomies (e.g., ankles, knees, wrists). It is not designed specifically to apply an even or graduated force to the limb (i.e., not a compression/pressure garment). This is a single-use device.	I
1123	31729	Intraluminal artery stripper, reusable	Дотор судас тайлагч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to perform an endarterectomy (the removal of plaque deposits from arteriosclerotic arteries) during a vasculature reconstruction procedure. It is typically made of high-grade stainless steel and is available in various designs including the "MollRing cutter". Indications for its use include disabling claudication, ischemic pain at rest, ischemic skin lesions, or gangrene. This is a reusable device.	I

1124	31757	Orthodontic extraoral headgear	Ортодонтийн амны хөндийн толгойн хувцас	A dental device used in conjunction with orthodontic appliances to exert pressure on the teeth or the jaws from outside the mouth. An orthodontic headgear will typically have a strap that wraps around the patient's neck or head and an inner bow portion that is fastened to the orthodontic appliance in the patient's mouth, or utilizes rests on the chin and forehead (reverse pull headgear).	I
1125	31760	Fixed-regulator oxygen refillable cylinder	Суурин зохицуулагчтай хүчилтөрөгчөөр цэнэглэдэг цилиндр	A container designed as a refillable cylinder with an integrated pressure regulator used to hold compressed medical oxygen (O2) under safe conditions at high pressure (e.g., 50 - 200 Bar). It is typically filled with O2 when delivered from the gas supplier and includes a built-in pressure regulator that, when activated, releases the O2 at the correct working pressure. It is available in some cylinder sizes (capacity) and colour-coded to denote O2 content. The cylinder may be made of steel, aluminium (Al) or other ferrous or non-ferrous materials. O2 is used as an essential life support gas, for anaesthesia, and for therapeutic purposes.	I
1126	31774	Dental pulp testing electrode gel	Шүдний целлюлозын сорилтын электродын гель	An electrode gel for pulp testers is a device intended to be applied to the surface of a tooth before use of a pulp tester to aid conduction of electrical current. After application, this device cannot be reused.	I
1127	31776	Dental mirror, reusable	Шүдний толь, дахин ашиглах боломжтой	A hand-held, dental instrument intended to be used by a dentist for intraoral inspection or inspection and retraction. It typically consists of a stainless steel shaft terminating at the distal end in a small round mirror that is angled to the shaft. This is a reusable device.	I
1128	31780	Dental pit/fissure sealant	Шүдний ан цав / ан цавын чигжээс	A resin-based dental material suitable for sealing pits and fissures on teeth. It may be chemically cured or external energy cured. After application, this device cannot be reused.	I
1129	31787	Denture repair kit, home-use	Хиймэл шүд засах иж бүрдэл, гэрийн хэрэглээ	A convenient collection of equipment and materials typically used in an emergency by a layperson to repair a damaged denture. It enables the permanent repair of denture cracks and breaks without professional assistance. It typically consists of dental adhesive materials (e.g., a resin monomer system of powder and liquid glue) and mixing and application utensils. After application, this device cannot be reused.	I

1130	31799	Orthodontic appliance dimension gauge	Ортодонт төхөөрөмжийн хэмжээс хэмжигч	A dental instrument intended to be used for accurate measurement of the dimensions of an orthodontic appliance (e.g., orthodontic bracket height) especially as it relates to patient oral anatomy during the fitting of the appliance (e.g., determining distance from the incisal edge to an orthodontic bracket locator blade). This is a reusable device.	I
1131	31801	Orthodontic metal band pusher	Ортодонтийн металл тууз түлхэгч	A hand-held dental instrument intended to be used by an orthodontist for positioning and adapting orthodontic metal bands on teeth. This is a reusable device.	I
1132	31807	Dental abrasive disk guard	Шүдний зүлгүүрийн дискний хамгаалалт	A dental device intended to be fitted around an abrasive disk when rotating at high-speed to protect tissues not intended to come in contact with the abrasive disk. It is typically made of metal. This is a reusable device.	I
1133	31810	Anaesthesia warmer	Мэдээ алдуулах халаагуур	A mains electricity (AC-powered) heating device into which tubes containing anaesthetic solutions are placed intended to warm the solution prior to it being administered to a patient for anaesthesia. It typically consists of a tabletop device that has wells for the anaesthetic solution tubes, a heating element, a thermostat and operating controls. It is designed to be portable for use in different locations where anaesthesia is administered.	I
1134	31813	Dental articulation paper forceps	Шүдний үе мөчний цаасан хямсаа	A hand-held manual dental instrument designed for grasping and holding articulation paper during its application to a patient's oral cavity. It typically has a tweezers-like design with two conjoined blades with serrated tips at the working end. It is made of high-grade stainless steel and is available in various sizes. This is a reusable device.	I
1135	31814	Dental dressing forceps, reusable	Шүдний боолтны хямсаа, дахин ашиглах боломжтой	A hand-held manual dental instrument designed for grasping and holding a dental dressing during its application to a patient's oral cavity. It typically has a tweezers-like design with two conjoined blades with serrated tips at the working end. It is made of high-grade stainless steel and is available in various sizes. This is a reusable device.	I

1136	31815	Dental cotton roll	Шүдний хөвөн ороомог	A non-sterile designed as an absorbent, non-sterile mass of cotton or man-made fibres formed as a small, short, hard-packed cylinder (a roll) that is used as a saliva absorber and intended to absorb moisture from the oral cavity during dental procedures. It may also be used as a packing between the lip/cheek and the gum to give better examination/operative exposure. This is a single-use device.	I
1137	31817	Basic manual toothbrush	Үндсэн гарын авлагын шүдний сойз	An instrument designed to be used by a patient to manually brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head with rows of bristles (e.g., nylon) grouped in separate tufts or evenly distributed. The device is typically used with toothpaste. This is a reusable device.	I
1138	31822	Dental surgical scissors	Шүдний мэс заслын хайч	A hand-held dental instrument used to cut oral tissue during a dental surgical procedure. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and has blades that terminate in sharp, fine, points. This is a reusable device.	I
1139	31847	Dental collar/crown scissors	Шүдний хүзүүвч/титэм хайч	A hand-held dental instrument designed to cut metal bands. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and has short, robust, blades that can cut through the thin metal strips (bands). This is a reusable device.	I
1140	31848	Periodontal probe, reusable	Шүдний шүдний датчик, дахин ашиглах боломжтой	A hand-held dental instrument intended to be inserted into a periodontal pocket around a tooth to measure the depth of the periodontal pocket, in order to assess the health of the periodontium and to monitor the progress of disease. It is typically made of high-grade stainless steel and has a distal end with a thin, angled or curved blunt tip with scaled markings to indicate measurements (typically millimetres). This is a reusable device.	I

1141	31849	Rubber dam frame	Резинэн далангийн хүрээ	A flexible border that holds a rubber dam in a stretched state to improve access to the field of operation. It is typically made of a thick stainless steel U-shaped rod that has small hook-like retainers attached at intervals along its length. This is a reusable device.	I
1142	31863	Margin finishing dental file/rasp, reusable	Маржин өнгөлгөөний шүдний файл/расп, дахин ашиглах боломжтой	A hand-held manual dental instrument that has various forms of fine ridged cutting surfaces at its working end(s) designed to smooth and shape a tooth, an approximate bone (e.g., alveolar) and/or a dental restoration (e.g., filling). It is typically a one-piece instrument available in a variety of sizes and working end designs, including straight and curved ends, and often double-ended with a central handle; it is made of metal [e.g., stainless steel, titanium (Ti)]. This is a reusable device.	I
1143	31875	Endodontic reamer	Эндодонтийн зүсэгч	A hand-held dental instrument used with a rotary action and designed to debride or enlarge the root canal by a side cutting action. This is a reusable device.	I
1144	31887	Gynaecological operating table, hydraulic	Эмэгтэйчүүдийн мэс заслын ширээ, гидравлик	A mobile table powered by manually-operated hydraulic mechanisms designed to support a patient during gynaecological surgical procedures. The table surface consists of articulated sections that can be elevated, lowered for contouring, or removed to accommodate various anatomical positions; adjustable leg holders/stirrups are also included either directly attached to the table or to its side rails.	I
1145	31904	Dental curette, basic	Шүдний курет, үндсэн	A hand-held dental instrument with a spoon-shaped working end designed to scrape oral tissues. This is a reusable device.	I
1146	31908	Periodontal hoe	Шүдний шүдний зээтүү	A hand-held manual dental instrument with a small blade at an acute angle (e.g., 90 degrees) to its stem intended to be used with a pulling action to remove gross amounts of supragingival calculus, and some subgingival calculus, in large wide-open pockets where the gingival tissue is soft and easily cleaned. It is usually made of high-grade stainless steel. This is a reusable device.	I

1147	31916	Auditory training system	Сонсголын сургалтын систем	An assembly of devices used mainly in the education of deaf and hard of hearing (HH) children with speech and auditory training to help improve their language learning and their abilities to communicate with normal-hearing people. It typically consists of a microphone, an amplifier with one or more controls (i.e., the teacher's operating console), and large earphones (headphones) to enable a high acoustic output to be achieved over a wide frequency range, i.e., to achieve a better performance than a wearable hearing aid. Some systems permit connection of more than one pupil.	I
1148	31919	Intranasal splint, non-biodegradable	Хамрын доторх чигжээс, биологийн задралд ордоггүй	A non-biodegradable device intended to be temporarily placed via a nostril into the nasal cavity after surgery or trauma to help minimize bleeding by tamponade effect, prevent adhesions between the mucosal surfaces, and/or provide support to the surrounding tissues during the healing period. It is typically made of plastic, silicone, and/or a blood/liquid absorptive material and is removed at the discretion of the physician. This is a single-use device.	I
1149	31920	ENT headrest	чих хамар хоолойн толгойн түшлэг	A device designed to be attached to an appropriate operating table to support and stabilize the head of a recumbent patient during an ear/nose/throat (ENT) procedure. The headrest is typically made of metal and synthetic materials that incorporate a cup-shaped, or indented with a central hole, cushion or pad that provides a softer surface for the patient's head to rest in. It is available in various shapes and sizes and will typically include mechanical mechanisms that enable adjustments in relation to the table top. This is a reusable device after appropriate cleaning.	I

1150	31928	Hand-held free weight exerciser	Гарын чөлөөт жингийн дасгалын төхөөрөмж	A piece of exercise equipment designed primarily to increase muscle strength especially of the upper body by repetitive lifting and lowering with the hands and arms. It may be one of several types of hand-held weights or masses that are not attached to another structural device, including barbells, dumbbells, kettlebells, weight bars, weight plates, and medicine balls. The device is intended to improve strength especially in the arms, wrists, shoulders, chest, and back; it may also be used to help improve lower-body muscle strength and improve body metabolic rate, balance, flexibility, mobility, and bone density.	I
1151	31934	Middle ear moulding	Дунд чихний хэлбэр	A preformed device intended to be implanted to reconstruct the middle ear cavity during repair of the tympanic membrane by permitting an ample air-filled cavity to be maintained in the middle ear; it also promotes regeneration of the mucous membrane lining of the middle ear cavity. It is typically made of synthetic polymer materials [e.g., polyamide, polytetrafluoroethylene (PTFE), silicone elastomer or polyethylene (PE)].	I
1152	31940	Earphone cushion	Чихэвчний дэр	A device that is part of an earphone, sometimes detachable, which rests against the ear or head. In the case of audiometric ear phones the cushion is part of the specification for calibration purposes.	I
1153	31946	Hearing protector	Сонсголын хамгаалагч	A device placed within the ear canal, in the concha, over the ear, or over a substantial part of the head to protect the ear from noise.	I
1154	31957	Ileal-conduit urostomy bag	Ileal-conduit urostomy уут	A plastic pouch designed to attach to a patient's skin around a stoma for use as a receptacle for the collection of urine following a urinary diversion constructed with the ileum. This is a single-use device.	I
1155	31965	Rectal probe	Шулуун гэдэсний датчик	A hand-held manual surgical instrument designed for exploring the tissues and structures of the rectum during a gastroenterological/urological surgical procedure. This is a reusable device.	I

1156	31975	Urethral/ureteral catheter connector, sterile	Шээсний суваг/шээсний сувгийн катетер холбогч, ариутгасан	A small, sterile, connecting device intended to create a mechanical union between the proximal end of urethral and/or ureteral catheter and an external device (e.g., irrigation/vacuum unit, syringe, urine drainage bag) to enable infusion, drainage, or other procedures to be performed through the lumen of the catheter; it has no additional functions (e.g., not a two-way valve). It may also be intended to connect a urinary condom catheter (a penis sheath-type catheter) to a urine drainage bag. This is a single-use device.	I
1157	31978	Finger-cot surgical drape	Хурууны хүүхдийн мэс заслын даавуу	A protective covering made of latex designed to isolate a urological/gynaecological surgical site from contamination (e.g., microbial, substance), that has a projection (finger cot) retained within the rectum or vagina to allow repeated insertion of the surgeon's finger into the rectum (e.g., during a transurethral prostatectomy) or vagina, keeping the glove of the surgeon from being contaminated. This is a single-use device.	I
1158	31981	Urethral catheter, coude	Шээсний сувгийн катетер, коуде	A flexible tube with a bent tip used to facilitate insertion into the urinary bladder via the urethra for the purpose of introducing/draining fluids or performing medical/surgical procedures. This is a single-use device.	I
1159	31987	Colostomy rod	Колостоми саваа	A device that is placed through a loop of colon brought out through the abdominal wall to temporarily keep it from sliping back through the surgical opening during the loop colostomy procedure. This is a single-use device.	I
1160	31989	Stomal appliance cement	Стомал төхөөрөмжийн цемент	A substance intended to be used to bind a stomal appliance, typically a tube (e.g., a colostomy or ileostomy tube) used in an operation to create a channel from an area inside the body to the outside, to the walls of a stoma (surgically-created opening in the body). This is a single-use device.	I

1161	32015	Cystoscopic rongeur	Цистоскопийн ронжер	A rigid, hand-held manual instrument intended to be used with a compatible rigid cystoscope for the removal of hard/tough tissue (e.g., calculi) from the urinary tract during a cystoscopic procedure. It is typically a very long instrument with one sliding and one stationary rod whose distal ends are equipped with sharp-edged, scoop-shaped jaws attached to pivoted handles that, when squeezed together, close the jaws to bite (cut) through tissue. It is introduced into the body through an artificial orifice or the working channel of the endoscope. This is a reusable device.	I
1162	32021	Suprapubic catheter introducer, reusable	Супрапубик катетер нэвтрүүлэх, дахин ашиглах боломжтой	A rigid surgical instrument(s) intended to gain percutaneous suprapubic access to the urinary bladder, via the lower abdominal wall, for placement of a drainage catheter (not included). It includes a sharp pointed trocar blade and/or a suprapubic access cannula/sleeve, and is typically made of high-grade stainless steel. This is a reusable device.	I
1163	32033	Battery box	Зайны хайрцаг	A special container intended to be used to house batteries for protective purposes. This device will typically be portable so that the user can safely carry the power source.	I
1164	32036	Headband, reusable	Толгойн тууз, дахин ашиглах боломжтой	A device designed to be worn on the head of a healthcare provider for the mounting of another device, most commonly a head-worn light or a binocular indirect ophthalmoscope (BIO), so that the mounted device will remain directed in the user's line of vision despite head movement. It is typically adjustable for a custom fit. This is a reusable device.	I
1165	32037	General-purpose light source	Ерөнхий зориулалтын гэрлийн эх үүсвэр	A mains electricity (AC-powered) device designed to produce light of high intensity, often called cold light, for various patient examination and procedure applications. Light transfer occurs either directly or through a fibreoptic-light cable connecting this device to an attached device (e.g., headlight, microscope, or endoscope).	I
1166	32043	Laparoscopic surgical procedure kit, non-medicated, reusable	Дурангийн мэс заслын иж бүрдэл, эмийн бус, дахин ашиглах боломжтой	A collection of various laparoscopic and surgical instruments (e.g., access cannulae, irrigation/aspiration cannula, forceps), dressings, and additional materials intended to be used specifically to perform a laparoscopic surgical procedure. It does not contain pharmaceuticals. It may be referred to as a procedure tray. This is a reusable device.	I

1167	32045	Gastro-urological retractor, fibreoptic	Ходоодны урологийн ретрактор, фиброптик	A surgical instrument with an integrated fibreoptic bundle for illuminating deep surgical sites, used to mechanically separate tissue or other anatomical parts to expose or access organs or tissues during a gastro-urological (GU) procedure. It is made of high-grade stainless steel and the fibreoptic bundle is attached to a separate light source, typically via a light-source cable, to produce illumination. This is a reusable device.	I
1168	32048	Patient identification band	Өвчтөнийг таних зурвас	A single-piece circular band designed to be worn around the wrist (i.e., bracelet, wristband), or sometimes ankle in babies, to provide identification and basic information about a patient. It is typically a slender, thin, and soft plastic band, with a self-locking device, that usually includes printed information with the name, date of birth, patient registration number, and other data that permit clear and easy identification of a patient in the healthcare facility. Some devices also include barcode information intended for reading with a computerized reader/scanner.	I
1169	32071	Biopsy forceps cover	Биопсийн хямсаа бүрхүүл	A sterile device made of a disposable material, e.g., plastic, that is used as a physical barrier on a biopsy forceps for protection against cross-contamination. This is a single-use device.	I
1170	32072	Urine flowmeter, single-use	Шээсний урсгал хэмжигч, нэг удаагийн	A non-electrical device that is used to measure the volume or flow of urine from a patient, either during the course of normal urination or while the patient is catheterized. The device may include a drip chamber to reduce the risk of retrograde bacterial contamination of the bladder. This device is a single-use device. This group of devices may reflect old technology.	I

1171	32078	Intestinal clamp, locking	Гэдэсний хавчаар, түгжих	A hand-held manual surgical instrument applied to the intestines having parallel, square-shaped blades that are hinged at one end, and with a catch lock at the other to lock the blades; the blades are brought together over the intestines to hold and close the intestines and to prevent bleeding. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel. The working end may have a variety of single- or dual-blade designs (e.g., straight or curved with grooves and/or serrations for grip). The blades are flat and thin in profile to prevent trauma to the gastrointestinal tissue. This is a reusable device.	I
1172	32079	Ophthalmic light source	Нүдний гэрлийн эх үүсвэр	An electrically-powered, noninvasive device designed to produce light of high intensity, often called cold light, for ophthalmic examination and procedure applications. Light transfer occurs either directly or through a fibreoptic-light cable connecting this device to an attached device (e.g., fibreoptic probes and micro light-conducting ophthalmic instruments that provide intraocular illumination).	I
1173	32089	Cystographic/urethrographic catheter, male	Цистографи/шээсний бичлэгийн катетер, эрэгтэй	A sterile, flexible or semi-rigid tube with one or more openings in the distal tip, designed to infuse a contrast medium into the male urethra, and possibly urinary bladder, for diagnostic radiographic imaging of the urethra and/or bladder. The imaging is typically used to delineate abnormalities of structure or function of the bladder and urethra, including the detection of vesicoureteral reflux (VUR) and stress incontinence. This is a single-use device.	I
1174	32098	Laparotomy ring	Лапаротомийн бөгж	A surgical instrument designed in the shape of a circular band that is set into the abdominal wall to hold open an incision during surgery on the abdominal organs. It functions as a fixed-length access retractor or wound retractor and is used in procedures where entry of the surgeon's hand into the abdominal cavity may facilitate the procedure, and for the extraction of large specimens. This device is used in colorectal, urological, gynaecological, and general surgical procedures. This is a reusable device.	I

1175	32099	Bladder neck spreader	Давсагны хүзүү тараагч	A manual gastroenterology-urology surgical instrument with specially designed moveable blades intended to be used to separate and spread the bladder neck. This is a reusable device.	I
1176	32100	Scoop, surgical	Хутгуур, мэс заслын	A spoon-shaped surgical instrument designed to be used for gastroenterological and urological surgical procedures. This instrument includes, e.g., blood scoops, biopsy scoops, ovum scoops, placenta scoops, secretion scoops or uterine scoops.	I
1177	32103	Gastro-urological suturing needle	Ходоодны уурологийн оёдлын зүү	A cylindrical shaped, solid instrument of various diameters, whose distal tip may be configured in various geometrical forms, used to insert and pull suture material through tissues of gastrointestinal and urological structures during a gastroenterological/urological (GU) procedure. The suture serves to unite two tissue surfaces. This is a reusable device.	I
1178	32119	Haemodialysis dialysate tank	Гемодиализийн диализатын сав	A large, dedicated, tank containing the dialysate used to serve more than one haemodialysis system.	I
1179	32124	Alarm, pillow pressure, haemodialysis	Сэрүүлэг, дэрний даралт, гемодиализ	A device that activates an audible/visible signal when it detects a low blood flow rate from the arterial blood tubing set connected to a haemodialysis system. The device consists of a small pressure pillow which senses the rate of blood flow. This generic device group may reflect old technology.	I
1180	32134	Lung dissection forceps	Уушигны задлах хямсаа	A hand-held manual surgical instrument designed for dissection of lung tissue during a surgical intervention or at autopsy. It typically has a tweezers-like design with two legs that are conjoined at the proximal tip. It is made of high-grade stainless steel and is available in various sizes. The working end will have grasping blades that are shaped as oval rings or flat grasping jaws that are typically serrated to provide better grip on the lung tissue. The surgeon applies pressure to the two legs of the instrument when grasping the tissue. This is a reusable device.	I

1181	32139	Blood access tubing crimping pliers	Цусны хүртээмжтэй хоолойг хавчих бахь	A hand-held manual instrument designed to control the flow of blood through an implanted or nonimplanted blood access device [e.g., an arteriovenous (AV) shunt] via external compression of its tubing. The instrument, typically used during haemodialysis, is designed with two blades which enable compression of the blood access device. This is a reusable device.	I
1182	32146	Medical tubing clip/clamp, temporary, non-calibrated, reusable	Эмнэлгийн хоолойн хавчаар/хавчаар, түр зуурын, тохируулаагүй, дахин ашиглах боломжтой	A non-sterile, manual device designed to compress a piece of medical device tubing or tubular container to reversibly occlude its lumen and stop the flow of material within; it is not intended for patient-contact. It has a manual mechanism (e.g., hinging, roller-type, vice-like) whereby pressure on the tube can be applied or removed, however it is not a calibrated device (e.g., it is often a roller type, clip, or screw-clamp). It may be referred to as a clip or a clamp. This is a reusable device.	I
1183	32153	Bed mattress support platform, electric	Орны матрас дэмжих тавцан, цахилгаан	A mains electricity (AC-powered) medical bed structure that supports a medical bed patient surface (e.g., a mattress) and that can articulate and/or change its surface to facilitate various therapeutic, diagnostic, and convenience positions. It is typically a flat structure made of a metal frame that operates in response to an electrically-operated bed control device.	I
1184	32159	Assistive jacket	Туслах хүрэм	An assistive garment that is specially designed/adapted for use by a person with a disability to be worn on the upper torso and shaped with full-length sleeves, a collar, and an opening at the front. It may be worn by a male or a female and will typically be constructed with features that accommodate the disability, e.g., large buttons, Velcro fasteners, zip fasteners, wide sleeves and large pockets. Coats and jackets for outdoor use are not included in this group of devices.	I

1185	32170	Professional examination gown, single-use	Мэргэжлийн шалгалтын даашинз, нэг удаагийн	A garment made of natural and/or synthetic materials intended to be worn by healthcare providers, sometimes over scrub suits, while examining patients. It can be fluid resistant or impervious to fluid. An examination gown is used during patient examination procedures to protect both the patient and staff from the transfer of contaminants such as microorganisms or body fluids. This is a single-use garment.	I
1186	32180	Antimicrobial bed mattress cover	Нянгийн эсрэг ор дэрний матрас бүрээс	A device made of soft textile materials shaped to fit over a bed mattress, to protect the mattress and prevent cross-contamination, that is treated/impregnated with an antimicrobial substance to control bacterial and fungal growth on the fabric and reduce the levels of house dust mites (HDM) and their allergen-containing faecal droppings. The device can be laundered for cleaning. This is a reusable device.	I
1187	32191	Infant/paediatric urine collection bag	Нярай/хүүхдийн шээс цуглуулах уут	A flexible plastic pouch designed to connect to a urinary catheter (typically indwelling) to collect discharged urine from an infant/paediatric patient; it is not designed with an opening for urine drainage. The device is not attached to the patient and is disposed of when full. This is a single-use device.	I
1188	32192	Umbilical cord clip	Хүйн хавчаар	A device placed on an umbilical stub (created by severing the umbilical cord of an infant after birth) for haemostasis, typically until the stub falls off. The device is typically designed as small metal or plastic pincers shaped to slip onto the umbilical cord where it is compressed to create the occlusion. This is a single-use device.	I
1189	32204	Stretcher, general-purpose	Дамнуурга, ерөнхий зориулалттай	A manually-pushed device designed as a stretcher on which a patient lies for transport, e.g., from one department to another within the hospital. It will typically have a wheeled undercarriage, which may be foldable. It may be supplied with various kinds of equipment to assist the patient during transport. For stretchers used to recline or maintain other positions see the appropriate generic device group.	I

1190	32207	Skin-closure adhesive strip	Арьсыг хаадаг наалдамхай тууз	A small, narrow flexible band (of fabric, plastic, paper, or other material) coated on one side with a pressure-sensitive adhesive, used to approximate the edges of superficial wounds. The device may be hypoallergenic and/or waterproof. This is a single-use device.	I
1191	32212	Perineal binder	Периналь холбогч	A therapeutic device, usually made of cloth, used to support the pelvic floor and the structures occupying the pelvic outlet, or to hold a dressing in place over that part of the body. This is a single-use device.	I
1192	32241	Fibreoptic operating light system	Шилэн кабелийн үйлдлийн гэрлийн систем	A system of lights intended to be used in the operating room (OR) to illuminate the surgical site over a prolonged period for optimal visualization of small, low-contrast objects at varying depths or through small incisions. It operates through light provided by a light source, usually located outside of the surgical field, which is delivered through fibreoptic cables to the site of operation. The cables will be mounted, e.g., from the ceiling or attached to a suitable floor mount, or they may possibly connect directly to the surgeons head-worn head light.	I
1193	32245	Medical monitor/light mount	Эмнэлгийн монитор/гэрлийн бэхэлгээ	A permanently-fixed structure designed to support a light and/or an image display monitor that is used for medical purposes [e.g., in an operating room (OR) and/or an examination/treatment room]. The mount is intended to be permanently-fixed to the ceiling and/or wall. This device will be designed to enable dynamic positioning (e.g., with dynamic arms, sliding bracket); the device to be mounted (medical light/monitor) is not included.	I
1194	32252	Transillumination phlebectomy system illuminator	Transillumination phlebectomy системийн гэрэлтүүлэгч	A hand-operated surgical instrument, a component of a transillumination phlebectomy system used for the resection and ablation of varicose veins, intended to supplycold light for the percutaneous illumination and visualization of a phlebectomy operative site. It typically consists of a tubular stainless steel sheath in which a fibreoptic bundle conducts the light from a light source, via a connected fibreoptic cable. This is a reusable device.	I

1195	32259	Endoscope cine camera	Дурангийн камер	An electro-optical device that is designed to be attached, either directly or with an adaptor, to a flexible or rigid endoscope to obtain moving-picture documentation of endoscopic findings and procedures. It typically consists of a lightproof chamber with an aperture fitted with a lens and a shutter, through which the image of an object is projected onto a surface for recording. It records a sequence of photographs and usually projects them sequentially to obtain a motion picture. The device may also include audio recording capabilities.	I
1196	32261	General/plastic surgery mirror	Ерөнхий/хуванцар мэс заслын толь	A reflective device designed to be used to assist practitioners during general/plastic surgery by displaying the image of an object placed before it.	I
1197	32262	General-purpose calliper, metallic	Ерөнхий зориулалтын калипер, металл	A manually-operated metallic device with an analogue Vernier scale designed to make accurate measurements of a patient's anatomy, or of other objects, during surgery, autopsy, or in other clinical settings. It is intended to make external measurements (e.g., external diameter, thickness), internal measurements (e.g., internal diameter, depth), measure length, or make step measurements (i.e., from a larger edge to a lesser edge on an object). It is typically made of stainless steel or chrome-plated steel and can be sterilized in a steam sterilizer (an autoclave). This is a reusable device.	I
1198	32263	Throat knife	Хоолойн хутга	A hand-held manual surgical instrument with a handle and an extra long, single-edged blade used during an autopsy to cut evenly across the entire throat of a cadaver. It is typically a one-piece instrument made of high-grade stainless steel; the blade is acutely V-shaped like that of an open razor (cut-throat razor). This is a reusable device.	I
1199	32264	Massage table/couch, line-powered	Массажны ширээ/буйдан, шугамаар ажилладаг	A mains electricity (AC-powered) table designed for various kinds of complementary therapy (e.g., massage, acupuncture, aromatherapy, reflexology, kinesiology). It consists of a framework with a flat tabletop surface whereby the height of the table is electrically adjusted, and may incorporate a face hole (the patient's face fits into this when lying prone), a headrest, and an armrest(s). This device is typically known as a massage/therapy table, couch or bed.	I

1200	32265	Surgical video camera	Мэс заслын видео камер	An electro-optical device (e.g., with an image sensor chip) designed to obtain moving-picture documentation of an open surgical procedure. The device is designed for transducing visual images as a sequence of electronic data following a pre-established standard; the images are usually displayed sequentially on the screen of a monitor as a video image. The device may include audio recording capabilities.	I
1201	32266	Massage table/couch, non-powered, non-portable	Массажны ширээ/буйдан, цахилгаангүй, зөөврийн бус	A manually-adjusted table designed for various kinds of complementary therapy (e.g., massage, acupuncture, aromatherapy, reflexology, kinesiology). It consists of a non-foldable framework (non-portable) with a flat tabletop surface which may have a head section, headrest, a face hole (the patient's face fits into this when lying prone), and/or armrest(s); positional adjustments of these components, including platform height, are made manually. It is typically known as a massage/therapy table, couch or bed.	I
1202	32271	Surgical cine camera	Мэс заслын камер	An electro-optical device designed to obtain moving-picture documentation of an open surgical procedure. It typically consists of a lightproof chamber with an aperture fitted with a lens and a shutter, through which the image of an object is projected onto a surface for recording. It records a sequence of photographs and usually projects them sequentially to obtain a motion picture. The device may also include audio recording capabilities.	I
1203	32274	Soft-rubber bed mattress overlay	Зөөлөн резинэн орны матрас давхарга	A pad or thin mattress made of soft rubber, usually full-body length, which is placed on top of a bed mattress to distribute an occupant's body weight over a large surface area, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I

1204	32285	Endoscope still camera	Дурангийн камер	An electro-optical device designed to be attached, either directly or with an adaptor, to a flexible or rigid endoscope to obtain still-picture documentation of endoscopic findings and procedures. It typically consists of a lightproof chamber with an aperture fitted with a lens and a shutter, through which the image of an object is projected onto a surface for recording. Included are digital and photographic film cameras.	I
1205	32287	Surgical camera lens	Мэс заслын камерын линз	An optical element of a surgical camera designed to change the degree of convergence or divergence of transmitted light to enable modification of viewed images (e.g., magnification, wide angle). It is made of glass and is available in a variety of dimensions. This is a non-sterilizable, reusable device.	I
1206	32288	Surgical camera holder	Мэс заслын камер эзэмшигч	A device designed to hold or stabilize a video camera or endoscope (e.g., to a table or rail) while recording a surgical operative procedure. This is a reusable device.	I
1207	32289	Surgical camera frame	Мэс заслын камерын хүрээ	A bordered grid typically mounted in front of the lens of a surgical camera to create a picture frame that will be superimposed upon the photographs taken during an operative procedure to provide spatial reference points. This is a reusable device.	I
1208	32292	Surgical helmet	Мэс заслын дуулга	A device worn by operating room personnel (the surgeon or assisting doctors/nurses) during a surgical procedure to protect them from the transfer of microorganisms, body fluids, and particulate material which may inadvertently come into contact or splash into their face. It is typically composed of a helmet frame with a transparent Plexiglas face shield. This is a reusable device.	I
1209	32297	Surgical cap, single-use	Мэс заслын малгай, нэг удаагийн	A head covering designed as a cap intended to be worn by surgical staff during an operation to protect both the patient and themselves from the transfer of microorganisms, body fluids, and particulate material; it may also be used as a hygienic head covering in other healthcare settings. It is usually made of reinforced paper or non-woven materials. This is a single-use device.	I

1210	32302	Inflatable extremity splint	Ye мөчний хийлдэг боолт	A non-sterile sleeve intended to be placed around an arm or leg and inflated to immobilize and protect the limb. It is typically used by emergency medical services (EMS) as a temporary measure in emergencies, e.g., accidents and motor vehicle crashes, to stabilize the limb for transport to a hospital. This is a reusable device.	I
1211	32307	Operating room stool	Хагалгааны өрөөний сандал	A seat, usually padded and height-adjustable, intended to be occupied by operating room (OR) staff during surgical procedures as an alternative to standing; it does not include support for the back or arms. It is intended to be used in ORs or cleanrooms and is therefore constructed so that it is easy to clean to help minimize risk of contamination.	I
1212	32312	Surgical mallet	Мэс заслын алх	A hand-held manual surgical instrument designed to strike a surface or another device (e.g., a surgical chisel, gouge, driver) to drive it during a surgical intervention. It is available in a variety of designs and materials; the shaft is typically made of metal (e.g., chromed iron (Fe) or high-grade stainless steel), but can be made of synthetic materials (e.g., Tufnol), and tapers distally to the head. The head is typically a solid, cylindrical shape normally being double-ended and made of solid (iron/steel) or shock-absorbing materials (e.g., rubber, plastic, or Tufnol). Also referred to as a surgical hammer it may also be used for autopsy. This is a reusable device.	I
1213	32313	Skin marking pen, reusable	Арьс тэмдэглэгээний үзэг, дахин ашиглах боломжтой	A dedicated pen (typically a felt-tip pen) intended to be used to delineate areas on the skin surface of a patient (e.g., to outline surgical incision sites, for dermatology applications) utilizing non-toxic ink. This is a reusable device.	I
1214	32321	Vein stripper, single-use	Судас тайлагч, нэг удаагийн	A sterile hand-held surgical instrument designed to manually excise (strip by stab avulsion) a length or section of a vein from a patient, typically varicose veins [superficial dilated tortuous veins especially of the legs (greater saphenous veins)]. It is typically designed as: 1) a flexible stainless steel cable with a stripping cup or disk (commonly known as an olive) attached to one end, and a handle at the other (some types can employ a guide tip); or 2) a rigid or semi-rigid rod terminating in a closed ring or loop (also known as a ring stripper). This is a single-use device.	I

1215	32322	Tourniquet, manually-operated	Турникет, гар ажиллагаатай	A strap or tubing intended to be wrapped around a patient's limb and tightened to reduce the circulation of blood.	I
1216	32357	Suturing needle, reusable	Оёдлын зүү, дахин ашиглах боломжтой	A non-sterile, cylindrical-shaped, solid, metal instrument intended to be used to insert and pull suture material through tissue (e.g., skin, fascia, serous, vascular, or other tissue/organ) during surgical stitching of tissues. It is available in various lengths, curvatures, diameters, cross-sectional shapes, and distal end forms; included is the Reverdin type needle with an eye that can be opened and closed with a sliding mechanism on a handle intended to facilitate ease of suturing. This is a reusable device intended to be sterilized prior to use.	I
1217	32364	Tonsil punch forceps	Гүйлсэн булчирхайд цохилт өгөх хямсаа	A hand-held manual surgical instrument with a cutting/biting action intended to be used for the removal of the tonsils during a tonsillectomy. It is a metallic forceps-like instrument with a distal mechanism designed to bite/punch the tonsil tissue when the handles are squeezed together. It is not intended for cutting bone (i.e., not a rongeur). This is a reusable device.	I
1218	32368	Cervical cytology brush	Умайн хүзүүний цитологийн сойз	A device with bristle-like projections designed to obtain a cervical biopsy of a suspicious area or visible exocervical lesions detected during a vaginal examination for the purpose of obtaining a tissue diagnosis from a woman with intraepithelial disease. It is inserted into the vagina and the head of the brush is firmly rotated over the area of interest until is covered with a bloody-mucoid sample. Some types may also have small bristles on a central protrusion that simultaneously enters the endocervical canal. The sample is secured in a cytology fixation solution or smeared onto a microscope slide for a Papanicolaou test (PAP). This is a single-use device.	I

1219	32369	Manual surgical stapler, reusable	Гарын авлагын мэс заслын үдэгч, дахин ашиглах боломжтой	A hand-held, manual surgical instrument designed to be used during open or endoscopic (i.e., endotherapy) surgical procedures for the application of surgical staples to approximate internal soft tissues (e.g., two ends of bowel) or for fixation of a surgical mesh to tissue during a laparoscopic procedure (e.g., hernia repair). This device, typically pistol-like in design, is loaded with staples and is intended to mechanically deliver a single or a multiple row of staples, depending upon the design. This is a reusable device intended to be sterilized prior to use.	I
1220	32382	Manual scalpel blade, reusable	Гар хуйхын ир, дахин ашиглах боломжтой	An interchangeable device designed to mount a compatible handle and function as the cutting edge of a scalpel. The device is made of high-grade stainless steel alloy and is used as a surgical instrument to cut and dissect tissues. This is a reusable device.	I
1221	32388	Dermabrasion brush, rotary	Арьсны сойз, эргэдэг	A device with wire bristles that is rotated in a power-driven tool to plane the skin (surgical removal of the epidermis and as much of the dermis as necessary) to remove scars, tattoos, pigmented nevi, fine wrinkles, or other irregularities. This is a reusable device.	I
1222	32418	Urological operating table, electromechanical	Урологийн мэс заслын ширээ, цахилгаан механик	A mobile, electrically-powered motorized table designed to support a patient during urological examination and surgical procedures, including cystoscopic procedures and both transurethral and open surgery of the urinary tract. Commonly known as a transurethral resection (TUR) table, its surface consists of a flat section with a headrest; It includes adjustable leg holders/stirrups either directly attached to the table or to its side rails. It may also include traction handles and an integrated urine/irrigation fluid collection tray with a filter to catch urinary stones and/or stone fragments.	I

1223	32462	Cast shoe, single-use	Цутгамал гутал, нэг удаагийн	A footwear designed to be worn over a foot that is encased in a cast in order to protect the cast material and add stability for the patient while ambulating. Its foot bed provides comfort when ambulating and it may or may not protect the toes. It is available in a variety of designs and sizes and can be typically used both indoors and outdoors; some types may be used without a cast, e.g., in the case of a toe fracture. This is a disposable device that is intended for a single-patient use.	I
1224	32526	Tuning fork	Тохируулагч сэрээ	A hand-held, mechanical test instrument designed as an acoustic resonator used to test the hearing acuity of a patient, to diagnose hearing disorders, and to test for vibratory sense. It is usually made of stainless steel in the form of a two-pronged fork with the prongs (tines) formed from a U-shaped bar with a handle attached at the base of the "U". It resonates at a specific constant pitch when set vibrating by striking it against a surface or with an object. The pitch that a particular tuning fork generates depends on the length of the two prongs. This is a reusable device.	I
1225	32529	Leukotome	Лейкотом	A surgical instrument designed to cut brain tissue (i.e., cutting white matter, leukotomy). It typically consists of a thin metallic loop wire attached to a rigid metallic cannula. The shaft is introduced in the brain through a bur hole and the tissue is cut by rotating the leukotome around its axis with the wire extended. The device is used in neurosurgical procedures, usually in image-guided stereotactic procedures. This is a reusable device.	I
1226	32546	Tremor transducer	Чичиргээний хувиргагч	A device used together with a parent device (e.g., a tremograph) for the measurement of the degree of tremor caused by certain diseases. This can be useful in the diagnosis of certain movement disorders, such as essential tremor and tremor in Parkinson's disease. This is a reusable device.	I

1227	32547	Medical networking interface unit	Эмнэлгийн сүлжээний интерфейсийн нэгж	An electronic unit or device assembly intended to be used to interface one or more noninvasive devices for digital communication of clinical data, typically from a patient data gathering point (e.g., patient monitor/monitoring system) to a computer/network server; it is not intended to store data, display data/images, or control other devices. It may be an ethernet router, network switch, wireless transmitter and/or receiver, or cellular device intended for wired and/or wireless transmission of data. It is not ambulatory and not patient worn.	I
1228	32558	Tracheolaryngeal trocar, reprocessed	Гуурсан хоолойн трокар, дахин боловсруулсан	A rigid, surgical instrument with a sharp pyramidal or conical point used to puncture the tracheolaryngeal region for access to the trachea (windpipe), the larynx, or the sinus cavities (e.g., the paranasal sinuses) during ear/nose/throat (ENT) surgery. It is typically assembled and used with a compatible sleeve, filling its lumen, thereby allowing the introduction of this assembly. Following puncture, the trocar is withdrawn providing a working channel to the cavity. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	I
1229	32560	Neurosurgical retractor, self-retaining	Мэдрэлийн мэс заслын ретрактор, өөрийгөө хадгалдаг	A surgical instrument for separating and/or drawing aside nervous system structures or other tissues to permit examination or intervention. Once set, this retractor maintains its set position. It is made of high-grade stainless steel. This is a reusable device.	I
1230	32563	Manual surgical saw, rigid	Гарын авлагын мэс заслын хөрөө, хатуу	A hand-held manual surgical instrument typically used in orthopaedic surgery for cutting bone or other body tissue through a sawing action performed by the user. It typically consists of a metal frame with an attached handle that firmly holds an exchangeable blade usually with the cutting teeth set in a straight line; or it may have an integral blade as part of the design which can have a straight or curved cutting edge. This is a reusable device.	I

1231	32572	Cottonoid pad	Cottonoid дэвсгэр	A cushion-like mass made of cotton or man-made fibres used during surgery (e.g., neurosurgery) to protect tissue, absorb fluids, and/or stop bleeding. This is a single-use device.	I
1232	32577	Neurosurgical headrest	Мэдрэлийн мэс заслын толгойны түшлэг	A device designed to be attached to an appropriate operating table to support and immobilize the head of a recumbent patient during a neurosurgical procedure. The headrest is typically made of metal and synthetic materials that incorporate a semicircular cupped cushion or pad that provides a softer surface for the patient's head to rest in. It is available in various shapes and sizes and will typically include mechanical mechanisms that enable adjustment to facilitate surgeon access to the skull. This device may be attached to dedicated chairs used for neurosurgical procedures. This is a reusable device.	I
1233	32581	Surgical clip rack	Мэс заслын хавчаартай тавиур	A device typically designed as a container used to hold and protect implantable clips during the sterilization process. The rack also serves to hold the clips in the proper geometric orientation to permit mating with the clip applier used during the clip's application. This is a reusable device.	I
1234	32591	Aneurysm clip applier	Аневризм хавчуур түрхэгч	A surgical instrument designed for the application/insertion of aneurysm clips (devices for approximating the edges of the neck of an aneurysm or for the prevention of bleeding from small individual blood vessels). This is a reusable device.	I
1235	32595	Gynaecological grasping forceps	Эмэгтэйчүүдийн барих хямсаа	A hand-held manual surgical instrument intended to be used for the general grasping, pulling, or compression of internal structures during a gynaecological surgical intervention; they are not intended for laparoscopic use. It typically has a scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end can have a variety of blade designs (e.g., straight or curved). The blades are typically flat and thin in profile, and rounded so that they do not cause trauma to the internal organs. This is a reusable device.	I

1236	32596	Foetal vacuum extraction system cup, reusable	Ургийн вакуум олборлох системийн аяга, дахин ашиглах боломжтой	A suction cap intended to be applied to the scalp of a foetus to facilitate vaginal or Caesarean section delivery by traction. It typically has a soft liner to prevent tissue damage, a connection to the vacuum source, a handgrip for the clinician to apply traction, and may include a vacuum release valve and fluid retention trap. Suction may be provided by an electrically-powered suction pump, the hospital central vacuum system, or a hand-operated vacuum pump. It is typically used for dystocia, uterine inertia, maternal exhaustion, or maternal/foetal distress. This is a reusable device.	I
1237	32598	Uterine fibroid hook	Умайн фибройд дэгээ	A shaft-like surgical instrument whose distal end tapers to form a hook or multiple hooks used to fix or apply traction to uterine fibroids during a gynaecological procedure. It is typically a one-piece instrument made of high-grade stainless steel with a handle at the proximal end that is available in various shapes. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I
1238	32601	Obstetrical decapitation hook	Эх барихын толгой таслах дэгээ	A shaft-like hand-held manual surgical instrument that tapers towards the distal end to form a groove which carries a strong cord or ligature designed to decapitate a foetus. This is a reusable device.	I
1239	32602	Umbilical cord scissors, reusable	Хүйн хайч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed specifically to cut the umbilical cord after birth. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is metallic and is available in various designs and sizes; the blades can have a variety of sizes and designs, e.g., curved, acutely angled at the tip, or have flat opposing moon shapes, and may be serrated. This is a reusable device.	I
1240	32604	Uterine packer	Умайн савлагч	A hand-held, surgical instrument used to introduce dressings into the uterus or vagina. This is a reusable device.	I

1241	32612	Cervical cone knife	Умайн хүзүүний конус хутга	A surgical, manually-operated, instrument that is inserted into the vagina and designed for excising a sample of abnormal tissue, e.g., indicated by the presence of precancerous changes, from the cervix. It is typically made of high-grade stainless steel and consists of a handle attached to a rod with a distal mounting attachment for an adjustable blade. When in situ the blade is activated into an arc to make the cut. The tissue is typically excised in the shape of a cone around the cervical opening and will be used for further histological examination. This is a reusable device.	I
1242	32616	Vaginal douche, reusable	Үтрээний шүршүүр, дахин ашиглах боломжтой	A manual device designed to produce and direct a stream of fluid (typically water, water/vinegar solution, or antiseptic chemicals) into the vaginal cavity typically for hygienic purposes, including the removal of vaginal discharge, medicinal deposits, and anticonceptual products from the vagina. It usually consists of a bag, bottle, or bulb to contain the fluid, and tubing often with a nozzle for vaginal insertion; the fluid is ejected upon hand compression by the user. The device is normally available [non-prescription] over-the-counter (OTC) for use in the home or healthcare facility. This is a reusable device.	I
1243	32620	Abdominal decompression chamber	Хэвлийн задралын камер	A hood-like device that is fastened over the abdomen of a pregnant woman to reduce pressure on the abdomen for the relief of abdominal pain during pregnancy or labour. It is connected to a dedicated pump that creates the artificial hypobaric environment inside the chamber.	I
1244	32625	Foetal head calliper	Ургийн толгойн аппарат	A dedicated instrument used to measure the size of the foetal head as displayed in an ultrasound image.	I
1245	32634	Endometrial cytology brush	Эндометрийн цитологийн сойз	A device with bristle-like projections designed to remove samples of the endometrium (the mucosal lining of the uterus) by brushing its interior surface. It is used in the study of endometrial cytology (cells). This is a reusable device.	I

1246	32636	Rigid bronchoscopic biopsy forceps, single-use	Хатуу бронхоскопийн биопсийн хямсаа, нэг удаагийн хэрэглээ	A sterile, rigid, manual instrument intended to perform through a compatible bronchoscope to obtain specimens of the bronchi and/or the lungs during endoscopy for histopathological examination. It is typically constructed as a very long instrument with one sliding and one stationary rod whose distal ends are equipped with scissors-like cups with a cutting edge around their rim which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the endoscope. This is a single-use device.	I
1247	32637	Rigid bronchoscopic biopsy forceps, reusable	Хатуу бронхоскопийн биопсийн хямсаа, дахин ашиглах боломжтой	A rigid manual instrument intended to perform through a compatible bronchoscope to obtain specimens of the bronchi and/or the lungs during endoscopy for histopathological examination. It is typically constructed as a very long instrument with one sliding and one stationary rod whose distal ends are equipped with scissors-like cups with a cutting edge around their rim which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the endoscope. This is a reusable device.	I
1248	32638	Flexible bronchoscopic biopsy forceps, single-use	Уян хатан бронхоскопийн биопсийн хямсаа, нэг удаагийн хэрэглээ	A flexible manual instrument intended to perform through a compatible bronchoscope to obtain specimens of the bronchi and/or the lungs during endoscopy for histopathological examination. It is typically constructed of a flexible metal coil or plastic tube whose distal end is equipped with a pair of scissors-like cups with a cutting edge around their rim which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through an artificial orifice of the body or the working channel of the endoscope. This is a single-use device.	I
1249	32643	Intrauterine pressure transducer	Умайн доторх даралт хувиргагч	A transducer for measurement of the pressure in the uterine cavity.	I

1250	32650	Cranioclast	Краниокласт	An obstetrical hand-held instrument that is used for crushing the foetal head after perforation to facilitate the delivery of a dead or anomalous (abnormal) foetus. It typically has a scissors-like design and is commonly referred to as forceps. It is made of high-grade stainless steel and has very strong handles that can be mechanically closed (to exert the necessary pressure) with a screw thread and wing nut clamp at the proximal end. The distal working end has robust curved and serrated jaws that grasp and crush the foetal head. This is a reusable device.	I
1251	32652	Vaginal applicator, reusable	Үтрээний түрхэгч, дахин ашиглах боломжтой	A device designed to apply medication to the vagina. It is typically a hand-held bulb, pump, or injector used to introduce medicated powder or other substances into the vagina either directly or through an open speculum. It is typically used to treat vaginitis but can be used for other forms of vaginal treatment. This is a reusable device.	I
1252	32659	Foetal stethoscope	Ургийн чагнуур	A mechanical listening device that is used for listening to foetal heart sounds. It is typically designed as a hollow tube (trumpet-shaped) to transmit the foetal heart sound through the inner channel by air conduction and is pressed against the outside of the mother's abdomen and the user will place their head and ear to the listening end of the device.	I
1253	32671	Abortion suction system	Үр хөндөлтийн сорох систем	An assembly of devices used to aspirate transcervically the products of conception or menstruation from the uterus. It generally consists of an electric-motor or vacuum-powered suction pump, a cannula, tubing, plastic/glass collection/specimen container(s), a vacuum gauge, a vacuum control knob, an overflow trap, a moisture filter, and possibly a microbial filter. The pump creates a vacuum in the cannula, which is inserted into the body for the removal of materials into the container. The system is primarily used for the termination of early pregnancies (up to 12 weeks), the treatment of incomplete spontaneous abortions, the removal of retained afterbirth, menstrual regulation, or biopsy.	I
1254	32673	Menstrual pad, scented	Сарын тэмдгийн дэвсгэр, анхилуун үнэртэй	A deodorized feminine hygiene product (a pad) that is held in place externally to absorb menstrual blood or other vaginal discharge. This is a single-use device.	I

1255	32675	Cleidoclast	Клейдокласт	A hand-held obstetrical instrument that is used for crushing the clavicle in order to reduce the width of the unborn baby's shoulder girdle in cases of difficult childbirth. It typically has a scissors-like design and is commonly referred to as forceps. It is made of high-grade stainless steel and has very strong handles and robust profiled jaws that grasp and crush the foetal bone. This device may reflect old technology. This is a reusable device.	I
1256	32679	Cervical cytology scraper, single-use	Умайн хүзүүний цитологийн хусуур, нэг удаагийн	A hand-held, manual, blunt surgical instrument designed to scrape and retrieve cytological material from the surface of the cervix (neck of the uterus) or vaginal area for pathological examination and diagnosis, often for the detection of cervical cancer. This is a single-use device.	I
1257	32683	Menstrual tampon, scented	Сарын тэмдгийн тампон, анхилуун үнэртэй	A deodorized plug made of cellulosic or synthetic material that is inserted into the vagina to absorb menstrual blood or other vaginal discharge. This is a single-use device.	I
1258	32686	Perineometer	Перинометр	A device consisting of a fluid-filled sack for intravaginal use that is attached to an external manometer. The device measures the strength of the perineal muscles by offering resistance to a patient's voluntary contractions of these muscles and is used to diagnose and to correct, through exercise, urinary incontinence or sexual dysfunction.	I
1259	32687	Colour discrimination tester	Өнгө ялгах шалгагч	An ophthalmic device that consists of various coloured materials, e.g., coloured yarns or colour vision plates (multicoloured plates which patients with colour vision deficiency would perceive as being of one colour), used for evaluating colour vision.	I
1260	32688	Haidinger brush imager	Haidinger бийр зурагчин	A mains electricity (AC-powered) ophthalmic device designed to produce an image consisting of two conical brush-like images with apexes touching (known as Haidinger brushes). The observation of the image characteristics by a patient through a Nicole prism facilitates his/her visual function evaluation, particularly the macular integrity.	I

1261	32692	Surgical binoculars, reusable	Мэс заслын дуран, дахин ашиглах боломжтой	A pair of lenses intended to be mounted onto a surgeon's spectacles to function as small telescope and provide a magnified image of the visual field during patient examination or surgical intervention. Also known as a surgical loupe, it may be mounted onto the spectacle frames and positioned in front of the spectacle lenses or attached directly onto each of the spectacle lenses. It may also be connected to an external light source or a head-worn light for visual field illumination. This is a reusable device.	I
1262	32693	Fresnel lens	Fresnel линз	A very thin and flexible ophthalmic lens intended to be applied to the back of spectacle lenses to focus light to a focal point to help manage various vision conditions including aphakia (absence of the lens of the eye), myopia, hyperopia, and presbyopia. It is typically made of glass or plastic and its surface is a concentric series of increasingly refractive zones.	I
1263	32696	Skin transilluminator, battery-powered	Арьс өнгөлөгч, батерейгаар ажилладаг	A hand-held, battery-powered device with a built-in light source, usually together with a lens, intended to be used to illuminate the skin and soft tissues, rendering them translucent for examination. It is typically used to examine subcutaneous and scrotal tissue/contents for lesions, and veins (e.g., on the scalp of an infant) for anatomical abnormalities. This device may also be known as a diaphanoscope, a phaneroscope or a light scanner.	I
1264	32700	Haploscope	Гаплоскоп	A device that consists of two moveable viewing tubes, each containing a slide carrier, a low-intensity light source for the illumination of the slides, and a high-intensity light source for creating afterimages. The device is intended to measure strabismus (eye muscle imbalance), to assess binocular vision (use of both eyes to see), and the treatment of suppression and amblyopia (dimness of vision without any apparent disease of the eye).	I

1265	32701	Magnifying prism reader	Томруулдаг призм уншигч	An ophthalmic device (a prism reader) consisting of a magnifying lens intended to magnify the print of reading material and to be used by a patient/person with impaired vision lying in a supine position. The device is placed over the reading material and it changes the angle of the magnified text. It can be made of solid glass or plastic material.	I
1266	32702	Magnifying bar reader	Томруулдаг самбар уншигч	An ophthalmic device (a bar reader) consisting of a magnifying lens intended to magnify the print of reading material and to be used by a patient/person with impaired vision. The device is placed directly onto reading material which is read from above. It can be made of solid glass or plastic material.	I
1267	32703	Ptosis crutch	Птозын таяг	A thin, non-sterile, purpose-shaped device that is attachment to an ophthalmic spectacle frame to prop open the upper eyelid in cases of ptosis (drooping of one or both eyelids); it is often used in pairs, one for either eye. This is a reusable device.	I
1268	32707	Ophthalmic head reflector	Нүдний толгойн тусгал	A head-worn ophthalmic device consisting of a circular concave mirror attached to a headband worn by an examiner, designed to reflect light onto the eye of a patient to allow examination of the eye and its associated structures. This is a reusable device.	I
1269	32712	Retinoscope, battery-powered	Батарейгаар ажилладаг ретиноскоп	A battery-powered, hand-held, ophthalmic instrument that is used to measure the refractive errors of the eye through the projection of a beam of light into the eye, and the observation of the movement of the illuminated area on the retinal surface and of the refraction of the emergent rays. The batteries may be of the rechargeable type, and are housed within the handle of the instrument. Also known as a skiascope and the method as sciascopy.	I
1270	32715	Prism, rotary	Призм, эргэлтэт	An ophthalmic prism of variable power used during the sight testing process to assess the eye muscles.	I

1271	32716	Maddox wing	Маддокс далавч	A hand-held, non-powered ophthalmic device intended to evaluate heterophoria/heterotropia, also known as strabismus or squint [i.e., a condition in which the eyes are pointing in slightly different directions (e.g., esophoria, exophoria, hyperphoria and/or cyclophoria)]. It is typically held by the patient, and consists of an eyepiece oriented towards a small board with a scale(s) [e.g., horizontal, vertical] and pointer(s), and a thin sheet (septum) which separates the board into two parts to create a different field of view for each eye (eye dissociation).	I
1272	32718	Fresnel prism	Френель призм	A thin plastic sheet with embossed rulings, which provides the optical effect of a prism, intended to be applied to spectacle lenses to give a prismatic effect typically to manage strabismus or other eye muscle dysfunction. The device may also be temporarily applied to spectacle lenses to determine how a patient might respond to prismatic power in their eye glasses.	I
1273	32719	Diagnostic ophthalmic prism	Оношлогооны нүдний призм	A transparent geometrical device intended to use light refraction principles to assist in the diagnosis of visual problems, especially those associated with ocular muscles (e.g., reduced convergence or accommodation). It is available in various forms such as a bar with multiple prisms of graduated powers, or a single prism on a handle. This is a reusable device.	I
1274	32721	Ophthalmic tonometer, manual	Нүдний тонометр, гарын авлага	An ophthalmic, manually-operated, measuring instrument designed for determining the intraocular pressure (IOP) by exerting an external force in direct contact with the eye which provides a reading of the resistance of the tunica of the eye to deformation (the extent of corneal indentation) which is expressed in millimetre(s) of mercury (mmHg). This device (known as a contact type, e.g., a Schioetz or Perkins tonometer) is used in the diagnosis of glaucoma and may be hand-held or used in conjunction with a slit lamp.	I
1275	32731	Spectacle lens curvature gauge	Нүдний шилний муруйлтын хэмжигч	An ophthalmic instrument designed to manually measure the curvature of the surface of a spectacle lens. It is usually calibrated in dioptres of surface power for a given refractive index.	I

1276	32736	Ophthalmic chair, manual	Нүдний сандал, гарын авлага	A manually-operated device designed to position a patient in a seated or reclined posture for easy access and patient comfort during an ophthalmic examination, treatment, or surgical intervention. It will typically have hand-operated adjustments and may be freestanding or connected to another device or system. It is not designed to position the patient completely horizontally during surgery (i.e., it is not an operating table).	I
1277	32751	Trabeculotome, reusable	Трабекулотом, дахин ашиглах боломжтой	A hand-held manual ophthalmic surgical instrument intended to be used to perform a trabeculotomy [surgical opening of the sinus venosus sclerae (Schlemm's canal)] to reduce intraocular pressure (IOP) for the prevention/treatment of glaucoma. It is typically made of high-grade stainless steel, having a two-pronged fork at the distal end and a handle at the proximal end. It enables guided unroofing of Schlemm's canal (an endothelium-lined tube) through insertion of one of the prongs via incisions and flaps made in the eye. This is a reusable device.	I
1278	32758	Flieringa ophthalmic ring	Flieringa нүдний цагираг	A circular band, typically stainless steel, sutured to the sclera to prevent collapse of the globe (sphere) during difficult intraocular operations. This is a reusable device.	I
1279	32761	Trabeculotomy probe	Трабекулотоми датчик	A slender, rod-like, hand-held manual surgical instrument made of flexible metal, with a blunt bulbous tip, used during a trabeculotomy procedure to explore and/or open the drainage angle of the sclera from outside the eye. This is a reusable device.	I
1280	32764	Ophthalmic knife, reusable	Нүдний хутга, дахин ашиглах боломжтой	A hand-held manual ophthalmic surgical instrument designed to make precise incisions in the eye and surrounding tissues during ophthalmic surgery. It is typically designed as a one-piece instrument with a sharp, single-edged cutting blade at the distal tip and a handle at the proximal end. It can have a variety of blade edge shapes, e.g., phaco (blunt or sharp), crescent, straight, and micro-phaco (for micro incision cataract surgery). It is usually made of high-grade stainless steel and some types can employ diamond blades. This is a reusable device.	I

1281	32767	General-purpose ophthalmic hook, reusable	Ерөнхий зориулалтын нүдний дэгээ, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to facilitate the manipulation of ocular structures or to remove foreign bodies in the eye. It is typically shaft-like with a small curve (blunt- or pointed-end) or bend distally, and a handle proximally. The device is commonly used to retract eye muscles or to stabilize and manoeuver tissue during posterior segment surgery. This is a reusable device.	I
1282	32772	Ophthalmic curette, reusable	Нүдний курсет, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument typically with a fenestrated, spoon-shaped or ring-like tip which can be either sharp or blunt, intended to be used to obtain or remove eye tissue through a scraping action. It is typically made of metal. This is a reusable device.	I
1283	32774	Eye muscle clamp	Нүдний булчингийн хавчаар	An hand-held manual ophthalmic surgical instrument designed to atraumatically grasp and hold the extraocular muscles (EOM) during an ophthalmic surgical intervention. It is made of high-grade stainless steel and is available in various sizes and designs. This is a reusable device.	I
1284	32775	Eyelid clamp, reusable	Зовхины хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed specifically to atraumatically grasp and hold the eyelid or isolate a portion of eyelid tissue during an ophthalmic surgical intervention (e.g., chalazion surgery, blepharostoplasty). It includes an appropriate clamping mechanism which may be one of a variety of designs (e.g., ring and disk), and may be referred to as entropion forceps, Downes lid clamp, or chalazion clamp. This is a reusable device.	I
1285	32786	Amsler grid	Амслер сүлжээ	An ophthalmic device that is a series of charts with grids of different sizes that are held at 30 centimeters distance from the patient and intended to rapidly detect central and paracentral irregularities in the visual field.	I

1286	32790	Nasal snare, single-use	Хамрын урхи, нэг удаагийн хэрэглээ	A hand-held manual surgical instrument intended to be inserted into the naris for the removal of tissue, typically polyps, tumours, and other abnormal tissue from the nasal cavity during ear/nose/throat (ENT) surgery. It typically consists of a cannula-like tube with two stationary and one sliding finger rings designed to position and tighten a loop of thin, flexible wire (the snare) around the tissue to be removed. It is intended for mechanical cutting only (i.e., not through electrical ablation). This is a single-use device.	I
1287	32791	Trial lens frame	Туршилтын линзний хүрээ	A device used in ophthalmic work for placing, holding, and exchanging trial lenses in front of the eyes of the patient during a sight-testing procedure.	I
1288	32792	Trial lens clip	Туршилтын линзний клип	A device used to hold prisms, spheres, cylinders, or occluders on a trial lens frame or set of spectacles during vision testing. This is a reusable device.	I
1289	32816	Spectacle frame	Нүдний шилний хүрээ	An ophthalmic device designed to hold a pair of spectacle lenses in front of and close to the eyes of the user. It typically consists of a plastic or metallic frame that is supported by the nose and ears. The device may have a protective function (e.g., by including side shields).	I
1290	32817	Ophthalmic slit lamp, surgical	Нүдний ангархай гэрэл, мэс заслын	An electrically-powered ophthalmic magnification instrument, usually stereoscopic, designed for use in the operating room (OR) to magnify minute structures within the eye or its surroundings in the performance of ophthalmic surgical procedures which require high magnification by transmitted light. It is typically equipped with motorized focusing, adjustable magnification mechanisms (zoom), backup lamps, and inclined tubes that permit the surgeon to see the field from a vertical perspective while keeping the head erect. Dual or multiple observation capability and the optical integration of still, motion picture and video cameras are common features. It can be fixed or mobile.	I

1291	32822	Corneal trephine manual instrument	Эвэрлэгийн трефиний гарын авлагын багаж	A hand-held, ophthalmic surgical instrument, constructed as a one-piece handle with trephine (not an exchangeable component) that is manually rotated with downward pressure by a surgeon in order to cut and remove circular pieces of corneal tissue (corneal buttons). The trephine portion consists of a shaft that has at its working end an extremely sharp, bevelled, cylindrical cutting edge. Healthy tissue may be taken from cadavers for transplant to the recipient, where the defect cornea is cut and removed for acceptance of the replacement. This is a reusable device.	I
1292	32842	Pliers, surgery	Бахь, мэс засал	A manually-operated surgical instrument used in various surgical procedures. It consists of two rods that form a handle proximally and extended distally through a pivot point to terminate in a tip. The tip functions as pincers and can be of various shapes. It is typically made of stainless steel. This is a reusable device.	I
1293	32845	Surgical depth gauge, reusable	Мэс заслын гүн хэмжигч, дахин ашиглах боломжтой	A surgical instrument designed to measure the depth of a recess, usually to measure the depth of holes being drilled in bone so that the surgeon can determine the length of the bone screw to be used. It may take two forms: 1) a device with a moveable (sliding) centrepiece (a prong), the tip of which is inserted into the recess to read from a scale; 2) a circular disc with a central hole which is clipped to a drill bit so that the device slides up as the drill bit is advanced. This is a reusable device intended to be sterilized prior to use.	I
1294	32850	Orthopaedic knife	Ортопедийн хутга	A hand-held manual surgical instrument designed for cutting/shaping bone during an orthopaedic surgical intervention. It is typically a heavy, one-piece instrument with a sharp, single-edged, strong cutting blade at the distal end available in various shapes and sizes, with a handle at the proximal end. It is normally made of high-grade stainless steel. This is a reusable device.	I

1295	32853	Orthopaedic joint/limb rongeur	Ортопедийн үе мөч/мөчлөгийн ронжер	A hand-held manual surgical instrument designed to remove bone during an orthopaedic intervention of the limbs/joints; it is not primarily intended for nasal, spinal, or cranial use and is not a dedicated rib rongeur. It is a heavy-duty metallic instrument that has a forceps- or pliers-like design and terminates at the distal end with sharp-edged, scoop-shaped jaws attached to strong, sprung (self-opening), pivoted or multi-pivoted handles that, when squeezed together, close the jaws to bite (cut) through the bone. This is a reusable device.	I
1296	32856	Orthopaedic implant impactor, reusable	Ортопедийн имплант импульс, дахин ашиглах боломжтой	A metal and/or plastic hand-held manual surgical instrument designed to position an orthopaedic implant within the body by transmission of an impact force that drives the implant into its final position. The proximal end of the instrument is a handle usually designed to absorb the impact from a surgical hammer or mallet, and the distal end is usually shaped to conform to the implant shape (flat or anatomically curved) or is shaped like a chisel handle to facilitate implant positioning. This is a reusable device.	I
1297	32858	Elbow/ankle friction/impact protector	Тохой/шагайны үрэлт/цохилтоос хамгаалах хэрэгсэл	A device designed to be worn over the elbow and/or the ankle to provide a cushion to protect the joint(s) from friction against surfaces and knocks against objects. It is typically made from soft padded materials and held in place with straps; it is designed to cover only the joint(s) and is not intended to cover a larger portion of the arm or leg. It is typically used by persons that have tendencies for skin sores on their elbows, are bedridden, or prone to lack of control with their arms causing injury. This is a reusable device.	I
1298	32862	Bone skid	Ясны гулсуур	A long, flat surgical instrument with cradles at each end which are sculpted to match the particular contours of a specific bone. A skid is designed to slip under a specific region of a specific bone so that the bone can be moved or positioned. This is a reusable device.	I

1299	32865	Orthopaedic implant driver	Ортопедийн суулгацын жолооч	A hand-held manual surgical instrument designed to impart force to an orthopaedic implantable device that is inserted to fix or fasten together bones. The device is frequently used to insert devices such as screws, nails, plates, or wires that are used to fix fractured or damaged bones and/or to attach orthopaedic prostheses to the bones. It is typically made of high-grade stainless steel or titanium (Ti). This is a reusable device.	I
1300	32871	Surgical torque wrench, reusable	Мэс заслын эргүүлэх эрэг чангалах түлхүүр, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used for gripping, turning/tightening, or twisting an object (e.g., a nut, bolt, or wire) during a surgical intervention; it is not dedicated to dental use only. It may be available in a variety of forms and might have fixed or adjustable jaws, or a detachable endpiece(s) [e.g., ratchet type]. This is a reusable device.	I
1301	32873	Surgical tamp, reusable	Мэс заслын шахалт, дахин ашиглах боломжтой	A hand-held, surgical instrument designed to be used to manually pack tissue or other material during a surgical intervention. It typically consists of a shaft that terminates in a blunt (flat or profiled) tip at the distal end and a handle at the proximal end. It is typically a one-piece instrument made of metal, however some types may employ a synthetic material for the handle (e.g., Tufnol). The surgeon may pack the material by applying hand pressure to the device or by tapping the proximal end with a hammer/mallet. This is a reusable device.	I
1302	32874	Wire holding/twisting pliers	Утас барих/мушгих бахь	A heavy-duty manual surgical instrument with specially-designed sturdy handles and blade jaws used to grip, tighten, and/or twist wires during a surgical intervention. It has a scissors-like design with curved handles and is made of high-grade stainless steel. It is available in various sizes and the jaws (typically short and broad with serrations) at the working end are activated through a single pivot or a double ratio-lever exchange pivot to provide greater gripping force. This is a reusable device.	I

1303	32878	Hip prosthesis socket pusher	Хип протезийн залгуур түлхэгч	A hand-held manual surgical instrument designed to hold an acetabular cup or shell at the distal end. It is rod-like in shape and used to force the acetabular component of a total hip prosthesis into the proper position in the acetabular vault of the pelvis. This is a reusable device.	I
1304	32879	Orthopaedic wire crimper	Ортопедийн утсан бутлуур	A hand-held manual surgical instrument designed like wire-closing forceps and used to bend wire or cerclage. This is a reusable device.	I
1305	32880	Spatula, surgical, orthopaedic	Хусуур, мэс заслын, ортопедийн	A surgical instrument, usually made of stainless steel, which is used to fill material into a bone cavity, manipulate bone tissue or to remove a material from a surface or vessel. The instrument comprises a handle proximally and a flat blade, with no sharp edge, at the distal tip. While progressing from the handle to the distal tip the shaft or the blade may be straight, curved or turn at various angles.	I
1306	32881	Wire twister	Утас эргүүлэгч	A surgical instrument specifically designed to twist surgical wire after this has been applied to the site in order to tighten the loop or binding that has been made by the surgeon. The loose ends of the wire are inserted into and gripped by the jaws of this device, and the surgeon pulls a handle which spins the spirally grooved centre piece, thereby twisting and tightening the wire. It is typically used in orthopaedic procedures. This is a reusable device.	I
1307	32882	Orthopaedic adhesive tape	Ортопедийн наалдамхай тууз	A very long and narrow sterile flexible band (typically of fabric or plastic material), coated on one side with a pressure-sensitive adhesive, designed to bind appendages in orthopaedic procedures. It can often be used as an alternative to a plaster of Paris or gypsum cast due to its lightweight properties when applied. This is a single-use device.	I

1308	32885	Wire cutter	Утас таслагч	A heavy-duty, hand-held manual surgical instrument with sturdy handles and blade-like jaws designed to cut orthopaedic wires, cerclages, and small diameter pins or bolts. It has a scissors-like lever action with straight or curved handles and is made of high-grade stainless steel. It is available in various sizes and the cutting blades (typically short, strong and with obtuse cutting edges) at the working end are activated through a single or double-jointed pivot that transfers the necessary shearing/cutting force. Commonly known as wire cutting pliers the blades can have a side or front cutting action; some may have carbide inserts for greater durability. This is a reusable device.	I
1309	32886	Wire holding/twisting forceps	Утас барих / мушгих хямсаа	A surgical instrument with specially designed sturdy blades used to grip, tighten and/or twist wires that are being applied to the patient during a surgical intervention. It typically has a scissors-like design with ring handles, is made of high-grade stainless steel and may be self-retaining. It is available in various sizes and the working end can have a variety of jaw designs, e.g., typically short and broad with carbide inserts, but some may be long with side protruding posts around which the loose end of the wire are secured to provide greater grip. The blades/handles are typically strong in profile. This is a reusable device.	I
1310	32916	Collodion protectant	Коллодионоос хамгаалах бодис	A viscous liquid compounded of pyroxylin, ether, and alcohol that dries to a transparent, tenacious film which is used as a topical protectant.	I
1311	32953	Percussion hammer, powered	Цохилтот алх, хөдөлгүүртэй	A spring-loaded percussion hammer with a piston driven head with a locking/release trigger. It is used to deliver a measured force to the body to test reflexes. This is a reusable device.	I

1312	32965	Circulating-fluid localized thermal therapy system pack, reusable	Эргэлтийн шингэний орон нутгийн дулааны эмчилгээний системийн багц, дахин ашиглах боломжтой	A device intended to be applied to part of the body as part of a circulating-fluid localized thermal therapy system to provide localized heat and/or cold therapy for the skin and/or underlying tissues (e.g., muscle) in the treatment of musculoskeletal pain and discomfort. It typically consists of a compact envelope that is heated and/or cooled with circulating fluid (e.g., water) from the system control unit. It is intended for use in both professional and home settings. This is a reusable device.	I
1313	32973	Paraffin wax bath	Парафины лав банн	A mains electricity (AC-powered) laboratory device used to hold and heat paraffin wax at a predertermined temperature range, keeping it in a liquid state, so that it can be used as an embedding material typically for histological specimen (e.g., tissue biopsy) fixation.	I
1314	32981	Wheelchair armrest	Тэргэнцэрт зориулсан гарын түшлэг	A small platform, typically cushioned, mounted on the lateral ends of a wheelchair to provide the user with a support on which to place the arms. The position of the platform (e.g., height) may be adjustable to suit the comfort and utility of the user.	I
1315	32982	Wheelchair footrest/legrest	Тэргэнцэрийн хөл/хөл	A platform (typically metal with or without a padded vinyl covering) usually mounted on a wheelchair in pairs, and upon which a wheelchair occupant may place the feet/legs for comfort, support, and/or to keep them off of the ground. It typically includes a mounting frame, footrest, and may include a mounted pad(s) to support the calves of the legs; it may be fixed or adjustable.	I
1316	32983	Wheelchair curb climber	Тэргэнцэртэй авирагч	A lever-like metal device typically designed for rear-wheel-drive powered wheelchairs, that is placed between the front wheel casters of the wheelchair to enable the occupied wheelchair to mount a curb or step. When the device makes contact with a curb it pivots and lifts the wheel casters up onto the curb as the user powers forward.	I

1317	32984	Wheelchair handrim	Тэргэнцэртэй гар хүрээ	A device typically made of metal, wood, and synthetic materials that is attached to the large wheels of a wheelchair to enhance the wheelchair occupant's ability/efficiency to self propel the wheelchair using at hand and arm power. It provides ergonomic surfaces for the thumb and the palm of the hand, eases stress on the shoulder and wrist, prevents fingers and thumb from getting caught by any part of the wheel, and improves gripping contact area.	I
1318	32987	Wheelchair antitip device	Тэргэнцэрт зориулсан хөлийн эсрэг төхөөрөмж	A device that is added to the front or rear of a wheelchair to prevent upset by limiting the degree of forward or backward tilting that can occur. The device, typically made of metal, may appear as a rod-like arm with or without a wheel at its distal end, and is mounted to the wheelchair in pairs. The device should have sufficient strength to function as intended when the wheelchair is carrying its maximum load on the steepest intended slope.	I
1319	32989	Wheelchair brake extension	Тэргэнцэрийн тоормосны өргөтгөл	A metal lever with handle designed to be attached to an existing wheelchair brake lever, to improve handling/leverage for a wheelchair occupant who has difficulty operating the standard brake lever.	I
1320	32991	Wheelchair side board	Тэргэнцэрийн хажуугийн самбар	A platform, possibly ergonomically designed, that is mounted on one side of a wheelchair to provide the wheelchair occupant with a usable surface (e.g., to place items or to perform activities such as writing, reading, or eating).	I
1321	32992	Wheelchair crutch/walking stick holder	Тэргэнцэрт таяг/таяг эзэмшигч	A cylinder, tube, or bag-like device that is mounted on a wheelchair to provide the wheelchair's occupant with a receptacle or holder for a crutch or a walking stick (cane).	I
1322	32993	Wheelchair hill holder	Тэргэнцэртэй толгод эзэмшигч	A breaking device that is activated when a wheelchair is on an incline to prevent the wheelchair from rolling backwards.	I
1323	32994	Seat toilet pan	Суудлын жорлонгийн сав	A device intended to be attached to the seat of a chair (e.g., wheelchair, shower seat, commode), to be used as a receptacle by the chair's occupant for toileting.	I

1324	32996	Wheelchair overhead suspension sling	Тэргэнцэр дээр тулгуурласан дүүжлүүр	A support assembly used to provide a wheelchair occupant with a means to suspend a disabled limb (arm or leg) for protection/comfort. It typically includes a strap or band made of various materials (e.g., fabric, nylon) and sling cuffs that attach to an adjustable balance bar, which in turn is attached to an overhead rod on the wheelchair or to an arm of a sling frame.	I
1325	33000	Hospital stretcher, powered	Эмнэлгийн дамнуурга, цахилгаантай	A battery-powered mobile platform designed to transport a recumbent patient within a healthcare facility (e.g., to and from beds, chairs, treatment facilities, wheelchairs, and transportation vehicles). It typically includes a fixed, wheeled undercarriage, batteries, electric motor(s), and steering/operative controls. Some types, when fitted with a radiolucent surface, may be used for the acquisition of radiographic images.	I
1326	33003	Chair control unit	Сандал хяналтын хэсэг	A mains electricity (AC-powered) unit which is connected to a powered chair and which is used to steer the various built-in functions of the chair. The operator may be the user or an assisting personnel. The unit may be separated from the chair or affixed to the chair. Control units which are built into the chair must be considered as part of the chair.	I
1327	33015	Standard treadmill, powered	Стандарт гүйлтийн зам, хөдөлгүүртэй	A mains electricity (AC-powered) device designed to facilitate in-place walking, jogging, or running to promote muscle redevelopment, to restore motion to joints, and to promote weight loss and cardiovascular fitness. It consists of an endless, continuous track (e.g., a shock-absorbing rubber belt rotating on rollers) on which the patient exercises that can be set to rotate at varying speeds, electric motors, and a control unit (to regulate belt speed/elevation, display related data, and activate an emergency stop). It will typically incorporate front and side-mounted rails to allow patients to steady themselves while in motion.	I
1328	33031	Lumbar spine orthosis	Бүсэлхий нурууны ортоз	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to encompass the lumbar spine region of the trunk to support or immobilize deformities, fractures, sprains, or strains of the spine. This is a reusable device.	I

1329	33089	Airway tube forceps, single-use	Амьсгалын замын хоолойн хямсаа, нэг удаагийн хэрэглээ	A sterile, hand-held instrument used for grasping a tube [e.g., a catheter or an endotracheal (ET) tube] for its insertion and/or extraction into/from the airways, or for grasping obstructive objects for their removal from the airways. Commonly known as a Magill's forceps, it typically has a scissors-like design with ring handles and is made of strong disposable plastic materials or stainless steel. It is available in various sizes and the working end will typically have grasping blades that have small ringed loops or S-shaped distal working ends. The blades are serrated to provide extra grip. It is typically used by emergency medical services (EMS). This is a single-use device.	I
1330	33107	Line-powered electromechanical operating table system	Шугаман дээр ажилладаг цахилгаан механик үйлдлийн ширээний систем	An assembly of devices designed with interchangeable operating table tops and table top transport trolleys to support and facilitate the transport of a surgical patient from the surgical reception area, to the operating room (OR) for the surgical procedure, and to the patient recovery area or intensive care unit (ICU). It typically consists of a height-adjustable column mounted on a base plate fixed in a optimal position to the floor of the OR, a selection of loose table tops dedicated to various clinical specialties, a control panel and a remote control for steering of the mains electricity (AC-powered) motorized column/table top, and table top transport trolleys.	I
1331	33115	Nuclear medicine phantom, anthropomorphic	Цөмийн анагаах ухаан фантом, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs. It is used in diagnostic nuclear medicine and incorporates radioactive sealed sources or refillable cavities to which radioactivity can be added in order to simulate anticipated in vivo distributions of radiopharmaceuticals used in nuclear medicine imaging procedures. It is a quality assurance (QA) device permitting both subjective and quantitative evaluation of the overall function of photon detector systems, e.g., gamma camera, SPECT or PET.	I

1332	33152	Universal operating table, electromechanical	Бүх нийтийн мэс заслын ширээ, цахилгаан механик	A mobile, electrically-powered motorized table designed to be adjusted to support a patient during many types of surgical interventions. The table surface may consist of many articulated sections that can be elevated or lowered for contouring to accommodate numerous anatomical positions (e.g., the whole table top may be adjusted to form a curved surface), or designed to be used in conjunction with dedicated accessories (i.e., positioners, traction devices) to satisfy the requirements of many clinical specialties; it may have x-ray transparent features.	I
1333	33191	Manual orthopaedic cement mixer, reusable	Гар ажиллагаатай ортопед цемент холигч, дахин ашиглах боломжтой	A hand-operated manual device designed to mix polymethylmethacrylate (PMMA) powder with methylmethacrylate monomer in order to produce polymerizing bone cement. It typically includes a single-use inner mixing bowl where the cement is mixed, an outer housing with a handcrank and driving gears connected to a disposable mixing blade(s), and a lid. The device is intended to be connected to, or placed under, a fume extraction device to prevent fumes from polluting the working environment; it is typically operated outside of the sterile surgical field. This is a reusable device.	I
1334	33199	Flexible endoscopic tissue manipulation forceps, single-use	Уян дурангийн эдийг засах хямсаа, нэг удаагийн хэрэглээ	A flexible, hand-held manual surgical instrument designed to be introduced through the working channel of an endoscope to grasp tissue (typically atraumatically), or additionally foreign bodies. It has proximal controls (e.g., scissors-like handles), a flexible long slender shaft, and distal grasping jaws; it is not an electrosurgical device and is not dedicated to biopsy. This is a single-use device.	I
1335	33204	Dental matrix band retainer	Шүдний матрицын тууз тогтоогч	A dental device designed to engage the ends of a matrix band or strip to hold it in position around a tooth that is being prepared for a dental restoration. It can be designed as a self-closing circular ring, or a rod-like instrument that tensions and locks the matrix band in place. This device will remain intraoral or attached to the matrix band during the dental procedure. This is a reusable device.	I

1336	33205	Basic electric toothbrush, line-powered	Үндсэн цахилгаан шүдний сойз, шугамаар ажилладаг	An instrument that is electrically-powered from the mains (AC-powered) via a transformer and designed to be used by a person to brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed. The device provides automated bristle movement (e.g., rotary or vibratory) intended to augment brushing, and is typically used with toothpaste; it is normally available [non-prescription] over-the-counter (OTC). The toothbrush head may be exchangeable. This is a reusable device.	I
1337	33208	Periodontal pick/brush, reusable	Шүдний шүдний сойз/сойз, дахин ашиглах боломжтой	A manual, pointed, oral hygiene device with a soft tip or bristles intended to be used to stimulate and massage the gums to promote good periodontal (gum) condition, and to clean and remove plaque and debris from between the teeth and gingival surfaces. It may also be referred to as an interdental/interproximal brush and is intended for use in the home. This is a reusable device.	I
1338	33209	Orthodontic pliers	Ортодонт бахь	A hand-held manual dental instrument designed to hold small objects or to bend or to cut metal strips or wire used in orthodontic procedures. It is typically made of high-grade steel and consists of two arms/rods that form a handle proximally and extend distally through a pivot point to terminate with jaws available in various shapes depending on intended use. This is a reusable device.	I
1339	33213	Ploss valve	Хавхлаг хавхлаг	A three-way switching device located between a stethoscope placed over the heart, a blood pressure cuff, and an earpiece. Commonly known as a "Ploss valve" or switching valve, it allows the user to alternate listening to one sound channel [i.e., the patient's heart or Korotkoff (blood pressure) sound] while excluding the other sound.	I

1340	33254	Urological operating table, electrohydraulic	Урологийн мэс заслын ширээ, цахилгаан гидравлик	A mobile, mains electricity (AC-powered) hydraulic-mechanism table designed to support a patient during urological examination and surgical procedures, including cystoscopic procedures and both transurethral and open surgery of the urinary tract. Commonly known as a transurethral resection (TUR) table, its surface consists of a flat section with a headrest; it includes adjustable leg holders/stirrups either directly attached to the table or to its side rails. It may also include traction handles and an integrated urine/irrigation fluid collection tray with a filter to catch urinary stones and/or stone fragments.	I
1341	33255	Chair scale, electronic	Сандлын жин, электрон	A battery-powered device designed for weighing elderly and/or weak patients, patients with a disability, or patients undergoing a specific treatment (e.g., dialysis) who are unable to use a conventional floor scale. It is the form of a chair in which the patient sits and their weight subsequently measured and displayed. It is primarily used for routine patient weight checks, but is also used to continuously and accurately monitor body fluid gain and loss in dialysis patients. It is designed to provide accurate patient weight measurements regardless of patient position in the chair seat.	I
1342	33312	Chair scale, mechanical	Сандлын жин, механик	A mechanical device designed for weighing elderly and/or weak patients or patients with a disability who are unable to use a conventional floor scale. It is in the form of a chair in which the patient sits; it typically has weights mounted on a sliding bar scale which are adjustable to achieve a balance indicating the weight of the occupant.	I

1343	33323	Urological operating table, electromechanical, battery-powered	Урологийн мэс заслын ширээ, цахилгаан механик, батерейгаар ажилладаг	A mobile, battery-powered (rechargeable battery pack) motorized table designed to support a patient during urological examination and surgical procedures, including cystoscopic procedures and both transurethral and open surgery of the urinary tract. Commonly known as a transurethral resection (TUR) table, its surface consists of a flat section with a headrest; it includes adjustable leg holders/stirrups either directly attached to the table or to its side rails. It may also include traction handles and an integrated urine/irrigation fluid collection tray with a filter to catch urinary stones and/or stone fragments.	I
1344	33324	Gynaecological operating table, electromechanical	Эмэгтэйчүүдийн мэс заслын ширээ, цахилгаан механик	A mobile, electrically-powered motorized table designed to support a patient during gynaecological surgical procedures. The table surface consists of articulated sections that can be elevated, lowered for contouring, or removed to accommodate various anatomical positions; adjustable leg holders/stirrups are also included either directly attached to the table or to its side rails.	I
1345	33325	Electrohydraulic operating table base	Цахилгаан гидравлик үйлдлийн ширээний суурь	A mains electricity (AC-powered)/hydraulic component of a modular electrohydraulic operating table assembly designed as a height-adjustable support intended for the introduction and engagement of interchangeable operating table tops. It may be mobile or stationary and in the form of a column or frame.	I
1346	33365	Culture medium control	Соёлын дунд хяналт	A device that consists of paper discs, or other suitable material, each impregnated with a specific freeze-dried, viable microorganism used to determine if a given culture medium is able to support the growth of that microorganism.	I
1347	33390	ENT wire bending die	ENT утас гулзайлгах үхэх	A device designed for external conforming (i.e., bending) of wires during ear/nose/throat (ENT), otorhinolaryngology procedures. The device consists of a metallic solid base and appropriate attachments on its surface that permit bending of wires in appropriate angles (e.g., 90º, 45º); it typically includes a millimetric scale to improve the precision of the procedure. It is used to conform wires on a separate table or bench as they are needed, typically while performing endaural (ear) surgery. This is a reusable device.	I

1348	33393	Gelfoam punch	Гельфоам цоолтуур	A manual instrument designed to punch circles of various sizes from a piece of Gelfoam (a sterile compressed gelatin sponge having haemostatic properties which usually absorbs completely within four to six weeks) typically used to help construct ossicular replacements during middle ear surgery. This is a reusable device.	I
1349	33394	ENT wire-cutting scissors	ENT утас хайч	A hand-held manual surgical instrument designed to cut wire intended to construct ossicular replacements for the middle ear. The cutting blades will be more robust than ordinary scissors to tolerate the forces required to cut surgical wire. This is a reusable device.	I
1350	33395	Ear speculum, reusable	Дахин ашиглах боломжтой чихний дугуй	A rigid plastic or metal tube that is cone-shaped (i.e., it tapers down from a standard instrument-fitting size to a small opening) and is either hand-held and manually inserted, or fitted onto a compatible otoscope and then inserted, into the ear canal to create a channel for examination, suction, irrigation, or the insertion of another surgical device during an ear/nose/throat (ENT) procedure. It may in addition be intended for use with an audiometer and might also be referred to as an ear cannula or probe. This is a reusable device.	I
1351	33398	ENT curette	Чих хамар хоолойн кюрет	A manual, surgical instrument, with a ring-shaped, fenestrated or spoon-like tip which can be either sharp or blunt used to obtain or remove tissue by scraping and/or excision during ear/nose/throat (ENT) surgery. This is a general-purpose curette for ENT applications, is made of high-grade stainless steel, and is provided in different shapes and sizes. This is a reusable device.	I
1352	33400	Mastoid gauge	Мастоид хэмжигч	A manual surgical instrument designed for introduction into and calibration of the mastoid bone antrum during surgical procedures (e.g., mastoidectomy). It is typically a slender, hand-held, calibrated (e.g., in millimetres) metallic device with an angled blunt distal end (also known as a searcher or seeker). This is a reusable device.	I

1353	33405	Sacculotomy tack inserter	Саккулотоми наалт оруулагч	A hand-held manual surgical instrument designed to be inserted into the ear during surgery to direct the insertion and placement of a sacculotomy tack (a pointed stainless steel tack implanted in the ear to relieve symptoms of vertigo). It is removed once the sacculotomy tack has been successfully implanted. This is a reusable device.	I
1354	33414	Ear scissors, reusable	Чихний хайч, дахин ашиглах боломжтой	A long, thin, hand-held manual surgical instrument designed to cut tissue during ear surgery; it is not intended for insertion through an endoscope. Sometimes referred to as alligator scissors, it typically has a slender body (to allow for restricted access) and small shearing blades which are hinged at the distal (working) end. It is made of metal and available in various sizes/lengths; the blades may have carbide inserts along the cutting edges. This is a reusable device.	I
1355	33416	Ear spoon	Чихний халбага	A hand-held manual surgical instrument intended to be used during interventions in the ear to remove or manipulate tissue or anatomical structures. It is usually made of high-grade stainless steel and has a cylindrical handle located centrally from which a shaft protrudes in both directions. These shafts terminate with an operative instrument, one of which is spoon-shaped. The opposite tip may be, e.g., blunt or pointed and possibly at a right angle to the shaft. This is a reusable device.	I
1356	33427	Laryngeal injection kit	Хоолойн тарилгын иж бүрдэл	A collection of surgical instruments, pharmaceuticals, and other items (e.g., dressings) intended to be used to perform an injection in the region of the larynx. This is a reusable device.	I

1357	33428	ENT forceps	чих хамар хоолойн хямсаа	A general-purpose ear/nose/throat (ENT) surgical instrument designed to facilitate the grasping, holding, or manipulation of anatomical structures (e.g., trachea, ear) or devices (e.g., cochlear implant electrode array) during ENT procedures. It typically has two main designs: 1) a self-retaining, scissors-like design with ring handles with the working end having a variety of blade designs, e.g., straight, or curved with grooves or serrations to provide grip; and 2) a tweezers-like design (may be a micro/fine instrument) with two conjoined blades with serrated tips at the working end. It is made of high-grade stainless steel. This is a reusable device intended to be sterilized prior to use.	I
1358	33429	ENT speculum holder	ENT спекулум эзэмшигч	A device intended to be used to secure an ear/nose/throat (ENT) speculum in a fixed position to enable a surgeon to remain hands-free during a surgical intervention. The holder is typically fastened to the side rail of the operating table and can be adjusted to a desired position. This is a reusable device.	I
1359	33430	ENT measurer	ENT хэмжигч	A device, typically a mechanical instrument, used to establish accurate measurements of the ear, nose, and throat regions of the body and which is used in the ear/nose/throat (ENT) clinical speciality. It may be, e.g., a depth gauge (a rod) or a microrule. This is a reusable device.	I
1360	33431	Laryngeal mirror, reusable	Хоолойн толь, дахин ашиглах боломжтой	A hand-held manual surgical instrument with a mirror or a surface sufficiently polished to reflect enough undiffused light to form a virtual image of an object placed before it at the distal end, intended to be used for a laryngeal examination. The mirror is affixed at an angle to a long, slender shaft with a handle at the proximal end that is held by the doctor who can manipulate the mirror close to the site of interest in the throat. This is a reusable device.	I

1361	33432	ENT mobilizer	Чих хамар хоолойн дайчлагч	A hand-held, manual, stainless steel surgical instrument with a small diameter shaft tapering from the handle typically intended to be used to remobilize the footplate of the stapes to relieve conductive hearing impairment due to otosclerosis or middle ear disease. The distal tip of the shaft is bent at a slight angle to the shaft and expands to form a small platform that is larger than the distal shaft. The distal surface of the platform is shaped into a set of small ridges or projections which can be of several geometric shapes. This is a reusable device.	I
1362	33433	ENT probe, reusable	Чих хамар хоолойн датчик, дахин ашиглах боломжтой	A slender, rod-like, hand-held manual surgical instrument, typically with a blunt bulbous or pointed tip, used for exploring fistulas, cavities or wounds used during ear/nose/throat (ENT) intervention. The distal end of the instrument, before the bulb/point, may be bent at a right angle to the shaft. This is a reusable device.	I
1363	33434	ENT retractor	Чих хамар хоолойн эмч	A surgical instrument for separating or drawing aside the margins of a surgical incision made during ear/nose/throat (ENT) surgery or various structures of these anatomical locations. It can have various designs, e.g., double or single-ended with a flat or curved, single or split, hook-like blade, or have a pointed hook formed at various angles. It is made of high-grade stainless steel. This is a reusable device.	I
1364	33435	Assistive sock/stocking	Туслах оймс/оймс	A garment specially designed/adapted to be worn by a person with a disability to protect and thermally insulate the feet/lower legs. It is typically made of elastic fabric material and constructed with features that facilitate easy donning and removal (e.g., special shape).	I
1365	33442	Craniofacial rongeur, reusable	Гавлын нүүрний мэс засал, дахин ашиглах боломжтой	A hand-held manual surgical instrument with sharp, scoop-shaped jaws designed for cutting tough tissues (cartilage, sinew) or bone, through a cutting/biting action, during surgery involving the cranium and/or face (e.g., craniotomy, ethmoidectomy, mastoidectomy, rhinoplasty); it is not dedicated to dental surgery. It is typically made of metal and designed to withstand the forces required to bite over tough/hard tissue. This is a reusable device.	I

1366	33449	Adenoid curette, reusable	Adenoid curette, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed for cutting and excising adenoid tissue (hypertrophic lymphoid tissue in the nasopharynx) during an adenoidectomy (adenectomy). It is typically designed as a long, slender instrument with a handle at the proximal end and a concave, spoon-like tip which has a sharp edge that is used to facilitate the removal of the tissue without causing trauma to the surrounding muscles. It is typically made of high-grade stainless steel and is a common instrument of choice for the removal of the adenoids. This is a reusable device.	I
1367	33450	Salpingeal curette	Салпингийн куретта	A slender, hand-held, surgical instrument that is used to clear blockages of the Eustachian tube during an ear/nose/throat (ENT) procedure. It is typically made of high-grade stainless steel and can be either rigid or malleable (bendable) and has a small, half-rounded, head terminating in a sharp scraping edge at its widest diameter at the curved distal end of a long shaft which has a handle at the proximal end. The scraping tip is available in various shapes and sizes. This is a reusable device.	I
1368	33452	Tonsil dissector, reusable	Гүйлсэн булчирхайн задлагч, дахин ашиглах боломжтой	A hand-held surgical instrument, usually spoon-shaped or rounded at the working end, used during the dissection of the tonsils during ear/nose/throat (ENT) surgery. It can be designed in several configurations, e.g., with a shaft that terminates at the distal end with a rounded, curved or angled tip, or it may be double-ended. The tip may be pointed, flat, sharp or blunt and angled or straight from the shaft and may or may not be serrated. It is made of high-grade stainless steel, available in various shapes and sizes, and may include suction capabilities. This is a reusable device.	I
1369	33454	Tonsil suturing hook	Гүйлсэн булчирхайд оёх дэгээ	A hand-held, shaft-like, manual surgical instrument designed to grasp, guide, or direct suture during surgery on the tonsils. The device tapers toward the distal end to form a right angled single hook or multiple hook; multiple hooks are usually in parallel and fenestrated. The proximal end forms a handle which may vary in shape. This is a reusable device.	I

1370	33466	ENT powder applicator	чих хамар хоолойн нунтаг түрхэгч	An applicator designed to utilize blowing air, typically through the use of a hand-operated bulb, to administer powdered medication into the ear, nose, or oral cavity/throat during an ear/nose/throat (ENT) procedure or treatment. This is a reusable device.	I
1371	33468	Ear wick, non-biodegradable	Биологийн задралд ордоггүй чихний зулын гол	A non-biodegradable packing material [e.g., loosely twisted unspun cotton, gauze, or polyvinyl alcohol (PVA)] intended to be used in the ear of a patient after internal ear surgery, and/or to administer medicinal substances to the ear to treat ear disorders. This is a single-use device.	I
1372	33476	Patient lifting system divided leg sling	Өвчтөн өргөх систем хуваагдсан хөл дүүгүүр	A lifting device used together with a patient lifting system to provide a support for an incapacitated patient or a person with a disability that is being lifted in a sitting position with their legs held apart and posterior exposed for toileting and washing. It is typically designed as a U-shaped sling construction made of strengthened fabric with lifting straps, a back support with or without head support and individual leg straps (bands) that are wrapped around each leg to support the patient/person in a sitting position with divided legs. This is a reusable device.	I
1373	33480	Bladder spatula	Давсагны хусуур	A hand-held surgical instrument designed to manipulate, typically by lifting, the bladder during a surgical intervention in the abdominal cavity. It typically consists of a large flat blunt blade (no sharp edges) at the distal end that is set at a right angle to the handle and curved so that the surgeon can manipulate the organ from its underside; it has a strong handle at the proximal end. It is usually made of stainless steel and is available in a variety of blade designs (e.g., curved upwards with a flat rounded end). The blade and handle can be designed to be at various ergonomic angles to each other. This is a reusable device.	I
1374	33491	Microscope micrometer	Микроскопын микрометр	A device used to measure and help evaluate minute thicknesses or distances of objects that are viewed under a microscope.	I
1375	33492	Laboratory tissue adhesive	Лабораторийн эд эсийн цавуу	An albumin-containing reagent used in the laboratory to fix one tissue surface to another or to a material. After application, this device cannot be reused.	I

1376	33500	Pacing/defibrillation lead repair kit	Пасинг/дефибрилляцийн хар тугалга засварын хэрэгсэл	A collection of sterile tools and materials designed to repair the lead of an implantable pacemaker or an implantable cardioverter-defibrillator (ICD). Typical components include a screwdriver, wrench, screws, crimps, adhesives, sealants, and other items used to repair a pacemaker lead or to reconnect a pacemaker/defibrillator lead to a pacemaker/defibrillator generator. This is a single-use device.	I
1377	33509	Haemorrhoidal forceps	Цусархаг хямсаа	A hand-held manual surgical instrument designed for the grasping, pulling or compression of haemorrhoidal tissue during a surgical intervention, typically for their removal. It typically has a scissors-like, self-retaining, design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have grasping blades that are shaped as large oval or triangular rings. The blades are heavily serrated or have profiled concentric grooves to provide extra grip of the haemorrhoids. This is a reusable device.	I
1378	33512	Multi-purpose warming cabinet, mobile	Олон зориулалттай халаах кабинет, гар утас	A mains electricity (AC-powered) mobile device designed to warm various items and products prior to use, e.g., bags of irrigation or intravenous (IV) solutions, blankets or clothing to cover or put onto a patient, or clothing for the operating room (OR) personnel to adorn. It typically consists of a heat insulated enclosure with a sealing door, shelves, heating element(s), a thermostat and operating controls. This is a freestanding cabinet equipped with wheels that is designed to be wheeled (moved) from one location to another within a building complex. It may also be used in a laboratory.	I
1379	33513	Exhaled-gas sample collector, non-electronic	Амьсгалах хийн дээж цуглуулагч, электрон бус	A container intended to collect a sample of a patient's exhaled gas for subsequent analysis. The container may be flexible or rigid and may have a soft disposable liner in which the sample is collected. This is a single-use device.	I
1380	33518	Surgical glove lubricant	Мэс заслын бээлий тосолгооны материал	A substance intended to be used to lubricate the hands before putting on surgical gloves. It may be in the form of a liquid, ointment, or cream. After application, this device cannot be reused.	I

1381	33520	Surgical drape adhesive	Мэс заслын наалдамхай цавуу	A spray, typically aerosol, intended to be applied to the skin to cause a surgical drape to adhere to the body. After application, this device cannot be reused.	I
1382	33531	Saliva absorbent	Шүлс шингээгч	A non-sterile device designed to absorb moisture from the oral cavity during a dental procedure. Also known as a saliva absorber, it can be in a variety of shapes and sizes and is typically made of paper, cotton, or polymeric web, and may have a high-absorbent core. This is a single-use device.	I
1383	33536	Cast/bandage waterproof bathing cover, single-use	Ус нэвтэрдэггүй усанд орох бүрээс, нэг удаагийн боолт	A device made of waterproof materials designed to be placed over a treated area of the body, typically a plaster cast, stitches, bandage, dressing, or PICC line, to keep the area dry while the user is having a shower or a bath. This is a single-use device.	I
1384	33541	Bone/joint surgical power tool motor, electric	Яс/үе мөчний мэс заслын цахилгаан багажны мотор, цахилгаан	A hand-held, electrically-powered component of a surgical power tool assembly designed to convert electrical energy into a non-dedicated mechanical energy to perform a variety of surgical procedures such as drilling or sawing of bones and tough tissues; it is not dedicated to dental procedures. It is designed to accept a motorless handpiece component/attachment (not included) and it is not intended to directly accept an endpiece (e.g., drill bit, saw blade). It may be a micro or macro style device, be cannulated to permit use of a guidewire, include a rechargeable battery, and might be operated with a hand- or foot-switch. This is a reusable device.	I
1385	33542	Bone hook	Ясны дэгээ	A hand-held, surgical instrument used for hooking around or into bone, typically to grasp, hold, and apply traction to the bone during a surgical intervention. It is a shaft-like instrument with a robust design and can have a singular hook or multiple hooks at the distal end and a handle of various designs at the proximal end. It is made of high-grade stainless steel. It is sometimes called a bone retractor. This is a reusable device.	I

1386	33543	Microscope slide tray	Микроскопын слайд тавиур	A device designed to safely store and organize stained microscope slides for their protection and presentation. This device is available as flat tray made of plastic materials in which the slides are placed flat into recesses. It will typically be made of white material to provide a background that facilitates slide viewing. This device will typically be placed in a microscope slide storage cabinet. This is a reusable device.	I
1387	33577	Abortion suction system collection bottle	Үр хөндөлтийн сорох систем цуглуулах сав	A component of an abortion (uterine) suction system designed to function as a trap to collect the products of conception from the uterus [the termination of early pregnancies (up to 12 weeks), the treatment of incomplete spontaneous abortions, the removal of retained afterbirth, menstrual regulation, or biopsy]. It is typically cylindrical in shape and connected to a wide bore tubing through which the removed material is suctioned. It may have an integrated filter made of woven textile that acts as a sieve and trap (blood passes through whilst solids are retained). This is a single-use device.	I
1388	33583	Bedding, single-use	Ор дэрний цагаан хэрэглэл, нэг удаагийн	A sheet, bed pad, and pillow to be used by a patient in a bed for a finite period and then discarded. For mattresses, pillows and sheets, see the appropriate generic device groups. This is a single-use device.	I
1389	33584	Bandages, liquid	Боолт, шингэн	A sterile material that is a liquid, semi-liquid, or a powder and liquid combination used to cover an opening in the skin, as a topical skin protectant, or as a dressing for burns. This is a single-use device.	I
1390	33587	General-body orifice lubricant, non-sterile	Ариутгалгүй ерөнхий биеийн нүхтэй тосолгооны материал	A non-sterile substance intended to facilitate entry of a diagnostic or therapeutic device into a body orifice by reducing friction between the device and the body; it is not dedicated to a particular part of the anatomy. After application, this device cannot be reused.	I

1391	33592	Orthodontic teeth positioner, preformed	Ортодонт шүдний байрлал тогтоогч, урьдчилан бэлтгэсэн	A prefabricated dental device, typically made of plastic, that is an impression of a perfected bite used to prevent a patient's teeth from shifting position, or to move teeth to a final position, after orthodontic appliances (braces) have been removed. The patient bites down on the device for several hours a day to force the teeth into a final position or to maintain the teeth in their corrected position. This is a reusable device.	I
1392	33594	Perineal warmer	Периналь халаагуур	A device designed to apply heat, by direct contact or from a radiant source, to the surface of the perineum (the area between the vulva and the anus). It is intended to help to soothe the perineum after an episiotomy (a surgical incision into the perineum and vagina to prevent traumatic tearing during childbirth).	I
1393	33618	Liquid-crystal patient thermometer, single-use	Шингэн болор өвчтөний термометр, нэг удаагийн хэрэглээ	A device designed to measure a patient's skin, oral, rectal, or axillary (armpit) body temperature. It uses liquid-crystal sensors (usually formed from esters of cholesterol) that are sealed in a plastic band and appear to change colour at indicated temperatures. The device may be used in the home. This is a single-use device.	I
1394	33641	Pneumatic arthroscopic shaver system handpiece hose	Артоскопийн хийн сахлын систем гар утас	A single or double-lumen tube in a straight or spiral design used to conduct compressed surgical air or nitrogen (N2) gas from a pneumatic arthroscopic shaver system control unit to the handpiece to supply it with power. The device is usually from 2 to 5 meters in length. Some types will have a double tube (inner and outer tubing) to facilitate the removal of the exhaust gases. This is a reusable device.	I

1395	33651	Manual goniometer	Гар ажиллагаатай гониометр	A non-powered, manually-operated measuring device, graduated in degrees (e.g., from 0 to 360 degrees), designed to be used in a clinical setting to measure the range of motion of the limb of a patient by measuring the angle of movement achieved at the joint. It is typically used by rheumatologists, physiotherapists, orthopaedists and general practitioners to evaluate joint movement (e.g., ankle, finger, knee, shoulder or spine) before and after a medical/surgical intervention. It may be made of plastic or stainless steel and is available in various designs (e.g., protractor-like with pivoting arms, dial-like with twin rotating dials). This is a reusable device.	I
1396	33652	Electronic goniometer/kinesiology sensor	Цахилгаан гониометр/кинезиологи йн мэдрэгч	A small electronic device designed to be fastened to a body part (e.g., a patient worn goniometer-, accelerometer-, or gyroscope-sensor), or hand-held by a clinician (e.g., goniometer), to evaluate a patient’s range of motion/movement of individual joints/limbs/spine; it is used in a clinical setting typically before/after a medical/surgical intervention, or to assess degree of physical fitness. Acquired data may be transferred to a computing device/software for recording/display and analysis.	I
1397	33653	Traction system noninvasive component	Таталтын системийн инвазив бус бүрэлдэхүүн хэсэг	A noninvasive traction device, e.g., a head halter, pelvic belt or a traction splint, that does not penetrate the skin and is intended to assist in connecting a patient to a traction apparatus so that a therapeutic pulling force may be applied to the patient's body.	I
1398	33676	Sitz bath, non-powered	Суух банн, цахилгаангүй	A tub that is filled with heated water and intended for use in external hydrotherapy to relieve pain or pruritus and to accelerate the healing of inflamed or traumatized tissues of the perianal and perineal areas. The patient immerses only the hips and buttocks, keeping the legs outside of the tub. It is typically used to maintain patient hygiene and to alleviate pain and discomfort caused by haemorrhoids, uterine cramps, labour, and/or other diseases of the pelvic, abdominal and perineal area (e.g., prostate, bladder, bowel, vaginal disorders).	I

1399	33678	ENT trocar blade	ENT трокар ир	A rigid, surgical instrument with a sharp pyramidal or conical point used to puncture body cavities during ear/nose/throat (ENT) surgery. It can be assembled and used together with a compatible cannula (not included) filling its lumen, thereby allowing the introduction of this assembly; following puncture, the trocar blade is withdrawn. This is a reusable device.	I
1400	33679	ENT punch	ENT цоолтуур	A general-purpose, manual surgical instrument designed for taking a soft tissue or bone sample during ear/nose/throat (ENT) surgery. It is typically designed with a long, thin, two-part sliding shaft (the upper part sliding along the lower part) which is joined to sprung (self-opening), pivoted, pistol-grip or ring handles. The working end terminates with sharp, profiled cutting jaws that close over the tissue when the handles are squeezed together cutting through it. It is available in various sizes and designs and is made of high-grade stainless steel. This is a reusable device.	I
1401	33680	ENT knife	ENT хутга	A hand-held manual surgical instrument designed to cut anatomical structures during ear/nose/throat (ENT) surgery. It is typically a one-piece instrument made of high-grade stainless steel with a long, slender shaft with a handle at the proximal end and a sharp, single-edged, cutting blade at the distal end. The blade is normally small and typically of various shapes. This is a reusable device.	I
1402	33721	Absorbent tipped applicator, non-sterile	Шингээгч үзүүртэй түрхэгч, ариутгагдаагүй	A device intended for medical purposes which include, to apply medications to, or to take specimens from, a patient or an object. It is typically designed as an absorbent, non-sterile, swab on a wooden, paper, or plastic stick. This is a single-use device.	I
1403	33722	General-purpose absorbent tip applicator/swab, single-use	Ерөнхий зориулалтын шингээгч үзүүр түрхэгч/арчдас, нэг удаагийн хэрэглээ	A hand-held manual device, also known as a cotton bud or swab, in the form of a stick with a single- or double-ended absorbent tip (e.g., cotton pledget), intended for cleaning or applying a substance (e.g., medication) to a superficial wound or body orifice, and/or to take specimens from a patient. It is not dedicated to a particular body area or orifice, and is intended for use in a healthcare setting and/or in the home. This is a single-use device.	I

1404	33728	Penile sexual vibrator	Бэлэг эрхтний бэлгийн чичиргээ	A noninvasive, electronic device intended to use vibratory stimuli to facilitate male orgasm and/or ejaculation, including for the treatment/control of male sexual disorders (e.g., premature ejaculation); it does not include sexual lubricant or additional accessory devices. It may be used in the presence of a limiting disability, such as spinal cord injury. It may also be used as an adjunct in the treatment of tightening the muscles of the pelvic floor to increase muscle tone (Kegel's exercise).	I
1405	33746	Humeral centering sleeve	Humeral төвлөрсөн ханцуй	A sterile implantable device designed to fix a humeral stem prosthesis in the middle of the humeral canal. It is a metal cylinder [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] that fits over the distal end of the stem and is implanted into the humeral canal of the patient.	I
1406	33751	Moisture-absorbing insole	Чийг шингээх чадвартай улавч	A device intended to be placed inside a shoe to absorb moisture and thereby reduce the risk of athlete's foot infection or other problems caused by excessive moisture. This is a reusable device.	I
1407	33785	Hand dynamometer/pinchmeter, electronic	Гар динамометр/пинчметр, электрон	An electrically-powered instrument designed to assess neuromuscular function by measuring the force or power exerted by the muscles of the hand/forearm to squeeze/pinch an object. It is used to assess a patient's grip strength in clinical or research settings, typically as part of a rehabilitation program for geriatric patients or those who have suffered a stroke; it may in addition be designed to be used as part of an interactive rehabilitation system whereby forces applied by the patient translate to movements in a video-game. It includes a force transducer to translate force into electrical impulses for measurement.	I
1408	33792	Vein immobilizer/stabilizer	Судасны хөдөлгөөнгүйжүүлэгч/тогтворжуулагч	A device consisting of a flat piece of plastic with two noninvasive prongs. It is placed on the skin so that the prongs are on either side of a vein and hold this stable while a hypodermic needle is inserted into the vein. This is a single-use device.	I

1409	33813	Gynaecological operating table, electromechanical, battery-powered	Эмэгтэйчүүдийн мэс заслын ширээ, цахилгаан механик, батерейгаар ажилладаг	A mobile, battery-powered (rechargeable battery pack) motorized table designed to support a patient during gynaecological surgical procedures. The table surface consists of articulated sections that can be elevated, lowered for contouring, or removed to accommodate various anatomical positions; adjustable leg holders/stirrups are also included either directly attached to the table or to its side rails.	I
1410	33822	Cold therapy water unit pad/cuff, knee	Хүйтэн эмчилгээний усны нэгж дэвсгэр/ханцуйвч, өвдөг	A device designed to be used together with a cold therapy water unit that uses chilled circulated water as the cooling medium to facilitate cold therapy to the knee for the reduction of oedema and pain that is a result of injury or disease. It typically consists of a soft bladder/cuff with tubing and connectors and is designed to fit around the knee. It is connected to the cold therapy unit and placed/held around the knee to be treated for a prescribed period of time while the cooled water is circulated through it and the unit. This is a reusable device.	I
1411	33831	Fixative, acid	Тогтворжуулагч, хүчил	An agent containing acid employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	I
1412	33832	Fixative, metallic	Тогтворжуулагч, металл	An agent containing metal employed in the preparation of a histologic or pathologic human specimen for the purpose of maintaining the existing form and structure of all of its constituent elements to be used for general diagnostic applications.	I
1413	33878	Cable/lead/sensor/probe cover, non-sterile	Кабель / хар тугалга / мэдрэгч / датчик бүрхэвч, ариутгагдаагүй	A non-sterile device, typically made of disposable plastic, that forms a protective enclosure around its cable/lead, probe, sensor, or tube contents, making a hygienic barrier to protect the contents from soiling and contamination so that the non-sterile contents may be used in the vicinity of, or enter into a hygienic area, e.g., a sterile surgical field. This is a single-use device.	I

1414	33886	Assistive bathing scrub brush	Усанд ороход туслах скраб сойз	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is a brush with a purpose-made handle or grip that allows the user to wash/scrub all parts of their body whilst bathing; particularly the parts that they cannot reach using their hands.	I
1415	33906	Tracheotome	Трахеотом	A knife-like, hand-held manual surgical instrument designed to cut an opening into the trachea (windpipe) through the anterior surface of the neck to create an artificial airway (tracheotomy). This is a reusable device.	I
1416	33954	Cotton pledget applicator, single-use	Хөвөн түрхэгч, нэг удаагийн	A slender rod of wood, flexible metal, or synthetic material with a pledget of cotton attached at one end intended to be used for cleaning or applying a substance (e.g., medication) to superficial wounds or body orifices [e.g., ears, nose, oral cavity, throat, anus, rectum]. This is a single-use device.	I
1417	33957	Antisnoring device	Хурхиралтын эсрэг төхөөрөмж	A device used by a person to prevent snoring and/or obstructive sleep apnoea. This device may employ a number of methods or technologies in order to achieve the intended purpose, e.g., attachments to the upper teeth. It can be available [non-prescription] over-the-counter (OTC) for home-use. This is a reusable device.	I
1418	33965	Episiotomy scissors, reusable	Эпизиотоми хайч, дахин ашиглах боломжтой	A hand-held, manual, obstetrical, surgical instrument intended to cut the outlet of the vagina in childbirth so as to facilitate the birth of the child (also known as perineotomy). It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; the blades are typically angled, have different shapes, and may be serrated. This is a reusable device.	I

1419	33968	Surgical screwdriver, reusable	Мэс заслын халив, дахин ашиглах боломжтой	A non-powered tool intended to fit into a screw head (e.g., slotted, cross/hex head) for the application of rotation to introduce/remove a screw (e.g., craniofacial bone screw, dental screw) into/from a patient in association with a surgical procedure [e.g., orthopaedic, dental, computer assisted surgery (CAS), image registration]. It may also be used to connect/disconnect a device to/from another device attached to a patient (e.g., implant component, fiducial marker). The proximal end of the device may have a handle for manual use or a profiled tang that fits into an independent chuck or power driver; it is typically made of metallic and/or polymer materials. This is a reusable device.	I
1420	33969	Surgical vice, bench	Мэс заслын туслах, вандан сандал	A surgical clamping instrument usually composed of two jaws that are closed by a screw mechanism or lever intended to be used to hold another medical device in position during the process of bending, shaping, or aligning. It is attached to a workbench and is used sterile in the operating room (OR). This is a reusable device.	I
1421	33990	Safety razor, reusable	Аюулгүй сахлын хутга, дахин ашиглах боломжтой	A hand-held device fitted with an exchangeable razor blade used to remove facial or body hair from a person or patient. It is known as a safety razor because the blade lies protected within the razor head leaving only the cutting edge exposed. This device can be used for skin preparation prior to treatment/surgical intervention or for normal grooming. It is reusable after appropriate cleansing and a change of blade has been done when used on different patients/users. This is a reusable device.	I
1422	33997	Surgical drill guide obturator	Мэс заслын өрөмдлөгийн хөтөч obturator	A surgical device designed to fill the lumen of a drill guide during its insertion to a surgical site primarily to prevent tissue obstruction of the drill guide lumen. When the drill guide is firmly placed at the chosen position on the bone surface, the obturator is removed. It is typically a rod with a rounded distal end, which protrudes out of the drill guide, and a knob-like handle that functions as a regulator to control the length of the protruding end and to remove it from the drill guide. It is typically made of a high-grade stainless steel. This is a reusable device.	I

1423	33999	Manipulator, joint, plunger-like	Манипулятор, хамтарсан, бүлүүртэй төстэй	A specialized plunger-like device intended to be used to manipulate/massage joints during chiropractic procedures. This is a reusable device.	I
1424	34004	Surgical instrument guard, reusable	Мэс заслын багажийн хамгаалалт, дахин ашиглах боломжтой	A device designed to be applied to a variety of surgical or invasive instruments to protect the instrument and/or its operator and/or the patient from injury, distortion, or damage during a procedure, handling, and/or storage. It is typically made of stainless steel or plastic materials. This is a reusable device.	I
1425	34009	External manual massager, clinical	Гадны гар ажиллагаатай массаж, клиник	A manual (non-powered) device designed to apply external massage to a patient, by the patient, staff, or a therapist in a hospital, institution, or therapeutic treatment situation. It is intended to stimulate/massage body muscles to provide a therapeutic effect. It is typically designed to be held in the hands and is available in a variety of configurations and materials, e.g., plastic, wood, ceramics. It is available in a variety of sizes and shapes and may be a one-piece device or have interchangeable massaging components (e.g., roller heads or pads), and have a variety of massage surfaces (e.g., points, ribs, smooth). This is a reusable device.	I
1426	34020	Examination/treatment glove, latex	Үзлэг/эмчилгээний бээлий, латекс	A device composed of latex used on the hands of an examiner as a protective barrier between the examiner and patient during examination and/or treatment procedures. This is a single-use device.	I
1427	34046	Internal surgery adhesive tape	Дотор мэс заслын наалдамхай тууз	A very long and narrow flexible, sterile band of bioabsorbable material coated on one side with an adhesive, used to bind organs or other internal structures during surgical procedures. It is made of a material that can be chemically degraded and typically absorbed via natural body processes within the body over time. This is a single-use device.	I
1428	34056	Audio cassette tape	Аудио кассет соронзон хальс	A device that contains a magnetic tape (band) upon which audio information is recorded and stored for playback or documentation. The tape spools on integrated reels which are activated by the recording/playing device utilized. This is a reusable device for general-purpose use.	I

1429	34082	Dressing, occlusive/semi-occlusive, hydrogel	Хувцаслах, битүүмжлэх / хагас бөглөрөх, гидрогель	A sterile or non-sterile wound or scar covering typically made of cross-linked polymer gels in sheet form or a gel that is dispensed with an applicator. The device helps to promote wound healing by maintaining a moist wound environment, facilitating wound debridement, and absorbing exudates in wounds that are minimally to moderately exudative. It may combine hydrogel with supplemental dressing materials (e.g., alginate, film backing), and provide a barrier impermeable to liquids and gases. Some types are used to manage hypertrophic or keloid scars by providing a barrier impermeable to liquids and gases to help maintain a moist environment for scar reduction. This is a single-use device.	I
1430	34084	Wound compression dressing	Шархыг шахах боолт	A sterile covering designed to exert pressure on a wounded area to prevent the collection of fluids in the underlying tissues; most commonly used after skin grafting and in the treatment of burns. This is a single-use device.	I
1431	34098	Forceps warmer	Хямсаа халаагуур	A mains electricity (AC-powered) device that is used in the laboratory to preheat and maintain a constant temperature of forceps that are being used in conjunction with paraffin wax embedding material and the devices and procedures around this process in order to prevent wax build-up on the forceps tips. It is available in various designs, typically a table top unit with several heated wells in which the forceps are kept when not in use.	I
1432	34099	In-line backflow valve, single-use	Шугамын урсах хавхлага, нэг удаагийн	A general-purpose device used in medical or laboratory tubing to prevent the backflow of gases or liquids. It will typically have a small ball or a leaf valve that instantly closes should a retrograde pressure (backflow) occur. This is a single-use device.	I

1433	34119	Embryotomy scissors	Үр хөврөлийн хайч	A hand-held obstetrical surgical instrument used in the decapitation of the foetus (embryotomy) for its removal from the womb through the birthing canal when there are no other options. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the robust blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various sizes; the blades may be straight or curved. This is a reusable device.	I
1434	34131	Vaginal lubricant	Үтрээний тосолгооны материал	A non-sterile substance (e.g., a gel or jelly) intended to be used to lubricate the vagina to facilitate entry of a gloved finger(s) or a device (e.g., a vaginal speculum) during a diagnostic or therapeutic procedure. After application, this device cannot be reused.	I
1435	34134	Examination/treatment table, powered	Үзлэг/эмчилгээний ширээ, цахилгаантай	A general-purpose table designed for minor medical examinations and/or treatment of the patient. It will typically consist of a framework or a large pedestal with a flat table top surface which consists of some hinged sections that can be adjusted into a raised position. The height of the table top surface will also be power-adjusted. This device is typically powered by hydraulics or mains electricity (AC-powered) and is typically used in examination rooms, endoscopy facilities, electrophysiology (EP) laboratories, or outpatient departments for minor interventions.	I
1436	34143	Endoscopic bite block, basic, single-use	Дурангийн хазуулсан блок, үндсэн, нэг удаагийн	A device intended to be inserted into a patient's mouth to maintain oral patency during an endoscopic procedure primarily to protect the endoscope, introduced via the mouth, from the patient's natural tendency to bite down on the instrument, thereby causing damage. The device is also intended to protect the tongue and teeth of the patient during endoscopy. It is a basic device and does not include additional functions/features such as lumen to support introduction of an oxygen (O2) line. This is a single-use device.	I

1437	34157	Salpingographic catheter	Салпингографийн катетер	A flexible, balloon-tipped tube inserted transvaginally and through the uterus for the selective catheterization/cannulation of the fallopian tubes, in order to inject dye or a contrast medium into the tubes for a radiographic procedure; it is usually radiopaque. This is a single-use device.	I
1438	34158	Secondary battery	Хоёрдогч батерей	A rechargeable set of electrochemical cells, or a single cell, designed to store chemical energy and release it in the form of electrical energy to provide power for active implantable medical devices or external medical instruments, for backup power for programmable devices that must retain electronic information, or to power portable or other medical devices when it is not possible or convenient to use the line supply. The size, shape, and chemical composition of the battery should be specified according to the requirements of the appropriate IEC standard.	I
1439	34164	Skin-approximation adhesive	Арьсанд ойртуулах цавуу	A sterile biodegradable glue made of synthetic polymer (e.g., cyanoacrylate) intended for topical closure of surgical incisions and simple traumatic lacerations that have easily-approximated skin edges; it is not intended for internal surgical applications. After application, this device cannot be reused.	I
1440	34165	Ovulation cycle calculator	Суперовуляци хийх мөчлөгийн тооцоолуур	A battery-powered device intended to assist a woman in determining her fertile and nonfertile periods with the express intention of avoiding pregnancy. The device is used to compute the fertile, infertile, and ovulatory phases given the ovulation cycle length and the first day of the last menstrual period.	I

1441	34169	Assisted reproduction electromechanical micromanipulator	Тусламжтай нөхөн үржихүйн цахилгаан механик микроманипулятор	An electrically-powered device designed for accurate manipulation of microscopic objects during laboratory in vitro assisted reproduction techniques (ART) [e.g., intracytoplasmic sperm injection] usually by making small movements under the visual field of a laboratory microscope. It includes precision motors that reproduce the movements of the hand on a microscopic scale (continuous or step-by-step movements performed with an input mechanism such as a joystick) applied to miniature tools which may be included (e.g., fine needles, syringe microinjectors, capillary tubes). The device does not perform its actions following a computerized program.	I
1442	34181	Body/limb elastic exerciser	Биеийн / мөчний уян хатан дасгал	An exercise apparatus intended to primarily strengthen one or several major muscle groups of the body (i.e., in the arms, legs, chest, back, and/or abdomen) through repetitive body motion against elastic resistance. It typically consists of elastic bands, cords, straps, tubes, or cables often with handles/grips and sometimes anchors for attachment to fixtures (e.g., doors). The device typically enables the performance of a wide variety of exercise motions including curls, presses, lunges, flies, and raises; it may also be used to improve body flexibility and mobility or as an aid in physical rehabilitation after an injury (e.g., ankle sprain).	I
1443	34200	Finger/hand exerciser	Хуруу/гар дасгалын төхөөрөмж	A non-powered device intended primarily to strengthen the muscles of the fingers and hands through repetitive finger/hand motion against resistance from elasticity, density, magnetism, or other means. It is available in a variety of forms including handgrips (some types with individual buttons to work each finger independently), elastic balls and webs, putty, and hand-held devices with elastic bands. The device may also help improve finger/hand flexibility and coordination, and help improve wrist and forearm strength.	I

1444	34235	Pacemaker electrode extractor, percutaneous	Зүрхний аппаратын электрод олборлогч, арьсаар	A compound instrument designed to extract a pacemaker electrode through a small incision in the skin. A percutaneous pacemaker electrode extractor has a small clamp to hold the electrode and an instrument designed to free the electrode of any adhering tissue. The instrument may have a loop that slides along the electrode to free it from adhering tissue or a laser is employed to cut away the adhering tissue. This is a reusable device.	I
1445	34343	Capillary patient thermometer, alcohol	Капилляр өвчтөний термометр, архи	An instrument designed to measure a patient's body temperature which is formed as a slender, hollow, sealed tube made of glass with a bulb at one end filled with coloured alcohol. It works on the capillary principle whereby the registered heat proportionally expands the medium, filling a graduated column. This is a reusable device.	I
1446	34374	Electrical stimulation system lead, single-use	Цахилгаан өдөөлтийн системийн хар тугалга, нэг удаагийн	A wire, insulated with non-conductive material except at its electrode(s), used as part of a nonimplantable electrical stimulation system to conduct electrical current from an external pulse generator (EPG) to the target tissue. This is a single-use device.	I
1447	34395	Back/leg/chest dynamometer	Нуруу/хөл/цээжний динамометр	An analogue instrument designed to assess neuromuscular function by measuring the force or power exerted by the back, chest, and leg muscles during flexion. It includes a force gauge, which may be attached to a handle or strap, to assess a variety of movements (e.g., leg abduction, lifting) and is typically used to test and control a patient's muscle strength as part of a rehabilitation program.	I
1448	34488	Bed/chair electric massager	Ор/сандал цахилгаан массажчин	A mains electricity (AC-powered) device intended to provide therapeutic massage to the occupant of a bed or chair for the treatment of body aches and pains. The device is designed to be placed in the bed or chair and some types may be fixed into appropriate beds/chairs. It may be used in a healthcare facility, but is typically designed for use in the home.	I

1449	34489	Pneumatic massager	Пневматик массажчин	An pneumatically-powered device with a vibrating head mechanism which is typically held in the hand and drawn across the area of the body/muscles to be treated. The vibrating head or pads may be interchangeable with others of different size and shape. It can be used for respiratory and physiotherapy treatment, typically in a hospital or institution, but is also suitable for home-use.	I
1450	34524	Dental tooth-cleaning solution	Шүдний шүд цэвэрлэх шийдэл	A liquid or gel substance intended to be applied by a dental professional to clean tooth surfaces/cavities, often prior to or following a dental procedure (e.g., restoration, implantation). It typically contains appropriate cleaning agents and may be formulated to prevent plaque accumulation and gingivitis. It is often applied with a syringe, which may be included. After application, this device cannot be reused.	I
1451	34540	Endoscopic video image processing/light source system	Дурангийн видео дүрс боловсруулах/гэрлийн эх үүсвэрийн систем	A mains electricity (AC-powered) unit/assembly that, when used with an appropriate endoscope (not included), is designed to both: 1) produce a source of cold light for endoscopic imaging; and 2) receive and process electronic video image signals sent from the endoscope/endoscopic video camera. It may additionally include image recording features and an image display monitor, however it does not include features to steer, propel or otherwise control the movement of the endoscope.	I
1452	34543	Clip forceps	Хавчаар хямсаа	A small scissors-like, or tweezers-like, surgical instrument with a spring catch, used to hold a bleeding vessel. In the scissors-like form, the spring opens the forceps when pressure on the handle is released. In the tweezers-like form, the spring closes the forceps when pressure on the blades is released. This is a reusable device.	I
1453	34555	Electrolyte analyser, fluorometric	Электролитийн анализатор, флюорометр	A mains electricity (AC-powered) automatic or semi-automated instrument that is either part of a general analyser or is a stand-alone device, used to measure the concentration of coloured solution of a particular electrolyte by fluorometric means.	I
1454	34614	Dressing, antimicrobial	Хувцаслах, нянгийн эсрэг үйлчилгээтэй	A sterile piece or strip of fabric material that has been impregnated with an antiseptic/antimicrobial agent and is used to cover a wound. This is a single-use device.	I

1455	34615	Bioabsorbable wound dressing	Био шингэдэг шархны боолт	A sterile wound cover with a bioabsorbable skin contact layer composed of bioengineered/synthetic materials intended to protect a wound and to subsequently be absorbed into the skin as the wound heals. This is a single-use device.	I
1456	34628	Douche, electric	Душ, цахилгаан	A mains electricity (AC-powered) device producing a jet of liquid which is applied to part of the body. This may be to maintain a state of hygiene, or be part of a treatment.	I
1457	34629	Douche, manual	Душ, гар ажиллагаа	A manually-operated device producing a jet of liquid which is applied to part of the body. This may be to maintain a state of hygiene, or be part of a treatment.	I
1458	34630	Douche, manual, non-sterile	Душ, гарын ажиллагаа, ариутгагдаагүй	A manually-operated device producing a jet of non-sterile liquid which is applied to part of the body. This may be to maintain a state of hygiene, or be part of a treatment.	I
1459	34637	Head reflector	Толгойн тусгал	A head-worn device consisting of a circular concave mirror (reflector) attached to a headband designed to reflect light to a site of examination/minor intervention (e.g., the nose, throat, or body surface) on a patient. The examiner wears the device on his/her head, places the reflector in front of one eye, and views the site through a small hole in the centre of the reflector. This is a reusable device.	I
1460	34651	Diagnostic contact lens, reusable	Оношлогооны контакт линз, дахин ашиглах боломжтой	An ophthalmic lens made of glass or plastic [e.g., polymethylmethacrylate (PMMA)] designed to be applied for a short period directly to the front surface of the eye (globe or cornea) to assist in the diagnosis of intraocular abnormalities. Included are vitrectomy sutureless lens (VSL) types. This is a reusable device.	I
1461	34653	Trial lens	Туршилтын линз	An individual ophthalmic lens from a trial lens set.	I
1462	34654	Surgical dressing	Мэс заслын боолт	A highly absorbent wound cover used for postsurgical wounds or burns. This is a single-use device.	I
1463	34655	Gauze, non-woven	Самбай, нэхмэл бус	A dressing composed of non-woven cotton gauze used to treat wounds or surgical incisions. This is a single-use device.	I

1464	34661	External manual massager, home-use	Гадны гар ажиллагаатай массажийн аппарат, гэрийн хэрэглээ	A manual (non-powered) device specifically designed to apply external massage in the home. It is typically held in the hand of the user and drawn/rolled across the area of the body/muscles to be treated; it may also be designed to be placed on the floor for foot massage. The massaging components, e.g., roller heads or pads, may be interchangeable with others of different size and shape. This is a reusable device.	I
1465	34662	Electric massager, home-use	Цахилгаан массаж, гэрийн хэрэглээ	A mains electricity (AC-powered) massager designed for home-use only. It typically has a vibrating head or other feature which may be held in the hand and drawn across the area of the body/muscles to be treated. The vibrating head may be interchangeable with others of different size and shape.	I
1466	34663	Pneumatic massager, home-use	Пневматик массажер, гэрийн хэрэглээ	An pneumatically-powered massager designed for home-use only. It typically has a vibrating head or other feature which may be held in the hand and drawn across the area of the body/muscles to be treated. The vibrating head, or pads, may be interchangeable with others of different size and shape.	I
1467	34664	Suction massager, home-use	Сорох массаж, гэрийн хэрэглээ	A suction generating massager designed for home-use only. It can be applied by the user and will be used to stimulate/massage body muscles to provide a therapeutic effect. It may consist of suction cups or be differently configured. It is not suitable for use in a hospital or institution. This is a reusable device.	I
1468	34667	Flotation therapy tank	Флотацийн эмчилгээний сав	A stationary electronic pod intended to be filled with high-density Epsom salt water to provide a body flotation medium and isolation space for promoting relaxation and wellness through sensory deprivation; it is intended to help improve various mind and body functions (e.g., concentration, creativity, sleep, blood circulation, tissue healing) and alleviate stress/pain. It is typically designed as a tub, with a closable lid to provide quiet and dim seclusion, wherein the patient floats during a therapy session; components for water heating, pumping, and filtering, and device control, may be integrated in the tank or in a separate unit.	I

1469	34668	Short-wave diathermy treatment system, home-use	Богино долгионы диатерми эмчилгээний систем, гэрийн хэрэглээ	An assembly of devices designed to be operated by a patient in the home to provide therapeutic deep heat within specific volumes of the body through the transcutaneous transmission of electromagnetic (EM) energy in the radio-frequency bands of 13 megahertz (MHz) to 27.12 MHz. It typically consists of an electric generator and two electrodes (active and return) intended to be held on/near the patient. This system is typically used to treat pain, muscle spasms, and joint contractures; it is not used for surgery or to treat malignancies.	I
1470	34669	Ultraviolet phototherapy unit, home-use	Хэт ягаан туяаны фото эмчилгээний аппарат, гэрийн хэрэглээ	A mains electricity (AC-powered) portable device that includes a lamp which emits light in the ultraviolet (UV) band intended to treat dermatological disorders (e.g., psoriasis, dermatitis) in the home.	I
1471	34675	Acupuncture unit, home-use	Зүү эмчилгээний хэсэг, гэрийн хэрэглээ	An electronic apparatus designed to be used in the home, or other non-professional setting, to provide electrical current for the stimulation of acupuncture points.	I
1472	34699	Dental laboratory drilling system motor	Шүдний лабораторийн өрөмдлөгийн системийн мотор	A mains electricity (AC-powered) engine (motor) used in a dental laboratory in conjunction with a flexible drive system (e.g., a Bowden cable) to provide the rotational power for a dental laboratory handpiece. It is typically combined with different speed controllers. This is a reusable device.	I
1473	34705	Dental laboratory press	Шүдний лабораторийн хэвлэл	An apparatus intended to be used in the dental laboratory for pressing together two halves of a mould for the forming and polymerization of base material for removable dental prosthesis production.	I
1474	34713	Dental milling system, CAD/CAM, laboratory	Шүдний тээрэмдэх систем, CAD/CAM, лаборатори	An assembly of devices designed for automated computer-aided design (CAD) and computer-aided manufacturing (CAM) of custom-made (prescribed for one patient) dental restorations and/or orthodontic appliances (archwires) produced in the dental laboratory. It typically includes three-dimensional (3-D) image acquisition capabilities that provide values (measurements) from, e.g., casts, models or chairside in vivo acquisition to acquire the prescription values for the production phase; software for record collection, treatment planning, simulation and device production; and robotic capabilities for production of the actual device(s) for delivery and final fitting to the patient.	I

1475	34807	Wax dental impression material	Шүдний эмэнд зориулсан лав материал	A material made of wax, sometimes in combination with resins of low melting point, designed to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. This is a single-use device.	I
1476	34808	Dental base plate	Шүдний суурь хавтан	A foundation on which an occlusal rim is built or a trial denture set-up. Dental base plates are made of wax, shellac or polymers and formed individually for one patient (custom-made). This is a single-use device.	I
1477	34816	Dental laboratory bur	Шүдний лабораторийн бур	A rotary cutting device made of high-grade steel, the working end of which is made from, or coated with, a hard material (e.g., particles of diamond or tungsten carbide), and which is designed to fit into a dental laboratory handpiece that provides the rotation and that is intended for dental laboratory use only to cut hard structures (e.g., metals, plastics, porcelains), during the fabrication of dental restorations. It is available in various shapes (e.g., cylinder, disk, sphere, oval). This is a reusable device.	I
1478	34827	Tendon/ligament tunneller	Шөрмөс / шөрмөсний туннеллер	A long, hand-held, manual surgical instrument designed to tunnel an artificial passageway along ligament and/or tendon tissue to create a connecting channel. It can have a variety of designs: 1) a long, round, stiff rod that tapers to a rounded point at the distal tip with a handle at the proximal end to allow the surgeon to exert the necessary pressure and manipulation to push it through the body tissue; or 2) a ring-handled instrument with long, slightly curved arms that join at a pivot point near the distal end, terminating in short grasping arms. It will typically be made of high-grade stainless steel. This is a reusable device.	I
1479	34831	Hypoallergenic skin adhesive tape	Харшил үүсгэдэггүй арьсны наалдамхай тууз	A flexible band of fabric, plastic, paper, or other material, coated on one side with a pressure-sensitive adhesive, and designed with a lower potential for producing an allergic reaction (i.e., hypoallergenic), intended to non-invasively adhere to the skin surface to fix a dressing in place, or attach objects (e.g., catheter); it is not waterproof. This is a single-use device.	I

1480	34832	Waterproof skin adhesive tape	Усны хамгаалалттай арьсанд наалдамхай тууз	A long and narrow flexible band that is coated on one side with a pressure-sensitive adhesive, and made from a material designed to resist water permeation, intended to be used to cover a surface (e.g., small wound), fix a dressing, attach objects, and/or exert pressure on a body part; it is not hypoallergenic. This is a single-use device.	I
1481	34833	General-purpose stool/chair	Ерөнхий зориулалтын сандал/сандал	A seat, usually height-adjustable, intended to be occupied by staff or patients during medical procedures, examinations, or rest; it may include support for the back, arms and feet (footrest/ring). It is not dedicated to a specific clinical specialty, procedure, or location. It may be used in a healthcare facility, office, or in the home.	I
1482	34834	Environmental air sampling unit	Хүрээлэн буй орчны агаарын дээж авах нэгж	A hand-held device, typically battery-powered, used to obtain samples of room air, typically from the working environment, for analysis. The air will typically be drawn through this device and collected in a closed container and sent for analysis in the laboratory in order to determine its content, e.g., bacteria contamination, vapour concentrations [benzene, mercury (Hg)]. This device may or may not require a dedicated kit to be used together with it in order to obtain the air sample.	I
1483	34836	Dental amalgam alloy	Шүдний амальгам хайлш	A composite of metals in fine particles, consisting mainly of silver (Ag), tin (Sn) and small amounts of copper (Cu), that is intended for mixing with mercury (Hg) to produce dental amalgam. Amalgam is a dental restorative material used to fill tooth cavities. After application, this device cannot be reused.	I
1484	34849	Anaesthesia workstation gas scavenger	Мэдээ алдуулах ажлын станцын хий цэвэрлэгч	A pneumatically-powered device that is a component of an anaesthesia workstation and connects between the expiratory valve or port of a breathing circuit and the extraction system enabling the waste anaesthetic, exhaled, or other trace gases to be removed under controlled conditions from the work environment and channelled to the outside of the building. Filters or absorbers may be required to clean the removed gases before discharging to the atmosphere. This device is also known as an anaesthetic gas scavenging system (AGSS).	I

1485	34852	Massage table/couch, non-powered, portable	Массажны ширээ/буйдан, цахилгаангүй, зөөврийн	A manually-adjusted, portable table designed for various kinds of complementary therapy (e.g., massage, acupuncture, aromatherapy, reflexology, kinesiology). It consists of a foldable framework (table top and legs) with a flat tabletop surface which may have a head section that can be manually adjusted. The height of the table may also be manually adjusted to fixed positions (i.e., set to an initial height but not readily adjustable). It may incorporate a face hole (the patient's face fits into this when lying prone), a headrest, and an armrest(s). This device is typically known as a massage/therapy table, couch or bed.	I
1486	34853	Thermometer jar	Термометрийн сав	A cylindrical, tall, slender vessel intended to be used for holding thermometers prior to and during their use on a patient. It is typically made of high-grade stainless steel or sterilizable plastic material (e.g., polypropylene) and will have a wide or weighted base to give it stability. The jar may hold an antiseptic solution. This is a reusable device.	I
1487	34854	Armrest/arm support cover, non-sterile	Ариутгалгүй гарын түшлэг/гарын тулгуур бүрээс	A non-sterile device designed as an outer covering and used for the protection of an arm supporting device, e.g., an armrest, armboard, or arm posturing device, against unhygienic conditions. It will typically be made of thin, shaped, plastic material which creates a physical barrier between the patient's arm and the arm supporting device. This is a single-use device.	I
1488	34857	Transcervical artificial larynx	Умайн хүзүүний хиймэл мөгөөрсөн хоолой	A battery-powered, speech-assistive device designed to be used by a person who has had their larynx removed (laryngectomy) to assist them in the reproduction of sounds similar to those produced by the vocal cords in normal speech. It is an externally-applied electromechanical device (also known as a neck-type artificial larynx) with a plastic or metal probe that generates a sound (i.e., tone); when the probe is held against the tissues of the neck (or cheek) the tone is transmitted to the mouth through the oropharynx. The appropriate movement of the lips, tongue, teeth, and jaw converts the tone into meaningful speech (i.e., modulates the tone).	I

1489	34858	Surgical suction system collection container, single-use	Мэс заслын сорох систем цуглуулах сав, нэг удаагийн	A sealable container (e.g., cylindrical, bottle-shaped, pouch) intended to be used as a component of a surgical suction system to collect aspirated materials (e.g., blood/bodily fluids, gases, body tissues, calculi) from a surgical site for disposal (e.g., to prevent backflow) or diagnostic/therapeutic purposes (e.g., tissue or polyp trap). It may be used singularly or connected in a series to provide greater capacity, and may be graduated to facilitate determination of the quantity of its contents; it may also be used in conjunction with aspiration liners and may include lid, microbial/hydrophobic filters or tubing. This is a single-use device.	I
1490	34859	Dental suction system	Шүдний сорох систем	An assembly of devices designed to aspirate water, blood, saliva, and tooth debris from the oral cavity by means of suction, to maintain a clear operative site during dental surgical, professional hygiene, and orthodontic procedures. It consists of an electrically-powered suction pump with a control knob and patient contact devices (typically suction handpiece/tip); collection containers, spittoon, tubing, and amalgam separator are also often included.	I
1491	34864	Adhesive bandage	Наалдамхай боолт	A sterile piece of fabric or plastic material intended to be applied to a part of a patient's body and held in place by its pressure-sensitive adhesive to secure objects to the skin, cover and protect wounds, and/or approximate the skin edges of a wound; it may or may not include an absorbent pad. It is not intended for compression bandaging and is not an adhesive tape nor an adhesive strip (e.g., such as an Elastoplast or Band-aid brand). This is a single-use device.	I
1492	34865	Butterfly skin-closure adhesive strip	Эрвээхэйний арьсыг хаадаг наалдамхай тууз	A small, narrow piece of flexible material covered on one side with a pressure-sensitive adhesive, and with broad, wing-shaped ends that function to approximate the edges of a superficial wound. The device may be hypoallergenic and/or waterproof. This is a single-use device.	I
1493	34866	Rocking infant bed, manual	Хүүхдийн эргэдэг ор, гарын авлага	A manually-operated bed designed to provide a rocking movement for newborn babies to soothe the infant. The rocking movement is provided by an attending person.	I

1494	34867	Bedpan	Орны таваг	A portable device used by a patient or a person with a disability that is confined to his/her bed as a receptacle in which to urinate and/or defecate. It will be removed and emptied by attending staff and sanitized for reuse. This is a reusable device.	I
1495	34868	Bedrail	Орны хашлага	A rigid, adjustable device that is mounted to the side or sides of a medical bed and, when in an "up" position, identifies the edge of the mattress support platform, providing a physical barrier intended to reduce the risk of accidental patient falls out of the bed. It may also enable the patient to independently sit up and/or change position while in bed. It may be a detachable component of the bed or integral to the overall construction of the bed. It is typically made of metal and/or plastic materials and is constructed to either lower or fold when the occupant vacates the bed or when not in use. It is not intended to be a patient restraint.	I
1496	34869	Rotation bed, electric	Эргэлтийн ор, цахилгаан	A mains electricity (AC-powered) bed that provides automated rotation of the patient in a circular framework using electric power. It is used for patients with severe fractures and/or spinal cord injuries to provide an essential periodic change (i.e., rotation) of the patient's body position.	I
1497	34870	Basic electric hospital bed	Эмнэлгийн цахилгааны үндсэн ор	A mains electricity (AC-powered) bed designed to be used as a patient bed for rest/sleep in a hospital ward/room, and which is motorized providing the patient/nursing staff with touch button adjustment possibilities. It typically includes a framework with wheels, a mattress support platform that can articulate, a headboard and footboard, siderails, and a remote control to operate the electrical motors. It may have an integrated weighing scale.	I
1498	34871	Hydraulic hospital bed	Гидравлик эмнэлгийн ор	A bed designed to be used as a patient bed for rest/sleep in a hospital ward/room that has a hydraulic mechanism to adjust the height and surface contour of the bed. It typically includes a framework with wheels, a mattress support platform that can articulate, a headboard and footboard, siderails, and manually-operated controls to operate the raise/lower, back rest, and foot elevation functions.	I

1499	34873	Manual hospital bed	Гарын авлагын эмнэлгийн ор	A mechanical bed designed to be used as a patient bed for rest/sleep in a hospital ward/room with manual mechanisms to adjust the height and surface contour of the bed. It typically includes a framework with wheels, a mattress support platform that can articulate, a headboard and footboard, siderails, and mechanical manually-operated controls to operate the bed.	I
1500	34874	Orthopaedic bed	Ортопедийн ор	A dedicated bed designed to provide support for skeletal traction to stabilize fracture sites.	I
1501	34878	Surgical instrument/endoscope cleaning utensil, reusable	Мэс заслын багаж/дурангийн цэвэрлэгээний хэрэгсэл, дахин ашиглах боломжтой	A non-absorbent, non-powered, hand-held device in the form of a brush, a wire, strip of metal, or handle intended to clean the exterior and/or interior (lumen) of a surgical instrument (e.g., bur, reamer, bone tap, suturing device, sheath/shaft, ultrasonic surgical handpiece) and/or endoscope. The bristles, fibres or spines of brushes may be mounted along a single plane or radiate out around a central shaft, and may be soft or stiff; the shaft/handle of brushes may be flexible or rigid. The device may be used to clean endoscopic or open-surgery instruments, and it may have a handle or a connector/adaptor at the proximal end. This is a reusable device.	I
1502	34880	Eye brush	Нүдний сойз	A brush intended to be used to gather tissue samples or to apply materials to the surface of the eye and/or its associated structures. This instrument typically consists of a handle at one end and bristles, fibres or spines, at the other. The bristles, fibres or spines may be mounted along a single plane or radiate out around a central shaft. The shaft-like handle may be flexible or rigid and the bristles may be soft or stiff. This is a reusable device.	I
1503	34881	Gingival cleaning brush	Буйл цэвэрлэх сойз	A dental instrument with soft bristle brushes and/or massaging points that are intended to be used to clean and massage the gingival tissue. This is a reusable device.	I

1504	34882	Surgical scrub brush, reusable	Мэс заслын скраб сойз, дахин ашиглах боломжтой	A hand-held device used by hospital staff to scrub their hands, fingers, and forearms prior to surgery or other intervention where a high degree of personal hygiene is required. It typically consists of a flat handle or a block with side grips on one side, and bristles, fibres, or spines that are typically mounted along a single plane on the other side. This is a reusable device.	I
1505	34885	Anaesthesia cabinet	Мэдээ алдуулах кабинет	A furniture-like device, typically designed as a small cupboard on wheels, used for the secure storage of anaesthetic equipment and drugs. It typically includes an appropriate working surface for anaesthetics, instruments, vials, or other small devices. It is usually constructed to prevent the build-up of static electrical charges.	I
1506	34886	Narcotics security storage cabinet	Мансууруулах бодис хадгалах шүүгээ	A furniture-like device specially designed to provide a secure storage for narcotics. It can have double walls, two locks with separate keys, reinforced hinges, and other security design measures to prevent illegal entrance. Such cabinets will typically be installed in hospital wards or institutions.	I
1507	34887	X-ray film pass box cabinet	Рентген хальс дамжуулах хайрцагны кабинет	A specially designed cabinet, typically built-in, that allows direct passage of x-ray film cassettes into and out of the dark room without letting in unwanted room light. Some pass boxes can be used to provide storage for both exposed and unexposed film cassettes.	I
1508	34888	Cable/lead strap	Кабель / тугалган оосор	A device (a strip) of appropriate material of uniform breadth used for primarily securing medical device cables and leads in order to secure/stabilize/hold them together, or fasten it or them to another medical device. It has a fastening mechanism, e.g., a buckle, stud or Velcro fastener, and is capable of adjustment. This is a reusable device.	I
1509	34897	Ear speculum, single-use	Чихний толбо, нэг удаагийн	A semi-rigid or rigid, plastic or metal tube that is cone-shaped (i.e., it tapers down from a standard instrument-fitting size to a small opening) and is either hand-held and manually inserted, or fitted onto a compatible otoscope and then inserted, into the ear canal to create a channel for examination, suction, irrigation, or the insertion of another surgical device during an ear/nose/throat (ENT) procedure. It may be referred to as an ear cannula. This is a single-use device.	I

1510	34906	Cardiac compression board	Зүрхний шахалтын самбар	A flat, rigid device intended to be placed under a patient to provide the necessary support required for the application of cardiopulmonary resuscitation (CPR), either manually applied or using a powered cardiac resuscitator. It may be suitable for placing on a bed or other soft surface and/or may have fixings for the attachment of straps used to secure a powered cardiac resuscitator. This is a reusable device.	I
1511	34908	Anaesthetist's trolley	Мэдээ алдуулах эмчийн троллейбус	A cart that contains a variety of equipment, anaesthetic agents, and other supplies that are readily available to the anaesthetist in order to meet the diverse needs of patients in scheduled procedures as well as in emergencies. The trolley (cart) has a work surface that can be easily cleaned and that provides an area to display equipment (e.g., laryngoscope and blades, endotracheal (ET) tubes, stethoscopes). This wheeled cart has drawers, shelves, and compartments with doors that are organized to hold individual drugs, devices, and instruments.	I
1512	34909	Instrument trolley	Багажны троллейбус	A cart used to transport medical and surgical instruments, and sometimes sterile supplies, from a central supply station or sterilization department to appropriate areas of the hospital [e.g., the operating room (OR)]. In sterilizing departments the trolley may be used in the sterilizing process, and for sterilized instruments the cart may be designed to accommodate sterile wraps/packaging and/or cases. This trolley (cart) can be closed or open (open trolleys are usually covered with fabric during transport).	I
1513	34910	Orthopaedic operating table accessory trolley	Ортопедийн мэс заслын ширээний дагалдах тэргэнцэр	A cart designed as a framework on wheels with baskets, shelves, hooks and organizers used to store all the traction related accessory devices (e.g., patient supports, perineal post, traction boots, traction tensioners) that are required to put a patient in traction (e.g., the stretching of a broken limb during orthopaedic surgery). This trolley (cart) is used in association with an orthopaedic operating table.	I
1514	34911	Dental casting unit	Шүдний цутгах төхөөрөмж	A device used in the dental laboratory for casting various kinds of metal with various kinds of technology.	I

1515	34912	Barium enema catheter	Барийн бургуй катетер	A flexible tube designed to administer barium, a contrast medium, into the lower gastrointestinal tract by way of the rectum, for radiographic visualization of the area; it may additionally be intended for washing of the colon. The rubber or plastic tube may also be used for colonoscopy and can have a silicone rubber retention balloon tip for the examination of incontinent persons. This is a single-use device.	I
1516	34915	Oesophageal balloon catheter	Улаан хоолойн бөмбөлөг катетер	A long, flexible device with an inflatable balloon(s) at its distal end designed to access the length of the oesophagus of adult and adolescent patients to dilate strictures through balloon inflation. It is typically constructed as a catheter of various designs and is usually used endoscopically to enable visualization during the procedure. It is typically used to dilate strictures due to oesophageal surgery, primary gastric reflux, radiation therapy, and dilatation of the cardia in patients with achalasia (failure to relax the lower oesophageal sphincter). This is a single-use device.	I
1517	34916	Anaesthesia conduction catheter holder, sterile	Мэдээ алдуулах катетер эзэмшигч, ариутгасан	A sterile device in the form of an adhesive backed pad with a locking mechanism that is used to secure an anaesthesia conduction catheter at the skin insertion site to prevent catheter migration. Also known as an epidural securement device. This is a single-use device.	I
1518	34927	Patient lifting system amputee sling	Өвчтөн өргөх систем тайрах оосор	A lifting device used together with a patient lifting system to provide a support for an amputee that is being lifted in a sitting position with their body (back, arms, and buttocks) enveloped within the sling. It is typically designed as a U-shaped piece of strengthened fabric with lifting straps or eyes, a back support and seat and is constructed to tilt backwards enough to compensate for the lack of the counterweight of the users' amputated legs; this to ensure that the user does not tip forwards and fall out of the device. This is a reusable device.	I

1519	34934	Patient lifting system bath chair	Өвчтөн өргөх системтэй ванны сандал	A lifting device designed with a seat, and typically with legs and a back support, used with a patient lifting system to seat, lift, and transfer an incapacitated, geriatric, or disabled patient from a wheelchair into a bath or a tub (prefilled with bathing water or not) and back out again after the bathing session has been completed.	I
1520	34935	Dental chair	Шүдний сандал	A device designed to support and position a patient in a sitting posture for a dental examination or procedure. It is typically height-adjustable with a reclining back and sometimes tilt positions to provide optimal viewing of and access to the oral cavity for the dentist. It may be be part of a complex dental treatment unit.	I
1521	34937	Paper chart recorder	Цаасан диаграм бичигч	A mains electricity (AC-powered) electronic device, which may include internal rechargeable batteries, intended to receive an input signal (e.g., from a physiological amplifier, signal conditioner, computer) which it converts and transcribes onto paper so that the information is stored in the form of a permanent document (hard copy). It will typically include a paper chart driven at constant speed by a motor and a pen(s) that moves back and forth in response to the signal, a printing array (e.g., thermal or electrostatic), or another device for printing on paper. It may be stationary or portable and will typically be used in the absence of a built-in chart recorder.	I
1522	34940	Circuit breaker tester	Хэлхээ таслагч шалгагч	An instrument designed to assess the electrical characteristics of circuit breakers, usually by means of current injection. It typically consists of a high-output current source, a high-accuracy ammeter, a multi-range timer, overload protectors, a display, and controls; it may include additional measuring capabilities (e.g., time delay, trip current) to test devices such as overload relays and/or ground-fault interrupters.	I
1523	34944	Circumcision kit, reusable	Хөвч хөндөх иж бүрдэл, дахин ашиглах боломжтой	A collection of various instruments, dressings, and possibly pharmaceuticals used to perform a circumcision procedure. Typical components include disinfectant, circumcision clamp, scissors, and scalpel. This is a reusable device.	I

1524	34947	Aorta clamp	Аорт хавчаар	A hand-held manual surgical instrument designed for the temporary, atraumatic compression of the aorta for haemostasis (arrest or prevention of bleeding) during a procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and the working end can have a wide variety of blade designs (e.g., curved, angled, semicircular) specific to different applications (e.g., used as an aorta cross clamp, an aorta aneurysm clamp, or an aorta anastomosis clamp). This is a reusable device.	I
1525	34948	Artery clamp	Артерийн хавчаар	A hand-held manual surgical instrument designed for the temporary, atraumatic compression of an artery for haemostasis (arrest or prevention of bleeding) during a procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and designs of the working end are specific to the surgical application. This is a reusable device.	I
1526	34949	Bone approximation clamp	Ясны ойролцоох хавчаар	A hand-held manual surgical instrument designed to grip and hold a bone or, being used in pairs one on either side of the fracture, to approximate the proximal and distal segment of a fractured bone during orthopaedic surgery. It is typically made of high-grade stainless steel and is designed with a double hooked, blade-like jaw at the distal end (this hooks over the upper edge of the bone) whilst an adjustable single hook is tightened against the lower edge of the bone through a screw mechanism. A traction bar may be employed to bridge the two bone clamps and using its screw mechanism, the fracture is drawn together. This is a reusable device.	I

1527	34950	Bronchus clamp	Гуурсан хоолойн хавчаар	A hand-held manual surgical instrument designed to be used for the temporary, atraumatic compression of the bronchus (the larger air passages of the lungs). It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and the working end is typically angled. This is a reusable device.	I
1528	34951	Bulldog clamp	Бульдог хавчаар	A manual surgical instrument with heavily serrated jaws at the working end designed to grasp, join, compress or support an organ, vessel or tissue. This instrument is typically made of high-grade stainless steel and comes in two main designs: 1) a flat, pincer-like design with jaws that close to a set opening and which have serrated finger grips or opposing handles at the proximal end which, when depressed by the operator, release the clamp; or 2) a self-retaining, scissors-like design with ring handles; both may have various straight, angled or curved blades at the working end. This is a reusable device.	I
1529	34952	Haemorrhoid clamp, reusable	Цусны хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed for the temporary, atraumatic holding and compression of haemorrhoidal tissue during rectal surgery. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and has blades that may terminate in triangular, serrated jaws. This is a reusable device.	I

1530	34953	Intestinal clamp	Гэдэсний хавчаар	A hand-held manual surgical instrument designed for the atraumatic grasping, compression, or support of the intestines during a surgical procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end may have a variety of blade designs, e.g., straight or curved with parallel grooves and/or serrations to provide grip. The blades are flat and thin in profile and semi-rigid (flexible) so that they do not cause trauma to the intestinal tissue. This is a reusable device.	I
1531	34954	Surgical tubing clamp, reusable	Мэс заслын хоолойн хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to compress a tube used in association with a surgical intervention to occlude the tube's lumen and prevent the passage of material contained within it. The instrument typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel. It comes in varying sizes and has strong, thick blades that are typically broad so as not to damage the tubing. It may have serrated or non-serrated jaws. This is a reusable device.	I
1532	34956	Bandage clip	Боолт хавчаар	A surgical instrument with two blades which are joined at their midpoint or made out of a single alpha-shaped part designed to temporarily attach or hold a bandage during surgery and/or other medical procedures. This is a single-use device.	I
1533	34957	Surgical drape clip, reusable	Хагалгааны хавчаар, дахин ашиглах боломжтой	A surgical instrument with two blades joined at their midpoint or made from a single alpha-shaped part, designed to temporarily attach or hold a drape(s), or to hold a drape to other devices, during a surgical procedure. It is typically designed with flat gripping blades so as not to harm the material of the drape. This is a reusable device.	I
1534	34959	Scalp haemostasis clip, reusable	Хуйхын цус тогтоогч хавчаар, дахин ашиглах боломжтой	A small, manually-operated and applied surgical device used to stop bleeding from the scalp during surgery on the cranium. It is usually applied to the scalp using the fingers or a dedicated pair of scalp clip forceps, and consists of two blades that are joined at a midpoint or is made of a single alpha-shaped part. It is typically made of high-grade stainless steel. This is a reusable device.	I

1535	34960	Skin clip, single-use	Арьсны хавчаар, нэг удаагийн	A surgical instrument with two blades that are joined at their midpoint, or made of a single alpha-shaped part, used to approximate the edges of a skin incision during a procedure or to hold an object, e.g., an electrode, to the skin. This is a single-use device.	I
1536	34961	Towel clamp, reusable	Алчуурын хавчаар, дахин ашиглах боломжтой	A manual instrument designed to hold together surgical towels and/or drapes, or for securing other devices such as cables/leads, during an operation/intervention; some types may in addition be used for compressing tubes. It is made of metallic and/or polymer materials and is available in a variety of sizes and designs (e.g., two blades joined at their midpoints, single alpha-shaped device, various gripping jaws); it is commonly known as a towel clamp, towel forceps, or towel clip. This is a reusable device.	I
1537	34963	Timer, general-purpose	Таймер, ерөнхий зориулалттай	A device used to measure and indicate a length of time. It primarily functions as a clock, but will be used for a dedicated function, e.g., the time measured during patient resuscitation, anaesthesia administration, or for other time-allotted treatment measurements.	I
1538	34964	Cold compress pack	Хүйтэн шахалтын багц	A device that is applied with pressure to the body surface to provide cold therapy for the skin and/or underlying tissues (e.g., muscle). It typically consists of a compact fabric or soft plastic envelope containing a hydrated, pliable, silicate-gel capable of forming to the contour of the body. This is a reusable device.	I
1539	34968	Campimeter	Кампиметр	An ophthalmic device, often referred to as a tangent screen, intended for use to measure the integrity of the central field of vision. This is done by using a hand-held instrument that mimics a white spot which is directed by the doctor from the periphery to the centre of a black backdrop (Tangent screen). The patient focuses from approximately 2 meters distance upon a centre-point, and informs the doctor when this spot has entered his or her field of vision. This is a quick method for perimetry. The white spot can be created by using a specially dedicated instrument (also called a Campimetre) that projects a strong white light spot, or simple black rods with a white spot at the distal end.	I

1540	34970	Gauze compress	Самбай компресс	A device that is intended to be applied with pressure to a body surface to provide medication, heat, cold, moisture, or to help control bleeding. Gauze compresses are typically manufactured from a transparent fabric of open weave and differing degrees of fineness, most often cotton muslin. This is a single-use device.	I
1541	34971	Moist-heat pack	Чийглэг дулаан савлагаа	A device intended to be applied with pressure to the body surface to provide moist heat therapy to reduce muscle spasms and cramps and/or joint and muscle stiffness and pain. It usually consists of a soft pad or a small pouch made of cotton, gauze, or linen available in a variety of thickness; it may also contain gel or absorbent materials. The device can be warmed in hot water or in a microwave oven. This is a reusable device.	I
1542	34978	Blood pressure cuff, reusable	Цусны даралтын ханцуйвч, дахин ашиглах боломжтой	A band-like device that has an inflatable bladder in an inelastic sleeve with one or two connecting tubes with connector (typically locking connectors) that can be connected to a mechanism for inflating and deflating the bladder and/or a sphygmomanometer or a patient monitoring device/system that is used to determine a patient's blood pressure. It is wrapped around the upper arm or the leg (thigh) of the patient. This is a reusable device which may be intended for single-patient or multi-patient reuse.	I
1543	34981	Perineal/coccygeal cushion	Периналь/коксик дэр	A soft pillow or pad that is round or oval with a hole in its centre, intended to alleviate pressure on the caudal extremity of the vertebral column (coccyx) and/or perineal area. It is used when sitting to relieve pain from hemorrhoids or during recovery from surgery, pregnancy, or injury. The device is typically made of foam or an air inflatable vinyl or rubber.	I
1544	34982	Stool cushion	Өтгөний дэр	A soft pillow or pad used to provide support and comfort to the user while sitting on a stool. The device may also be used to elevate the user by increasing the height of the seat. This is a reusable device.	I

1545	34983	Dental cuspidor	Шүдний тос	A device shaped as a round bowl (a vessel), into which the patient will spit out the contents of their mouth during and after dental procedures. This vessel is usually a component of the dental delivery system and will typically have a water supply to allow the filling of a drinking vessel with warmed water for the patient to rinse out their mouth and provide the flushing of the cuspidor to wash away the waste (e.g., blood, tooth and material debris).	I
1546	34984	Ophthalmic cystotome, reusable	Нүдний цистотом, дахин ашиглах боломжтой	A hand-held manual ophthalmic surgical instrument designed for opening the capsule of the lens of the eye. It is typically made of high-grade stainless steel and is essentially a poniard-shaped cutter used for piercing the capsule. The cutter has a mechanism so that it can be retracted into a protective tubular support when repositioning of the instrument during the procedure. This is a reusable device.	I
1547	34986	Ceiling mount	Таазны бэхэлгээ	A non-dedicated (general-purpose) manually-operated device designed to be permanently fixed to the ceiling and from which another medical device(s) is intended to be safely suspended, affixed, or mounted. [This device does not include ceiling mounts that are dedicated to a device(s)].	I
1548	34987	Floor mount, static	Шалны бэхэлгээ, статик	A non-dedicated (general-purpose) manually-operated device designed to be permanently fixed to the floor and upon which another medical device(s) is intended to be safely affixed or mounted. [This group of devices does not include static floor mounts that are dedicated to a device(s)].	I
1549	34990	Dental stool	Шүдний багаж	A sitting platform (a stool) designed for use by the dental operator. It may be attached to a dental chair (the examination/treatment chair) so that it can revolve through 270 degrees around the chair. The height is adjustable and when not in use it may be retracted close to the chair. It may alternatively be separate from the dental chair, typically with adjustments for height, horizontal and vertical back rest adjustments. The back rest may also be used as a side rest or abdominal rest for the operator.	I

1550	34998	Haemodialysis dialysate electrical conductivity meter	Гемодиализийн диализатын цахилгаан дамжуулах хэмжигч	A mains electricity (AC-powered) device designed to measure the concentration of the dialysis solution (dialysate) delivered to a haemodialysis dialyser by measuring the electrical conductivity of the solution. The instrument can measure in the range of conductivity usually found in dialysate and includes the appropriate sensors, transducers, electronic circuits, and a display for the measurement. This device may be an integral component of the haemodialysis system or a stand-alone instrument.	I
1551	35001	Multi-parameter device tester	Олон параметрийн төхөөрөмж шалгагч	A battery-powered electronic device designed to measure two or more parameters (e.g., temperature, conductivity, pressure, pH, flow) to calibrate or test a medical device (e.g., haemodialysis equipment, anaesthesia machine, suction system, ophthalmic laser). It typically consists of a hand-held electronic box with appropriate connections and a digital display; dedicated measuring devices (e.g., probe, sensor, electrode, buffer solution) are typically included. It is not dedicated to a specific clinical discipline and is intended to be used by a professional in a professional setting (e.g., clinical engineering).	I
1552	35007	Penis nappy	Бэлэг эрхтний живх	A disposable, male incontinence device (a nappy or diaper) in the form of a sheath composed of absorbent material and worn over the penis of an incontinent adult or adolescent patient to collect urine. This device, which accommodates both dribbling and total incontinence, typically includes a waterproof outer layer, a highly absorbent middle layer, and an inner layer of permeable, non-absorbent material to protect the penis from moisture. This is a single-use device.	I
1553	35008	Infant nappy	Нялхсын живх	A disposable undergarment (nappy or diaper) composed of absorbent material intended to be worn around the perineum between the legs to collect urine and faeces for disposal from an infant or an incontinent child. This is a single-use device.	I

1554	35009	Over-guidewire oesophageal dilator	Хэт чиглүүлэгч утастай улаан хоолойн өргөсгөгч	A surgical instrument in the form of a slender, hollow cylinder made of metal, plastic or other suitable material, designed to dilate oesophageal strictures/passages after being passed over a pre-positioned guidewire, typically in sequentially increasing sizes. It is commonly used prior to and to assist in a gastroscopy and is available in a variety of sizes and flexibilities. Commonly known as a Savary-Guillard dilator it will typically be used during fluoroscopy. This is a reusable device.	I
1555	35010	Lacrimal dilator, reusable	Лакримал өргөсгөгч, дахин ашиглах боломжтой	A hand-held, manual, ophthalmic surgical instrument used for enlarging the lacrimal canal (the lacrimal duct) during an ophthalmic procedure. This is a reusable device.	I
1556	35013	Periodontal file/rasp, manual	Periodontal файл/расп, гар ажиллагаатай	A hand-held manual dental instrument that has various forms of ridged cutting surfaces at its working end(s) designed to scrape and smooth during a periodontal procedure. It is typically a one-piece instrument available in a variety of sizes and working end designs, including straight and curved ends, and often double-ended with a central handle; it is made of metal [e.g., stainless steel, titanium (Ti)]. This device is typically used to remove gross supragingival calculus, smooth the cementoenamel junction (CEJ), and remove overhanging margins of dental restorations. This is a reusable device.	I
1557	35014	Surgical scrub brush dispenser	Мэс заслын сойз тараагч	A device, typically located at a scrub station, that contains and dispenses surgical scrubbing brushes when activated by the users forearm/elbow. This is a reusable device.	I
1558	35016	Narcotic-control pill dose dispenser	Мансууруулах бодисыг хянах эмийн тунг түгээгч	A device designed to distribute narcotics, and/or other controlled medication pills, under strict security requirements in a healthcare facility in the amount needed for a single dose for an individual patient. It typically consists of a small but sturdy, computerized, wall-mounted (or sometimes stand-alone) cabinet that contains unit-dose packaged drug pills and/or containers with multiple doses but that only dispense an exact amount of pills at a time, preventing the operator access to the remaining stock of drugs. It frequently includes a double-lock system to ensure that only authorized personnel have access to controlled drugs.	I

1559	35017	Gauze bandage, roll	Самбай боолт, өнхрөх	A long, layered, woven-cotton gauze supplied in rolls that is used to bandage heads, limbs, and difficult to dress wounds (e.g., burns, plastic surgery, or orthopaedic wounds). This is a single-use device.	I
1560	35021	Hand dynamometer/pinchmeter, mechanical	Гар динамометр/пинчметр, механик	A non-powered, mechanical instrument designed to assess neuromuscular function by measuring the force or power exerted by the muscles of the hand/forearm to squeeze/pinch an object. It is used to assess a patient's grip and/or pinch strength in clinical or research settings, typically as part of a rehabilitation program for geriatric patients or those who have suffered a stroke. This device is commonly known as a Vigorimeter. It typically consists of various size squeeze bulbs and an analogue manometer to record the exerted effort. The patient will typically be asked to perform the test a few times so that the physician can obtain a mean value.	I
1561	35022	Ear bougie	Чихний бужигнаа	A cylindrical, rod-like, surgical instrument that is used to explore and/or dilate a stricture during ear/nose/throat (ENT) surgery, e.g., opening the Eustachian tube to improve chronic dysfunction or inspection of the tympanic orifice during otology. It is designed with a semi-rigid tapered shaft that terminates at the distal end in a small, bulbous tip; it may be hollow for the passing of other slender devices through the instrument. This is a reusable device.	I
1562	35023	Ear dropper, reusable	Чихний дусаагуур, дахин ашиглах боломжтой	A device intended to be used for aspirating a small volume of liquid so that it can be dispensed in single drops into the ear canal. It is typically designed as a hollow tube, open at both ends, with an aspiration bulb attached to the proximal and a narrow opening at the distal end. It is usually made of glass or plastic with a rubber teat and may be used in conjunction with ear/nose/throat (ENT) treatments. This is a reusable device.	I
1563	35024	Earplugs, single-use	Чихний бөглөө, нэг удаагийн	A device, usually used as a pair, made of rubber or pliable plastic/silicone material intended to be inserted into the outer ear canal for protection against excessive noise levels or water entering the ears when swimming/bathing. This device may be premoulded (preformed) or mouldable. This is a single-use device.	I

1564	35025	Ear canal irrigation syringe	Чихний сувгийн усалгааны тариур	A device intended to be used to flush the ear canal with an irrigating solution. It is typically available in two main design mechanisms that are used to carefully exert pressure on the irrigating fluid: 1) a cylindrical barrel with a plunger that have finger and thumb rings respectively mounted onto them for the operator to apply the necessary pressure; and 2) an elastomeric rubber, one-piece bulb that tapers to a thin nozzle that fits into the outer ear canal. This device may be used by a healthcare professional or by the patient/end user. This is a reusable device.	I
1565	35026	Electrocardiographic electronic-signal simulator	Электрокардиографийн электрон дохионы симулятор	A portable, battery-powered device that is primarily intended to imitate the human heart's electrical activity, mimicking an electrocardiogram (ECG). It may also be designed to imitate other physiological functions, e.g., blood pressure, respiration or temperature. It is used to test and calibrate ECG monitoring and recording equipment, check patient cable continuity or train healthcare providers. This device is intended to be used by a healthcare provider in a clinical setting.	I
1566	35028	Electrocardiographic electrode tester	Электрокардиографийн электрод шалгагч	An instrument designed to measure the electrical impedance between the surface of external electrocardiography electrodes and the skin; it is also typically capable of measuring interference voltages that may be stored on electrodes (i.e., offset voltage) and/or detect faulty lead wires and cables. The device is mainly used to assess the ability of a set of surface (skin) electrodes to conduct bioelectric signals from the skin to the electrodes; it can also measure the impedance of the lead wires and cables from the electrodes to the measuring unit. It is intended to be used by a healthcare provider in a clinical setting.	I

1567	35029	Electrocautery system generator, battery-powered	Цахилгаан гүйдлийн системийн генератор, зайгаар ажилладаг	A battery-powered device that produces and delivers a regulated electrical current used to heat the electrode tip or wire loop of a cutting instrument used during surgical intervention to burn or sear body tissue. It is used to stop bleeding (cauterization of blood vessels), to treat superficial skin lesions, e.g., the removal of warts, the removal of gastrointestinal polyps via an appropriate endoscope, or to occlude fallopian tubes during sterilization procedures. It will typically contain electronic circuits and have a built-in thermocoupler to help control the temperature at the electrode. This is not an electrosurgical diathermy system.	I
1568	35030	Electrocautery system generator, line-powered	Цахилгаан гүйдлийн системийн генератор, шугамаар ажилладаг	A mains electricity (AC-powered) device that regulates an electrical current used to heat the electrode tip or wire loop of a cutting instrument used during surgical intervention to burn or sear body tissue. It is used to stop bleeding (cauterization of blood vessels), to treat superficial skin lesions, e.g., the removal of warts, the removal of gastrointestinal polyps via an appropriate endoscope or to occlude fallopian tubes during sterilization procedures. It will typically contain electronic circuits and have a built-in thermocoupler to help control the temperature at the electrode. This is not an electrosurgical diathermy system.	I
1569	35031	Electrode tester	Электрод шалгагч	A test instrument used for the functionality testing/control of electrodes used upon the patient to ensure the patency. It is designed to check the impedance of, e.g., electrocardiograph (ECG) electrodes (impedance being the total opposition, measured in ohms, that a circuit offers to the flow of alternating current). The device may equally well be used for random batch control or be used in the manufacture of electrodes.	I

1570	35035	Electrocardiographic electrode, single-use	Электрокардиографийн электрод, нэг удаагийн хэрэглээ	A non-sterile, noninvasive electrical conductor designed to conduct electrical signals, generated by a patient's heart, from the skin surface to an electrocardiograph (ECG) monitoring device, via an ECG lead wire (not included). It is typically a disk-like electrode that is affixed to the skin with a special adhesive, adhesive tape, or suction mechanism; a conductive gel may be pre-applied and it may include a skin cleaning wipe to assist electrical connection. Electrocardiography is usually performed using a set of electrodes (e.g., 10) connected to appropriate leads and cables. This is a single-use device.	I
1571	35036	Electrooculograph electrode	Электрокулографын электрод	An electrical conductor intended to be applied to the skin adjacent to the eye to transmit signals during a diagnostic evaluation of the eye's extraocular neuromuscular system. This is a single-use device.	I
1572	35037	Oesophageal electrode	Улаан хоолойн электрод	An electrical conductor intended to be used to stimulate the muscular contraction of the oesophagus. This is a single-use device.	I
1573	35041	Electrosurgical cable adaptor	Цахилгаан мэс заслын кабелийн адаптер	A small connector used to join the cable(s) from a handpiece/electrode(s) (active and/or return) to the generator of an electrosurgical system. This device will typically be used when the system components are from different manufacturers and the connections are not compatible. This is a reusable device.	I
1574	35042	Electrosurgical diathermy system cable, reusable	Цахилгаан мэс заслын диатермийн системийн кабель, дахин ашиглах боломжтой	An insulated metal wire that functions as an electrical conductor between an electrosurgical diathermy system generator and a system handpiece/electrode, to transmit electrical energy between the two that may, or may not, contain information. This is a reusable device.	I
1575	35043	Electrosurgical handpiece/electrode holder, reusable	Цахилгаан мэс заслын гар утас/электрод эзэмшигч, дахин ашиглах боломжтой	A device intended to be used to house or fix an active electrosurgical handpiece/pen with its electrode when not being used by the surgeon during the surgical procedure to secure the electrical conducting unit, especially the electrode, within the sterile operating zone and protect it against potential adverse events. The holder will typically be fastened to an object within the sterile field (e.g., a drape, anaesthesia dividing arm, operating table). This is a reusable device intended to be sterilized prior to use.	I

1576	35047	ENT elevator	ENT лифт	A hand-held, manually-operated, surgical instrument used to lift, position or pry anatomical structures or surgical material during ear/nose/throat (ENT) surgery. It may be a single or a double-ended device with a blunted blade or hook of various shapes with no cutting edges at the distal working end(s) and a handle positioned centrally or at the proximal end. Its shape and size depends upon the intended use, e.g., a blunt antrum, a rhinology or septum elevator, a strong nasal fracture elevator, or a specially designed ear elevator. It is usually made of high-grade stainless steel. This is a reusable device.	I
1577	35048	Bone lever/elevator, reusable	Ясны хөшүүрэг/лифт, дахин ашиглах боломжтой	A manual surgical instrument designed to lift, position, or pry up (elevate) bone, other anatomical structures, or surgical material/devices during an orthopaedic intervention. It is made of high-grade stainless steel and is available in a wide variety of sizes, designs, and blade shapes. It is typically a robust instrument with a blunted blade with no cutting edge at the distal end that can be pointed, rounded, flat, curved or hook shaped and a handle of various designs at the proximal end. Some types can have special functions, e.g., for angle joint operations or for luxation procedures. This is a reusable device.	I
1578	35049	Bidet, portable	Биде, зөөврийн	A portable device designed for the purpose of washing and bathing the genitalia and the inner buttock and anus. It is available in a variety of designs and can fit into a standard toilet bowl, be placed in a freestanding, low-mounted, framework, or be formed as a purposed shaped bowl for use, e.g., for a bedridden person. It consist of a bowl that resembles the shape of a toilet but is typically more elongated and does not have a seat. It is used to enhance personal hygiene after a visit to the toilet or when a person has soiled themselves.	I

1579	35051	High-frequency epilator	Өндөр давтамжийн эпилятор	A device intended to destroy the dermal papilla of hair by applying an electric current at the tip of a fine electrode needle that has been inserted close to the hair shaft, under the skin, and into the dermal papilla. A specially adapted tweezers that also can conduct the electrical current to the hair can be used for hair removal. Hair removal using high frequency electricity may also be done using certain types of electrosurgical diathermy systems.	I
1580	35052	Oesophageal bougie, reusable	Улаан хоолойн буги, дахин ашиглах боломжтой	A cylindrical, rod-like, surgical instrument that is used to explore and/or dilate a stricture during oesophagoscopic or bronchoscopic procedures. It may be designed with a semi-rigid tapered end (Maloney type) or with a blunt end (Hurst type), and may be hollow for the passing of other slender devices through it. This is a reusable device.	I
1581	35053	Manometric gastrointestinal motility analysis system	Ходоод гэдэсний замын хөдөлгөөний шинжилгээний манометрийн систем	An assembly of devices which includes a main computerized unit designed to evaluate peristaltic motility in the gastrointestinal tract by measuring pressure using an intraluminal sensor catheter/probe at several points; it may also measure pH, respiration, and swallowing with appropriate sensors. In addition to the central computer with software it may includethe appropriate perfusion and/or nonperfusion catheters. It is intended to evaluate patients with dysphagia, gastro-oesophageal reflux disease (GERD), noncardiac chest pain, and/or assess connective tissue and neuromuscular disease.	I
1582	35054	Mechanical oesophageal stethoscope	Улаан хоолойн механик чагнуур	A non-powered listening device designed to be inserted into a patient's oesophagus to listen to heart and lung sounds. This is a reusable device.	I
1583	35056	Quantitative sensory testers, touch discrimination	Тоон мэдрэхүйн шалгагч, мэдрэгчтэй ялгаварлан гадуурхах	A device used during neurological examination to evaluate a patient's touch perception thresholds. This is typically achieved by applying to the skin: 1) artificial hairs of different diameters until a sensation is achieved; 2) a single rod/fibre held in the fingers of the examiner who determines if the condition of tactile sensation is normal; 3) a pinwheel (an instrument with a serrated wheel); 4) a pointed instrument; or 5) a compass-like instrument raked over the skin in concentric arcs to define the effected area. This is a reusable device.	I

1584	35057	Ethylene oxide analyser	Этилен ислийн анализатор	A dedicated electronic instrument used for the qualitative/quantitative analysis of the concentration of ethylene oxide (ETO) in a sample.	I
1585	35058	Stair-climbing exerciser, non-powered	Шатаар авирах дасгалын төхөөрөмж хийдэг, цахилгаангүй	An exercise apparatus designed to simulate the motion of climbing stairs primarily to increase cardiovascular endurance by keeping the heart and respiration rates elevated over a continuous period (aerobics); it also promotes lower-body muscle strength. It may consist of static staircases, or steppers (also known as climbers) consisting of foot pedals or platforms with a manual/hydraulic/air piston drive system, and with side handrails and/or front handlebars. It may include workout program modes to adjust the resistance level, a monitor to display the workout time, distance, speed, calories burned, and heart rate; and handlebars with grip pulse sensors or wireless heart rate tools.	I
1586	35059	Core body stabilization/exercise stool	Гол биеийн тогтворжилт/дасгалын дасгал	A seat designed to be occupied by a patient during exercise or treatment, and/or to improve core body stability whilst seated, typically as part of physiotherapy or ergotherapy. It is in the form of an ergonomically-designed seating platform with no back support (i.e., not a chair) intended to facilitate muscular activation/exercise.	I
1587	35060	Leg exerciser	Хөлний дасгалын төхөөрөмж	A mechanical device designed to be powered by the user's legs to provide variable resistance to movement of the lower extremities in order to maintain, develop, or restore leg and ankle muscle strength and endurance. It may also be used to increase venous circulation in the legs in order to prevent deep vein thrombosis (DVT) and subsequently pulmonary embolism in inactive patients.	I
1588	35061	Quadriceps board exerciser	Квадрицепстэй дасгалын төхөөрөмж	A lower-limb exercise apparatus designed to improve the range of motion around the knees by stretching the muscles in the lower limbs using a board that supports the thighs (i.e., a quadriceps board). It typically consists of wooden boards that form two triangles which support the thigh and control the movement of the knee; the height and angle of the board are usually adjustable. The device is intended to improve the flexibility of the muscles in the lower limbs but may also increase quadriceps muscle strength.	I

1589	35065	Prescription spectacles	Эмчийн жороор олгодог нүдний шил	An ophthalmic device consisting of a spectacle frame with a pair of optical spectacle lenses (typically made of plastic or glass, also known as eyeglasses) designed to be worn in front of the user's eyes to provide refractive corrections to eyesight conditions such as presbyopia (the eye's diminished power of accommodation that occurs with ageing), or refractive ametropia (myopia, hyperopia and astigmatism). The lenses may be tinted (sunglasses) to protect the eyes from bright light and radiation.	I
1590	35069	Medical gas pipeline system air filter	Эмнэлгийн хий дамжуулах хоолойн системийн агаарын шүүлтүүр	A component of a medical gas pipeline system designed as an exchangeable filter to trap the impurities of the air that is being produced by, e.g., a hospital's compressors, and that passes through it. It is composed of tightly woven materials through which the air passes and particles/impurities are trapped in the filter material removing these from the air producing clean, filtered air to meet the specified requirement. For medical air, several filters may be used in-line. After application, this device cannot be reused.	I
1591	35070	Breathing circuit bacterial filter	Амьсгалын хэлхээний бактерийн шүүлтүүр	A screening device with a membrane designed to be used in a breathing circuit to remove and retain bacterial pathogens. It prevents the breathing circuit and the related devices from becoming contaminated, therefore decreasing the risk of cross-contamination between patients. Its use may also reduce the degree of required breathing circuit cleaning or extend the use of single-use breathing circuits. This is a single-use device.	I
1592	35073	Finger protector, single-use	Хурууны хамгаалалт, нэг удаагийн	A device intended to be used to protect an injured finger from further trauma during the healing process. It will typically be made of durable materials, e.g., plastic, rubber, or reinforced metal. This is a single-use device.	I
1593	35075	Luer adaptor	Luer адаптер	A small connecting device that mates two related but otherwise incompatible devices, and holds them in a secured, sealed, locked position (e.g., an injection needle to a syringe that does not have a matching conical fitting). This is a single-use device.	I

1594	35076	Medical gas/vacuum quick-connect fitting	Эмнэлгийн хий/вакуум хурдан холбох хэрэгсэл	A device used as a component of a medical gas/vacuum pipeline system or independantly and designed to be gas-specific allowing the user to rapidly connect other gas/vacuum dependant devices to the medical gas/vacuum supply. It is available for all medical gases, vacuum, and gas evacuation and provides safety features such as specific mechanical mating patterns, colour coding, different tube diameter connections; all to prevent wrong connection. It is available as a male or female connector; the male also connects into a terminal unit. It can be designed as a diameter-indexed safety system connector (DISS), reverse DISS, or a non-interchangeable screw-threaded connector (NIST).	I
1595	35077	Antibacterial floor mat	Бактерийн эсрэг шалны дэвсгэр	A pad designed to be placed on the floor to wipe the soles of the footwear of persons walking on its surface, and that contains an antimicrobial agent to inhibit bacterial cross-contamination. The product is intended to reduce the amount of dirt/contamination carried from one area and deposited in another where stricter hygiene requirements may apply.	I
1596	35078	Footstool, non-conductive	Хөлийн сандал, цахилгаан дамжуулахгүй	A platform on short legs designed to be stood upon to compensate for differences in height or upon which to place the feet for rest when sitting.	I
1597	35080	Rigid endoscopic tissue manipulation forceps, reusable	Хатуу дурангийн эдийг засах хямсаа, дахин ашиглах боломжтой	A rigid, hand-held manual surgical instrument designed to be introduced through the working channel of an endoscope and/or an endoscopic port (e.g., laparoscopic port) primarily for grasping and manipulating tissues during endoscopic surgery. It has proximal controls (e.g., scissors-like handles), a rigid long slender shaft, and distal grasping jaws; it is not an electrosurgical device and is not dedicated to biopsy. This is a reusable device.	I

1598	35081	Haemostatic forceps	Гемостатик хямсаа	A hand-held manual surgical instrument designed to constrict blood vessels during surgery to prevent bleeding. Often referred to as a haemostat (hemostat), it typically has a scissors-like, self-retaining design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end will typically have short or long narrow blades that can be straight or curved. The blades are finely serrated to provide extra grip on the blood vessels. This is a reusable device.	I
1599	35082	Obstetrical forceps, reusable	Эх барихын хямсаа, дахин ашиглах боломжтой	A scissors-like obstetrical instrument intended specifically to assist the birth of the foetus during difficult vaginal births. It typically is designed with two curved blades are that are introduced separately and then connected to a handle to exert traction on the foetal head or to rotate the foetal head in order to facilitate its passage through the birth canal. It is made of metal. This is a reusable device.	I
1600	35083	Open-surgery stone-retrieval forceps	Нээлттэй хагалгааны чулуу авах хямсаа	A hand-held manual surgical instrument designed to grasp and/or manipulate a calculus (i.e., a kidney or gallbladder stone) during an open surgical procedure; additional intended uses may include soft-tissue manipulation (e.g., polyp removal). It is typically made of high-grade stainless steel and is of scissors-like design with two handles attached to two long curved blades. The handles may be permanently joined or conjoined, usually by pressure, during use. The distal gripping blades may be designed with serrated and/or ringed or slotted grasping surfaces. This is a reusable device.	I

1601	35085	Mouth gag, adjustable, reusable	Амны хаалт, тохируулах боломжтой, дахин ашиглах боломжтой	A mechanical device with adjustable parts intended to be placed between the teeth of the upper and lower jaws of a patient to maintain an open oral cavity, typically during emergent placement of an artificial airway or for an oral/dental surgical intervention. Also known as a jaw spreader, it is available in various designs having support structures that force and/or hold the jaws apart; e.g., it may be designed with flat, pivoted blades that angle outward when adjusted; or it may have two parallel plates that move apart with adjustments to a centre screw; or it may have a scissors-like design with pivoted, self-retaining, notched blades at the distal end. This is a reusable device.	I
1602	35086	Gas cylinder trolley	Хийн цилиндртэй тэргэнцэр	A dedicated cart designed to hold and secure one or more medical gas cylinders of compressed gas; but may be used for other types of gases, both during transport and static placement. The usual gases are [e.g., oxygen (O2), air, nitrous oxide (N2O) or helium (He)]. This trolley (cart) is used to prevent the cylinder(s) from falling both during transport and whilst the gas is being used. It is typically constructed of a metal framework [coated iron (Fe) or aluminium (Al)] and designed for standing upright on the floor when not in transport. It is configured to hold a certain size of gas cylinder(s) and will include a handle, a cylinder(s) securing device, and a pair of wheels.	I
1603	35089	Adult drinking/feeding cup	Насанд хүрэгчдийн уух / хооллох аяга	A cup specially designed for drinking/feeding purposes to be used by adult or geriatric patients who have difficulties in using an ordinary drinking cup. It may also be used by a staff member to give the drink/liquefied food to a patient. It will typically have some form of spout from which the user will drink and a lid to secure from spillage of the contents. This is a reusable device.	I

1604	35090	Surgical gouge	Мэс заслын цүүц	A heavy-duty, hand-held, surgical instrument used to remove pieces of bone or other hard tissue during orthopaedic and plastic surgery procedures. It typically comprises a handle proximally which becomes a shaft that terminates in a convex profile with a sharp, semi-lunar, bevelled cutting edge to facilitate tissue removal. It is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. It is typically made of high-grade stainless steel and can be designed as a one-piece instrument (all steel) or the handle may be made of synthetic material (e.g., Tufnol). This is a reusable device.	I
1605	35091	Surgical gown, single-use	Мэс заслын халат, нэг удаагийн	A garment intended to be worn by healthcare staff over a scrub suit to cover the arms, trunk, and upper legs, during a surgical procedure; it may be fluid resistant or impervious to fluids. Also known as an operating room (OR) gown, it is used during surgical procedures to help protect both the patient and operating room personnel from the transfer of microorganisms, body fluids, and particulate material. This is a single-use garment.	I
1606	35092	Patient gown, single-use	Өвчтөний халаад, нэг удаагийн	A non-sterile garment made of natural and/or synthetic materials (e.g., paper, cloth, plastic) intended to be worn by patients in a clinical setting (e.g., during hospitalization, during examination in a doctor's office). A patient gown is usually short-sleeved and may be closed by ties at the back/side of the garment. This is a single-use garment.	I
1607	35096	Surgical guillotine	Мэс заслын гильотин	A manually-operated surgical instrument designed to cut body tissues and/or organs by using a sliding blade during a surgical intervention. It typically consists of a metal frame through which runs the sliding blade which is moved by the device operator with a handcrank mechanism. It is made of high-grade stainless steel and is available in various shapes and sizes depending on the tissue each is intended to cut. This is a reusable device.	I

1608	35097	Surgical hair clippers	Мэс заслын үсний хайч	A hand-held electrically-powered device designed for removing long hair from the head or body of a patient prior to surgery/treatment. The device is typically operated by a healthcare professional. This is a reusable device.	I
1609	35106	Cordotomy hook	Кордотомийн дэгээ	A hand-held, shaft-like, manual surgical instrument used in division of the tracts of the spinal cord -- a surgical procedure known as a cordotomy, chordotomy, or tractotomy where the antero-lateral tracts of the spinal cord are cut to relieve otherwise intractable pain. The device tapers towards the distal end to form a hook or multiple hooks used in the procedure which can be performed percutaneously. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I
1610	35107	Incus hook	Incus дэгээ	A shaft-like, hand-held manual surgical instrument intended to be used during ear/nose/throat (ENT) surgery for fixation or traction of the incus bone (the anvil bone of the group of three that form the sound-transmitting ossicles in the middle ear). The device tapers towards the distal end to form a hook or multiple hooks used in the procedure. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I
1611	35108	Rhinoplasty hook	Ринопластик дэгээ	A hand-held, shaft-like, manual surgical instrument used in plastic surgery of the nose. The device tapers towards the distal end to form a hook or multiple hooks used in the procedure. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I

1612	35110	Skin/tissue hook	Арьс/эдийн дэгээ	A hand-held manual surgical instrument designed to hook skin or tissue in order to grasp, apply traction, and lift the skin/tissue during a surgical intervention. It is typically a shaft-like instrument with small double hooks at the distal end and a handle at the proximal end. The hooks are curved in opposite directions and when the device is placed onto the skin or tissue to be grasped, it is twisted clockwise so that the hooks lock into the skin/tissue. Also known as a tissue pick, it is not unlike a hooked wound retractor. It is made of high-grade stainless steel and may be supplied with a cylindrical steel protecting sheath for storage and sterilization. This is a reusable device.	I
1613	35111	Sympathectomy hook	Симпатэктомийн дэгээ	A hand-held, shaft-like, manual surgical instrument used to excise a segment of a sympathetic nerve or ganglia. The device tapers towards the distal end to form a hook or multiple hooks used in the procedure. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I
1614	35112	Tracheal hook	Гуурсан хоолойн дэгээ	A double-ended surgical instrument designed to hold the trachea steady during the creation of a tracheostoma and/or for separating/drawing aside the margins of a tracheostoma to assist in the insertion of a tracheostomy tube. It can be of various designs, e.g., double or single-ended with one end forming a broad bladed retractor and the opposite end tapers to form a pointed hook formed at various angles or multiple parallel hooks. It is made of high-grade stainless steel. This is a reusable device.	I

1615	35113	Non-heated respiratory humidifier	Халаадаггүй амьсгалын чийгшүүлэгч	A device designed to prevent the drying of airway passages associated with the inhalation of oxygen (O2) by adding water vapour to the dry gas as it is passed through, or more seldom, over water. It typically consists of a graduated container (reservoir) for the water, a top piece that functions as a detachable lid (typically a screw lid with a gastight seal), and a tube that protrudes into the water to divert the gas below the water level. This device, commonly known as a bubble humidifier, does not heat the water. It has connectors: 1) one (e.g., a winged nut) that connects to an oxygen therapy flowmeter; and 2) one to which the patient tubing is connected. This is a reusable device.	I
1616	35114	Coronary artery scissors	Титэм артерийн хайч	A hand-held surgical instrument used to cut the tissue of the coronary artery during heart surgery. It comprises two pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes; the blades are typically acutely angled and very sharply-pointed to penetrate the vessel wall. This is a reusable device.	I
1617	35117	Ice collar	Мөсөн хүзүүвч	A flexible container (a bag) designed for placing around the throat as a collar and to be filled with ice to provide dry cold therapy to the neck/throat area. It is typically made of plastic or rubber materials with a size and shape appropriate for comfortable use as a collar; it will have a detachable cap that can be threaded or fixed to the bag once it is filled with ice. It will typically include attachments (e.g., tabs or Velcro) to facilitate fixing to the neck/throat. It can be used to alleviate pain and/or promote healing in minor injuries of the neck, throat, and/or head, e.g., after minor surgery or tonsillectomy, and to alleviate a sore throat. This is a reusable device.	I

1618	35119	Incontinence clamp	Шээс задгайрах хавчаар	An instrument designed to prevent the involuntary discharge of urine (enuresis) from the male urethra. It is typically a hinged frame made of malleable metal or plastic, often having portions lined with sponge rubber, that is fastened across the penis to atraumatically apply external pressure to the urethra. It is normally available [non-prescription] over-the-counter (OTC). This is a washable and reusable device.	I
1619	35120	Incontinence pants, reusable	Шээс задгайрах өмд, дахин ашиглах боломжтой	An underwear designed to retain urine leakage in incontinent adults and older children. It typically consists of a reusable man's brief or woman's panty with external softness and shape resembling regular underwear, and a disposable pant liner and/or a tube that deliver the urine to a bag placed on or around one leg. The device is typically used for patients with heavy urinary incontinence in healthcare facilities or at home.	I
1620	35122	Metered dose inhaler	Хэмжээтэй тунгаар амьсгалах төхөөрөмж	A hand-held device designed to administer a pre-measured dose of aerosolized medication directly into the mouth of a patient. It typically consists of a shaped plastic holder with integrated mouthpiece into which a pressurized metal canister containing the solution or suspension of medicine is placed. Commonly known as a metered dose inhaler (MDI), aerosol inhaler or puffer, it is a portable device typically carried in the pocket or a handbag (purse) of the patient for convenient access. A medicine chamber spacer may be attached to this device to facilitate its use by small children (enables the slow inhalation of the medicine). This is a reusable device intended for single-patient use.	I
1621	35124	Medical device integration rack	Эмнэлгийн төхөөрөмжийг нэгтгэх тавиур	A device that is designed as an instrument rack (maybe cabinet-like with closed sides) and is used for mounting and organizing several medical devices that are intended to interact (integrated instrumentation). It is typically mobile (on wheels) and has built-in grounded outlets, pull-out shelves, working surfaces, and may even be equipped with a built-in transformer. This device, when supplied with the instrumentation fitted, will become a system and will require product identification of the whole as a system.	I

1622	35128	Fluid delivery hanger	Шингэн дамжуулах өлгүүр	A device to which a fluid delivery container, e.g., an intravenous (IV) container, is attached and suspended overhead. The hanger is typically constructed of metal and may be stationary or moveable on track systems.	I
1623	35129	Patient isolation chamber	Өвчтөнийг тусгаарлах камер	A room designed to provide environmental isolation of a patient to protect hospital personnel from exposure to air-borne infections, e.g., tuberculosis (TB), or aerosol medications whilst the infected patient is being treated. The air in this chamber is filtered before it is returned to the normal external atmosphere.	I
1624	35135	Dura mater knife	Дура матер хутга	A hand-held manual surgical instrument designed to cut or incise the dura mater without damaging the underlying structures during a surgical intervention. It is typically a one-piece instrument with a sharp, single-edged, cutting blade terminating in a hook shape at the distal end (the internal radius of the hook has the cutting edge) which is normally very small; it has a long slender shaft with a handle at the proximal end. It is normally made of high-grade stainless steel. This is a reusable device.	I
1625	35136	Constrained-barbell exerciser	Хязгаарлагдмал штанг дасгалын төхөөрөмж	An exercise apparatus intended primarily to strengthen muscles with the use of a barbell limited to movement along a vertical plane. It consists of a metal frame with a barbell that is fixed to move only up and down within steel rails/runners; behind each runner is a series of slots on which the barbell can be hooked and secured at many levels (which is intended to make the weight safer to use without a spotter in the event it becomes too heavy). It may include a weight rack in the base for stabilization and the barbell may be counterbalanced. It may be used for exercises that help strengthen upper- or lower-body muscles (e.g., bench press, squats); also referred to as a Smith machine.	I

1626	35138	Meniscus knife	Мениск хутга	A surgical instrument designed to apply pressure to and/or cut the crescent-shaped disk of fibrocartilage that borders and partly covers the articulating surfaces of the tibia and femur at the knee (meniscus). At the proximal end is a handle, sometimes T-shaped (Smillie design), that tapers to a cutting blade at the distal end. The blade is available in various designs (e.g., straight, curved, single- or double-edged) and may enable a chisel-like cutting action. The device is typically made of high-grade stainless steel. This is a reusable device.	I
1627	35139	Chisel/osteotome blade handle	Цүүц/остеотомын ирний бариул	A hand-held manual surgical device that is an interchangeable component of a chisel or osteotome blade and that functions as a handle designed to mount a compatible blade of these types which is locked into place. Together, this device and the selected blade, become a single-bladed surgical instrument used by a physician for cutting/contouring bone. This is a reusable device.	I
1628	35140	Cast/plaster knife	Цутгамал/гипс хутга	A flat-bladed, hand-held, instrument with a short, strong cutting blade with a sharp edge that is used to cut or trim the plaster of a cast. It is typically a one-piece device made of high-grade stainless steel. This is a reusable device.	I
1629	35141	Scalpel, reusable	Скалпель, дахин ашиглах боломжтой	A hand-held manual surgical instrument constructed as a one-piece handle and scalpel blade (not an exchangeable component) used by the operator to manually cut or dissect tissue. The device is typically made of high-grade stainless steel alloy. This is a reusable device.	I
1630	35143	Sternum knife	Өчүүний ясны хутга	A heavy-duty, hand-held manual surgical instrument designed for cutting into the sternum (the breastbone). It typically has a T-shaped handle to allow the application of pressure to the blade which descends from the handle in a thick shaft terminating in various contours. It is typically made of high-grade stainless steel; its handle may be made of a synthetic polymer (e.g., Tufnol). This is a reusable device.	I

1631	35144	Lower-limb mechanical weight exerciser	Доод мөчний механик жинтэй дасгалын төхөөрөмж	A mechanical exercise apparatus intended primarily to strengthen the major muscles of the lower body (e.g., quadriceps, hamstrings, calves, hip adductors, gluteus maximus) through a repetitive squatting, stepping, lunging, extending, curling, or pushing motion performed with the legs/feet against the force of a weight. It typically consists of a metal frame containing a sliding sled, lever, or pulley-cable system that incorporates changeable weights and a platform or stirrups for the feet or hands; a bench may be included for the user to sit or lay while performing the exercise. The device may also be used to improve lower body flexibility and mobility.	I
1632	35146	Laminar airflow tent	Ламинар агаарын урсгалтай майхан	A device that is an air-handling unit designed in the form of a portable tent intended to produce a directed, non-turbulent flow of clean air free of contaminants (so-called "sterile" area) to reduce the possibility of infection to a patient. It will typically be set-up around the patient's bed. The air is typically filtered, usually through a high-efficiency particulate air (HEPA) filter, to remove particulate matter and microorganisms. The unit will provide a temporary measure to improve the patient's condition.	I
1633	35148	Ophthalmic examination slit lamp	Нүдний үзлэгийн ангархай гэрэл	An electrically-powered, ophthalmic, binocular microscope designed to examine the interior anatomy of the eye by viewing through the pupil; it is not dedicated to surgical procedures. It projects a narrow slit of light into the eye and resulting light reflections are detected obliquely with a travelling microscope to enable observation of the internal ocular structures. It is used to perform a variety of measurements [e.g., intraocular pressure (IOP) or tonometry, corneal thickness, anterior chamber depth] and to evaluate symptoms (e.g., eye itchiness, grittiness, pain, dry eyes, photophobia, and reduced visual acuity).	I

1634	35151	Eye-surface lavage system	Нүдний гадаргууг угаах систем	A device assembly designed for automated or semi-automated irrigation and washing of the eye surface (i.e., sclera and cornea). It typically consists of a main electromechanical unit that may include a pump for infusion of non-medicated liquid (e.g., saline), an extractor, and controls for the temperature and the rate of irrigation; it may be coupled to special lenses (e.g., Morgan therapeutic) and/or to dedicated handpieces (e.g., Lewis), cannulae, catheters, and/or probes. The system is used to remove damaged tissue and/or debris (e.g., foreign objects) for ophthalmic procedures/surgery and in emergency departments.	I
1635	35153	Lens spoon	Линзний халбага	A hand-held ophthalmic surgical instrument used in ophthalmic surgery to manipulate/remove the lens of the eye. It is typically made of high-grade stainless steel and has a spoon-shaped distal working end. This is a reusable device.	I
1636	35157	Haemorrhoid ligator	Геморрой холбогч	A hand-held manual surgical instrument designed to deploy a ligature (e.g., a latex rubber band) to internal haemorrhoids for their removal through blood flow occlusion. It is typically made of high-grade stainless steel, and has a long shaft with a profiled clamp or grip at the distal end for holding multiple ligatures. The surgeon mechanically operates the distal clamp or grip with a handle(s) to release and deploy the ligatures as needed. This is a reusable device.	I
1637	35160	Operating room laundry bag	Хагалгааны өрөөний угаалгын уут	A sac intended to collect and contain soiled linens/clothing from the surgical site/operating room (OR) for transport to a laundering facility. It is usually supported in or on a dedicated rack or stand. This is a reusable device.	I

1638	35177	Surgical/medical face mask, single-use	Мэс заслын/эмнэлгийн нүүрний маск, нэг удаагийн хэрэглээ	A flexible, loose-fitting mask designed to be placed over the mouth and/or nose of a healthcare worker to permit normal breathing while protecting the patient and wearer from the transfer of large particles (e.g., blood, body fluids, and airborne particulate materials) during medical procedures and patient examination; it is not a form-shaped filtering device (i.e., not a respirator). It is made of a flexible, porous fabric or paper material and is typically secured using elastic head straps or ties; it may incorporate a forming nosepiece (metal wire) and/or transparent face/eye visor intended to protect the upper face/eyes from debris/fluid. This is a single-use device.	I
1639	35180	Conductive bed mattress cover	Цахилгаан дамжуулагч ор матрас бүрээс	A device made of soft, conductive material that is shaped to fit over a bed mattress to create a physical barrier to protect the mattress, prevent cross-contamination and the build-up of static electricity. This is a single-patient device that is used for a limited time, without laundering, until considered inappropriate for further use and then discarded (e.g., incinerated).	I
1640	35181	Waterproof bed mattress cover, single-use	Ус нэвтэрдэггүй орны матрас бүрээс, нэг удаагийн	A device made of soft, waterproof material that is shaped to fit over a bed mattress to create a physical barrier to protect the mattress, prevent cross-contamination, and prevent exposure to soiling, typically bedwetting or spills of other liquids. This is a single-patient device intended to be used for a limited time, without laundering, until considered inappropriate for further use and then discarded (e.g., incinerated).	I
1641	35183	Basic bed mattress	Үндсэн ор матрас	A large, durable, fabric case filled with a resilient material designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie and rest/sleep. The device provides no special therapeutic effect.	I

1642	35186	Water-filled bed mattress	Усаар дүүргэсэн ор матрас	A large, durable case filled with temperature-regulated water designed to be placed on a special frame or a bed mattress support platform to provide a comfortable surface on which an occupant can lie and rest/sleep. It promotes the distribution of the occupant's weight over a large surface area making it popular in hospital birthing/maternity departments.	I
1643	35188	Parenteral/enteral solution bag	Парентераль/энтерал уусмалын уут	A flexible pouch or sack designed to contain a solution of nutrients or medication for administration to a patient either parenterally (e.g., intravenously) or enterally (directly into the gastrointestinal tract). It is typically made of synthetic polymer materials. This is a single-use device.	I
1644	35189	Medical chart cabinet	Эмнэлгийн картын кабинет	A furniture-like cabinet, typically containing a rack to hold and organize the patient journals (medical charts) of the patients being treated/examined at a hospital bed ward or ambulatory outpatients. The device is lockable and most often mobile for easy transport around the ward or other facilities.	I
1645	35190	Ophthalmic microscope	Нүдний микроскоп	An ophthalmic magnification instrument, usually stereoscopic, designed to assist the surgeon/operator during examination and treatment of the anterior eye structures by transmitted light. It is used to provide high image resolution and coaxial illumination for identifying disease processes, extracapsular cataract extraction including phacoemulsification, intraocular lens (IOL) implantation, evaluating corneal injuries, and other ophthalmic surgical procedures. This device is typically used together with specially designed illumination sources and is attached to another device, e.g., a mobile or fixed support, or a common base on a device known as a slit lamp.	I

1646	35191	General-purpose surgical microscope	Ерөнхий зориулалтын мэс заслын микроскоп	A general-purpose, surgical, light (optical) magnification instrument, usually stereoscopic, designed to magnify minute structures, e.g., nerves or vessels in the performance of delicate surgical procedures which require high magnification by transmitted light. An operating microscope will often be equipped with motorized focusing, adjustable magnification mechanisms (manual, zoom or both), backup lamps, and inclined tubes that permit the surgeon to see the field from a vertical perspective while keeping the head erect. Dual or multiple observation capability and the optical integration of still, motion picture and video cameras are common features. It can be fixed or mobile.	I
1647	35192	Soft-rubber chair cushion	Зөөлөн резинэн сандлын дэр	A pad made of soft rubber designed to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. It may be used in a wheelchair. This is a reusable device.	I
1648	35193	Speech therapy mirror	Ярианы эмчилгээний толь	A device with a surface sufficiently polished to reflect enough undiffused light to form a virtual image of an object placed before it, for purposes of examination. Speech mirrors are specifically intended to be used to view the mouth and associated structures while forming sounds and words during speech therapy.	I
1649	35203	Oxygen administration nasal catheter	Хүчилтөрөгчийн хэрэглээний хамрын катетер	A flexible tube, typically lubricated with a water-soluble gel, that is inserted through a naris to deliver supplemental oxygen (O2) to the nasopharynx. This is a single-use device.	I
1650	35206	Nebulizer tester	Мананцар үүсгэгч шалгагч	A device used to evaluate the function of a nebulizer. It may also be used for calibration.	I

1651	35213	Middle ear malleus nipper	Дунд чихний нугасны хавчуур	A hand-held manual surgical instrument intended to be used to cut the malleus (hammer-shaped lateral bone of the group of three that form the sound-transmitting ossicles in the middle ear). It is typically a ring-handled instrument with, distal to a pivot pin, a set of blades: one slides back and forth to operate a set of jaws for cutting, and the other is stationary and may end in a sharpened anvil or a hook. In the anvil design, the sliding blade opens and closes a second sharpened blade against the anvil. In the hook design, the sliding blade closes against the hook. This is a reusable device.	I
1652	35216	Ophthalmoscope, indirect, monocular	Офтальмоскоп, шууд бус, монокуляр	An ophthalmic device used for examining the interior of the eye, including a light source and a hand-held lens. It produces an inverted, or reversed, image of 2 to 5 times magnification.	I
1653	35226	Pressure alleviation pad, air	Даралт бууруулах дэвсгэр, агаар	A device designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is shaped as a mattress (full-body length or shorter versions), or a cushion, filled with air and is intended to distribute an equal pressure between the patient and bed or chair over a larger surface area so there is less pressure on the pressure points.	I
1654	35227	Pressure alleviation pad, animal skin	Даралт бууруулах дэвсгэр, амьтны арьс	A device designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is made of natural animal skin designed to distribute the pressure between the patient and the bed or chair, over a large surface to reduce pressure on pressure points.	I

1655	35228	Pressure alleviation pad, foam	Даралт бууруулах дэвсгэр, хөөс	A device designed as a pad to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is filled with foam designed to distribute the pressure between the patient and the bed or chair over a larger surface area to reduce pressure on pressure points.	I
1656	35229	Pressure alleviation pad, gel	Даралт бууруулах дэвсгэр, гель	A gel-filled mattress or cushion-like device designed to distribute pressure between the patient and the operating table, bed or chair upon which the patient is placed, in order to prevent pressure sores occurring on the parts of the patient's body which are prone to this through, e.g., lying on an operating table for a longer period of time under anaesthesia or the bony anatomy of the patient/user.	I
1657	35230	Pressure alleviation pad, mud	Даралт бууруулах дэвсгэр, шавар	A mud-filled device designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is designed as a mattress or cushion shaped device with the intention of distributing the pressure between patient the underlay in order to reduce pressure on pressure points.	I
1658	35231	Pressure alleviation pad, water	Даралт бууруулах дэвсгэр, ус	A water-filled device designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is designed as a mattress or cushion shaped device with the intention of distributing the pressure between patient the underlay in order to reduce pressure on pressure points. Designed to distribute pressure between patient and bed or chair over a larger surface to reduce pressure on pressure points.	I

1659	35246	Surgical patient preparation kit	Мэс заслын өвчтөнд бэлтгэх иж бүрдэл	A collection of devices designed for the preoperative preparation of the operative site on a patient's body. It typically includes scrubbing pads (e.g., surgical sponges) and sterilizing/disinfecting solutions. This is a single-use device.	I
1660	35250	Common bile duct probe	Нийтлэг цөсний сувгийн мэдрэгч	A hand-held manual surgical instrument designed as a slender rod made of flexible metal with a blunt bulbous tip, used for exploring the common bile duct, i.e., the union of the cystic and hepatic ducts. It is used in surgical procedures to explore and/or dilate strictures of the common duct. This is a reusable device.	I
1661	35251	Eye probe	Нүдний мэдрэгч	A slender, rod-like, hand-held manual surgical instrument made of flexible metal, with a blunt bulbous tip, designed for exploring eye tissue during an ophthalmic intervention. This is a reusable device.	I
1662	35252	Fistula probe	Фистул датчик	A slender, rod-like, hand-held manual surgical instrument made of flexible metal, with a blunt bulbous tip, designed for use in abnormal body passages or communications (fistulas), usually between two internal organs, or leading from an internal organ to an external cavity or to the surface of the body. It is mostly used to explore and/or dilate strictures inside a fistula. This is a reusable device.	I
1663	35253	Paranasal sinus probe	Хамрын синусын датчик	A hand-held manual surgical instrument designed for introduction into the air cavities in the cranial bones which communicate with the nasal cavity (i.e., paranasal sinuses) to explore and/or dilate strictures in the passages from the nose to the communicating sinuses, typically during ear/nose/throat (ENT) surgery. This is a reusable device.	I
1664	35271	Assistive foot-propelled tandem, four-wheeled	Туслах хөлтэй тандем, дөрвөн дугуйтай	A vehicle with four wheels, two seats (saddles) and two sets of pedals, mounted on a slender frame designed for two persons, one of which is a person with a disability, typically accompanied by an attendant. They will typically sit astride the device and pedal with their legs to provide a means of transportation. It is designed to be operated by or accommodate the person with the disability. The vehicle will provide short- to medium-range recreational transportation.	I

1665	35285	Aorta punch, reusable	Аорт цоолтуур, дахин ашиглах боломжтой	A manual surgical instrument designed to cut a circular plug of tissue from the wall of the aorta to create an anastomosis site during vascular surgery. It consists of a pointed, cone-shaped, disk-like tip on the end of a plunger that is inserted through a small incision made; its diameter corresponds to the size of the hole. Behind the tip is a thinner section which entraps (holds) the tissue as the sharp circular blade is pressed down the plunger by the surgeon into and through the tissue. It is typically made of high-grade stainless steel and is available in various punch sizes. It can equally be used to punch holes in other vessels if needed. This is a reusable device.	I
1666	35286	Biopsy punch, reusable	Биопсийн цоолтуур, дахин ашиглах боломжтой	A manual surgical instrument designed to obtain a tissue or bone sample typically for histopathological analysis. The instrument may be ring-handled, pistol grip, or shaft-like in design. Ring-handled or pistol grip designs feature extended shafts which terminate in a punch-like or mechanical jaw mechanism at the distal tip. The shaft-like instrument is a hollow tube, sharpened on one end, and is usually used with a trocar. This is a reusable device.	I
1667	35288	Ear wick, biodegradable	Биологийн хувьд задардаг чихний зулын гол	A fragmentable packing, composed of a biodegradable material [e.g., poly(DL-lactide-co-caprolactone)], intended to prevent adhesions between mucosal surfaces in the ear of a patient undergoing outer ear surgery. It typically helps to mimimize bleeding via a tamponade effect and blood absorption. This is a single-use device.	I
1668	35292	X-ray film duplicator, diagnostic imaging	Рентген хальсны хувилагч, оношлогооны дүрслэл	A device for the duplication of diagnostic x-ray films. It is used with special "reversal" film and comprises a light source with masks for the various film sizes, and appropriate means for controlling the exposure.	I

1669	35299	Phoropter	Фороптер	An ophthalmic device intended to be placed in front of a patient's eyes to measure the refractive error of the eye (the inaccuracies of focusing light upon the retina) during an ophthalmic examination, typically to determine a patient's prescription for glasses. It typically consists of two mounted, disk-like housings which contain lenses of different characteristics. It is designed such that the optometrist can change the lenses and other settings while asking the patient to read an eye chart and to provide subjective feedback on which settings give best vision. The setting changes may be manual or automated.	I
1670	35300	Medical gas cylinder regulator	Эмнэлгийн хийн цилиндр зохицуулагч	A reduction valve designed to be attached to the valve stem of a medical gas cylinder to lower high, variable gas pressure (e.g., 50 - 250 bar) to a lower, constant working pressure, typically 3 - 12 bar. It can be single or dual stage regulator, usually of a piston or diaphragm design. It will have a safety relief valve to avoid excessive pressure due to increased ambient temperatures, and it may have associated devices, usually a manometer or manometers, to display the available gas reserve of a gas cylinder and the working pressure.	I
1671	35302	Respiratory simulator	Амьсгалын симулятор	A mains electricity (AC-powered) device that allows the operator to determine whether respiration equipment is functioning correctly, and to teach students, medical and paramedical personnel the use and interpretation of electrocardiograph(ECG)/respiration monitors. It uses, e.g., digital circuitry to either recall or simulate respiration rates and, for some types, sound. The device may also be used to test and evaluate mechanical ventilators.	I
1672	35303	Ankle restraint	Шагайны хязгаарлалт	A non-rigid device, typically a strap or band made of various materials (e.g., fabric, nylon, leather, foam), used to temporarily secure a patient's ankle to a fixture or furniture part (e.g., bedrail, chair, table leg) to restrict the patient's physical activity for the prevention of potential injury or hazards. This is a reusable device.	I

1673	35304	Arm restraint	Гарын хязгаарлалт	A non-rigid device, typically a strap or band made of various materials (e.g., fabric, nylon, leather, foam), used to temporarily secure a patient's arm(s) to a fixture or furniture part (e.g., bedrail, chair, table leg) to restrict the patient's physical activity for the prevention of potential injury or hazards. This is a reusable device.	I
1674	35305	Strait-jacket	Дамжуулах хүрэм	A non-rigid restraining garment, typically a long-sleeved jacket, used to bind the arms of an adult or adolescent patient tightly against their body (torso) to prevent them from inflicting injury to themselves or their attendants. This is a reusable device.	I
1675	35306	Infant bed restraint	Нялхсын орны хязгаарлалт	A device designed to limit totally or partially the movement of infants and/or toddlers when lying in its bed or crib; this may be a belt or a strap, or to prevent them from falling out of a bed after climbing the bedrail (e.g., a cover or net). This is a reusable device.	I
1676	35307	Wrist restraint	Бугуйны хязгаарлалт	A non-rigid device, typically a strap or band made of various materials (e.g., fabric, nylon, leather, foam), used to temporarily secure a patient's wrist (s) to a fixture or furniture part (e.g., bedrail, chair, table leg) to restrict the patient's physical activity for the prevention of potential injury or hazards. This is a reusable device.	I
1677	35308	Resuscitator, cardiac, manually/pneumatically-powered	Сэхээн амьдруулах, зүрхний, гараар / пневматикаар ажилладаг	An external device that is manually- or pneumatically-powered and used for the application of rhythmic compression to the chest in the region of the heart to provide blood flow during treatment of cardiac arrest [cardiopulmonary resuscitation (CPR)]. The pneumatically-powered device is driven by compressed gas cylinders. Cardiac resuscitators are typically used as an adjunct to or substitute for manual external cardiac compression, to prevent fatigue and to provide better consistency in the applied force and rate of compression.	I
1678	35310	Orthodontic retainer	Ортодонт тогтоогч	An orthodontic appliance, bonded or removable, intended to be used on a single patient to maintain teeth in corrected positions during the period of functional adaptation following corrective treatment. This appliance, also referred to as a positioner, is also used to maintain the positions of the teeth and jaws gained by orthodontic procedures.	I

1679	35311	Bladder retractor, self-retaining	Давсаг татагч, өөрөө тогтоогч	A frame-like mechanism designed to draw back the margins of an incision made in the urinary bladder or other tissues/anatomical structures related to the bladder during a surgical intervention. The device retracts tissue with self-locking blades that are either blunt or hook-like (sometimes multiple hooks). It is made of high-grade stainless steel. This is a reusable device.	I
1680	35315	Orthopaedic retractor	Ортопедийн татагч	A hand-held manual surgical instrument designed to separate and/or draw back tissues to permit access to skeletal structures for examination or intervention. It is made of high-grade stainless steel. This is a reusable device.	I
1681	35320	Manual dental scaler, reusable	Гарын авлагын шүдний хэмжигч, дахин ашиглах боломжтой	A hand-held dental instrument designed for removing calculus and other accretions from the surface and between the teeth during dental cleaning and periodontal (gum) therapy. It is typically designed as a one-piece instrument with a pointed, distal end of various shapes and sizes. Also known as a periodontic scaler, it can be a single-ended or double-ended instrument with a handle at the proximal end or positioned centrally. It is usually made of high-grade stainless steel. This is a reusable device.	I
1682	35321	Bed scale	Орны жин	A transportable electronic device designed to measure and display the body weight of a patient occupying a bed and who is unable to vacate the bed. It is available in a variety of designs such as a slab-like padded board suspended by metal brackets from a trolley (cart) that contains a weighing mechanism onto which the patient is moved (rolled from the bed onto the slab), or more commonly a system whereby the entire bed (with patient) is weighed and the known weight of the bed and the bedding is subtracted to provide the patient's weight (e.g., pads containing transducers are placed under each wheel or leg of the bed and connected to the electronic weighing unit).	I

1683	35322	Scale, patient, chair	Жинлүүр, тэвчээртэй, сандал	A device designed for weighing elderly, weak, or disabled patients who cannot stand on a conventional scale. It is used primarily for routine patient weight checks. Specialized chair scales are available for dialysis, in which weight must be continuously and accurately monitored for body fluid gain and loss. Chair scales are designed to provide accurate patient weight readings regardless of the patient position and, in the case of dialysis chair scales, to monitor over several hours with negligible drift.	I
1684	35323	Scale, patient, floor	Хэмжээ, тэвчээр, шал	An electronic or mechanical scale for weighing ambulatory patients. The scale is designed to be placed on the floor.	I
1685	35324	Infant scale, electronic	Нялхсын жин, электрон	An electrically-powered device designed to measure the weight of an infant, particularly a newborn, or to monitor weight changes, e.g., during critical care procedures. It typically consist of a weight tray, a flexure plate or bending beam, an electronic transducer, and an analogue or digital display; it may include markings to also measure infant length. The device is also known as paediatric or baby scale.	I
1686	35329	Orthopaedic scissors	Ортопедийн хайч	A hand-held manual surgical instrument designed to cut bone or cartilage tissue during orthopaedic surgery. It comprises two sturdy pivoted blades that are usually provided with a finger and thumb ring-handle and which cut with a shearing action (i.e., the blades cut as the sharpened edges pass one another as they are closed). It is typically made of high-grade stainless steel and is available in various designs and sizes. Some types can have carbide inserts along the cutting edges. This is a reusable device.	I
1687	35334	Scrub suit, single-use, sterile	Скраб костюм, нэг удаагийн, ариутгасан	A sterile, two-piece garment designed to be worn by healthcare staff to facilitate hygienic conditions typically in areas where surgery is performed. It typically consists of a shirt and pants composed of disposable materials and is intended to provide a barrier to help prevent cross-contamination of infectious agents between staff and patients. This is a single-use garment.	I

1688	35339	Rubberized sheet	Резинэн хуудас	A device that is a sheet with a rubberized surface, intended to be used as a waterproof barrier. It is typically used to cover the mattress of a bed to prevent soiling from inadvertent urination by the occupant or to cover/protect other devices where uncontrollable amounts of liquid/fluids are present. This is a reusable device.	I
1689	35340	Sitz bath kit, single-use	Суудлын ванны хэрэгсэл, нэг удаагийн	A collection of devices and supplies used for the administration of a limited bath performed by immersing only the hips, buttocks, and the perineal region of the patient into water or a water solution (i.e., a sitz bath). It typically consists of a basin (e.g., an inflatable plastic basin), an irrigation set with a bag, tubing, clamps and towels; some kits may include substances to add to the water (e.g., salts or herbs). This device is used with a sitz bath to maintain patient hygiene and for external hydrotherapy to alleviate pain and discomfort caused by haemorrhoids, uterine cramps, labour, and/or other diseases of the pelvic, abdominal and perineal area. This is a single-use device.	I
1690	35342	Lower-limb warming sock/stocking, reusable	Доод мөчийг дулаацуулах оймс/оймс, дахин ашиглах боломжтой	A tubular covering intended to worn on the feet and/or legs of a patient to minimize loss of body heat during treatment, birthing, or general hospitalization. It is typically made of fabric or paper material. This is a reusable device.	I
1691	35343	Brain spatula	Тархины хусуур	A hand-held manual surgical instrument designed to manipulate neural tissue or to remove a material from a neural surface or vessel during brain surgery. It is typically made of high-grade stainless steel and consists of a handle proximally and a broad flat blunt blade (no sharp edges) that can be slightly curved or have various angles at the distal tip, or it can be double-ended. This is a reusable device.	I
1692	35344	Orthopaedic cement spatula	Ортопедийн цемент хусуур	A hand-held manual surgical instrument designed to spread orthopaedic bone cement material onto a surface. It is typically made of high-grade stainless steel and consists of a handle proximally and a flat blunt blade (no sharp edges) at the distal tip. Progressing from the handle to the distal tip, the shaft or the blade may be straight, curved, or turn at various angles. This is a reusable device.	I

1693	35345	Lung spatula	Уушигны хусуур	A hand-held manual surgical instrument designed to manipulate the pulmonary tissue/surfaces of the lungs during a surgical intervention in the thorax. It typically consists of a large flat blunt blade (no sharp edges) at the distal end and a strong handle at the proximal end. It is usually made of stainless steel and is available with a variety of blade designs, e.g., curved and flat with a protected rounded end, a wire basket structure of interconnected round wires, or broad and flat with fenestrations. The blade and handle can be designed to be at various ergonomic angles to each other. This instrument is sometimes referred to as a lung retractor. This is a reusable device.	I
1694	35346	Middle ear spatula	Дунд чихний хусуур	A hand-held manual surgical instrument designed to manipulate middle ear tissue or structures during ear/nose/throat (ENT) surgery. It is typically made of high-grade stainless steel and consists of a handle proximally and a flat blunt blade (no sharp edges) at the distal tip. Progressing from the handle to the distal tip the shaft or the blade may be straight, curved, or turn at various angles. This is a reusable device.	I
1695	35348	Self-retaining ear speculum	Өөрөө хадгалдаг чихний толь	A hand-held manual instrument which typically comprises two arms joined at a pivot point and designed for expanding or stretching the tissue around the ear orifice when inserted and opened. It has a blunt distal tip and is used for examination or surgery, typically during ear/nose/throat (ENT) intervention. It is usually made of stainless steel with a self-retaining or adjustable mechanism and is available in various sizes, shapes and contours. This is a reusable device.	I
1696	35349	Eyelid speculum, reusable	Зовхины тэлэгч, дахин ашиглах боломжтой	A self-retaining, ophthalmic surgical instrument intended to be used to retract the eyelids during an opthalmologic examination or procedure. It is typically composed of two arms joined at a pivot point and that terminate in blunt tips; the arms can be expanded with a self-opening or adjustable mechanism to stretch tissue. The device is available in various sizes, shapes, and contours and is usually made of stainless steel. This is a reusable device.	I

1697	35350	Nasal speculum, reusable	Хамрын тэлэгч, дахин ашиглах боломжтой	A hand-held surgical instrument inserted into a nostril and manually expanded to maximally open the nostril by stretching the tissue around the nasal orifice, allowing access for examination or ear/nose/throat (ENT) surgical intervention. The device is made of high-grade stainless steel and has two blunt, contoured blades that are expanded by applying pressure to the pivoted handles. The handles are typically attached to springs so that they close upon release of the pressure applied to them. This is a reusable device.	I
1698	35351	Rectal speculum	Шулуун гэдэсний тэлэгч,	A hand-held manual surgical instrument intended to be used to expand or stretch the rectal orifice/canal after it is inserted and opened. It is comprised of two arms joined at a pivot point and is available in various sizes, shapes, and contours; it is usually made of stainless steel. The instrument is used for examination or for the insertion of other instrumentation. This is a reusable device.	I
1699	35352	Vaginal speculum, reusable	Үтрээний тэлэгч, дахин ашиглах боломжтой	A hand-held manual instrument intended to dilate the vagina after insertion, typically for visual examination of the vaginal canal and cervix and/or to perform a gynaecological procedure. It consists of two long blades, joined at a handle at one end, that are inserted into the vagina in a horizontal position and then opened at an angle. It is typically made of stainless steel. This is a reusable device.	I
1700	35354	Moulded splint	Цутгасан чигжээс	A device designed to immobilize and protect an injured body part during the healing process, and that has been premoulded to fit that body part. This is a single-use device.	I
1701	35355	Adult inguinal hernia truss	Насанд хүрэгчдийн гэдэсний ивэрхий	A bandage-like strap of worsted yarn intended to be worn over the groin to prevent protrusion of abdominal contents in an adult with an inguinal hernia. This is a single-use device.	I
1702	35357	Padded stays splint, single-use, sterile	Жийргэвч нь чиг, нэг удаагийн, ариутгасан хэвээр байна	A sterile padded device designed to immobilize and protect an injured body extremity (arm or leg) during the healing process. It is typically in the form of a preshaped rigid mould (with padding) intended to be held in place with straps/bandages (not included); it is not primarily intended for use in an emergency setting. This is a single-use device.	I

1703	35358	Vacuum mouldable splint	Вакуумаар хэлбэржүүлж болох оосор	A non-sterile device designed to immobilize and protect an injured body part during the healing process. Immobilization is achieved by placing the device around the body part and then withdrawing air from the device. This is a reusable device.	I
1704	35359	Traction system spreader bar	Таталтын системийн тараагч баар	A metal bar that has curved-hoop segments for attaching hooks or pins to perform traction with an external traction system. The bar is adjustable and is used to vary the angle at which the system's cord applies traction, via harnesses attached to the head or pelvic area, to affect the cervical or lumbar vertebrae.	I
1705	35360	Vessel spreader	Судасны тараагч	A hand-held manual microsurgical instrument with specially designed blades intended to be used to separate and spread parts of a vessel wall to enable the suturing of an anastomosis. This is a reusable device.	I
1706	35362	Chemical/physical sterilization process indicator	Химийн/физик ариутгалын үйл явцын үзүүлэлт	A sterilization indicator designed to be placed within a sterilizing chamber, and to respond with a characteristic chemical and/or physical change to one or more of the physical conditions within the chamber, to validate the sterilization process. It may be presented in one of a variety of forms (e.g., tape, test pack, tag). This is a single-use device.	I
1707	35368	Auditory stimulator	Сонсголын өдөөгч	A mains electricity (AC-powered) device that applies sound stimuli (e.g., pure tones, speech) to a patient's acoustic system. It is typically used as a component of several types of devices such as audiometers, auditory evoked-potential recording systems, and auditory function screening devices.	I
1708	35373	Visual stimulator	Харааны өдөөгч	An electronic device used to apply visual stimuli (e.g., shifting patterns of light) to a patient's eyes. This device typically presents light to the eye through an optical system (optical stimulator), or light is viewed directly from an illuminated screen (direct-view stimulator), or light-emitting diode (LED) stimulating goggles. It is typically used as a component of several other devices such as refractors, scanning ophthalmoscopes, visual evoked potential (VEP) recording systems, or an electroretinograph (ERG).	I

1709	35374	Stockinette	Стокинетт	A knitted, seamless, expandable tubing, typically made of cotton, that is open at both ends and intended to be used to hold bandages in place; to place uniform pressure on a leg, finger, arm, or other part of an extremity; to pad the area under a cast, splint or orthosis; or to cover a stump when a prosthesis is worn. This is a single-use device.	I
1710	35376	Stretcher, neurological/comatose	Дамнуурга, мэдрэлийн/коматоз	A specially designed stretcher used to transport (move) a non-ambulatory, comatose, or neurologically injured patient without changing his/her body position. It does not require hospital personnel to lift, roll, or drag the patient.	I
1711	35377	Vein stripper, reusable	Судас тайлагч, дахин ашиглах боломжтой	A hand-held surgical instrument designed to manually excise (strip by stab avulsion) a length or section of a vein from a patient, typically varicose veins [superficial dilated tortuous veins especially of the legs (greater saphenous veins)]. It is typically designed as: 1) a flexible stainless steel cable with a stripping cup or disk (commonly known as an olive) attached to one end, and a handle at the other (some types can employ a guide tip); or 2) a rigid or semi-rigid rod terminating in a closed ring or loop (also known as a ring stripper). This is a reusable device.	I
1712	35379	Universal operating table, electrohydraulic	Бүх нийтийн мэс заслын ширээ, цахилгаан гидравлик	A mobile, mains electricity (AC-powered) hydraulic-mechanism table designed to be adjusted to support a patient during many types of surgical interventions. The table surface consists of many articulated sections that can be elevated or lowered for contouring to accommodate numerous anatomical positions (e.g., the whole table top may be adjusted to form a curved surface) to satisfy the requirements of many clinical specialties.	I
1713	35380	Tendon stripper	Шөрмөс тайлагч	A hand-held manual surgical instrument designed to excise a length of ligament, tendon or fascia for use as a living graft. It typically consists of a handle and a semicircular shaped trough that terminates in a sharp cutting edge. It is typically made of high-grade stainless steel. This is a reusable device.	I

1714	35381	Foot orthosis, post-treatment	Хөлийн ортоз, эмчилгээний дараах эмчилгээ	A specially designed shoe insert used to provide rigid or semi-rigid correction of the foot after an orthopaedic procedure. It is only for use during the finite period of treatment. This is a reusable device.	I
1715	35382	Surgical glove tester	Мэс заслын бээлий шалгагч	A test instrument used to control the quality of surgical gloves. This may be as part of the quality assurance (QA) testing during manufacture, or in the case where the gloves are to be reused, but this will not be typical.	I
1716	35385	Syringe cutter	Тариур таслагч	A device designed to cut a syringe to prevent syringe reuse. It typically includes a sharp metal cutting blade housed in a plastic container that receives the pieces of destroyed syringe. It is typically located in the vicinity of where the syringes are used, e.g., on the ward, in anaesthesia induction rooms, in an intensive care unit (ICU), accident and emergency (A&E) departments, and laboratories. This is a reusable device.	I
1717	35390	Irrigation syringe	Усалгааны тариур	A hand-held device intended to be used primarily for the flushing of body orifices with an irrigation solution. It is not dedicated to anatomy or type of application and may be available in various designs (e.g., a rigid plastic barrel with a fitted rubber bulb at one end and a nozzle at the other). This is a single-use device.	I
1718	35391	Hypodermic syringe, tuberculin	Гиподермик тариур, туберкулин	A device with a small barrel with plunger that has the measured units used for administering tuberculin skin test antigen. This is a single-use device.	I
1719	35392	Photo-electromechanical tachometer	Фото цахилгаан механик тахометр	A hand-held, battery-powered instrument that provides the option of using either a photosensor at one end, or a mechanical contact at the other end, to measure and establish rotational speeds of a rotating device or device component (e.g., an electrically-powered motor). The user may point the device's photosensor at, or makes physical contact with, the rotating object, and a reading, typically in revolutions per minute (rpm), will appear on the digital display. Some combination devices may include a stroboscope. The device may be able to convert and display results in other units such as foot/second or inches/second. It will typically be able to store a number of readings within its memory.	I

1720	35394	Operating table, orthopaedic	Мэс заслын ширээ, ортопед	A complete mobile operating table constructed to provide an elevated surface to support the patient's body and provide traction to the patient's limbs during upper and lower extremity orthopaedic procedures. Its top surface consists of flat height-adjustable sections that can be adjusted in relation to the section supporting the trunk, and the sections that initially support the legs; these are lowered once the patient has been placed in traction. Broken bones can be drawn apart, repositioned, and set to the correct position. This device may be powered by hydraulics, mains electricity (AC-powered), or an internal rechargeable battery pack and may be raised, lowered and tilted.	I
1721	35395	Overbed table	Орны дээгүүр ширээ	A table designed to be moved directly over the bed of a patient/occupant to provide them with a surface to eat, read, or write while in bed. It is typically constructed as a C-shaped metal framework with a table top surface, on which objects are placed, and small Castor wheels to provide the mobility for moving it over the bed.	I
1722	35396	Thermometer holder	Термометр эзэмшигч	A device specifically designed to hold a patient thermometer. It can be, e.g., a small container to put the thermometer in or a holder affixed to, e.g., a wall upon which the thermometer is placed (housed). It is typically made of plastic, glass or metal and is used to protect the thermometer from damage and maintain it in a hygienic condition while it is not being used.	I
1723	35397	Capillary patient thermometer, mercury	Капилляр өвчтөний термометр, мөнгөн ус	An instrument designed to measure a patient's body temperature which is formed as a slender, hollow, sealed tube made of glass with a bulb at one end filled with mercury (Hg). It works on the capillary principle whereby the registered heat proportionally expands the medium, filling a graduated column. This is a reusable device.	I
1724	35400	Endotracheal tube adaptor	Эндотрахеаль хоолойн адаптер	A connecting device, usually a small part, used to join an endotracheal (ET) tube to a breathing circuit or a manual resuscitator in order to make them compatible so that they mate together. This is a single-use device.	I

1725	35401	Endotracheal tube cuff inflator	Дотор хоолойн ханцуйвчийн хийлэгч	A manually-powered device designed to instill air into the cuff of an in situ endotracheal (ET)/endobronchial tube. The inflator typically includes a manually-operated rubber bulb for the delivery of ambient air into the cuff, and a pressure gauge or manometer that displays the pressure within the cuff to help prevent the development of excessive pressure which may cause trauma to the trachea. The purpose of the cuff is to provide an adequate seal for positive pressure ventilation and to prevent aspirated secretions from passing into the lungs. This is a reusable device.	I
1726	35403	Tracheostomy care kits	Трахеостомийн эмчилгээний иж бүрдэл	A collection of various instruments and other items, e.g., towels, gauze, swabs, cleaning brush, and suction device, used for the ongoing care of a tracheostomy, i.e., the removal of the tracheostomy tube, removal of secretions, and cleaning of the tracheostomy tube for its reinsertion. This is a single-use device.	I
1727	35409	Spinal hernia truss	Нурууны ивэрхийн ферм	A strap(s) or a girdle made of firm material that is tightly applied/fastened around the body to provide spinal hernia containment. This is a single-use device.	I
1728	35410	Infant inguinal hernia truss	Нярайн гэдэсний ивэрхийн ферм	A bandage-like strap of worsted yarn intended to be worn over the groin to prevent protrusion of abdominal contents in an infant with an inguinal hernia. This is a single-use device.	I
1729	35411	External nasal splint	Хамрын гадна талын чигжээс	A rigid or semi-rigid device intended to be applied externally to the nose for the immobilization of nasal bones and cartilage, typically after a fracture or surgery. It functions as a truss-like support on the outside of the nose. This is a single-use device.	I

1730	35429	Sharps container	Хурц үзүүртэй сав	A hard-walled container designed for the safe deposit and collection of biologically or chemically contaminated used sharps; this includes needles, lancets, scalpel blades, cannulae, or other devices that present a hazard to a healthcare worker or patient if they were to inadvertently have bodily contact with the device and cause themselves an injury. This container is typically designed to be puncture resistant, leak-proof, and closable (usually having a lid that cannot be reopened once closed) and is identified with the universal biohazard symbol on its labelling. It is disposed of when filled to the recommended level, typically by incineration.	I
1731	35430	Radioactive waste container	Цацраг идэвхт хог хаягдлын сав	A hard-walled container designed for the safe deposit, collection and storage of radioactive materials including containers previously used for those materials (e.g., scintillation vials). It is made from metal and/or hard plastic and typically designed with an internal radiation shield [e.g., a lead (Pb) liner]. It typically has a lid with radiation shielding properties that allows temporary and final closure options. It is identified with a radioactive symbol on its labelling and sent to a radioactive waste treatment plant for disposal when filled to the recommended level.	I
1732	35431	Charcoal water purification filter	Нүүрс ус цэвэршүүлэх шүүлтүүр	A device containing charcoal designed to filter primarily soluble organic components from flowing water. It is typically filled with activated carbon to adsorb low-molecular weight organics such as chloramines, a substance that is frequently used in tap water sources as a bactericidal agent. The device is frequently used to filter tap water intended for haemodialysis.	I
1733	35432	Water purification unit, deionization	Ус цэвэршүүлэх төхөөрөмж, ионгүйжүүлэх	A single-item device consisting of ion-exchange columns used for purifying water by removing negative and positive ions.	I
1734	35433	Particulate water purification filter	Тоосонцрын ус цэвэршүүлэх шүүлтүүр	A device designed to remove sediment and other suspended particles from flowing water by creating a mechanical barrier to elements larger than a specified size (e.g., 5 to 10 microns/micrometres); it is often made of polypropylene filaments.	I

1735	35434	Water purification unit, reverse osmosis	Ус цэвэршүүлэх төхөөрөмж, урвуу осмос	A device used for purifying water by reverse osmosis, i.e., by forcing water through a semi-permeable membrane which retains elements larger than a specified dimension.	I
1736	35435	Water purification unit, ultraviolet	Ус цэвэршүүлэх төхөөрөмж, хэт ягаан туяа	A mains electricity (AC-powered) germicidal ultraviolet lamp that produces short-wave radiation lethal to bacteria, viruses, and other microorganisms present in common water.	I
1737	35436	Manual wire driver	Гар утасны драйвер	A hand-held manual surgical instrument (drill-like) designed to drive orthopaedic bone wires, e.g., Steinmann pins, Kirschner wires or K-Wires (thin needle-like pins of different thickness that are pointed for self-drilling) into fractured/deformed bones for their restoration. This is a reusable device.	I
1738	35437	X-ray film cassette, manual	Рентген хальсны кассет, гар ажиллагаатай	A device used in medical imaging applications to shield x-ray film from exposure to room light during transport and insertion into a diagnostic imaging system, film formatter, or film processor. It is typically designed for use with a particular imaging system or image formatting unit and consists of a plastic or metal housing with removable metal or plastic inserts. Some film cassettes used in x-ray applications can incorporate an x-ray grid into the cassette design.	I
1739	35443	Assistive bathing wear	Усанд ороход туслах хувцас	A garment specially designed/adapted to be worn by a person with a disability during bathing activities. It is typically constructed with features that facilitate easy donning, fastening, and removal (e.g., wide sleeves or trouser legs, Velcro or zip fasteners). It may also be used for hydrotherapy and may include protective bathing pants properties for incontinence.	I
1740	35448	Floor mount, mobile	Шалны бэхэлгээ, гар утас	A non-dedicated (general-purpose) mobile (on wheels) manually-operated device designed to be easily moved from one place to another on the floor and upon which another medical device(s) is intended to be safely affixed or mounted. [This group of devices does not include mobile floor mounts that are dedicated to a device(s)].	I

1741	35450	Steam delivery line filter	Уур хүргэх шугамын шүүлтүүр	A screening device installed in a steam delivery line or at the intake of a device utilizing steam with a membrane pore size small enough to entrap any particulate matter that may be carried with the steam from the production site.	I
1742	35452	Isolation gown, reusable	Тусгаарлах даашинз, дахин ашиглах боломжтой	A garment made of natural and/or synthetic materials intended to be worn by healthcare providers or visitors to isolate themselves from patients. The isolation gown helps to protect the patient (e.g., burn patients) from the transfer of infectious agents carried by the healthcare provider or visitor; or it may help to protect the healthcare provider or visitor from a contagious agent which has infected the patient. This is a reusable garment intended to be laundered after each use.	I
1743	35454	Contact lens inserter	Контакт линз суулгагч	A hand-held ophthalmic device used to insert a contact lens on the surface of the eye. This is a reusable device.	I
1744	35465	Assistive remote control	Туслах алсын удирдлага	An electronic device designed as a control panel/unit, which may include a receiver, intended to assist a person with a disability to control and operate other devices remotely in their local environment. It includes multiple buttons/switches to allow control of various functions and includes characteristics (button size, simplicity) to allow ease of use.	I
1745	35474	Cooling/freezing bath	Хөргөх / хөлдөөх банн	A receptacle for water in which a patient is placed to rapidly lower body temperature for therapeutic purposes (e.g., to treat hyperthermia).	I
1746	35477	Clinical laboratory information system	Эмнэлзүйн лабораторийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, display, output and distribute clinical laboratory information (e.g., transfer of digital images), within or between healthcare facilities, to support the administrative and clinical activities associated with clinical laboratory services and facilities. Some systems will also assist in data management/analysis. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded, and not directly used to run, steer, or control laboratory analysers or equipment).	I

1747	35478	Desiccator	Хатаах төхөөрөмж	A closed, airtight, vessel intended to be used to contain objects or chemicals that are to be kept moisture free. It will typically contain a desiccant [a substance such as calcium oxide (CaO) that is used as a drying agent]. This is a reusable device.	I
1748	35480	Microscope slide dispenser	Микроскопын слайд тараагч	A manually-operated device that is used to dispense unused glass microscope slides which are to be used in the preparation of human tissue/specimens for the diagnostic histological examination under a microscope. This device will hold a stack of slides that are placed flat, one on top of the other, and the operator will turn a knob or activate a lever handle which will push out one slide from the stack so that this protrudes out of the dispenser and can be picked up by the edges of the slide, leaving it free from fingerprints. It can be made of metal and/or plastic materials.	I
1749	35483	Anaerobic laboratory incubator	Анаэробик лабораторийн инкубатор	A mains electricity (AC-powered) device for maintaining a constant and suitable oxygen (O2) free environment for the cultivation of anaerobic microorganisms.	I
1750	35484	Basic light microscope	Үндсэн гэрлийн микроскоп	A magnification instrument designed with a standard microscope configuration [the object viewed through an ocular(s) from above] used to magnify and study specimens and small objects by transmitted visible light. It is widely used in laboratories and for research and in healthcare facilities where there is a need for such magnification. The device consists of a stand that supports the main components, an ocular body in which the eyepieces are mounted, a nosepiece to support the objectives, a specimen stage, a condenser to focus the light on the specimen, and a source of light [e.g., tungsten (W), halogen] and light port.	I
1751	35487	Rotator, orthopaedic	Эргэдэг, ортопед	A prosthetic or orthotic accessory intended for medical purposes to support, protect or aid in the use of a cast, orthosis (brace), or prosthesis.	I
1752	35490	Rh-typing view box	Rh бичих харах хайрцаг	A lighted box equipped with a translucent, heated horizontal surface, which is utilized for Rh slide agglutination. The surface of the box should be maintained at 40 to 50° Celsius to provide the proper temperature for reaction between red blood cells and antisera.	I

1753	35492	Isolation gown, single-use	Тусгаарлах халад, нэг удаагийн	A garment made of natural and/or synthetic materials intended to be worn by healthcare providers or visitors to isolate themselves from patients. The isolation gown helps to protect the patient (e.g., burn patients) from the transfer of infectious agents carried by the healthcare provider or visitor; or it may help to protect the healthcare provider or visitor from a contagious agent which has infected the patient. This is a single-use garment.	I
1754	35494	Ophthalmic operating table top	Нүдний мэс заслын ширээний тавцан	A component of a modular operating table designed as a detachable table top constructed for ophthalmic surgical procedures. It is particularly intended to provide support for and stabilization of the head of the patient (typically includes a headrest) and to help provide optimal access for the surgeon(s) during the intervention (e.g., by having a small-width table top and therefore a shorter stretch distance for the surgeon).	I
1755	35495	Eye magnet, powered	Нүдний соронз, хөдөлгүүртэй	A mains electricity (AC-powered) device that generates a magnetic field intended to locate and remove metallic foreign bodies [typically those containing iron (Fe) or steel] from eye tissue. It typically includes an electromagnet, a power supply, controls for the intensity of the magnetic field, and switches; it also typically includes several detachable probes (e.g., straight, curved) to provide better access and minimum trauma to the eye and possibly other points on the surface of the body. This is a reusable device.	I
1756	35498	Mobile laminar airflow unit	Ламинар агаарын урсгалын хөдөлгөөнт төхөөрөмж	A device designed to displace the entire air mass within an enclosure (e.g., a room), with uniform velocity and parallel direction, to remove contaminants; it is part of a mobile cabinet or mount. Air is typically drawn from the environment into the system by negative pressure created by a blower; air particles and liquid droplets are removed usually using high-efficiency particulate air (HEPA) filters. Filtered air is then circulated into the enclosure and exhausted or recirculated. The device is intended to provide temporary isolation of patients avoiding contamination and/or to perform procedures in a contaminated-free environment in emergency situations.	I

1757	35501	Anaesthesia screen	Мэдээ алдуулах дэлгэц	A frame-like device designed to provide a barrier between the sterile surgical site (i.e., where the surgeon operates) and the non-sterile area where the anaesthesiologists and other staff work during a procedure. It is typically fixed to the side rail of the operating table, and surgical drapes are hung over it or from it to create the hygienic partition. This is a reusable device.	I
1758	35503	Sleep apnoea bed pillow	Унтах апноэ ор дэр	A specially designed cushion intended to support the head and neck (the cervical region) in a position that is similar to that used in cardiopulmonary resuscitation (CPR), so that the upper airway remains open, thereby reducing the incidence of mild obstructive sleep apnoea. It may also be used to help reduce snoring and improve the quality of sleep. This is a reusable device.	I
1759	35504	Blood pressure transducer holder	Цусны даралт хэмжигч эзэмшигч	A device used to secure a pressure transducer used for invasive blood pressure measurement at a desired height. The holder can be fastened to (e.g., a bed or an operating table) and can be adjusted so that the transducer is at the same level as the heart of the patient. This is a reusable device.	I
1760	35507	Fibreoptic light cable	Шилэн кабелийн гэрлийн кабель	A flexible fibreoptic cable that is designed to transport cold light from a light source to an instrument or other equipment, e.g., an endoscope or a headlight. The fibreoptic bundle is protected within a sheath and can be made of either glass or plastic fibres. Each end of the cable is encased in a metal connector that fits into the respective instruments/equipment and also protects the end of the fibreoptic bundle. This is a reusable device.	I
1761	35508	Mount, monitor/television set	Холбогч, монитор/телевизор	A mount on which a patient monitor, television set, or other visual display unit (VDU) may be fixed so that it is safely mounted in a position suitable for viewing. This device will provide for adequate adjustment possibilities.	I

1762	35516	Jar, medical	Ваар, эмнэлгийн	A cylindrical vessel with a wide mouth designed for holding medical materials or instruments which are frequently used, e.g., in an examination room or a doctor's surgery. A jar is usually taller than the width of its mouth opening and may have a cover (a lid) that fits on top to protect the contents from room contaminants. It will usually not have handles. The size and shape of the jar will depend upon the particular item that the jar is intended to hold. This is a reusable device.	I
1763	35518	Electrical socket tester	Цахилгаан залгуур шалгагч	A device specially designed to check an electrical socket outlet for a variety of problems. This will usually include the control of the sockets in a complete electrical system for correct functioning. It will typically perform a series of tests on the electrical system, e.g. Current leakage, proper grounding, or to measure resistance in the outlet. Some may include testing for mechanical problems, e.g. Mechanical tensions of the ground outlet, which must be precisely specified to a certain level. The results of the tests may appear on a digital display or meter.	I
1764	35519	Traction unit, non-active	Таталтын нэгж, идэвхгүй	A device, a traction unit, e.g. a head halter, pelvic belt, traction splint or harness and beam configuration, that allows for a certain traction force to be applied without variation (static) during treatment.	I
1765	35523	Audio spectrum analyser	Аудио спектр анализатор	A mains electricity (AC-powered) electronic instrument that displays and/or calculates the spectral components of an audio signal and presents the result as relative power versus frequency. The calculation is commonly performed by converting the audio signal into an electronic form, periodically sampling and digitizing the electronic input signal, then processing the signal digitally using fast Fourier transform (FFT) to identify the relative spectral components. It may also be referred to as a wave analyser.	I

1766	35524	Flexible endoscopic tissue manipulation forceps, reusable	Уян дурангийн эдийг засах хямсаа, дахин ашиглах боломжтой	A flexible, hand-held manual surgical instrument designed to be introduced through the working channel of an endoscope to grasp tissue (typically atraumatically), or additionally foreign bodies. It has proximal controls (e.g., scissors-like handles), a flexible long slender shaft, and distal grasping jaws; it is not an electrosurgical device and is not dedicated to biopsy. This is a reusable device.	I
1767	35527	Periocular/lacrimal retractor, self-retaining	Periocular/lacrimal retractor, өөрийгөө хадгалдаг	A self-retaining, ophthalmic surgical instrument intended to be used to draw aside the margins of a periocular surgical wound, typically to access the nasolacrimal duct/lacrimal sac during an ophthalmic intervention; it is not intended to retract tissues of the eyeball and is not an eyelid speculum. The instrument is typically designed with two conjoined legs and a self-retaining mechanism, and is usually made of stainless steel. This is a reusable device.	I
1768	35528	Surgical/emergency suction cannula, illuminating, reusable	Мэс заслын/ яаралтай сорох суваг, гэрэлтүүлэгч, дахин ашиглах боломжтой	An atraumatic, invasive, single-lumen, rigid/semi-rigid tube designed as a conduit for aspiration of body cavities, wounds, or surgical sites to facilitate observation and/or clear an airway obstruction, whilst providing illumination of the site. It is not dedicated to dental, intrauterine, or liposuction procedures, and is neither an ophthalmic, nor an intravascular device; it is not designed for surgical irrigation. It has a built-in light or fibreoptic bundle used to illuminate the operative site. Often referred to a as suction tube or tip, it may incorporate a handle with side valve(s)/hole(s), and may be provided with a stylet, sheath, and/or tubing. This is a reusable device.	I
1769	35529	Invasive blood pressure monitoring tubing set	Цусны даралтыг хянах инвазив хоолойн иж бүрдэл	A collection of devices that includes the necessary tubing and other items, e.g., connectors, stopcock(s), clamps and filters, used as an external connection for invasive blood pressure measurement. This set will interface, either directly or from an intermediate stopcock, between the applied invasive catheter and the measuring transducer. It will have physical characteristics appropriate for preserving, to the extent possible, the waveform and fidelity of the measured pressure. This is a single-use device.	I

1770	35531	Surgical drape, general-purpose, single-use	Мэс заслын даавуу, ерөнхий зориулалттай, нэг удаагийн	A protective covering made of natural or synthetic materials, or both, designed to isolate a site of surgical incision or a surgical field from contamination (e.g., microbial, substance) in various clinical settings (e.g., in an operating room or catheterization laboratory). The device may also be used to protect a patient from heat/flame during a surgical procedure. It may be available sterile or non-sterile (sterilized at some point before initial use). This is a single-use device.	I
1771	35532	Surgical drape, general-purpose, reusable	Мэс заслын даавуу, ерөнхий зориулалттай, дахин ашиглах боломжтой	A protective covering made of natural or synthetic materials, or both, designed to isolate a site of surgical incision or a surgical field from contamination (e.g., microbial, substance) in various clinical settings (e.g., in an operating room or catheterization laboratory). The device may also be used to protect a patient from heat/flame during a surgical procedure. It may be available sterile or non-sterile (sterilized at some point before initial use). This is a reusable device.	I
1772	35533	Apgar score timer	Apgar онооны таймер	A device used during childbirth to measure and indicate a length of time at predetermined intervals from the setting time; this being when the baby is born. The time intervals are typically 1, 5 and 10 minutes. It is used to determine the physical health of a newborn infant and its response to birth and life outside the womb according to a weighed score named after the name of the inventor, Virginia Apgar, who devised the Apgar score, which commonly transpires as: Appearance (colour), Pulse (heartbeat), Grimace (reflex), Activity (muscle tone), and Respiration/breathing (APGAR). The total numerical score is 10.	I

1773	35534	Medical gas delivery line filter, respiratory	Эмнэлгийн хий дамжуулах шугамын шүүлтүүр, амьсгалын замын	A non-sterile screening device primarily intended to be installed in gas pipelines and gas intakes of anaesthesia, ventilation, and other respiratory devices to entrap particulate matter that may be carried with the gas. The particulate matter is filtered to minimize its delivery to a patient, to minimize the loss of equipment performance, and to prevent the build-up of matter that may serve as fuel for a potential oxygen (O2) fire. The device is not intended to be incorporated into a breathing circuit. After application, this device cannot be reused.	I
1774	35535	Phototherapy timer	Фото эмчилгээний таймер	A device intended to be used to measure and indicate the length of time elapsed during phototherapy treatment. This device may have the ability to turn off the phototherapy unit it is serving. This group of devices may reflect old technology since modern phototherapy units will have the timer as a built-in function.	I
1775	35536	Assistive handicraft needlework device	Туслах гар урлалын оёдлын төхөөрөмж	A tool, material, or piece of equipment, or a collection of such items specially designed to be used by a person with a disability to assist them with needlework; tiffany work is included; this is a fine lace work also known as Chantilly.	I
1776	35538	Freestanding electric massager	Бие даасан цахилгаан массажчин	An electrically-powered benchtop, mobile, or stationary device designed to provide therapeutic massage to a larger area than hand-held massaging devices. It may be in the form of a vibrating bed or a tabletop/freestanding unit with a massaging handpiece or other interchangeable mechanisms that are applied to the body to mechanically stimulate the musculature or provide other physiotherapy treatment; it may additionally provide heat. This device is intended for use in healthcare facilities and is not applicable to home therapies.	I
1777	35540	Cardiopulmonary resuscitation training model	Зүрх судасны сэхээн амьдруулах сургалтын загвар	A specially-constructed doll with simulated respiratory and cardiovascular functions designed to demonstrate and teach resuscitation techniques that include "mouth-to-mouth" resuscitation and heart compressions [cardiopulmonary resuscitation (CPR)] and sometimes manual pulse registration. This device is commonly known as a manikin.	I

1778	35541	Spinal rongeur	Нуруу нугасны нуруу	A hand-held manual surgical instrument with sharp, scoop-shaped jaws designed for cutting tough tissues (intervertebral disk) or bone, through a cutting/biting action, during open spinal surgery (e.g., laminectomy, discectomy). It is typically made of metal and designed to withstand the forces required to bite over tough tissue. It is not intended for endoscopic access. This is a reusable device.	I
1779	35542	Rectal clamp	Шулуун гэдэсний хавчаар	A hand-held manual surgical instrument designed for the atraumatic grasping or compression of the rectum and/or anal canal during a surgical procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and the working end can have a variety of blade designs, e.g., straight or curved with parallel grooves or serrations to provide grip. The blades are typically flat and thin in profile, and are flexible so that they do not cause trauma to the intestinal tissue. This is a reusable device.	I
1780	35543	Rectal hook	Шулуун гэдэсний дэгээ	A hand-held, shaft-like, manual surgical instrument designed to apply traction to rectal tissue/fistulae. The device tapers towards the distal end to form a hook or multiple hooks used in the procedure. The proximal end forms a handle which may vary in shape. In multiple hook designs, the hooks are in parallel. This is a reusable device.	I
1781	35545	Pressure alleviation pad, soft rubber	Даралт бууруулах дэвсгэр, зөөлөн резин	A soft rubber filled device designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It can equally be used as an underlay for the patient when he/she is undergoing a long treatment where the body is immobilized, or for disabled, infirm persons who are confined to sitting/lying positions. It is designed as a mattress or cushion shaped device with the intention of distributing the pressure between patient the underlay in order to reduce pressure on pressure points.	I
1782	35546	Footrest cover, sterile	Хөлийн түшлэг, ариутгасан	A sterile device used as an outer covering for the protection of a footrest (foot holder) against unhygienic conditions. It will typically be made of thin, shaped, plastic material which creates a physical barrier between the patient's foot and the footrest. This is a single-use device.	I

1783	35547	Heel stirrup cushion/pad, reusable	Дахин ашиглах боломжтой өсгийтэй дөрөөний дэр/дэр	A pad designed to be placed between a patient's foot and a table heel stirrup, cushioning the patient's heel and lower leg to provide greater comfort and to reduce the risk of sores during long procedures. The device is typically made of soft material (e.g., foam) with an appropriate shape and size to fit the heel stirrup; it is usually supplied in pairs. The device is used mainly for patients in lithotomic position for obstetrical, urological, colonic, or rectal procedures. This is a reusable device.	I
1784	35548	Dressing, gas-diffusive	Хувцаслах, хий ялгаруулах	A non-resorbable sterile or non-sterile wound covering made of synthetic, polymeric materials (e.g., polyurethane or polyethylene) that is impermeable to liquids but allows gas interchange. It helps to provide a moist, healing environment for the wound; it may or may not have an adhesive backing.	I
1785	35549	Operating table sheet, single-use	Үйлдлийн ширээний хуудас, нэг удаагийн	A sheet intended to be used as a dressing on an operating table which is used as a barrier between the table top and the patient in order to retain a sterile condition. It is typically made of a strong fibre, e.g., artificial fabric or paper. This is a single-use device.	I
1786	35550	Operating table sheet, reusable	Үйлдлийн ширээний хуудас, дахин ашиглах боломжтой	A sheet intended to be used as a dressing on an operating table which is used as a barrier between the table top and the patient in order to retain a sterile condition. It is typically made of a fabric, e.g., cotton. This is a reusable device.	I
1787	35552	Tooth extraction forceps	Шүд авах хямсаа	A hand-held manual dental surgical instrument shaped like pincers and designed for the extraction of teeth. This is a reusable device.	I
1788	35553	Rubber dam punch	Резинэн далан цоолбор	A hand-held dental instrument used to place holes in rubber dam material to permit the passage of the dam over the crowns of the teeth. The handles are squeezed together and the plunger (punch) creates a hole in the rubber dam material. It is typically designed to create various hole sizes. This is a reusable device.	I
1789	35554	Centrifuge bucket/tube holder adaptor	Центрифугийн хувин/хоолойн эзэмшигч адаптер	A device intended to compensate for and enable the use of different size test tubes and bottles in a centrifuge rotor bucket or centrifuge tube holder. This is a reusable device.	I
1790	35555	X-ray film minifier	Рентген хальсыг багасгагч	A mains electricity (AC-powered) device intended to be used to copy full-size radiographs onto a smaller format. The most common sizes used are 10 cm x 10 cm and 35 mm formats.	I

1791	35557	Examination/treatment table sheet, single-use	Үзлэг/эмчилгээний хүснэгт, нэг удаагийн	A dressing on an examination/treatment table which is used as a barrier between the table top and the patient in order to retain a hygienic/sterile condition. It is typically made of a strong fibre, e.g., artificial fabric or paper. This is a single-use device.	I
1792	35558	Examination/treatment table sheet, reusable	Үзлэг/эмчилгээний хүснэгт, дахин ашиглах боломжтой	A dressing on an examination/treatment table which is used as a barrier between the table top and the patient in order to retain a hygienic/sterile condition. It is typically made of a fabric, e.g., cotton. This is a reusable device.	I
1793	35561	Specimen container mailer, non-insulated	Сорьцын савны шуудан, тусгаарлагчгүй	A non-sterile tube, box, or envelope designed to transport a specimen container/receptacle by mail and to provide protection for the container and its specimen content. It can be used for mail services internal or external to healthcare facilities and is intended to protect the specimen container (e.g., glass vial, bottle, tube, or slide) from adverse conditions that could cause breakage. This is a single-use device.	I
1794	35562	Electrocardiographic lead set, reusable	Электрокардиографийн хар тугалганы багц, дахин ашиглах боломжтой	A collection of noninvasive devices intended to conduct electrical signals from a patient's heart, via an electrode attached to the surface of the chest/limbs, to an electrocardiograph (ECG) machine or a patient monitoring system. It is designed as an insulated wire(s), which may additionally include a detachable or permanently attached electrode and/or cable with connector. Some types may be designed as a pre-configured array (e.g., EEG belt) to assist electrode placement. This is a reusable device.	I
1795	35563	Bariatric bed	Бариа заслын ор	A mains electricity (AC-powered) bed specifically designed as a bed to accommodate a bariatric (obese) patient whose body mass exceeds the safe working load of standard hospital/institution beds and trolleys, i.e., 500 kg total, including the weight of the mattress and other accessories. Features like size, shape, and patient comfort (both physical and mental) will be taken into consideration by the design. This device is electrically-operated to assist the user/attending staff to adjust the functions and positions of the bed. It will typically include adjustable height, back rest, knee-break, removable head and foot ends and possibly an integrated weighing facility.	I

1796	35564	Camera cover, reusable	Камерын бүрээс, дахин ашиглах боломжтой	A device made of a material, typically of plastic and shaped to fit the camera, which is used as a physical barrier on a camera to protect it from environmental exposure and/or allow the camera to be used in a sterile surgical field. This is a reusable device.	I
1797	35570	Orthopaedic stretcher	Ортопедийн дамнуурга	A manually-operated device consisting of a platform mounted on a wheeled frame designed to transport recumbent, immobilized patients with suspected neural axis injuries to or within a hospital.	I
1798	35571	Contaminated laundry bag	Бохирдсон угаалгын уут	A sac intended to collect and contain infectious linens/clothing for transport to a laundering facility. It is usually marked by colour code and is supported in or on a dedicated rack or stand. This is a reusable device.	I
1799	35572	Food tray, single-use	Хоолны тавиур, нэг удаагийн	A tray designed in disposable materials to carry and serve dishes of food on a single occasion. It may also be used to collect dirty dishes or gather up other similar items. This is a single-use device.	I
1800	35575	General-purpose drying cabinet	Ерөнхий зориулалтын хатаах шүүгээ	A mains electricity (AC-powered) device designed for the controlled warming and drying of a variety of items and products, including medical devices. It typically consists of a heat insulated enclosure with a sealing door, shelves, heating element(s), a thermostat and operating controls; some types may include an extractor/air circulation fan and air filters. This is a freestanding cabinet (tabletop or floor design) typically used in a laboratory or hospital reprocessing unit.	I
1801	35576	Surgical microscope still camera	Мэс заслын микроскопын хөдөлгөөнгүй камер	An electro-optical device intended to be used to capture and generate an enlarged image of a microscopic field for examination of a clinical specimen during a surgical procedure. It is designed to attach to a surgical microscope and utilizes the lens system for magnification of the microscope’s field; the images generated are used for subsequent clinical decision-making. This device may be a digital or photographic camera; some types may in addition be used with laboratory microscopes.	I

1802	35577	Infusion/injection training model	Судсаар хийх/тарих сургалтын загвар	A synthetic replica of a human arm designed for instructing intravenous (IV) line placement, injections, and infusions. It simulates the anatomy of an arm with blood vessels, tissues, and skin produced in soft, rubber-like materials. The device is typically used by nursing, medical, and paramedical students.	I
1803	35579	Silver recovery system, x-ray film	Мөнгө сэргээх систем, рентген хальс	An assembly of devices designed to reclaim soluble silver (Ag) complexes from the solutions used during x-ray film processing. It may be a free-standing unit or may be incorporated as a component of an x-ray film processing system. The retrieved silver is typically returned to a manufacturer who can handle this product.	I
1804	35580	Diagnostic-imaging multiformat camera	Оношлогооны дүрслэлийн олон форматтай камер	An electrically-powered camera-based imaging unit, typically using laser scanning techniques, that is designed to capture digital images created using diagnostic imaging systems, e.g., computed tomography (CT), magnetic resonance imaging (MRI), positron emission tomography (PET), gamma camera or ultrasound, and to reproduce them in variable image formats on x-ray or radiographic film. This device usually has adjustments that allow the operator to determine how many images will be recorded on one film sheet (multi-formatting). This can be typically anywhere from 1 to 128 images in multiples of two which can be recorded onto a single sheet of film.	I
1805	35582	Decontamination floor mat, reusable	Халдваргүйжүүлэх шалны дэвсгэр, дахин ашиглах боломжтой	A pad made of coarse, durable material that is designed to be placed on the floor to wipe the soles of the footwear of persons walking on its surface. The product is intended to reduce the distribution of dirt/contaminated materials on the floor. This product can be reused after appropriate cleaning procedures.	I

1806	35583	Floor covering, conductive	Шалны бүрээс, дамжуулагч	A material used to cover the floor of a room where special consideration must be taken to the degree of static electricity allowed. This covering is conductive and will be installed in such a manner that it reduces static electrical charges which would normally accumulate. It is typically used in environments, e.g., operating theatres or examination rooms where static electricity can often lead to adverse effects for the patient and/or clinical personnel.	I
1807	35584	Bath hand rail	Банны гар хашлага	A bar intended to provide a supportive hand-hold for a person with a disability when raising or lowering themselves or changing their body position while bathing in a bath or bathing facility. It will typically be affixed to or around the bath.	I
1808	35585	Toilet hand rail	Ариун цэврийн өрөөний гар хашлага	A device of various bar-shaped designs intended to provide a person with a disability a supportive hand-hold when lowering or raising their body to or from the toilet. It may be designed to be wall-mounted or affixed to the toilet.	I
1809	35586	Hand rail	Гарын төмөр зам	A device that is fixed to the wall and is of differing bar shaped designs that is intended to provide a person with a disability a supportive hand-hold whilst standing and moving.	I
1810	35588	Washbowl, reusable	Угаалгын сав, дахин ашиглах боломжтой	A portable rigid container designed to be filled with water and carried to the point of use to wash a patient who typically needs assistance (e.g., a bed-bound, geriatric, and/or disabled patient). It may be designed to be placed in a dedicated bowl/basin stand. This is a reusable device.	I
1811	35589	Intramedullary canal cleaning brush, reusable	Интрамедулляр суваг цэвэрлэх сойз, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to remove blood clots and bone debris from the intramedullary canal of a bone (marrow space) in preparation for the insertion of orthopaedic cement. It typically consists of a handle at the proximal end and bristles, fibres, or spines at the distal end which may be soft or stiff and are mounted along a single plane or radiate out around a central shaft which may be flexible or rigid. This is a reusable device.	I

1812	35591	Cardiac valve graft	Зүрхний хавхлагын шилжүүлэн суулгах	An allograft (tissue obtained from a human cadaver) or xenograft (tissue of, most commonly, porcine or bovine origin) that is used to repair or replace the natural heart valve. This device is typically used to treat acquired or congenital valvular disease. A biological valve is processed to render the tissue in the valve non-viable.	I
1813	35592	Microlaryngeal probe	Бичил хоолойн датчик	A hand-held manual surgical instrument designed for paediatric laryngology and for phonatory microsurgery applications in adults. This delicate probe gives a precise sense of palpation for accurate detection of induration, tissue mass, and cystic changes. It is also used to break thick mucus fluid before its extraction. This is a reusable device.	I
1814	35593	Carotid artery clamp	Каротид артерийн хавчаар	A hand-held manual surgical instrument designed for the temporary, atraumatic compression of the carotid artery for haemostasis (arrest or prevention of bleeding) usually during a procedure performed to the intracranial vasculature. It is typically made of high-grade stainless steel and is designed with a single, blade-like hook that is positioned around half of the circumference of the artery while an adjustable bowed clamp is tightened against the underside of the artery through a screw mechanism. This is a reusable device.	I
1815	35594	Aortic coarctation clamp	Аортын коарктацийн хавчаар	A hand-held manual surgical instrument designed for the temporary, atraumatic compression of the section of aorta effected by coarctation (i.e., a congenital narrowing of the aorta in the vicinity of the insertion of the ductus arteriosus). It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel; it may utilize inserts made of various materials (e.g., carbide). It is available in various sizes and has serrated blades that are either straight or curved. The serrated region has a central, non-serrated trough running its length to prevent trauma to the enclosed vessel. This is a reusable device.	I

1816	35595	Bone clamp traction bar	Ясны хавчаар татах бар	A manual surgical device designed to bridge two opposing bone clamps being used as a pair, one on either side of a fracture (the proximal and distal segment of a fractured bone) that is being approximated during orthopaedic surgery. It is attached to the stem of each of the bone clamps and using its screw mechanism, the fracture is drawn together by the surgeon. It is typically made of high-grade stainless steel and is designed for this function only. This is a reusable device.	I
1817	35597	Central supply trolley	Төвийн хангамжийн тэргэнцэр	A cart used to transport medical, surgical, and general supplies from a central supply depot to the appropriate department in a healthcare facility. This trolley (cart) can be closed or open (open trolleys are usually covered with fabric during transport). It is typically linked together with other supply trolleys and pulled by an in-house truck or moved by an automated robotic transport system.	I
1818	35598	Food/drink trolley	Хоол, ундааны тэргэнцэр	A wheeled cart intended to be used to transport food, drink, and/or related items within the home or healthcare facility. It has shelves/platforms within a frame on wheels, and may have hot and cold compartments and/or liquid dispensers. It may be used by healthcare staff to deliver food/drink to patients and/or by disabled patients to assist daily living within the home.	I
1819	35599	Laundry/linen trolley	Угаалгын машин / цагаан хэрэглэлийн тэргэнцэр	A cart used to deliver clean laundry to patients and hospital personnel and to transport dirty laundry to laundry facilities. This device may be completely closed or have an open design that requires coverings to protect the environment from exposure to dirty linen/laundry. This trolley (cart) is typically linked together with other transport trolleys and pulled by an in-house truck or moved by an automated robotic transport system.	I
1820	35601	Housekeeping trolley	Гэр ахуйн троллейбус	A cart used by cleaning staff typically to carry buckets with mops, brooms, cleaning compounds, dustpans, dispensers, and an open trash bag for trash removal. This trolley (cart) consists of a framework that is designed to contain and hold all of the items needed for housekeeping.	I

1821	35602	Assistive nightwear	Туслах шөнийн хувцас	A garment specially designed/adapted to be worn by a person with a disability while sleeping at night. It may be a one-piece garment (a nightgown) or a two-piece garment (pyjamas) typically constructed with features that facilitate easy donning, fastening, and removal (e.g., wide sleeves or trouser legs, Velcro and zip fasteners), and sometimes with specially-made openings/flaps for visits to the toilet.	I
1822	35604	Audiometric room	Аудиометрийн өрөө	A specially constructed room used to conduct diagnostic hearing evaluations. It is insulated against outside noise interference (sound-proofed) and has walls, a ceiling, and sometimes a floor with sound absorbing properties to eliminate sound reflections.	I
1823	35605	Medical chart holder attachment	Эмнэлгийн карт баригч хавсралт	A special accessory used together with a medical chart holder in order to present/display the patient records/charts.	I
1824	35606	Waste compactor, stationary	Хаягдал нягтруулагч, суурин	A mains electricity (AC-powered) device designed to press (compact) waste materials firmly together in order to reduce the volume (bulk) of the waste (e.g., cartons, boxes, wrappers). This device is typically electrohydraulically powered and is designed for large quantities of waste and is typically found located in technical support areas where bulk waste is handled.	I
1825	35607	Waste compactor, portable	Хаягдал шахагч, зөөврийн	A mains electricity (AC-powered) device designed to press (compact) small or moderate amounts of waste materials firmly together in order to reduce the volume (bulk) of the waste (e.g., cartons, boxes, wrappers). It is designed to be easily carried or moved.	I
1826	35608	Shower curtain, single-use	Шүршүүрийн хөшиг, нэг удаагийн	A piece of waterproof or water-resistant drapable material intended to be hung as a screen at the front of or around an open shower to contain the water within the cubicle/space; some types are coated or impregnated with an antimicrobial agent. It is usually moved horizontally to allow entry/exit of the person using the shower. This is a single-use device.	I
1827	35609	Milk-formula refrigerator	Сүүний найрлагатай хөргөгч	A mains electricity (AC-powered) device specially designed to quickly cool heated milk formula to the appropriate temperature (45° Celsius) for infant ingestion.	I

1828	35611	Emergency eyewash fountain	Яаралтай тусламжийн нүд угаах усан оргилуур	An emergency eyewash station intended to be used by healthcare personnel or any individual involved in exposure to hazardous substances (e.g., chemicals) and where there is an immediately need to wash primarily their eyes and face in order to avoid and/or reduce the risk of damage. This device can also be attached to the taps (faucets) of an ordinary sink.	I
1829	35612	Document/material conveyor system	Баримт бичиг/материал дамжуулагч систем	An assembly of mains electricity (AC-powered) devices designed for the transport of materials or documents requisitioned by a user (e.g., patient journals, small samples or small packages of goods) from one place to another within a hospital or larger institution complex. It is typically a fully automated and closed off transport system thereby prohibiting tampering by individuals not concerned with the transaction.	I
1830	35613	Material-handling lift	Материал зөөвөрлөх өргөгч	An elevator designed specifically for the transport of goods and materials between different levels (floors) in a building. This device is not suitable nor certified for the transport of people.	I
1831	35625	Laundry/linen trolley cover	Угаалгын/маалинган тэрэгний бүрээс	A device made of a fabric material typically shaped to fit over the complete trolley to form a physical barrier which covers the linen/laundry trolley (cart) to prevent cross-contamination between the trolley and its contents and the surrounding environment. This is a reusable device.	I
1832	35629	Surgical-microscope utility supply system	Мэс заслын-микроскопийн хэрэглээний хангамжийн систем	An assembly of devices that form a permanently ceiling-mounted system providing easy access to utilities/amenities (e.g., electricity) for a surgical microscope designed to be used in an operating room (OR). It provides manoeuvrability of the microscope that will be held in balance by the counterbalance mechanisms of the system. It will typically be equipped with a light source and possibly a chair for the surgeon. This device is used in neurosurgery and plastic surgery.	I

1833	35630	General utility supply system, ceiling-mounted	Нийтийн хэрэглээний хангамжийн систем, таазанд суурилуулсан	An assembly of devices that form a permanent ceiling-mounted system that provides easy access to utilities/amenities (e.g., electricity, gas, or gas scavenging). It is used in the operating room (OR), examination rooms, the recovery department, the intensive care unit (ICU), and accident and emergency (A&E) rooms. It typically consists of a ceiling fixture support, equipped with moveable arms (often multi-jointed) and a pendant head. It can include an equipment carrier for mounting other medical devices.	I
1834	35631	Toilet cushion	Ариун цэврийн дэр	A soft pillow or pad designed to provide support, comfort, and assistance to the user while sitting on a toilet or commode seat. The device is designed to evenly distribute body weight, absorb shock, and adjust height for the user who has difficulty bending to or rising from a low position.	I
1835	35634	Audio cassette tape recorder	Аудио хуурцаг бичигч	A mains electricity (AC-powered) and/or battery-powered, electronic device used to store information on a magnetic film coated on a nonmagnetic plastic material housed in a reel-to-reel, audio cassette. It is typically used for audio recording and playback and is a general-purpose recording device that reflects old technology.	I
1836	35636	Basic laundry bag	Үндсэн угаалгын уут	A sac intended to collect and contain dirty linens/clothing of various kinds for transport to a laundering facility. It is usually supported in or on a dedicated rack or stand. This is a reusable device.	I
1837	35639	Back row exerciser	Арын эгнээний дасгалын төхөөрөмж	A mechanical exercise apparatus primarily intended to strengthen the muscles of the back through a repetitive rowing motion (as in rowing a boat with oars) performed with the arms against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that incorporates changeable weights and bars and/or handles/hand stirrups for the user to grip and pull; it may include a bench for the user to exercise while sitting or inclined. The device may also be used to improve back flexibility, mobility, and to strengthen other upper body muscles (e.g., biceps, triceps).	I

1838	35647	External orthopaedic fixation system, reusable	Гадны ортопедийн бэхэлгээний систем, дахин ашиглах боломжтой	An assembly of devices designed to stabilize fractured bones, other than those in the vertebral column, to promote treatment and healing. It typically consists of an external plastic and/or metallic fixator (a framework) and other external and/or implantable components such as clamps, rods, rings, cams, bushings, collars, bolts and nuts; it may also include some instrumentation (e.g., screw drivers, wrenches, drills). It is used mainly to help the healing of long bones such as the femur, tibia and humerus, as well as fractures of the wrist, elbow, knee, hip and ankle, joint fusions, and limb lengthening. This is a reusable device.	I
1839	35656	Vision training device, battery-powered	Алсын хараг сургах төхөөрөмж, зайгаар ажилладаг	A battery-powered device with a series of individual flashing light sources [typically consisting of a light-emitting diode (LED)] to treat poor accommodative and vergence facility, convergence insufficiency, and large accommodative lag in non-presbyopic subjects. It is designed as a long metal or plastic bar upon which the lights are mounted at intervals and the patient, placed in front it, tracks the movement of the flashing lights as they rapidly change positon. Some types use alternating red and blue lights making use of the phenomenon of chromatic aberration to gently rock accommodation and convergence of the lens. It is suitable for home-use but may be used in an optometrist's office.	I
1840	35657	Vision training device, line-powered	Алсын хараг сургах төхөөрөмж, шугамаар ажилладаг	A mains electricity (AC-powered) device with a series of individual flashing light sources [typically consisting of a light-emitting diode (LED)] to treat poor accommodative and vergence facility, convergence insufficiency, and large accommodative lag in non-presbyopic subjects. It is designed as a long metal or plastic bar upon which the lights are mounted at intervals; the patient placed tracks the movement of the flashing lights. Some types use alternating red and blue lights making use of the phenomenon of chromatic aberration to gently rock accommodation and convergence of the lens. It is used in an optometrist's office, but some types are suitable for home-use.	I

1841	35676	External breast prosthesis	Хөхний гаднах протез	An external device intended to replace the female breast typically after a mastectomy. It is made of various materials to simulate the appearance and texture of a breast and is typically fitted into a brassiere.	I
1842	35683	Wearable free weight exerciser	Зүүж өмсдөг үнэгүй жингийн дасгалын төхөөрөмж	A piece of exercise equipment designed to be worn on the body as a weight primarily to increase muscle strength. It is typically comprised of pieces of metal encased in a fabric material that is applied to the arms, wrists, legs, and ankles, or to the torso (in the form of a vest). The device is intended to improve muscle strength by increasing workload on the muscles during exercise or activities of daily living; it may also help improve body metabolic rate, balance, flexibility, mobility, and bone density.	I
1843	35684	Haemodialysis system blood line clamp	Гемодиализийн системийн цусны шугамын хавчаар	An electrically-powered integral unit of a haemodialysis system used to modify or stop the flow of blood through the blood line tubing during dialysis.	I
1844	35688	Pressure alleviation pad, air, alternating-contact, single-use	Даралт бууруулах дэвсгэр, агаар, ээлжлэн контакттай, нэг удаагийн	A special pressure pad or mattress that is used in combination with a pump and which is designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It is constructed with parallel cushion chambers that are alternately filled with air, thereby actively changing the pressure contact points to the patient's body. This is a single-use device.	I
1845	35689	Pressure alleviation pad, air, alternating-contact, reusable	Даралт бууруулах дэвсгэр, агаар, ээлжлэн контакттай, дахин ашиглах боломжтой	A special pressure pad or mattress that is used in combination with a pump and which is designed to prevent pressure sores, e.g., bed sores or decubitus ulcers, occurring on the parts of the patient's body which are prone to this. It is constructed with parallel cushion chambers that are alternately filled with air, thereby actively changing the pressure contact points to the patient's body. This is a reusable device.	I
1846	35693	Cardiopulmonary resuscitation kit, single-use	Зүрх, уушигны сэхээн амьдруулах иж бүрдэл, нэг удаагийн хэрэглээ	A collection of items in a portable case intended for cardiopulmonary resuscitation (e.g., airway tubes, face masks, resuscitator). It is typically placed in a convenient location in public buildings and in emergency medical services (EMS) vehicles for quick access in emergency situations. This is a single-use device.	I

1847	35694	Menstrual tampon, unscented	Сарын тэмдгийн тампон, үнэргүй	A non-deodorized plug made of cellulosic or synthetic material that is inserted into the vagina to absorb menstrual blood or other vaginal discharge. This is a single-use device.	I
1848	35696	Dental amalgam carrier	Шүдний амальгам зөөгч	A hand-held dental instrument specially designed to collect, transport and deposit amalgam in its plastic state into prepared cavities. This is a reusable device.	I
1849	35697	Dental material application tool, single-use	Шүдний материал хэрэглэх хэрэгсэл, нэг удаагийн	A hand-held manual dental instrument intended to be used for the application of a dental restorative material (e.g., amalgam, resin) to a patient's tooth/teeth; the restorative material is not included. It includes a handle with an application tip/brush which holds the material on its surface/bristles; it is not a syringe- or pistol-like device. This is a single-use device.	I
1850	35699	Neck mechanical weight exerciser	Хүзүүний механик жинтэй дасгалын төхөөрөмж	A mechanical exercise apparatus intended primarily to strengthen the major muscles of the neck/cervical spine (e.g., sternocleidomastoid, splenius capitis and cervicis/colli) through repetitive flexion or extension of the neck/cervical spine muscles against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that may incorporate changeable weights and a head pad or head/neck harness; a bench may be included for the user to sit while performing the exercise. It is typically used during rehabilitation where it may also be intended for injury assessment and improvement of flexibility.	I
1851	35700	Facebow	Facebow	A caliper-like dynamic dental instrument intended for use in a dental diagnostic procedure to record the relative position of the mandible to the temporomandibular joints (TMJs) and/or to record the spatial relationship between the maxilla and mandible. This determination is intended for use in placing models of the upper and lower jaws into an articulator and/or in assessing a range of movements in the TMJs. This is a reusable device.	I
1852	35701	Fluoride gel tray	Фторын гель тавиур	A device typically made of styrofoam that is used to apply fluoride topically to the teeth. The device is designed to conform to the human mouth; a patient bites down on the device after it has been filled with a fluoride gel or solution for application.	I

1853	35702	Dental abrasive strip, single-use	Шүдний зүлгүүрийн тууз, нэг удаагийн	A manual dental device in the form of a strip coated with abrasive particles on one or both sides intended to be used for modifying the surface of a tooth or restoration during a dental procedure. It is commonly known as a polishing strip. This is a single-use device.	I
1854	35703	Universal foot-controlled electrosurgical diathermy system conducting unit, single-use	Бүх нийтийн хөл удирдлагатай цахилгаан мэс заслын диатерми систем дамжуулах төхөөрөмж, нэг удаагийн	A sterile electrical conductor comprised of an electrode handpiece with cables and an active electrode, typically non-detachable, intended to provide an electrical connection between the output terminals of an electrosurgical diathermy generator and a patient. The energy emitted from the device is used to cut and coagulate tissue at a surgical site on the patient. The operator regulates the energy with a foot-switch. This is a non-dedicated device intended to be used in multiple clinical specialties. This is a single-use device.	I
1855	35705	Ear bowl	Чихний аяга	A bowl specifically designed to be used for treatment of the ear(s), e.g., irrigation of the outer ear canal during a ear/nose/throat (ENT) procedure. It is usually constructed to fit the curvature of the head so that it will sit closely under the ear lobe and is typically made of high-grade stainless steel. This is a reusable device.	I
1856	35709	Electrode/transducer strap, reusable	Электрод/хувиргагч оосор, дахин ашиглах боломжтой	A strip of material (e.g., fabric) intended to be used to hold electrodes and/or transducers (e.g., foetal monitoring transducers) in place on the body surface; it typically has fasteners (e.g., Velcro, buckle). This is a reusable device.	I
1857	35714	Orthopaedic casting stand	Ортопедийн цутгах тавиур	A structure/frame designed to hold and support a patient's torso or limb (arm or leg) in an appropriate position during an orthopaedic casting procedure. It typically consists of an adjustable base/pedestal and frame with a set of detachable components including limb-positioning attachments to maintain optimum joint alignment, supports for resting limbs, and blades for forming the cast. Typically the body part is placed on a blade and the cast material is wrapped around it; after completing the cast, the blade is removed from the cast to provide space for improved blood circulation and patient comfort. This is a reusable device.	I

1858	35715	Eye-patch	Нүдний наалт	A device with a synthetic or biological origin used to close/cover one or both eyes, for the purpose of protecting the eye after a procedure or as part of an ophthalmic therapeutic intervention. This is a single-use device.	I
1859	35718	Legrests	Хөл	A device used during a medical/surgical procedure (e.g., an examination, birthing) to steadily sustain or hold a patient's leg. This device will often be considered an accessory to one or more generic device groups of parent devices. It is typically constructed of metal/plastic/rubber and can be attached to, e.g., operating tables/examination tables/treatment chairs. This device is typically used in pairs.	I
1860	35720	Line-powered shaver system handpiece electrical cable	Шугаман дээр ажилладаг сахлын системийн гар утасны цахилгаан кабель	An insulated electrical conductor designed to provide an electrical connection between the control unit or generator and the handpiece of a line-powered shaver system to transfer low-voltage electricity (e.g., 24 volt) and signals. The device typically consists of metal wires surrounded by non-conductive materials and terminal metal connectors (e.g., electrical plugs consisting of pins and sockets) that lock into place. This is a reusable device.	I
1861	35728	Assistive blouse/shirt	Туслах цамц/цамц	A garment specially designed/adapted to be worn on the upper torso, usually covering underwear, by a person with a disability. It is typically constructed with features to facilitate easy donning, fastening, and removal (e.g., wide neck and/or sleeves, large pockets, large buttons, Velcro or zip fasteners).	I
1862	35730	Skinfold calliper, electronic	Арьс нугалах калипер, электрон	A hand-held, battery-powered instrument designed to assess body fat in subcutaneous adipose tissue by measuring, via electronic means, the thickness of folds of skin gathered at various areas of the body (typically that on the posterior aspect of the upper arm or on the thighs, back, or over the lower ribs of the chest). It is typically made of metal and/or plastic and has moveable arms/jaws for application to the skin folds. The device can record the skinfold measurements and, typically, percent body fat measurements are computed based on internal microprocessor algorithms and displayed (e.g., on an LCD screen).	I

1863	35732	Rigid endoscopic biopsy forceps, reusable	Дурангийн биопсийн хатуу хямсаа, дахин ашиглах боломжтой	A rigid, manual, non-electrosurgical instrument intended to obtain tissue specimens during endoscopic procedures (e.g., laparoscopy, thoracoscopy, spinoscopy, arthroscopy). It is typically constructed as a long instrument with one sliding and one stationary rod whose distal ends are equipped with scissors-like cups with cutting edge rims, which are operated by a control handle at the proximal end of the instrument. It is introduced into the body through an artificial orifice of the body or the working channel of the endoscope. This is a reusable device.	I
1864	35734	Laboratory liquid dispenser, manual	Лабораторийн шингэн түгээгч, гар ажиллагаатай	A manual laboratory device designed to dispense fluid from a stock reservoir (e.g., a bottle or other container). The user determines the intended volume, typically up to 100 ml, by operating a manual pump. This device may be hand-held, or fitted to a bottle or alternative reservoir.	I
1865	35736	Ultraviolet view box	Хэт ягаан туяаг харах хайрцаг	A mains electricity (AC-powered) device designed for visual examination of a process and/or its results using ultraviolet (UV) light. It is used to support and illuminate an object with UV light so that the information held within this object can be seen and studied. It typically includes UV lamps of one or more frequencies (254, 312, and 366 nm are typical), a translucent diffusing screen, and filters; the illumination typically comes from behind the object being viewed. It is mainly used in clinical laboratories for visual examination of a process and/or its results (e.g., for assessing thin-layer chromatographs, electrophoresis gels); but is also used in photo documentation processes.	I
1866	35740	Arrhythmia-recognition training model	хэм алдагдалыг таних сургалтын загвар	A collection of devices that includes instruments, a manikin, and software that simulates physiological arrhythmia conditions for the training of recognition of irregularity of the heartbeat.	I

1867	35741	Training material, audio-visual	Сургалтын материал, аудио дүрс	A device (e.g., video tape, cassette, CD-ROM) or other media storage device which may be manually handled, used for teaching purposes. It will typically be used for training purposes regarding specific medical devices or procedures, and it may contain instructions for use, cleaning and maintenance. It can be intended for use by scholars, professional healthcare workers, or other persons requiring tuition.	I
1868	35749	Analytical scalp lead	Аналитик хуйхны хар тугалга	A wire(s) intended to connect an electroencephalographic electrode(s) to an electroencephalographic system to facilitate the transmission of the electrical signals captured at the site of the electrode to the system for measuring, recording, monitoring and/or analysis during encephalography (EEG); the electrodes are not included. The procedure is performed to record, monitor, and/or analyse the brain's electrical activity. This is a reusable device.	I
1869	35752	Tracheostomy tube neck holder, reusable	Трахеостомийн гуурсан хоолойн хүзүү эзэмшигч, дахин ашиглах боломжтой	A noninvasive device designed to be fastened around the neck of a patient to secure a tracheostomy device (tube, button) in situ. It is typically in the form of a dedicated strap/collar intended to connect to the tracheostomy device, which is not included. This is a reusable device.	I
1870	35754	Oral liquid dose dispenser cabinet	Амны хөндийн шингэн тунг тараагч кабинет	An electrically-powered device designed to distribute oral liquid medication/vitamins in a healthcare facility in the amount needed for a single dose for an individual patient. It typically consists of a small cabinet with an electronic pump that contains unit-dose packaged liquid drugs (e.g., glass ampules, sealed plastic containers) and/or containers with multiple doses that dispense an exact amount of liquid at a time.	I
1871	35760	Dermabrasion brush, manual	Арьсны сойз, гарын авлага	A hand-operated device with wire bristles that is used to manually plane the skin (surgical removal of the epidermis and as much of the dermis as necessary) to remove scars, tattoos, pigmented nevi, fine wrinkles, or other irregularities. This is a reusable device.	I

1872	35761	Dental laboratory curing unit	Шүдний лабораторийн эдгээх хэсэг	A mains electricity (AC-powered) device used in the dental laboratory for curing polymer-based materials. This can be achieved by heat, heat and pressure, light, or a combination of these.	I
1873	35762	Dental porcelain furnace	Шүдний шаазан зуух	A dedicated furnace used in dental laboratory for firing dental porcelain.	I
1874	35765	Short-wave diathermy treatment system tester	Богино долгионы диатерми эмчилгээний систем шалгагч	An instrument designed to assess the power output characteristics of a short-wave diathermy treatment system, typically operated at 13.56 or 27.12 MHz. It is capable of measuring in a continuous range of frequencies, typically from 10 to 30 MHz; the results are usually expressed in watt in a range from zero to one kilowatt. The device typically consists of a power measuring instrument that measures on a 50 Ohm load; it also includes probes appropriate for coupling with the diathermy system generator. It is intended to be used by a healthcare provider (e.g., clinical technician) in a clinical setting.	I
1875	35767	Dental amalgam mercury	Шүдний амальгам мөнгөн ус	Elemental mercury (Hg) of high purity intended for use as a component of dental amalgam in the restoration of a dental cavity or broken tooth. It is usually mixed in situ with fine particles composed mainly of silver (Ag), tin (Sn), and small amounts of copper (Cu) to obtain the amalgam. After application, this device cannot be reused.	I
1876	35768	Dental-professional prophylaxis brush, reusable	Шүдний мэргэжлийн урьдчилан сэргийлэх сойз, дахин ашиглах боломжтой	A rotary dental instrument with natural or synthetic bristle brushes intended to be used by a dental hygienist and/or dentist to clean and polish teeth. It is designed to be attached to a powered dental handpiece which provides the necessary rotation. This is a reusable device.	I
1877	35775	Dental/surgical polymerization lamp	Шүдний/мэс заслын полимержих гэрэл	A mains electricity (AC-powered), hand-held, device intended to be used to activate the polymerization of: 1) a dental resin-based material in the oral cavity; and/or 2) a surgical adhesive/sealant during an open-surgery procedure. It typically includes a light source [e.g., halogen, fluorescent, light-emitting diode (LED)] that emits light in the visible, or less frequently, ultraviolet spectrum, mounted in a handpiece that is typically attached to or used with a portable control unit or charging station.	I

1878	35778	Surgical apron, single-use	Мэс заслын хормогч, нэг удаагийн	A sterile garment designed to be worn by surgical staff for protection from soiling or spills on the ventral (front) aspect of the body during surgical procedures. It is made of fabric and/or polymer materials. This is a single-use device.	I
1879	35779	Wheelchair narrowing attachment	Тэргэнцэрийг нарийсгах хавсралт	A mechanical device attached to a wheelchair that enables the wheelchair occupant to minimally reduce the width of the wheelchair when it must pass through a passage (e.g., a doorway) that is too narrow for its normal width.	I
1880	35780	Endoscopic teaching attachment	Эндоскопийн заах хавсралт	A device designed for coupling to the eyepiece of a fibreoptic endoscope to transmit the images of an endoscopic procedure to a second eyepiece so that an observer can follow the procedure simultaneously with the endoscope operator. It typically consists of a clip-on side articulated arm attachment with an eyepiece adaptor that may include a beam splitter. It may be known as a lecturescope or an observerscope. This is a reusable device.	I
1881	35782	Tracheal bistoury	Гуурсан хоолойн бистоури	A surgical instrument in the form of a long, narrow-bladed knife designed for opening abscesses or slitting up sinuses and/or fistulas in the trachea. It is typically made of high-grade stainless steel and has a straight or curved cutting edge that terminates at the distal end with a sharp or blunt point. This is a reusable device.	I
1882	35783	Wheelchair lap tray	Тэргэнцэрт зориулсан тэвш	A device designed as a flat or shallow board or vessel that is attached to a wheelchair and placed across the lap of the occupant to serve as a platform for the performance of routine activities (e.g., eating, working or carrying objects).	I
1883	35785	Dental burnisher	Шүдний шарагч	A rotary dental device with a smooth or ribbed working head used to create thin margins between a restoration and the enamel at the cavo-surface angle, and/or to polish the surface of metallic restorations by rubbing. It's terminus may be flat, ball, or beavertail. It is available according to the material used in the restoration (e.g., amalgam, gold alloy). This is a reusable device.	I

1884	35786	Corneal bur manual instrument	Эвэрлэг бүрхэвчний гарын авлагын багаж	A hand-held, ophthalmic surgical instrument that consists of a shaft with fluting or cutting planes of steel, or other hard metal, of various shapes at its distal end, used to excavate corneal tissue (e.g., removal of rust rings) through manual rotation. This is a one-piece instrument with no exchangeable components. This is a reusable device.	I
1885	35787	Ophthalmic calliper	Нүдний аппарат	A hand-held manual ophthalmic measuring instrument consisting of two legs hinged at one end and designed to measure the diameter, length, angles, and thicknesses of the eye. Some types, known as a blepharometer, can be used to measure the thickness of the eyelid and the force of the lid closure.	I
1886	35788	Orthopaedic bone calliper	Ортопедийн ясны аппарат	A hand-held manual surgical instrument consisting of two legs hinged at one end designed to measure various bone dimensions (e.g., diameter or length) required for orthopaedic procedures. It has an attached scale to indicate the measured units. This is a reusable device.	I
1887	35791	Dental amalgam capsule	Шүдний амальгам капсул	A small container in which silver (Ag) alloy is intended to be mixed with mercury (Hg) to form dental amalgam. This is a reusable device.	I
1888	35792	Flexible endoscopic sponge/swab forceps	Уян дурангийн хөвөн/арчдас хямсаа	A flexible manual device intended to be used in combination with a compatible endoscope (e.g., a gastroscope) to carry an absorbent pad of folded gauze or cotton into the site of intervention. It is typically constructed of a flexible metal coil or plastic tube whose distal end is equipped with a pair of scissors-like grasping tongs which are operated by a control handle attached at the proximal end of the instrument. It is introduced into the body cavity through the working channel of the endoscope. This is a reusable device.	I
1889	35793	Dental restoration carver, amalgam, reusable	Шүдний нөхөн сэргээх сийлбэрч, амальгам, дахин ашиглах боломжтой	A hand-held manual dental instrument intended to be used for producing and perfecting anatomical forms in dental amalgam restorations, typically by cutting, scraping, paring, and smoothing finishes and modelling patterns intraorally. It will typically be a double-ended instrument with working ends of various shapes and designs, and a central handle. This is a reusable device.	I

1890	35794	Dental wax carver	Шүдний лав зүсэгч	A hand-held manual dental instrument used to carve wax patterns with a blunt blade of varying size and shape, which can be heated for softening the wax while fashioning the pattern. This is a reusable device.	I
1891	35796	Fluorescence light microscope	Флюресцент гэрлийн микроскоп	A magnification instrument in which light (typically ultraviolet) that has been absorbed by the specimen and re-emitted at a longer wavelength is observed (as visible light) so that the specimen is visible through the eyepiece. This device is typically used in the laboratory for histopathology and microbiology, commonly in conjunction with fluorescent dyes. Appropriate filters are used to select the correct wavelength of incoming beam to excite the fluorescent compound and eliminate the unwanted incident wavelength from the fluorescent light source (i.e., the specimen).	I
1892	35797	Orthopaedic cerclage applier	Ортопедийн цорго түрхэгч	A hand-held manual surgical instrument designed to position and secure or bind an orthopaedic cerclage loop, clamp, or wire. This is a reusable device.	I
1893	35798	Open-surgery ligation clip applier	Нээлттэй хагалгааны хавчаар түрхэгч	A hand-held manual surgical instrument designed to apply small atraumatic clips (not included) for the ligation of blood vessels, or similar tubular anatomy, mainly to prevent and/or stop bleeding (i.e., haemostasis) during an open-surgery procedure. It may also be used to apply small clamps (e.g., bulldog type) to tissues however it is not intended to apply an aneurysm clip. The device is typically a metallic instrument with flat, curved ends to hold and deliver the clips (e.g., forceps-like); implantable clips are not included. This is a reusable device after sterilization.	I
1894	35799	Radiological patient lifting system	Радиологийн өвчтөнийг өргөх систем	An assembly of devices intended to be used to lift and move a patient to and from a radiological examination table. The assembly typically consists of a support base with lifting mechanism, mast, boom, swivel bar, and seat (e.g., sling). Most of the assembly is composed of materials that do not interfere with the x-ray image.	I
1895	35800	Endoscope inflation bulb	Дурангийн инфляцийн чийдэн	A device that is used in conjunction with an endoscope and its direct application and which assists in the use of the endoscope. It is a dedicated device shaped as a rubber bulb which is used to feed air via the endoscope to obtain an endoscopic view of the site. This is a reusable device.	I

1896	35802	Otologic clamp	Отологийн хавчаар	A hand-held manual surgical instrument designed to grasp internal ear structures (e.g., a bone of the ossicles) during an ear/nose/throat (ENT) procedure. It typically has a self-retaining, scissors-like design with ring handles and is made of high-grade stainless steel. It is available in various sizes and blade designs that may utilize carbide inserts. This is a reusable device.	I
1897	35803	Surgical penis clamp, reusable	Бэлэг эрхтний мэс заслын хавчаар, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to grasp the penis for manipulation during surgery (e.g., circumcision). It is typically a clip-like device e.g., with self-retaining levers. The penis is placed into this clamp that closes around or on the organ. This is a reusable device.	I
1898	35804	Uterine clamp	Умайн хавчаар	A scissors-like, hand-held manual surgical instrument designed to grasp and/or manipulate the uterus during surgery. It is typically made of high-grade stainless steel and will have wide, rounded, blades at the distal end to hold the uterus during a surgical intervention. This is a reusable device.	I
1899	35810	Ophthalmic knife test drum	Нүдний хутганы туршилтын хүрд	An instrument designed to test the sharp penetrating point of surgical knives used in ophthalmic procedures. It typically consists of two concentric cylinders, the external cylinder is large enough to slip over the smaller internal one. When properly placed, a piece of soft material is inserted and held between the inner and the outer cylinder in the same manner as a raw skin is drawn upon a drum head. The knives are tested by pressing the point slightly against the surface of the soft material (e.g., kid or sheep skin). The point must penetrate easily and smoothly without any sound if the knife is sharp; otherwise the knife needs sharpening or should be discarded.	I

1900	35811	Dental excavator, reusable	Шүдний экскаватор, дахин ашиглах боломжтой	A hand-held manual dental instrument designed for cutting, scraping, and removing the carious dentine of a decayed tooth or other pathological bone tissue within the oral cavity. It is made of high-grade stainless steel typically designed as a double-ended instrument, having a central handle, with small, sharp, spoon-, scoop-, or spatula-shaped blades that have sharp cutting/gouging edges. This is a reusable device.	I
1901	35812	Dental surgical probe, reusable	Шүдний мэс заслын датчик, дахин ашиглах боломжтой	A slender, rod-like, hand-held manual dental surgical instrument intended to be used to explore, measure and/or perform therapeutic procedures during various types of dental surgical intervention. The distal end may be needle-like, hooked, or blunt; it is made of flexible or rigid metallic and/or synthetic polymer material and it may have scaled markings for measurements. This is a reusable device.	I
1902	35815	Endotracheal tube holder	Дотоод гуурсан хоолойн эзэмшигч	A device designed to hold and stabilize an endotracheal (ET) tube when it has been intubated into a patient; it may also include a teeth protector to prevent damage to the teeth or tube during intubation. It typically consists of straps, pinch rings, cloth ties, or Velcro bands and provides the advantage of easy readjustment of the tube without retaping or the use of safety pins. This is a single-use device.	I
1903	35816	Bedrail cover, reusable	Орны тавиур, дахин ашиглах боломжтой	A device made of a material, typically plastic or fabric, that is used as a physical barrier on a bedrail to prevent cross-contamination between a patient and the bedrail. This is a reusable device.	I
1904	35817	Incontinence pants liner	Шээс задгайрах өмдний доторлогоо	A disposable pad composed of absorbent materials that is worn inside incontinence pants to catch and retain urine from an incontinent person. This is a single-use device.	I
1905	35818	Bed/chair occupant movement pressure/vibration sensor	Ор/сандал суугчийн хөдөлгөөний даралт/чичиргээ мэдрэгч	An electrically-powered electronic sensing pad (pressure- or mechanical vibration-sensing) designed to be placed under a bed and/or chair occupant to detect and/or measure occupant movement related to activities such as sleep, wakefulness, and/or bed/chair exit. Some types are able to detect in addition occupant respiration and heart rates; and some types function with an alarm/alert/notification system to indicate unattended occupant attempt to vacate bed/chair.	I

1906	35819	Ceiling-mounted intravenous hanger, reusable	Таазанд суурилуулсан судсаар хийх гогцоо, дахин ашиглах боломжтой	A metal rod designed to be mounted from the ceiling that may be length adjustable (telescopic) and include a hanger of one or more hooks at the lower end. It is typically attached to a track and carrier system that allows the movement of the pole along the track. Various fluid delivery devices (bags or bottles) can be suspended from this device for the administration of intravenous (IV) fluids/medication to the patient. Ceiling-mounted IV poles are mainly used in healthcare areas where administration of IV fluids is frequent and/or the use of the floor space is critical.	I
1907	35825	Bulk waste incinerator	Бөөн хог шатаах зуух	A device designed to destroy general bulk waste in the hospital or institution by burning under controlled conditions. It will be installed in the technical support facilities and be administered by technical personnel. This incinerator will typically have a capacity to incinerate large volumes of waste materials.	I
1908	35830	Salivary gland dilator, reusable	Шүлсний булчирхайг тэлэгч, дахин ашиглах боломжтой	A surgical instrument used during ear/nose/throat (ENT) surgery for enlarging a salivary gland cavity, canal, or duct, typically prior to the introduction of a catheter during an invasive diagnostic or interventional procedure. It is rod-like device, with a long, very slender body and a rounded nose at its distal end, that is made of metal (e.g., stainless steel). This is a reusable device.	I
1909	35836	Adenotome blade, reusable	Аденотом ир, дахин ашиглах боломжтой	A surgical cutting edge that is designed to be mounted into the handle of an adenotome to excise the adenoids (hypertrophic lymphoid tissue in the nasopharynx) during an adenoidectomy. The device is typically a flat piece of metal (e.g., stainless steel) with one or both sharp edges at the working end; it is configured at its proximal end to attach to a particular type of adenotome. This is a reusable device.	I
1910	35839	X-ray film cassette, automatic film changing	Рентген хальсны кассет, автомат хальс солих	A housing for x-ray film specifically designed to be used in, and work as part of, an automated x-ray film changing system. The housing is intended to be loaded with x-ray film under appropriate darkroom conditions, and is then inserted into the loading magazine of the film changing system. After exposure, it is held in a receiving magazine until the operator removes it for final processing.	I

1911	35844	Limb tourniquet, manual, reusable	Хөлний турник, гарын авлага, дахин ашиглах боломжтой	A strap or tubing intended to be wrapped around a patient's limb (arm or leg) and manually tightened to reduce blood circulation to or from the portion of the limb distal to where the device is applied. It is typically used by emergency medical services (EMS) for emergency blood loss prevention or for routine blood sampling. It will typically have a fastening mechanism (e.g., Velcro or a self-locking buckle) that allows adjustments to the degree of tightness. This is a reusable device which may be intended for single- or multi-patient use.	I
1912	35845	Medicine spoon, reusable	Эмийн халбага, дахин ашиглах боломжтой	A device used for orally dosing/portioning/serving medicine to a recipient, e.g., a patient or person with a disability. It will typically be designed to facilitate giving different quantities and to show these in defined level markings. This is a reusable device.	I
1913	35847	Laparoscope system, reprocessed	Лапароскопийн систем, дахин боловсруулсан	An assembly of laparosocpes and their accessories used for the visual examination and treatment of the abdominal/retroperitoneal cavity and its organs (laparoscopy). The insertion is typically through an incision(s) made in the abdominal wall (routinely just below the umbilicus or in the near vicinity). This system is mostly used for gynaecological procedures. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	I
1914	35850	Dental impression tray, reusable	Шүдний хэвний тавиур, дахин ашиглах боломжтой	A horseshoe-shaped receptacle made of metal or plastic designed to carry dental impression material to the mouth, to confine the material in opposition to the surfaces to be recorded (e.g., teeth and gums), and to control the impression material while it sets to form an impression. The device is used mainly to facilitate the manufacturing of custom dental prostheses (e.g., dentures). This is a reusable device.	I

1915	35851	Rubber dam clamp forceps	Резинэн далангийн хавчаарын хямсаа	A hand-held dental instrument used for the insertion and removal of rubber dam clamps. It is typically designed with permanently joined handles pivoted scissors-like, and has small projections at the working end that fit into corresponding holes in the rubber dam clamp. It will typically have a sliding lock mechanism that locks the handles in position while the operator moves the rubber dam clamp around the tooth. This is a reusable device.	I
1916	35861	Gingival retraction cord, non-medicated	Буйл татах утас, эмийн бус	A non-medicated cotton string intended to be used to temporarily push gum tissue (gingiva) away from prepared tooth margins to help make an accurate dental impression. This is a single-use device.	I
1917	35862	Agar dental impression material	Агар шүдний импрессийн материал	A material having reversible agar hydrocolloid as a gel-forming ingredient designed to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. This is a single-use device.	I
1918	35864	Polyether dental impression material	Шүдний полиэфир материал	An elastomeric, polyether-based material capable of reacting to form a rubber-like substance used to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. This is a single-use device.	I
1919	35866	Silicone dental impression material	Шүдний силикон материал	An elastomeric, polysiloxane-based material capable of reacting to form a rubber-like substance suitable to reproduce the structure of a patient's teeth and gums, or other oral anatomy, after being placed on an impression tray and inserted into the mouth. This is a single-use device.	I
1920	35867	Dental amalgam well	Шүдний амальгам сайн	A small cup where mixed amalgam is put before being taken up by an amalgam carrier or an amalgam syringe. This is a reusable device.	I
1921	35869	Dental anaesthesia syringe, intraligamentary	Шүдний мэдээ алдуулалтын тариур, интралигамент	A hand-held manual dental instrument consisting of a barrel (cylinder) with plunger/piston intended to be used to inject an anaesthetic agent under pressure via the periodontal ligament or into bone through an attached sterile needle. This is a reusable device.	I

1922	35871	Denture cleanser	Хиймэл шүд цэвэрлэгч	An agent intended to be used to remove soft debris from removable prosthetic dental appliances (e.g., dentures or bridges), normally by the immersion of the prosthesis/appliance in the agent overnight and/or mechanical cleaning with a toothbrush. It is intended for home-use and/or for hospitalized or institutionalized patients. After application, this device cannot be reused.	I
1923	35880	Examination/treatment table paper	Үзлэг/эмчилгээний ширээний цаас	A non-sterile sheet made of paper intended to cover the surface of an examination/treatment table, or chair, during use to function as a barrier between the table top and the patient to maintain hygienic conditions. It is typically supplied in a roll designed to be mounted at one end of the table such that a new length of paper can be pulled down over the table top for each new patient. This is a single-use device.	I
1924	35888	Saddle block anaesthesia kit	Эмээлийн блок мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver an analgesic or anaesthetic agent to the lower dural sac in the region corresponding to the buttocks, in the perineum, or to the inner aspects of the thighs. It typically consists of a procedural needle, syringe, catheter, and a filter. This is a single-use device.	I
1925	35892	Hospital stretcher, manual	Эмнэлгийн дамнуурга, гарын авлага	A manually-operated device consisting of a platform mounted on a wheeled frame designed primarily to facilitate easy transport of a recumbent patient within a healthcare facility; it may include side rails, supports for fluid infusion equipment, and patient securement straps. The device may also be used as a treatment table (e.g., in an emergency, recovery, or labour room), or as a bed in some intensive and specialized care units or under high patient census conditions (e.g., disasters).	I
1926	35894	Medical tubing clip/clamp, temporary, dial-calibrated	Эмнэлгийн хоолойн хавчаар/хавч, түр зуурын, залгах тохируулгатай	A non-sterile manual device designed to control the infusion rate through gravity intravenous administration infusion sets. It typically consists of a mechanism that regulates the flow using a calibrated dial that permits control of the flow rate in a given range (e.g., from a few to 250 ml/h); it may also include a lateral clamp for temporary interruption of the infusion and/or a check valve to permit parallel infusion. The device is used in-line with gravity infusion administration sets. This is a single-use device.	I

1927	35898	Colour discrimination eye chart	Нүдний өнгө ялгах график	An ophthalmic chart with coloured figures printed on coloured backgrounds used in testing colour vision.	I
1928	35899	Colour-indication patient thermometer	Өвчтөний өнгөт термометр	A device designed to measure a patient's skin, oral, rectal, or axillary (armpit) body temperature. The device records body temperature using heat sensitive chemical cells (dots) which are sealed at the end of a plastic or metal strip. Body heat causes a colour change in the heat sensitive chemicals. This is a single-use device.	I
1929	35900	Surgical scrub station timer	Мэс заслын гар угаах хэсэгт байрлах таймер	A device used to measure and indicate the appropriate length of time required for surgical staff to have cleaned/scrubbed their hands. This device may be mechanical or electrically-powered.	I
1930	35914	Nasal gouge	Хамрын гауж	A single-bladed, hand-held manual surgical instrument designed to cut and shape the bone and cartilage of the nose during ear/nose/throat (ENT) surgery. It typically comprises a handle proximally which becomes a shaft that terminates in a convex profile with a sharp, semi-lunar, bevelled cutting edge to facilitate tissue removal. It is typically made of high-grade stainless steel as a one-piece instrument and is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. This is a reusable device.	I
1931	35915	Ear excavator	Чихний экскаватор	A hand-held manual surgical instrument designed for cutting, scraping, scooping and removing tissue during a surgical procedure in or around the ear, allowing the performance of specialized procedures such as removal of the cochlear cupola and microsurgery of the middle ear and the sinus timpani. It is made of high-grade stainless steel and typically designed as a double-ended instrument having a central handle with small and sharp spoon-, scoop-, or spatula-shaped blades that have cutting/gouging edges. This is a reusable device.	I

1932	35916	Cable/lead tester	Кабель/хар тугалга шалгагч	A mains electricity (AC-powered) test instrument used for the testing and measurement of electrical cables and leads. Typically these will be cables which are connected to patients, e.g., an electrocardiograph (ECG) cable or an electroencephalograph (EEG) cable, which are exposed to wear and tear, but may also be other types, e.g., mains power supply cables.	I
1933	35921	Air-fluidized bed	Агаарын шингэнтэй ор	A mains electricity (AC-powered) bed designed for the treatment of severely and extensively burned patients. It may also be used in cases of decubitus ulcers or where the patient has little remaining body fat (extreme anorexia) and the displacement of the body weight is vital. It employs the circulation of filtered and temperature-regulated air forced through large quantities of ceramic spherules (small round beads) which become transformed from a solid mass into an almost liquid (fluidized) state, providing the patient with complete uplift over the whole supine body surface. Other beneficial effects are the drying of wound seepage and reduction of infection risk.	I
1934	35922	Visual acuity projector	Харааны хурц проектор	A mains electricity (AC-powered) ophthalmic device intended to project an image on a screen to test visual acuity. The images typically include block letters (Snellen chart) and/or other symbols (e.g., recognizable objects used for children who cannot read) viewed in gradually decreasing size. They are typically identified according to the distance at which they are ordinarily visible (normally 6 metres or 20 feet).	I
1935	35925	Tourniquet cuff, single-use	Турникет ханцуйвч, нэг удаагийн	A band-like device that is applied around an extremity (arm or leg) and connected to a tourniquet unit to apply a controlled pressure to restrict blood circulation and prevent normal blood flow to or from the distal area during a surgical intervention or serious injury. The tourniquet unit is used to provide the pressure within the cuff and display the pressure applied. The cuff usually comprises a dual-chamber allowing for alternation of the pressure site to avoid tissue damage or necrosis. This is a single-use device.	I

1936	35930	Footrest cover, non-sterile	Ариутгалгүй хөлийн тавиур	A non-sterile device used as an outer covering for the protection of a footrest (foot holder) against unhygienic conditions. It will typically be made of thin, shaped, plastic material which creates a physical barrier between the patient's foot and the footrest. This is a single-use device.	I
1937	35934	Voltage regulator	Хүчдэл зохицуулагч	A device that helps to maintain a stable mains voltage, i.e., with the help, or as part, of a suitable secondary power supply. Should the voltage drop below a pre-set limit the device will increases the voltage in correspondence with the particular type of device it is protecting. Some types may, when there is a sufficient reduction, automatically switch on a boost transformer.	I
1938	35942	Phosphorescent/fibreoptic patient thermometer	Фосфоресцент/фиброптик өвчтөний термометр	A hand-held, battery-powered, electronic instrument designed to measure a patient's body temperature. It uses a fibreoptic probe that includes a small mass temperature sensor, usually based on phosphor fluorescence decay time or other temperature varying physical property, e.g., liquid crystal structure or polarization rotation. This is a reusable device.	I
1939	35946	Transducer adaptor cable	Хөрвүүлэгчийн адаптер кабель	A cable that connects a transducer to an electronic amplifier that is typically a component of a parent device that can display and monitor the measurements. This device will typically be used when the devices to be connected are from different manufacturer's, enabling them to mate together. This is a reusable device.	I
1940	35948	Endoscopic surgical probe	Дурангийн мэс заслын датчик	A slender, rod-like, hand-held manual surgical instrument intended to be inserted through an endoscope (e.g., arthroscope, laparoscope) to explore, measure, and/or perform therapeutic procedures during various types of surgical interventions (excludes cryosurgery). It is made of metallic and/or synthetic polymer material. This is a reusable device.	I

1941	35950	Vascular graft tunneller	Судасны шилжүүлэн суулгах туннеллер	A long, surgical instrument used to tunnel an artificial passageway along vascular tissue planes to create a connecting channel typically for the introduction of a vascular graft or a vascular prosthesis. It can have a variety of designs, but basically it will be a long, round, stiff rod that tapers to a rounded point at the distal tip and have a handle at the proximal end to allow the surgeon to exert the necessary pressure and manipulation to push it through the body tissue. It will typically be made of high-grade stainless steel and possibly other materials for the handle, which may be detachable. This is a reusable device.	I
1942	35951	Malignant hyperthermia trolley	Хортой гипертерми троллейбус	A cart specially designed for use in the treatment of malignant hyperthermia. This trolley (cart) typically holds/contains the necessary equipment, drugs, and replacement breathing circuits. Malignant hyperthermia is a severe form of fever that occurs as a reaction to certain anaesthetic agents and muscle relaxants.	I
1943	35954	Medical device rail	Эмнэлгийн төхөөрөмжийн төмөр зам	A device in the form of a narrow bar designed to be fixed on the wall for mounting and organizing medical devices [e.g., in hospital wards, treatment rooms, intensive care units (ICU)]; the equipment to be supported is not included. It may be used in conjunction with clamps and/or poles. It is available in various lengths.	I
1944	35957	Prescription spectacle lens, custom-made	Захиалгат нүдний шилний линз, захиалгаар	An ophthalmic lens made of glass or plastic that is manufactured in accordance with a specific patient prescription (custom-made) and intended to be worn in front of the eyes to correct the refractive errors of that patient's eyesight, e.g., refractive ametropia (myopia, hyperopia and astigmatism), and possibly to protect the eyes against radiation or mechanical hazards; it has no additional specialized features. This device may require cutting to enable it to be mounted into a selected spectacle frame for patient wear.	I

1945	35958	Endoscope video camera	Дурангийн видео камер	An electro-optical device (e.g., with an image sensor chip) designed to be attached, either directly or with an adaptor, to a flexible or rigid endoscope to allow real-time viewing of the internal anatomy during an endoscopic surgical procedure and to obtain moving-picture documentation of endoscopic findings and procedures. The device is designed for transducing visual images as a sequence of electronic data following a pre-established standard; the images are usually displayed sequentially on the screen of a monitor as a video image. The device may include audio recording capabilities.	I
1946	35961	Patient lifting system lift pants	Өвчтөн өргөх систем өргөх өмд	A lifting device used together with a mobile lift system (normally a ceiling-mounted overhead track system) to provide a support for an incapacitated patient or a person with a disability that has been raised from a sitting position and held in a standing position for mobility training; it is primarily used for confidence building when walking. It is designed as a sling construction made of straps attached to a pants-like holder which is placed between the users' legs (the crotch) and secured high around the waist which will cradle the hip section of their body allowing them to maintain balance whilst moving slowly forward using their feet. This is a reusable device.	I
1947	35969	Dental anaesthesia syringe, reusable	Шүдний мэдээ алдуулалтын тариур, дахин ашиглах боломжтой	A hand-held manual dental instrument consisting of a barrel (cylinder) with plunger/piston intended to be used for injecting an anaesthetic agent, subcutaneously or intramuscularly, from a prefilled, single-use cartridge through an attached sterile needle; a needle is not included. This is a reusable device.	I

1948	35970	Dental irrigation/aspiration syringe	Шүдний усалгаа/сорох тариур	A hand-held manual dental instrument consisting of a barrel (cylinder) with plunger intended to be used to inject and/or aspirate a volume of solution into/from an operative site in the oral cavity. It is typically a small syringe (e.g., 3 ml) and is used for washing and aspirating the pulp cavity and root canal to remove debris. It is hand-operated by the operator who exerts a steady pressure on, e.g., thumb rings and/or swivel finger bars, which exerts pressure on the syringe plunger forcing the washing/rinsing fluids through an attached needle (e.g., a blunt or very fine needle) directly at the operative site. This is a reusable device.	I
1949	35973	Cardiac insulation pad	Зүрхний дулаалгын дэвсгэр	A thin and pliable cushion designed to be placed around the heart in conjunction with cold cardioplegia during cardiac surgery with extracorporeal circulation. The device is intended to help to prevent rapid rewarming of the heart. This is a single-use device.	I
1950	35975	Cadaver bag	Кадаврын уут	A sack for storing a dead body that typically has been preserved for anatomical study. It is commonly known as a body bag. This is a single-use device.	I
1951	35976	Microscope slide cabinet	Микроскопын слайд шүүгээ	A furniture-like device designed for the secure storage of many prepared laboratory specimen slides, e.g., histology microscope slides. The slides will typically be placed in dedicated trays. This device may be used, e.g., in the laboratory or a physician's office and can be locked to prevent access by an unauthorized person.	I
1952	35977	Continuous passive motion exerciser, leg	Тасралтгүй идэвхгүй хөдөлгөөний дасгалын төхөөрөмж, хөл	A device, typically electrically-powered, that provides leg joint movement by continuous passive motion (CPM), i.e., provides joint movement by perpetually flexing and extending the patient's leg without muscular exertion from the patient.	I
1953	35978	Continuous passive motion exerciser, arm	Тасралтгүй идэвхгүй хөдөлгөөний дасгалын төхөөрөмж, гар	A device, typically electrically-powered, that provides arm joint movement by continuous passive motion (CPM), i.e., movement by perpetually flexing and extending the patient's arm without muscular exertion from the patient.	I

1954	35979	Endoscope cleaning brush, reusable	Дуран цэвэрлэх сойз, дахин ашиглах боломжтой	A device used to remove dirt or debris from the working channel(s) and irregular surface of the endoscope prior to disinfection and sterilization. It consists of a flexible insertion tube or metal coil with plastic bristles. This is a reusable device.	I
1955	35993	Bedrail pad	Орны тавцан	A device which is formed as a flat or contoured fitted cushion made of soft, non-irritating materials designed to protect the patient from coming into contact with the bedrails and inadvertently hurting or injuring themselves. It will be mainly used for patients that have little self-control, infants and very young children. This is a reusable device.	I
1956	35995	Transcutaneous electrical stimulation electrode, single-use	Арьсны цахилгаан өдөөх электрод, нэг удаагийн хэрэглээ	An electrical conductor intended to be attached to a patient's skin (noninvasive) to provide therapeutic electrical stimuli through the body surface [e.g., transcutaneous electrical nerve stimulation (TENS), electrical muscle stimulation (EMS), cranial electrotherapy stimulation (CES)]. It is typically a flat, flexible, conductive pad with an adhesive (e.g., gel), or a preformed shape/mechanism designed for attachment to a particular body part (e.g., earclip), connected to a conductive wire. This is a single-use device.	I
1957	35996	Patient sling scale	Өвчтөний дүүгүүрийн жин	A transportable electronic device designed to lift an immobile patient, typically bedridden, in a sling in order to measure and/or monitor their body weight. It typically consists of a wheeled framework that includes a lifting mechanism (e.g., a hydraulic pump), a patient sling (to encompass the patient's body), a lifting arm, hooks, and an electronic scale (typically incorporating strain gauge transducers). The sling is placed under/around the patient and the lifting arm is used to lift the patient until their whole body is suspended; the scale subsequently displays the measured weight of the patient.	I

1958	35999	Wall-mounted intravenous hanger	Хананд суурилуулсан судсаар хийх гогцоо	A device that is designed to be attached directly to a wall, a wall fixture (a mounting) or other vertical structure and is used to function as an intravenous (IV) hanger. It will typically have one or more horizontally extended arms with a hook at the far end; the arm may be fixed at a ninety degree angle to the wall or can swing in an arc to the wall. Various fluid delivery devices (bags or bottles) can be suspended from this device for the administration of intravenous (IV), irrigation, enteral feeding fluids/medication to the patient. Wall-mounted IV poles are mainly used in healthcare areas where administration of IV fluids is frequent and/or the use of the floor space is critical.	I
1959	36000	Orthopaedic cement mixing bowl	Ортопедийн цемент холих аяга	A sterile device designed for the specific purpose of containing the components that comprise orthopaedic bone cement while these are being mixed prior to application on a patient. It is typically used together with an orthopaedic cement mixer. This is a single-use device.	I
1960	36005	MRI system synchronizer	MRI системийн синхрончлогч	A physiological monitoring unit used as a component of a diagnostic magnetic resonance imaging (MRI) system, that produces a signal which enables image formation or data collection to be synchronized with a specific measurable physiological parameter, e.g., the beginning of a patient's respiratory or cardiac cycle. It is primarily used for the purpose of artifact reduction or enhancement of signal-to-noise ratios in various real-time or dynamic MRI applications. It is sometimes referred to as a gated imaging accessory or trigger.	I
1961	36008	Laser-resistant surgical drape	Лазерт тэсвэртэй мэс заслын хөшиг	A protective covering made of natural or synthetic materials, or both, designed to provide protection to areas peripheral to a laser surgery field by preventing the penetration of laser energy. It is treated or coated with a material resistant to laser-energy penetration. This is a reusable device.	I

1962	36015	Ophthalmic operating table, hydraulic	Нүдний мэс заслын ширээ, гидравлик	A table powered by manually-operated hydraulic mechanisms designed to support a patient during ophthalmic surgical procedures. It is adjustable to accommodate various positions (e.g., height, tilt). It is particularly intended to provide support for and stabilization of the head of the patient (typically includes a headrest) and to help provide optimal access for the surgeon(s) during the intervention (e.g., by having a small-width table top and therefore a shorter stretch distance for the surgeon). It may be freestanding or connected to another device or system.	I
1963	36020	Scale weight	Жингийн жин	A countermeasure that is produced in an exact unit of weight and intended to balance the weight of an object, typically on a mechanical scale, to produce a quantified measurement.	I
1964	36021	Cytotoxic waste container	Цитотоксик хог хаягдлын сав	A container made of metal, hard plastic and/or cardboard designed for the safe deposit, collection and storage of cytotoxic materials (e.g., chemotherapy/antineoplastic drugs). It is typically used with a liner or a sealed leak proof bag, and has a lid for that allows temporary and final closure options; the lid typically includes a seal to prevent leakage. It is identified with a cytotoxic biohazard symbol on its labelling and sent to an appropriate waste treatment plant for disposal when filled to the recommended level.	I
1965	36027	Assistive suit	Туслах костюм	An assistive, two-piece, garment that is specially designed/adapted for use by a person with a disability to be worn on the upper torso (the jacket) and from the waist to the ankles with separate tube-shaped sections for the legs (the trousers). It may be worn by a male or a female and will typically be constructed with features that accommodate the disability, e.g., large buttons, Velcro fasteners, zip fasteners, wide sleeves and/or trouser legs, and large pockets. Coats and jackets for outdoor use are not included in this group of devices.	I
1966	36044	Enteral feeding kit, infant	Энгийнээр хооллох хэрэгсэл, нярай	A collection of sterile devices that includes tubing and other materials intended to administer nutrient liquids directly into the stomach, duodenum, or jejunum of an infant patient by means of gravity or an enteral pump. This is a single-use device.	I

1967	36053	Nasogastric tube holder, noninvasive	Ходоодны гуурс баригч, инвазив бус	A small, noninvasive device intended to be used to secure a nasogastric tube to prevent displacement or removal of the tube from the patient. It is typically designed as an adhesive plaster with wings that are attached to the face (e.g., across the bridge of the nose, on the cheeks). It may have a lock-ring or non-adhesive tabs that is/are attached to the nasogastric tube (placed through a nostril and via the oesophagus) to hold it safely and comfortably in place. The lock-ring or tabs can be removed without scissors for easy removal of the tube. This is a single-use device.	I
1968	36057	Patient feeding bottle	Өвчтөний тэжээлийн сав	A glass or plastic container, typically with a relatively narrow neck, used to hold liquid or semi-solid foods for feeding any patient (from paediatric to geriatric) who has difficulty with oral ingestion, with a device such as a nasogastric tube or a Levin cap. This is a reusable device.	I
1969	36063	Stretcher mattress	Дамнуургатай матрас	A large, flat, cushion or pad with a strong cover filled with a resilient material (e.g., foam rubber) designed to be used on a stretcher to provide patient comfort whilst they lie upon it. It is much thinner than a bed mattress and is placed on top of, and typically secured to, the stretcher support platform covering this area. This is a general-purpose device that has no special therapeutic purpose.	I
1970	36067	Flame-resistant bed mattress	Галд тэсвэртэй орны матрас	A large, durable, fabric case filled with a resilient material designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie and rest/sleep; it is also designed to retard flames in case of fire. The device provides no special therapeutic effect.	I
1971	36068	Trial lens set	Туршилтын линзний багц	A set of ophthalmic trial lenses of various dioptric powers intended for vision testing to determine the required refraction. This device typically includes other related devices such as a trial frame into which the trial lenses can be rapidly exchanged during the examination.	I

1972	36069	Freestanding/bed-attached intravenous pole	Бие даасан/орны хавсаргасан судсаар хийх туйл	A freestanding or equipment-attached metal rod with two or more hooked bars extending horizontally from its top from which various fluid delivery devices (bags or bottles) can be suspended for the administration of intravenous (IV) fluids/medication to the patient. It is used during infusion therapy for intravenous administration of fluids/solutions or blood transfusions. Infusion pumps and/or syringe pumps can also be attached to it. Also called an IV pole or drip pole, it can be a fixed or side-swinging, adjustable, vertical pole attached to a bed, operating table, wheelchair, or more commonly, an independent floor-standing IV pole for bedside use; some have wheels for patient mobility.	I
1973	36072	Patient reverse-isolation chamber	Өвчтөний урвуу тусгаарлах камер	A room-like enclosure designed to prevent the entry of infectious airborne agents. It is typically used to protect a patient who is undergoing treatment for burns or who has a suppressed immune system (immunosuppressed) due to therapy or congenital abnormality. It typically includes fans and air filters which maintain a clean-air atmosphere at a pressure greater than the air pressure outside the enclosure.	I
1974	36078	Implantable defibrillator analyser	Суулгах боломжтой дефибриллятор анализатор	A device used to assess and/or monitor the performance of an automatic implantable cardioverter-defibrillator (AICD) system at the time of implantation or in the electrophysiology (EP) laboratory. This device typically monitors the electrographic signals from the implanted electrode/leads, provides information on the patient's defibrillation/cardioversion energy threshold, and monitors and/or records electric cardiac signals during arrhythmia induction. It typically consists of an electronic unit including a display, measuring modes (energy, voltage, time), and a pulse generator.	I

1975	36087	Pulse oximeter probe, reprocessed	Пульс оксиметрийн датчик, дахин боловсруулсан	A photoelectric device designed to be applied externally to a body site (e.g., fingertip, ear lobe, bridge of nose, toe, or bridge of the foot) for the transcutaneous measurement of haemoglobin oxygen saturation (SpO2) in arterial blood using signals produced by a light-emitting diode (LED) and received by a photodetector. The signals are subsequently transmitted to an oximeter/monitor (not included) which measures and displays the SpO2. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	I
1976	36093	Burn wrap	Шатаах боолт	A sterile or non-sterile trauma covering used to maintain the stability of a burn patient en route to a burn centre or hospital. The device is intended to be applied at the emergency site and is used to wet and cool the burn area, prevent burn progression, minimize trauma, and provide protection against contamination. It may be covered in a gel and can be of various sizes (e.g., towel to sheet size). This is a single-use device.	I
1977	36096	Halogenated vapour absorber	Галогенжүүлсэн уур шингээгч	A refillable container (e.g., a canister) placed in an anaesthesia unit/workstation breathing circuit for the removal of halogenated vapours. This device is filled with an appropriate absorbent (e.g., activated charcoal) to chemically remove the halogenated vapours. This is a reusable device.	I
1978	36124	Medical gas/vacuum terminal unit	Эмнэлгийн хий/вакуум терминалын нэгж	A device that is typically used as a component of a medical gas/vacuum pipeline system and that has a gas-specific outlet fitting designed to allow secure, quick connection to a specific medical gas, vacuum or a gas evacuation system. It is typically secured to a wall or integrated into patient room gas panels. Other gas dependant medical devices are connected to the supply being provided via this device by plugging in a quick-connector fitting (the male). On disconnection of the medical device from the outlet fitting, it will self seal the gas pipeline system preventing gas leakage to environment.	I

1979	36129	Suturing guide	Оёдлын утас чиглүүлэгч	A surgical device that is placed over an open wound to the aid the surgeon in placing the sutures so that, when pulled tight, the sutures will meet. It is typically made of metal or plastic material. This is a single-use device.	I
1980	36132	Haemodynamic-monitoring training model	Гемодинамик хяналтын сургалтын загвар	A device consisting of a manikin and software designed for training in the cardiovascular management of critical care patients. It may be possible to perform a catheterization on some models.	I
1981	36136	Haemostatic knife	Гемостатик хутга	A hand-operated surgical instrument, similar in appearance to a surgical scalpel, designed for simultaneous cutting of tissues and cauterization (haemostasis) of blood vessels by applying an electrically-heated blade. It typically consists of a high-resistance, flat, sharp blade at the distal end and a handle at the proximal end with an electric cable; the blade is typically an integral part of the knife. Haemostasis is induced by direct transmission of thermal energy (heat) from the blade to the tissues; negating the use of grounding electrodes. It is used for a variety of procedures, including general and plastic surgery, gynaecology, and orthopaedics. This is a reusable device.	I
1982	36137	Hydrotherapy tank	Усан эмчилгээний сав	A tank specially designed for hydrotherapy treatment where the patient is immersed in water. Various kinds of treatment may be applied to the patient, e.g., the patient may be passive while being massaged with water jets, may move around in the tank, or may actively use a dedicated treadmill device while in the tank. An external heating/pump system will typically heat and agitate the water that is circulated through the tank. Such tanks are typically installed in the rheumatology department of a hospital.	I

1983	36138	Surgical laminar airflow unit	Мэс заслын ламинар агаарын урсгалын нэгж	An electrically-powered device designed to filter air [usually through a high-efficiency particulate air (HEPA) filter] in surgical theatres by producing a directed, non-turbulent flow of clean air to provide an area free of contaminants and reduce the risk of patient infection. It may be mobile (on wheels) or fixed [e.g., to the ceiling], and provides a curtain of fast moving air that helps to delineate the sterile field; some types allow connection of a hose with a nozzle designed to be adhered to the patient to direct the filtered air across the surgical site. An operating light or light system may be mounted to this unit.	I
1984	36139	Pharmaceutical laminar airflow unit	Эмийн ламинар агаарын урсгалын нэгж	An air-handling unit designed to be used within a pharmaceutical production area in order to produce a directed, non-turbulent flow of clean air and thereby provide an area free of contaminants to reduce the possibility of infection to products. The air is filtered, usually through a high-efficiency particulate air (HEPA) filter, to remove particulate matter and microorganisms. The unit is fixed, typically to the ceiling or sometimes the wall depending on where the protection is needed.	I
1985	36141	Ventilator tester	Агааржуулагч шалгагч	An electronic device designed to assess the performance of a ventilator by measuring, evaluating, displaying, and/or recording a set of ventilator parameters and/or waveforms (e.g., breath rate, inspiratory/expiratory ratio, tidal volume, flow rate, and airway pressure). It typically consists of an electronic unit including a display, measuring instruments, and appropriate sensors; it will simulate the human respiratory system or use an external human lung simulator in order to test several parameters. It is used by a healthcare provider (i.e., clinical technician) in a clinical setting for assessing infant, paediatric, and adult mechanical ventilators.	I

1986	36142	Aspiration tray, single-use	Аспирацийн тавиур, нэг удаагийн	A container of various instruments, dressings, pharmaceuticals, and other items necessary to perform an aspiration and related procedures. It typically includes separate sections designated to hold the various utensils required for needle biopsy, aspiration, and/or drainage. Its bottom typically has a plastic foam insert that is scored to allow placement of sharp objects and needles. This is a single-use device.	I
1987	36153	Dental etching solution	Шүдний сийлбэрлэх уусмал	An acid solution, in liquid or gel form, intended to be used to create a retentive surface for a dental composite, adhesive, or a pit and fissure sealant; it is also referred to as dental etchant. After application, this device cannot be reused.	I
1988	36165	Operating table, proctological	Мэс заслын ширээ, проктологийн	A complete mobile operating/examination table specially constructed for proctological operations (i.e., posterior/perineal examination and procedures). Its top surface consists of flat height-adjustable sections that can be adjusted in relation to the section that supports the patient's main body trunk, and the section supporting the knees (the patient is usually positioned in a kneeling position to provide the surgeon with posterior access). This device may be powered by hydraulics, mains electricity (AC-powered), or an internal rechargeable battery pack and may be raised, lowered and tilted.	I
1989	36167	Orthopaedic broach	Ортопедийн хүрэм	A surgical instrument that is designed as an elongated, tapered and serrated cutting tool intended for shaping and enlarging holes in bone tissue. This is a reusable device.	I
1990	36178	Stretcher equipment holder	Дамнуургын тоног төхөөрөмж эзэмшигч	A device intended to be affixed to a stretcher and designed to provide a platform, board, holder or mount for emergency equipment/devices (e.g., oxygen tank, intravenous fluid delivery bag, infant life support system) during treatment or transport of the patient.	I
1991	36180	Dental casting furnace	Шүдний цутгах зуух	A device intended to be used to burn off wax from an inlay, crown, and bridge mould and establish the proper condition and temperature of the investment to receive the molten casting alloy. This device is typically used in the dental laboratory.	I

1992	36184	Laser adaptor	Лазер адаптер	A connecting device, usually a small part, designed to join a device or component to a laser, or join devices being used with the laser, or to make any of these devices compatible so that they mate together (e.g., a laser contact probe from one manufacturer connect to the laser delivery arm of a laser from a different manufacturer). Included are optical couplers designed to connect a laser source to a fibreoptic laser delivery system. This is a reusable device.	I
1993	36186	Wheelchair glove	Тэргэнцэрт зориулсан бээлий	A special cover worn on the hands of a wheelchair occupant designed to protect their hands when propelling wheels that are equipped with rims; this may also apply to wheelchairs that are fully- or partially-powered. The cover may be designed for different activities (e.g., conventional use, or sports activities). This is a reusable device.	I
1994	36206	Ankle/foot orthosis	Шагай/хөлний ортоз	A prefabricated (non-customized) externally applied and wearable appliance or apparatus intended to encompass the ankle joint, or the ankle and foot, to support, align, prevent, or correct orthopaedic deformities/injuries or to improve function of the ankle and/or foot through actions such as alignment, hinge-support, or dorsiflexion assistance. It may also be intended to offload and redistribute foot pressures that affect pedal circulation to improve blood flow and help heal diabetic foot ulcers or postsurgical wounds, and may include patient adaptable plantar inserts. This is a reusable device.	I
1995	36217	Mortuary trolley	Шарил хадгалах тэргэнцэр	A wheeled table or stretcher used to transport a corpse from the morgue's refrigerator to the work area. This trolley (cart) is also used to transport a corpse from a hospital room to the morgue.	I
1996	36228	Hip orthosis	Ташааны ортез	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to support, align, prevent, or correct deformities/injuries or improve function of the hip; it is not dedicated to infants. It is typically adjustable and comprised of components that include a hip/pelvic girdle, thigh cuff, and articulated hip portion. This is a reusable device.	I

1997	36232	Wheelchair tyre	Тэргэнцэрийн дугуй	A circular cushion of rubber and/or synthetic material which is fitted to a wheelchair wheel rim and which functions as a soft contact to the surfaces upon which the wheelchair stands and provides the wheelchair with traction and some shock absorption as it is propelled. It comes in a variety of designs, diameters and sizes. This term is appropriate for spare and replacement tyres (tires).	I
1998	36233	Wheelchair power-assisted conversion kit	Тэргэнцэрийг цахилгаанаар хөрвүүлэх хэрэгсэл	A collection of electronic devices and equipment used to convert a wheelchair with non-powered wheel rotation into a power-assisted wheelchair to provide the occupant and/or assistant with powered-wheel rotation, but will not alter the wheel configuration of the wheelchair it has been fitted to.	I
1999	36235	Manual surgical rotary handpiece, reusable	Гарын авлагын мэс заслын эргэлтэт гар, дахин ашиглах боломжтой	A manually-powered, hand-held, surgical device intended to be used to provide rotary motion for an endpiece (not included) during a surgical procedure such as cutting, sculpting, trepanning, or drilling bone and driving Kirschner wires; it is not dedicated to a specific clinical procedure. It is available in two main designs: 1) a U-shaped drill brace powered by the surgeon who holds the top of the brace steady whilst rotating it with horizontal crankshaft-like movements; or 2) a drill powered by the rotation of a side-mounted handle, and which may be cannulated to allow for use of a guidewire. Both types may have a Jacobs chuck or collet to hold the drill bit. This is a reusable device.	I
2000	36248	Protective barrier strike-through detector	Хамгаалалтын саадыг нэвтлэх детектор	A device designed to provide a visual and/or auditory signal (an alarm) when it detects penetration (strike-through) of a potential contaminant (e.g., body fluids, microorganisms) through an aseptic barrier such as protective attire. It may detect penetration in several ways; 1) it may be based on the simultaneous use of two gloves on each hand with a layer of gel in the middle that changes colour with fluid contact, detecting the outer glove failure; or 2) it may operate using a flow of very low electrical current and when a closed-circuit is established due to fluid contact between the patient and the healthcare professional (e.g., a surgeon), it gives an alarm.	I

2001	36254	Wheelchair back rest	Тэргэнцэрийн нурууны амралт	A padded support (typically vinyl covered) designed to attach to the back of a wheelchair. It typically replaces the wheelchair's sling upholstery and provides the wheelchair occupant with improved back support, posture, air circulation, and comfort.	I
2002	36261	Wheelchair wheel	Тэргэнцэртэй дугуй	A circular frame of metal and/or synthetic materials which turns on a central axle that is attached to the body of a wheelchair to enable the wheelchair to move when propelled. It comes in a variety of designs, diameters and weights, and is typically fitted with a tyre (tire); brackets for mounting the wheel onto the wheelchair may be included with the device.	I
2003	36264	MRI image enhancement padding	MRI дүрсийг сайжруулах дэвсгэр	A device that is a material in the form of padding or sheets that is placed around a patient undergoing a magnetic resonance imaging (MRI) study, and which is used to improve the homogeneity of the local magnetic field by eliminating the air/tissue interface. This will improve images obtained by fat saturation and gradient echo magnetic resonance imaging techniques.	I
2004	36272	Pillow cover, reusable	Дэрний бүрээс, дахин ашиглах боломжтой	A device made of an impermeable material that fits over a pillow, and under a pillowcase, to reduce allergen levels or for infection control. This is a reusable device.	I
2005	36290	Suction oesophageal intubation detector, adult	Сорох улаан хоолойн интубацийн детектор, насанд хүрэгчид	A device designed to verify endotracheal (ET) tube placement by the application of a partial vacuum (using a plunger syringe or a self-inflating bulb) through a small calibre tube introduced into the tracheal tube during airway management. It is used during adult intubation. This device exploits the anatomic difference between the trachea and the oesophagus: when the detector bulb or syringe is depressed (a partial vacuum is applied) it refills with air if the intubation is tracheal, and fails to fill if the intubation is oesophageal (the oesophagus collapses around the tube). It is used in healthcare facilities or in the field to evaluate oesophageal intubation. This is a single-use device.	I

2006	36292	Endoscope camera adaptor	Дурангийн камерын адаптер	An optical device designed to connect a camera (moving- or still-image) to a non-video endoscope (rigid or flexible), especially when the devices are from different manufacturers. It may be referred to as a coupler. This is a reusable device.	I
2007	36296	High-efficiency filter air cleaner, stationary	Өндөр үр ашигтай шүүлтүүр агаар цэвэрлэгч, суурин	A mains electricity (AC-powered) device that uses a combination of a prefilter and a high-efficiency particulate air (HEPA) filter to remove 99.97% of particles greater than 0.3 microns. This device is frequently used to prevent the transmission of tuberculosis (TB) and other diseases caused by airborne pathogens. It is designed to be stationary and is fixed in one location.	I
2008	36297	Electrostatic precipitation air cleaner, stationary	Электростатик хур тунадасны агаар цэвэрлэгч, суурин	A mains electricity (AC-powered) device designed to filter the air by electrostatic precipitation. Positively charged ions are attracted to airborne particles as they are drawn through the device. The positively charged ions are then precipitated from the air when they are passed through a negatively-charged channel or series of plates. The efficiency of the device is dependent upon the particle migration velocity, collection field surface area, the distance through the collection field, and airflow rate. It is designed to be stationary and is fixed in one location.	I
2009	36300	Postmortem sexual-assault forensic evidence kit	Үхлийн дараах бэлгийн хүчирхийллийн шүүх эмнэлгийн нотлох баримтын багц	A collection of sterile devices and materials designed to be used during a forensic investigation/examination to facilitate the acquisition of sexual-assault evidence from the body of a deceased person (alleged victim or suspect). It typically includes devices to make and mail vaginal, rectal, oral and penile swabs and smears (e.g., cotton swabs with microscope slides and slide mailers); devices to collect samples of blood (e.g., blood collection cards); containers (e.g., envelopes, bags) to collect pulled head/pubic hair, clothing, debris, and foreign material; and a biohazard label and tamper-evident security seal for the sample container. This is a single-use device.	I

2010	36303	Video conferencing telemedicine system	Видео хурлын телемедициний систем	A general-purpose system designed for use within the field of telemedicine to provide real-time and interactive transmission of images and sound between two or more sites. This can be within a hospital, or between different hospitals or at conferences, nationally or internationally.	I
2011	36304	Wheelchair canopy	Тэргэнцэрт зориулсан халхавч	A cover (e.g., made of cloth, mesh, plastic) that is attached to a wheelchair to provide the occupant with overhead protection from the sun and/or precipitation (rain, snow, sleet), and lightweight hazards from above.	I
2012	36307	Laser beam-blocking barrier	Лазер туяанаас хамгаалах хаалт	A dedicated device designed to provide protection, typically for healthcare personnel, from inadvertent laser radiation by attenuating, reflecting, and/or blocking laser energy. The device can be configured to cover a window, doorway or to partition an area of a room.	I
2013	36308	Operator eye protection laser filter	Операторын нүдийг хамгаалах лазер шүүлтүүр	An eyepiece intended to be fitted to a device used during a laser procedure (e.g., surgical laser system, endoscope, surgical microscope) to protect the operator's eyes from laser energy. This is a reusable device.	I
2014	36309	Laser beam eye protector, patient	Лазер туяа нүдний хамгаалагч, тэвчээртэй	A protective device that is designed to be placed either under or over the patient's eyelids in order to protect the eyes from injury during laser surgery.	I
2015	36312	Hip protection trousers	Хип хамгаалах өмд	A garment intended to be worn over a patient’s hips to provide protection for the protruding hip areas (greater trochanter) and against the possibility of a hip (neck of femur) or femoral shaft fracture in the event of a patient fall. This device is typically available as an undergarment or outer trousers designed with built-in pads or specialized side pockets for the placement of removable firm pads (one on either side) that transfer the energy from the impact of a fall to the soft tissue and muscles anterior and posterior to the femoral bone, thus diverting the force of the impact away from the greater trochanter. This is a reusable device.	I

2016	36313	Continuous passive motion joint exerciser	Тасралтгүй идэвхгүй хөдөлгөөн хамтарсан дасгалын төхөөрөмж	A mains electricity (AC-powered) device designed to continuously move one or more joints (shoulder, elbow, wrist, hand/fingers, hip, knee, ankle, and/or feet/toes) without patient assistance during continuous passive motion (CPM) exercise therapy. It typically consists of a motorized carriage with pads and straps to hold and support the limb/digit, and an electrical control unit for the healthcare professional to set the variable range of motion and motion speed; it may additionally be intended to provide active resistance. It is typically intended to stimulate articular tissues, circulation of synovial fluid, reduce joint oedema, and provide neuromuscular and/or coordination training.	I
2017	36314	Shoulder continuous passive motion exerciser	Мөрний тасралтгүй идэвхгүй хөдөлгөөний дасгалын төхөөрөмж	A mains electricity (AC-powered) device designed to continuously move the shoulder joint (e.g., flexion, rotation, adduction/abduction) without patient assistance during continuous passive motion (CPM) exercise therapy usually following surgery or trauma to the joint. It typically consists of a motorized carriage with straps to hold and move the arm/shoulder, and an electrical control unit for the healthcare professional to set the variable range of motion and motion speed; digital displays, manual/automated safety capabilities, and other features may also be included. CPM is believed to stimulate articular tissues and circulation of synovial fluid, and to reduce joint oedema.	I
2018	36336	Foot-switch, electrical	Хөлийн унтраалга, цахилгаан	An electrically-powered pedal(s) intended to be used by an operator of a medical device to regulate the activation and/or intensity of a parent device (e.g., electrosurgical system generator, laser, ophthalmic examination unit, dental drill/saw system control unit) to which it is connected, typically via an electrical cable. This is a reusable device.	I

2019	36337	Urine flowmeter, reusable	Шээсний урсгал хэмжигч, дахин ашиглах боломжтой	A device intended to be used to measure the flow and volume of urine from a patient during the course of normal urination in order to identify micturation disturbances. It is usually operated by healthcare personnel who instruct the patient to empty their bladder into the measuring chamber of the device; some types may be operated by the patient at home. It may employ mechanical and/or electrical measurements of parameters such as total voided volume, volume at maximum flow, maximum flow rate, mean flow rate, flow time, and time of maximum flow; it may provide digital or printed data. This is a reusable device.	I
2020	36362	Basic remote control	Үндсэн алсын удирдлага	A non-dedicated, hand-operated, battery-powered cordless (wireless) device designed to control/activate other medical devices or equipment from a distance (remotely).	I
2021	36364	Bottle warmer	Лонхны халаагуур	A mains electricity (AC-powered) heating device into which a bottle is intended to be placed for the preheating of its contents (e.g., milk for feeding infants, water, or other fluids). It typically consists of a tabletop device that has a well(s) for placement of the bottle(s), a heating element, a thermostat, and operating controls. It is designed to be portable for use in different locations.	I
2022	36375	Surgical microscope mount	Мэс заслын микроскопны хананы тогтоогч	A structure intended to be fixed to the ceiling or wall of an operating room (OR) and upon which a surgical microscope (not included) is mounted for use during surgical procedures. Various functions may be controlled from the mount such as movement (motor-assisted), light intensity, zoom, or colour balance; it is not freestanding device (i.e., not a stand).	I

2023	36380	Visual acuity light box	Хараany хурц гэрлийн хайрцаг	A mains electricity (AC-powered) light viewing box that uses a translucent version of the ophthalmic chart (Snellen chart) imprinted with block letters (optotypes) and/or other symbols (e.g., LEA symbols for children who can not read) in gradually decreasing sizes used for testing visual acuity. The letters/symbols are identified according to distances at which they are ordinarily visible (normally 6 metres or 20 feet) and are combined in a box where the individual letters or symbols are selected and high-lighted by the optician/doctor with background electrical lighting. This device is typically mounted on a wall of the optician/doctor's examination room/office.	I
2024	36438	X-ray film cassette changing system	Рентген хальсны кассет солих систем	An assembly of devices designed to transport cassettes containing films from a supply magazine through a pair of intensifying screens, where an x-ray exposure is initiated, and afterwards into a receiving bin.	I
2025	36513	Mammographic x-ray system stereotactic unit	Маммографийн рентген системийн стереотактик нэгж	A device that can only fulfil its purpose when used together with and enhance the function of a diagnostic mammographic x-ray system. It is used to take two pictures of a breast from two different angles. On the basis of this stereoscopic picture set, it is possible to determine the exact position of a lesion in the breast and a cytological sample of this will be taken. This device or technique may be built-in to some diagnostic x-ray systems for mammography.	I
2026	36535	Infant incubator undercarriage	Нялхсын инкубаторын тэрэг	A cabinet or open table with wheels, shelves or closed cupboards used as the bearer of the incubator. This may have an electrically-powered raise/lower function.	I
2027	36549	Test instrument, light therapy device	Туршилтын хэрэгсэл, гэрлийн эмчилгээний төхөөрөмж	An instrument used to check the correct functioning of light therapy units or other light-emitting devices, typically to measure the quality and the strength of the light being delivered.	I

2028	36557	Foot bath	Хөл банн	A mains electricity (AC-powered) device designed to be filled with water to provide therapeutic heat treatment specifically to the feet. It typically consists of a unit with a wide stable base that stands on the floor and includes a shallow receptacle in the centre for the user to place their feet. It has a heating element with thermostat that heats the water to a selected temperature. Some types may have therapeutic foot massage capabilities. This device is intended to relieve foot pain (e.g., ankle joint pain from sprains), as well as headaches, coughs, and other cold symptoms.	I
2029	36560	Hand-held electric massager	Гараар ажилладаг цахилгаан массажчин	An electrically-powered device with a vibrating head, or pads, designed to be held in the hand and drawn across the area of the body/muscles to be treated. The vibrating head, or pads, may optionally be heated, and may be interchangeable with others of different size and shape. It is typically used for respiratory therapy or physiotherapy (e.g., help reduce muscular tension, arthritic pain or joint mobility) in the home and/or healthcare facility.	I
2030	36606	Fluoroscopy/angiography table top	Флюроскопи/ангиографийн ширээний тавцан	A component of a modular operating table designed as a detachable table top constructed for use during surgical procedures requiring fluoroscopic guidance, such as cardiovascular surgery and other interventional radiology procedures (e.g., biopsy). This table top is typically a one-piece, and completely flat construction with an x-ray translucent section(s) providing x-rays free of artefacts. It is not dedicated to breast biopsy, and not designed to position a patient during other specialist surgeries (i.e., it is not a specialist operating table top with x-ray transparent features).	I
2031	36608	Orthopaedic operating table top	Ортопедийн хагалгааны ширээний тавцан	A component of a modular operating table designed as a detachable table top to support a patient during orthopaedic surgical procedures. Its surface consists of articulated sections that can be adjusted; it might be intended to provide traction, and may have x-ray transparent features. It is often intended to be used with additional patient positioners.	I

2032	36610	Gas analyser tester	Хийн анализатор шалгагч	An electronic device designed to evaluate and display the content of a gas mixture to calibrate a gas analysing device. Results are typically provided as concentrations or percents for each gas in the mixture. Single gases may also be analysed. It is typically used by a healthcare provider (i.e., clinical technician) involved in the repair, servicing, and maintenance of gas analysers.	I
2033	36611	Operating table system column, stationary, line-powered	Үйлдлийн хүснэгтийн системийн багана, суурин, шугамаар ажилладаг	A mains electricity (AC-powered) component of an operating table system that functions is a permanently-fixed table top column, usually situated in the middle of the operating room (OR) floor, for the introduction and engagement of loose table tops upon which the patient usually has been placed and prepared for the surgical intervention. This device will typically have a limited rotation to provide better access for the surgeon if necessary. The table tops are transported to and from this column by the staff using a compatible table top trolley.	I
2034	36612	Image display unit, colour	Зураг харуулах нэгж, өнгө	An electrically-powered visual display unit (VDU), commonly known as a screen or a monitor [e.g., cathode-ray tube (CRT) or liquid crystal display (LCD)], designed for displaying graphical information (e.g., values or images measured/acquired by other devices) in colour. The device(s) that generates the visual data is not included with the display unit.	I
2035	36614	Examination/operating table component trolley	Үзлэг/үйл ажиллагааны ширээний бүрэлдэхүүн хэсгийн тэргэнцэр	A dedicated cart designed as a framework on wheels intended to transport a component/accessory of an examination and/or operating table (e.g., patient supports, stirrups, tabletops) within a hospital/institution department or ward. It may include baskets, shelves, hooks and/or organizers for storing and/or transporting components. This trolley (cart) may be used in association with an examination/operating table and may have a fixed height or be hydraulically height-adjustable by a pump (e.g., to position a tabletop onto or off a column). It is not intended to be used to perform procedures.	I
2036	36656	Voltage-stabilizing power supply	Хүчдэл тогтворжуулах цахилгаан хангамж	A device designed to eliminate significant voltage fluctuations in the electricity supplied to a device from the mains power supply.	I

2037	36658	Mainframe computer	Үндсэн компьютер	A large mains electricity (AC-powered) data management and processing unit designed to handle very high volume data input and output and run, or host, multiple operating systems (e.g., provide network services to many desktop or dedicated computers). It includes a microprocessor [central processing unit (CPU)] and several subsidiary computers (channels or peripheral processors) for high-speed memory and high on-line data storage capacity. The device is typically used by large healthcare establishments for critical applications.	I
2038	36665	Collimator trolley	Коллиматор троллейбус	A cart used to store and transport collimators (heavy, specially shaped mobile metal structures used in radiotherapy and nuclear medicine) when they are not in use. This trolley (cart) is specially designed to support the significant weight of the collimators without tipping during any transport and exchange operation.	I
2039	36673	Patient identification title generator	Өвчтөнийг таних гарчиг үүсгэгч	A mains electricity (AC-powered) device designed to electronically create a patient's name, date of birth and other personal data, which can then be fed to and imposed upon medical material related to that patient, e.g., a video uptake or other images, to ensure that the data is linked to the correct patient.	I
2040	36674	Package sealing unit	Багцыг битүүмжлэх хэсэг	A mains electricity (AC-powered) device intended to be used for sealing packaged products and utensils, e.g., blood products, test tubes or sterilized instruments/equipment, through the application of heat upon the packaging materials to create an airtight seal. It is typically used in operating room (OR) departments, sterile packaging centres, and laboratories.	I

2041	36679	Cardiopulmonary stress exercise treadmill	Зүрх судасны стресс дасгалын гүйлтийн зам	An electrically-powered device designed to be used as a component of a stress test system that permits the evaluation of a patient's physiologic response to physical stress (e.g., workload testing of the cardiac and/or pulmonary disorders/function). It is designed for walking, jogging, or running on a moving belt that facilitates physical exercise while the patient remains on the spot (i.e., treadmill). It consists of an endless, continuous track (e.g., a shock-absorbing rubber belt rotating on rollers) that rotates at varying speeds and elevation, electric motors, and controls. It will typically incorporate front and side-mounted rails to allow the user to steady themselves.	I
2042	36684	Ergometer control unit	Эргометрийн хяналтын хэсэг	A mains electricity (AC-powered) device used to regulate the ergometer workload and translate the patient data.	I
2043	36685	Infant resuscitation table	Нярайн сэхээн амьдруулах хүснэгт	A flat surface fixed on legs and on which newborn infants who do not breathe spontaneously at birth and are oxygen deficient are placed for emergency resuscitation. It is typically equipped with a heating lamp and sometimes a supplemental heating pad, a low-pressure suction system, an oxygen (O2) supply, a gas mixer (oxygen/air), and a resuscitator. It may be supplied with the resuscitation devices or not, in which case the resuscitation devices are fitted by another party (e.g., hospital clinical engineer, device supplier). This device is typically fixed in one place.	I
2044	36688	Alternating-pressure inflator	Хувьсах даралтын хийлэгч	An electrically-powered device that forces ambient air into the parallel chambers of an alternating-pressure bed mattress overlay or an alternating-pressure chair cushion, for the timed alternation of chamber inflation and thereby exchange of patient contact points. The inflator, which may be referred to as a pump and may be programmable, ensures a regular exchange of the overlay/cushion pressure points for the patient.	I
2045	36690	Cardiopulmonary resuscitation kit, reusable	Зүрх судасны сэхээн амьдруулах иж бүрдэл, дахин ашиглах боломжтой	A collection of items in a portable case intended for cardiopulmonary resuscitation (e.g., airway tubes, face masks, resuscitator). It is typically placed in a convenient location in public buildings and in emergency medical services (EMS) vehicles for quick access in emergency situations. This is a reusable device.	I

2046	36691	Optical-disc-station computer drive	Оптик дискний станцын компьютерийн хөтөч	A device designed to be connected to one or more computers in order to provide more data storage capacity on optically read discs. Two kinds of discs are available: 1) an erasable, magneto optical device (MOD); or 2) a single-use, write once read many (WORM) disc.	I
2047	36696	Anaesthetic gas scavenging unit	Мэдээ алдуулах хий цэвэрлэх төхөөрөмж	A device intended to collect excess anaesthetic, analgesic, or trace gases or vapours from a patient's breathing system, ventilator, or extracorporeal oxygenator, and to expel them by means of an exhaust system. Some types may be connected to a special mixing box for the removal of orthopaedic bone cement gases. This device is an independent unit and may be used in association with various kinds of devices and systems. This device is also known as an anaesthetic gas scavenging system (AGSS).	I
2048	36712	Elapsed-time clock, electronic	Өнгөрсөн цаг, электрон	A battery-powered electronic device designed to measure and indicate length of time (elapsed time) typically in association with various medical, surgical, and laboratory procedures.	I
2049	36713	Elapsed-time clock, mechanical	Өнгөрсөн цаг, механик	A mechanical device designed to measure and indicate length of time (elapsed time) typically in association with various medical, surgical, and laboratory procedures.	I
2050	36719	Electrocardiographic signal amplifier	Электрокардиографийн дохио өсгөгч	An electrical device that amplifies the signal level and provides impedance matching between two or more medical devices when bioelectrical signals from the heart are transmitted between them.	I
2051	36725	Microphone amplifier	Микрофон өсгөгч	An electronic device intended to be used to increase voltage, current, or power to intensify the signal strength from a microphone.	I
2052	36731	Thermographic camera	Термографийн камер	A camera intended to measure and display differences in temperature, usually shown by colour differences, in humans or objects. Differences in temperature may be used for examination and diagnosis applications (e.g., in skin conditions, vascular disorders, or breast malignancies). This device may be stand-alone or part of a thermographic system.	I

2053	36749	Ultrasonic-cleaning water bath	Хэт авианы цэвэрлэгээний усан банн	An electrically-powered device intended to be used to clean instruments/utensils with ultrasonic waves transmitted from its integral transducers through water contained in a bath. A dedicated cleaning agent may be added to the water to enhance the cleaning effect.	I
2054	36761	Visible-light skin transilluminator	Үзэгдэх цайвар арьс өнгөлөгч	An electrically-powered device intended to use visible light (e.g., red LED light) to illuminate the skin and subcutaneous soft tissues, rendering them translucent for examination. It is typically used to help locate peripheral veins beneath the skin to assist a healthcare professional during venipuncture or sclerotherapy, or for examining subcutaneous and scrotal tissue/contents for lesions or anatomical abnormalities. It is typically a portable hand-held device which may also be known as a vein finder/viewer, diaphanoscope, phaneroscope, or light scanner.	I
2055	36768	Freestanding microphone	Бие даасан микрофон	A freestanding electroacoustic transducer designed to capture sound waves, usually vocal, and convert them into electrical signals that are amplified typically for various medical communication/recording or patient-assistive applications. It is not permanently attached to or integrated into another device and may operate via wireless technology. It is typically hand held, attached to clothing, or placed in a holder.	I
2056	36791	External defibrillator tester	Гадны дефибриллятор шалгагч	An electronic instrument used to test an external defibrillator to ensure compliance with performance specifications. The device connects to the output of the defibrillator, typically via contact plates, and measures the energy delivered by the defibrillator into a standard resistive load; it may also perform transcutaneous pacemaker testing, provide waveform information, and execute other quality control procedures. The device may be used to test the function of an external defibrillator periodically, after repair, or for training purposes.	I

2057	36792	Anaesthesia vaporizer tester	Мэдээ алдуулах ууршуулагч шалгагч	A device designed to evaluate and display the performance of an anaesthetic vaporizer; it may also be used to assist in the calibration of the vaporizer. Currently, most types are electronic but some may be mechanical. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	I
2058	36794	Infusion pump tester	Дуслын автомат шахуургын шалгагч	A device assembly designed to assess the performance of infusion pumps by accurately measuring, evaluating, displaying, and/or recording a set of pump variables (typically output flow, volume delivery, and occlusion pressure needed to activate the pump alarms). The assembly usually consists of a computerized electronic unit, measuring devices (e.g., volume, flow, pressure, time), a display, and a recorder. It is used to test general-purpose, syringe, and/or ambulatory infusion pumps and may be operated manually or user programmable to run automatic test protocols. This device is intended to be used by a professional in a professional setting (e.g., clinical engineering).	I
2059	36795	Laser beam tester	Лазер туяа шалгагч	A device assembly designed to assess the performance of laser radiation (i.e., laser beams) by measuring, displaying, and analysing some or all of the most critical laser beam characteristics, typically including peak intensity, centroid position, beam shape, intensity profile, beam diameter, ellipticity, Gaussian fit analysis, and relative power/energy. The assembly usually consists of a beam detector (e.g., CCD camera, knife-edges), a computerized unit, appropriate software for beam analysis, and a display. It is used for alignment, optimization, and quality control of laser beams delivered from continuous-wave and/or pulsed-laser medical devices.	I

2060	36796	Electrical safety tester	Цахилгааны аюулгүй байдлын шалгагч	An instrument designed to manually and/or automatically verify the safety of electrically-powered medical devices. It typically includes an electric current meter that can measure the alternating current (AC) and direct current (DC) in micro- and mili-amperes with a frequency response that complies with appropriate standards. The device can perform AC and DC leakage-current measurements (typically in the range of 1 A to 20 mA) and resistance-to-ground assessments using two- and/or four-terminal techniques in devices up to several ohms; it may also perform patient lead isolation tests in multiple-electrode devices.	I
2061	36799	Urine flow transducer	Шээсний урсгалын хувиргагч	An electronic device intended to be used to measure the rate of a patient's natural flow of urine in standard units (e.g., litres per minute). This device is intended to produce electrical signals that reflect urine flow rate, the results of which are displayed on a parent device.	I
2062	36800	Isolation transformer	Тусгаарлагч трансформатор	A device designed to be used in a mains electricity alternating current (AC) circuit to increase (step-up) or decrease (step-down) voltage, to provide the specified voltage to a parent device; it is not a built-in component of the parent device. It provides isolation between the mains current and the parent device for safety, and has separate primary (input) and secondary (output) coils.	I
2063	36801	Utility trolley	Ашиглалтын троллейбус	A cart designed for transporting/supplying general-purpose goods, devices, medical equipment, or supplies within a hospital/institution department or ward. This trolley (cart) may have one or more open platforms and may have a handle(s) for pushing the trolley.	I

2064	36813	Electrosurgical system tester	Цахилгаан мэс заслын систем шалгагч	A device assembly designed to assess the performance of an electrosurgical system typically by measuring, evaluating, displaying, and/or recording system generator power, current, peak voltage output, and radio-frequency current leakage using an appropriate test load. It can also usually verify the operation of the neutral electrode contact quality monitor. The assembly typically consists of an electronic unit including measuring devices (e.g., wattmeter, ammeter), displays, appropriate resistive loads, and test leads. It can test monopolar and bipolar systems and may be operated manually or be user programmable to run automatic test protocols.	I
2065	36815	Surgical fluid heating plate	Мэс заслын шингэнийг халаах хавтан	A mains electricity (AC-powered) device that consists of a plate surface and heating elements (i.e., electrically heated from mains power) intended to be used in the operating room (OR) to heat water/fluids used for flushing/rinsing during surgical interventions.	I
2066	36816	Instrument warmer, electric	Багаж халаагуур, цахилгаан	An electrically-powered heating device intended to warm patient-contact instruments (e.g., rigid endoscopes or trocars) before they are introduced into body orifices or other parts of the body. It typically consists of a tabletop device that has recesses or wells for placement of the instrument insertion portion, a heating element, a thermostat and operating controls.	I
2067	36817	Infant scale, mechanical	Нялхсын масштаб, механик	A mechanical device designed to measure the weight of an infant, particularly a newborn, or to monitor weight changes during critical care procedures. It typically consists of a weight tray, a beam lever system mounted on a hardened steel pivot point, and a sliding weight(s) that can be moved along the weight scale to indicate the occupant's weight when it is in balance. The device is also known as a paediatric or baby scale.	I
2068	36822	Labelling machine	Шошгоны машин	An electrically-powered device intended to print (e.g., identification text, barcodes) on identification/naming devices (e.g., labels, signs) for different purposes. It is typically a thermal or laser device and is available in various forms (e.g., hand-held, desktop with PC and cart).	I

2069	36824	Electric cooling fan	Цахилгаан хөргөлтийн сэнс	A mains electricity (AC-powered) device intended to be used to cool a patient by blowing a stream of ambient air toward or over the patient. As the device is used near patients, and in the vicinity of and in conjunction with other advanced medical devices, it should meet the same hospital grade electrical safety requirements as the other electrical devices. It can be mounted on a table stand or a wall mount.	I
2070	36843	Mobile examination/treatment room light	Зөөврийн үзлэг/эмчилгээний өрөөний гэрэл	A mobile device intended to provide light to illuminate a site of patient examination and/or treatment. It typically consists of one or more light bulb(s), which reflect the light via reflectors or mirrors depending upon the construction, and will often be mounted on a pantograph counterbalance assembly that is attached to a mobile mount. It is usually used during examination or treatment in locations that do not have the required lighting installed. This device is designed to be easily moved from one location to another.	I
2071	36847	Birthing bed/table, non-powered	Төрөх ор/ширээ, цахилгаангүй	A manually-operated, adjustable device designed to support a pregnant woman's body in an appropriate position during labour and delivery, and may in addition be intended for other obstetrical examination or treatment procedures. This device may be referred to as a birthing/obstetric bed, table, couch, or chair, and will typically include leg holders (stirrups), traction handles, a receptacle for afterbirth, and have facilities for the attachment of various accessories.	I
2072	36850	Autotransformer	Автотрансформатор	A device used in a mains electricity alternating current circuit (AC) to increase (step-up) or decrease (step-down) the voltage without using galvanic insulation between the input and output, to provide the specified voltage to a parent device; it is not a built-in part of the parent device. It has a primary and secondary coil, one being part of the other.	I
2073	36858	Centrifugal circulatory assist pump, manual	Цусны эргэлтийн туслах насос, гарын авлага	A centrifugal pump that is manually hand cranked (rotated) by the perfusionist or operator present in order to substitute for the electrically-operated pump during a power outage. It is a specially constructed pump used to provide circulatory assistance (support of the blood circulation when the heart fails) to the patient due to his/her dependence upon artificial assistance in order to maintain the body's heart function.	I

2074	36866	Pulse oximeter tester	Пульс оксиметр шалгагч	An electronic instrument designed to test the function of a pulse oximeter to ensure that its displayed readings are within the manufacturer's specifications (calibration). Typically it will simulate the pulse oximeter's probe; it may include pulse oximeter probe-testing capabilities. It is intended to be used by a healthcare provider (i.e., clinical technician involved in the repair, servicing, and maintenance of pulse oximeters) in a clinical setting.	I
2075	36867	Operating table, universal, mobile	Хагалгааны ширээ, бүх нийтийн, хөдөлгөөнт	A complete mobile operating table, commonly known as a universal table, that can be adapted to suit most of the operation positions required for surgical intervention. The table top surface consists of many hinged sections that can be elevated or lowered and/or formed into different contours (e.g., the whole table top can be hinged to form a curved surface) to accommodate the anatomical positions required for the different clinical specialities. This device may be powered by hydraulics, mains electricity (AC-powered), or an internal rechargeable battery pack.	I
2076	36899	Computer mouse/roller-ball	Компьютерийн хулгана/галзуу бөмбөг	A desktop, electronic component of a computer assembly designed for interactive communication between the user and a computer display by hand-operated displacement of the cursor on the computer screen (e.g., for menu/symbol choice and the execution of commands). It is connected to the computer via a cable or wirelessly and may be in the form of a computer mouse or a roller-ball.	I
2077	36931	External circulating-air core temperature regulation system pad, reusable	Гадны эргэлтийн агаарын үндсэн температурыг зохицуулах системийн дэвсгэр, дахин ашиглах боломжтой	An underlay or overlay through which temperature-regulated air is circulated as part of an external circulating-air core temperature regulation system, intended to elevate and/or lower a patient’s core body temperature, typically in surgical and intensive care settings. Air temperature and flow are regulated by a separate control unit. The device is available in a variety of lengths, widths, thicknesses, and shapes to accommodate body size and application (e.g., adult/paediatric, full-/partial-body). This is a reusable device.	I

2078	36937	MRI system table, non-powered	MRI системийн ширээ, цахилгаангүй	A non-powered mobile table that is made of ferromagnetically inactive materials (non-magnetic) to render it compatible with magnetic resonance imaging (MRI) environment, and that is designed for the transport of the patient to and from the examination table in the MRI system. This table can be safely left in the MRI examination room because of its compatibility, whilst the patient is being examined.	I
2079	36985	Reclining chair	Тухлах сандал	A manually-operated, general-purpose device designed to support a patient in a seated position; it includes a back rest that reclines for patient comfort. The chair is intended to be used in a variety of settings including recovery from minor procedures, during convalescence, while donating blood, or while receiving chemotherapy. It may have a height-adjustable mechanism and have attached armrests, footrests, and/or legrests.	I
2080	37001	Patient-height measure	Өвчтөний өндрийг хэмжих	A device designed to measure the height of a patient. It can be, e.g., a wall-mounted graduated scale or a freestanding vertical graduated rod with an adjustable cross-piece that is placed on the top of the patient's head. It may provide analogue or digital readings.	I
2081	37007	Kinetic bed	Кинетик ор	A mains electricity (AC-powered) bed designed to enable continuous change of the patient's lying position, e.g., it can tilt the entire bed mattress support system (this includes the mattress, the framework that supports the mattress, and the bedding) lengthways, sideways or to a near vertical tilt; the patient will be secured in such extreme position. The bed is used for the treatment of critically ill patients who are immobilized, often during ventilator treatment, in order to prevent oedema, improve circulation, and prevent bedsores; it is also used for patients with severe back problems. It may have an integrated weighing scale.	I

2082	37008	Rocking infant bed, electric	Нялх хүүхдийн ор, цахилгаан	An electrically-powered bed designed to provide a motorized rocking movement to soothe an infant during sleep. The motorized mechanism is control-adjustable to provide variable degrees of movement and speed. Sometimes referred to as a rocking bassinet it consists of a soft flat platform with sides to prevent the infant from falling out. It may incorporate features to enable a safe sleeping position (e.g., supine sleeping bag).	I
2083	37010	Paediatric bed	Хүүхдийн ор	A bed with appropriate size for children (typically up to 12 years of age) that incorporates safety canopy tops, fixed endrails, and moveable and latchable siderails. It allows children complete freedom in bed without the danger of falling out, yet allows staff access to the patient. Paediatric beds are not appropriate for neonates/infants.	I
2084	37012	Infant care table	Хүүхэд асрах хүснэгт	A specially made table used for nursing, e.g., washing or changing of nappies, of newborn babies. It can be equipped with a washing basin, typically of soft material (rubberized cloth), and a surface upon which to lie the infant for drying with a towel.	I
2085	37020	Audiometric booth	Аудиометрийн лангуу	A small chamber, usually accommodating one seated person, used to conduct diagnostic hearing evaluations. It is insulated against outside noise interference (sound-proofed) and has sound absorbing properties to eliminate sound reflections.	I
2086	37028	Laboratory thermostat	Лабораторийн термостат	A device used in laboratories to regulate the temperature of various media in association with a parent device, e.g., water in water baths.	I
2087	37035	Barcode reader	Бар код уншигч	A photoelectric electronic device designed to read and interpret barcodes placed in its line of sight. A barcode is typically an electronically-readable information strip consisting of parallel, vertical stripes and spaces of variable thicknesses which can also be presented in two or more layered information levels. This device may be capable of storing the read data and downloading it to other data systems.	I

2088	37044	Body-insulating pad	Биеийн тусгаарлагч дэвсгэр	A mattress (underlay) with a surface that conforms to a patient's body, to help provide pressure relief for the skin, and is made of an insulating material intended to prevent the loss of the patient's body heat. The device may help reduce the risk of hypothermia. It may be used by emergency medical services (EMS). This is a reusable device.	I
2089	37048	Footrest	Хөлийн түшлэг	A device intended to be used to sustain/retain a patient's foot or feet in a desired position. This device will often be considered an accessory to one or more parent devices. It is typically constructed of metal/plastic/rubber and can be attached to, e.g., operating tables/examination tables/treatment chairs.	I
2090	37050	Medical table clamp	Эмнэлгийн ширээний хавчаар	A device designed to be used together with operating tables and examination/treatment tables to hold different components and accessories (e.g., operating table tops, footrests, transducer holders, anaesthesia screen holders, intraoperative patient positioners) onto the table, providing added functionality. It can have different fixation/locking mechanisms and is often designed to fit onto the table side rails, allowing for easy and safe adjustments of the position of the mounted devices; some types may include a section of side rail. This is a reusable device.	I
2091	37074	Birthing bath	Төрөх банн	A large bath intended to be filled with heated water for use before and/or during child birth. It may be used to deliver the baby under water and/or to provide a comfortable environment for the expecting mother prior to birth. The device may also include specific features such as connectors and diagnostic attachments.	I
2092	37109	Thermoluminescent dosimetry brick oven	Термолюминесцент дозиметрийн тоосгон зуух	A special mains electricity (AC-powered) oven designed to heat thermoluminescence dosimetry (TLD) bricks in controlled conditions after their use in patient radiation treatment in order to release residual light; this meaning that the bricks are returned to a zero factor enabling them to be reused.	I
2093	37147	Cooling utility supply system	Хөргөлтийн хангамжийн систем	An assembly of devices designed to provide utilities/amenities (e.g., water, compressed air) to cool other medical devices, data equipment, or laboratory devices/equipment to facilitate their operation.	I

2094	37158	Chair cushion, air-free	Сандлын дэр, агааргүй	A device used to prevent pressure sores while the patient/user is in a sitting position (it is placed under their buttocks). It may be designed to provide side/back support and will be fabricated from materials suitable for passive pressure alleviation, e.g., gel, or foam. It is typically used for an elderly immobilized person, in cases of decubitus ulcers, a person with a disability, or a person with little remaining body fat. It is designed as a pad or cushion suitable to be placed on the seat of a chair and distributes the patient/userâ€™s body weight over the surface area of their buttocks thereby relieving the pressure points. It may be used for a wheelchair. This is a reusable device.	I
2095	37160	Patient transfer system, powered	Өвчтөн шилжүүлэх систем, хөдөлгүүртэй	A mains electricity (AC-powered) assembly of devices used to transfer a supine patient, typically from his/her bed or transport stretcher to an operating table or vice versa. It is usually installed in large operating room (OR) complexes and serves as a sluice providing demarkation between the OR staff and the ward staff/porters and related devices. It may be designed as a motorized belt that is wider than the length of the patient and that rotates around a moveable pick-up plate which feeds in under the patient, drawing him/her onto the belt and depositing him/her onto an adjacent surface. It is typically fully automated, requiring no human intervention other than to operate the controls.	I
2096	37162	Patient transfer sliding board	Өвчтөн шилжүүлэх гүйдэг самбар	A manual device intended to be used by a healthcare provider to assist in the physical movement and transfer of a patient (e.g., hospitalized, disabled, geriatric) from one position to another. It is typically designed to bridge a bed to a chair, whereby the patient is intended to move/slide over the device surface. It may be constructed as a solid sliding board with a low-friction surface, or a roller board (roller system in a framework); it has no lifting capabilities.	I

2097	37163	Patient transfer sliding mat	Өвчтөн шилжүүлэх гүйдэг дэвсгэр	A manual device typically in the form of an open roll mat or flat sheet designed to be used by healthcare professionals to assist in the physical movement and transfer of a patient (e.g., hospitalized, disabled, geriatric) from one place to another. The device typically has no lifting capabilities and utilizes sliding techniques to move the patient. It is typically designed using low-friction artificial fibres and intended to be slid under the patient who is then gently pushed by attending staff to glide across the surface of the device.	I
2098	37164	Patient position turntable	Өвчтөний байрлалыг эргүүлэх тавцан	A non-powered, manual device typically in the form of a rotating flat plate/disk intended to be positioned under a patient's buttocks or feet (when standing) to allow healthcare provider to pivot the patient for a change in position or direction, typically to facilitate proximal patient transfer (e.g., from bed to toilet); it has no lifting capabilities.	I
2099	37165	Patient transfer/turning sheet, single-use	Өвчтөн шилжүүлэх/эргэх хуудас, нэг удаагийн	A manual device in the form of a non-inflatable sheet or mat intended to be used by healthcare professionals to assist in the physical movement and/or transfer of a recumbent patient from one position/location to another. The device may operate using sliding/rolling and/or lifting techniques to move the patient upon it. It is typically made of plastics or textiles and may incorporate handles. This is a single-use device.	I
2100	37170	Fluid level alarm	Шингэний түвшний дохиолол	An electronic device that monitors the fluid level in a system or a reservoir and that provides a warning signal when the pre-set limits are exceeded.	I
2101	37201	Stand-up bed	Босоо ор	A mains electricity (AC-powered), motorized bed used for a person with a disability or a bedridden patient to enable them to acheive a standing position whilst being held in the bed. It can be raised from a horizontal (flat) to a vertical (standing) position and helps prevent undesirable effects, e.g., pressure sores; contracture in the hip, knee and ankle joints; or deterioration of cardio-circulatory and respiratory performance.	I

2102	37224	Birthing bed, water-filled	Төрөх ор, усаар дүүрсэн	A bed designed for use during labour and delivery to help minimize the discomfort, risk, and lapse of time associated with transfers between beds and delivery tables, allowing the mother to remain in the same room and bed throughout labour and delivery. This device will have a heated water-filled mattress that conforms to the body's contours providing a dispersement of the contact pressure. It may have facilities for the attachment of different accessories.	I
2103	37225	Operating table, ophthalmic	Мэс заслын ширээ, нүдний	A complete mobile operating table specially constructed to support a patient's body during ophthalmic surgical procedures. It provides support and stabilization, in particular to the head of the patient, and provides optimal access for the surgeon(s) during the intervention. This table is typically designed to have a small width table top giving a shorter distance for the surgeon to stretch to meet the centre line and is not appropriate for operations to be done on the body. It will typically have a dedicated ophthalmic headrest to provide maximum stabilization of the head. This device may be powered by hydraulics, mains electricity (AC-powered), or an internal rechargeable battery pack.	I
2104	37240	Hot/cold therapy pack, reusable	Халуун/хүйтэн эмчилгээний багц, дахин ашиглах боломжтой	A non-sterile device intended to be applied with or without pressure to the body surface (i.e., non-invasively) to provide heat and/or cold therapy for the skin and/or underlying tissues in the treatment of musculoskeletal pain and discomfort (e.g., from sports injuries or rheumatism). It consists of a compact envelope filled with a thermally-retentive material (e.g., silicate-based gel) that can be heated and/or cooled. It may be shaped/sized to fit a specific anatomy or include a strap; it is not intended to support the neck. This is a reusable device.	I
2105	37254	Gynaecological operating table top	Эмэгтэйчүүдийн мэс заслын ширээний тавцан	A component of a modular operating table designed as a detachable table top constructed for gynaecological surgical procedures. It consists of articulated sections that can be elevated, lowered for contouring, or removed to accommodate the anatomical positions required, and it will have a removable pelvic section and adjustable leg holders/stirrups as an integral part of the table which may be motorized.	I

2106	37255	Universal operating table top	Бүх нийтийн хагалгааны ширээний тавцан	A component of a modular operating table designed as a detachable table top that can be adjusted to support a patient during many types of surgical interventions. It may consist of many articulated sections that can be elevated or lowered for contouring to accommodate numerous anatomical positions (e.g., the whole table top may be adjusted to form a curved surface), or intended to be used in conjunction with dedicated accessories (i.e., positioners, traction devices) to satisfy the requirements of many clinical specialties; it may have x-ray transparent features.	I
2107	37256	Urological operating table top	Урологийн мэс заслын ширээний тавцан	A component of a modular operating table designed as a detachable table top to support a patient during urological examination and surgical procedures, including cystoscopic procedures and both transurethral and open surgery of the urinary tract. Its surface consists of a flat section that may have motor-driven longitudinal traverse, a headrest, adjustable leg holders and facilitate a urine/irrigation fluid collection tray with a filter to catch urinary stones/fragments.	I
2108	37322	Exerciser control unit	Дасгалын төхөөрөмж хяналтын хэсэг	A mains electricity (AC-powered) unit used to regulate those exercisers which require adjustment to the operating parameters, e.g., speed, elevation, or stroke length. It will typically include a display to show the settings or other physiologic parameters, and it may include an emergency stop button.	I
2109	37337	Ocular occluder/Maddox rod	Нүдний бөглөрөл/Маддокс саваа	A hand-operated, non-powered ophthalmic device intended to temporarily prevent and/or attenuate the passage of light (vision) to the eye(s) during an eyesight examination (e.g., diagnosis/measurement of heterophoria/heterotropia, myopia). The part of the device used to cover the eye(s) is typically spoon- or oval-shaped, and may be fully opaque or incorporate small holes and/or a Maddox lens(es) [i.e., coloured lens(es)]; the device also incorporates a handle and/or binocular frame. This is a reusable device.	I
2110	37377	Assistive dressing game	Туслах хувцас солих тоглоом	A device designed as an educational game to be used by a person with a disability to learn to understand the connection between the various parts of the human body and which garments are to be worn there. This game helps them to understand how to dress themselves.	I

2111	37382	Entry phone	Нэвтрэх утас	An electronic, closed-circuit, communication device installed within a building or building complex, e.g, a hospital, an institution, or in the home, designed to allow people to talk directly to one another to identify themselves and upon recognition allow the person on the inside to activate (unlock) the lock that keeps the main access door closed to provide entry to the person on the outside.	I
2112	37412	Medical device cleaning jet handpiece	Эмнэлгийн төхөөрөмж цэвэрлэх тийрэлтэт гар багаж	A hand-operated device designed to regulate and direct a narrow stream (a jet) of water and/or air for the initial cleaning of laboratory glassware, pipettes, syringes, certain endoscopes, cannulae, surgical instruments and other devices prior to disinfection/sterilization. It is usually in the form of a pistol with an activation trigger, and may be fitted with different nozzles or a variable nozzle. It is typically connected via tubing to a tap (faucet) and/or a pressurized air source. This is a reusable device.	I
2113	37443	Bed head/footboard	Орны толгой/хөл	A device consisting of rigid panels and/or frames that are mounted to a medical bed to identify for the patient (occupant) the edge of the head or foot end of the bed and/or mattress support platform. It may be used as handles to push/move the bed and is typically made from wood, metal, and/or plastic materials.	I
2114	37446	Adenotome blade, single-use	Аденотом ир, нэг удаагийн хэрэглээ	A surgical cutting edge that is designed to be mounted into the handle of an adenotome to excise the adenoids (hypertrophic lymphoid tissue in the nasopharynx) during an adenoidectomy. The device is typically a flat piece of metal (e.g., stainless steel) with one or both sharp edges at the working end; it is configured at its proximal end to attach to a particular type of adenotome. This is a single-use device.	I
2115	37447	Aspiration tray, reusable	Сорох тавиур, дахин ашиглах боломжтой	A container of various instruments, dressings, pharmaceuticals, and other items necessary to perform an aspiration and related procedures. It typically includes separate sections designated to hold the various utensils required for needle biopsy, aspiration, and/or drainage. Its bottom typically has a plastic foam insert that is scored to allow placement of sharp objects and needles. This is a reusable device.	I

2116	37450	Camera cover, single-use	Камерын бүрээс, нэг удаагийн	A sterile device made of a material, typically of plastic and shaped to fit the camera, which is used as a physical barrier on a camera to protect it from environmental exposure and/or allow the camera to be used in a sterile surgical field. This is a single-use device.	I
2117	37451	Nose dropper, reusable	Хамрын дусаагуур, дахин ашиглах боломжтой	A device intended to be used for aspirating a small volume of liquid so that it can be dispensed in single drops into the nasal passages. It is typically designed as a hollow tube, open at both ends, with an aspiration bulb attached to the proximal and a narrow opening at the distal end. It is usually made of glass or plastic with a rubber teat and may be used in conjunction with ear/nose/throat (ENT) treatments. This is a reusable device.	I
2118	37452	Nipple shielding teat, single-use	Хөхний толгойг хамгаалах хөх, нэг удаагийн	A device in the form of a flexible dome with milk-flow holes designed to be worn on a nipple by a nursing mother to facilitate breast feeding when an infant has latch-on problems (i.e., aberrant suckling technique), is premature, ill, or small (suction inside the device holds the nipple in an extended position), or when the mother has flat or inverted nipples (it provides sensation deep in the mouth that stimulates the baby). It is typically made of preformed silicone materials that additionally provide nipple protection. This is a single-use device.	I
2119	37453	Eye dropper, reusable	Нүдний дусаагуур, дахин ашиглах боломжтой	A pipette-like device intended to be used for aspirating a small volume of liquid so that it can be dispensed in single drops onto the external surface of the eye. It is typically designed as a hollow tube with an aspiration bulb attached to the proximal end and a narrowed opening at the distal end. It is usually made of glass or plastic with a rubber teat. This is a reusable device.	I
2120	37454	Ear dropper, single-use	Чихний дусаагуур, нэг удаагийн хэрэглээ	A device intended to be used for aspirating a small volume of liquid so that it can be dispensed in single drops into the ear canal. It is typically designed as a hollow tube, open at both ends, with an aspiration bulb attached to the proximal and a narrow opening at the distal end. It is usually made of glass or plastic with a rubber teat and may be used in conjuction with ear/nose/throat (ENT) treatments. It may contain a medication. This is a single-use device.	I

2121	37455	Waterproof bed mattress cover, reusable	Усны хамгаалалттай орны матрас бүрээс, дахин ашиглах боломжтой	A device made of soft, waterproof material that is shaped to fit over a bed mattress to create a physical barrier to protect the mattress, prevent cross-contamination, and prevent exposure to soiling, typically bedwetting or spills of other liquids. It can be laundered for cleaning. This is a reusable device.	I
2122	37456	Pillow cover, single-use	Дэрний бүрээс, нэг удаагийн	A device made of an impermeable material that fits over a pillow, and under a pillowcase, to reduce allergen levels or for infection control. This is a single-use device.	I
2123	37457	Bedrail cover, single-use	Орны тавиур, нэг удаагийн	A non-sterile device made of a material, typically plastic or fabric, that is used as a physical barrier on a bedrail to prevent cross-contamination between a patient and the bedrail. This is a single-use device.	I
2124	37459	Nose clip, reusable	Хамрын хавчаар, дахин ашиглах боломжтой	A device intended to be used to compress the nose externally, to ensure that airflow is exclusively conducted through the mouth during examinations of the pulmonary function (e.g., spirometry), and/or to stop nosebleeds (epistaxis). It is typically constructed of plastic with rubber or foam tips. This is a reusable device.	I
2125	37460	Hair clipper, manual	Үс хайч, гарын авлага	A manually-operated device (a hair-clipping instrument) designed for removing long hair from the head or body of a patient prior to surgery or treatment, or for cutting (trimming) a patient's head hair for grooming. The device is typically operated by healthcare personnel. This is a reusable device.	I
2126	37472	Dermatome blade, reusable	Дерматом ир, дахин ашиглах боломжтой	A surgical cutting device that is designed to be mounted onto a dermatome handle/handpiece (not included) and used to provide the cutting edge for the harvesting of skin grafts or excision of small skin lesions. It is available in various sizes and will typically need to be re-sharpened periodically. This is a reusable device.	I
2127	37473	Dermatome handpiece, pneumatic	Дерматом гар, пневматик	A pneumatically-powered, hand-held surgical instrument designed to cut from the body (harvest) thin donor slices of skin for skin grafting, or to excise small skin lesions, using a dedicated insertable blade (not included). This instrument will typically be driven by compressed gas [e.g., surgical-grade air, nitrogen (N2)] from a medical gas supply system. This is a reusable device.	I

2128	37476	Anaesthesia mask stabilizer, reusable	Мэдээ алдуулах маск тогтворжуулагч, дахин ашиглах боломжтой	A device designed to secure an anaesthesia mask on the face of a patient typically by providing anchorage for the fixation of the mask's headstrap. It is typically a ring or circular band with a number of hooks spaced around its outer edge, which is placed over the connector port of the mask. It is typically used for anaesthesia of long duration. This is a reusable device.	I
2129	37483	Electrosurgical tip cleaning pad	Цахилгаан мэс заслын үзүүр цэвэрлэх дэвсгэр	A wad designed to be used to periodically wipe clean (i.e., remove eschar build-up) a tip (e.g., an electrode or blade) used in an electrically-mediated surgical technique for cutting, coagulating, or cauterizing tissue. The device is typically abrasive on one side to facilitate cleaning, and adhesive on the other side so that it may be conveniently affixed to an easy access object in the operative arena (e.g., surgical drape, mayo stand). It may include a radiopaque thread making it visible on x-ray. This is a single-use device.	I
2130	37502	Ostomy bag closure device	Остоми уутыг хаах төхөөрөмж	A device intended to facilitate the emptying and/or reclosure of an open-ended ostomy bag. This is a reusable device.	I
2131	37510	Assistive patient lifting pole	Өвчтөнд туслах өргөх шон	A device designed as an overhead bar with a hanging handgrip above the occupant of the bed that is attached to a medical bed or secured to the wall behind the bed and used by the occupant to provide support when changing position or pulling themselves into a sitting position.	I
2132	37512	Vacuum terminal unit	Вакуум терминалын нэгж	A device that is a component of a medical gas/vacuum pipeline system that has a specific inlet connection for vacuum. It is designed to be mounted to wall-mounted medical supply units, utility supply systems (ceiling pendants), or directly to a wall, and functions as the inlet assembly of a gas/vacuum pipeline system to which the operator can connect and disconnect a device, typically a suction system or other device that is dependent upon vacuum to function as intended. On disconnection of the medical device from the inlet, it will self seal the vacuum terminal unit.	I

2133	37518	Lifting toilet seat	Өргөх жорлонгийн суудал	An electrically-powered seat capable of being lowered and/or elevated designed to be attached to or placed over a standard or assistive toilet to lower a person with a disability to a conventional sitting level for toileting, and to raise them for easy standing after toileting.	I
2134	37530	Centrifuge rotor, ultracentrifuge	Центрифугийн ротор, хэт центрифуг	A device, commonly called the rotor, or rotor head, used as a component in an ultra centrifuge. It is designed to function safely under the centrifugal conditions created by the operational speeds. It is horizontally attached at the top of the vertical shaft which is part of the electrically-powered drive unit and the samples to be centrifuged are placed in this rotor.	I
2135	37531	Centrifuge rotor, adjustable angle	Центрифугийн ротор, тохируулгатай өнцөг	A device, commonly called the rotor, or rotor head, used as a component in a centrifuge. It is designed with the tube holding devices shaped like buckets which are self adjusting. These swing outwardly at an increasing angle from the vertical still position in relationship to the centrifugal force. It is horizontally attached at the top of the vertical shaft which is part of the electrically-powered drive unit and the samples to be centrifuged are placed in this rotor.	I
2136	37532	Centrifuge rotor, fixed angle	Центрифугийн ротор, тогтмол өнцөг	A device, commonly called the rotor, or rotor head, used as a component in a centrifuge. It is designed with the tube holding bores formed at a pre-set angle and pattern. It is horizontally attached at the top of the vertical shaft which is part of the electrically-powered drive unit and the samples to be centrifuged are placed in this rotor.	I
2137	37544	Oxygen terminal unit	Хүчилтөрөгчийн терминалын нэгж	A device that is a component of a medical gas pipeline system or a medical gas/vacuum pipeline system that has a gas-specific outlet connection for oxygen (O2). It is designed to be mounted to wall-mounted medical supply units, utility supply systems (ceiling pendants), or directly to a wall, and functions as the outlet assembly of a gas pipeline system to which the operator can connect and disconnect a device, typically anaesthesia systems, ventilators, respiratory devices, infant incubators, and other devices that require O2 to function as intended. On disconnection of the medical device from the outlet, it will self seal the gas pipeline system preventing gas leakage to the environment.	I

2138	37566	Blood collection tube holder, single-use	Цус цуглуулах хоолой эзэмшигч, нэг удаагийн	A hand-held cylindrical device designed to be used together with an evacuated blood collection tube to draw blood samples from a patient. It is typically a hollow plastic adaptor into which the blood collection tube is inserted and to which the user attaches a hypodermic blood collection needle (not included); it may include an integrated blood collection tube spike. This device also facilitates a multiple-tube blood collection via one venipuncture. This is a single-use device.	I
2139	37593	Bed mattress support platform, manual	Орны матрасыг дэмжих тавцан, гарын авлага	A manually-operated medical bed structure that supports a medical bed patient surface (e.g., a mattress) and that can articulate and/or change its surface to facilitate various therapeutic, diagnostic, and convenience positions. It is typically a flat structure made of a metal frame that operates in response to the movement of manual levers and/or handcrank.	I
2140	37598	Hygiene apron, reusable	Эрүүл ахуйн хормогч, дахин ашиглах боломжтой	A garment designed to be worn by healthcare staff for general protection from soiling or spills on the ventral (front) aspect of the body during the course of work or a procedure. It is typically made of a durable fabric material and is periodically laundered when no longer considered hygienic. This is a reusable garment.	I
2141	37601	Orthodontic magnet	Ортодонт соронз	A small magnetic device used for palatal expansion, intrusion of posterior teeth, molar distalization, forced eruption of unerupted teeth, to aid in functional appliance treatment, to retract and align teeth. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	I
2142	37602	Assistive skirt/dress	Туслах банзал / даашинз	A garment specially designed/adapted to be worn by a woman with a disability to cover the torso typically from the shoulders down to various leg lengths, or from the waist down to various leg lengths. It is typically constructed with features to facilitate easy donning, fastening, and removal (e.g., wide sleeves, large pockets, Velcro or zip fasteners).	I
2143	37678	Manual endodontic filling material spreader	Гараар эндодонт дүүргэгч материал тараагч	A hand-held, manually-operated dental instrument specifically designed to compress filling materials in a root canal, mainly in a lateral direction. The working part is tapered, circular in cross-section and has a pointed tip. This is a reusable device.	I

2144	37685	Personal device holder, reusable	Хувийн төхөөрөмж эзэмшигч, дахин ашиглах боломжтой	A portable device designed to be worn or carried by a patient/layperson to hold a portable medical device (e.g., long-term recorder, wireless antenna, portable oxygen equipment, urine collection bag, tracheostoma protector, infusion pump) during ambulation or sleep; it is neither designed to hold an invasive tube/catheter to the skin surface (i.e., not a catheter/tube holder), nor to house and protect a device from damage (i.e., not a rigid case/housing). It is typically designed as a wearable bag, pouch, strap, belt, headband, or clothing, or as a trolley with wheels. This is a reusable device.	I
2145	37686	Wheelchair, occupant-driven, single-lever-operated, non-collapsible	Тэргэнцэр, зорчигч жолооддог, нэг хөшүүрэгтэй, эвхэгддэггүй	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by operating a lever, which, via a cranked mechanism, rotates the wheels on both sides. The device cannot be folded or readily dismantled for transport.	I
2146	37687	Wheelchair, occupant-driven, bimanual-chain-operated, collapsible	Тэргэнцэр, зорчигчид жолооддог, хоёр гарын авлагын гинжээр ажилладаг, эвхэгддэг	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by rotating one or two handles on a toothed wheel(s) with a chain link(s) to rotate the drive wheel(s). The device may be disassembled or folded for transport.	I

2147	37694	Nitrogen terminal unit	Азотын терминалын нэгж	A device that is a component of a medical gas pipeline system or a medical gas/vacuum pipeline system that has a gas-specific outlet connection for nitrogen (N2). It is designed to be mounted to wall-mounted medical supply units, utility supply systems (ceiling pendants), or directly to a wall, and functions as the outlet assembly of a gas pipeline system to which the operator can connect/disconnect a device, e.g., a surgical power tool or a laboratory device. It may incorporate a dual connection where one serves as a return for removal of the exhaust nitrogen. On disconnection of the device from the outlet, it will self seal the gas pipeline system preventing gas leakage to the environment.	I
2148	37697	Exothermic heat therapy pack/patch	Экзотермик дулаан эмчилгээний багц/патч	A device intended to be applied to the body surface, sometimes with pressure, to provide heat therapy to reduce muscle spasms and cramps and/or for joint and muscle stiffness and pain. It includes an envelope(s) filled with a material that produces an exothermic chemical reaction when activated; it may be available in a variety of forms (e.g., adhesive patch, belt containing packs). This is a single-use device.	I
2149	37699	Skin clip, reusable	Арьсны хавчаар, дахин ашиглах боломжтой	A surgical instrument with two blades that are joined at their midpoint, or made of a single alpha-shaped part, used to approximate the edges of a skin incision during a procedure or to hold an object, e.g., an electrode, to the skin. This is a reusable device.	I
2150	37744	Wheelchair bracket	Тэргэнцэрт зориулсан хаалт	A device, typically a metal rack, that is attached to a wheelchair and used to mount accessories for wheelchair customization or to adapt to new requirements.	I
2151	37749	Wheelchair electronic hardware support	Тэргэнцэрт зориулсан электрон тоног төхөөрөмжийн дэмжлэг	A holder and platform (e.g., a wire basket or a plastic box, and a flat work surface) used to provide a wheelchair occupant with a support to use personal electronic hardware (e.g., a laptop computer, cellular phone, remote control).	I

2152	37784	Laboratory scale, mechanical	Лабораторийн жин, механик	A mechanical instrument designed for general use in the clinical laboratory to determine the weight of bulk materials, solutions, or large discrete objects when it is not necessary to have the accuracy of a laboratory balance, when the weight is beyond the range of a laboratory balance, or to weigh specimens under special conditions (e.g., in fume hoods). It includes appropriate top surfaces, trays, or platforms. Its capacity may range from 0.5 to 200 kg (1 to 440 lb), with a readability between 1 to 100 g (0.0025 to 0.25 lb).	I
2153	37795	Warming infant bed, non-adjustable	Дулаан нярайн ор, тохируулах боломжгүй	A non-adjustable bed (has a fixed height and mattress platform) specifically designed for a newborn, sick, or premature baby that requires additional heating provided by a heating pad system. It is typically ergonomically designed to provide good access to the baby by the attending/nursing staff or parents. It may be equipped with features such as shelves, drawers, a canopy, and is typically used in the maternity department.	I
2154	37808	Pulse oximeter probe, reusable	Пульс оксиметрийн датчик, дахин ашиглах боломжтой	A photoelectric device designed to be applied externally to a body site (e.g., fingertip, ear lobe, bridge of nose, toe, or bridge of the foot) for the transcutaneous measurement of haemoglobin oxygen saturation (SpO2) in arterial blood using signals produced by a light-emitting diode (LED) and received by a photodetector. The signals are subsequently transmitted to an oximeter/monitor (not included) which measures and displays the SpO2. This is a reusable device.	I
2155	37826	Autopsy knife	Задлан шинжилгээний хутга	A hand-held manual surgical instrument with a handle and a heavy single-edged blade, of various shapes and sizes, used during an autopsy to cut open and dissect a cadaver. It is typically a one-piece instrument made of high-grade stainless steel; it may employ synthetic or wood material as part of the handle. This is a reusable device.	I

2156	37833	Soft contact lens inserter/remover	Зөөлөн контакт линз суулгагч/ арилгагч	A device designed to insert and remove a soft contact lens from the eye. It typically consists of a small, hand-held, double-prong plastic pincer with specially-designed tips to retract the lens from the eye; the device tip includes a mark and an indentation to hold the lens and facilitate its accurate placement on the eye. The device is used to avoid soft lens contamination and to facilitate lens removal and insertion typically by users with low dexterity, long nails, or rough fingers; it is also used by contact lens wearers in dirty environments. This is a reusable device.	I
2157	37835	Myomatome	Миоматом	A hand-held manual surgical instrument designed for the removal of a myoma (i.e., a tumour of a simple nature which would consist of muscle fibres; such muscle tumours often occur in the uterus) during a surgical intervention. It is typically designed as a one-piece instrument with a sharp, double-edged, cutting blade at the distal end which is normally very long and spearhead-shaped; it has a long and slender shaft with a handle at the proximal end. It is normally made of high-grade stainless steel. This is a reusable device.	I
2158	37837	Orthopaedic osteotome blade, reusable	Ортопедийн остеотомын ир, дахин ашиглах боломжтой	A sharp component of an orthopaedic osteotome intended to be attached to a dedicated handle (not included) to become a chisel-like surgical instrument designed to cut and/or shape bone by percussion during an orthopaedic procedure. It is typically flat or curved (concave) in design and bevelled on one or both sides; it is made of high-grade stainless steel. This is a reusable device.	I
2159	37839	Suturing unit, reusable	Оёдлын нэгж, дахин ашиглах боломжтой	A non-powered, hand-held device intended to pass sutures or a needle/suture assembly through tissues/prosthetic materials to facilitate suturing during an endoscopic and/or open surgical procedure; it may also knot, cut and/or tighten the sutures/ligature loop during or after placement. It typically consists of a shaft with hooks, catches, clasps, or forceps-like jaws at the distal end, and a proximal handle with controls. It typically has a pointed/cutting component to create a suture tunnel, and is loaded with the sutures or the suture is inserted through the shaft. This is a reusable device.	I

2160	37840	Cartilage knife	Мөгөөрсний хутга	A hand-held manual surgical instrument designed for cutting, shaving or shaping cartilage during a surgical intervention. It is typically a one-piece instrument with a sharp, single-edged, cutting blade at the distal end which is normally very long, similar in shape to a scalpel blade, and may vary in length and size; it has a handle at the proximal end. It is normally made of high-grade stainless steel. Also known as a chondrotome, a cartilage knife can also be used in pathology procedures. This is a reusable device.	I
2161	37852	Infant drinking/feeding cup	Нярайн уух/хооллох аяга	A cup specially designed for drinking/feeding purposes to be used by infants and small children who have not yet learnt how to handle an ordinary drinking cup. It will typically have some form of spout from which the user will drink and a lid to secure from spillage of the contents. This is a reusable device.	I
2162	37882	Incontinence penis clamp, single-use	Шээс задгайрах шодой хавчаар, нэг удаагийн	A male urinary incontinence device designed to gently compress the penis, either the proximal shaft or the glans penis, to occlude the urethra and prevent involuntary urination/dribbling for men who are incontinent of the bladder. It is typically made of plastic materials and is designed as an adjustable, two hinged, self-retaining lever clamp with foam rubber inserts; the user can typically adjust the tension to suit their penis size and needs. It is removed by the user when voiding and then reapplied. This is a single-use device which is discarded when soiled.	I
2163	37896	Corneal marker, reusable	Эвэрлэгийн маркер, дахин ашиглах боломжтой	A manual instrument intended to be used to imprint, indent, and/or incise corneal tissue prior to an ophthalmic surgical procedure. It is typically made of high-grade stainless steel and includes a long slender handle with a distal end having characteristics for producing specific markings. The device may have a defined pattern of fine marking surfaces (e.g., cross hairs, symmetrical or asymmetrical interlinking wires) that simultaneously engage corneal tissue. Some types are used with a corneal marking pad to transfer ink to the anterior of the eye; other types are used with a slit lamp to precisely incise vertical and horizontal points for precision alignment. This is a reusable device.	I

2164	37899	Assistive underwear	Туслах дотуур хувцас	A garment specially designed/adapted to be worn by a person with a disability as an under garment (first layer of clothing next to the skin). It is typically constructed with features that facilitate easy donning, fastening, and removal (e.g., wide sleeves or trouser legs, Velcro or zip fasteners), and sometimes with specially-made openings/flaps for visits to the toilet.	I
2165	37911	Radio-frequency hyperthermia system phantom, test-object	Радио давтамжийн гипертерми системийн хий үзэгдэл, туршилтын объект	A device consisting of an object or a patterned two or three-dimensional (3-D) array of objects, materials or openings of varying dimensions that exhibit prescribed electrical and thermal properties. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of a radio-frequency (RF) hyperthermia system and associated therapy treatment planning systems and software.	I
2166	37912	Radio-frequency hyperthermia system phantom, anthropomorphic	Радио давтамжийн гипертерми системийн хий үзэгдэл, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of a radio-frequency (RF) hyperthermia system and associated therapy treatment planning systems and software. The design can incorporate fluid pumps or other types of moveable components.	I
2167	37913	Ultrasonic hyperthermia system phantom, test-object	Хэт авианы гипертерми системийн хий үзэгдэл, туршилтын объект	A device consisting of an object or a patterned two or three-dimensional (3-D) array of objects, materials or openings of varying dimensions that exhibits prescribed electrical and thermal properties. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of an ultrasound hyperthermia system and associated therapy treatment planning systems and software.	I

2168	37914	Ultrasonic hyperthermia system phantom, anthropomorphic	Хэт авианы гипертерми системийн хий үзэгдэл, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of an ultrasound hyperthermia system and associated therapy treatment planning systems and software. The design can incorporate fluid pumps or other types of moveable components.	I
2169	37915	Microwave hyperthermia system phantom, anthropomorphic	Бичил долгионы гипертерми системийн хий үзэгдэл, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of a microwave hyperthermia system and associated therapy treatment planning systems and software. The design can incorporate fluid pumps or other types of moveable components.	I
2170	37916	Microwave hyperthermia system phantom, test-object	Бичил долгионы гипертерми системийн хий үзэгдэл, туршилт-объект	A device consisting of an object or a patterned two or three-dimensional (3-D) array of objects, materials or openings of varying dimensions that exhibits prescribed electrical and thermal properties. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of a microwave hyperthermia system and associated therapy treatment planning systems and software.	I

2171	37918	Ionic manual toothbrush	Ион гарын ажиллагаатай шүдний сойз	An instrument designed to be used by a person to manually brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed; the head includes a light-activated semiconductor [e.g., a titanium (Ti) rod] that releases negative ions intended to disintegrate dental plaque. The device is typically used with toothpaste; it is normally available [non-prescription] over-the-counter (OTC). This is a reusable device.	I
2172	37924	Incontinence device suspender	Шээс задгайрах төхөөрөмжийн түдгэлзүүлэлт	A device used by a person with a disability to secure a body-worn incontinence device [e.g., a nappy (diaper) or a pad] in a stable and safe position. It is available in a variety of designs, typically in the form of a waist-belt with straps, hooks, Velcro fasteners. This is a reusable device.	I
2173	37936	Nitrous oxide low pressure hose	Азотын ислийн нам даралтын хоолой	A length of reinforced colour-coded flexible tubing produced according to ISO5359 intended to conduct compressed nitrous oxide (N2O) from an N2O terminal unit or N2O cylinder to a medical device that functions with N2O (e.g., ventilator, anaesthesia unit, analgesia unit, or other N2O dependent medical device). The gas pressure in the tubing will be low, a "working pressure" (e.g., 3 - 5 bar), having been reduced by a regulator from a high pressure. The tubing is reinforced with, e.g., woven polyester or cotton and intended for use within a static clinical environment (e.g., intensive care). It is available in various lengths, including standard coil lengths. This is a reusable device.	I

2174	37937	Standing transfer platform, electric	Байнгын шилжүүлгийн тавцан, цахилгаан	An electrically-powered device designed to assist a healthcare provider in the physical moving (transfer) of a patient with a disability in an upright (standing) position over a short distance on a horizontal plane. It consists of a wheeled platform with a low centre of gravity and a surrounding framework with body securing devices (e.g., belts, foot plates, knee pads) to hold the patient being transferred in the standing position, and includes a powered mechanism to, e.g., to adjust the platform to assist standing. It is neither intended to maintain the patient in a prolonged standing position (i.e., not a stander) nor intended to lift and suspend the patient (i.e., not a patient lift).	I
2175	37938	Bariatric walking frame, foldable	Бариа алхалтын хүрээ, эвхэгддэг	A non-wheeled or partially-wheeled mobility aid in the form of a waist-high, foldable, extra wide framework with handgrips and four legs (the two front legs may have wheels to assist in forward movement) designed to provide a stable support for a bariatric (obese) person when standing or ambulating; it may also be used during rehabilitation. It is a sturdy construction made of lightweight metal and rubber materials that surrounds the front and flanks of the user. The user repositions the device in front of them for each forward step. The device is foldable for storage and transportation; it may be width-adjustable.	I
2176	37939	Patient carrying harness	Өвчтөн үүрэх оосор	A device used to assist one or more healthcare professionals or attending persons to physically carry an incapacitated/disabled patient from one place to another over a limited distance. The device is typically made strong textile materials (e.g., nylon, plastic, canvas) and consists of an arrangement of belts and straps to form a harness that is fitted to the person to be carried.	I

2177	37951	Handgrip disability-assistive walker, non-powered, foldable	Хөдөлгөөнгүй, эвхэгддэг гар бариултай алхагч	A non-powered, all- or partially-wheeled mobility aid in the form of a waist- or trunk-high, foldable framework with handgrips and three or four legs designed to provide a stable support for a patient with a walking disability, a geriatric, obese, or infirm patient when standing or ambulating; it may also be used during rehabilitation. It is constructed of lightweight metal, plastic, and rubber materials and in the form of a mobile support structure which the patient holds and pushes in front of them as they walk. It is foldable for storage and transportation and may include a braking mechanism; it may be width-adjustable and some types may include a seat on which the patient can rest.	I
2178	37952	Bariatric walker, foldable	Бариа алхагч, эвхэгддэг	An all- or partially-wheeled mobility aid in the form of a waist-high, foldable, extra wide framework with handgrips and four legs designed to provide a stable support for a bariatric (obese) person when standing or ambulating; it may also be used during rehabilitation. It is a sturdy construction made of lightweight metal, plastic, and rubber materials that surrounds the front and flanks of the user. The user holds the handgrips to push the device in front of them as they move forward. The device is foldable for storage and transportation, and includes a braking mechanism; it may be width-adjustable.	I
2179	37953	Standing transfer platform, manual	Байнгын шилжүүлгийн тавцан, гарын авлага	A manually-operated device designed as a platform for use by healthcare professionals to assist in the physical moving (transfer) of a patient with a disability in an upright (standing) position over a short distance on a horizontal plane. Sometimes referred to as a rota stand it consists of a wheeled platform with a low centre of gravity and a surrounding framework, shinpad and/or handlebar; it may include body securing devices (e.g., belts, foot straps, knee pads) to hold the person being transferred in the standing position. It is neither intended to mechanically assist standing nor facilitate gait.	I

2180	37954	Bariatric walker, non-foldable	Бариа алхагч, эвхэгддэггүй	An all- or partially-wheeled mobility aid in the form of a waist-high, non-foldable, extra wide framework with handgrips and four legs designed to provide a stable support for a bariatric (obese) person when standing or ambulating; it may also be used during rehabilitation. It is a sturdy construction made of lightweight metal, plastic and rubber materials that surrounds the front and flanks of the user. The user holds the handgrips to push the device in front of them as they move forward. The device is non-foldable and includes a braking mechanism; it may be width- adjustable.	I
2181	37955	Assistive soap-holding device	Туслах саван барих төхөөрөмж	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is designed as a gripping device to grip and hold a bar of soap and has a handle that allows the user to easiler grasp this device with the soap whilst bathing.	I
2182	37960	Patient carrying chair	Сандал зөөх өвчтөн	A device designed to assist one or more healthcare professionals or attending persons to physically carry an incapacitated/disabled patient over a limited distance. The device is typically made of strong textile materials (e.g., nylon, plastic, canvas) and consists of a chair or cradle with a belt/harnesses.	I
2183	37961	Basic walking frame, foldable	Үндсэн алхах хүрээ, эвхэгддэг	A mobility aid in the form of a waist-high, foldable framework with handgrips and four, rigid, non-wheeled legs designed to provide a stable support to a person with a disability, a geriatric or an infirm person when standing or ambulating; it may also be used during rehabilitation. It is typically constructed of lightweight metal, plastic, and rubber materials and surrounds the front and flanks of the user. The user holds the handgrips and slightly lifts the device to reposition it in front of them for each forward step. The device is foldable for storage and transportation.	I

2184	37963	Antimicrobial pillowcase	Нянгийн эсрэг дэрний уут	A protective envelope for a pillow typically made of a thin textile material that creates a physical barrier to soiling and cross-contamination; it is treated/impregnated with an antimicrobial substance to control bacterial and fungal growth on the fabric and reduce the levels of house dust mites (HDM) and their allergen-containing faecal droppings. The device is laundered for cleaning. This is a reusable device.	I
2185	37964	Water-filled chair cushion	Усаар дүүргэсэн сандлын дэр	A water-filled pad designed to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. It may be used in a wheelchair. This is a reusable device.	I
2186	37969	Water-filled bed mattress overlay	Усаар дүүргэсэн ор матрас давхарга	A water-filled pad or thin mattress, usually full-body length, which is placed on top of a bed mattress to distribute an occupant's body weight over a large surface area, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I
2187	37972	Infant incubator cover	Нялхсын инкубаторын бүрээс	A non-sterile cape, or similar device, intended to cover and enhance the outer appearance of an infant incubator, typically when used in neonatal departments where parents are allowed access to visit their child, making the overall impression less traumatic. This is a reusable device.	I
2188	37976	Antimicrobial duvet cover	Нянгийн эсрэг хөнжил хөнжил	A protective envelope for a duvet typically made of a thin textile material that creates a physical barrier to soiling and cross-contamination; it is treated/impregnated with an antimicrobial substance to control bacterial and fungal growth on the fabric and reduce the levels of house dust mites (HDM) and their allergen-containing faecal droppings. The device is laundered for cleaning. This is a reusable device.	I

2189	37978	Assistive bathing washcloth	Туслах угаалгын алчуур	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is a washcloth made of textile material that will have a purpose-made handle or grip to facilitate its use.	I
2190	37979	Oxygen quick-connect coupling, female	Хүчилтөрөгчийн түргэн холболттой холбогч, эмэгтэй	A female connecting device used to accept a male oxygen (O2) connector to connect two devices together to provide a continuous passageway for the delivery of O2. It has safety features such as a specific mechanical mating pattern, colour coding and a dedicated tube diameter connection to prevent wrong connection and allow a user to rapidly connect and disconnect oxygen dependent devices. It can be attached, e.g., to an O2 regulator or an O2 extension tubing. It can be designed as a diameter-indexed safety system (DISS) connector or a non-interchangeable screw-threaded (NIST) connector. This is not an oxygen terminal unit.	I
2191	37980	Anaesthetic gas scavenging quick-connect coupling, female	Мэдээ алдуулах хий ялгаруулдаг хурдан холбогч, эмэгтэй	A female connecting device used to accept a male anaesthetic gas scavenging (AGS) connector to connect two devices together to provide a continuous passageway for the controlled evacuation of exhaust anaesthesia gases. It has safety features such as a specific mechanical mating pattern, colour coding and a dedicated tube diameter connection to prevent wrong connection and allow a user to rapidly connect/disconnect AGS dependent devices. It can be attached, e.g., to an anaesthetic gas scavenging system (AGSS) or extension tubing. It can be designed as a diameter-indexed safety system (DISS) connector or a non-interchangeable screw-threaded (NIST) connector. This is not an AGS terminal unit.	I

2192	37981	Thermography system operation software	Термографийн системийн ажиллагааны программ хангамж	Mainframe or personal computer (PC) based operating system software (or firmware) specific to the central processing unit (CPU) incorporated into a thermographic imaging system configuration. This includes the software or firmware based programs and routines supplied by the computer manufacturer that drive a specific computer in the performance of its tasks and assists the operators, applications programmers and programs with various supporting functions. A proprietary name and a "version number" are commonly used identify different operating system versions.	I
2193	37983	Assistive safety razor	аюулгүй сахлын машин ашиглахад туслах төхөөрөмж	A hand-held device designed to be used by a person with a disability to assist them in their personal shaving needs by enabling them to shave their body hair, typically facial, but also includes other body hair, e.g., hair under the arms or on the legs. It is fitted with an exchangeable razor blade and is manually drawn over the skin surface area to be shaved. It is normally used in conjunction with a shaving soap, foam, or gel. It is known as a safety razor because the blade lies protected within the razor head leaving only the cutting edge exposed. It will include an inserted razor blade or razor head and have a suitable handle for the user to grip. This is a reusable device.	I
2194	37984	Assistive electrical shaver	цахилгаан сахлын машинашиглахад туслах төхөөрөмж	A battery-powered device designed to be used by a person with a disability to assist them in their personal shaving needs by enabling them to shave their body hair, typically facial, but also includes other body hair, e.g., trimming the hairline and beards. It is moved over the skin surface area to be shaved and is used dry (does not require shaving soap, foam, or gel). It will include rotating cutting heads, rechargeable batteries, and will have a handle and controls suitable for the user. The rotating blades, also referred to as the cutting heads, lie protected beneath a thin cage-like cover through which protruding hair will enter and be cut off.	I

2195	37985	Assistive shaving brush	сахлын сойз ашиглахад туслах төхөөрөмж	A device designed to be used by a person with a disability to assist them in attending to their personal shaving needs by enabling them to apply lather to their face in preparation for a wet shave. It will include a head of long, flexible, bristles and have a suitable handle for the user to grip.	I
2196	37986	Assistive swimming float	усан сэлэлтийн онгоц ашиглахад туслах төхөөрөмж	A device designed to be used by a person with a disability to assist them to float while bathing or swimming and maintain buoyancy. It is available in various designs, e.g., inflatable arm rings which are worn in pairs (one on each arm under the armpit) or a float or floats attached to the upper body (thorax).	I
2197	37987	Assistive bathing neck collar	Усанд ороход туслах хүзүүвч	A device designed to be used by a person with a disability to assist them to float while bathing or swimming and keep their head above the water. It is designed as a collar that is worn around the neck and is available in various designs, e.g., inflatable or non-inflatable.	I
2198	37989	Assistive inflatable bathing cap	Усанд ороход туслах хийлдэг малгай	A device designed to be used by a person with a disability to assist them while bathing or swimming to keep their head buoyant and above the water. It is designed as a bathing cap that is inflated and secured onto the users head.	I
2199	37991	Bed remote control	Орны алсын удирдлага	A hand-operated electronic device that has a functional connection to an electrically-powered medical bed to control its operation, typically the articulations and/or the raising/lowering of the bed, and sometimes other functions for patient use (e.g., communication with the staff, radio/television operation). It may be connected to the bed via an electrical cable or operate wirelessly [e.g., radio-frequency (RF), infrared (IR) transmission]. It is intended to be operated by the patient or healthcare provider.	I
2200	37995	Assistive snow scooter	Туслах цасны скутер	A combustion-engine-driven, on-road/off-road vehicle designed to be operated by a person with a disability to provide a means of transportation in the snow. It has ski-like runners, the front pair being steerable via handlebars, and a mid-mounted, powered, underslung track that propels it, all of which is attached to a central frame upon which the user sits astride. It is typically a standard snow-scooter modified by a manufacturer.	I

2201	38018	Medicine chamber spacer, reusable	Эмийн тасалгааны зай, дахин ашиглах боломжтой	A device intended to be placed between a nebulizer or a metered dose inhaler (MDI) and the patient's mouth, to function as a reservoir into which an aerosol medication is dispensed in order to minimize delivery of large aerosolized particles. It typically resembles a tube, container, or mask made of plastic, paper, or cardboard. By holding the drug(s) after aerosolization (e.g., via an internal valve) this device reduces the direct delivery of large aerosolized particles which would otherwise deposit in the mouth/upper airway, but are intended for the lower airway. This is a reusable device.	I
2202	38022	Toilet booth	Жорлонгийн бүхээг	A special enclosure containing a toilet facility installed to enable convenient access to a toilet, typically in the home, for a person with a disability. It typically consists of walls, a floor, a door, a toilet with associated facilities, and sometimes a washbasin (sink).	I
2203	38027	Pubic-pressure wearable urinal	Биеийн даралтад өмсдөг шээсний суваг	A non-sterile, urine drainage device designed for men with incontinence and/or a small or retracted penis that is held into the pubic bone and groin area to make a urine-tight seal. It consists of a front piece (a pubic flange) with an attached urinal; this being a naturally, downward curved cone into which the penis protrudes. Urine is collected in the cone and emptied through the removal of its sealing cap. It is typically held in place with groin and waist straps to provide an alternative to inserting a catheter or wearing incontinence pads. This is a reusable device.	I
2204	38035	Assistive go-kart	Туслах карт	A combustion engine, low-slung vehicle with four wheels, the front pair being steerable, mounted on a wide-based central frame in which the user with a disability sits to participate in go-karting events without the attendance of another person; it is designed to be operated by the user. It is typically a standard go-kart with the necessary modifications constructed by a manufacturer who specializes in making such vehicles. This vehicle will be used for recreational and sporting purposes.	I

2205	38037	Assistive patient grip ladder	Өвчтөнд туслах шат	A device that is strategically placed (e.g., anchored to an immovable object) by a healthcare professional to assist a person/patient (e.g., a hospitalized, a person with a disability, or a geriatric) to change their body position by gripping the ladder and pulling themselves step by step. The device typically has no lifting capabilities and utilizes the users own pulling capabilities to help change/adjust the person's position.	I
2206	38042	Assistive soap dish	Туслах саван	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is designed as a shallow vessel (a dish) to hold a bar of soap in one convenient location so that the user can easily find the soap each time they want to use it.	I
2207	38050	Stand-up mobile patient lifting system, electrically-powered	Цахилгаанаар ажилладаг хөдөлгөөнт өвчтөн өргөх систем	An electrically-powered, mobile assembly of devices designed to enable one person to lift an incapacitated patient or a person with a disability from a sitting position into a standing position and then move them from one place to another by physically pushing it with minimal effort with the occupant held secured in the standing position. Also known as a stand-up hoist or standing hoist, it typically consists of a support base on wheels with lifting mechanism, a footrest (footplate), knee/leg supports, a sling/harness, an electrical motor and batteries. It allows secure standing of a patient for toileting, dressing, and transfer.	I
2208	38052	Assistive wheeled stretcher	Туслах дугуйтай дамнуурга	A manually-operated device designed as a wheeled stretcher with a platform made for a person with a disability in a lying position to transport themselves around. It has a flat top surface upon which the user lies on their stomach and four wheels. It is available in a variety of designs, e.g., having two large hand-propelled wheelchair type wheels at the front which also provides a steering capability, or it can be very low so that the user propels and steers by pushing directly on the floor. It will provide a person with a disability with a means of limited mobility typically without presence of an attendant.	I

2209	38058	Assistive drinking mug	Туслах ундааны аяга	A device designed in the form of a mug to be used by a person with a disability as a vessel to contain drinking beverages and from which they can drink. This is a reusable device.	I
2210	38061	Assistive soap dispenser	Туслах саван саван	A device designed to be used by a person with a disability to assist them in attending to their personal body washing needs. It is designed to contain soap, either as a liquid or as a bar of soap, that will provide the user with a portion of soap (it dispenses either a squirt of the liquid soap or one bar of soap) each time it is activated by the user. When empty it can be refilled.	I
2211	38064	Ankle continuous passive motion exerciser	Шагайны тасралтгүй идэвхгүй хөдөлгөөний дасгалын төхөөрөмж	A mains electricity (AC-powered) device designed to continuously move the ankle joint (e.g., flexion, inversion/eversion) without patient assistance during continuous passive motion (CPM) exercise therapy usually following surgery or trauma to the joint. The device typically consists of a motorized carriage with straps to hold and move the leg/ankle, and an electrical control unit for the healthcare professional to set the variable range of motion and motion speed; digital displays, manual/automated safety capabilities, and other features may also be included. CPM is believed to stimulate articular tissues and circulation of synovial fluid, and to reduce joint oedema.	I
2212	38072	Chair occupancy alarm, line-powered	Сандал суудлын дохиолол, шугамаар ажилладаг	A mains electricity (AC-powered) device designed to provide a restraint-free method of monitoring the occupant of a chair (e.g., a patient, geriatric, an Alzheimer's disease or dementia patient, or a person with a disability) who are at risk of vacating the chair unattended and falling; in such an event it will activate a sound and/or visual signal to alarm the staff. The device is typically used together with connected sensor pads that are placed strategically under the patient.	I

2213	38073	Metallic orthopaedic cement restrictor	Металл ортопед цемент хязгаарлагч	A sterile, implantable device designed to be inserted into the medullary canal of a bone (e.g., femur, tibia, or humerus) during orthopaedic surgery to prevent cement progression in the diaphysis and therefore facilitate cement pressurization during the introduction of an implant. It is typically made of titanium (Ti) and is available in a variety of designs, e.g., straight or tapered, hollow with a fenestrated surface, and it may have a toothed surface to prevent its migration from the desired location. It is not intended for spinal indication.	I
2214	38074	Bed occupancy alarm, line-powered	Орны түгжрэлийн дохиолол, шугамаар ажилладаг	A mains electricity (AC-powered) device designed to provide a restraint-free method of monitoring the occupant of a bed (e.g., a patient, geriatric, an Alzheimer's disease or dementia patient, or a person with a disability) who are at risk of vacating the bed unattended and falling; in such an event it will activate a sound and/or visual signal to alarm the staff. The device is typically used together with connected sensor pads that are placed strategically under the patient.	I
2215	38087	Dry powder inhaler	Хуурай нунтаг амьсгалагч	A hand-held device designed to administer powdered medicine through the mouth and into the bronchial airways. Commonly known as a dry powder inhaler (DPI), it is a portable device typically carried in the pocket or a handbag (purse) of a patient for convenient access. This form of medicine administration is an alternative to aerosol inhalation and may induce the patient to greater inhalational effort. This is a reusable device intended for single-patient use.	I
2216	38102	Tympanotomy knife, reusable	Тимпанатомийн хутга, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to cut or pierce the eardrum (tympanic membrane) during ear/nose/throat (ENT) surgery, frequently for insertion of a drainage tube in cases of inflammation of the middle ear. Otherwise known as myringotomy knife, it is a one-piece instrument made of high-grade stainless steel with a long, slender shaft with a handle at the proximal end and a sharply-pointed cutting blade of various shapes at the distal end. This is a reusable device.	I

2217	38103	Nasal knife	Хамрын хутга	A hand-held manual surgical instrument designed to cut and dissect internal nasal tissue, including the nasal septum, during ear/nose/throat (ENT) surgery. It is typically a one-piece instrument made of high-grade stainless steel with a long, slender shaft with a handle at the proximal end and a sharp, single-edged, cutting blade at the distal end. The blade is normally small and typically of various forms (e.g., sharply-pointed, double-edged, with swivel devices) according to the procedure to be performed (e.g., submucous dissection, septal surgery). This is a reusable device.	I
2218	38104	Flap knife	Хавчуур хутга	A hand-held manual surgical instrument with a handle and a single-edged, contoured blade of various lengths used during the amputation of a limb to surgically create the flap of skin that will be folded over and sutured or clipped in place to cover the amputation wound and form the end of the stump. It is typically a one-piece instrument made of high-grade stainless steel. This is a reusable device.	I
2219	38105	Laryngeal knife	Хоолойн хутга	A hand-held manual surgical instrument designed to cut and dissect laryngeal tissue, including the vocal cords, during ear/nose/throat (ENT) surgery. It is typically a one-piece instrument made of high-grade stainless steel with a long, slender shaft with a handle at the proximal end and a sharp, single-edged, cutting blade at the distal end. The blade is normally small and available in various shapes (e.g., sickle, flap, straight) according to the procedure performed (e.g., excision of cysts, adhesions, webs). This is a reusable device.	I
2220	38140	Neonatal bed	Нярайн ор	A bed designed for newborn babies. It is usually an open rectangular receptacle, and mounted on a wheeled framework (trolley). It is padded or lined with appropriate bedding and used mostly as the general-purpose or standard baby bed in birthing departments. A source of additional heating may be provided to the newborn.	I

2221	38211	Stand-on floor scale, electronic	Шалны жинлүүр, электрон	An electrically-powered device designed to be placed on/integrated into the floor and upon which a patient is intended to stand to measure and display total body weight. It is not designed to weigh a wheelchair-bound patient or bed/stretcher.	I
2222	38339	Multichannel radiation survey meter	Олон сувгийн цацрагийн хэмжилтийн тоолуур	A survey meter or area monitor with a spectrometer to separate pulses received from a detector according to pulse size. Pulse size is proportional to energy of the detected radiation. It typically consists of a detector (usually a scintillation or semiconductor detector), a linear amplifier, an analogue-to-digital converter (ADC), a computer memory for storing information from the ADC, a scalar or count rate meter. The memory permits automated data processing, e.g., background subtraction and spectrum striping, which permits the analysis of complex spectra.	I
2223	38355	Radiation shielding apron	Цацрагаас хамгаалах хормогч	A full or half-length apron-like garment intended to shield portions of the body of an individual (i.e., a device operator, patient, or other attending person) from exposure to radiation during medical or dental procedures. Some include attached or detachable collars for neck and thyroid protection. The device typically consists of a fluid resistant outer covering surrounding a thin sheet of lead (Pb) or lead-equivalent material. Those used for neutron attenuation are composed of hydrogenous materials; those used in mixed beta-gamma radiation field may have layers of both hydrogenous and lead-equivalent materials. This is a reusable device.	I

2224	38356	Radiation shielding bib	Цацраг туяанаас хамгаалах хантааз	A personal protective device intended to shield the chest and/or breast area of an individual (i.e., the patient, operator, or other attending person) from unnecessary exposure to radiation from diagnostic or therapeutic medical and dental procedures. Some have either attached or detachable collars used for neck and thyroid protection. Bibs used in diagnostic x-ray and nuclear medicine typically consist of a fluid resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material. Bibs used for neutron attenuation are composed of hydrogenous materials; those used in mixed beta-gamma radiation field may have layers of both hydrogenous and lead-equivalent materials.	I
2225	38357	Radiation shielding blanket	Цацрагаас хамгаалах хөнжил	A personal protective device intended to shield selected body parts of a patient, or others, from unnecessary exposure to radiation during diagnostic or therapeutic medical or dental procedures. Radiation protection blankets used in diagnostic x-ray and nuclear medicine typically consist of a fluid resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material. Blankets intended to attenuate neutrons are composed of hydrogenous materials instead of lead. Blankets used in mixed beta-gamma radiation field may have layers of both hydrogenous and lead-equivalent materials.	I
2226	38358	Radiation shielding collar	Цацрагаас хамгаалах хүзүүвч	A personal protective device intended to shield the neck area including the nape, the throat, and the thyroid of an individual (i.e., a device operator or other attending person) from unnecessary exposure to radiation during diagnostic or therapeutic medical and dental procedures. Collars used in x-ray and nuclear medicine typically consist of a fluid resistant outer covering surrounding a thin sheet of lead (Pb) or lead-equivalent material. Collars used for neutron attenuation are composed of hydrogenous materials instead of lead; those used in mixed beta-gamma radiation field may have layers of both hydrogenous and lead-equivalent materials. This is a reusable device.	I

2227	38360	Radiation shielding goggles	Цацрагаас хамгаалах нүдний шил	A personal protective device intended to be used to shield the eyes of healthcare staff from unnecessary exposure to primary and scattered radiation associated with diagnostic and therapeutic medical and dental procedures. It will typically be designed as goggles consisting of a single unit with lenses, side shields, top shields, and bottom shields made from clear lead-equivalent materials, e.g., glass or plastic. The lenses and shields offer additional physical barrier protection from liquid radioactive materials. Goggle lenses may be either uncorrected (non-prescription) or corrected (prescription) for the individual's vision.	I
2228	38361	Eye radiation shield	Нүдний цацрагийн хамгаалалт	A personal protective device used to cover the patient's eye and the surrounding orbit to shield this area from unnecessary exposure to primary and scattered radiation associated with diagnostic and therapeutic medical procedures. An eye shield is available in various shapes and is typically made of lead (Pb) glass, lead, or tungsten (W) when attenuating photons, or hydrogenous materials when attenuating neutrons.	I
2229	38362	Thyroid radiation shield	Бамбай булчирхайн цацрагийн хамгаалалт	A radiation protection device designed to shield the thyroid of an individual (i.e., the operator, patient, or other attending person) from unnecessary exposure to radiation from diagnostic medical and dental procedures. It provides an attenuating barrier between the individual's thyroid and the source of primary or scattered radiation. Structural thyroid shields may be attached to the wall, ceiling, or radiation delivery device by an articulating arm that can be adjusted to shield the thyroid area of the throat. Other types may be more flexible to fit over a patient's thyroid. It typically consists of a fluid resistant outer covering that surrounds a thin sheet of lead (Pb) material.	I

2230	38363	Face radiation shield	Нүүрний цацрагийн хамгаалалт	A transparent personal protective device intended to shield the face and eyes of a healthcare worker from unnecessary exposure to primary and scattered radiation associated with diagnostic medical and dental procedures. The shield is typically made from clear lead-equivalent materials, e.g., glass or plastic, and fits over the individual's face and normal spectacles, if these are being worn. It provides additional protection from radioactive liquids and body fluids. It may also be referred to as a visor or mask.	I
2231	38364	Radiation shielding glove	Цацрагаас хамгаалах бээлий	A personal protective device used to shield the entire hand or hands of an individual (i.e., the operator or other attending person) from unnecessary exposure to primary and scattered radiation associated with diagnostic and therapeutic medical procedures. Each finger is shielded individually. When used in diagnostic x-ray and nuclear medicine, it typically consists of a fluid resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material. The glove offers radiation protection from all directions to the fingers, top and bottom of the hand. Some provide an additional physical barrier protection from liquid radioactive materials and body fluids.	I
2232	38365	Radiation-shielding procedure preparation glove/mitten	Цацрагаас хамгаалах процедурын бэлтгэлийн бээлий/бээлий	A personal protective device intended to be used to shield the entire hand or hands of medical personnel from unnecessary exposure to primary and scattered radiation associated with the preparation of a diagnostic and/or therapeutic radiological procedure (e.g., patient positioning). It is typically intended for procedure set-up or patient positioning; it is not a patient examination/treatment glove, nor a surgical glove. It typically includes a thin layer of lead (Pb) or lead-equivalent material and may be fluid resistant.	I

2233	38366	Partial-hand radiation shield	Хэсэгчилсэн гар цацрагийн хамгаалалт	A flat pad with a strap or partial glove assembly used to shield only a portion of the hand or fingers of the wearer from unnecessary exposure to primary and scattered radiation associated with diagnostic and therapeutic medical procedures. Some types can be designed to shield just the palm, others may shield only the dorsal surface of the hand and fingers. It typically consists of a fluid resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material and is typically intended to be worn over patient examination or surgical gloves.	I
2234	38367	Gonad radiation shield	Бэлгийн булчирхайн цацрагийн хамгаалалт	A personal protective device intended to shield the gonads of an individual (i.e., a device operator, patient, or other attending person) from unnecessary exposure to radiation from diagnostic medical and dental procedures by providing an attenuating barrier to the radiation. It comes in various configurations: 1) anatomically designed to fit over the gonads; 2) placed directly on the body; or 3) attached to the wall or radiation delivery device on an articulating arm. Radiation protection male and female gonadal shields are typically made of lead (Pb) or lead-equivalent material.	I
2235	38368	Radiation shielding apron rack	Цацрагаас хамгаалах хормогч тавиур	A device intended to store a radiation shielding apron used for radiation protection in a manner that protects it from damage, e.g., through folding, and preserves its inherent shielding capabilities.	I
2236	38369	Radiation shielding material, ionizing	Цацрагаас хамгаалах материал, ионжуулагч	A radiation protection device that attenuates ionizing radiation used to create barriers between an individual or a specific body part and a source of primary or scattered radiation used in medical or dental procedures. This group of devices includes a variety of materials, e.g., lead (Pb) bricks and sheets, lead-equivalent materials, leaded glass or plastic, tungsten (W), low molecular weight plastics or hydrogenous materials. Examples of use can be: lead bricks to build protective structures, lead sheets used in walls and doors, leaded glass or leaded-plastic sheets used in windows, mouldable lead-equivalent plastic or thermoplastic materials used to shield specific anatomical areas.	I

2237	38370	Facility radio-frequency shielding material	Байгууламжийн радио давтамжаас хамгаалах материал	A radiation protection device consisting of electrically conductive materials used in conjunction with other medical devices in a medical facility to form a barrier against radio-frequency (RF) emissions and interference. This kind of material protects medical devices and/or persons from incident or stray radio-frequency fields. This group of devices includes a wide variety of materials, e.g., copper (Cu) sheeting and copper mesh. Copper sheets and copper mesh are used in walls, floors, ceiling, doors and windows for magnetic resonance imaging rooms to prevent interference with the electronics used to form and receive the radio-frequency imaging pulses.	I
2238	38371	Facility magnetic field shielding material	Байгууламжийн соронзон орны хамгаалалтын материал	A radiation protection device in the form of magnetically conductive material used in conjunction with medical devices in a medical facility, to form a barrier to contain magnetic field lines, and protect people or electronic equipment from magnetic effects. This kind of shielding is intended to permit electronic equipment to be operated closer than otherwise possible to large magnetic fields, e.g., those associated with magnetic resonance imaging (MRI) systems.	I
2239	38372	Radiation protection booth	Цацрагаас хамгаалах лангуу	A radiation protective device intended to protect the operators from unnecessary exposure to radiation used in medical and dental procedures. A booth provides a structural radiation blocking/attenuating barrier between the individual and the source of primary or scattered radiation. It comes in a variety of portable, modular, and fixed configurations and typically have two or more sides located in the treatment room, having clear glass or plastic, lead (Pb) containing, sections to permit visual observation of the patient. It serves as a partition dividing the radiation delivery system from the operator and may also separate a radionuclide therapy patient from the visitor or observer.	I

2240	38373	Radiation shielding panel, portable/mobile	Цацрагаас хамгаалах самбар, зөөврийн/хөдөлгөөнт	A portable or mobile rigid barrier designed to shield patients and healthcare professionals from unnecessary exposure to radiation used in diagnostic or therapeutic medical procedures. It provides a physical radiation-attenuating barrier between an individual and a source of primary or scattered radiation. It may be a stand-alone device or intended to be integrated within an electronic system; the panel itself is not electronic. The types of materials used depend on the type of radiation to be attenuated [e.g., those used in diagnostic x-ray and nuclear medicine consist of lead (Pb) or lead-equivalent materials, and those used to attenuate neutrons are composed of hydrogenous materials].	I
2241	38374	Radiation shielding panel, fixed	Цацрагаас хамгаалах самбар, суурин	A permanently installed device forming a structural barrier designed to block or attenuate radiation emissions from a primary or scattered radiation source. It includes various solid or transparent barriers typically used to shield patients from unnecessary exposure to radiation emitted from, e.g., diagnostic/therapeutic radiation emitting devices. It may also be used to shield a patient undergoing a diagnostic or therapeutic procedure requiring the administration of a radioactive material or placement of a radioactive source. The barrier can be permanently attached to the floor, wall or ceiling or to a medical device, or mounted on articulating structures giving a limited range of motion.	I
2242	38375	Radiation shielding curtain	Цацрагаас хамгаалах хөшиг	A flexible radiation protective device intended to shield the operator or other attending persons from unnecessary exposure to radiation emitted during a medical or dental procedure. The curtain is a flexible radiation blocking or attenuating barrier located between the individual and the source of primary or scattered radiation. This radiation barrier is designed to hang from rods or tracks attached to the ceiling, wall, radiation delivery equipment, or other radiation shields. It typically consists of a fluid resistant outer covering that surrounds a thin sheet of flexible lead (Pb) or lead-equivalent material.	I

2243	38376	Radiation protection door	Цацрагаас хамгаалах хаалга	A door that shields individuals outside the radiation room from unnecessary exposure to primary or scattered radiation emitted to patients during medical and dental procedures. Radiation blocking or attenuating barrier materials are either located inside or on the surface of the door. A shielded door used in diagnostic x-ray or nuclear medicine typically consist of sheets of lead (Pb) or lead-equivalent material layered between door components. Doors intended to attenuate neutrons are composed of hydrogenous materials instead of lead.	I
2244	38377	Radiation protection window	Цацрагаас хамгаалах цонх	A window that shields individuals outside the treatment or radiation area from unnecessary exposure to radiation emitted by patients and medical and dental procedures. It provides a radiation blocking or attenuating barrier between the individual and the source of primary or scattered radiation while retaining visibility. Windows used in diagnostic x-ray and nuclear medicine typically consist of lead (Pb) glass or lead-plastic in a radiation shielded frame. Windows intended to attenuate neutrons are composed of hydrogenous materials. Windows in therapeutic neutron activation treatment rooms are designed to attenuate the gamma rays.	I
2245	38379	Syringe radiation shield	Тариурын цацрагийн хамгаалалт	A radiation protective device made to surround a syringe while radioactive material is drawn up into the syringe and during patient injection. It is intended to shield the user from unnecessary exposure to radiopharmaceuticals or other radioactive material used in diagnostic or therapeutic procedures. It is typically made of lead (Pb), lead with a leaded glass insert, or clear lead-equivalent plastic materials.	I

2246	38380	Vial radiation shield	Шилэн цацрагийн бамбай	A device, sometimes called a vial holder, designed to partially or completely surround a vial or a container of a solid or liquid radioactive material. It protects persons from unnecessary radiation exposure by partially or totally blocking the radiation emissions from a vial or similar container holding a radiopharmaceutical or other radioactive material used in diagnostic or therapeutic procedures. It is made of lead (Pb) or lead-equivalent materials, the shielding properties may vary depending on the isotopes they are intended to be used with. Some include an opening that allows needle access to the vial contents and some are either totally transparent or include a window.	I
2247	38381	Radiation protection safe	Цацрагийн хамгаалалт аюулгүй	A lockable shielded radiation protective container intended to store radionuclide sources and materials in order to prevent their use by unauthorized individuals. Depending on the intended use, it incorporates shielding materials with appropriate attenuation characteristics that prevent exposure to persons from radiation emitted from the sources stored inside the safe.	I
2248	38382	Radiological quality assurance device, multiple application kit	Радиологийн чанарын баталгааны төхөөрөмж, олон төрлийн хэрэглээний иж бүрдэл	A collection of equipment and devices sold as a kit for quality assurance (QA) purposes in order to facilitate the comprehensive testing of a variety of quality control parameters for a specific ionizing radiation, non-ionizing radiation or ultrasound emitting system. Each instrument included in a kit of this kind should be related to a generic device group in the Global Medical Device Nomenclature (GMDN) for quality assurance instruments.	I
2249	38385	Diagnostic x-ray system quality assurance device	Оношлогооны рентген системийн чанарын баталгааны төхөөрөмж	An instrument intended to be used to assess the performance of diagnostic x-ray equipment for quality assurance (QA) purposes; it is typically intended to measure, display, and record one or more x-ray parameter(s) [e.g., kVp, mAs, dose, exposure time]. It may be placed in the field of view and/or be connected to the x-ray equipment, and may have various forms (e.g., handheld or desktop unit with sensor and dedicated software).	I

2250	38386	X-ray system quality assurance device, kVp meter	Рентген системийн чанарын баталгааны төхөөрөмж, кВп тоолуур	An instrument used for quality assurance (QA) purposes to measure the peak kilovoltage (kVp) output from a x-ray tube. The measurement is taken directly in the radiation field, and the measurement is used to calculate the corresponding kVp.	I
2251	38387	X-ray system quality assurance device, mAs meter	Рентген системийн чанарын баталгааны төхөөрөмж, мАс тоолуур	An instrument used for quality assurance (QA) purposes to measure the electrical current and x-ray pulse time of a x-ray tube. It outputs the results as the current-time product (mAs).	I
2252	38388	X-ray system quality assurance device, kVp/mAs meter	Рентген системийн чанарын баталгааны төхөөрөмж, кВп/мАс тоолуур	An instrument that includes the electronics to measure for quality assurance (QA) purposes the peak kilovoltage (kVp) output, electrical current and x-ray pulse time of a x-ray tube. It outputs results as the current time product (mAs) and provides measurements used to calculate the corresponding kVp.	I
2253	38389	X-ray system quality assurance device, penetrameter	Рентген системийн чанарын баталгааны төхөөрөмж, нэвтрэлтийн хэмжигч	A electromechanical instrument used for quality assurance (QA) purposes to test the x-ray kilovoltage settings by differentiating the penetrating power of the x-ray through pre-calibrated attenuation step wedges and blocks. The step wedges and blocks may be made of, e.g., copper (Cu), aluminium (Al) or other materials.	I
2254	38393	X-ray system quality assurance device, penetrameter cassette	Рентген туяаны системийн чанарын баталгааны төхөөрөмж, penetrameter кассет	A quality assurance instrument that is used to measure the kilovoltage applied to an x-ray tube in order to check the calibration of diagnostic x-ray equipment. The step number at which the x-ray film density under the copper (Cu) wedge matches the reference density is related by a calibration curve to the kilovoltage of the x-ray generator. This component of the cassette assembly is typically enclosed in a specially designed cover that contains a beam hardening pre-filter, lead masks with a series of holes, a copper step-wedge, an intensifying screen and an optical attenuator and an x-ray film support.	I

2255	38394	Microwave system quality assurance device	Бичил долгионы системийн чанарын баталгааны төхөөрөмж	An instrument specifically designed to be used to check the calibration and performance of devices that produce microwave radiation used for diagnostic, therapeutic or other applications. It will, e.g., measure and establish the amount of microwave energy leakage emitted by high-powered equipment, e.g., ovens, heaters, dryers or medical devices using microwave technology. The measurement is typically done with the help of a connected probe held in the near vicinity of the device being measured. It will provide an indication of the quantity of microwave radiation being emitted, e.g., in mW/cm2.	I
2256	38395	Ultrasound system quality assurance device	Хэт авианы системийн чанарын баталгааны төхөөрөмж	An instrument used for quality assurance (QA) purposes to check the calibration and performance of systems that produce ultrasound waves used for diagnostic or therapeutic applications. This includes a variety of instruments used to measure parameters associated with beam production, beam quality, image quality and other system performance parameters.	I
2257	38396	Radio-frequency system quality assurance device	Радио давтамжийн системийн чанарын баталгааны төхөөрөмж	An instrument used for quality assurance (QA) purposes to check the calibration and performance of systems that produce radio-frequency (RF) radiation used primarily for therapeutic or surgical applications. It includes a variety of instruments used to measure parameters associated with near and far field assessments of beam production, beam quality, image quality and other system performance parameters.	I
2258	38397	MRI system quality assurance device	MRI системийн чанарын баталгааны төхөөрөмж	An instrument that is specifically designed to be used to check the calibration and performance of magnetic resonance imaging (MRI) systems or magnetic resonance spectroscopy systems that produce magnetic and radio-frequency (RF) fields used in diagnostic imaging or in vivo spectroscopy applications. It includes a variety of instruments used to measure parameters associated with magnetic field confirmation, strength and stability, near and far RF field generation, image quality and other system specific performance parameters.	I

2259	38398	Neutron system quality assurance device	Нейтрон системийн чанарын баталгааны төхөөрөмж	An instrument used for quality assurance (QA) purposes to check the calibration and performance of medical systems that are used to produce neutron beams used for diagnostic and neutron capture therapeutic applications. It includes a variety of instruments used to measure parameters associated with neutron beam production, beam quality, and other system performance parameters.	I
2260	38399	Accelerator system quality assurance device	Хурдасгуурын системийн чанарын баталгааны төхөөрөмж	An instrument specifically designed to be used to check the calibration and performance of linear and non-linear medical accelerator systems used for radiation therapy applications, for quality assurance (QA) purposes. It includes a variety of instruments used to measure parameters associated with particle and photon beam production, beam quality, and other system performance parameters.	I
2261	38458	Examination/treatment table, manual	Үзлэг/эмчилгээний хүснэгт, гарын авлага	A non-mobile table designed for routine/minor medical examinations and/or treatment of the patient. It will typically consist of a framework with a flat table top surface which may have a head section that can be manually adjusted into a raised position. The height of the table may also be manually adjusted to fixed positions (i.e., set to an initial height but not readily adjustable). It may facilitate a paper roll holder from which paper is pulled to cover the table surface as a hygienic barrier for each new patient. This device is typically used in examination rooms or doctors' surgeries as a statically placed table.	I
2262	38459	Antimicrobial bed sheet	Нянгийн эсрэг ор дэрний даавуу	A large piece of fabric material intended to cover the mattress of a bed to protect it from being soiled and to provide the bed's occupant with clean, non-irritating contact surfaces (over and under); it is treated/impregnated with an antimicrobial substance to control bacterial and fungal growth on the fabric and reduce the levels of house dust mites (HDM) and their allergen-containing faecal droppings. The device is typically made of a thin-textile or reinforced-paper material and is laundered for cleaning between periods of use. This is a reusable device.	I

2263	38462	Wheelchair legrest	Тэргэнцэрийн хөл	A platform (typically metal with or without a padded vinyl covering) usually mounted on a wheelchair in pairs, and upon which a wheelchair occupant may place the legs for comfort, support, and/or to keep them off of the ground. The device may be fixed or adjustable. This group of devices will also include the extensions needed to fit this device.	I
2264	38465	Anaesthesia/respiratory training model	Мэдээ алдуулах / амьсгалын замын сургалтын загвар	An anatomical replica of the respiratory tract, beginning with the head, designed mainly for training of anaesthesia and ambulance personnel in intubation and "mouth-to-mouth" techniques. It is typically made of hard and soft plastic materials.	I
2265	38467	Continuous passive motion exerciser control unit	Тасралтгүй идэвхгүй хөдөлгөөний дасгалын төхөөрөмж хяналтын нэгж	A mains electricity (AC-powered) unit used to control an exerciser device that function using continuous passive motion (CPM). It can have functions, e.g., start/stop, speed regulation, adjustment of the working length, and/or remote control by the patient.	I
2266	38468	Intravenous pressure infusor, automated	Судсаар хийх даралтат инфузор, автоматжуулсан	A pneumatically-powered device designed to increase the rate of an intravenous (IV) infusion given to a patient by applying pressure directly to the infusion bag. The device is designed with a pressure chamber into which the infusion bag is secured, and is connected to a supply of pressurized air which, when activated, creates pressure in the rear of the chamber. It typically includes a pressure gauge to indicate the applied pressure and overpressure safety features.	I
2267	38477	Breast pump, manual	Хөхний саалтуур, гарын ажиллагаатай	A hand-held device used to extract milk from the breast, typically for collecting and feeding to an infant. The device produces a low-grade suction through a funnel-like component that is applied to the breast and is typically operated by the donor; the milk collects in an attached vessel (e.g., a sterilized bottle). This is a reusable device.	I
2268	38478	Breast pump, electric	Хөхний саалтуур, цахилгаан	A mains electricity (AC-powered) device used to extract milk from the breast, typically for collecting and feeding to an infant. The device produces a continuous low-grade suction through a funnel-like component that is applied to the breast; the milk collects in an attached vessel (e.g., a sterilized bottle). The device may have a safety mechanism to prevent a potentially harmful increase in negative pressure.	I

2269	38493	Wheelchair umbrella holder	Тэргэнцэртэй шүхэр эзэмшигч	A device that is attached to a wheelchair to hold an overhead umbrella used by the wheelchair occupant to protect themselves against precipitation (rain, snow, sleet).	I
2270	38495	Wheelchair article holder	Тэргэнцэртэй нийтлэл эзэмшигч	A container (e.g., a wire basket, nylon tote bag, or plastic box) that provides a wheelchair occupant with a receptacle for items (e.g., personal/shopping items, work supplies). The device can be mounted at various locations on the wheelchair depending on the type of wheelchair and configuration of the device.	I
2271	38508	Wheelchair bumper	Тэргэнцэрийн бампер	A padded barrier designed to be attached to appropriate sites on the perimeter of a wheelchair prone to having contact or colliding with other objects to protect the occupant, the wheelchair and the environment. It is typically made of vinyl covered metal, plastic, or polyvinyl chloride (PVC).	I
2272	38509	Wheelchair, occupant-driven, single-lever-operated, collapsible	Тэргэнцэртэй, зорчигч жолооддог, нэг хөшүүрэгтэй, эвхэгддэг	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by operating a lever, which, via a cranked mechanism, rotates the wheels on both sides. The device may be disassembled or folded for transport.	I
2273	38510	Assistive dining dish	Туслах хоолны таваг	A device designed to be used by a person with a disability to hold the food when they are eating it. It is typically made of non-breakable materials in the form of a plate or a bowl which may have a cover and/or handgrip(s). This is a reusable device.	I

2274	38558	Primary battery	Үндсэн батерей	A non-rechargeable set of electrochemical cells, or a single cell, designed to store chemical energy and release it in the form of electrical energy to provide power for active implantable medical devices or external medical instruments, for backup power for programmable devices that must retain electronic information, or to power portable or other medical devices when it is not possible or convenient to use the line supply. The device includes terminals and may include a case. The size, shape, and chemical composition of the device should be specified according to the requirements in "IEC 60086-1 Primary batteries - Part 1: General", or the latest version of this standard.	I
2275	38581	Ionic electric toothbrush	Ионы цахилгаан шүдний сойз	A battery-powered instrument designed to brush clean the teeth and gums. It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed; the head includes a light-activated semiconductor [e.g., a titanium (Ti) rod] that releases negative ions intended to disintegrate dental plaque. The device provides automated bristle movement (e.g., rotary or vibratory) intended to augment brushing and is used with toothpaste; it is normally available [non-prescription] over-the-counter (OTC). The toothbrush head may be exchangeable. This is a reusable device.	I
2276	38584	Bite registration rim wax, plate	Хазуулсан бүртгэлийн обуд лав, хавтан	A dental material (modelling wax) delivered as prefabricated plates of wax with or without reinforcing foils (metal, polymer) for registration of jaw relation (making bite rims). This is a single-use device.	I
2277	38588	Complete upper denture	Бүрэн дээд хиймэл шүд	A custom-made artificial replacement for all teeth in the upper jaw (maxilla) carried on a removable plate or frame which is supported by surrounding soft and hard tissues of the oral cavity. It can be made of a variety of materials including polymers [polymethylmethacrylate (PMMA), polycarbonate (PC)], acrylic, ceramics, and/or metals [e.g., base metal alloys or titanium (Ti)].	I

2278	38589	Complete lower denture	Доод хиймэл шүдийг бүрэн гүйцэд хийнэ	A custom-made artificial replacement for all teeth in the lower jaw (mandible) carried on a removable plate or frame which is supported by surrounding soft and hard tissues of the oral cavity. It can be made of a variety of materials including polymers [polymethylmethacrylate (PMMA), polycarbonate (PC)], acrylic, ceramics, and/or metals [e.g., base metal alloys or titanium (Ti)].	I
2279	38590	Overdenture	Хэт шүдэлбэр	A custom-made, removable, artificial replacement for some or all teeth in the lower or upper jaw (mandible or maxilla) that is retained in the mouth with precision dental attachments. The attachments can be placed in retained tooth roots or dental implants.	I
2280	38591	Custom-made dental crown, metal	Захиалгат шүдний титэм, металл	A device made totally of metal alloy material, and created for a specific post-pubescent/adult patient (custom-made), that functions as an artificial covering to replace the major part, or the whole part, of the clinical crown of a tooth.	I
2281	38593	Custom-made dental crown, metal/ceramic	Захиалгат шүдний титэм, металл/керамик	A device made of a combination of metal and tooth-coloured ceramic, and created for a specific post-pubescent/adult patient (custom-made), that functions as an artificial covering to replace the major part, or the whole part, of the clinical crown of a tooth.	I
2282	38594	Custom-made dental crown, ceramic	Захиалгат шүдний титэм, керамик	A device made totally of ceramic material, and created for a specific post-pubescent/adult patient (custom-made), that functions as an artificial covering to replace the major part, or the whole part, of the clinical crown of a tooth.	I
2283	38595	Custom-made dental crown, polymer	Захиалгат шүдний титэм, полимер	A device made entirely of polymer-based material with or without fibre reinforcement, and created for a specific post-pubescent/adult patient (custom-made), that functions as an artificial covering to replace the major part, or the whole part, of the clinical crown of a tooth.	I
2284	38596	Custom-made dental crown, metal/polymer	Захиалгат шүдний титэм, металл/полимер	A device made of metal, veneered with a polymer-based, tooth-coloured material, and created for a specific post-pubescent/adult patient (custom-made), that functions as an artificial covering to replace the major part, or the whole part, of the clinical crown of a tooth.	I
2285	38602	Bite registration rim wax	Хазуулсан бүртгэлийн хүрээний лав	A dental material (modelling wax) with or without reinforcing foils (metal, polymer) for registration of jaw relation (making bite rims). This is a single-use device.	I

2286	38651	Dental shade guide	Шүдний сүүдрийн гарын авлага	A device used to determine the correct shade (colour) of filling materials, artificial crowns, and teeth to match the patient's dentition.	I
2287	38682	Knee cushion	Өвдөгний дэр	A soft pillow or pad intended to be used to provide support and comfort to the knee(s) of the user to restore natural lower body alignment, relax muscles, and relieve painful pressure points. The device is typically placed under the knees to raise them to an angle as the user lies in a supine position.	I
2288	38686	Walking training prosthesis	Явган алхах протез	A device designed as a short leg prosthesis that are used in pairs to help train an above-the-knee amputee to regain balance and mobility when walking with prostheses. Commonly known as stubbies this device is much shorter than the full length prostheses that will be finally fitted and typically have a backward facing rocker-type foot to prevent the trainee falling backwards.	I
2289	38702	Walking chair, foldable	Алхах сандал, эвхэгддэг	An all-wheeled mobility aid in the form of a foldable framework that has a built-in seat or sling that supports a disabled or geriatric person in a sitting position while walking. It is constructed of lightweight metal, plastic, rubber and textile materials in the shape of a low centre-of-gravity mobile support structure in which the user walks while seated. The device is foldable and may include forearm supports and a braking mechanism.	I
2290	38704	Walking chair, non-foldable	Алхах сандал, эвхэгддэггүй	An all-wheeled mobility aid in the form of a non-foldable framework that has a built-in seat or sling that supports a disabled or geriatric person in a sitting position while walking. It is constructed of lightweight metal, plastic, rubber and textile materials in the shape of a low centre-of-gravity mobile support structure in which the user walks while seated. The device is non-foldable and may include forearm supports and a braking mechanism.	I

2291	38727	General-purpose surgical scissors, reusable	Ерөнхий зориулалтын мэс заслын хайч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to cut/dissect a variety of tissues during open surgery and having no dedication to a specific anatomy or clinical use; it might in addition be intended for cutting materials associated with surgery (e.g., sutures). It is comprised of two pivoted shearing blades with handles, whereby the blades cut as the sharpened edges pass one another as they are closed; some types may have blades that cross over to expose a sharp edge for slicing tissue like a scalpel. It is typically made of metal and is available in various designs and sizes, and some types can have carbide inserts along the cutting edges. This is a reusable device.	I
2292	38737	Needle cutter	Зүү зүсэгч	A device designed to cut a syringe needle to prevent its reuse. It typically includes a sharp metal cutting blade housed in a plastic container that receives the pieces of the destroyed needle. This is a reusable device.	I
2293	38744	Rhinoscopic mirror	Риноскопийн толь	A hand-held surgical instrument with a mirror or a surface sufficiently polished to reflect enough undiffused light to form a virtual image of an object placed before it at the distal end used for a rhinoscopic examination. The mirror is affixed to a very long, slender shaft with a handle at the proximal end that is held by the doctor who can manipulate the mirror close to the site of interest in the nose. This is a reusable device.	I
2294	38753	Wheelchair medical gas supply holder	Тэргэнцэртэй эмнэлгийн хийн хангамжийн эзэмшигч	A container or bracket attached to a wheelchair used to hold the wheelchair occupant's medical gas supply (e.g., cylinder of oxygen).	I
2295	38759	Dental suction system cannula, reusable	Шүдний сорох системийн суваг, дахин ашиглах боломжтой	A semi-rigid or rigid hollow tubular component of a dental suction system designed to be inserted into the oral cavity for the aspiration and removal of blood, pus, saliva, debris, and water during a dental procedure. It is made of metal or plastic materials that can be sterilized. This is a reusable device.	I
2296	38783	Dental caries removal solution	Шүд цоорох өвчнийг арилгах уусмал	A liquid substance used in dentistry to detect and remove caries from an infected tooth. After application, this device cannot be reused.	I

2297	38785	Dental bleaching agent	Шүд цайруулах бодис	A dental liquid solution or a paste used to whiten teeth for therapeutic or cosmetic purposes. After application, this device cannot be reused.	I
2298	38787	Cryogenic spray, dental	Криоген шүршигч, шүдний	A liquid/gaseous refrigerant, typically contained in an aerosol or other spray dispenser, which is applied (sprayed) to a tooth to chill it, primarily to observe the patient's resulting intensity and duration of sensation in the evaluation of dental pulp vitality (i.e., helps to determine if the pulp is normal, inflamed, or necrotic). Some refrigerants may be used as a local anaesthetic when extracting deciduous teeth in children. After application, this device cannot be reused.	I
2299	38788	Dental antifog solution	Шүдний манангийн эсрэг уусмал	A liquid substance used to prevent the occurrence of condensed vapour (fog) on the mirrored surface of a dental instrument during treatment. This device will typically be contained in a spray can, bottle, or squeeze bottle. After application, this device cannot be reused.	I
2300	38790	Dental impression material mixer	Шүдний импрессийн материал холигч	A mains electricity (AC-powered) device designed for mixing to produce a dental impression material chairside immediately before application to the oral cavity of a patient during a dental procedure. It is typically used to blend a salt of alginic acid (i.e., alginate) with water (and appropriate additives if necessary) to produce a dental impression material of rapid irreversible setting. The device typically consists of an electrical mixer with a well, a container (e.g., cup) used to mix the alginate with water before placing in the mixer well, and external controls to operate the mixer.	I
2301	38796	Manual dental scaler, single-use	Гараар шүдний хэмжигч, нэг удаагийн	A hand-held dental instrument designed for removing calculus and other accretions from the surface and between the teeth during dental cleaning and periodontal (gum) therapy. It is typically designed as a one-piece instrument with a pointed distal end of various shapes and sizes. Also known as a periodontic scaler, it can be a single-ended or double-ended instrument with a handle at the proximal end or positioned centrally. It is usually made of high-grade stainless steel. This is a single-use device.	I

2302	38797	Dermatome handle	Дерматомын бариул	A hand-held manual surgical instrument designed to cut from the body (harvest) thin donor slices of skin for skin grafting, or to excise small skin lesions, using a dedicated insertable blade (not included). This is a reusable device.	I
2303	38884	Radiation shielding goggles/spectacles	Цацрагаас хамгаалах шил/нүдний шил	A personal protective device in the form of eyewear/glasses with clear lenses intended to be used to shield the eyes of healthcare staff from unnecessary exposure to primary and scattered radiation associated with diagnostic and therapeutic medical procedures. It is designed as uncorrected (non-prescription) or corrected (prescription) goggles or spectacles with lenses and side shields made of radiation-protecting materials (e.g., glass, plastic). The lenses and side shields offer additional physical barrier protection from liquid radioactive materials.	I
2304	39694	Tinted non-prescription spectacles	Эмийн жороор олгодоггүй өнгөт нүдний шил	An optical device, commonly known as sunglasses, that consists of a spectacle frame or clips with a pair of tinted spectacle lenses (typically made of plastic or glass) designed to be worn in front of the eyes to attenuate light radiation by absorption, reflection, or polarization to protect the eyes from bright light; it is neither intended to provide refractive corrections nor enhance colour discrimination.	I
2305	39837	Ultrasonic knife system handpiece	Хэт авианы хутганы системийн гар хэрэгсэл	A hand-held surgical device that is a component of a surgical ultrasonic knife system that is typically used for the cutting of sensitive body tissue (e.g., a tumour) by using ultrasonic energy as the cutting medium during a surgical intervention. This handpiece is connected to the unit that generates the ultrasonic energy required. This is a reusable device.	I
2306	40168	Breast transilluminator	Хөхний трансиллюминатор	A mains electricity (AC-powered) transilluminating device with a built-in light source using low intensity emissions of visible light and near-infrared radiation (700 to 1050 nm) that is transmitted through the female breast to visualize translucent tissue for the diagnosis of cancer, or other conditions, diseases or abnormalities. This device may also be known as a diaphanoscope.	I
2307	40238	Laser lens, ophthalmic, surgical	Лазер линз, нүдний, мэс заслын	A device designed to modify the convergence of the rays of light of an ophthalmic laser beam used to coagulate or cut tissues of the eye, the orbit, or the surrounding skin.	I

2308	40453	Surgical apron, reusable	Мэс заслын хормогч, дахин ашиглах боломжтой	A garment designed to be worn by surgical staff for protection from soiling or spills on the ventral (front) aspect of the body during surgical procedures. This is a reusable device that must be laundered/sterilized after each use.	I
2309	40468	Orthodontic face bow	Ортодонт нүүрний нум	A dental device used in conjunction with extraoral traction anchored on the back of the head or neck, as a long metal bow that inserts intraorally into an orthodontic appliance. Generally used to move teeth or bones posteriorly or prevent their forward movement.	I
2310	40480	Bed washer	Ор угаагч	A mains electricity (AC-powered) washing machine for fully or semi-automated washing of hospital patient beds which are suitable or certified by the manufacturer for machine washing. This cleansing process is usually carried out in a centralized station where all bedding is removed prior to the washing process, following which the bed is made ready for its next use with a cleaned mattress, clean linen and accessories. This device is typically built-in to the building facilities because of its size.	I
2311	40483	Operating table washer	Хагадгааны ширээ угаагч	A mains electricity (AC-powered) large machine for fully or semi-automated washing of operating tables of the types that are designed for such a process. This cleansing process is usually carried out after each operative use. This device is typically built-in to the building facilities because of its size.	I
2312	40484	Medical air low pressure hose	Эмнэлгийн агаарын нам даралтын хоолой	A length of reinforced colour-coded flexible tubing produced according to ISO5359 intended to conduct compressed medical air from a medical air cylinder/terminal unit to a medical device that functions with medical air (e.g., ventilator, anaesthesia unit, anaesthesia system, suctions system, or other medical air dependent device). The gas pressure in the tubing will be low, a "working pressure", having been reduced by a regulator from a higher pressure. The tubing is reinforced with, e.g., woven polyester or cotton and intended for use within a static clinical environment (e.g., intensive care). It is available in various lengths, including standard coil lengths. This is a reusable device.	I

2313	40485	Circulating-fluid localized thermal therapy system pack, single-use	Цусны эргэлтийн шингэний орон нутгийн дулааны эмчилгээний системийн багц, нэг удаагийн хэрэглээ	A device intended to be applied to part of the body as part of a circulating-fluid localized thermal therapy system to provide localized heat and/or cold therapy for the skin and/or underlying tissues (e.g., muscle) in the treatment of musculoskeletal pain and discomfort. It typically consists of a compact envelope that is heated and/or cooled with circulating fluid (e.g., water) from the system control unit. It is intended for use in both professional and home settings. This is a single-use device.	I
2314	40490	Curtain, general-purpose, single-use	Хөшиг, ерөнхий зориулалттай, нэг удаагийн	A curtain used to separate a room or a part of it for privacy. It may be used, e.g., in front of a window, around a bed, or before a cubicle. This is a single-use device.	I
2315	40491	Curtain, general-purpose, reusable	Хөшиг, ерөнхий зориулалттай, дахин ашиглах боломжтой	A curtain used to separate a room or a part of it for privacy. It may be used, e.g., in front of a window, around a bed, or before a cubicle. This is a reusable device.	I
2316	40494	Medical/surgical procedure scale, electronic	Эмнэлгийн/мэс заслын процедурын жин, цахим	An electronic device designed to weigh body tissues and/or clinical objects [e.g., dressings, surgical sponges, nappies (diapers)] in association with a medical/surgical procedure and/or at autopsy. It is not intended to weigh a patient (including infants), and is not intended for laboratory use.	I
2317	40499	Shaver system cable/hose	Сахлын системийн кабель/хоолой	A device used in a shaver system to connect the shaver handpiece (the cutting instrument and handle) to the control unit or a direct power source. A form of power (e.g., pressurized gas or a low-voltage electrical current) depending upon the design, is transferred via this connection. This is a reusable device.	I
2318	40501	Bib, infant/child	Биб, нялхас/хүүхэд	A garment that is worn over the front of the body of an infant (e.g., a paediatric or a child with a disability) to protect their clothing and body from becoming soiled typically when feeding or being fed or from dribbling. It can be made of textiles and/or plastic materials and is fastened around the neck; some designs may include a pocket-like termination near the bottom to catch spilled food/liquid. This is a reusable device.	I

2319	40502	Optical proctoscope, single-use	Оптик проктоскоп, нэг удаагийн хэрэглээ	An endoscope with a rigid inserted portion intended for the visual examination and treatment of the rectum and anus. It is inserted into the body through the anus during proctoscopy. The anatomical images are illuminated by a built-in or external light source and can be viewed by the user through direct or magnified viewing, or a fibreoptic bundle. This device is longer than an anoscope to provide a deeper view. This is a single-use device.	I
2320	40503	Bib/apron, adult, single-use	Биб/хормогч, насанд хүрэгчдэд зориулсан, нэг удаагийн	A garment that is worn over the front of the body of an adult (e.g., a person with a disability or a geriatric) to protect their clothing and body from becoming soiled typically when feeding or being fed or from dribbling or from therapeutic social activities, e.g., arts and crafts. It can be made of textiles and/or plastic materials. This is a single-use device.	I
2321	40504	Hand-held urinal, reusable	Дахин ашиглах боломжтой гар шээсний суваг	A portable, hand-held container intended to be directly urinated into by a patient for excretory purposes; it may be specific to male or female patients, or unisex. It is typically in the form of a bottle with a handle, or a bag, or pouch; it may include a noninvasive funnel and tubing, and may have a drain with a stopper in it to facilitate emptying. It is not intended to be worn by the patient. This is a reusable device.	I
2322	40506	Laundry bag rack/stand	Угаалгын уутны тавиур / тавиур	A device designed like a rack or a stand (e.g., a metal framework) that is used to hold one or more laundry bags (also known as hamper bags) whilst they are in use (being filled with soiled laundry). Full bags are closed and put on a trolley (cart) to be transported to the laundry. This is a reusable device.	I
2323	40511	Hygiene apron, single-use	Эрүүл ахуйн хормогч, нэг удаагийн	A non-sterile garment designed to be worn by healthcare staff for general protection from soiling or spills on the ventral (front) aspect of the body, and typically to prevent penetration of infectious material, during the course of work or a procedure. It is typically made of a thin plastic polymer. This is a single-use garment.	I

2324	40513	Ultralow-temperature laboratory freezer	Хэт бага температурт лабораторийн хөлдөөгч	A mains electricity (AC-powered) freezer designed for the storage of laboratory products and sample materials [e.g., in vitro diagnostic (IVD) reagents, cryo-preserved tissue/body fluid samples] that require extremely low temperatures, usually in the range from -40 to -90° Celsius. It will typically have a corrosion resistant (typically stainless steel) interior minimizing the risk of adulteration, contamination, and/or corrosion of the contents, and a shelving configuration appropriate for storage/easy localization of the products. It will typically be programmable, have defrost capabilities, a built-in alarm system to warn against temperature variations, and a recorder to record events.	I
2325	40517	Sterilization packaging, reusable	Ариутгалын савлагаа, дахин ашиглах боломжтой	A device, typically in the form of a paper sheet, envelope, bag, wrap, or similar, intended to be used to contain medical devices that are to be sterilized. It is designed to allow sterilization of the enclosed medical device and also to maintain sterility of the device until the packaging is opened for use of the device, or until a predetermined shelf date is expired. This is a reusable device.	I
2326	40518	Assistive laundry cupboard-dryer	Туслах угаалгын шүүгээ-хатаагч	An electric laundry appliance designed to be used by a person with a disability for the purpose of drying clothing through the application of heat and ventilation. It is typically a closed chamber containing a heat source and is equipped with open shelving used for drying and airing clothes.	I
2327	40522	Laminar airflow hood	Ламинар агаарын урсгалын бүрээс	A ventilated laboratory enclosure designed to prevent airborne biological contamination of laboratory specimens contained within, and personnel handling the specimen, by creating a barrier with a forced flow of uniform-velocity and parallel-direction air. It is typically a plastic/metallic cabinet-like structure with an open front for product handling and a sash to regulate the opening. Air is typically drawn from the environment into the system by negative pressure created by a line-powered blower; air particles and liquid droplets are removed usually using high-efficiency particulate air (HEPA) filters. Contaminated air is usually exhausted to the outside; also known as an LAF bench.	I

2328	40523	Chemical fume hood	Химийн утааны бүрээс	A ventilated laboratory enclosure designed to remove from the working environment chemical fumes, vapours, gases, mists, aerosols, and particulates that are actively or potentially flammable, irritating, corrosive, toxic, or otherwise noxious. It is typically a plastic/metallic cabinet-like structure with an open front for product handling; it typically includes a sash to regulate the front opening, line-powered blowers to produce an inward flow of room air into the hood, and an exhaust system. Most hoods exhaust the contaminated air to the outside, but some filter the air and recirculate it into the room.	I
2329	40530	Trolley lift	Өргөгч тэргэнцэр	An electromechanical motorized unit designed to transport trolleys (carts) in the vertical plane [i.e., moving (lifting) them up and down]. The trolleys handled by this unit will typically be used for the transport of food, laundry, and waste. This device may also have the ability to tip/turn the trolley to dump the contents into a large bin or skip.	I
2330	40533	Wheelchair, occupant-driven, foot-operated, non-collapsible	Тэргэнцэртэй, зорчигчид жолооддог, хөлөөрөө ажилладаг, эвхэгддэггүй	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by pushing or pulling on the ground with a foot or both feet. The device cannot be folded or readily dismantled for transport.	I
2331	40535	Solid-seat mobile patient lifting system seat	Хатуу суудалтай хөдөлгөөнт өвчтөн өргөх системийн суудал	A lifting device used together with a solid-seat mobile lifting system to provide a support for an incapacitated patient or a person with a disability that is being lifted in a sitting position for transfer and (re)positioning. It is designed as a seat with a solid surface (this may be padded) upon which the person to be lifted is sat and contained during the lifting process.	I
2332	40536	Patient lifting system stretcher	Өвчтөн өргөх системийн дамнуурга	A lifting device used together with a patient lifting system to provide a support for an incapacitated patient or a person with a disability that is being lifted in a lying (horizontal) position for transfer and (re)positioning. It is designed as an elongated framework with a solid or soft surface upon which the person to be lifted is placed and contained during the lifting process.	I

2333	40538	Manual patient lifting belt/harness	Өвчтөний гараар өргөх бүс/бүс	A device used to assist healthcare professionals or attending persons to physically move and lift a patient or a person with a disability (e.g., from the floor to a bed). The device is typically made strong textile materials (e.g., nylon or canvas) consisting of belts/harnesses. The device will typically require two persons to safely perform the lift. This is a reusable device.	I
2334	40539	Commode, manual	Комод, гар ажиллагаатай	A non-active, manually-operated transportable device in the form of a chair with a receptacle for collecting urine and faeces intended to enable a patient with a disability to urinate/defecate away from a bathroom or fixed toilet (e.g., in the bedroom); it may additionally be used to assist with sitting on the toilet or washing in a shower or bath, however it is not a dedicated toilet seat or shower seat. Also known as a sanichair, it may incorporate hydraulically-assisted seat height and/or tilt adjustment, and/or wheels (castors).	I
2335	40540	Sternum binder	Өчүүний ясыг холбогч	A strip or roll of fabric or plastic material designed to support the sternum (the breastbone). This is a single-use device.	I
2336	40542	Medication trolley	Эмийн тэргэнцэр	A small cart used within a healthcare facility for the distribution medicines to the patients. This trolley (cart) typically has many lockable drawers/storage compartments and a writing surface.	I
2337	40545	Menstrual pad, unscented	Ариун цэврийн хэрэглэл, үнэргүй	A non-deodorized, feminine hygiene product (a pad) that is held in place externally to absorb menstrual or other vaginal discharge. This is a single-use device.	I
2338	40546	Examination/treatment glove, non-latex	Үзлэг/эмчилгээний бээлий, латексгүй	A device made out of a synthetic material (non-latex), e.g., vinyl, polyurethane, or nitrile, used on the hands of an examiner as a protective barrier between the examiner and patient during examination and/or treatment procedures. This is a single-use device.	I
2339	40549	Surgical glove, non-latex	Мэс заслын бээлий, латексгүй	A device made of a synthetic material (non-latex), e.g., polyurethane, that acts as a protective barrier when worn on the hands of a surgeon. This is a single-use device.	I

2340	40555	Hot/cold therapy pack, single-use	Халуун/хүйтэн эмчилгээний багц, нэг удаагийн	A non-sterile device intended to be applied with or without pressure to the body surface (i.e., non-invasively) to provide heat and/or cold therapy for the skin and/or underlying tissues in the treatment of musculoskeletal pain and discomfort (e.g., from sports injuries or rheumatism). It consists of a compact envelope filled with a thermally-retentive material (e.g., silicate-based gel, peat) that can be heated and/or cooled. It may be shaped/sized to fit a specific anatomy or include a strap; it is not intended to support the neck. This is a single-use device.	I
2341	40589	Medical tubing clip/clamp, temporary, non-calibrated, single-use	Эмнэлгийн хоолойн хавчаар/хавч, түр зуурын, тохируулаагүй, нэг удаагийн хэрэглээ	A manual device designed to compress a piece of medical device tubing or tubular container to reversibly occlude its lumen and stop the flow of material within; it is not intended for patient-contact. It has a manual mechanism (e.g., hinging, roller-type, vice-like) whereby pressure on the tube can be applied or removed, however it is not a calibrated device (e.g., it is often a roller type, clip, or screw-clamp). It may be referred to as a clip or a clamp. This is a single-use device.	I
2342	40593	Pneumatic dental power tool hose	Шүдний хийн цахилгаан багажны хоолой	A single- or double-lumen (coaxial) tube in a straight or spiral design intended to be used to conduct compressed gas from a source to a dental drilling system handpiece to provide power to the turbine. The device is of an adequate length to provide manoeuvrability of the handpiece. The coaxial types have a double tube (inner and outer tubing) to facilitate the removal of the exhaust gases. This is a reusable device.	I
2343	40596	Electromechanical device/system transport trolley	Цахилгаан механик төхөөрөмж/систем тээвэрлэх тэргэнцэр	A mobile (on wheels) cart intended to be used as a carrier for transporting an electromechanical device(s) or a powered system assembly. This trolley (cart) may be designed specifically for a proprietary control unit/system, and will typically have one or more horizontal surfaces where the devices are placed; it may include additional features (e.g., gas cylinder holder, intravenous pole) specific to a proprietary system. Neither electromechanical devices nor system components are included.	I

2344	40599	Instrument storage cabinet	Багаж хадгалах шүүгээ	A furniture-like device designed for general-purpose use, typically where surgery is practised and carried out, to store and possibly display surgical instruments and other devices/products which will be used during surgical examinations/procedures. It will typically consist of double doors with glass windows in them that close off the shelving, and multiple drawers where the instruments are kept. It can be made of stainless steel, plastic materials, glass and wood. This device will typically be used in operating and procedure rooms, including dental, ophthalmological clinics, and doctors surgeries.	I
2345	40602	Chest-press exerciser	Цээжний шахалтын дасгалын төхөөрөмж	A mechanical exercise apparatus primarily intended to strengthen the muscles of the chest (especially the pectoralis major) through a repetitive pushing or pulling motion performed with the arms against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that incorporates changeable weights and bars and/or handles/hand stirrups for the user to grip and push or pull; also typically included is a bench for the user to sit or lay while performing the exercise (some exercises referred to as bench press). The device may also be used to help strengthen other upper-body muscles (e.g., deltoids, biceps, triceps).	I
2346	40603	CT phantom, test object	CT фантом, туршилтын объект	A device that consist of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions that comes in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of diagnostic x-ray computed tomography (CT) imaging systems and associated image acquisition, display, and analysis computer programs.	I

2347	40604	CT phantom, anthropomorphic	КТ фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model that is designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of x-ray computed tomography (CT) systems and associated image acquisition, display, and analysis computer programs. The design can incorporate fluid pumps or other types of moveable components.	I
2348	40605	Nuclear medicine phantom, transmission	Цөмийн анагаах ухаан фантом, дамжуулалт	A device consisting of a patterned array of lead absorbers supported in lucite or another radiolucent material. Transmission phantoms are placed between a radioactive source and the image detector head. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of photon detector systems used in nuclear medicine applications and associated image acquisition, display, and analysis computer programs.	I
2349	40606	Nuclear medicine phantom, flood source	Цөмийн анагаах ухааны фантом, үерийн эх үүсвэр	A device which is either a radioactive sealed source or a water-filled radiolucent disc or other shape to which radioactivity can be added. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of photon detector systems used in nuclear medicine applications and associated image acquisition, display, and analysis computer programs.	I
2350	40607	Nuclear medicine phantom, point source	Цөмийн анагаах ухааны фантом, цэгийн эх сурвалж	A device which is either a radioactive sealed source or a refillable well made of radiolucent material to which radioactivity can be added. A point source is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of photon detector systems used in nuclear medicine imaging applications and associated image acquisition, display and analysis computer programs.	I

2351	40608	Nuclear medicine phantom, line source	Цөмийн анагаах ухааны фантом, шугамын эх сурвалж	A device which is either a linear radioactive sealed source or refillable linear radiolucent tube to which radioactivity can be added. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of photon detector systems used in nuclear medicine imaging applications and associated image acquisition, display and analysis computer programs.	I
2352	40609	Mammographic x-ray phantom, test object	Маммографийн рентген фантом, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of dedicated digital or conventional diagnostic x-ray mammography systems or general-purpose x-ray systems adaptable for mammography applications. It is also used in performance evaluations of associated image acquisition, display, and analysis computer hardware and software.	I
2353	40610	Mammographic x-ray phantom, anthropomorphic	Маммографийн рентген фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human breast. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of mammographic x-ray systems and associated image acquisition, display and analysis computer programs. The design can incorporate fluid pumps or other kinds of moveable components. This group of devices includes biopsy and other kinds of interventional procedure training phantoms.	I

2354	40611	Video test pattern generator	Видео туршилтын загвар үүсгэгч	An electric signal generator designed to deliver video signals in a great variety of test patterns, according to specific standards, for assessing and testing video monitors and other video equipment (e.g., network video servers, computer video surveillance systems, video recorders) and/or their components. It typically consists of an electronic unit with front and/or remote controls that allow selection of timings, patterns, colour spaces, digital and/or high-definition output, and audio signal type; and a display that shows the test pattern and parameters chosen. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	I
2355	40612	Dental x-ray phantom, test object	Шүдний рентген хий фантом, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of dental x-ray imaging systems and associated image acquisition, display, and analysis computer programs.	I
2356	40613	Dental x-ray phantom, anthropomorphic	Шүдний рентген хий фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of diagnostic dental x-ray systems and associated image acquisition, display and analysis computer programs. The design can incorporate fluid pumps or other kinds of moveable components. This group of devices of phantoms includes biopsy and other kinds of interventional procedure training phantoms.	I

2357	40614	General-purpose diagnostic x-ray phantom, test object	Ерөнхий зориулалтын оношлогооны рентген фантом, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both calibration protocols and in subjective and quantitative evaluations of various calibration and performance characteristics of conventional and digital general-purpose x-ray imaging systems. It is also used in the assessment of the performance characteristics of associated image acquisition, display, and analysis computer programs.	I
2358	40615	General-purpose diagnostic x-ray phantom, anthropomorphic	Ерөнхий зориулалтын оношлогооны рентген фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall function of both conventional and digital general-purpose x-ray systems and associated image acquisition, display and analysis computer programs. The design can incorporate fluid pumps and moveable components. This group of devices includes biopsy and other kinds of interventional procedure training phantoms.	I
2359	40616	Multi-modality diagnostic imaging phantom, test object	Олон төрлийн оношлогооны дүрслэл, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations and is a quality assurance device used in both subjective and quantitative evaluations of various calibration and performance characteristics of diagnostic imaging systems. A multi-modality phantom is specifically intended for use with more than one diagnostic imaging modality, e.g., magnetic resonance imaging (MRI), ultrasound, x-ray and nuclear medicine (NM) systems.	I

2360	40617	Multi-modality diagnostic imaging phantom, anthropomorphic	Олон төрлийн оношлогооны дүрслэл, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ system that are used to evaluate the overall function of various calibration and performance characteristics of diagnostic imaging systems. A multi-modality phantom is specifically intended for use with more than one diagnostic imaging modality, e.g., magnetic resonance imaging (MRI), ultrasound, x-ray, and nuclear medicine (NM) systems.	I
2361	40618	Angiographic x-ray phantom, test object	Ангиографийн рентген фантом, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of angiographic x-ray systems and associated image display systems, image acquisition software, and related system and application software programs.	I
2362	40619	Angiographic x-ray phantom, anthropomorphic	Ангиографийн рентген фантом,антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall performance of angiographic x-ray systems and associated image acquisition, display, and analysis equipment and computer programs. The design incorporates fluid pumps or other moveable components. This group of devices includes biopsy and other kinds of interventional procedure training phantoms.	I

2363	40620	Fluoroscopic x-ray phantom, test object	Флюроскопийн рентген фантом, туршилтын объект	A device that consist of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of fluoroscopic x-ray systems and associated image display systems, image acquisition software, and related system and application software programs.	I
2364	40621	Fluoroscopic x-ray phantom, anthropomorphic	Флюроскопийн рентген фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall performance of fluoroscopic x-ray systems and associated image acquisition, display, and analysis equipment and computer programs. The design can incorporate fluid pumps or other kinds of moveable components. This group of devices includes biopsy and other kinds of interventional procedure training phantoms.	I
2365	40622	Bone densitometry x-ray phantom, test object	Ясны нягтралын рентген фантом, шинжилгээний объект	A device that consist of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of x-ray based bone density measurement systems and associated image acquisition, display, and analysis computer programs.	I

2366	40623	Bone densitometry x-ray phantom, anthropomorphic	Ясны нягтралын рентген фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device and is intended to permit both subjective and quantitative evaluation of the overall performance of x-ray based bone density measurement systems and any associated image acquisition, display, and analysis computer programs. The design can incorporate fluid pumps or other moveable components.	I
2367	40624	Multi-modality therapeutic radiation phantom, anthropomorphic	Олон төрлийн эмчилгээний цацрагийн хий үзэгдэл, антропоморф	A device consisting of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to simulate the functional, physical, or a combination of these characteristics of normal or diseased human organs. It is available in both fixed and variable designs and typically include holders for ionization chambers, dosimeters or radiation measurement instruments. It is a quality assurance (QA) device enabling detailed mapping of therapeutic radiation dose distributions. This dose information is used for quantitative and subjective assessments of the performance of a radiation therapy treatment planning devices and therapeutic radiation delivery systems.	I
2368	40625	Diagnostic ultrasound phantom, anthropomorphic	Оношлогооны хэт авианы фантом, антропоморфик	A device that consists of preserved human or animal tissue, or a tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ, organ systems or blood flow. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the performance of ultrasound image acquisition and display systems and associated image acquisition, display, and analysis computer programs. Designs can incorporate fluid pumps and software or microprocessor controls. This group of devices includes Doppler flow, ultrasound mammography, biopsy, and interventional training phantoms.	I

2369	40626	Bone densitometry ultrasound phantom, test object	Ясны нягтралын хэт авианы фантом, туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials, or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations and is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of ultrasound bone density measurement systems (bone densitometers) and associated image acquisition, display, and analysis computer programs.	I
2370	40627	Bone densitometry ultrasound phantom, anthropomorphic	Ясны нягтралын хэт авиан фантом, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is a quality assurance (QA) device intended to permit both subjective and quantitative evaluation of the overall performance of ultrasound based bone density measurement systems (bone densitometers) and any associated image acquisition, display, and analysis computer programs. The design incorporates fluid pumps or other moveable components.	I
2371	40628	Diagnostic ultrasound phantom, test object	Оношлогооны хэт авианы фантом,туршилтын объект	A device that consists of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials, or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device that enables both subjective and quantitative evaluations of various calibration and performance characteristics of diagnostic ultrasound systems and associated image acquisition, display, and analysis computer programs.	I

2372	40629	MRI phantom, anthropomorphic	MRI фантом, антропоморф	A device that consists of preserved human or animal tissue, or a tissue-equivalent model device to mimic the functional, physical, or a combination of these characteristics of a normal or diseased human organ or organ systems. It is available in both fixed and variable configurations and is a quality assurance (QA) device used in calibration protocols and in subjective and quantitative evaluations of the overall performance of magnetic resonance imaging (MRI) or magnetic resonance spectroscopy systems, associated image acquisition, and analysis computer programs. This group of devices includes phantoms for MRI mammography and biopsy phantoms.	I
2373	40631	Multi-modality therapeutic radiation phantom, test object	Олон төрлийн эмчилгээний цацрагийн фантом, туршилтын объект	A device consisting of a variety of multi-modality radiation therapy phantom designs. It can consist of an object of uniform material density or a two or three-dimensional (3-D) model containing patterns of objects, materials, or openings. It is available in both fixed and variable configurations including holders for ionization chambers, dosimeters or other radiation measurement instruments. It is a quality assurance (QA) device used in the calibration of photon and electron beam emitting radiation therapy systems and the measurement of performance attributes, e.g., beam flatness, symmetry, dose depth or geometric accuracy.	I
2374	40633	Hand traction plate	Гар татах хавтан	An orthopaedic device designed as a flat plate with converging slots and clamps onto which the patient's hand is placed and held (locked) through the application of the clamps to the fingers so that traction can be applied to the hand and fingers. Also known as a Weinberger hand traction device, it is used during orthopaedic surgical procedures on the hand/wrist when broken bones are being drawn apart, repositioned, and set to the correct position. It is available in various sizes (adult or child) and has a solid plate construction (typically radiotranslucent) which can be securely attached/locked to other components of the table. This is a reusable device.	I

2375	40634	Brachytherapy radionuclide phantom, anthropomorphic	Брахитерапийн радионуклидын фантом, антропоморфик	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to simulate the functional, physical, or a combination of these characteristics of normal or diseased human organs. Available in both fixed and variable designs it allows for the insertion of brachytherapy sources or source assemblies, including holders for ionization chambers, dosimeters or other radiation measurement instruments. Some may evaluate the accuracy of ultrasound probes used to guide source placement. It is a quality assurance (QA) device enabling detailed simulations of remote afterloading and manual brachytherapy radiation dose distributions.	I
2376	40635	Brachytherapy radionuclide phantom, test object	Брахитерапийн радионуклидын фантом,, туршилтын объект	A non-tissue configured model designed to mimic the functional/physical characteristics of normal or diseased human organs during performance evaluations of brachytherapy system components or radiation therapy treatment planning devices. It consists of either an object of uniform material density or a two or three-dimensional (3-D) model containing patterns of objects, materials, and openings intended to allow for the insertion of brachytherapy sources or assemblies, holders for ionization chambers, dosimeters or radiation measurement instruments. Available in both fixed and variable configurations, it may also be used to evaluate ultrasound probes used for guide source placement.	I
2377	40636	MRI phantom, test object	MRI фантом, туршилтын объект	A device that consists of a uniform density, or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions and material densities. It is available in both fixed and variable configurations and is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of magnetic resonance imaging (MRI) systems or magnetic resonance spectroscopy systems and associated image acquisition, display, and analysis computer programs.	I

2378	40637	Bone densitometry radionuclide phantom, anthropomorphic	Ясны нягтралын радионуклидын фантом, антропоморф	A device that consists of preserved human or animal tissue, or a two or three-dimensional (3-D) tissue-equivalent model designed to mimic the functional, physical, or a combination of these characteristics of normal or diseased human organs or organ systems. It is a quality assurance (QA) device and is intended to permit both subjective and quantitative evaluation of the overall performance of diagnostic radionuclide bone density measurement systems and any associated image acquisition, display, and analysis computer programs. The design can incorporate fluid pumps or moveable components.	I
2379	40638	Bone densitometry radionuclide phantom, test object	Ясны нягтометрийн радионуклидын фантом,, туршилтын объект	A device including a variety of reusable devices that consist of a uniform density or a two or three-dimensional (3-D) pattern of objects, materials or openings of varying dimensions. It includes phantoms that come in both fixed and variable configurations. It is a quality assurance (QA) device used in both subjective and quantitative evaluations of various calibration and performance characteristics of radionuclide based bone density measurement systems and associated image acquisition, display, and analysis computer programs.	I
2380	40654	Basic diagnostic x-ray system table, non-powered	Оношлогооны үндсэн рентген системийн ширээ, цахилгаангүй	A non-powered table that is a component of a basic diagnostic x-ray system designed to position and support a patient during a variety of routine/planar or speciality diagnostic procedures requiring the use of a diagnostic x-ray system; it is not a planar tomography nor computed tomography (CT) table. It can be a stationary or mobile unit and is made of radiolucent materials with low x-ray attenuation coefficients. It is not intended for use during interventional radiology/surgery.	I

2381	40655	Basic diagnostic x-ray system table, powered	Оношлогооны рентген системийн үндсэн ширээ, цахилгаантай	A powered/programmable table that is a component of a basic diagnostic x-ray system designed to position and support a patient during a variety of routine/planar or speciality diagnostic procedures requiring the use of a diagnostic x-ray system; it is not a planar tomography nor computed tomography (CT) table. It can be a stationary or mobile unit and is made of radiolucent materials with low x-ray attenuation coefficients. It is not intended for use during interventional radiology/surgery.	I
2382	40656	CT system table	CT системийн ширээ,	A powered/programmable table that has electronic and/or software controls for table top height and positioning and is specifically designed to position and support a patient during diagnostic examinations involving the use of an x-ray computed tomography (CT) system; it is not primarily intended for interventional procedures/surgery. It is typically an integral component of a CT system design or gantry configuration and can be flat or curved and made of radiolucent materials with low x-ray attenuation coefficients.	I
2383	40657	Fluoroscopy/angiography table, non-powered	Флюроскопи/ангиографийн ширээ, цахилгаангүй	A non-electric table designed to support and position a patient during fluoroscopy/angiography typically in conjunction with a cardiovascular intervention or other minimally-invasive surgical intervention (e.g., biopsy). It has a flat table top with either a fixed position or mechanical table top positional controls (e.g., lever mechanism). It is not dedicated to breast biopsy, and not designed for other specialized surgeries (i.e., it is not a specialized operating table with x-ray transparent features).	I
2384	40658	Fluoroscopy/angiography table, powered	Флюроскопи/ангиографийн ширээ, цахилгаантай	A powered table designed to support and position a patient during fluoroscopy/angiography typically in conjunction with a cardiovascular intervention or other minimally-invasive surgical intervention (e.g., biopsy). It has a flat table top with electronic controls for table top positioning and/or motion relative to the x-ray beam. It is not dedicated to breast biopsy, and is not intended for other specialized surgeries (i.e., it is not a specialized operating table with x-ray transparent features).	I

2385	40659	Angiographic x-ray system table, non-powered	Ангиографийн рентген системийн ширээ, цахилгаангүй	A device that is a component of a diagnostic x-ray system that has a non-electrical table with fixed position table top or mechanical table top position and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks or lever mechanisms, specifically designed to support and position a patient during cardiac or other vascular examinations or interventional procedures requiring the use of an angiographic x-ray system. It may incorporate accessories for use in various cardiac and non-cardiac, e.g., cerebral or renal, angiographic imaging or angiography guided interventional procedures.	I
2386	40660	Angiographic x-ray system table, powered	Ангиографийн рентген системийн ширээ, цахилгаантай	A device that is a component of a diagnostic x-ray system that has a powered/programmable table with electronic and/or software controls for table top positioning, table height and/or motion relative to the x-ray beam specifically designed to position and support a patient during cardiac or other vascular examinations or interventional procedures requiring the use of an angiographic x-ray system. It may incorporate accessories for use in various cardiac and non-cardiac, e.g., cerebral or renal, angiographic imaging or angiography guided interventional procedures. It may be a stationary or mobile unit.	I
2387	40661	Planar tomography x-ray system table, non-powered	Хавтгай томографийн рентген системийн ширээ, цахилгаангүй	A device that is a component of a diagnostic x-ray system that is a non-electrical table with fixed position table top or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks or lever mechanisms specifically designed to support and position a patient during planar tomography examinations. It can be a stationary or mobile unit and is made of radiolucent materials with low x-ray attenuation coefficients.	I

2388	40662	Planar tomography x-ray system table, powered	Хавтгай томографийн рентген системийн ширээ, хөдөлгүүртэй	A device that is a component of a diagnostic x-ray system that is a powered/programmable table with electronic and/or software controls for table top height and positioning specifically designed to position and support a patient during planar tomography examinations. It can be a stationary or mobile unit and is made of radiolucent materials with low x-ray attenuation coefficients.	I
2389	40663	Mammographic biopsy x-ray table, non-powered	Маммографийн биопсийн рентген ширээ, цахилгаангүй	A non-electric table with fixed position table top or mechanical table top positioning and/or table height controls (e.g., pneumatic controls, magnetic locks, cranks or lever mechanisms) specifically designed to support and position a patient during breast imaging examinations usually in conjunction with breast biopsy. It can be stationary or mobile and is made of radiolucent materials with low x-ray attenuation coefficients. The design can incorporate various other devices [e.g., stereotactic or other patient positioning system (PPS), film holders, cassettes or dosimetry instruments].	I
2390	40664	Mammographic biopsy x-ray table, powered	Маммографийн биопсийн рентген ширээ, цахилгаантай	A powered/programmable x-ray mammography table with electronic positional controls specifically designed to position and support a patient during breast imaging examinations usually in conjunction with breast biopsy. It can be stationary or mobile and is made of radiolucent materials with low x-ray attenuation coefficients and typically has special openings or attachments to facilitate breast imaging.	I
2391	40665	Bedside imaging x-ray system table, non-powered	Орны дэргэдэх дүрсний рентген системийн ширээ, цахилгаангүй	A device that is a type of non-electrical patient bed with a mattress that is specifically intended to function as an x-ray table during x-ray imaging procedure conducted at a patient's bedside. It is commonly used in critical care or intensive care settings and include those with fixed position tops or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It typically has special designs, openings and mattresses to facilitate bedside radiography and C-arm placement during various imaging procedures and is made of radiolucent materials with low x-ray attenuation coefficients.	I

2392	40666	Bedside imaging x-ray system table, powered	Орны дэргэдэх дүрсний рентген системийн ширээ, цахилгаантай	A device that is a type of powered/programmable patient bed with a mattress that is specifically intended to function as an x-ray table during x-ray imaging procedures conducted at a patient's bedside. It is commonly used in critical care or intensive care settings and typically has special designs, openings, and mattresses to facilitate bedside radiography and C-arm placement during various imaging procedures. It may have electronic and/or software controls for bed height and positioning and is typically mobile. The bed top and mattress is made of radiolucent materials with low x-ray attenuation coefficients.	I
2393	40670	Nuclear medicine system table, non-powered	Цөмийн анагаах ухааны системийн ширээ, цахилгаангүй	A multi-purpose device that is a component of a general-purpose nuclear medicine (NM) system and is used for patient support during nuclear medicine imaging procedures, e.g., gamma camera-based NM systems. It has a fixed position table top with mechanical table top position and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks or lever mechanisms. It is designed to position and support a patient during a variety of planar (non-SPECT, non-PET) imaging procedures. It can be a stationary or mobile unit, or incorporated as an integral component of the planar NM imaging system gantry design.	I
2394	40671	Nuclear medicine system table, powered	Цөмийн анагаах ухааны системийн ширээ, цахилгаан	A multi-purpose device that is a component of a general-purpose nuclear medicine (NM) system and is used for patient support during nuclear medicine imaging procedures, e.g., gamma camera-based NM systems. It has a flat or curved-top, electrically-powered/programmable with electronic and/or software controls for table top height and motion. It is designed to position and support a patient during a variety of planar (non-SPECT, non-PET) imaging procedures. It can be a stationary or mobile unit, or incorporated as an integral component of the planar NM imaging system gantry design.	I

2395	40672	PET system table, non-powered	PET системийн ширээ, цахилгаангүй	A device that is a component of a positron emission tomography (PET) system specifically designed to support and position a patient during PET imaging procedures. It is a non-electrical flat or curved top table with fixed position table top or mechanical table top position and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be a stationary or mobile unit and is most typically incorporated as an integral component of the PET imaging system design or gantry configuration.	I
2396	40673	PET system table, powered	PET системийн ширээ, тэжээгддэг	A device that is a component of a positron emission tomography (PET) system specifically designed to support and position a patient during PET imaging procedures. It is a powered/programmable table having electronic and/or software controls for table top height, position and motion. It can be a stationary or mobile unit and is most typically incorporated as an integral component of the PET imaging system design or gantry configuration.	I
2397	40674	SPECT system table, non-powered	SPECT системийн ширээ, цахилгаангүй	A device that is a component of a single photon emission computed tomography (SPECT) system specifically designed to support and position a patient during SPECT imaging procedures. It is a non-electrical flat or curved top table with fixed position table top or mechanical table top position and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be a stationary or mobile unit and is most typically incorporated as an integral component of the SPECT imaging system design or gantry configuration.	I
2398	40675	SPECT system table, powered	SPECT системийн ширээ, тэжээгддэг	A device that is a component of a single photon emission computed tomography (SPECT) system specifically designed to support and position a patient during SPECT imaging procedures. It is a powered/programmable table having electronic and/or software controls for table top height, position and motion. It can be a stationary or mobile unit and is most typically incorporated as an integral component of the SPECT imaging system design or gantry configuration.	I

2399	40676	MRI system table, powered	MRI системийн ширээ, тэжээлтэй	A powered/programmable table designed with electronic and/or software controls to position and support a patient during magnetic resonance imaging (MRI) examinations. It is dedicated for use as part of an MRI system, as an integral component of the MRI system gantry, and made with ferromagnetically inactive materials to render it compatible with MRI environments. It may have a detachable table top, equipment supports, physiological monitors, mattresses, alarms and a patient positioning system (PPS).	I
2400	40677	Ultrasound imaging system table	Хэт авианы дүрслэлийн системийн ширээ,	A flat or curved-top table specifically designed to position and support a patient during diagnostic, interventional or surgical procedures involving the use of a diagnostic ultrasound imaging system. It can also be articulated to facilitate patient positioning and may be mobile, stationary or be incorporated an integral component of an ultrasound imaging system configuration. It may be mechanically operated or a table which incorporates electronic or software controls for table height, motion, and/or table top positioning.	I
2401	40678	Thermography system table	Термографийн системийн ширээ,	A device that is a component of a thermography system that functions as a flat or curved-top table specifically designed to position and support a patient during thermographic imaging procedures. This device can be articulated to facilitate patient positioning and includes both mechanically operated tables and tables which incorporate electronic or software controls for table height, motion, and/or table top position. Some may include both mechanical and electronic/software controls. It can be a stationary or mobile unit or incorporated as an integral component of the diagnostic thermography imaging system configuration.	I
2402	40679	Radionuclide neutron activation system table	Радионуклидын нейтрон идэвхжүүлэлтийн системийн ширээ	A device that is a component of a radionuclide neutron activation system used to position and support a patient and which has been specifically designed to be used with a diagnostic neutron activation systems. It can also be articulated to facilitate patient positioning and is made of very low molecular weight materials with low neutron cross-sectional areas in order to reduce or eliminate the potential for producing extraneous radiation through inadvertent activation of the materials in the table.	I

2403	40680	Multi-purpose diagnostic imaging table	Олон зориулалттай оношилгооны зургийн ширээ	An electrically-powered multi-purpose device intended to support and position a patient in conjunction with multiple diagnostic imaging procedures (e.g., x-ray, nuclear medicine or ultrasound). It may contain a variable number of articulated joints to facilitate patient positioning and incorporates electronic or software controls for table height, motion, and/or table top position.	I
2404	40682	Therapeutic x-ray system table, non-powered	Эмчилгээний рентген системийн ширээ цахилгаангүй	A non-powered radiotherapy table specifically designed to position and support a patient during treatments administered using a therapeutic x-ray system. It has a fixed-position table top or mechanical table top with positioning and/or table height controls (e.g., pneumatic controls, magnetic locks, cranks, and lever mechanisms). It can be a stationary or mobile unit, or incorporated as an integral component of a therapeutic x-ray system design.	I
2405	40683	Therapeutic x-ray system table, powered	Эмчилгээний рентген системийн ширээ, цахилгаантай	A powered/programmable radiotherapy table specifically designed to position and support a patient during treatments administered using a therapeutic x-ray system. It has electronic and/or software controls for table top height and positioning. It can be a stationary or mobile unit, or incorporated as an integral component of a therapeutic x-ray system design.	I
2406	40684	Teletherapy radionuclide system table, non-powered	Телетерапийн радионуклидын системийн ширээ, цахилгаангүй	A device that is a component of a teletherapy radionuclide system (commonly known as a cobalt therapy machine) and that is a non-electrical radiotherapy table specifically designed to position and support a patient during therapeutic radiation treatments administered using a radionuclide teletherapy system (e.g., a Cobalt-60 teletherapy system). It has a fixed position table top or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be a stationary or mobile unit, or incorporated as an integral component of a radionuclide teletherapy system or gantry configuration.	I

2407	40685	Teletherapy radionuclide system table, powered	Телетерапийн радионуклидын системийн ширээ, цахилгаанаар ажилладаг	A device that is a component of a teletherapy radionuclide system (commonly known as a cobalt therapy machine) and that is a powered/programmable table specifically designed to position and support a patient during treatments administered using a therapeutic radionuclide teletherapy system (e.g., a Cobalt-60 teletherapy system). It has electronic and/or software controls for table top height and positioning. It can be a stationary or mobile unit, or incorporated as an integral component of a radionuclide teletherapy system or gantry configuration.	I
2408	40686	Accelerator system table, non-powered	Хурдасгуурын системийн ширээ, цахилгаангүй	A non-electrical radiotherapy device that is a component of an accelerator system specifically designed to position and support a patient, typically supine, during therapeutic radiation treatments administered using a medical linear accelerator or non-linear accelerator. It is a flat surface on legs with fixed position top or mechanical top positioning and/or height controls (e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms). It may be an independent device that is stationary or mobile, or it can be an integral component of a medical accelerator system design.	I
2409	40687	Accelerator system table, powered	Хурдасгуурын системийн ширээ, хөдөлгүүртэй	An electrically-powered and/or programmable radiotherapy device that is a component of an accelerator system specifically designed to position and support a patient, typically supine, during treatments administered using a medical linear accelerator or non-linear accelerator. It is a flat surface on legs that includes electronic and/or software controls for top height adjustments and positioning. It may be an independent device that is stationary or mobile, or it can be an integral component of a medical accelerator system design.	I

2410	40688	Hyperthermia system table, non-powered	Гипертерми системийн ширээ, цахилгаангүй	A continuous or articulated surface non-electrical table specifically designed to position and support a patient during treatments administered using a medical hyperthermia system. This is a table with fixed position table top or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be stationary, mobile or incorporated as an integral component of a hyperthermia system design.	I
2411	40689	Hyperthermia system table, powered	Гипертерми системийн ширээ, тэжээлтэй	A mains electricity (AC-powered) continuous or articulated surface powered/programmable radiotherapy table specifically designed to position and support a patient during treatments administered using a medical hyperthermia system. It has electronic and/or software controls for table top height and positioning. It can be a stationary or mobile unit or otherwise incorporated as an integral component of a hyperthermia system.	I
2412	40690	Radionuclide neutron activation system table, non-powered	Радионуклидын нейтроныг идэвхжүүлэх системийн ширээ, цахилгаангүй	A device that is a component of a radionuclide neutron activation system and that is a non-electrical radiotherapy table specifically designed to position and support a patient during treatments administered using a neutron stream diverted from a nuclear reactor. It has a fixed position table top or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks or lever mechanisms. It is made from low molecular weight materials that reduce or eliminate unintended table activation during patient treatments and is typically a freestanding, mobile or fixed-position table.	I
2413	40691	Radionuclide neutron activation system table, powered	Радионуклидын нейтроны идэвхжүүлэлтийн системийн ширээ, тэжээлтэй	A device that is a component of a radionuclide neutron activation system and that is a powered/programmable radiotherapy table specifically designed to position and support a patient during treatments administered using a neutron stream diverted from a nuclear reactor. It is made from low molecular weight or hydrogenous materials that reduce or eliminate unintended table activation during patient treatments. It has electronic and/or software controls for table top height and positioning. It can incorporate various features [e.g., a patient positioning system (PPS) and monitoring devices, film holders and alarms].	I

2414	40692	Brachytherapy system table, non-powered	Brachytherapy системийн ширээ, цахилгаангүй	A device that is a component of a brachytherapy system and that is a non-electrical radiotherapy table specifically designed to position and support a patient during treatments using either a manual or remote-afterloading brachytherapy. It is a table with a fixed position table top or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be a stationary or mobile unit or incorporated as an integral component of the brachytherapy system.	I
2415	40693	Brachytherapy system table, powered	Брахитерапийн системийн ширээ, цахилгаантай	A mains electricity (AC-powered) device that is a component of a brachytherapy system and that is a powered/programmable radiotherapy table specifically designed to position and support a patient during treatments administered using either a manual or remote-afterloading brachytherapy system. It has electronic and/or software controls for table top height and positioning and can be a stationary or mobile unit or incorporated as an integral component of the brachytherapy system.	I
2416	40694	Radiation therapy treatment planning system table, non-powered	Цацрагийн эмчилгээний эмчилгээний төлөвлөлтийн системийн ширээ, цахилгаангүй	A non-electrical device that is a component of a radiation therapy treatment planning system (RTTPS) and is specifically designed to position and support a patient during treatment planning procedures. It is a table with a fixed position table top, or mechanical table top positioning and/or table height controls, e.g., pneumatic controls, magnetic locks, cranks and lever mechanisms. It can be a stationary or mobile unit or incorporated as an integral component of the RTTPS design.	I
2417	40695	Radiation therapy treatment planning system table, powered	Цацрагийн эмчилгээний эмчилгээний төлөвлөлтийн системийн ширээ, цахилгаантай	A powered/programmable device that is a component of a radiation therapy treatment planning system (RTTPS). It is a radiotherapy table specifically designed to position and support a patient during treatment planning procedures. It has electronic and/or software controls for table top height and positioning and can be a stationary or mobile unit or otherwise incorporated as an integral component of a RTTPS design.	I

2418	40696	Mechanical epilator	Механик эпилятор	A device designed to mechanically remove body hair; it does not utilize high-frequency electric current applied to the dermal papilla (the hair root). Mechanical techniques to remove hair may include use of a rotating head, hand-held tweezers, or a wax applying roller, all of which pluck or pull the unwanted hair.	I
2419	40697	Diagnostic x-ray system chair	Оношлогооны рентген системийн сандал	A device designed to support and position a seated patient during examinations involving the use of any diagnostic x-ray system (e.g., general-purpose, dental, angiography, fluorography, or CT system). It is typically a seat supported by legs, sometimes with a back.	I
2420	40698	Nuclear medicine system chair, multi-purpose	Цөмийн анагаах ухааны системийн сандал, олон зориулалттай	A chair or stool that functions with a nuclear medicine imaging system and is designed to support and position a patient during examinations involving the use of various nuclear medicine imaging systems such as a gamma camera, positron emission tomography (PET), and single photon emission computed tomography (SPECT) systems.	I
2421	40699	MRI system chair	MRI системийн сандал	A chair or stool specifically designed to support and position a patient during examinations involving the use of a diagnostic magnetic resonance imaging (MRI) system. For MRI system compatibility these chairs/stools are made of ferromagnetically inactive materials.	I
2422	40700	Ultrasound imaging system chair	Хэт авиан шинжилгээний системийн сандал	A chair or stool specifically designed to support and position a patient during examinations involving the use of a diagnostic ultrasound imaging system.	I
2423	40701	Diagnostic imaging chair, multi-purpose	Оношлогооны зураг авах сандал, олон зориулалттай	A mains electricity (AC-powered) device designed to be used with any diagnostic imaging system to support and position a patient in a sitting posture during the imaging procedure (e.g., x-ray, nuclear medicine, thermography, ultrasound). It may be designed with rests for the arms or as a stool.	I
2424	40703	Teletherapy radionuclide system chair	Телетерапийн радионуклидын системийн сандал	A chair or stool that is a component of a teletherapy radionuclide system and is designed to support and position a patient during radiation therapy treatments involving the use of a radionuclide teletherapy system.	I

2425	40704	Accelerator system chair	Хурдасгагч системийн сандал	A seat, typically with legs, that is a component of a therapeutic accelerator system, and used to support and position a seated patient during radiation therapy treatments involving the use of either a medical linear accelerator or non-linear accelerator.	I
2426	40705	Therapeutic x-ray system chair	Эмчилгээний рентген системийн сандал	A chair or stool that is a component of a therapeutic x-ray system and that is specifically designed to support and position a patient during radiation therapy treatments involving the use of a therapeutic x-ray system.	I
2427	40706	Radionuclide neutron activation system chair	Радионуклид нейтрон идэвхжүүлэх системийн сандал	A chair or stool that is a component of a radionuclide neutron activation system and that is specifically designed to support and position a patient during radiation therapy treatments involving the use of a nuclear reactor designed to deliver a stream of neutrons into a patient for therapeutic purposes. It incorporates special material in order to reduce or eliminate neutron activation of the chair during patient treatments.	I
2428	40707	Brachytherapy system chair	Брахитерапийн системийн сандал	A mains electricity (AC-powered) device (a chair or stool) that is a component of a brachytherapy system and which is specifically designed to support and position a patient during brachytherapy radiation treatments given by either a manual applicator or a remote afterloading brachytherapy system applicator. It will typically be height-adjustable and may have a reclining back.	I
2429	40708	Hyperthermia system chair	Гипертерми системийн сандал	A mechanical (non-powered) chair or stool specifically designed to support and position a patient during radiation therapy treatments involving the use of a therapeutic hyperthermia system.	I
2430	40709	Radiation therapy system chair, multi-purpose	Цацрагийн эмчилгээний системийн сандал, олон зориулалттай	A chair or stool that functions with more than one radiation therapy system (e.g., accelerator, teletherapy, hyperthermia, x-ray, and brachytherapy systems) and is designed to position and support a patient during a variety of radiotherapy treatments.	I

2431	40734	Orthodontic clasp, metal, custom-made	Ортодонт тэврэлт, металл, захиалгаар хийнэ	A dental device made of cast metal material intended to retain and stabilize a removable orthodontic appliance to stationary teeth. It is manufactured to meet the specifications of an individual patient. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	I
2432	40738	Radioisotope calibration system	Радиоизотопын шалгалт тохируулгын систем	A system of radioactivity measuring instruments designed for quantifying the amount of radiation in a radiopharmaceutical dose or other test samples inserted into a shielded chamber or well for measurement. The system's instruments radiation level measurements in units of Curie and/or Becquerel are used to quantify the radioactivity in diagnostic or therapeutic radiopharmaceuticals prior to and after patient administration. This will be used to measure radiation levels of in vitro diagnostic test samples, e.g., those required for Schilling tests, Cr-51 or I-125 blood volume.	I
2433	40816	Back pulldown exerciser	Нуруу татах дасгалын төхөөрөмж	A mechanical exercise apparatus primarily intended to strengthen the muscles of the back (especially the latissimus dorsi) through a repetitive pulldown motion performed with the arms against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that incorporates changeable weights and a bar or handles/hand stirrups for the user to grip and pull; also typically included is a bench for the user to sit while performing the exercise (commonly referred to as a lat pulldown). The device may also be used to improve back flexibility, mobility, and to strengthen other upper body muscles (e.g., biceps, triceps).	I

2434	40903	Radiation shielding container, transport/transfer	Цацрагаас хамгаалах сав, тээвэрлэх/шилжүүлэх	A radiation protection device specifically designed to shield persons from harmful radiation exposure during air or land based shipping, transfer and delivery of radioactive materials (e.g., radioisotopes) from facility to facility. Designs typically incorporate a container with a lead lining sufficient to attenuate the emissions from the contained radioactive materials, sources, radiopharmaceuticals, or radiation containing devices being transported. This device is used for intra- and inter-hospital transportation of syringes, vials or other devices containing radioisotopes.	I
2435	40905	Radiation shielding container, general-purpose	Цацрагаас хамгаалах сав, ерөнхий зориулалтын	A radiation protection device intended for hospital or clinic use that is specifically designed to shield persons from unintended radiation exposure to radioactive materials, sources, devices, and/or radiopharmaceuticals that are being kept in the facility. The design typically incorporates lead shielding or plastic materials of sufficient thickness to attenuate a specified level of radioactivity. This group of devices does not include special purpose containers designed as vial or syringe shields or transportation/transfer containers.	I
2436	40913	Therapeutic radiation system exposure timer	Эмчилгээний цацрагийн системд өртөх таймер	An automatic or manually-controlled device designed to measure, record, and terminate the delivery of a beam (or beams) of therapeutic radiation at a time consistent with a desired exposure or exposure sequence. It is typically a component of a radiation therapy system, e.g., therapeutic x-ray, linear accelerator, brachytherapy, neutron capture therapy, stereotactic radiosurgery or radionuclide teletherapy. This group of devices includes a variety of timers, e.g., ionization chamber based and photoelectric detector based (phototimers), as well as others of electronic or electromechanical controlled design. It may be a freestanding unit used in quality assurance.	I

2437	40915	Stationary x-ray grid	Хөдөлгөөнгүй рентген сүлжээ	A component of an x-ray system used in diagnostic x-ray imaging applications, e.g., planar x-ray imaging or mammography. It typically consists of a housing containing lead foil strips separated by x-ray transparent spacers. These spacers or "interspaces" are filled with aluminium (Al) or another x-ray transparent (radiolucent) organic compound. Radiographic grids are placed between the x-ray target (patient) and the x-ray film and are used to absorb scatter radiation, and improve radiographic image contrast. It typically comes in two patterns, linear and crossed. Most are focused to a line in space called a convergent line, but can be used over a variable range called the focal distance.	I
2438	40927	Radiological compression belt	Радиологийн шахалтын бүс	A non-powered device designed to flatten and stabilize the abdomen through compression during therapeutic or diagnostic radiological procedures. It is commonly in the form of an inflatable belt/wrap worn around the abdomen, whereby pressure is applied through inflation with a manual pump or using a separate electronic pump. This is a reusable device.	I
2439	40955	Hand-held urinal, single-use	Гар шээсний суваг, нэг удаагийн	A portable, hand-held container intended to be directly urinated into by a patient for excretory purposes; it may be specific to male or female patients, or unisex. It is typically in the form of a bottle with a handle, or a bag, or pouch; it may include a noninvasive funnel and tubing, and may have a drain with a stopper in it to facilitate emptying. It is not intended to be worn by the patient. This is a single-use device.	I
2440	41014	Cine film processor, automatic	Кино процессор, автомат	An automatic photographic film processing device used to develop rolls of film, e.g., 16mm or 35mm, used in x-ray fluoroscopy applications (cinefluorography) which require the use of a motion picture camera to record sequential fluoroscopic images in a movie format that is formed on the output phosphor of an image intensifier tube.	I

2441	41039	Cervical spine collar, reusable	Умайн хүзүүний нурууны хүзүүвч, дахин ашиглах боломжтой	A prefabricated (non-customized) padded device that is worn around the neck and intended to support or immobilize the cervical spine to treat deformities, fractures, sprains, or strains (often to treat whiplash resulting from an automobile accident). This device will provide support to the head while limiting movement of the cervical vertebrae. It is available in a variety of sizes. This is a reusable device.	I
2442	41042	Thoracic spine orthosis	Цээжний нурууны ортоз	A prefabricated (non-customized) orthopaedic corset designed to encompasses the thoracic spine region of the trunk to support or immobilize deformities, fractures, sprains, or strains of the spine through compression of the abdomen. This is a reusable device.	I
2443	41044	Wrist/hand/finger stable-position orthosis	Бугуй/гар/хурууны тогтвортой байрлалтай ортез	An externally applied orthopaedic appliance or apparatus designed to maintain both the transverse and longitudinal arches of the hand, and to hold the thumb in a functional position. This is a reusable device.	I
2444	41045	Wrist/hand/finger flexion orthosis, manual	Бугуй/гар/хурууны нугалах ортоз, гарын авлага	An externally applied, manually-operated orthopaedic appliance designed to help provide gripping action for the hand through flexion of the wrist and fingers, or via a cable that provides power from shoulder motion. The device has unicentric joints at the metacarpophalangeal joints (knuckles) and the wrist, and has an adjustable rod for different grips.	I
2445	41047	Wrist/hand/finger flexion orthosis, pneumatic	Бугуй/гар/хурууны нугалах ортоз, пневматик	An externally applied, pneumatically-powered orthopaedic appliance designed to provide gripping action for the hand via a rod(s) and/or cable(s) that is powered from a source of compressed gas or a gas-filled piston. The orthosis has unicentric joints at the metacarpophalangeal joints (MP joints or knuckles) and at the wrist.	I
2446	41051	Bath board	Усанд орох самбар	A device in the form of a flat board designed to be sat upon by an adult patient who is bathing in a bath (usually while being attended/assisted) to elevate the patient out of the water except for the feet. The patient is typically disabled, infirm, or undergoing medical treatment and cannot sit normally in a bath. The device typically includes a solid or ribbed flat seat and is secured across the rim of the bath; it is typically made of water-resistant or waterproof materials. The device may be used in a hospital, institution, or home.	I

2447	41052	Non-wearable urine/faecal collection bag holder	Өмсөх боломжгүй шээс/баас цуглуулах уут эзэмшигч	A device designed to secure a urine or faecal collection bag (e.g., intestinal ostomy bag), or a respective bag extension, in a stable position and height to an object other than the patient. It is available in a variety of designs (e.g., hanger) and may be intended to attach the bag to objects such as wheelchairs, beds, and chairs occupied by the patient, or it may be a freestanding device with bag-suspending hooks/clips (e.g., portable stand). This is a reusable device.	I
2448	41053	Elbow orthosis	Тохойн ортоз	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance designed to encompass the elbow joint to support, align, prevent, or correct deformities/injuries or to improve function of the elbow. This is a reusable device.	I
2449	41057	Lumbar cushion	Бүсэлхий нурууны дэр	A soft pillow or pad used to provide support and comfort to the user's lower back, often during the treatment and/or prevention of musculoskeletal disorders or injuries. The device may be used to support the natural curvature of the lower spine, improve posture, relax muscles, and relieve painful pressure points. The device is typically placed between the lower back and the back of a seat/chair while the user is seated.	I
2450	41058	Multifunction body cushion	Олон үйлдэлт биеийн дэр	A soft pillow or pad designed to provide support and comfort to a user's body part(s) in a variety of locations and positions, or to assist the user to fulfill a functional requirement involving various body parts. The device can be designed in a number of configurations that include a combined armrest-back support device, or an adjustable device.	I
2451	41065	Knee support orthosis	Өвдөгний тулгуур ортоз	A stand-alone prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to support, align, prevent, or correct deformities/injuries or to improve function of the knee; it may incorporate hinges for improved support. It is not a component of a larger device assembly. This is a reusable device.	I

2452	41067	Orthodontic chin cap/cup	Ортодонт эрүүний таг/аяга	A dental device component of an extraoral orthodontic headgear designed to help reduce/correct mandibular prognathism by applying reverse pull force to the chin, via tight attachment to the headgear head straps. This is a reusable device.	I
2453	41073	Parapodium standing frame	Параподиум зогсож буй хүрээ	A prefabricated (non-customized) orthopaedic orthosis designed to encompass and provide support for the body of a patient who is unable to stand unassisted, typically a child with spina bifida, enabling them to remain standing; it is not intended for mechanical elevation of the patient. It typically consists of a frame-like structure in which the patient is held in a standing position with braces, pads, and struts typically around the thorax, hips, knees, and ankles; it includes joints at the knees and hips enabling the patient to sit while remaining in the frame. This is a reusable device.	I
2454	41074	Swivel-walker	Эргэдэг алхагч	An orthopaedic orthosis designed to encompass and provide support for the body of a patient who is unable to stand unassisted, to help them move (walk) by rocking sideways (shifting their weight from side-to-side with a shoulder movement) which makes the footplate of the device swivel so that it “walks” forward. It typically consists of a frame-like structure in which the patient is held (strapped) in a standing position with braces, pads, and straps typically around the thorax, hips, knees, and ankles. The device is intended to enable the patient to walk forward and turn on a flat surface. This is a reusable device.	I
2455	41076	Orthosis, hip-unit	Ортоз, ташааны хэсэг	An externally applied orthopaedic appliance or apparatus for the hip joint that is used with other units to constitute a larger or total lower limb appliance to support, align, prevent, or correct deformities of the leg or to improve the function of moveable parts of the leg.	I
2456	41078	Passive hand prosthesis	Идэвхгүй гар протез	An artificial substitute for a missing hand that may be attached to a natural arm or used as part of an upper-limb external prosthetic system, and is designed to move only as a result of the direct application of external forces.	I

2457	41080	Body-powered hand prosthesis	Биеийн хүчээр ажилладаг гар протез	An artificial substitute for a missing hand that may be attached to a natural arm or used as part of an upper-limb external prosthetic system, and is designed to replace the appearance and some of the function of the hand. The device moves as the result of connecting straps/cables or other mechanism powered by the movement of body segments.	I
2458	41081	Wedge cushion	Шаантаг дэр	A wedge-shaped pillow or pad typically designed to be placed between the legs to provide support for proper posture, body alignment, and comfort while sitting or lying. The device modifies the position of the legs, hips, and pelvic region when it would otherwise be uncomfortable for the legs to approximate. The device may also be applied to other body parts where such an effect would be beneficial.	I
2459	41082	Electrical hand prosthesis	Цахилгаан гар протез	An artificial substitute for a missing hand that may be attached to a natural arm or used as part of an upper-limb external prosthetic system, and is designed to replace the appearance and some of the function of the hand. The device moves as the result of a motor(s) that may be integral or proximally mounted with a mechanical link. The control of the motor is through an electromechanical switch operated by body movement using straps or cables.	I
2460	41084	Split-hook/specialized-tool hand prosthesis	Хуваасан дэгээ/мэргэшсэн багажийн гар протез	An artificial substitute for a missing hand that comes in various forms (e.g., a hook or type of tool) and that replaces some of the functions of the hand.	I
2461	41086	Passive wrist prosthesis	Бугуйны идэвхгүй протез	An artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to be positioned by the application of external force.	I
2462	41088	Body-powered wrist prosthesis	Биеийн хүчээр ажилладаг бугуйн протез	An artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of connecting straps/cables or other mechanism powered by the movement of body segments, or it moves as the result of a connection with another functional limb component.	I

2463	41089	Body-powered wrist prosthesis, locking	Биеийн хүчээр ажилладаг бугуйн протез, түгжээ	An artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of connecting straps/cables or other mechanism powered by the movement of body segments, or it moves as the result of a connection with another functional limb component. The position of the device can be maintained by a locking mechanism that is body- or externally-powered.	I
2464	41090	Electrical wrist prosthesis	Бугуйны цахилгаан протез	An artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power applied directly or via a connection with another functional limb component. The control of the motor is through an electromechanical switch operated by body movement using straps or cables.	I
2465	41091	Myoelectric wrist prosthesis	Миоэлектрик бугуйны протез	A powered artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power applied directly or via a connection with another functional limb component. Surface electrodes embedded in the device make contact with the skin and amplify muscle action potentials from voluntary contracting muscle in the residual limb/trunk, which turns on the motor to provide a function.	I
2466	41093	Passive elbow prosthesis	Идэвхгүй тохойн протез	An artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system. The device is positioned by the application of external force and its position is maintained by friction.	I
2467	41094	Passive elbow prosthesis, locking	Идэвхгүй тохойн протез, түгжих	An artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system. The device is positioned by the application of external force and its position is maintained by a locking mechanism.	I

2468	41095	Wheelchair, occupant-driven, bimanual-lever-operated, collapsible	Тэргэнцэр, зорчигч жолооддог, хоёр гарын авлагатай хөшүүрэгтэй, эвхэгддэг	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by operating two, usually opposed, levers, which, via a cranked mechanism, rotate the drive wheel(s). The device may be disassembled or folded for transport.	I
2469	41096	Body-powered elbow prosthesis	Биеийн хүчээр ажилладаг тохойн протез	An artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of connecting straps/cables or other mechanism powered by the movement of body segments, or it moves as the result of a connection with another functional limb component.	I
2470	41097	Body-powered elbow prosthesis, locking	Биеийн хүчээр ажилладаг тохойн протез, түгжих	An artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of connecting straps/cables or other mechanism powered by the movement of body segments, or it moves as the result of a connection with another functional limb component. The position of the device can be maintained by a locking mechanism that is body- or externally-powered.	I
2471	41098	Wheelchair, occupant-driven, single-rear-wheel-operated, collapsible	Тэргэнцэртэй, зорчигч жолооддог, нэг арын дугуйтай, эвхэгддэг	A wheeled personal mobility device that incorporates a seat-support system for a person with a disability or a person without the full capacity to walk (not bariatric) designed to be manually propelled by the user while seated in the device. The occupant moves the device by rotating one rear wheel, which has a mechanism to transfer drive to the opposite rear wheel. The device may be disassembled or folded for transport.	I

2472	41099	Electrical elbow prosthesis	Цахилгаан тохойн протез	An artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power applied directly or via a connection with another functional limb component. The control of the device is achieved by an electromechanical switch for the motor that is operated by body movement using straps or cables.	I
2473	41100	Myoelectric elbow prosthesis	Миоэлектрик тохойн протез	A powered artificial substitute for a missing elbow used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power applied directly or via a connection with another functional limb component. Surface electrodes embedded in the device make contact with the skin and amplify muscle action potentials from voluntary contracting muscle in the residual limb/trunk, which turns on the motor to provide a function.	I
2474	41102	Passive shoulder prosthesis	Идэвхгүй мөрний протез	An artificial substitute for a missing shoulder used as part of an upper-limb external prosthetic system and designed to be positioned by the application of external force.	I
2475	41103	Passive wrist prosthesis, locking	Бугуйны идэвхгүй протез, түгжих	An artificial substitute for a missing wrist used as part of an upper-limb external prosthetic system and designed to be positioned by the application of external force; its position is maintained by a locking mechanism.	I
2476	41104	Electrical shoulder prosthesis	Мөрний цахилгаан протез	An artificial substitute for a missing shoulder used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power and the control of the motor is through an electromechanical switch operated by body movement using straps or cables.	I
2477	41105	Myoelectric shoulder prosthesis	Миоэлектрик мөрний протез	A powered artificial substitute for a missing shoulder used as part of an upper-limb external prosthetic system and designed to restore some of the function of the joint. The device moves as the result of external motor power. Surface electrodes embedded in the device make contact with the skin and amplify muscle action potentials from voluntary contracting muscle in the body, which turns on the motor to provide a function.	I

2478	41107	Humeral-rotation prosthesis	Хумерын эргэдэг протез	A device sometimes used proximal to an external elbow prosthesis to help increase the internal/external shoulder rotation when such rotation is restricted by the stump remaining after a transhumeral amputation.	I
2479	41108	Hand prosthesis range-of-motion aid	Хөдөлгөөний хүрээний гар протезийн тусламж	An externally applied non-powered device positioned on the arm, maintained by friction, and designed to increase the flexion range of the elbow allowing a prosthetic hand to reach the face of the wearer. This is a reusable device.	I
2480	41109	Ankle/foot prosthesis	Шагай/хөлийн протез	An artificial substitute for an ankle and foot designed to restore some of the appearance and/or function of the normal anatomy. The device may be used as part of a lower limb prosthetic system.	I
2481	41112	Assistive coverall	Туслах комбинезон	A lightweight wrap (e.g., made of vinyl, nylon, or other plastic) specially designed/adapted to be used by a person with a disability to cover and protect them against precipitation (rain, snow, sleet), cold and wind, especially when using a wheelchair, pram, or sledge. The device is typically hooded and has openings to allow access to the operating and steering controls of the occupied transportation device if required.	I
2482	41113	Assistive coat	Туслах цув	An over garment (e.g., an overcoat or jacket) specially designed/adapted to be worn by a person with a disability for outdoor use. It may be worn by a male or a female and is typically constructed with features to facilitate easy donning, fastening, and removal (e.g., wide sleeves, large pockets, Velcro or zip fasteners).	I
2483	41115	Assistive hat/cap	Туслах малгай/малгай	A covering specially designed/adapted to be worn on the head (i.e., on the crown of the head only or additionally covering the ears and the back of the head) of a person with a disability while outdoors. It is typically constructed with features that facilitate easy donning, fastening, and removal (e.g., Velcro fasteners and easily-managed ties and buckles to keep the hat/cap in place).	I

2484	41119	Wheelchair/chair/stander headrest	Тэргэнцэр/сандал/зогсоогчийн толгойны түшлэг	A padded device attached to a wheelchair, a disability-supportive chair, and/or a stander to provide a disabled patient with additional head support and comfort while in a sitting and/or standing position. This device will also include the extensions (e.g., a metal insert, screws) needed to attach this device. It may be available in various shapes and sizes, and it may be adjustable.	I
2485	41141	Arm cushion	Гарны дэр	A soft pillow or pad used to provide support and comfort to the user's arm, typically during the treatment and/or prevention of musculoskeletal or circulatory disorders (e.g., muscle sprain/strain, lymphoedema). The device may be used to support various areas of the arm (i.e., wrist, elbow, or shoulder).	I
2486	41154	Birthing cushion	Төрөх дэр	A soft pillow, pad, sack filled with small beads (Sacco sack), or an inflatable cushion, intended to provide positional support and comfort for a pregnant woman during labour and/or childbirth. It may be placed on the floor and might facilitate a variety of birthing positions. This is a reusable device.	I
2487	41157	Automobile seat cushion	Автомашины суудлын дэр	A soft pillow or pad designed to be used in a standard motor vehicle to provide support and comfort to the user when seated either as the driver of the vehicle or as a passenger. It may be used to improve posture, provide back support, adjust seat height, provide side support, relieve stress points in the shoulder, back, buttocks, and legs, or to provide an antislip mechanism for the user. The device is typically placed behind the lower lumbar region of the back or under the buttocks and/or legs while the user is seated.	I
2488	41159	Standing stool	Босоо сандал	A tall device comprised of a seat platform resting on one or more legs designed to provide support for a disabled occupant in a standing or near-standing position for an extended period. The device does not support the back or arms (although sometimes referred to as a chair). Included is the work stool.	I

2489	41163	Vocational/recreational cushion	Мэргэжлийн/амралт зугаалгын дэр	A soft pad designed to provide a supportive platform for the user upon which he/she may perform vocational and/or recreational activities (e.g., work training, hobbies, reading, writing). The device will typically be shaped around the user to maximize space for an activity, and may be placed on a hard support structure for appropriate height positioning.	I
2490	41191	Audiometer testing system	Аудиометрийн туршилтын систем	An assembly of electronic reference devices intended to calibrate and/or test the calibration of an audiometer. It measures the sound frequency and intensity characteristics that emanate from an audiometer earphone and/or the environment (ambient noise). The system typically consists of an acoustic cavity of known volume, a sound level meter, a microphone with calibration, oscillators, frequency counters, microphone amplifiers, and a recorder. It can measure selected audiometer test frequencies at a given intensity level, and selectable audiometer attenuation settings at a given test frequency.	I
2491	41222	Medication transfer set	Эмийн шилжүүлгийн багц	A collection of sterile devices and supplies designed to transfer parenteral medications [e.g., intravenous (IV) fluids, drugs] between a first container(s) [e.g., a vial(s)] and a second container/administration line [e.g., an IV bag/line] in a non-powered closed system; it may also be used to compound and/or reconstitute medication for its preparation and administration. It is available in a variety of configurations and typically includes vials, tubes, connectors, spikes, syringes, and caps. This is a single-use device.	I
2492	41230	Earplugs, reusable	Чихний бөглөө, дахин ашиглах боломжтой	A device, usually used as a pair, made of rubber or pliable plastic/silicone material intended to be inserted into the outer ear canal for protection against excessive noise levels or water entering the ears when swimming/bathing. This device may be premoulded (preformed) or mouldable. This is a reusable device.	I
2493	41231	Ear pip	Чихний хавчаар	A small preformed plastic ear insert, often used as a temporary measure until an individually fitted earmould is available. This is a reusable device.	I

2494	41232	Acoustic earmuffs	Акустик чихэвч	A device that is worn over the ears to protect the user's hearing from excessive levels of noise, typically when using noisy machinery. It consists of two hard plastic cups (one to fit over each ear) that are lined with sound attenuating material with soft ear cushions/pads on the outer rim. The cups are held together with a headband that is sprung to gently hold the cups against the side of the head. Included are types that also provide warmth and which are used for cold outdoor weather conditions. Also known as ear defenders. This is a reusable device.	I
2495	41234	Earphone, insert	Чихэвч, оруул	An electroacoustic device intended to be worn in the ear to transmit sound to the ear from an external device for improved hearing or private listening. It is designed to fit either in the outer ear or is attached directly to a connecting element such as an earmould inserted in the ear canal.	I
2496	41241	Throat microphone	Хоолойн микрофон	A battery-powered, speech-assistive device worn on the throat and designed to magnify vibrations which emanate from the throat region when the wearer is speaking to increase the volume of speech. It is an electroacoustic transducer by which electrical signals are obtained from acoustic oscillations.	I
2497	41243	Television set listening aid	Телевизийн сонсох хэрэгсэл	A device used by a person that is hard of hearing to listen to a television (TV) set. It takes the sound output from a TV, either by a direct electrical connection or by means of a microphone placed close to the TV loudspeaker, amplifies the signal which is then fed to the user by means of an earphone or an induction loop in conjunction with an appropriate hearing aid.	I
2498	41245	Neck induction loop	Хүзүүний индукцийн гогцоо	A small induction loop worn around the neck of the user.	I
2499	41247	Large letter reading material	Том үсэг унших материал	A medium that presents its content in large letters so that a person with impaired vision and/or a disability can read the content. Included are books and printed matter.	I

2500	41249	Surgical/dental drill/saw system power/control unit	Мэс заслын/шүдний өрөм/хөрөөний системийн цахилгаан/хяналтын хэсэг	A device that is a component device of a drill/saw system and that is used to regulate the functions of powered surgical and dental drills and/or saws that are connected. These functions will typically be, e.g., the speed and torque. Some units may even be, or regulate, the power supply to the drill/saw motors/turbines which can be, e.g., electrically or pneumatically-powered. This device may have integrated irrigation functionality and may be operated through hand and/or foot controls.	I
2501	41328	Bariatric wheelchair, attendant/occupant-driven, rear-wheels-operated, collapsible	Бариа заслын тэргэнцэр, үйлчлэгч/үнэчлэгч жолооддог, арын дугуйтай, эвхэгддэг	A wheeled personal mobility device that incorporates a heavy-duty framework and extra wide seat-support system for a bariatric (obese) person with a disability or an obese person without the full capacity to walk, and is manually propelled by the user while seated in the device or by an attendant. The occupant moves the device by rotating both rear wheels. An attendant moves the device by pushing or pulling handles on the device. The device may be disassembled or folded for transport.	I
2502	41345	Vaginal dilator set	Үтрээ өргөсгөгч иж бүрдэл	A collection of firm rod-like instruments, of increasing diameter, designed to mechanically enlarge the vagina over time for therapeutic purposes. The devices can also be inserted into the vagina and worn for prescribed periods to maintain vaginal patency after surgery (e.g., transgender vaginoplasty) or radiation treatments, or to stretch the vaginal orifice (the introitus) when it is unusually narrow due to a birth defect or vaginismus (the inability of the vaginal sphincter to relax). The user is typically instructed to begin with the smallest diameter device, increasing in size as the treatment proceeds until satisfactory patency is achieved. This is a reusable device.	I
2503	41397	Orthodontic archwire	Ортодонтийн нуман утас	A dental wire in the shape of an arch used with orthodontic attachments (orthodontic brackets) that are affixed to the crowns/surfaces of two or more teeth in order to cause/guide tooth movement. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I

2504	41434	Smoking apron	Тамхи үнс унахаас хамгаалах хормогч	A combustion-retardant garment designed to be worn by a person for protection from falling cigarette ash, typically while sitting or reclining and smoking. This is a reusable device.	I
2505	41435	Foot orthosis	Хөлийн ортоз	A device designed to encompass the whole or part of the foot, or designed as a plantar insert, and intended to provide rigid or semi-rigid correction of the foot for persons with orthopaedic deformities/injuries of the feet; it may also be intended to offload and redistribute foot pressures that affect pedal circulation to improve blood flow and help heal diabetic foot ulcers or postsurgical wounds. It is typically made of metal, synthetic, and/or textile materials and may include customizable plantar inserts. This is a single-patient device that can be reapplied to the patient during the treatment period (reusable) before being discarded.	I
2506	41457	Hand orthosis	Гар ортез	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus intended to be used to encompass the whole or part of the hand to support, align, prevent, or correct deformities/injuries or to improve function of the hand. This is a reusable device.	I
2507	41458	Wrist orthosis	Бугуйны ортоз	A prefabricated (non-customized) externally applied orthopaedic appliance or apparatus designed to support, align, prevent, or correct deformities/injuries or to improve function of the wrist. This is a reusable device.	I
2508	41459	Wrist/hand orthosis	Бугуй/гарын ортоз	An externally applied orthopaedic appliance or apparatus designed to support, correct, or improve function of the wrist and hand through actions such as alignment, hinge-support, or dorsiflexion assistance. This is a reusable device.	I
2509	41461	Wrist/hand/metacarpophalangeal joint extension orthosis	Бугуй / гар / метакарпофалангиал үений өргөтгөлийн ортоз	An externally applied orthopaedic appliance or apparatus designed to assist in the extension of the wrist, hand, and metacarpophalangeal joints (MP joints or knuckles). The device has an outrigger (a projecting support) to assist in the extension of the thumb. This is a reusable device.	I
2510	41462	Wrist/hand/finger extension orthosis	Бугуй/гар/хурууны сунгалтын ортоз	An externally applied orthopaedic appliance or apparatus designed to assist in the extension of the wrist, hand, and fingers. The device has an outrigger (a projecting support) to assist in the extension of the thumb. This is a reusable device.	I

2511	41466	Multiple-joint arm orthosis	Олон үе мөчний гарны ортоз	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to support, align, prevent, or correct deformities/injuries or to improve function of multiple joints of the arm. It is designed to support the elbow and at least one additional joint (i.e., shoulder and/or wrist) and may additionally support the hand. This is a reusable device.	I
2512	41473	Assistive dining cushion	Туслах хоолны дэр	A device designed to provide a supportive platform upon which a person with a disability may dine (e.g., with a tray, plate, or directly on the device). It is typically designed as a pad or a firm cushion that is placed upon the lap (i.e., knees and upper legs) of the user when sitting. It can also be used for other functions such as a working or activity platform.	I
2513	41474	Transoesophageal pacing lead	Транс улаан хоолойн зүрхний цохилтын хурдыг нэмэгдүүлэх	A sterile, flexible wire with an electrode, insulated with non-conductive material except at its ends, that serves as an electrical conductor to regulate cardiac pacing, with one end connected to an external temporary pacemaker and the other end (electrode) applied through the oesophagus to the heart. This is a single-use device.	I
2514	41542	Leg/knee cushion	Хөл/өвдөгний дэр	A soft pillow or pad intended to be placed under or between the leg(s)/knee(s) of a patient during the treatment/prevention of musculoskeletal and/or circulatory disorders. It is primarily intended for support when the patient is lying down, and may be used for one or more of the following: to reduce pressure on or between the legs, to improve postural alignment (e.g., of the spine or legs), to improve blood circulation in the lower extremities, and/or to prevent pressure sores/ulcers.	I
2515	41544	Periodontal knife	Periodontal хутга	A hand-held dental instrument used to excise the gums and other oral soft tissue during a periodontal intervention (e.g., a gingivectomy involving the excising of the soft tissue wall of a pocket). It is typically designed as a one-piece instrument with a sharp, single-edged cutting blade of various shapes and sizes along the working end. It can be a single-ended or double-ended instrument with a handle at the proximal end or positioned centrally. It is usually made of high-grade stainless steel. This is a reusable device.	I

2516	41566	Back-filling orthosis	Буцааж дүүргэх ортоз	A prefabricated (non-customized) externally applied and wearable device designed to fill in severe curvatures of the back. This is a reusable device.	I
2517	41571	Custom-made cushion	Захиалгат дэр	A soft pillow or pad that is specially designed for an individual to provide support, comfort, or assist the user to fulfill a functional requirement.	I
2518	41573	Cervical spine cushion	Умайн хүзүүний нурууны дэр	A soft pillow or pad used to provide support and comfort to the user's neck, often during the treatment and/or prevention of musculoskeletal disorders or injuries. The device may be used to alleviate pressure on the neck and spinal cord while the user is sitting, lying, or standing. This device may function as a cushion under the neck when the user is supine, or it may be placed, even secured, around the user's neck to help support the head.	I
2519	41574	Infant nursing cushion	Нярай сувилахуйн дэр	A soft pillow or pad used to provide arm support and comfort to the user during breast-feeding, and possibly during other infant-care related activities. The extra support provided by the device helps to minimize muscle fatigue associated with maintaining one position.	I
2520	41575	Orthotic insole, prefabricated, non-antimicrobial	Ортотик улавч, угсармал, нянгийн эсрэг үйлчилгээтэй	A prefabricated shoe insert typically available for use by a layperson intended to provide supplemental support for the arch and/or heel of the foot; it does not include an antimicrobial agent(s). This is a reusable device.	I
2521	41583	Freestanding support rail	Бие даасан тулгуур төмөр зам	A self-supporting bar that is placed strategically on the floor by a healthcare professional for hospitalized, disabled, or geriatric patients to hold and support themselves when rising from a bed or a chair.	I
2522	41585	Laryngostroboscope system	Ларингостробоскопийн систем	A device used to observe and record the intralaryngeal phenomenon of phonation (speech). It is comprised of a number of components, e.g., a rhino-laryngeal stroboscope unit, camera, video recorder, computer and software, and will typically be used together with an appropriate endoscope. It is typically used in ear/nose/throat (ENT) departments to investigate the correct functioning of the vocal apparatus (glottis) and to investigate voice disorders.	I

2523	41587	External defibrillation electrode, paediatric, single-use	Гадны дефибрилляцийн электрод, хүүхдийн, нэг удаагийн хэрэглээ	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator to a pre-pubescent patient in order to defibrillate the heart (restore a normal rhythm) or slow a rapid heart rate. It typically consists of a cable set [with a connector for insertion into the external pulse generator (EPG)] that terminates with self-affixing pads (the electrodes) prefabricated with contact gel and an adhesive, that are applied to the chest (the intact torso) or back of the patient so that the discharge passes across the region of the heart. This device may remain applied to the patient during stages of treatment. This is a single-use device.	I
2524	41604	Assistive automobile wheelchair lift	Автомашины тэргэнцэрт туслах өргөгч	An electrically-powered hoist designed for personal use, enabling a person with a disability to lift and position their unoccupied wheelchair onto or into a motor vehicle, e.g., a car or van, which is built or adapted for use by them. It will typically be attached to the vehicle and be powered by the vehicle's electrical supply.	I
2525	41613	Assistive automobile child safety seat	Туслах автомашины хүүхдийн аюулгүйн суудал	A device designed to be used in a motor vehicle, e.g., a car or van, used by a person with a disability or a standard motor vehicle to accommodate the seating for a child with a disability and providing that child with a safe and comfortable seat that conforms to the regulations for children's safety seats. Included are swivelling seats, elevating seats, and sliding seats.	I
2526	41646	Compounding transfer set	Нийлмэл дамжуулах багц	A collection of sterile items typically used in the clinical pharmacy or a manufacturing plant to provide a sterile fluid path for the compounding (mixing) of different multi-ingredient solutions from multiple source containers into a final suitable container. It is typically available in a variety of configurations (e.g., as a 6-lead or a 9-lead set) and includes, e.g., tubes, connectors, spikes. This device may also be used for intravenous (IV) solution compounding. This is a single-use device.	I

2527	41660	Periodontal curette	Шүдний шүдний кюрет	A hand-held dental instrument with a sharp, hollow-ground blade, usually rounded and semicircular in cross-section, used with a pulling action to remove calculus of periodontal pockets and smooth root surfaces; it is not a gingival retraction cord packing tool. It is typically a double-ended instrument with a handle positioned centrally and is made of metal. This is a reusable device.	I
2528	41677	Orthodontic archwire/bracket ligature	Ортодонтийн нуман утас/хаалтны холбоос	A device intended to securely tether an orthodontic archwire to an orthodontic bracket, or securely hold the archwire in the archwire slot of an orthodontic bracket (or brace). It is in the form of a small single tie, or a circular band made of elastomeric (e.g., polyurethane, rubber) or metal materials. This is a single-patient device intended to be replaced regularly during orthodontic treatment (single-use).	I
2529	41707	Laser beam delivery unit holder	Лазер туяа дамжуулах нэгж эзэмшигч	A device designed to be used together with a laser delivery unit to provide support to the delivery unit during the operation of the laser. The holder will help with the positioning of the final laser beam output and increase safety from inadvertent movement which would be undesirable. This is a reusable device.	I
2530	41717	Medicine spoon, single-use	Эмийн халбага, нэг удаагийн хэрэглээ	A device used for orally dosing/portioning/serving medicine to a recipient, e.g., a patient or person with a disability. It will typically be designed to facilitate giving different quantities and show these as defined level markings. This is a single-use device.	I
2531	41756	Gas cylinder holder	Хийн цилиндр эзэмшигч	A device designed to hold and secure a single medical gas cylinder of compressed medical gas which is to be used in medical treatment/therapy. The usual gases are, [e.g., oxygen (O_2), air, or nitrous oxide (N_2O)]. It is used to secure the cylinder both during transport and typically whilst the gas is being used. The device is typically constructed of metal and may be mounted to a medical device service rail system, a bed under transport, or other medical devices requiring medical gas to be present. It is configured to meet the size of the cylinder, typically those of small dimensions.	I

2532	41861	Dental restoration carver, resin	Шүдний нөхөн сэргээх сийлбэрчин, давирхай	A hand-held manual dental instrument intended to be used for producing and perfecting anatomical forms in dental composite or acrylic resin restorations, typically by cutting, scraping, paring, and smoothing finishes and modelling patterns intraorally. It will typically be a double-ended instrument with working ends of various shapes and designs, and a central handle. This is a reusable device.	I
2533	41875	Electric-motor-driven wheelchair, occupant-controlled	Цахилгаан мотортэргэнцэр, зорчигчийн удирдлагатай	An electrically-powered wheeled personal mobility device with a seat designed to enable a non-bariatric person with a disability, or without the full capacity to walk, to self-mobilize using power from an electric motor(s). It includes controls (typically joystick) to allow the occupant electronic control of speed/direction; it is not designed with a foot platform and handlebars (i.e., not a mobility scooter).	I
2534	41882	Cardiac resuscitator, manual	Зүрхний сэхээн амьдруулах эмч, гарын авлага	A manually-operated external device (a hand-powered pump) designed to be applied to the chest of a patient suffering cardiac arrest so that a healthcare professional or layperson can administer rhythmic compression to the chest in the region of the heart to provide blood flow during cardiopulmonary resuscitation (CPR). It typically consists of central piston, a soft but firm base, (a ring) that contacts the chest, a strong spiralled spring that transfers the users applied force to the piston, and a large handle for the user's hands. The compression force can be adjusted to a pre-set load to achieve equal delivered compressions to prevent damage to the ribs/organs. This is a reusable device.	I

2535	41893	Medical device service rail clamp	Эмнэлгийн төхөөрөмжийн үйлчилгээний төмөр замын хавчаар	A clamp designed to fit onto a medical device mounting rail or medical device service rail system to provide a secure method of fixing/mounting (holding) other medical or non-medical devices being used in the vicinity for patient treatment/care. It will typically be used in a hospital ward, a treatment room or an intensive care unit (ICU). It will have a gripping profile that is compatible to the medical rail it is intended to fit and a locking mechanism providing extra safety against inadvertent loosening. To this clamp, other adaptors may be fitted/slotted to provide holders for the devices to be carried, or it may have a dedicated function for which it is solely designed.	I
2536	41900	Alternating-pressure bed mattress overlay, reusable	Хувьсах даралтын ор матрас давхарлаж, дахин ашиглах боломжтой	A pad or thin mattress, usually full-body length, which is placed on top of a bed mattress and designed with parallel chambers that are alternately filled with forced-air to actively change an occupant's bed contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I
2537	42039	Oxygen low pressure hose	Хүчилтөрөгчийн нам даралтын хоолой	A length of reinforced colour-coded flexible tubing produced according to ISO5359 intended to conduct compressed oxygen (O2) from an O2 terminal unit or O2 cylinder to a medical device that functions with O2 (e.g., ventilators, anaesthesia unit, analgesia unit, and other O2 dependent respiratory device). The gas pressure in the tubing will be low, a "working pressure" (e.g., 3 - 5 bar), having been reduced by a regulator from a high pressure. The tubing is reinforced with, e.g., woven polyester or cotton and intended for use within a static clinical environment (e.g., intensive care). It is available in various lengths; some types may include an integrated mount. This is a reusable device.	I
2538	42050	Finger protector, reusable	Хурууны хамгаалалт, дахин ашиглах боломжтой	A device intended to be used to protect an injured finger from further trauma during the healing process. It will typically be made of durable materials, e.g., plastic, rubber, or reinforced metal. This is a reusable device.	I

2539	42112	Electric heated glove	Цахилгаан халаалттай бээлий	An electrically-powered device intended to be worn on the hand(s) of a patient who is intolerant of exposure to a cold outdoor environment to provide warmth. It is in the form of an insulated glove with an integrated heating system often with rechargeable batteries. It is typically be used by persons with various impairments such as circulatory and tissue disorders, rheumatism, arthritis, or recent surgery.	I
2540	42115	Heated insole	Халаасан улавч	An assistive device intended to be worn against the feet of a person who is intolerant of exposure to a cold outdoor environment. This device provides a source of heating, typically electrical, and fits inside the selected footwear being used by the user allowing him/her to function outdoors. This protective device will typically be used by persons having impairments, e.g., circulatory or tissue disorders, rheumatism, arthritis, amputations, dysmelia or recent surgery. This is a reusable device.	I
2541	42215	Gastrointestinal ostomy tube pocket	Ходоод гэдэсний остоми хоолойн халаас	A non-sterile, noninvasive pouch designed to be wrapped around the protruding end of a gastrointestinal ostomy tube (e.g., gastrostomy or jejunostomy tube) to hold and support it in order to ensure its stabilization on the patient. This is a reusable device.	I
2542	42268	Accelerator system collimator electron applicator	Хурдасгуурын систем коллиматор электрон түрхэгч	A device used with a therapeutic accelerator system collimator, intended to be attached between the beam exit port in the accelerator collimator housing and the patient, for the final state of collimation before the electron beam reaches the patient. It is placed close to the skin and is used to reduce the amount of scattered electrons that reach the targeted treatment area. Although the shape of the cone of these devices is rectangular, a slot is typically built into the device to accommodate a custom-shaped insert used to match the field shape to the target volume.	I
2543	42279	Mobile specimen x-ray system, analogue	Хөдөлгөөнт сорьцын рентген систем, аналог	A mobile (on wheels) specimen x-ray system designed to generate and control x-ray beams and to record the absorption patterns of x-rays passing through tissue samples or amputated body parts. The image is from film or phosphor plate.	I

2544	42298	Intermittent urethral drainage catheter, non-sterile	Шээсний сувгийн завсрын катетер, ариутгагдаагүй	A non-sterile, flexible or rigid, tube designed to be repeatedly inserted through the urethra, typically by the user (i.e., self-applied), to the urinary bladder to provide short-term, episodic urine drainage (removed after each void), typically for an individual who is physiologically incapable of voiding. Because of the potential frequency of catheterization, the device will typically be pre-lubricated or coated with/made of materials that facilitate easy insertion and removal [e.g., polytetrafluoroethylene (PTFT) - Teflon, or glass]. The device may be male or female dedicated. This is a reusable device.	I
2545	42305	Professional examination gown, reusable	Мэргэжлийн шалгалтын даашинз, дахин ашиглах боломжтой	A garment made of natural and/or synthetic materials intended to be worn by healthcare providers, sometimes over scrub suits, while examining patients. Depending upon its intended use, it may be fluid resistant or impervious to fluid. An examination gown is used during patient examination procedures to protect both the patient and staff from the transfer of contaminants such as microorganisms or body fluids. This is a reusable garment.	I
2546	42328	Foam-filled bed mattress overlay	Хөөсөөр дүүргэсэн ор матрас давхар	A foam-filled pad or thin mattress, usually full-body length, which is placed on top of a bed mattress to distribute an occupant's body weight over a large surface area, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I
2547	42338	Syndesmotome	Синдесмотом	A hand-held, dental, surgical instrument designed for cutting desmodontal fibres and for detaching the alveolodental ligaments (the fibrous connective tissue surrounding the root of a tooth that separates it from and attaches it to the alveolar bone). It is typically made of high-grade stainless steel and has a long shaft with a handle at the proximal end and an angled scythe-like or knife-like blade at the distal end. This is a reusable device.	I

2548	42345	Dental mouthwash	Шүдний ам зайлагч	A substance intended to be used to clean and disinfect the oral cavity (including teeth and gums) for personal hygiene and/or dental clinical procedures. It is available in various forms (e.g., liquid solution, dissolving tablets) which inhibit bacterial growth and sometimes provide specific benefits for teeth (e.g., fluoride, whitening agents). It is intended for use in the home or a clinical setting. This is a single-use device.	I
2549	42374	Orthodontic clasp, metal wire, custom-made	Ортодонт тэврэлт, төмөр утас, захиалгаар хийнэ	A dental device made of metal wire intended to retain and stabilize a removable orthodontic appliance to stationary teeth. It is manufactured, typically chairside, to meet the specifications of an individual patient. This is a single-patient device that is used for the duration of the treatment (single-use) before being discarded.	I
2550	42391	Capillary thermometer cover	Капилляр термометрийн бүрхэвч	A device intended to be used as a physical barrier for an alcohol or mercury capillary thermometer to prevent cross-contamination between patients and/or environmental exposure. This is a single-use device.	I
2551	42404	Multifunction cardiac electrode, paediatric	Олон үйлдэлт зүрхний электрод, хүүхдийн	A non-sterile electrical conductor designed to be applied to a paediatric patient for automatic or manual defibrillation, external pacing, cardioversion, and electrocardiographic monitoring through transmission of cardiac bioelectric signals (typically from the thoracic surface) to devices that record/process the signals and potentially return electrical impulses [e.g., electrocardiograph, electrocardiographic monitor(s), defibrillator]. It is a disk-like electrode that is affixed to the skin with a special adhesive and a conductive gel (pre-gelled). It may be made of x-ray translucent materials and may include permanently attached lead wires. This is a single-use device.	I

2552	42412	Laparoscopic access cannula, single-use	Лапароскопийн суваг, нэг удаагийн	A single-lumen surgical device intended to be percutaneously inserted through the abdominal wall to create an access port for a laparoscope/laparoscopic instrument during laparoscopy. The cannula is provided with a shut-off valve for gas/fluid supply, and other sealing devices (e.g., dedicated seals/rings, caps, valves), to prevent insufflation gas leakage whilst allowing entry of instruments; it may additionally be intended for thoracoscopy whereby the valve may not be required. It may include a sharp or blunt trocar blade to assist introduction and/or puncture the abdominal wall; if the trocar is included it may be referred to as a trocar or trocar assembly. This is a single-use device.	I
2553	42427	Animal-skin chair pad	Амьтны арьсан сандлын дэвсгэр	A pad made of natural animal skin, typically a sheep wool fleece, intended to be placed on the seat of a chair and contact an occupant's body to distribute body weight over the surface area of the buttocks, typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. It is available in various sizes and may also help to provide warmth for the occupant and to absorb sweat. It is commonly used for elderly immobilized patients (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. It may be used in a wheelchair. This is a reusable device.	I
2554	42433	Intermittent urethral drainage catheter, non-antimicrobial, reusable	Шээсний сувгийн ус зайлуулах катетер, нянгийн эсрэг үйлчилгээтэй, дахин ашиглах боломжтой	A flexible or rigid tube designed to be repeatedly inserted through the urethra, typically by the user (i.e., self-applied), to the urinary bladder to provide short-term, episodic urine drainage (removed after each void), typically for an individual who is physiologically incapable of voiding. Because of the potential frequency of catheterization, the device is typically pre-lubricated or coated with/made of materials that facilitate easy insertion and removal [e.g., polytetrafluoroethylene (PTFT) - Teflon, or glass]; it does not include an antimicrobial agent(s). The device may be male or female dedicated. This is a reusable device.	I

2555	42446	Suction/irrigation system canister/bottle holder, single-use	Сорох/усалгааны системийн сав/лонх баригч, нэг удаагийн	A device intended to be used to hold a dedicated fluid or collection/specimen canister or bottle that is used within a suction and/or irrigation system. This device can be used to mount the canister/bottle(s) to the parent system when it is mobile (on wheels), or to mount the canister/bottle to a medical device service rail system or a wall rail (typically used on the ward). This is a single-use device.	I
2556	42451	Eustachian catheter, reusable	Eustachian катетер, дахин ашиглах боломжтой	A long, flexible tube used for middle ear drainage and/or temporary equalization of the pressure on both sides of the eardrum via insufflation. The distal tip is passed along the floor of the nose and guided into the Eustachian tube; air may be blown from an external bag through the device and into the middle ear. It is typically made of soft metals [e.g., silver (Ag) coated brass], and has a curved distal end with a slightly bulbous tip and a wider funnel-like proximal end with a finger ring to aid manipulation. This is a reusable device.	I
2557	42461	Tongue depressor, examination, single-use	Хэл дарагч, үзлэг, нэг удаагийн хэрэглээ	A hand-held device used to displace the tongue to facilitate examination of the surrounding organs/tissues. It is typically a double-ended flat device with rounded working ends made of wood or plastic materials; it may be aromatic/flavoured to make then less intrusive. The device may be used in a healthcare facility, doctor's office, or in the home. This is a single-use device.	I
2558	42489	Electrocardiographic electrode, reusable	Электрокардиографийн электрод, дахин ашиглах боломжтой	A noninvasive electrical conductor designed to conduct electrical signals, generated by a patient's heart, from the skin surface to an electrocardiograph (ECG) monitoring device, via an ECG lead wire (not included). It is typically a disk-like electrode that is affixed to the skin with a special adhesive, or adhesive tape, and a conductive gel (some are pre-gelled), or using a suction mechanism; alternatively, some types may be designed to be attached to hand-held heart rate meters. Electrocardiography (ECG) is usually performed using a set of electrodes (e.g., 12) connected to appropriate leads and cables. This is a reusable device.	I

2559	42498	Intravenous pole multi-outlet holder	Судсаар хийх туйлын олон гаралтын эзэмшигч	A mains electricity (AC-powered) device used with an intravenous (IV) pole (usually of the floor-standing type) and designed to provide multiple electrical outlet sockets so that an electrical source is made available when two or more infusion pumps are mounted into the retaining slots provided. This device will fit onto a standard IV pole and is intended to accept the mounting of a number of infusion pumps, keeping them safely fastened to the pole in an organized manner.	I
2560	42514	Ventilator stand	Агааржуулагчийн тавиур	A mobile device onto which a ventilator (not included) is designed to be mounted/secured so that the ventilator can be safely moved about. It is designed as a floor stand (a vertical pole with a horizontal platform or spars or other form of fastening mechanism) with a set of effectively-spaced wheels to provide mobility and stability.	I
2561	42536	Uterine depressor	Үтрээний хусуур	A hand-held surgical instrument used to displace (depress -- to press down or aside) the uterus to facilitate examination of the surrounding organs/tissue during a surgical intervention. It is typically a double-ended device, that can be of various shapes (e.g., curved, spoon-shaped, or fenestrated) with the working ends slightly angled to improve organ manipulation and visibility. It is usually made of high-grade stainless steel. This is a reusable device.	I
2562	42537	Cytology scraper, single-use	Цитологийн хусагч, нэг удаагийн	A wooden, plastic, or metal instrument used to collect a scraping of cells from tissue for the purposes of a diagnostic examination. This is a single-use device.	I
2563	42548	In-line backflow valve, reusable	Шугаман доторх буцах хавхлага, дахин ашиглах боломжтой	A general-purpose device used in medical tubing or pipe-lines to prevent the backflow of gases or liquids. It will typically have a small ball or a leaf valve that instantly closes should a retrograde pressure (backflow) occur. This is a reusable device.	I
2564	42558	Electromechanical operating table base	Цахилгаан механик мэс заслын ширээний суурь	An electrically-powered component of a modular electromechanical operating table assembly designed as a height-adjustable support intended for the introduction and engagement of interchangeable operating table tops. It may be mobile or stationary and in the form of a column or frame.	I

2565	42782	Elbow joint orthosis component	Тохойн үений ортозын бүрэлдэхүүн хэсэг	A prefabricated (non-customized) externally applied and wearable orthopaedic device designed as a component of an upper limb orthosis to allow or control motion of the elbow joint. This is a reusable device.	I
2566	42795	Female wearable urinal, reusable	Эмэгтэй хүний өмсдөг шээсний уут, дахин ашиглах боломжтой	A non-sterile, urine drainage device designed for women that typically consists of a flexible tube attached to a collector that is specially formed to securely fit around the female genitals to provide a route to channel urine, via a tube, into a collection bag. This device provides an alternative to inserting a catheter through the urethra, especially when difficulty is encountered in insertion or retention. It may be used to treat urinary incontinence or for non-ambulatory patients. This is a reusable device after appropriate cleaning.	I
2567	42797	Incontinence penis clamp, reusable	Шээс задгайрах шодой хавчаар, дахин ашиглах боломжтой	A male urinary incontinence device designed to gently compress the penis, either the proximal shaft or the glans penis, to occlude the urethra and prevent involuntary urination/dribbling for men who are incontinent of the bladder. It is typically made of plastic materials and is designed as an adjustable, two-hinged, self-retaining lever clamp with foam rubber inserts; the user can typically adjust the tension to suit their penis size and needs. It is removed by the user when voiding and then reapplied. The device is washed/disinfected at regular intervals to maintain hygiene. This is a reusable device.	I
2568	42808	Chair lift/transporter	Сандал өргөгч/тээвэрлэгч	A manually-powered device designed to be used by a healthcare provider to easily transport a chair without wheels and with or without an occupant. This device is typically used to move chairs in institutions for persons with disability.	I

2569	42809	Assistive stool/step	Туслах өтгөн/алхам	A platform designed or adapted for a disabled person to stand upon to compensate for differences in height, to place the feet/legs upon for rest/support when seated, and/or to sit upon. It may include legs, hand rails, and/or suction cups to attach to a surface, and may be used inside, outside or in a bath. It may be used to facilitate comfort, to correct lower-limb positioning during a treatment, or to compensate for an injury, temporary or permanent disability. This is a reusable device.	I
2570	42812	Chair/stool armrest	Сандал/сандлын түшлэг	A device designed to be attached to a chair or a stool to provide the occupant with arm support for comfort while sitting.	I
2571	42834	Vacuum hose	Вакуум хоолой	A length of reinforced colour-coded flexible tubing intended to be connected to a vacuum-producing medical device, medical equipment, or a medical system to channel incoming suction. It has a thick wall to prevent collapse due to the negative pressure of the vacuum and typically produced according to ISO5359. It is available in various lengths, including standard coil lengths. This is a reusable device.	I
2572	42893	General-purpose bowl, reusable	Нийтийн зориулалттай аяга, дахин ашиглах боломжтой	A portable bowl or basin designed to be used for a variety of medical purposes such as containing fluids, carrying or holding instruments prior to or during a procedure, and collecting body waste or other matter. The design and shape can vary including round, oblong, deep or quite shallow. This is a reusable device.	I
2573	42911	Gas pipeline/supply system air compressor	Хийн дамжуулах хоолой / хангамжийн системийн агаарын компрессор	A mains electricity (AC-powered) device designed to create compressed air, normally of medical grade, and supply it to a hospital or institution's gas pipeline/supply system. Ambient air is filtered, compressed by this device, then cleaned and stored in a pressure tank for delivery upon demand within the facility for medical purposes. Also referred to as a bulk air compressor.	I
2574	42966	Weighted cuff	Жинлэсэн ханцуйвч	A device in the form of a cuff that is filled with a weighted substance (e.g., sand) and that is worn on the limb or limbs of the user during exercise to help strengthen the muscles or to prevent trembling of the limb(s). It will typically be used by a person with a disability or a patient that has suffered a stroke for rehabilitation. This is a reusable device.	I

2575	43031	Wheelchair medical gas supply/intravenous pole holder	Тэргэнцэртэй эмнэлгийн хийн хангамж/судасны шон эзэмшигч	A device typically constructed of metal and intended to be attached to a wheelchair to mount a medical gas supply (e.g., an oxygen cylinder) and/or an intravenous (IV) pole. It is typically used during patient transport.	I
2576	43057	Assistive manual toothbrush, single-use	Туслах гар ажиллагаатай шүдний сойз, нэг удаагийн	An instrument designed to be used by a disabled person to manually brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and distal head to which is attached two or more rows of bristles (e.g., nylon) grouped in separate tufts, in rows, or evenly distributed; it may be designed with a grip adapted as an extension of the arm, hand, or finger. The device is normally used with toothpaste. This is a single-use device.	I
2577	43082	Pressurized full-body orthosis	Бүтэн биеийн даралтат ортез	A pressurized suit (rigid pneumatic structure) intended to provide whole-body support to help thoracic paraplegics walk. This is a reusable device.	I
2578	43090	Basic electric toothbrush	Үндсэн цахилгаан шүдний сойз	An electrically-powered device designed to be used by a patient to brush clean their teeth and gums (i.e., remove plaque, tartar, stains). It typically consists of a proximal handle and an exchangeable distal head with rows of bristles (e.g., nylon) grouped in separate tufts or evenly distributed. The device provides automated bristle movement (e.g., rotary or vibratory) intended to augment brushing, and is typically used with toothpaste. This is a reusable device.	I
2579	43093	Toilet armrest/back rest, freestanding	Ариун цэврийн өрөөний гарын түшлэг/нурууны түшлэг, бие даасан	A freestanding device, typically in the form of padded arm and back rests fitted to a framework, that stands on the floor surrounding a toilet to assist a person with a disability to sit on or get off of the toilet by providing support for their arms and/or back. The device is easily removed from the toilet bowl for conventional toilet use.	I

2580	43215	Paraffin wax oven	Парафины лав зуух	A mains electricity (AC-powered) device used for maintaining paraffin wax and paraffin wax embedded tissues at a precisely controlled temperature. This device will typically be designed as an electrically-heated metal cabinet and will have a thermostat for the optimal selection of the different melting points for the different kinds of paraffin in use. The thermostat will also ensure that the threshold temperature of the specimen is not exceeded. The device may have design safety features to mitigate the danger of using, e.g., xylene and other flammable liquids within the oven during it application.	I
2581	43233	Nerve guide, animal-derived	Мэдрэлийн хөтөч, амьтны гаралтай	An implantable tubular device made exclusively of animal-derived bioabsorbable material(s) [e.g., porcine-derived collagen matrix, chitosan] intended to be used to create a tunnel through which a discontinuous peripheral nerve can regenerate to bridge the proximal and distal nerve stumps. The device is typically used during hand surgery and/or nerve reconstruction. It is intended to be chemically degraded and typically absorbed via natural body processes. It is also known as a nerve sheath, nerve cuff, nerve protector, nerve conduit, or a nerve wrap.	I
2582	43268	Bed mattress support platform, hydraulic	Орны матрасыг дэмжих тавцан, гидравлик	A hydraulically-powered medical bed structure that supports a medical bed patient surface (e.g., a mattress) and that can articulate and/or change its surface to facilitate various therapeutic, diagnostic, and convenience positions. It is typically a flat structure made of a metal frame that operates in response to hand and foot controls.	I
2583	43272	Nipple pad/ring, reusable	Хөхний толгой/цагираг, дахин ашиглах боломжтой	A device intended to be worn directly over the breast/nipple of a nursing woman between breast feedings to help protect the nipple from chafing, due to friction from clothing, and/or to treat sore/cracked nipples; it may also be intended to absorb leaking breast milk. It may be in the form of a fabric or cotton pad (commonly known as a nursing pad), a dome-shaped gel (e.g., hydrogel) cover, or a ring. This is a reusable device.	I

2584	43315	Surgical hood	Мэс заслын юүдэн	A non-sterile head covering designed as a top with elongated sides and back with a front opening for the face to be used by surgical staff to cover their hair and facial hair (beards) in order to protect both the patient and themselves from the transfer of microorganisms, body fluids, and particulate material. It is typically made of soft, disposable materials. This is a single-use device.	I
2585	43370	Ostomy bag pressure bandage	Остоми уутны даралтын боолт	A piece, strip, or band of material designed to apply pressure to stabilize an ostomy bag (receptacle that collects bodily waste through a stoma) to a patient's body. This is a reusable device.	I
2586	43383	Ophthalmic operating table, electromechanical	Нүдний мэс заслын ширээ, цахилгаан механик	An electrically-powered motorized table designed to support a patient during ophthalmic surgical procedures. It is adjustable to accommodate various positions (e.g., height, tilt). It is particularly intended to provide support for and stabilization of the head of the patient (typically includes a headrest) and to help provide optimal access for the surgeon(s) during the intervention (e.g., by having a small-width table top and therefore a shorter stretch distance for the surgeon). It may be freestanding or connected to another device or system.	I
2587	43387	Clamp jaw cover, non-sterile	Хавчаар эрүүний таг, ариутгагдаагүй	A non-sterile device used in pairs that are placed/fitted onto the distal working end (the jaws) of surgical instruments (e.g., vascular clamps, haemostats and forceps) to provide improved atraumatic grip and even pressure distribution when clamping an artery or a vein. It is typically a long device designed as a cylindrical tube and made of radiopaque silicone materials; it is available in various sizes. Sterilization takes place along with the instrument prior to the procedure. It may also be known as jaw covers. This is a single-use device.	I

2588	43464	Female-incontinence urethral plug	Эмэгтэй хүний шээсний уутны бөглөө	A sterile, female urinary incontinence device (a tampon-like plug) designed to be placed into the urethral opening to occlude the urethra and prevent involuntary urination/dribbling for females who are incontinent of the bladder. It is typically made of plastic and textile materials and is designed to absorb urine and swell thereby blocking the urinary passage. It is removed by the user when voiding and discarded. This is a single-use device.	I
2589	43564	Bed transporter	Ор зөөгч	A battery-powered device designed to be used by one healthcare provider to transport a hospital bed with steerable wheels with or without an occupant in a controlled manner within a hospital. It typically consists of a chassis, batteries, an operator handle with operating panel, a bed gripping claw, an electric motor that powers the drive wheel(s), a remote control for operation/steering, brakes, and an emergency stop button. The device is attached (locked) to one end of the bed and pulls the bed after it. It is compatible for transport in lifts and for long and short internal transports.	I
2590	43588	Leg splint system, self-moulding	Хөл чиглүүлэгч систем, өөрөө цутгах	A collection of non-sterile devices designed to produce a moulded splint that is formed around the lower limb of a patient who requires support or immobilization (e.g., to treat fractures, injuries, strains, sprains). It typically consists of a two-component polyurethane that is mixed and poured into a textile which matches this part of the body creating a rigid or soft foam splint that is applied to the patient’s leg/foot where it sets. It is available in different sizes. This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	I

2591	43651	General specimen receptacle transport container	Ерөнхий сорьцын савыг тээвэрлэх сав	A non-powered portable device designed for the transportation of clinical specimens contained within receptacles (e.g., glass vials, bottles, tubes, slides, swabs) from the point of collection to the laboratory or between medical institutions. It is typically designed to be liquid-tight with a shock-absorbing foam liner to protect the contents from adverse conditions that could cause breakage and to absorb any escaped fluid. It is available in a variety of designs whereby it may be thermally insulated and might include a non-powered cold pack(s). This is a reusable device.	I
2592	43669	Neck elastic exerciser	Хүзүүний уян харимхай дасгалын төхөөрөмж	A mechanical exercise apparatus intended primarily to strengthen the major muscles of the neck (e.g., sternocleidomastoid, splenius capitis and cervicis/colli) through repetitive flexion or extension of the neck muscles against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that may incorporate changeable weights and a head pad or head/neck harness; a bench may be included for the user to sit while performing the exercise. The device may also be used to improve neck flexibility and mobility.	I
2593	43671	Temperature-controlled laminar airflow air cleaner	Температурын хяналттай ламинар агаарын урсгалын агаар цэвэрлэгч	A mains electricity (AC-powered) device designed to physiologically condition a patient's immediate ambient air using temperature-controlled laminar airflow (TLA), typically to provide a non-pharmaceutical asthma treatment. It is designed to be stationary usually adjacent to the patient's bed or other location intended for relaxation. It consists of a base containing air intakes, filters, air cooling system, and an air supply nozzle above the patient. Typically for home-use, TLA is intended to displace the natural body convection and significantly reduce particle and allergen exposure during sleep/rest within the breathing zone without causing draught/dehydration.	I

2594	43783	Earmould impression kit	Чихний хэвний иж бүрдэл	A collection of non-sterile supplies, instruments, and materials intended to be used to make an accurate impression of the folds and convolutions of cartilage that form the outer ear and its canal (i.e., an earmould). It typically includes a foam or cotton block, a mixing bowl, a spatula, impression liquid and/or powder; it also includes either a syringe or tube to deliver the impression material, or less frequently an impression tray for direct moulding. The mould of the ear is used to manufacture custom-made hearing devices such as hearing aids and earplugs. This is a single-use device.	I
2595	43826	Air-conduction tinnitus masker, in-the-ear	Агаар дамжуулагч чихний шуугианыг дарагч, чихэнд	A battery-powered digital acoustic device designed to provide noise of sufficient intensity and bandwidth to mask tinnitus (a ringing sound in the ear or internal head noises) by neutralizing a patient's perception of the symptoms for temporary relief. It typically consists of a miniature sound generator, contained in a case that fits completely inside the outer ear (concha) [in-the-ear (ITE)], that delivers the noise to the eardrum through air. The microphone in some types may measure the level of the background noise and adjust accordingly the masking signal. The digital design of the device allows for the introduction of new tinnitus masking software programs.	I
2596	43851	Gravity-convection laboratory oven	Гравитаци-конвекцийн лабораторийн зуух	A mains electricity (AC-powered) device used for high-temperature laboratory procedures such as baking, drying, desiccating, and sterilizing, through natural heat convection, items placed within it (e.g., glassware, instruments, cultures, or samples). It operates at temperatures from 5° Celsius above ambient temperature up to 250° Celsius. It is available in a variety of designs and chamber sizes, and the chamber is typically lined with corrosion-proof materials (e.g., stainless steel). The device is thermally insulated, has manual or microprocessor-operated controls, heating elements, and time and temperature sensors.	I

2597	43947	Positive pressure airway secretion-clearing device	Эерэг даралттай амьсгалын замын шүүрлийг цэвэрлэх төхөөрөмж	A hand-held, non-powered device designed to remove excessive mucus or sputum (phlegm) from the lungs and upper airways using positive pressure airway (PEP) to treat patients affected by acute or chronic lung disease. PEP is created when a patient exhales into the device which creates vibrations in the chest by various means (e.g., an oscillating ball or creating bubbles in a solution within the device) loosening the mucus for expectoration and assisting in lung expansion. Also known as an oscillating positive expiratory pressure (OPEP) device, it is a single-patient device designed for use both in a healthcare facility and in the home. This is a reusable device.	I
2598	43956	Temporal bone holder	Түр зуурын ясны эзэмшигч	A surgical device used to hold a piece of bone in a clamped position outside of the surgical field while the surgeon and/or other helping assistants work on it. It is typically used to reshape bone or for creating grafting material. This device will typically have a sturdy foot, a clamp to hold the bone, and an integral dish-like bowl to catch the bone fragments/cuttings. This is a reusable device.	I
2599	43998	Umbilical cord clamp, single-use	Хүйн хавчаар, нэг удаагийн	A sterile, hand-held manual surgical instrument designed to temporarily compress the umbilical cord immediately after birth. It is used before cutting or ligating (e.g., with a clip) the cord, and is intended to enable aseptic haemostasis. It is typically made of plastic material and may incorporate features such as serrations on the contact area and/or a security lock. This is a single-use device.	I
2600	44007	Breast self-examination pad	Хөхөө өөрөө шалгах дэвсгэр	A device intended to be used to perform a tactile self-breast examination for abnormalities, typically unfamiliar changes/lumps in the soft tissue of the breast. It is typically pouch-shaped and made of thin, flexible, plastic (e.g., polyurethane) that contains a small quantity of fluid silicone and/or air, allowing it to conform to the user's breast and reduce skin friction between the hand and the surface of the breast. The device will allow the user to sense subtle tissue density variations. This is a reusable device.	I

2601	44011	Decontamination floor mat, single-use	Халдваргүйжүүлэх шалны дэвсгэр, нэг удаагийн	A pad made of coarse, durable material that is designed to be placed on the floor to wipe the soles of the footwear of persons walking on its surface. The product is intended to reduce the distribution of dirt/contaminated materials on the floor. The product is for single-use and is not washed or cleaned for reuse. It may be a pad of layered adhesive sheets that bind dirt touching the surface; when the sheet is sufficiently saturated it is peeled off and discarded to reveal a new adhesive surface.	I
2602	44081	Home healthcare information system application software	Гэрийн эрүүл мэндийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of home healthcare services and facilities. It is typically supplied for installation into a dedicated home healthcare information system or existing mainframe or decentralized computers/networks.	I
2603	44084	Healthcare-facility-orientation information system	Эрүүл мэнд-байгууламж-чиг баримжаа олгох мэдээллийн систем	A dedicated computerized system designed to provide information services to the public (e.g., patients, visitors) for their orientation to locations and services within a healthcare facility(ies). It may operate through an interactive touchscreen and display information such as directions, locations, staff names, help menus, and terminology. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	I
2604	44101	Bedside information system application software	Орны дэргэдэх мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the provision and utilization of administrative and clinical information at the patient's bedside. It is typically supplied for installation into a dedicated information system used at the patient's bedside or existing mainframe or decentralized computers/networks.	I

2605	44102	Patient-administration information system application software	Өвчтөн удирдлагын мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support patient administration services. Data typically include patient demographic information with patient admission, discharge, transfer, and outpatient-contact information. The device is available for installation into existing mainframe or decentralized computers/networks.	I
2606	44108	Logistics-management information system application software	Логистик-менежментийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of logistics management services (i.e., control of the flow of goods, services, and related information between points of origin and consumption). It is typically supplied for installation into a dedicated logistics-management information system or existing mainframe or decentralized computers/networks.	I
2607	44142	Line-powered autopsy saw	Шугаман хөдөлгүүртэй задлан шинжилгээний хөрөө	A mains electricity (AC-powered) device that consists of motorized handpiece designed to hold and provide torque for a circular rotating blade used during an autopsy to cut through bone and tough tissues, especially for the removal of the upper part of the cranium. It may include an extraction unit with a container for collecting tissue/bone debris. This is a reusable device.	I
2608	44143	Autopsy hand saw	Задлан шинжилгээний гар хөрөө	A hand-held manual device comprised of a handle with a toothed metallic blade that is used during an autopsy to cut through bone and tough tissues. This is a reusable device.	I

2609	44144	Pneumatic autopsy saw	Хийн задлан шинжилгээний хөрөө	A pneumatically-powered, hand-held device that consists of motorized handpiece designed to hold and provide torque for a circular rotating blade used during an autopsy to cut through bone and tough tissues, especially for the removal of the upper part of the cranium. It may include an extraction unit with a container for collecting tissue/bone debris. This device is typically powered by compressed air. This is a reusable device.	I
2610	44145	Battery-powered electromechanical operating table system column	Зайгаар ажилладаг цахилгаан механик үйлдлийн хүснэгтийн системийн багана	A battery-powered component of an electromechanical operating table system designed as a moveable (non-fixed), height-adjustable column that can be repositioned as desired within the operating room (OR) for the introduction and engagement of interchangeable operating table tops upon which the patient has usually been placed, transported, and prepared for the surgical procedure. This device is mobile to the degree that is can be moved within the OR to better facilitate any given kind of procedure. It is battery-powered, not having a permanent electrical connection, and must be recharged from the mains supply when not in use.	I
2611	44149	Mastoid gouge	Мастоидын гоуж	A single-bladed, hand-held, surgical instrument that is used to cut and shape the mastoid process (the large projection of the temporal bone of the skull found immediately behind each ear) during ear/nose/throat (ENT) surgery. It typically comprises a handle proximally which becomes a shaft that terminates in a convex profile with a sharp, semi-lunar, bevelled cutting edge to facilitate tissue removal. It is typically made of high-grade stainless steel as a one-piece instrument and is hand-held by the surgeon who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. This is a reusable device.	I

2612	44192	Alternating-pressure chair cushion, single-use	Хувьсах даралтын сандлын дэр, нэг удаагийн	A pad intended to be placed on the seat of a chair and designed with parallel chambers that are alternately filled with forced-air to actively change an occupant's buttocks-chair contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. This is a single-use device.	I
2613	44214	Orthosis suspension unit	Ортозын түдгэлзүүлэлтийн хэсэг	A component of an orthosis that holds the orthosis to the body at various anatomical sites, e.g., the pelvis or malleolus. This is a reusable device.	I
2614	44231	Upper-limb mechanical weight exerciser, lever/pulley-cable	Дээд мөчний механик жингийн дасгалын төхөөрөмж, хөшүүрэг/дамар-кабель	A mechanical exercise apparatus intended primarily to strengthen the major muscles of the upper limb (e.g., biceps, triceps, deltoids, brachioradialis, wrist flexors and extensors) through a repetitive pushing, pulling, curling, or extending motion performed with the arms/hands against the force of a weight. It typically consists of a metal frame containing a lever or pulley-cable system that incorporates changeable weights and bars and/or handles/hand stirrups for the hands and arms; a bench may be included for the user to sit or lay while performing the exercise. The device may also be used to improve upper limb flexibility and mobility.	I
2615	44288	Armrest/arm support cover, sterile	Ариутгасан гарын түшлэг/гарын тулгуур бүрээс	A sterile device designed as an outer covering and used for the protection of an arm supporting device, e.g., an armrest, armboard, or arm posturing device, against unhygienic conditions. It will typically be made of thin, shaped, plastic material which creates a physical barrier between the patient's arm and the arm holder or arm supporting device. This is a single-use device.	I
2616	44294	Infant recumbent sleep positioner	Нярай хүүхдийг хэвтүүлэн унтуулах байрлал тогтоогч	A non-rigid device, usually made of flame retardant fabric and/or polyurethane foam materials, intended to modify the sleeping position/posture of infants to prevent deformational plagiocephaly, a flattening of the back of the skull from a consistent back-sleeping position. It is available in a variety of designs including a wedge-shaped head pillow, a sleeping garment (sleeveless vest) with hooks/Velcro fasteners/nylon zip fasteners and an insertable foam wedge, or a specially designed mattress. This is a reusable device.	I

2617	44301	Patient identification swipe card	Өвчтөний таних карт	A device designed in the form of a swipe card intended to be carried by a patient for personal identification; it typically includes the patient's name, date of birth, card number, pin code, and other required information embedded electronically so that the patient cannot be mistaken for another. This device will typically provide the patient with access rights to provided facilities (e.g., electronic access to his/her medical records).	I
2618	44316	Hand-held telescope	Гар дуран	A device that consists of an arrangement of ophthalmic lenses or mirrors with a handle intended to enlarge images for a visually impaired patient/person. It is typically made of plastic, glass and metal.	I
2619	44318	Gynaecological bib	Эмэгтэйчүүдийн цээж	A garment that is worn over the front of the body of a female patient that has removed her clothing for chest/breast examination/treatment. It is used to provide the patient with a certain degree of privacy during the procedure. It typically consists of a piece of disposable fabric or plastic that is fastened around the neck and it has a opening at the centre to facilitate the examination/treatment. This is a single-use device.	I
2620	44341	Phone/pager	Утас/пейжер	A telecommunication device intended to receive messages/calls from a nurse call or home alert system device (e.g., ambulatory fall sensor, wall-affixed push-button) to notify a recipient that (urgent) assistance is required by the patient; it is also used with some long-session therapeutic devices (e.g., cryolipolysis skin contouring system) to send reminders to the operator during treatment. It alerts the recipient with an audio, tactile, and/or visual signal and is typically used by medical professionals, caregivers or neighbours responsible for the patient.	I

2621	44356	Sound pillow	Дууны дэр	A device designed to look, feel, and function just like a normal pillow with the addition of built-in loudspeakers so that sound from an external source can be discrete and intimate for a user when lying in bed or a resting in a chair. It has a cable and a connector for connection to a radio, television, or other sound emitting device with a jack-plug sound outlet. The sound level is regulated by the user with an adjusting control which lies close by and is adapted to this specific use. It is typically used to create a relaxing atmosphere with music, for entertainment for the user, e.g., to listen to the radio, and to aid sleep and relieve tinnitus.	I
2622	44358	Wrist/hand/finger flexion orthosis, electric	Бугуй/гар/хурууны нугалах ортоз, цахилгаан	An externally applied, battery-powered orthopaedic appliance designed to provide gripping action for the hand via a rod(s) and/or cable(s) and a battery pack providing the energy. The orthosis has unicentric joints at the metacarpophalangeal joints (MP joints or knuckles) and at the wrist.	I
2623	44361	Foam-filled chair cushion	Хөөсөөр дүүргэсэн сандлын дэр	A foam-filled pad designed to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. It may be used in a wheelchair and may contain weight-distribution air cells. This is a reusable device.	I

2624	44378	Bone distraction forceps	Ясны анхаарлыг сарниулах хямсаа	A hand-held, manual, open-surgery instrument with sturdy handles and blade-like jaws designed to distract (force apart) two bone surfaces to enable a surgical procedure, e.g., two vertebrae during a spinal surgical intervention. It has a scissors-like lever action with straight or curved handles and is typically made of high-grade stainless steel. It is available in various sizes with the distraction blades at the working end which are activated through a single or double-jointed pivot that transfers the necessary force to create distraction; the blades are typically short and slender to fit between bone segments or pre-implanted pedicle screws. This is a reusable device.	I
2625	44406	Dental restoration/appliance emergency fix kit	Шүдний сэргээн засварлах хэрэгсэл / яаралтай тусламжийн хэрэгсэл	A convenient collection of the necessary equipment and materials, typically used in an emergency by a layperson, to refix a dental restoration or appliance. It is typically used to temporarily refix dislodged crowns, bridges, fillings, or inlays to restore appearance and function without professional assistance. It typically consists of dental adhesive materials and mixing and application utensils. After application, this device cannot be reused.	I
2626	44411	Hamper cover, reusable	Садааны таг, дахин ашиглах боломжтой	A device made of durable materials that is used together with a hamper and is used to conceal and/or isolate the contents of the hamper. It is used in healthcare facilities to contain bad odours and/or airborne contamination of the contaminated contents within the hamper during, e.g., collection and transport. This is a reusable device.	I
2627	44414	Home blood collection kit, allergy testing	Гэрийн цус цуглуулах хэрэгсэл, харшлын сорил	A collection of sterile devices and materials intended used by a layperson to collect and mail to a clinical laboratory a capillary blood specimen, taken from their body, for allergen immunoglobulin E (IgE) profile testing. It typically includes a syringe, needle, alcohol prep pad, gauze pad, a bandage strip, a container to retain the blood sample, and an envelope for mailing to the laboratory. It is designed to preserve the blood sample for a specified number of days following collection. It is normally available [non-prescription] over-the-counter (OTC) for home-use. This is a single-use device.	I

2628	44463	Assistive hair comb	Туслах үсний сам	A device designed to be used by a person with a disability to assist them in grooming their hair. It will typically be a purpose-made comb consisting off a head with a single row of spaced teeth and a suitable handle for the user to grip.	I
2629	44465	Assistive sexual habilitation/rehabilitation device	Бэлгийн нөхөн сэргээх туслах хэрэгсэл	A device designed to be used to train a person with a disability or to be used by a person with a disability to assist them in the awareness of erogenous zones and their own sexuality.	I
2630	44481	Ankle binder, reusable	Шагай холбогч, дахин ашиглах боломжтой	A strip or roll of fabric or plastic material designed to be wrapped around the ankle to help stabilize and support the joint. It does not include a rigid support (i.e., not an ankle/foot orthosis) and is not a tubular support bandage. This is a reusable device after appropriate cleaning.	I
2631	44494	Vacuum laboratory oven	Лабораторийн вакуум зуух	A mains electricity (AC-powered) device used for high-temperature laboratory procedures such as heating, drying, and desiccating items placed within it, and that provides vacuum within its heating chamber. It operates at temperatures from 10° Celsius above ambient temperature up to 250° Celsius, and is available in a variety of designs and chamber sizes. The chamber is made of corrosion-proof, seam-welded materials (e.g., stainless steel) and includes design features to ensure a negative pressure environment. The device is thermally insulated and has microprocessor-operated controls, heating elements, a vacuum pump, time and temperature sensors, and a glass inspection window.	I
2632	44497	Animal-skin bed mattress overlay	Амьтны арьсан ор матрас давхарга	A pad made of natural animal skin, typically a sheep wool fleece, intended to be placed on top of a bed mattress and contact an occupant’s body to distribute body weight over a large surface area, typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. It is available in various sizes and may also help to provide warmth for the occupant and to absorb sweat. It is commonly used for elderly immobilized patients (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I

2633	44511	Gel-filled chair cushion	Гель дүүргэсэн сандлын дэр	A gel-filled pad designed to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. It may be used in a wheelchair. This is a reusable device.	I
2634	44594	Gel-filled bed mattress overlay	Гельээр дүүргэсэн ор матрас давхарга	A gel-filled pad or thin mattress, usually full-body length, which is placed on top of a bed mattress to distribute an occupant's body weight over a large surface area, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I
2635	44711	Optical medical device procedural cover	Оптик эмнэлгийн төхөөрөмжийн процедурын бүрхэвч	A device designed to fit over the distal end of a non-surgically-invasive device with optical functionality (e.g., laser beam-guide, optical scanning handpiece, endoscope) during use, to act as a cover/shield to avoid direct contact to the eye and/or cross-contamination between patients; it is not intended to act as a spacer. It is typically a small rigid partially- or fully-transparent plastic device. This is a single-use device.	I
2636	44728	Dental shaded pontic kit	Шүдний сүүдэртэй понтик иж бүрдэл	A collection of devices intended to be used to produce artificial tooth veneers (shaded pontics) typically inside clear plastic custom-made teeth aligners (retainer-style orthodontic appliances). This is used to create the appearance of teeth inside the aligner to cover spaces where teeth may be missing for aesthetic purposes during treatment to realign teeth. The contents of the device may include polymer-based materials, dispenser gun, mixing tips, applicator brushes and practice aligner.	I

2637	44732	Orthodontic aligner auxiliary attachment kit	Ортодонт тохируулагчийн туслах хавсралтын иж бүрдэл	A collection of devices, used with retainer-style orthodontic appliances (e.g., preformed teeth aligners) to further facilitate and enhance teeth alignment. The kit includes buttons and elastics, typically made of clear materials for aesthetic purposes, that are attached to the orthodontic aligner and/or teeth to help achieve extrusion, rotation and anchorage control. This provides the clinician with greater control to achieve additional tooth movement during the treatment. The contents of this kit may also include plastic/composite adhesive, etchant, elastics, burs and polishing wheels for cutting the aligners. This is a reusable device.	I
2638	44734	Orthodontic appliance automated cleaner	Ортодонт аппаратын автомат цэвэрлэгч	An electromechanical device designed to clean soft debris, plaque and stain build-up from the surface of removable orthodontic aligners or retainers. The orthodontic appliances are typically placed in a receptacle and water together with an appropriate cleansing tablet or solution, and cleaned through an automated cycle. An audible signal may alert the user that the program has finished.	I
2639	44736	Orthodontic appliance cleanser	Ортодонтийн хэрэгсэл цэвэрлэгч	An agent used to remove soft debris, plaque and stain build-up from the surface of removable orthodontic aligners or retainers. It is normally used at home by the wearer of the appliance, and is typically supplied as tablets or crystals used to make a solution that removes and/or dissolves debris or accretions. This device may need to be used in conjunction with an electrical or mechanical cleansing device. After application, this device cannot be reused.	I

2640	44738	Orthodontic progressive aligner	Ортодонтийн дэвшилтэт тохируулагч	A custom-made orthodontic appliance, typically supplied in series intended to be worn in succession and self-changed every few weeks, designed to influence the shape and/or function of the stomatognathic system to correct malocclusions (e.g., underbites, overbites, cross bites, open bites, crooked teeth) and/or other cosmetic and/or structural flaws of teeth and/or jaws. Also described as sequential or successive, the device is custom-made based on an oral impression, self-removable, and is typically made of clear/transparent synthetic polymers (e.g., a thermoformed polycarbonate); a post-treatment orthodontic retainer/positioner may be included with the device. This is a reusable device.	I
2641	44748	Static magnetic bedding	Статик соронзон орны даавуу	A bedding product (e.g., quilt, mattress underlay/overlay, pillow, pillow insert) impregnated with magnetized metals or metallic compounds, intended to produce a weak magnetic flux field over body surfaces during rest or sleep to potentially provide comfort or localized temporary relief of minor aches and pains (e.g., due to muscle soreness/stiffness, arthritis, poor blood circulation, migraine). This is a reusable device.	I
2642	44763	Cervical spine immobilization system, reusable	Умайн хүзүүний нурууг хөдөлгөөнгүй болгох систем, дахин ашиглах боломжтой	An assembly of orthopaedic devices designed to immobilize the cervical spine (the bones in the neck) after an injury or surgery, to protect the bones from damaging movement during the healing processes. Commonly known as a Halo vest, it typically consists of a ring(s) around the head (the halo) which is attached to the skull with threaded bolts, a special padded vest/harness, four rods with locking mechanisms connecting the head ring to the vest, together with the appropriate instrumentation. This device may be made of ferrous or non-ferromagnetically active materials [to allow magnetic resonance imaging (MRI)], and is available in various sizes. This is a reusable device.	I

2643	44770	External defibrillation electrode, paediatric, reusable	Гадны дефибрилляцийн электрод, хүүхдийн, дахин ашиглах боломжтой	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator to a pre-pubescent patient in order to defibrillate the heart (restore a normal rhythm) or slow a rapid heart rate. It usually consists of a cable set that terminates with electrodes (paddles) that are hand-held by the operator to the chest (the intact torso) or back of the patient so that the discharge passes across the region of the heart. Typically available as a set of two electrodes with a combined cable/connector, or as a single electrode with cable/connector, in which case two will be connected to the external pulse generator (EPG). This is a reusable device.	I
2644	44771	External defibrillation electrode, adult, single-use	Гадны дефибрилляцийн электрод, насанд хүрэгчид, нэг удаагийн	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator to a post-pubescent patient to defibrillate the heart (restore a normal rhythm) or slow a rapid heart rate. It typically consists of a cable set [with a connector for insertion into the external pulse generator (EPG)] that terminates with self-affixing pads (the electrodes) prefabricated with contact gel and an adhesive, that are applied to the chest (the intact torso) or back of the patient so that the discharge passes across the region of the heart. This device may remain applied to the patient during stages of treatment. This is a single-use device.	I
2645	44795	Manual orthopaedic bender, reusable	Гар ажиллагаатай ортопед нугалагч, дахин ашиглах боломжтой	A manually-operated surgical instrument designed to bend orthopaedic devices, typically those for implantation (e.g., orthopaedic rods, bone fixation plates), to an appropriate anatomical shape. The bending process is typically performed within the operating room (OR), inside or outside of the operative sterile field. The device may be hand held or table mounted. This is a reusable device.	I
2646	44805	Orthopaedic implantable-device cutter	Ортопедийн суулгацын таслагч	A heavy-duty manual surgical instrument designed to hold and cut orthopaedic surgical implant devices (i.e., metal rods, plates, screws). The cutting is typically performed with a shearing action. It may be a hand-held or a table mounted device. This is a reusable device.	I

2647	44821	Washbasin	Угаалгын сав	A device that is permanently-fixed to a wall or furnishings intended as a general-purpose washing receptacle used by persons (patients, staff, visitors) to wash their hands and face for hygienic purposes. It is usually located in a bathroom, an examination room, the patient ward, a physician’s office, or a place of abode for a person with a disability.	I
2648	44823	Digital imaging cassette	Дижитал дүрс бичлэгийн кассет	A device intended to be used in diagnostic x-ray imaging to hold and shield a phosphor plate (not included) from exposure to room light during transport and insertion into a computed radiography (CR) scanner to produce a digital image of a patient radiation pattern. This is a reusable device.	I
2649	44827	Dental dry field kit	Шүдний хуурай талбайн иж бүрдэл	A collection of devices and supplies used in orthodontic and restorative dentistry to maintain a dry oral cavity for treatment procedures. It provides the operator with easy access to the field of operation by holding the mouth open, displacing the tongue, and removing saliva during various procedures (e.g., bonding orthodontic brackets, bleaching, applying veneers or pit and fissure sealants, posterior restorations). It typically consists of bite blocks, pad extenders, suction tips of varying sizes, and tubing that connects to a suction system. This is a reusable device.	I
2650	44828	Dental cheek retractor, professional, reusable	Шүдний хацар татагч, мэргэжлийн, дахин ашиглах боломжтой	A hands-free, self-retaining frame intended to allow a dental professional to retract the lips/cheeks of a patient during an orthodontic or restorative dental procedure for easy access to the field of operation. It is designed to be placed in and around the lips/cheeks and may also be designed to displace the tongue. It is a synthetic polymer device which may include suction adaptors/tubing for saliva removal to maintain a dry field. It is not intended to be placed between the teeth (i.e., not a mouth gag). This is a reusable device.	I

2651	44851	Limb/torso/head restraint, single-use	Мөч/их бие/толгой, нэг удаагийн хэрэглээ	A non-rigid device, typically a strap(s), band(s) or garment-like, intended to be temporarily placed on or around one or more parts of a patient’s body (e.g., torso, limbs, head) to restrict movement, to facilitate patient positioning and stabilization during a medical procedure, and/or to prevent injury/hazards while potentially permitting limited movement. It is made of various materials (e.g., fabric, nylon, leather, or foam) and typically anchored to a fixture or furniture part (e.g., a bedrail, operating table). It is not intended for immobilization of specific joint. This is a single-use device.	I
2652	44858	Bite relief pad	Хазуулсан хазалтыг арилгах дэвсгэр	A thin, plastic, horshoe-like wafer that is placed between the upper and lower sets of teeth and bitten down on, or chewed, to help relieve pain or discomfort after orthodontic treatment. This is a single-use device.	I
2653	44860	Orthodontic appliance archwire-cooling device	Ортодонт аппаратын нуман утас хөргөх төхөөрөмж	A hand-held dental instrument used in orthodontics to intraorally chill or cool thermally-activated archwires when placing bends in an orthodontic appliance. The device, after it has been precooled (typically with a cryogenic spray), is applied to a desired point of contact on the wire to extract heat and allow easy bending. As the archwire warms to body temperature it attempts to return to its former shape, and thus contributes to the application of forces within the mouth. The device is typically formed as a heavy-duty stainless steel rod with an insulated plastic handle and a slot at the distal end to accept wire. This is a reusable device.	I
2654	44861	Orthodontic appliance force gauge	Ортодонт төхөөрөмжийн хүч хэмжигч	A hand-held dental instrument intended to be used in orthodontics to accurately measure forces (in grams or ounces) applied by the elastics or springs used when setting up orthodontic appliances within the patient's mouth. The device is typically of cylindrical or tubular design (but can be dial-shaped with circular read out) and is made of metal (some partly plastic); it contains a spring-loaded mechanism which indicates the force exerted to pull the appliance elastic or spring to the desired length. This is a reusable device.	I

2655	44862	Temporary cardiac pacing/stimulation connection cable, reusable	Түр зуурын зүрхний цохилт/стимуляцийн холболтын кабель, дахин ашиглах боломжтой	A flexible wire, insulated with non-conductive material except at its ends, that provides a connection between an external temporary pacemaker and implanted cardiac pacing leads, to transmit electrical impulses to the heart and possibly relay information about the heart's activity back to the pacemaker. The proximal end plugs into a temporary pacemaker or an adaptor (e.g., when the cable/lead does not meet original design), and the distal end, which may consist of a connector block to accommodate different connection configurations, connects to the pacing leads/heart wires (e.g., IS-1 leads). This is a reusable device intended to be sterilized prior to use.	I
2656	44863	Temporary cardiac pacing/stimulation connection cable, single-use	Түр зуурын зүрхний цохилт/стимуляцийн холболтын кабель, нэг удаагийн хэрэглээ	A sterile, flexible wire, insulated with non-conductive material except at its ends, that provides a connection between an external temporary pacemaker or an ECG monitoring device and implanted cardiac pacing leads or nonimplantable intracardiac pacing leads (e.g., temporary cardiac pacing catheter) to transmit electrical impulses/stimuli to the heart and possibly return information about the heart's activity. The proximal end plugs into a temporary pacemaker or an adaptor and the distal end, which may consist of a connector block to accommodate different connection configurations, connects to the pacing leads (e.g., IS-1 leads) or pacing catheter. This is a single-use device.	I
2657	44869	Orthopaedic graft inserter, reusable	Ортопедийн залгаас суулгагч, дахин ашиглах боломжтой	A hand-held manual surgical instrument designed to push a cartilage or bone graft into a position from which the graft can be delivered into a chondral defect [e.g., during anterior cruciate ligament (ACL) reconstruction surgery]. This device is available in a variety of designs, such as a plunger made of high-grade materials [e.g., stainless steel or titanium (Ti)] used to advance the graft down its tubular-shaped holder or possibly a bone graft funnel and into place; it is also available in a variety of sizes. This is a reusable device.	I
2658	44878	Shoulder immobilizer/orthosis, single-use	Мөрний иммобилизатор/ортез, нэг удаагийн хэрэглээ	A prefabricated (non-customized) non-rigid wearable device designed to support, align, and/or temporarily immobilize the shoulder joint to support the healing of an injury or surgical wound. It will typically consist of straps, buckles, fasteners, or be in the form of a sling. This is a single-use device.	I

2659	44887	Dental osteotome	Шүдний остеотом	A hand-held, dental, surgical instrument used during dental osteotomy for shaping and condensing bone, typically when performing a dental implant surgical procedure. It is hand-held by the dentist who will use a surgical mallet or hammer to manually impart an impacting force to the proximal end of the instrument. The device will have a straight or bayonet-shaped handle leading to a round or concave tip at the distal end, which may be marked with graduations to indicate depth differences. It is used for ridge expanding, bone condensing and sinus floor elevation procedures. This device will be made of high-grade stainless steel. This is a reusable device.	I
2660	44974	Earmould impression material	Чихний хэвийг хэвлэх материал	A rubber-like material used to replicate the shape of an individual's ear canal for the manufacture of custom-made hearing aids and earmoulds. The device may be supplied as a two-component silicone (base and catalyst) which produces the usable product. This is a single-use device.	I
2661	44975	Medical equipment handle cover, reusable	Эмнэлгийн тоног төхөөрөмжийн бариулын бүрээс, дахин ашиглах боломжтой	A device designed specifically to cover the handle of a piece of medical equipment (e.g., operating light) to provide a physical sterile barrier between the handle and the hand of a healthcare professional, e.g., during a surgical procedure. It is typically a rigid polymer device designed for attachment to a handle and may in addition provide grip for improved manipulation of the handle; it is not designed to cover other equipment components. This is a reusable device intended to be sterilized prior to use.	I
2662	44977	Medical equipment handle cover, single-use	Эмнэлгийн тоног төхөөрөмжийн бариулын бүрээс, нэг удаагийн	A device designed specifically to cover the handle of a piece of medical equipment (e.g., operating light) to provide a physical sterile barrier between the handle and the hand of a healthcare professional, e.g., during a surgical procedure. It is typically a polymer device designed for attachment to a handle and may in addition provide grip for improved manipulation of the handle; it is not designed to cover other equipment components. This is a single-use device.	I

2663	44979	Surgical plume evacuation system filter	Мэс заслын чавганы нүүлгэн шилжүүлэх системийн шүүлтүүр	A device intended to be used as part of a surgical plume evacuation system to entrap particulates/microbes from smoke created through the use of various tissue-burning surgical devices (e.g., laser, electrosurgical diathermy device) and prevent them from exhausting into ambient air or evacuation tubing/pipeline systems. It will typically have a hydrophobic membrane that retains the particulate/bacterial pathogens through a combination of methods (e.g., mechanical, electrostatic). The device is available in various sizes and designs. This is a reusable device, typically with a limited lifetime (e.g., 5 hours, 20 procedures, or weekly exchange).	I
2664	44982	Manual surgical saw blade, flexible, reusable	Гар ажиллагаатай мэс заслын хөрөө, уян хатан, дахин ашиглах боломжтой	A flexible, wire-like, metal surgical instrument, usually of a high-grade stainless steel, typically intended to be used in orthopaedic or neurological surgery to cut bone. It has a serrated surface, or a surface coated with an abrasive material, and functions as the cutting blade of a flexible manual hand saw commonly known as a Gigli saw. This is a reusable device.	I
2665	44983	Manual surgical saw blade, rigid	Гар ажиллагаатай мэс заслын хөрөөний ир, хатуу	A flat surgical cutting instrument, usually made of high-grade stainless steel, with a serrated edge designed for attachment to a rigid manual hand saw used for cutting bone/tissue when a directional pressure is applied. This device is designed with the cutting teeth arranged in a straight line along the cutting edge and which cuts when the blade is manually powered in a back and forth motion by the user. This is a reusable device.	I
2666	44984	Surgical saw blade, oscillating, reusable	Мэс заслын хөрөөний ир, хэлбэлздэг, дахин ашиглах боломжтой	A flat surgical cutting instrument, usually made of high-grade stainless steel, with a serrated edge and designed for attachment to a dedicated powered saw used for cutting bone/tissue during orthopaedic or oral surgery; it is not dedicated to cutting through the sternum (i.e., not a sternum saw blade). This device is designed with the cutting teeth arranged in an arc or on a flat plane pointing directly forward at its distal end to cut in a rapid oscillating (circular/arc-shaped) motion; it is not intended to perform a sagittal motion. This is a reusable device.	I

2667	44987	Manual surgical saw, flexible	Гар ажиллагаатай мэс заслын хөрөө, уян хатан	A hand-held manual surgical instrument typically used in orthopaedic or neurological surgery for cutting bone through a sawing action performed by the operator. It typically consists of an exchangeable, flexible, wire-like blade with a handle at each end of the blade. The handles can be easily unhooked to permit entry of the blade into a narrow opening, e.g., holes drilled in the top of the skull through which the flexible blade is fed for sawing of the skull prior to removal of the top section. This device is commonly known as a Gigli saw. This is a reusable device.	I
2668	44988	Autopsy saw blade	Задлан шинжилгээний ир	A metal instrument, usually of a high-grade stainless steel quality, with a serrated edge and designed for attachment to a powered autopsy saw to cut bone and tough tissue in a cadaver. The device is typically circular with cutting teeth around the outer edge. This is a reusable device.	I
2669	44990	Skin-cover adhesive strip, non-antimicrobial	Арьсыг бүрхсэн наалдамхай тууз, нянгийн эсрэг үйлчилгээтэй	A small, narrow, flexible band (of fabric, plastic, paper, or other material) coated on one side with a pressure-sensitive adhesive and possibly with an absorbent pad, typically intended to cover a superficial wound or fix a dressing to skin. It may be hypoallergenic and/or waterproof, however it does not include antimicrobial agents/properties. Commonly referred to as a sticking plaster, it is intended for use in the home or a clinical setting. This is a single-use device.	I
2670	45004	Rubber dam, non-latex	Резин далан, латекс бус	A sheet of elastomeric synthetic material (e.g., silicone) that is punched with holes and placed over the teeth during dental procedures. It can have a variety of functions such as: 1) to isolate the field of operation from the rest of the oral cavity; 2) to eliminate saliva; 3) to prevent the patient swallowing liquid/dental material; 4) to protect soft tissue from harmful solutions; and 5) to reduce risk of infection. This device may be used for patients and/or staff that have an allergy to latex. This is a single-use device.	I

2671	45007	Dental wedge, single-use	Шүдний шаантаг, нэг удаагийн	A small, dental device intended to be introduced between two adjacent teeth for slight separation during a dental procedure. It is typically used during the placement of a filling material, or to stabilize and support other devices (e.g., a matrix band and/or rubber dam). It may include a removable shield intended to protect the healthy tooth/teeth from damage by the instruments. This is a single-use device.	I
2672	45008	Dental matrix band tensioner	Шүдний матрицын тууз чангалагч	A hand-held, dental instrument designed for tightening a matrix band around a tooth that is being prepared for a dental restoration. It is a rod-like device, typically designed with a manually controlled rotating action at its distal end for insertion into and tightening of a retainerless matrix band around the tooth. When the matrix band is in place, this device is removed offering a clear field of vision. Some types may incorporate a torque control mechanism to limit over-tensioning. This is a reusable device.	I
2673	45011	Aspiration/injection needle, reusable	Сорох/тарих зүү, дахин ашиглах боломжтой	A sharp bevel-edged, hollow tubular metal instrument used for removing fluid from a body cavity and for injecting substances into the body typically during a surgical procedure. This is a reusable device.	I
2674	45049	Radio-frequency skin contouring system electrode, return	Радио давтамжийн арьсны өнгөний системийн электрод, буцах	A non-active conductor that is part of a skin contouring system that uses radio-frequency (RF) energy and that is placed on a patient's skin to provide a complete electrical circuit for energy transferred to the patient from a monopolar applicator. This device is affixed to the patient's body typically where the greatest surface area is utilized during treatment and helps to prevent the occurrence of electrical burns. It may have a mat-like design. This is a single-use device.	I

2675	45105	Orthopaedic cement spacer mould	Ортопедийн цементийн зайны хөгц	A moulding device designed to form an implantable provisional joint prosthesis component out of orthopaedic cement (otherwise known as a cement spacer), which is used in two-stage joint revision typically to treat joint arthroplasty infection. It is filled with prepared antibiotic-containing bone cement which cures into the shape of the prosthesis and is subsequently placed into the joint space until replaced with a revision joint prosthesis. It is typically made of silicone and available in a variety of shapes and sizes for different joint applications. This is a single-use device.	I
2676	45117	Dappen dish holder	Даппен таваг эзэмшигч	A device used to secure and hold a single-use dappen dish during the dispensing and mixing of dental materials chairside in the dental surgery. This device is typically made of stainless steel. This is a reusable device.	I
2677	45119	Dappen dish, reusable	Даппен таваг, дахин ашиглах боломжтой	A small, shallow, hand-held concave vessel made of glass or metal used to mix dental materials chairside prior to application to the patient during dental procedures. The user dispenses the required amount of component materials into the device and mixes them by hand (e.g., with a spatula) until the consistency of the mixture is appropriate. It is most often used for prophy and fluoride treatments, for mixing composite materials, acrylics, cements, and amalgams. This is a reusable device.	I
2678	45120	Dappen dish, single-use	Даппен таваг, нэг удаагийн	A small, shallow concave vessel made of a thermoplastic material used to mix dental materials chairside prior to application to the patient during dental procedures. The device is typically placed in a holder while the user dispenses the required amount of component materials into it and mixes them by hand (e.g., with a spatula) until the consistency of the mixture is appropriate. The device will then be placed in a hand-held holder for patient application. It is most often used for prophy and fluoride treatments, for mixing composite materials, acrylics, cements, and amalgams. This is a single-use device.	I

2679	45126	Infant limb immobilizer, single-use	Нярай хүүхдийн мөчний хөдөлгөөнгүй, нэг удаагийн хэрэглээ	A non-rigid device, usually made of a fabric and/or plastic materials, used to temporarily render parts of an infant's body immovable, e.g., the arms and/or feet while the patient undergoes therapeutic or diagnostic interventions. It will typically be used to prevent the patient from interrupting an intravenous (IV) infusion, pulling out a catheter, or interfering with wound care. This is a single-use device.	I
2680	45127	Infant whole-body immobilizer, reusable	Нярай хүүхдийн бүх биеийг хөдөлгөөнгүй болгодог, дахин ашиглах боломжтой	A device intended to be used to temporarily render an infant's whole body immovable (strait-jacket effect) while the patient undergoes therapeutic or diagnostic interventions. It includes non-rigid fabric and/or plastic components but might also include a rigid structural component (e.g., board). This is a reusable device.	I
2681	45128	Wrist immobilizer, single-use	Бугуйны хөдөлгөөнгүй, нэг удаагийн	A rigid external support designed to temporarily render the wrist immovable (i.e., prevention of flexion, extension, and rotation) as therapy for non-displaced fractures, strains, sprains, and muscle injuries of the wrist and/or to prevent injury during a procedure (e.g., radial catheterization). The rigid support typically includes a wrap which may be held in place with a fastener such as Velcro; it is available in a variety of sizes. This is a single-use device.	I
2682	45129	Cervical spine collar, single-use	Умайн хүзүүний нурууны хүзүүвч, нэг удаагийн	A prefabricated (non-customized) padded device that is worn around the neck and intended to support or immobilize the cervical spine to treat deformities, fractures, sprains, or strains (often to treat whiplash resulting from an automobile accident). This device will provide support to the head while limiting movement of the cervical vertebrae. It is available in a variety of sizes. This is a single-use device.	I

2683	45131	Dental delivery system irrigation handpiece	Шүдний хүргэх системийн усалгааны гар утас	A hand-held device that is used to regulate and direct a stream of pressurized, warmed water and/or air for the purpose of irrigating/clearing debris from the field of operation in the oral cavity during restorative or operative dental procedures. It is fitted with a long syringe-like nozzle that is activated by the user, typically through push-type controls. This device, also commonly known as a three-way or a Triplex syringe, is typically a component of a dental delivery system from which the air and water is supplied. This is a reusable device.	I
2684	45136	Breast milk bag	Хөхний сүүний уут	A sterile flexible sac designed for the collection and storage of breast milk. This is a single-use device.	I
2685	45161	Pacing lead extraction kit, single-use	Pacing хар тугалга олборлох хэрэгсэл, нэг удаагийн	A collection of sterile devices designed to remove the electrically-conducting leads of an implantable pacemaker or an implantable cardioverter-defibrillator (ICD), typically in cases where infection has developed or a device malfunction has occurred. It typically includes stylets, dilating sheaths, snares, and retrieval baskets. This is a single-use device.	I
2686	45171	Dry medical towel/wipe, single-use	Хуурай эмнэлгийн алчуур/арчиж, нэг удаагийн	A dry fabric intended to be used to wipe or dry a patient’s intact skin (not related to wound care), clean medical devices/equipment (e.g., endoscopes, ultrasound systems), and/or clean the general environment (e.g., fluid spill). It may be moistened (e.g., with water or used together with disinfectant/cleaning solutions) however no solutions are included. Some devices may be provided sterile, or designed to be sterilized, for use under sterile conditions [e.g., within an operating room (OR)]; devices intended for non-surgical applications may be provided and used in a non-sterile state. This is a single-use device.	I

2687	45182	Self-retaining surgical retractor, reusable	Өөрөө барих мэс заслын татагч, дахин ашиглах боломжтой	A hand-operated, self-retaining, one-piece surgical instrument intended to be used to separate/draw aside the margins of a wound/incision to allow access to tissues/organs during open surgery; it is not intended to retract the ribs and is not dedicated to ophthalmic surgery, but may otherwise be clinically dedicated. It is designed as a one-piece device (i.e., not a mounting ring, or table-fixed assembly) having two legs with distal hooked blades and a self-retaining mechanism to maintain the legs in an open position for retraction. This is a reusable device.	I
2688	45251	Orthodontic appliance relief material	Ортодонт аппаратыг хөнгөвчлөх материал	A device used to cover the offending sharp edges of an orthodontic appliance being worn by the user in order to provide relief from the discomforts that this can cause. It can be presented as a sheet, strip, or rod and is typically made of a mouldable wax or silicone material that is easy to manipulate with the fingers in order to cover the offending protrusions of the orthodontic appliance that are causing irritations in the patient's mouth. This is a single-use device.	I
2689	45258	Head/neck immobilizer, reusable	Толгой/хүзүүний хөдөлгөөнгүй, дахин ашиглах боломжтой	A rigid or non-rigid device, usually made of fabric and/or plastic materials, used to temporarily render the head/neck of a patient immovable to ensure immobilization when a head and/or spinal injury is suspected. It is used in conjunction with serious accidents and for transport of the patient on a stretcher and possibly in conjunction with a spinal board to which this device and the patient are strapped. It is typically made of x-ray translucent/non-ferromagnetically active materials that allow x-ray and magnetic resonance imaging (MRI) and comes in various sizes. This is a reusable device after appropriate cleaning.	I

2690	45259	Head/neck immobilizer, single-use	Толгой/хүзүүний хөдөлгөөнгүй, нэг удаагийн	A rigid or non-rigid, non-sterile, device usually made of fabric and/or plastic materials, used to temporarily render the head/neck of a patient immovable to ensure immobilization when a head and/or spinal injury is suspected. It is used in conjunction with serious accidents and for transport of the patient on a stretcher and possibly in conjunction with a spinal board to which this device and the patient are strapped. It is typically made of x-ray translucent/non-ferromagnetically active materials that allow x-ray and magnetic resonance imaging (MRI) and comes in various sizes. This is a single-use device.	I
2691	45293	Dental cavity varnish solvent	Шүдний хөндийн лак уусгагч	A liquid substance used in dentistry typically to thin dental cavity varnish if it becomes thick, so that it can be restored to a consistency for application. After application, this device cannot be reused.	I
2692	45295	Urethral self-catheterization assistive mirror	Шээсний сувгийг өөрөө катетержуулах туслах толь	A device designed to reflect undiffused light to assist a disabled person with the self-placement and positioning of a urinary drainage/irrigation catheter (not included) by helping them to see a virtual image of and locate their own urethral orifice. This is a reusable device.	I
2693	45329	Dental soft-tissue coring punch, reusable	Шүдний зөөлөн эдийн цоолтуур, дахин ашиглах боломжтой	A dental instrument designed to remove with precision a circular section of oral soft tissue (e.g., gum, palatal mucosa) during dental surgery, typically to allow access to a site for drilling and dental/orthodontic implant placement without the use of a scalpel. Sometimes referred to as a mucotome, it will typically be designed with a handle at the proximal end for manual operation or for mounting into a dental power tool (e.g., contra-angle low-speed drill handpiece), and have a cylindrical hollow tube-like head with a sharp cutting at the distal end. It is typically made of high-grade stainless steel. This is a reusable device.	I

2694	45333	Female-incontinence urethral balloon	Эмэгтэй хүний шээсний сувний бөмбөлөг	A sterile, female urinary incontinence device (a balloon-like plug) designed to be placed into the urethral opening and inflated to occlude the urethra and prevent involuntary urination/dribbling for females who are incontinent of the bladder. It is typically made of plastic and textile materials and is designed to be inflated using an external inflation device. It is removed by the user when voiding and discarded. This is a single-use device.	I
2695	45335	Electroacoustical airway secretion-clearing system	Амьсгалын замын шүүрлийг цэвэрлэх цахилгаан акустик систем	An assembly of devices designed to provide externally applied vibrations to the chest wall of a patient via an electroacoustical transducer (the applicator) to loosen excessive airway secretions [mucus or sputum (phlegm)] to promote airway clearance and improve bronchial drainage for patients with respiratory disease [e.g., cystic fibrosis (CF), neuromuscular disease, bronchitis, bronchiectasis, chronic obstructive pulmonary disease (COPD)]. It consists of a mains electricity (AC-powered) frequency generator, a hand-held applicator containing the transducer, and connection cable. It is intended to be operated by a healthcare professional in a professional setting.	I
2696	45336	Diaphragm wearable urinal	Диафрагмын зүүж болох шээсний уут	A non-sterile urine drainage device designed for men with incontinence consisting of a front piece with a scrotal support and a leak-proof, flexible diaphragm through which the penis passes into a closed cone-shaped tube connected to a leg bag into which the urine is collected. It is typically held in place with groin and waist straps. The collection bag functions as the reservoir for the collection of the urine. This device provides an alternative to inserting a catheter or wearing incontinence pads. This is a reusable device.	I
2697	45354	Tinnitus control patch	Чихний шуугианыг хянах нөхөөс	An adhesive dermal patch, containing a passive topographical geometric matrix, intended to be placed behind-the-ear (BTE) to reduce tinnitus by organizing light in a manner to affect the characteristic of water in the inner ear for the restoration of normal sound within the auditory system. This is a single-use device.	I

2698	45358	Corneal resection holder, single-use	Эвэрлэгийн тайралт эзэмшигч, нэг удаагийн	A device designed to hold donated corneal tissue so that it can be resected in preparation for transplantation. The device may be in the form of a pedestal, with retention and locking rings, upon which the donated cornea is placed and inflated with air, or some other material, to simulate the pressure of the anterior chamber of the eye for the procedure. This method allows resection from the epithelial side of the cornea. The device may also include tubing and clips, and inflation is typically achieved manually with a syringe. This is a single-use device.	I
2699	45363	Assistive nail clippers	Туслах хумсны хайч	A device designed to be used by a person with a disability to assist them with cutting or shortening their fingernails or toenails. It will be a robust instrument with curved cutting blades to suit the natural curvature of human nails. It comprises two hinged blades that are conjoined at the handle end of the device; these are sprung to hold them apart when not activated, and often an additional lever to accentuate the cutting action. When activated, two blades are pressed together in a chopping motion to bite off (clip) the nail that has been positioned between them.	I
2700	45369	Lice comb, powered	Бөөсний сам, хөдөлгүүртэй	A battery-operated, hand-held device with specially-designed teeth (tines) spaced with precision and intended to be systematically drawn through the hair, typically following the contour of the scalp, to expose and remove human head lice (Pediculus humanus capitis) and their eggs (nits) from an infested person. The device will typically vibrate the comb teeth and/or provide an electrostatic discharge to electrocute the lice. It is normally available [non-prescription] over-the-counter (OTC).	I

2701	45370	Lice removal/prevention kit	Бөөс арилгах/урьдчилан сэргийлэх хэрэгсэл	A collection of non-sterile devices intended to physically and chemically remove human head lice (Pediculus humanus capitis) and/or their eggs (nits) from an infested individual, and/or to prevent (re)infestation. It includes a lice removal and/or prevention agent(s) [e.g., shampoo, solution, emulsion] and also includes additional devices, typically one or more of the following: manual lice comb, shower cap, laundry additive. It does not include lice vacuuming devices. It is normally available [non-prescription] over-the-counter (OTC). This is a reusable device.	I
2702	45376	Penis/scrotum wearable urinal	Бэлэг эрхтнийг зүүдэг шээсний суваг	A non-sterile urine drainage device designed for men with incontinence and a retracted penis that includes a front piece (a shaped cone) intended to contain both the penis and the scrotum to form a leak-proof seal around the male genitals. It is typically held in place with groin and waist straps and has a connected collection bag that functions as the reservoir for the collection of the urine. This device provides an alternative to inserting a catheter or wearing incontinence pads. This is a reusable device.	I
2703	45387	Assistive drinking glass	Туслах ундааны шил	A device designed in the form of a drinking glass to be used by a person with a disability as a vessel to contain beverages and from which they can drink. This is a reusable device.	I
2704	45407	Dental abrasive powder	Шүдний зүлгүүрийн нунтаг	A dental material made from various base substances having some abrasive qualities [e.g., treated sodium bicarbonate ($NaHCO_3$) or aluminium oxide (Al_2O_3)] and applied with an appropriate device (e.g., a dental abrasive air jet system) to the surface of teeth or dental devices. It has a wide variety of both prophylactic and treatment applications such as the removal of plaque and stains, cleaning fissures (above and below the gingiva), the preparation of a tooth surface prior to bonding, the cleaning of orthodontic appliances (bands and brackets), the removal of adhesive residue, and the cleaning of implants prior to loading. This is a single-use device.	I

2705	45412	Chloroform gutta-percha	Хлороформ гуттаперча	A dental material made from the coagulated sap of certain tropical trees, that is dissolved in chloroform and intended to fill/seal the root canal of a tooth. It may also be used to soften natural gutta-percha based points. After application, this device cannot be reused.	I
2706	45528	Intercom system	Домофон холбооны систем	An assembly of electronic, closed-circuit, communication devices installed throughout a building complex, e.g, a hospital, an institution, or in the home, designed to allow people to talk directly to one another whilst in different locations. The system typically consists of strategically situated intercoms.	I
2707	45534	Vertical non-powered traction system	Босоо хүчгүй зүтгүүрийн систем	An assembly of devices designed to be wall-mounted for the application of constant vertical traction forces to the cervical vertebrae by means of attached harnesses. The assembly usually consists of several specialized harnesses, a combination of pulleys and cords, and a set of weights that hang from the cords as the source of the traction force (or the patient's own weight may be used). Adjustable spreader bars may be used to vary the angle at which the cord applies the traction. Patients are typically seated on a traction chair or the device may be temporarily attached to a door. The assembly is used in orthopaedic and/or physical therapy procedures.	I
2708	45548	Radiation shielding head wear	Цацрагаас хамгаалах толгойн элэгдэл	A personal protective device intended to shield the head of an individual (i.e., the operator or other attending person) from unnecessary primary and scattered radiation during diagnostic or therapeutic medical procedures. It can be shaped like a cap or hood and will typically consist of a fluid resistant outer covering surrounding a thin sheet of lead (Pb) or lead-equivalent material. Head wear used for neutron attenuation is composed of hydrogenous materials instead of lead; those used in mixed beta-gamma radiation field may have layers of both hydrogenous and lead-equivalent materials.	I

2709	45564	Nasal inhaler	Хамрын шүүлтүүр	A hand-held device designed to administer medication directly into the nares of a patient, typically for the purpose of alleviating symptoms of the common cold and/or sinus ailments. It is a portable device typically carried in the pocket or a handbag (purse) of the patient for convenient access. This is a reusable device that must be filled prior to use and is intended for single-patient use.	I
2710	45590	Cast cutter vacuum system	Цутгамал таслагч вакуум систем	An assembly of devices designed to collect the dust produced by a cast cutter (e.g., pneumatic or electric cast saw) from the workspace environment by suction during the cast removal procedure. It typically consists of a motorized vacuum pump, a filter, and a collection container (e.g., bag or cartridge). It is typically a portable unit and its motor may run concurrently with the saw motor.	I
2711	45603	Single-administration urethral drainage catheter	Нэг удаагийн шээсний сувгийн катетер	A sterile, flexible tube intended to be inserted one-time through the urethra to the urinary bladder, by the patient/user or a healthcare provider, to provide urine drainage, typically for an individual who is physiologically incapable of voiding. It is typically made of polyvinyl chloride (PVC), and may be coated with a lubricating substance (e.g., acquires a smooth and mucous surface when brought in contact with water). The distal end can have various tip designs [e.g., open-ended, rounded with a side-hole(s)], and the proximal end typically connects to a urine collection container. This is a single-use device.	I
2712	45605	Single-administration urethral catheterization kit, single-use	Нэг удаагийн шээсний сувгийн катетержуулалтын иж бүрдэл, нэг удаагийн хэрэглээ	A sterile collection of devices that includes a urological catheter (with or without a urine drainage bag), a cap, and other related accessories intended for one-time, self-urinary catheterization. The catheter is inserted through the urethra by the patient to provide urine drainage. This is a single-use device.	I

2713	45606	Compression/pressure shirt/pants	Шахах/даралтын цамц/өмд	A garment in the form of a vest, shirt, pants, leggings, or whole-body suit intended to tightly fit over and apply compression/pressure (i.e., graduated or even-force) to an area of the upper and/or mid/lower body to support skin/subcutaneous healing and scar prevention, to exude excessive interstitial fluid, and/or to help improve proprioception. It is a piece of clothing designed to be worn around the hips and/or shoulders, and is neither a strip/roll binder, limb sleeve, glove, nor sock. It is typically made of cotton or synthetic elastic material (e.g., Lycra); it does not include antimicrobial features. Absorbent pads may be used underneath the device. This is a reusable device.	I
2714	45626	Helium/oxygen terminal unit	Гелиум/хүчилтөрөгчийн терминалын нэгж	A device that is a component of a medical gas pipeline system or a medical gas/vacuum pipeline system that has a gas-specific outlet connection for a mixture of 79% helium (He) and 21% oxygen (O2). It is designed to be mounted to wall-mounted medical supply units, utility supply systems (ceiling pendants), or directly to a wall, and functions as the outlet assembly of a gas pipeline system to which the operator can connect and disconnect a device using this He/O2 mix as a breathing gas; being three times less dense than air, it is easier to breathe. On disconnection of the medical device from the outlet, it will self seal the gas pipeline system preventing gas leakage to the environment.	I
2715	45686	Electrosurgical handpiece/electrode holder, single-use	Цахилгаан мэс заслын гар багаж/электрод эзэмшигч, нэг удаагийн	A device intended to be used to house or fix an active electrosurgical handpiece/pen with its electrode when not being used by the surgeon during the surgical procedure. This is to secure the conducting unit, especially the electrode, within the sterile operating zone and protect it against potential adverse events. The holder will typically be fastened to an object within the sterile field (e.g., a drape, anaesthesia dividing arm, operating table). This is a single-use device.	I

2716	45737	Brain knife	Тархины хутга	A hand-held manual surgical instrument with a handle and an extra-long, broad blade intended to be used during an autopsy to slice evenly across the entire brain mass of a cadaver to obtain clean cut, cross-sectional, pathological samples. It is typically a one-piece instrument made of high-grade stainless steel; the blade is very broad and thin with a rounded tip. This is a reusable device.	I
2717	45804	Electrical mains power cable	Цахилгааны сүлжээний цахилгаан кабель	An insulated electrical cord designed to enable connection of a medical device to a mains electricity supply socket, with a male and a female connector (plug) at either end. It is manufactured to medical grade standards for use in healthcare facilities and the home, providing the required legislative level of electrical safety; it may include an adaptor/transformer. This is a reusable device.	I
2718	45806	Multifunction cardiac electrode, adult	Олон үйлдэлт зүрхний электрод, насанд хүрэгчид	A non-sterile electrical conductor designed to be applied to an adult patient for automatic or manual defibrillation, external pacing, cardioversion, and electrocardiographic monitoring through transmission of cardiac bioelectric signals (typically from the thoracic surface) to devices that record/process the signals and potentially return electrical impulses [e.g., electrocardiograph, electrocardiographic monitor(s), defibrillator]. It is a disk-like electrode that is affixed to the skin with a special adhesive and a conductive gel (pre-gelled). It may be made of x-ray translucent materials and may include permanently attached lead wires. This is a single-use device.	I
2719	45846	Assisted reproduction transfer catheter/set	Нөхөн үржихүйн шилжүүлгийн катетер/иж бүрдэл	A device or collection of devices that includes a flexible polymer tube intended to be used primarily to transfer gametes (eggs or sperm) and/or embryos into the female reproductive tract for the purpose of assisted reproduction [e.g., intrauterine insemination (IUI) or gamete intrafallopian transfer (GIFT)]. In addition to the ‘live transfer’ catheter it may also include a trial transfer catheter intended to assess/ensure that embryo placement will be successful; it typically also includes devices intended to assist catheter introduction (e.g., outer guide sheath, stylet). This is a single-use device.	I

2720	45847	Walking stick/seat	Алхах таяг/суудал	A device with one or more tips (ferrules) and an integral foldable seat designed to assist a person with a disability to support their weight while walking (typically has a handgrip without a forearm support) and to provide a portable place for them to sit (to rest for a short while). The device is typically constructed of metal and plastic materials.	I
2721	45848	Walking frame/chair, non-wheeled	Алхах хүрээ/сандал, дугуйгүй	A hip-high scaffold manipulated by the arms with handgrips to enable a person with a disability to support their weight while walking, that includes an integrated seat for resting. It is typically made of lightweight metal or plastic.	I
2722	45849	Walking frame/chair, wheeled	Алхах хүрээ/сандал, дугуйтай	A hip-high scaffold, with two or more wheels, manipulated by the arms with handgrips to enable a person with a disability to support their weight while walking, and that includes an integrated seat for resting. It is typically made of lightweight metal or plastic.	I
2723	45897	Nail treatment patch	Хумсны эмчилгээний наалт	A non-sterile piece of self-adhesive material designed to treat infected nails (e.g., onychomycosis) and nail-growth disorders (onychodystrophy) by occluding the nail plate after direct application. It requires replacement with a new device at intervals (e.g., few days to a week) until a completely healthy nail has grown; it may be applied in combination with systemic antimicrobials. The device is typically transparent and available in various sizes; it is normally available [non-prescription] over-the-counter (OTC) for home-use. This is a single-use device.	I
2724	45907	Spool tape recorder	Дамрын соронзон хальсны бичигч	A mains electricity (AC-powered) electronic device designed to record and playback audio information on a magnetic film coated on a nonmagnetic plastic material housed on an open reel; not being securely contained within a cassette. Commonly know as a reel-to-reel recorder it uses a supply reel or feed reel containing the tape that is mounted on a spindle; the end of the tape is manually pulled out of the reel, threaded through mechanical guides and a tape head assembly, and attached by friction to the hub of a second, initially empty take up reel; an arrangement is similar to that used for motion picture film. This is a general-purpose recording device that reflects old technology.	I

2725	45921	Tracheostomy tube obturator	Трахеостомийн хоолойн бөглөрөл	A device designed to fill the lumen of a tracheostomy tube during its insertion into the stoma created in the larynx (windpipe) to assist in this process, reduce patient trauma, and prevent any tissue damage. When the tracheostomy tube is correctly positioned the obturator is removed. It is typically a thin rod with a bulbous rounded distal end that protrudes out of the tracheostomy tube, and a knob-like handle used to remove it. It is typically made of a high-grade stainless steel and/or silver (Ag) or silver plated brass. This is a reusable device.	I
2726	46007	Cardiac mapping system reference patch	Зүрхний зураглалын системийн лавлагааны нөхөөс	A component of a cardiac mapping system that is an adhesive device placed on the surface of a patient's body, typically the chest and/or back, to provide a fixed reference point for the tip of an internal, non-fluoroscopic catheter during an electrophysiological and electromechanical real-time mapping of the heart. It may be sensor-containing or have a sensor attached to it, and is used to compensate for patient movement during the procedure. It is typically used with a cardiac mapping system computer to assist in the location and navigation of the catheter tip, and to provide electrocardiogram information. This is a single-use device.	I
2727	46031	Orthopaedic cement compressor	Ортопедийн цементийн компрессор	A device used to apply pressure to orthopaedic bone cement during a total hip arthroplasty (THA) procedure (within the acetabulum and/or femur) in order to optimise inner bone (cancellous) cement interdigitation to improve fixation of the implant. The device is typically made of a compressible silicone rubber which conforms to the shape of the cut bone to enable formation of a good seal. Cement may be injected through the device into the bone cavity using an appropriate syringe; pressure may be applied to the device with a firm handle (e.g., stainless steel), or a backplate. This is a single-use device.	I
2728	46037	Gingival retraction cord, medicated	Буйл татах утас, эмтэй	A medicated (e.g., with epinephrine) cotton string intended to be used to temporarily push gum tissue (gingiva) away from prepared tooth margins to help make an accurate dental impression. This is a single-use device.	I

2729	46083	Traction table, line-powered	Татлагын ор, цахилгаанаар ажилладаг	A mobile, mains electricity (AC-powered) table designed to support a patient and to provide traction for the back muscles and spine (e.g., lumbar, cervical) by a motorized mechanical manipulation of the spine. The table surface may consist of sections that can be raised and lowered to manipulate the curvature of the patient's spine, or apply a rotational roller mechanism protruding through the table surface to the spine, or employ masts and traction accessories for lumbar and cervical traction in a sitting position. Interchangeable traction devices such as head halters, pelvic belts, traction boots, and a traction unit may be used with this table. It is used in a healthcare facility.	I
2730	46141	Bed lift	Орны өргөлт	A mains electricity (AC-powered) device that functions as a height-adjustable undercarriage on which a standard bed is mounted, thus serving as a height-adjustable bed. It is typically used for a person with a disability in a home-use setting.	I
2731	46146	Stand-up chair, mechanical	Босоо сандал, механик	A mechanical device designed to support a patient with a disability (e.g., geriatric, injured, disabled) in a sitting posture and helps the person via its self-raising mechanism to both to sit down from a standing position and stand up from a sitting position. The manual and/or power-assisted (e.g., spring-assisted) features may include a seat that can be elevated and tilted forward to help the person stand, a back rest that reclines for comfort, a seat with tilting sections, and/or casters to permit a reorientation. It is neither a stander (which is intended to support a patient in a prolonged standing position) nor a wheelchair.	I
2732	46148	Patient transfer system, manual	Өвчтөн шилжүүлэх систем, гарын авлага	A wheeled stretcher and a mechanism on which a patient can be placed so that the patient can be transferred with minimal disturbance (i.e., without changing horizontal body position, lifting, rolling, or dragging). The device typically includes a patient-transfer mechanism (e.g., mechanical, hydraulic) easy to operate by an attendant with minimal physical effort. It is used in hospitals and other healthcare facilities to reduce injuries to both patients and staff while transferring non-ambulatory, comatose, or neurologically-injured patients between beds, tables, and/or stretchers.	I

2733	46149	Freestanding patient lifting system, manual	Бие даасан өвчтөн өргөх систем, гарын авлага	A non-powered, stationary assembly of devices designed to enable one person to lift and move an incapacitated patient or a person with a disability safely and with minimal physical effort within an area limited by the lifting radius of the system. Also known as a patient hoist, it typically consists of a support base (non-fixed and freestanding on the floor) with a lifting mechanism, mast, boom/lifting arm(s), swivel bar, and patient holding device (e.g., a sling, holder or a frame). The lifting mechanism provides mechanical advantage (e.g., using pneumatic springs) to aid manual movement of components. Repositioning of the assembly may be achieved by lifting it to a new position/location.	I
2734	46150	Mobile patient lifting system, line-powered	Зөөврийн өвчтөн өргөх систем, шугамаар ажилладаг	A mains electricity (AC-powered), mobile assembly of devices designed to enable one person to lift and move an incapacitated patient or a person with a disability, of any size and weight, safely and with minimal physical effort. Also known as a patient hoist, it typically consists of a support base on wheels with a motorized lifting mechanism, mast, boom/lifting arm(s), swivel bar, and patient holding device (e.g., a sling, holder or a frame). It is typically used to lift and move the occupant in a sitting or semi-sitting position over limited distances within the treatment facility due to the restriction of the power cord.	I
2735	46179	Noninvasive breast implant sizer	Инвазив бус хөхний суулгацын хэмжээ	A clinical instrument typically used by a surgeon during breast reconstruction surgery consultation and/or preoperative planning as a guide to select an appropriately-sized breast implant (mammary prosthesis) and tissue expander. It is typically a transparent anatomical template used with other devices (e.g., calliper, measuring tape) to measure various dimensions of the patient's existing breast (e.g., width, height, projection) for selection of the optimal expander/prosthesis to achieve symmetry with reconstruction. The device is provided in a range of dimensions. This is a reusable device.	I

2736	46188	Corneal trephine system handpiece, battery-powered	Эвэрлэгийн трефиний системийн гар, зайгаар ажилладаг	A battery-powered, hand-held component of a corneal trephine system (this component is also known as a trephine engine) that holds and provides the rotary motion for a trephine insert, which typically has an extremely sharp or fine saw-toothed bevelled cutting edge for corneoscleral surgical procedures. This is a reusable device.	I
2737	46202	Rectal irrigation system catheter	Шулуун гэдэсний усалгааны системийн катетер	A flexible tube that is a component of a rectal irrigation system and designed to be inserted into the rectum (may be held in position by an inflatable retention balloon) where it serves as a conduit for water introduced into the rectum. The irrigation is typically used to provoke the defecation reflex for the evacuation of the bowels to treat/prevent constipation and reduce the risk of faecal incontinence. This is a single-use device.	I
2738	46208	Spinal surgery positioning board	Нурууны мэс заслын байрлал тогтоох самбар	A device comprised of a supportive foundation and adjustable positioning elements designed to be attached to an operating table to enable correct positioning and immobilization of a patient during surgical procedures involving the spine (e.g., thoracolumbrosacral surgery, disc decompression). It supports the patient in the prone or supine position providing a close approximation to a patient's natural lumbar lordosis while facilitating reduced abdominal compression. It typically consists of a base plate/board made of durable materials (e.g., metal, carbon fibre) to which other devices are attached (e.g., intraoperative positioners, headrest, x-ray cassette). This is a reusable device.	I
2739	46223	Pacing/defibrillation lead setscrew	Температур/дефибрилляцийн хар тугалга тохируулагч боолт	A sterile device designed to secure the attached pacing lead terminal(s) in the header connector (connection socket) of an implantable pacing device (e.g., an implanted pacemaker or defibrillator) during the implantation procedure. It is typically made of high-grade stainless steel or titanium (Ti). The device is typically available in a set of graduated sizes. This is a single-use device.	I

2740	46237	General laboratory container, single-use	Ерөнхий лабораторийн сав, нэг удаагийн	A container (e.g., test tube, bottle, cup, assay tray with large wells) intended to be used as a non-dedicated receptacle to hold consumable laboratory substances (e.g., reagents, buffers), specimens, and other materials associated with procedures in the laboratory; it is not intended for in vitro diagnostic procedures. It is typically made of plastic or glass and may be used on the benchtop for manual procedures, or on-board automated liquid handling instruments or analysers. This is a single-use device.	I
2741	46252	Corneal trephine handle	Эвэрлэгийн трефиний бариул	A hand-held, ophthalmic surgical device used to hold an exchangeable trephine (cylindrical cutting blade) so that it can be manually rotated with downward pressure by a surgeon in order to cut and remove circular pieces of corneal tissue (corneal buttons) or scleral tissue. It is typically made of high-grade stainless steel and may have a knurled portion on the shaft to provide a grip. This is a reusable device.	I
2742	46266	Dental cryoanaesthesia mouthpiece	Шүдний криоанестезийн амны хөндий	A dental brace-like device designed to be chilled to freezing/subfreezing temperatures and then applied to the labial sulci (gums) in a patient's mouth for a period to provide a cold anaesthesia to reduce pain during a dental procedure. It is typically made of a thermoplastic elastomer (TPE) and cryogenic materials. This is a single-use device.	I
2743	46293	Sitz bath kit, reusable	Суудлын ванны иж бүрдэл, дахин ашиглах боломжтой	A collection of devices and supplies used for the administration of a limited bath performed by immersing only the hips, buttocks, and the perineal region of the patient into water or a water solution (i.e., a sitz bath). It typically consists of a basin (e.g., a rigid plastic basin), an irrigation set with a bag, tubing, clamps and towels; some kits may include substances to add to the water (e.g., salts or herbs). This device is used with a sitz bath to maintain patient hygiene and for external hydrotherapy to alleviate pain and discomfort caused by haemorrhoids, uterine cramps, labour, and/or other diseases of the pelvic, abdominal and perineal area. This is a reusable device.	I

2744	46306	Tinted spectacle lens, prescription, standard	Өнгөт нүдний шилний линз, жор, стандарт	An ophthalmic device made of glass or plastic that is manufactured in accordance with a standard prescription and used to correct the refractive errors of a patient's eyesight, e.g., refractive ametropia (myopia, hyperopia and astigmatism), and to attenuate light radiation by absorption, reflection, or polarization. This device may require cutting to enable it to be mounted into a selected spectacle frame for patient wear.	I
2745	46339	Parallel bar exerciser, powered	Зэрэгцээ бариултай дасгалын төхөөрөмж, хөдөлгүүртэй	A mains electricity (AC-powered) exercise apparatus designed to assist a user in maintaining good walking posture, particularly a person with a disability, a paraplegic, or a patient who has suffered a stroke and is learning to walk. It typically consists of two parallel wooden or steel handrails each one supported by two poles and base plates; the user holds the bars, which are electrically height and/or width-adjustable, thus relieving his/her weight when walking. The device is intended to improve the user’s balance as well as coordination and flexibility; additionally, it can improve the muscle strength in the lower limbs.	I
2746	46344	Wall-mounted urinal	Хананд суурилуулсан шээсний хоолой	A device mounted on the wall that enables a person or several persons to urinate in a standing position. It is typically made of metal or ceramics and will have a built-in flushing/rinsing system and be connected to a sewer drain.	I
2747	46345	Urine chute	Шээсний суваг	A device used by a person with a disability to direct urine from the natural orifice (urethra) into, e.g., a toilet. It would typically be made of plastic material and could be used when the person is standing. This is a reusable device.	I
2748	46365	Basic electric home bed	Үндсэн цахилгаан гэрийн ор	A mains electricity (AC-powered) motorized bed designed to be used in the home by a patient for rest/sleep, and that provides the occupant with touch button adjustment possibilities. It typically includes a framework with wheels, a mattress support platform that can articulate, a headboard and footboard and a remote control to operate the electrical motors. The device typically raises the torso and/or legs to various heights. It may also include a heatable mattress and physical therapy pulsators.	I

2749	46366	Rotation bed, manual	Эргэлтийн ор, гарын авлага	A bed designed to be mechanically rotated in a circular framework by healthcare facility staff. It is used for patients with severe fractures and/or spinal cord injuries to provide an essential periodic change (i.e., rotation) of the patient's body position.	I
2750	46388	General-purpose cytology brush	Ерөнхий зориулалтын цитологийн сойз	A sterile device consisting of tufts or bristles set into a handle that is intended to collect cells from an area of the body, typically during an open surgical procedure. The cells are used for histopathological analysis. This is a single-use device.	I
2751	46444	Alternating-pressure bed mattress overlay, single-use	Хувьсах даралтын ор матрас давхар, нэг удаагийн	A pad or thin mattress, usually full-body length, which is placed on top of a bed mattress and designed with parallel chambers that are alternately filled with forced-air to actively change an occupant's bed contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a single-use device.	I
2752	46446	Rewritable CD	Дахин бичих боломжтой CD	An optical disk designed to record data from an electronic source, e.g., a computer, and to store the information in a digital format so that the data can be copied or retrieved (read or downloaded) using computer technology. The device can store the data which can be repeatedly recorded many times over onto its surface (i.e., the disc can be written and erased many times, storing different information each time). It is commonly referred to as a CD-RW.	I
2753	46448	Fascial tissue dilator, single-use	Нүүрний эдийг тэлэгч, нэг удаагийн хэрэглээ	A surgical instrument used for stretching or enlarging the fascial tissue covering a cavity, tract, or opening typically prior to the introduction of a catheter during an invasive diagnostic or interventional procedure (e.g., femoral artery catheterization). It is a rod-like device with a long, slender, hollow or solid body and a rounded nose, inflatable balloon or screw-tip at its distal end, that is available in a variety of sizes and typically made of metal or plastic. This is a single-use device.	I

2754	46449	Salivary gland dilator, single-use	Шүлсний булчирхайг тэлэгч, нэг удаагийн хэрэглээ	A sterile surgical instrument used during ear/nose/throat (ENT) surgery for enlarging a salivary gland cavity, canal, or duct, typically prior to the introduction of a catheter during an invasive diagnostic or interventional procedure. It is rod-like device, with a long, very slender body and a rounded nose at its distal end that is made of metal (e.g., stainless steel). This is a single-use device.	I
2755	46451	Salivary gland catheter	Шүлсний булчирхайн катетер	A sterile, thin flexible tube intended to be used to access the salivary glands typically to introduce a contrast medium to enhance the radiographic images of the glands during sialography. It is typically made of metal or plastic materials [e.g., polyethylene (PE), polyurethane] and will have a short length of rigid or flexible cannula extending from its distal end. This device may also be used for intraoperative cholangiography. This is a single-use device.	I
2756	46453	External orthopaedic fixation system reprocessed component	Гадны ортопедийн бэхэлгээний системийг дахин боловсруулсан бүрэлдэхүүн хэсэг	A component of an external fixation system intended to be used to stabilize a fractured bone/joint. It may be a specially designed frame, clamp, rod, pin, rod-to-rod coupling, rod-to-pin coupling, post, fastener, wire, bolt, washer, nut, hinge, ring, socket, bar, screw, or other device. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	I
2757	46455	Torque manipulation device	Эргэлтийн хүчийг удирдах төхөөрөмж	A sterile hand-operated device intended to be attached to the proximal end of an invasive device (e.g., a catheter, a needle, or a guidewire) to provide the operator with the ability to manually manipulate and control the directional torque (rotation) of the device to which it is attached. This device may be made of plastic or metal materials. This is a single-use device.	I
2758	46480	Orthopaedic knee-balance analyser, non-electrical	Ортопедийн өвдөгний тэнцвэрийн анализатор, цахилгаан бус	A mechanical orthopaedic device intended for measurement of the forces within the knee joint during a total knee arthroplasty (TKA) to assist with further planning of the procedure. It is typically a spring-loaded device with paddles to push against the adjacent joint surfaces and scales to display a force reading. This is a reusable device.	I

2759	46490	Spectacle lens occluder	Нүдний шилний хаалт	A thin, plastic, flap-like device that is clipped onto the upper frame of a pair of existing spectacles (eyeware) to block vision through the spectacle lens. It is typically made of plastic and is available in preformed, leaf-shaped, disks, usually with a pair of clip on hinges on its top edge; it is subsequently applied to the exterior of the lens. The device is often used for children and is intended to be used prophylactically (e.g., to prevent amblyopia -- impairment of vision without apparent disease) and/or therapeutically [e.g., to treat squinting, double vision (diplopia), and problems due to absence of a natural lens (aphakia)]. This is a reusable device.	I
2760	46498	Medical/surgical procedure scale, mechanical	Эмнэлгийн / мэс заслын процедурын масштаб, механик	A mechanical device designed to weigh body tissues and/or clinical objects [e.g., dressings, surgical sponges, nappies (diapers)] in association with a medical/surgical procedure and/or at autopsy. It is not intended to weigh a patient (including infants), and is not intended for laboratory use.	I
2761	46511	Surgical traction tensioner	Мэс заслын зүтгүүрийн чангалагч	A hand-operated tensioning device designed to be attached to a patient-contact device (e.g., hand wrap/trap, pelvic bone pin, foot boot, skull tongs) for the application of adjustable pulling force (traction) to a body part (e.g., leg, arm, hand, head, pelvis), typically during orthopaedic procedures (e.g., cervical spine surgery, pelvic reconstruction, fracture reduction). It may be a floor-standing pole or attached to an operating table or table extension, and typically consists of a multi-jointed structure with metal bars/posts, a manual screw/crank for traction adjustment, and mounting clamps/adaptors.	I
2762	46523	Amniotomy kit	Амниотоми иж бүрдэл	A collection of sterile devices and materials used to perform an amniotomy, the surgical rupture of the membrane surrounding the foetus (i.e., the amnion - the thin, tough membrane that lines the chorion and contains the foetus and the amniotic fluid), to induce or expedite labour. It typically includes a perforator, surgical gloves, and gel. This is a single-use device.	I

2763	46525	Bed traction frame	Орны татлагын хүрээ	An adjustable support structure usually attached to a patient's bed and designed for management of various orthopaedic conditions. It typically consists of a steel tubing structure that includes brackets and/or pulleys; it includes a post for the headboard and/or footboard, and often an adjustable-length top bar or rail with a hanging trapeze. The device is designed for use in combination with weights and/or other attachments to produce the desired traction in patients while permitting some freedom of motion. It is used to treat patients with fractures and other orthopaedic disorders (e.g., of the lower or cervical spine, hip).	I
2764	46528	Traction system skull tongs	Таталтын системийн гавлын хавчуур	A device designed to provide traction to the cervical spine by applying an upward longitudinal force from a traction system to the skull that causes hyperextension of the head and neck. It is typically a two-arm pivoted device that is attached to the skull using pins (partially implanted or not); the proximal end includes a mechanism (e.g., an adjustable threaded bolt and nut) responsible for the application of the traction force. It typically includes straps for connection to the traction system and is used in the management/treatment of damage to the cervical spine, aligns vertebral structures and provides stabilization for a cervical spine injury caused by trauma or disease.	I
2765	46537	Cervical spine immobilization head ring	Умайн хүзүүний нурууг хөдөлгөөнгүй болгох толгойн цагираг	A loop (halo) that is part of a cervical spine immobilization system (commonly known as a Halo vest) and designed to be fixed to the skull of a patient at brow level using pointed, steel, threaded bolts (typically four) that are adjusted to penetrate the outer bone of the skull. Vertical, adjustable rods from the Halo vest are locked to this loop, and a traction upon the cervical spine is created, holding the head firmly in place relative to the torso so that cervical vertebrae are immobilized following surgery or injury. It may be made of ferrous or non-ferromagnetic materials [to allow magnetic resonance imaging (MRI)], and is available in various sizes. This is a reusable device.	I

2766	46541	Elastomeric infusion pump system filling device	Эластомер дусаах насосны системийг дүүргэх төхөөрөмж	A device that is used to fill an elastomeric infusion pump system chamber with a prescribed medicated solution, to create the pressure required to expand the elastic chamber and the subsequent force that infuses the solution into the patient/user when connected. The device typically holds a syringe prefilled with the solution, and has a handle or lever that is used to push the syringe plunger inward to force the solution into the elastomeric chamber. This device is typically designed for use by a layperson. This is a reusable device.	I
2767	46556	Cold/cool therapy gel	Хүйтэн / сэрүүн эмчилгээний гель	A non-sterile, jelly-like substance in a container or in patch/strip form intended for localized topical skin application to provide a cooling effect for underlying muscles/joints to reduce pain and swelling typically from sports injuries or to reduce pain from tension headache/migraine (cold therapy), and/or for cooling at the skin surface to treat heat rash or sooth irritation (cool therapy). After application, this device cannot be reused.	I
2768	46557	Cold/cool therapy spray	Хүйтэн / сэрүүн эмчилгээний шүршигч	A non-sterile liquid (e.g., alcohol based) in a spray container intended for localized application to the body surface to provide a cooling effect for underlying muscles/joints to reduce pain and swelling typically from sports injuries (cold therapy), and/or for cooling at the skin surface to treat heat rash or hot flushes (cool therapy); it may be intended to be applied to the skin directly or used in combination with a moist-cold pack/bandage (i.e., used to soak the moist-cold pack/bandage). After application, this device cannot be reused.	I
2769	46558	Heat therapy gel	Дулааны эмчилгээний гель	A non-sterile gelatinous compound in a container that is dispensed for application to the body surface to provide a warming effect for underlying tissues. It is intended to reduce/relieve pain, muscle tension, and to increase local circulation. After application, this device cannot be reused.	I

2770	46583	Tissue expander injection port locator	Эд эс тэлэгч тарилгын порт байршуулагч	A small, hand-held, manually-operated, sterile device designed to assist with the location of the subcutaneous injection port of an implanted tissue expander prior to the insertion of a filling needle into the port in order to fill the tissue expander with, e.g., saline. It is moved over the surface of the skin at the point where the concealed injection site is situated and an indicator, e.g., a small magnet, reacts to the metal material of the port, indicating where it is located. Repetition of this locating process on several axes provides the exact location of the injection site. This is a single-use device.	I
2771	46599	Pylorus clamp	Пилорусын хавчаар	A hand-held manual surgical instrument intended for atraumatic compression of the pylorus (the lower muscular opening of the stomach) during a surgical procedure. It is typically made of high-grade stainless steel, is available in various sizes, and has a robust design, e.g., the working end will have strong blades that are flat and broad in profile so that they do not cause trauma to duodenal tissue. The blades are serrated with parallel grooves and/or serrations to provide grip and the handle is also robust to allow the required pressure to be applied by the surgeon. This is a reusable device.	I
2772	46624	Pelvic floor muscle exerciser	Аарцгийн давхрын булчингийн дасгалын төхөөрөмж	A manual device used by women to provide Kegel exercise (alternate contraction and relaxation of perineal muscles) to treat urinary stress incontinence, sexual dysfunction, or to tone the muscles of the pelvic floor. It is typically inserted into the vagina and is available in a variety of designs that commonly includes a spring-loaded, split, cantilevered cylinder that requires the voluntary contraction of the vagina to squeeze it together, or a solid metal, profiled weight that is gripped by the vaginal muscles as gravity pulls it downward. This is a reusable device.	I

2773	46633	Catheter/overtube balloon inflator, reprocessed	Катетер/гуурсан хоолойн бөмбөлөг хийлэгч, дахин боловсруулсан	A device designed to inflate and regulate the pressure of the balloon of a catheter, endoscopic overtube, or other invasive device (e.g., tamp, endomicroscopy probe), typically by injecting and aspirating fluid or air within the balloon, and to deflate the balloon during a medical procedure. It typically consists of a dedicated manual syringe/plunger or electronic mechanism for inflation/deflation, an analogue or digital gauge/screen for monitoring pressure, a locking mechanism, and a connecting tube. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	I
2774	46662	Catheter/overtube balloon inflator, reusable	Катетер/гуурсан хоолойн бөмбөлөг хийлэгч, дахин ашиглах боломжтой	A device designed to inflate and regulate the pressure of the balloon of a catheter, endoscopic overtube, or other invasive device (e.g., tamp, endomicroscopy probe), typically by injecting and aspirating fluid or air within the balloon, and to deflate the balloon during a medical procedure. It typically consists of a dedicated manual syringe/plunger or electronic mechanism for inflation/deflation, an analogue or digital gauge/screen for monitoring pressure, a locking mechanism, and a connecting tube. This is a reusable device.	I
2775	46663	ERCP catheter, non-balloon, non-electrical, reusable	ERCP катетер, бөмбөлөг биш, цахилгаангүй, дахин ашиглах боломжтой	A non-electrical flexible tube inserted through a flexible endoscope, after its placement in the duodenum via the oral cavity, for the endoscopic cannulation of the gastrointestinal ductal system (i.e., the pancreatic, hepatic, and/or common bile ducts) during endoscopic retrograde cholangiopancreatography (ERCP). It is typically a single-lumen device made of radiopaque plastic materials with incremental markings at the distal tip, used to deliver a contrast medium to the ducts for their radiographic visualization; it does not incorporate a balloon. This is a reusable device.	I

2776	46669	Breast ductography cannula	Хөхний сувгийн суваг	A thin, sterile, semi-rigid or rigid metal tube that is inserted into the nipple of the female breast to inject a contrast medium into the lactiferous ducts to enhance their visualization during a radiographic procedure. It is typically made of high-grade stainless steel and is designed with a blunt distal tip; it has a connector at the proximal end for attachment to a device that propels the contrast medium. This metal tube is typically used to help define the cause of nipple discharge from intraductal abnormalities such as neoplasms, ductal ectasia, or fibrocystic changes. This is a single-use device.	I
2777	46718	Eye magnet, non-powered	Нүдний соронз, цахилгаангүй	A non-electric hand-held instrument designed to generate a magnetic field intended to locate and remove metallic foreign bodies [typically those containing iron (Fe) or steel] from eye tissue; it may include a wire loop at one end for mechanical extraction. This is a reusable device.	I
2778	46721	Disposable vacuum tubing	Нэг удаагийн вакуум хоолой	A sterile length of flexible tube intended to be used as a connection line between a vacuum source and a medical device, medical equipment, or a medical system that is dependent upon suction to operate or function. It is typically made of malleable synthetic polymer material(s) (e.g., plastic, silicone) and is designed with a thick wall to prevent collapse due to the negative pressure of the vacuum; it is available in a variety of lengths, including standard coil lengths. This device is used when sterile conditions are required (e.g., for an autologous blood transfusion system). This is a single-use device.	I
2779	46724	Ophthalmic surgical instrument handle, manual	Нүдний мэс заслын багажны бариул, гарын авлага	A hand-held manual device designed to hold and operate a compatible ophthalmic surgical instrument tip (typically scissors, forceps). It is typically in the form of a conventional handle with a connector that secures the inserted tip, and has a manually-operated internal actuating piston that operates the inserted tip (e.g., opens and closes blades). It is typically used for surgery in the anterior or the posterior segment to cut, grasp, and manipulate eye tissue; it is not a handle for a corneal trephine. This is a reusable device.	I

2780	46751	Bone holding forceps	Яс барих хямсаа	A manual surgical instrument designed to grasp and hold a bone during an open surgical procedure. It is typically strongly constructed with a scissors-like design, which may or may not be self-retaining, and with ring handles or curved shank handles. It is made of high-grade stainless steel and is available in various sizes. The working end can have a wide variety of jaws designs, e.g., curved serrated jaws, straight toothed jaws, or profiled wrench-like jaws with grooves to provide extra grip of the bone. This is a reusable device.	I
2781	46786	Direct ophthalmoscope	Шууд офтальмоскоп	An electrically-powered, hand-held, ophthalmic instrument designed to be held close to the patient's eye to examine the interior of the eye and related structures [e.g., fundus (retina), cornea, aqueous, lens, and vitreous] by producing an upright (unreversed) image of approximately 15 times magnification. It consists of a main unit (commonly referred to as the head) with a built-in light source directed through the pupil to illuminate the interior of the eyeball, a mirror with a single hole for viewing, and a dial containing lenses of different powers; a dedicated power supply handpiece may be included with the head.	I
2782	46788	Indirect monocular ophthalmoscope, electrically-powered	Цахилгаанаар ажилладаг шууд бус монокуляр офтальмоскоп	An electrically-powered, hand-held, ophthalmic instrument designed to be held arm's length from the patient to examine the interior of the eye and related structures [e.g., fundus (retina), cornea, aqueous, lens, vitreous] using the examiner's one eye (monocular). It is intended to provide a wide field of view and produce an inverted (reversed) image of approximately 2 to 5 times magnification. It typically consists of a built-in light (e.g., non-polarized light) directed through the pupil to illuminate the interior of the eyeball, lenses, and filters.	I

2783	46824	Mechanical expiratory valve, single-use	Амьсгалын механик хавхлага, нэг удаагийн	A non-sterile mechanical device intended to be used in a respiratory or anaesthesia breathing circuit or system to maintain a degree of positive pressure in a patient's airway at the end of expiration. Typically constructed of plastic/metal it has a valve that is actuated by a spring to provide expiratory airway resistance, and an adjustable knob (usually not graduated) that is typically set between 0 and 20 cmH20 pressure, but may be fully closed when controlled/assisted ventilation is applied. It is normally used with anaesthesia breathing systems, pulmonary resuscitators, or ventilators and is commonly known as a pop-off valve, relief valve, or spill valve. This is a single-use device.	I
2784	46827	Laryngoscope blade, reusable	Ларингоскоп ир, дахин ашиглах боломжтой	The segment of a laryngoscope (i.e., rigid intubation type) intended to be inserted into the oral cavity to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It is connected to the laryngoscope handle and illumination of the airway is provided by a small built-in light bulb or a fibreoptic light. This device may be curved or straight and of various designs and lengths; it may be hinged/interchanged with the handle. Some types are magnetic resonance imaging (MRI) compatible. This is a reusable device.	I
2785	46828	Laryngoscope blade, single-use	Ларингоскоп ир, нэг удаагийн	The segment of a laryngoscope (i.e., rigid intubation type) intended to be inserted into the oral cavity to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It is connected to the laryngoscope handle and illumination of the airway is provided by a small built-in light bulb or a fibreoptic light. This device may be curved or straight and of various designs and lengths; it may be hinged/interchanged with the handle. Some types are magnetic resonance imaging (MRI) compatible. This is a single-use device.	I

2786	46829	Flexible-end laryngoscope blade	Уян хатан төгсгөлтэй ларингоскоп ир	The segment of a laryngoscope (i.e., rigid intubation type) intended to be inserted into the oral cavity to manipulate the tongue, preventing it from obstructing the oropharynx and enabling a clear view of the trachea for the insertion of an endotracheal (ET) tube prior to the delivery of inhalation anaesthesia and/or ventilation. It has a pivoted, flexible-tip typically operated through a mechanism activated by a trigger on the laryngoscope handle, which allows the operator to elevate the epiglottis and thus facilitate intubation. Illumination of the airway is provided by a small built-in light bulb or a fibreoptic light. This is a reusable device.	I
2787	46830	Laryngoscope handle, reusable	Ларингоскопын бариул, дахин ашиглах боломжтой	The hand-held segment of a laryngoscope (i.e., non-endoscopic rigid type) used to manipulate the laryngoscope blade during airway access and intubation. It is a cylindrical device that contains the batteries/light-emitting cells that provide energy/light for the airway-illuminating feature of the laryngoscope (e.g., small light bulb, fibreoptics), and can accommodate various blades. It is available in various sizes and may be magnetic resonance imaging (MRI) compatible. This is a reusable device.	I
2788	46936	Walking stick holder	Алхах таяг эзэмшигч	A device designed as a holder for a user's walking stick (cane) to maintain the stick in an upright position ready for use and prevent the stick from falling on the floor or ground and becoming a liability to the user or other persons. It is available in a variety of designs such as a clip that may be carried upon the user's person for attachment to, e.g., a table when out dining, a bracket affixed to a wall in the user's abode or floor-stand.	I
2789	46944	Test tube heater	Туршилтын хоолой халаагч	An electrically-powered device used in the laboratory to hold and maintain at specific temperatures test tubes containing a fluid specimen (e.g., cell samples). The device typically contains several slots to hold test tubes upright, and its heating element is controlled electronically to reliably maintain a physiological temperature.	I

2790	46951	Scalp clip applier, reusable	Хуйхын хавчаар түрхэгч, дахин ашиглах боломжтой	A hand-held, manually-operated, surgical instrument used for the application (the attachment) of nonimplantable, single-use scalp clips to the margins of a scalp wound/incision during a surgical intervention on the cranium/scalp. Often referred to as a clip gun, it has a pistol-like design and holds an exchangeable, preloaded cassette of scalp clips that are fired into the scalp tissue, with the pull of a trigger, to approximate the margins of the wound/incision until it heals. This is a reusable device.	I
2791	46967	Basic endotracheal tube, single-use	Үндсэн дотоод хоолой, нэг удаагийн хэрэглээ	A hollow cylinder inserted orally or nasally into the trachea to provide an unobstructed airway to convey gases and vapours to and from the lungs during anaesthesia, resuscitation, and other situations where the patient is not properly ventilated; it does not include an antimicrobial agent(s). The device may: 1) be packaged with a connector that will attach to a breathing circuit or manual resuscitator; 2) have a distal inflatable cuff to seal against the tracheal wall; 3) be radiopaque; and 4) have a built-in pilot balloon for cuff pressure monitoring. It is available in various diameters and lengths for adult and paediatric patients. This is a single-use device.	I
2792	46976	Surgical mallet head	Мэс заслын алхны толгой	A device intended to replace the head of some types of surgical mallets and hammers. It is typically a solid cylinder of various diameters with flat ends; it is made of durable, non-splintering, synthetic polymer materials and is fixed (typically screwed using it's central screw thread) to the the distal end of the mallet. This is a reusable device.	I
2793	46981	Assistive clock/timepiece	Туслах цаг/цаг	A device intended to be used by a person with a disability for measuring, displaying, and/or speaking the time. It may or may not have an alarm function.	I
2794	46984	Assistive personal mirror	Туслах хувийн толь	A device designed to be used by a person with a disability to assist them in attending to their personal facial care and skin care by allowing them to view their body/facial features in a mirror surface. It may be hand-held and have an extended handle that may be foldable.	I

2795	47070	Cervical aspiration catheter	Умайн хүзүүний аспирацийн катетер	A semi-rigid, sterile, tube designed to aspirate cervical mucous, typically for the evaluation of infertility. It is used to obtain cervical mucous samples for post-coital determination of spermatic hostility; it may also be used to remove a viscous mucous barrier prior to intrauterine insemination, embryo transfer, or other transcervical procedures. The tube usually contains a rigid inner tube with a plunger that is positioned near the distal end; once in situ, the plunger is slowly withdrawn, creating a suction that draws mucous into the tube. The mucous is typically expelled onto a microscope slide for examination. This is a single-use device.	I
2796	47077	Surgical scrub brush, single-use	Мэс заслын гуужуулагч сойз, нэг удаагийн	A hand-held device used by hospital staff to scrub their hands, fingers, and forearms prior to surgery or other intervention where a high degree of personal hygiene is required; it may also be used to mechanically clean the intact skin or superficial wounds of a patient. This device typically has a synthetic sponge surface and a soft bristle surface; it may also include a separate nail cleaner and/or a disinfecting substance. This is a single-use device.	I
2797	47103	Insect bite/sting hyperthermia device	Шавж хазуулсан/хатгах гипертерми төхөөрөмж	A portable, electrically-powered device intended to be used for the external surface treatment of insect bites or stings (e.g., from midges/gnats, mosquitoes, wasps, hornets, horseflies) through the topical application of concentrated heat. The heat (around 50° Celsius) works to minimize or prevent itching, and may prevent subsequent swelling. It may be either a self-contained hand-held unit or an attachment for a smartphone. This is a reusable device.	I

2798	47104	Lip herpes hyperthermia device	Уруулын герпес гипертерми төхөөрөмж	A portable, battery-powered device designed to control the outbreak of herpes to the lips (herpes labialis) through the application of concentrated heat. The heat (around 50° Celsius) works to prevent the formation of blisters/cold sores and helps to treat other symptoms (e.g., prickly and burning sensations, itch, pain). It typically consists of a pocket-sized, hand-held housing containing electronics, batteries, and a skin-surface contact plate. It is normally available [non-prescription] over-the-counter (OTC) for home-use. This is a reusable device intended for single-patient use.	I
2799	47116	Haemodialysis chair, manual	Гемодиализын сандал, гар ажиллагаатай	A manually-operated device designed to support the patient in a seated or reclined posture during haemodialysis procedures. It is usually made of easily washable materials, with appropriate arm, back, and footrests that can be adjusted by the patient manually. It provides interface with the dialysis system, facilitating the patient connection to the extracorporeal blood circuit.	I
2800	47117	Haemodialysis chair, electric	Гемодиализын сандал, цахилгаан	A mains electricity (AC-powered) device designed to support the patient in a seated or reclined posture during haemodialysis procedures. It is usually made of easily washable materials, with appropriate arm, back, and footrests that can be adjusted by the patient using a powered mechanism. It provides interface with the dialysis system, facilitating the patient connection to the extracorporeal blood circuit.	I
2801	47118	Neurosurgical chair	Мэдрэлийн мэс заслын сандал	A mains electricity (AC-powered) device with moveable parts designed to support and position a patient in a sitting or reclined position during neurosurgery.	I
2802	47119	Tracheostomy tube decannulation cap	Трахеостомийн хоолойн деканнуляцийн таг	A device designed to facilitate tracheostomy tube weaning and removal (decannulation), as well as voice restoration, for patients who have been chronic users of a tracheostomy tube. It is a small plastic cover (a cap), typically brightly coloured for easy identification, that is placed on the proximal end of a fenestrated or uncuffed tracheostomy tube to close the tracheostomy termination. This is a single-use device.	I

2803	47120	Cardiopulmonary rehabilitation chair, electric	Зүрх, уушигны нөхөн сэргээх сандал, цахилгаан	A mains-electricity (AC-powered) device designed to support a cardiac/pulmonary patient in a seated position and to facilitate their placement in an optimal posture for rehabilitation and mobilization. It typically includes an adjustable headrest, back rest, and arms; it may have a design that permits easy patient monitoring. Some types permit limited indoor transportation and/or include a table for patient use (e.g., dining, writing) and safety belts. The device is widely used in acute care settings, and for short- and long-term rehabilitation; it is typically intended for patients with chronic cardiac diseases that benefit from being out of bed, such as those with congestive heart failure.	I
2804	47123	Alternating-pressure chair cushion, reusable	Хувьсах даралтын сандлын дэр, дахин ашиглах боломжтой	A pad intended to be placed on the seat of a chair and designed with parallel chambers that are alternately filled with forced-air to actively change an occupant's buttocks-chair contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. This is a reusable device.	I
2805	47124	Ophthalmic cannula transscleral trocar blade	Нүдний сувгийн транссклераль трокар ир	A rigid, hand-held, manual ophthalmic surgical instrument with a sharp or blunt tip intended to fill the lumen of a compatible ophthalmic cannula (not included) and part eye tissue during cannula insertion into the eye (transscleral access). It is intended to be withdrawn once the cannula is in place. This is a reusable device.	I

2806	47143	Electrical-only medical device connection cable, single-use	Зөвхөн цахилгаанаар ажилладаг эмнэлгийн төхөөрөмжийн холболтын кабель, нэг удаагийн	A non-patient-contact, insulated, electrical cord with a connector (plug) at both ends designed to transmit electrical power and/or signal (data) between medical devices (e.g., to connect a lead, electrical catheter, handpiece, or monitor to a parent device). It is not intended to connect directly to patient-worn electrodes (i.e., it is not a lead), is not intended to connect to the mains (i.e., not a mains power cable), does not generate any type of power and/or signal, and has no additional non-electrical conducting or processing functionality. Some types may include an electrical isolator to prevent electrical shocks, and/or a cable cover. This is a single-use device.	I
2807	47144	Dental chair, electric	Шүдний сандал, цахилгаан	A mains electricity (AC-powered) device designed to support a patient in a seated position to facilitate dental examination, treatment, and/or minor surgery procedures. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to several standard positions. Devices intended for dental examination and/or treatment (e.g., lights, irrigation) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I
2808	47145	Dental chair, mechanical	Шүдний сандал, механик	A manually- or hydraulically-powered device designed to support a patient in a seated position to facilitate dental examination, treatment, and/or minor surgery procedures. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to several standard positions. Devices intended for dental examination and/or treatment (e.g., lights, irrigation) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I

2809	47146	ENT chair, electric	Чих хамар хоолойн сандал, цахилгаан	A mains electricity (AC-powered) device designed to support a patient in a seated position to facilitate ear, nose, throat (i.e., ENT) examination, treatment, and/or minor surgery. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to standard positions. Devices intended for ENT examination and/or treatment (e.g., otoscopes, laryngoscopes) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I
2810	47147	ENT chair, mechanical	Чих хамар хоолойн сандал, механик	A manually- or hydraulically-powered device designed to support a patient in a seated position to facilitate ear, nose, throat (i.e., ENT) examination, treatment, and/or minor surgery. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to standard positions. Devices intended for ENT examination and/or treatment (e.g., otoscopes, laryngoscopes) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I
2811	47148	Paediatric dental chair, electric	Хүүхдийн шүдний эмчийн сандал, цахилгаан	A mains electricity (AC-powered) device designed to support a paediatric patient in a seated position to facilitate dental examination, treatment, and/or minor surgery procedures. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to several standard positions. Devices intended for dental examination and/or treatment (e.g., lights, irrigation) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I

2812	47149	Paediatric dental chair, mechanical	Хүүхдийн шүдний эмчийн сандал, механик	A manually- or hydraulically-powered device designed to support a paediatric patient in a seated position to facilitate dental examination, treatment, and/or minor surgery procedures. It is typically adjustable in height to enable healthcare staff to perform procedures while standing. It usually includes head and armrests, a reclining back that may be tilted from a vertical to a horizontal position, and has rotating capabilities; some types can be programmed to several standard positions. Devices intended for dental examination and/or treatment (e.g., lights, irrigation) may be attached as components of the chair, or stand separately as self-supported, wall- or ceiling-mounted units.	I
2813	47150	Podiatric chair, electric	Хүүхдийн сандал, цахилгаан	A mains electricity (AC-powered) device designed to support a patient in a seated position and to facilitate foot examination, treatment, and/or minor surgery procedures. It is typically adjustable in height and includes armrests and a reclining back that may be tilted from a vertical to a horizontal position. It usually includes individual leg sections and footrests with lifting and rotating capabilities; some types can be programmed to several standard positions. Devices intended for foot examination and/or treatment may be attached as components of the chair (and may be operated using the chair controls), or stand separately as self-supported or wall-mounted units.	I

2814	47151	Podiatric chair, mechanical	Хүүхдийн сандал, механик	A manually- or hydraulically-powered device designed to support a patient in a seated position and to facilitate foot examination, treatment, and/or minor surgery procedures. It is typically adjustable in height and includes armrests and a reclining back that may be tilted from a vertical to a horizontal position. It usually includes individual leg sections and footrests with lifting and rotating capabilities; some types can be programmed to several standard positions. Devices intended for foot examination and/or treatment may be attached as components of the chair (and may be operated using the chair controls), or stand separately as self-supported or wall-mounted units.	I
2815	47162	Endoscopic bite block, oxygenating	Дурангийн хазуулсан блок, хүчилтөрөгчтэй	A dual-purpose device inserted into a patient's mouth to maintain oral patency during an endoscopic procedure primarily to protect the endoscope, introduced via the mouth, from the patient's natural tendency to bite down on the instrument, and that simultaneously supports an oxygen (O2) line to provide the patient with an uninterrupted flow of O2 during and after endoscopy. The device also protects the tongue and teeth of the patient during endoscopy and may include a gas sample line that enables monitoring of the expired carbon dioxide (CO2) during the procedure. This is a single-use device.	I
2816	47176	Vinyl examination/treatment glove, non-powdered	Винил үзлэг/эмчилгээний бээлий, нунтаггүй	A non-sterile device made of vinyl intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	I

2817	47177	Vinyl examination/treatment glove, powdered	Винил үзлэг/эмчилгээний бээлий, нунтаг	A device made of vinyl intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is covered with powder to facilitate donning/removal; it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	I
2818	47188	Extremity-oxygenation hyperbaric chamber, non-powered	Хэмжээ-хүчилтөрөгчийн гипербарик камер, цахилгаангүй	A small vessel intended to hermetically surround a patient's limb for the topical application of oxygen (O2) from an O2 gas supply at a pressure slightly greater than atmospheric (e.g., 1 to 2 atm) during hyperbaric oxygen therapy (HBOT). The device is typically a rigid or flexible plastic shell with valves and tubing for connection to an O2 source. It is typically used to treat skin ulcerations, decubitus ulcers, infected stumps, skin grafts, burns, and frostbite.	I
2819	47202	Sleep apnoea face mask, single-use	Унтах апноэ нүүрний маск, нэг удаагийн хэрэглээ	A non-sterile, flexible, form-shaped device designed to be placed over a user's nose and mouth (due to compulsive mouth breathing) to interface with a sleep apnoea positive airway pressure unit for the delivery of direct ambient air, or medical oxygen (O2) and air, for continuous positive airway pressure higher pressure (CPAP) or bi-level positive airway pressure (BiPAP) ventilation therapy to improve/enhance the sleep of a person experiencing sleep apnoea. It is typically made of plastic and/or silicone materials that create an airtight seal around the patient's nose and mouth. It is available in various designs and sizes and stabilized with a headstrap. This is a single-use device.	I

2820	47285	Auditory brainstem implant system	Сонсголын тархины ишний суулгацын систем	An assembly of electronic devices intended to restore useful hearing to a deaf patient via electrical stimulation of the brainstem's cochlear nucleus. It typically includes an external speech processor and microphone/headset to transform acoustical signals into an electrical code, which is transmitted from the headset to a surgically implanted receiver-stimulator where it is decoded and delivered to a multichannel electrode array. The array is surgically placed on the cochlear nucleus, which when stimulated results in the signal's transmission to the brain where it is interpreted as sound. An auditory brainstem implant (ABI) is used to treat deafness resulting from auditory nerve tumours.	I
2821	47371	Auditory brainstem implant system electrode array assembly	Сонсголын тархины ишний суулгацын системийн электродын массивын угсралт	The sterile implantable portion of an auditory brainstem implant system that typically consists of a battery-powered receiver-stimulator and an electrode array surgically placed on the brainstem's cochlear nucleus. The external portion of the device transmits electrical signals to the receiver-stimulator where they are decoded and sent to the multichannel electrode array to stimulate the brainstem's cochlear nucleus; this results in the signal's transmission to the brain where it is interpreted as sound.	I
2822	47401	Umbilical cord clamp remover	Хүйн хавчаар арилгагч	A non-sterile instrument designed to remove an umbilical cord clamp that has been applied to a patient. It typically operates by either opening the clamp's locking mechanism or by cutting the clamp. The instrument is typically made of plastic, and sometimes metal, materials. This is a single-use device.	I
2823	47402	Umbilical cord clamp/cutter	Хүйн хавчаар/таслагч	A sterile, hand-held manual surgical instrument designed with a clamping and cutting mechanism to simultaneously clamp and sever the umbilical cord immediately after birth. It may be used on the maternal side of the umbilical cord and on the infant side, typically where the clamp remains until the cord stub falls off. It is typically made of plastic materials [e.g., polycarbonate (PC)]. This is a single-use device.	I

2824	47409	Negative-pressure wound therapy tubing set	Сөрөг даралтын шархыг эмчлэх хоолойн иж бүрдэл	A collection of sterile, flexible, plastic tubing and associated items (e.g., connectors, line clamp, negative pressure applicator pad, canister) intended to be used as part of a vacuum-assisted wound closure system; commonly known as negative pressure wound therapy (NPWT). It is designed to create an airtight connection between the open-cell foam dressing and drape at the wound site and the vacuum pump. The tubing allows negative pressure to be delivered to the wound site and provides a conduit to channel excess interstitial fluid, wound exudate, and infectious materials from the wound to the collection canister. This is a single-use device.	I
2825	47447	Bed blanket, single-use	Орны хөнжил, нэг удаагийн	A large piece of fabric or fabric-like material used to cover a patient/person to insulate body heat for warmth. It is typically used as a bed covering, but may be used for other purposes (e.g., as a wrap for warmth and comfort). This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
2826	47448	Duvet, reusable	Дахин ашиглах боломжтой хөнжил	A thick bed covering intended to be used to cover a patient to insulate body heat for warmth. It is typically designed as two layers of material that envelop a light filling (e.g., down, feathers, small pieces of synthetic material) which trap pockets of air to promote heat insulation. Also known as a continental quilt or a comforter, it may or may not be used in conjunction with a duvet cover and is laundered for cleaning between periods of use. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. This is a reusable device.	I

2827	47449	Duvet, single-use	хөнжил, нэг удаагийн	A thick bed covering intended to be used to cover a patient to insulate body heat for warmth. It is typically designed as two layers of material that envelop a light filling (typically small pieces of synthetic material) which trap pockets of air to promote heat insulation. Also known as a continental quilt or a comforter, it may or may not be used in conjunction with a duvet cover. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
2828	47450	Basic duvet cover, reusable	Үндсэн хөнжил, дахин ашиглах боломжтой	A protective envelope for a duvet typically made of a thin textile material intended to create a physical barrier to soiling and cross-contamination. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. The device is laundered for cleaning, usually at regular intervals. This is a reusable device.	I
2829	47451	Basic duvet cover, single-use	Үндсэн хөнжил хөнжил, нэг удаагийн	A protective envelope for a duvet typically made of a thin textile material intended to create a physical barrier to soiling and cross-contamination. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
2830	47452	Bed pillow, single-use	Орны дэр, нэг удаагийн	A sealed cloth case stuffed with soft material (e.g., foam rubber) designed to support the head especially during rest and sleep in bed; it can also be used to support another part of the body to provide comfort (e.g., behind the back when in a sitting position, under a leg for support). It may or may not be used with a pillowcase. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I

2831	47453	Basic pillowcase, reusable	Үндсэн дэрний уут, дахин ашиглах боломжтой	A protective envelope for a pillow typically made of a thin textile material intended to create a physical barrier to soiling and cross-contamination. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. The device is laundered for cleaning, usually at regular intervals. This is a reusable device.	I
2832	47454	Basic pillowcase, single-use	Үндсэн дэрний уут, нэг удаагийн	A protective envelope for a pillow typically made of a thin-textile or reinforced-paper material intended to create a physical barrier to soiling and cross-contamination. It does not include antimicrobial/probiotic materials but might provide a physical barrier (e.g., tight weave) to dust mites. This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
2833	47455	Basic bed sheet, reusable	Үндсэн орны даавуу, дахин ашиглах боломжтой	A large piece of fabric material intended to cover the mattress of a bed to protect it from being soiled and to provide the bed's occupant with clean, non-irritating contact surfaces (over and under); it does not include antimicrobial or nonadherent properties. It is typically made of a thin-textile or reinforced-paper material and is laundered for cleaning between periods of use. This is a reusable device.	I
2834	47456	Basic bed sheet, single-use	Үндсэн орны даавуу, нэг удаагийн	A large piece of fabric material intended to cover the mattress of a bed to protect it from being soiled and to provide the bed's occupant with clean, non-irritating contact surfaces (over and under); it does not include antimicrobial or nonadherent properties. It is typically made of a thin-textile or reinforced-paper material. This device is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
2835	47457	Orthopaedic trocar blade, reusable	Ортопедийн трокар ир, дахин ашиглах боломжтой	A rigid hand-held surgical instrument with a sharp (pyramidal or conical) point designed to be used during orthopaedic surgery for the manual puncture of a bodily entry point to: 1) gently part the surrounding soft tissue upon entry; 2) assist in the location and positioning of skeletal fractures; and/or 3) assist alignment of surgical instruments/implants. It is typically made of high-grade stainless steel, titanium (Ti), or synthetic material. This is a reusable device.	I

2836	47463	Vacuum shut-off valve	Вакуум хаалттай хавхлага	A component of a medical vacuum supply pipeline system designed to stop (close off) the vacuum in a vacuum distribution pipeline in cases of emergency or maintenance. This device is installed in the pipeline and is manually activated by service personnel/trained hospital staff. It typically consists of a main housing, pipe connections at both ends, a valve with an operating handle, a vacuum gauge, and sometimes an inlet for the connection of emergency vacuum when the main system is closed.	I
2837	47464	Intracorporeal lithotripsy suction system	Бие доторх литотрипсийн сорох систем	An assembly of devices designed for use with an intracorporeal lithotripsy system to evacuate, by suction, the irrigation fluid-containing fragments of urinary calculi from the kidneys, ureters, and bladder during lithotripsy. It typically consists of a pneumatically-powered pump that creates suction via the venturi mechanism, a vacuum gauge, vacuum control knob, a compressed air connector, tubing, a moisture filter, and possibly a microbial filter. The vacuum created by the pump is applied to the body through the tubing and an inserted probe, for the removal of the calculi in a stone catcher and the fluid in a collection container.	I
2838	47476	Air-filled bed mattress overlay	Агаараар дүүргэсэн ор матрас давхарга	A static-air-inflated pad or thin mattress, usually full-body length, which is placed on top of a bed mattress to distribute an occupant's body weight over a large surface area, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat. This is a reusable device.	I
2839	47477	Air-filled chair cushion	Агаараар дүүргэсэн сандлын дэр	A static-air-inflated pad designed to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat. It may be used in a wheelchair. This is a reusable device.	I

2840	47479	Alternating-pressure chair cushion system	Хувьсах даралтын сандлын дэрний систем	An assembly of devices consisting of an alternating-pressure chair cushion and a dedicated pump, which also functions as the control unit, designed to actively change an occupant's buttocks-chair contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized patients especially in cases of decubitus ulcers, patients with disabilities, or patients with low body fat.	I
2841	47516	Treadmill/elliptical gait rehabilitation system	Гүйлтийн зам/зууван алхаа нөхөн сэргээх систем	An assembly of electrically-powered devices designed to assist a patient with a walking disability (neurogenic, muscular, or osseous in origin) regain lost motor function. It primarily consists of a speed-regulated treadmill or elliptical to facilitate gait; an overhead patient support assembly with pulleys, harness, and straps to unload patient weight; a robotic orthosis system attached to the patient's legs individually, or in the form of pedals, to guide leg movements; side-mounted rails for patient support; an operator control unit to regulate speed/elevation and display related data; and sometimes patient incentive features.	I
2842	47520	Orthopaedic bed mattress	Ортопедийн ор матрас	A large, durable, fabric case filled with a combination of layered resilient materials (e.g., foam rubber and gel) designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie and rest/sleep, and to promote therapeutic postures in users suffering back maladies (e.g., spinal column compression, back pain) through the homogenous distribution of body weight.	I
2843	47526	Mandible-repositioning sleep-disordered breathing orthosis	Эрүүний байрлалыг өөрчилдөг нойрны эмгэг амьсгалын ортоз	A removable intraoral device designed to alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea) by repositioning and/or controlling the lower jaw (mandible), typically in a downward and forward position. It works by locking the mandible (e.g., holding the teeth) and preventing it from retruding, thus increasing the patency of the airway and decreasing both air turbulence and airway obstruction. A number of different fixed (non-adjustable) and adjustable types using several techniques and materials are available. This is a reusable device.	I

2844	47527	Mandible-repositioning/palate-lifting sleep-disordered breathing orthosis	Эрүүний байрлалыг өөрчлөх/тагнай өргөх нойрны эмгэг амьсгалын ортоз	A removable intraoral device designed alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea) by repositioning the lower jaw (mandible), frequently in a downward and forward position, and by elevating the soft palate (soft tissue constituting the back of the roof of the mouth). It works by locking the mandible (e.g., holding the teeth) and preventing it from retruding and by applying pressure to lift a drooping soft palate, thus increasing the patency of the airway and decreasing both air turbulence and airway obstruction. This is a reusable device.	I
2845	47528	Palate-lifting sleep-disordered breathing orthosis	Тагнай өргөх нойрны эмгэг амьсгалын ортоз	A removable intraoral device designed to alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea) by elevating the soft palate (soft tissue constituting the back of the roof of the mouth). It works by applying pressure to retract and lift a drooping soft palate, thus increasing the patency of the airway and decreasing both air turbulence and airway obstruction. This is a reusable device.	I
2846	47529	Tongue-retaining sleep-disordered breathing orthosis	Хэл хадгалах нойрны эмгэг амьсгалын ортоз	A removable intraoral device designed to alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea) by retention of the tongue, frequently keeping the tongue in a forward position during sleep. It typically works by applying a gentle negative pressure that holds the tongue in a position that facilitates breathing, thus increasing the patency of the airway and decreasing both air turbulence and airway obstruction. This is a reusable device.	I
2847	47556	Jaw physiology evaluation system	Эрүүний физиологийн үнэлгээний систем	An assembly of mains electricity (AC-powered) devices designed to record parameters for mandibular and muscles of mastication function, primarily to aid in the diagnosis and treatment of temporomandibular joint (TMJ) and myofascial pain dysfunction (MPD) disorders, and for orthodontic, denture, and reconstruction patient evaluation. It typically uses surface electromyography to evaluate muscle groups at rest or in function; sonography to detect sounds/vibrations from the TMJ joint and/or other computer-based system to non-invasively track the mandible in function or identify its position in space relative to the skull.	I

2848	47568	Suturing needle holder, single-use	Оёдлын зүү эзэмшигч, нэг удаагийн	A hand-held manual surgical instrument designed to grasp a suture needle when pushing/pulling the needle and attached suture through tissue during suturing. It has short serrated jaws at the distal end to provide better grip of the needle, and is available in a wide variety of sizes and designs, such as: 1) a self-retaining, scissors-like design with ring handles at the proximal end; 2) a tweezers-like design with bowed, hinged handles that are operated by squeezing them together; and 3) a heavy-duty pincer-like design. This is a single-use device.	I
2849	47584	Pulsed signal therapy system	Импульсийн дохионы эмчилгээний систем	An assembly of devices designed to create and deliver pulsating electromagnetic signals to stimulate chondrogenesis (the formation of cartilage) during pulsed signal therapy (PST). It is intended to regenerate damaged cartilage, particularly by stimulating the production of collagen types that are present in healthy cartilage. It typically consists of a mains electricity (AC-powered) generator and various coils/applicators. The frequency range is typically from 1 to 30 Hz (normally 10 to 12 HZ) and the field strength from 10 to 20 G (normally 12 to 14 G). Typical uses include treatment of arthritis, tendonitis, family of rheumatic illnesses, fibromyalgia, osteoporosis, and acute injuries.	I
2850	47593	Pulsed signal therapy system body pad	Импульсийн дохионы эмчилгээний системийн биеийн дэвсгэр	A component of a pulsed signal therapy (PST) system designed to deliver pulsating electromagnetic signals to various segments of the body (e.g., knee, foot, leg, arm, shoulder, hip, and back) during PST treatment. It is typically a flexible textile pad that connects twin coils, one placed on either end of the pad; it is connected to the system's generator. The pad can be formed over a body part (knee, shoulder, elbow) to provide the best possible placement of the coils. This is a reusable device.	I

2851	47605	Vaginal douche, single-use	Үтрээний шүршүүр, нэг удаагийн	A non-sterile, manual device designed to produce and direct a stream of fluid (typically water, water/vinegar solution, or antiseptic chemicals) into the vaginal cavity typically for hygienic purposes, including the removal of vaginal discharge, medicinal deposits, and anticonceptual products from the vagina. It usually consists of a squeeze bottle to contain the fluid, typically prefilled, with an attached nozzle for vaginal insertion; the fluid is ejected upon hand compression by the user. The device is normally available [non-prescription] over-the-counter (OTC) for use in the home or healthcare facility. This is a single-use device.	I
2852	47675	Ultrasonic surgical system torque wrench, reusable	Хэт авианы мэс заслын системийн эргүүлэх эрэг чангалах түлхүүр, дахин ашиглах боломжтой	A hand-held instrument designed to manually attach or detach a handpiece tip (blade) from the handpiece of an ultrasonic surgical system. It is typically formed with a socket that is placed over the handpiece tip and rotated by the operator to tighten or loosen, with appropriate torque, the tip to or from the handpiece. The device is made of durable materials and typically includes a mechanism to prevent under- or over-tightening. This is a reusable device.	I
2853	47676	Ultrasonic surgical system torque wrench, single-use	Хэт авианы мэс заслын системийн эргүүлэх эрэг чангалах түлхүүр, нэг удаагийн хэрэглээ	A sterile hand-held instrument designed to manually attach or detach a handpiece tip (blade) from the handpiece of an ultrasonic surgical system. It is typically formed with a socket that is placed over the handpiece tip and rotated by the operator to tighten or loosen, with appropriate torque, the tip to or from the handpiece. The device is made of durable materials and typically includes a mechanism to prevent under- or over-tightening. This is a single-use device.	I
2854	47681	External circulating-air core temperature regulation system pad, single-use	Гадны эргэлтийн агаарын үндсэн температурыг зохицуулах системийн дэвсгэр, нэг удаагийн	An underlay or overlay through which temperature-regulated air is circulated as part of an external circulating-air core temperature regulation system, intended to elevate and/or lower a patient’s core body temperature, typically in surgical and intensive care settings. Air temperature and flow are regulated by a separate control unit (not included). The device is available in a variety of lengths, widths, thicknesses, and shapes to accommodate body size and application (e.g., adult/paediatric, full-/partial-body). This is a single-use device.	I

2855	47698	Tungsten-weighted oesophageal dilator	Гянт болд жинтэй улаан хоолойн өргөсгөгч	A surgical instrument in the form of a strong-walled rubber tube filled with tungsten (W) designed to dilate the oesophagus using a single dilator, or dilators of sequentially increasing sizes. The device is internally weighted with the tungsten for gravity assistance [and to avoid the potential hazards of manipulation with mercury (Hg)] when blindly inserted into the oesophagus of an upright patient; it may have a round or fine tip increasing to full diameter over several centimeters from the tip. The device is commonly referred to as a Maloney or Hurst dilator and is intended to treat cardiospasm, oesophagitis, and stenosis. This is a reusable device.	I
2856	47715	Orthopaedic fixation plate tensioner	Ортопедийн бэхэлгээний хавтан чангалагч	A hand-held manual surgical instrument designed to apply tension to an orthopaedic implant (typically a fixation plate) to compress a fracture site prior to final fixation of the implant. It is typically designed with two adjustable legs, one terminating with an anchoring loop that is attached to intact bone and the other terminating with a claw that is attached to the implant which has been fixed to one side of the fracture site; after device placement the fracture is compressed through manual operation of a device mechanism (e.g., turning a central screw). It is typically made of high-grade stainless steel and may be used on simple or compound fractures. This is a reusable device.	I
2857	47724	Manual intraocular lens injector, reusable	Гар ажиллагаатай нүдний дотоод линз шахагч, дахин ашиглах боломжтой	A hand-held manual ophthalmic surgical instrument designed to expel (launch) a prepared (folded) intraocular lens (IOL) from an attached IOL insertion cartridge into the anterior or posterior chamber of the eye during ophthalmic implantation surgery. It has a central plunger that is activated by a precise mechanism (e.g., a screw thread) and a mechanism at the distal end to hold/grip the insertion cartridge; it is typically made of lightweight metal materials [e.g., titanium (Ti)]. This is a reusable device.	I

2858	47735	Orthopaedic cement curette	Ортопедийн цемент кюрет	A sterile, hand-held, manual surgical instrument designed to remove excess orthopaedic bone cement from an implantation site during the cementing of a prosthesis. It is typically made of plastic materials and consists of a handle proximally and a concave, spoon-like tip that is angled at the distal end, or it may be double-ended with the handle placed centrally. This is a single-use device.	I
2859	47736	Orthopaedic cement mixing pad	Ортопедийн цемент холих дэвсгэр	A cushion designed to provide a shock-absorbing surface for the manual mixing of bone cement components in an orthopaedic cement dispenser (a dedicated syringe-like device). The cushion is typically made of soft silicone material and typically attached to the proximal end of an orthopaedic cement dispensing gun; cement mixing occurs when the gun operator repeatedly rotates the dispenser and taps it against the cushion before placing it in the gun. This is a reusable device.	I
2860	47743	Bone graft packing block	Ясны шилжүүлэн суулгах блок	A device designed to tightly compact (pack) an implant with a bone graft material (e.g., autologous, allogeneic, xenogeneic, or of synthetic origin) prior to the implantation of the implant. It is typically a small, box-shaped device consisting of two parts, a frame to hold the implant to be filled and a fitted lid that stabilizes the implant while it is being filled. The packing of the implant is done manually, typically with an impactor. This is a reusable device.	I
2861	47752	Warm-bonded endodontic obturation system oven	Дулаан холболттой эндодонт бөглөрөлтийн системийн зуух	A mains electricity (AC-powered) device designed to heat endodontic obturators that are preloaded with a resin-based sealing, filling, and core material. It is designed to heat the distal working end of the obturator, which is encased in the endodontic root canal material, so that it is at an optimal temperature for insertion into the prepared root canal for warm bonding. The oven typically has operating controls, temperature adjustment controls, and a temperature display.	I

2862	47780	Patient surgical drape, reusable	Өвчтөний мэс заслын даавуу, дахин ашиглах боломжтой	A noninvasive sheet designed to cover a portion of a patient's anatomy during a surgical procedure to function as a barrier to cross contamination (e.g., isolate a site of surgical incision, protect non-operative anatomy). It is not designed with specific heat-reflective or laser resistant materials. It is available in a variety of designs (e.g., flat sheet with or without an access hole, leg tube). This is a reusable device intended to be sterilized prior to use.	I
2863	47781	General-purpose surgical drape, reusable, sterile	Ерөнхий зориулалтын мэс заслын хөшиг, дахин ашиглах боломжтой, ариутгасан	A sterile protective covering made of natural or synthetic materials, or both, designed to isolate a site of surgical incision or a surgical field from contamination (e.g., microbial, substance) in various clinical settings (e.g., in an operating room or catheterization laboratory). The device may also be used to protect a patient from heat/flame during a surgical procedure. This is a reusable device.	I
2864	47782	Patient surgical drape, single-use, non-sterile	Өвчтөний мэс заслын даавуу, нэг удаагийн, ариутгагдаагүй	A non-sterile, noninvasive flat sheet designed to cover a portion of a patient's anatomy during a surgical procedure to isolate a specific anatomical site (e.g., site of surgical incision) from potential contamination (e.g., microbial, substance). The device may also be used to protect a patient from heat/flame during a surgical procedure, however it is not designed with specific heat-reflective or laser resistant materials. This is a single-use device intended to be sterilized prior to use.	I
2865	47783	Patient surgical drape, single-use	Өвчтөний мэс заслын даавуу, нэг удаагийн	A noninvasive sheet designed to cover a portion of a patient's anatomy during a surgical procedure to function as a barrier to cross contamination (e.g., isolate a site of surgical incision, protect non-operative anatomy). It is not designed with specific heat-reflective or laser resistant materials. It is available in a variety of designs (e.g., flat sheet with or without an access hole, leg tube or an adhesive film sheet otherwise known as an incise drape). This is a single-use device.	I

2866	47814	Orthopaedic implantation hammering attachment	Ортопедийн суулгацын алх хавсралт	A surgical instrument designed to be attached to another surgical implantation instrument or directly to an orthopaedic implant to provide a surface on which an operating surgeon can make strikes, with a surgical hammer or mallet, to insert an orthopaedic implant (e.g., an intramedullary nail). It is typically made of high-grade stainless steel and typically in the form of a cylindrical shaft with a threaded portion at the distal end (i.e., threaded into the implant or connected to the implantation instrument) and a broader, robust striking head (surface) at the proximal end. This is a reusable device.	I
2867	47825	Surgical instrument track identification tape	Мэс заслын багажны замын таних тууз	A non-sterile, colour-coded, band coated on one side with a pressure-sensitive adhesive intended to attach to a surgical instrument; it is typically wrapped around the handle or shaft to indicate instrument ownership (e.g., by doctor, hospital floor, department or ward) and identifies the instrument prior to and during a surgical procedure. This marking will facilitate that the correct instruments are returned to the correct owner particularly after being sterilized in the hospital sterilization department or other facility. It is typically made of plastic material and is available in a sheet with different size strips of tape or in continuous roll (a spool). This is a single-use device.	I
2868	47865	Surgical drilling suction device	Мэс заслын өрөмдлөгийн сорох төхөөрөмж	A hand-held surgical tubular device designed to provide irrigation fluid and suction whilst simultaneously assisting with guidance of a rotating drill (e.g., a surgical twist drill or crown drill) during an orthopaedic drilling procedure on hard tissue (usually bone) and/or a metal implant (e.g., an orthopaedic bone screw). It is connected to an irrigation/suction system(s) via its dual bore construction, one bore to deliver the irrigation fluid and the second for aspiration of fluid and debris; the irrigation fluid also acts as a coolant to avoid overheating the site. It is made of a high-grade stainless steel, typically with exchangeable drill guides. This is a reusable device.	I

2869	47870	Orthopaedic fixation implant alignment tool	Ортопедийн бэхэлгээний суулгацыг тэгшитгэх хэрэгсэл	A surgical instrument designed to facilitate the correct orientation (alignment) of an orthopaedic fixation implant, implants, or system of implants during orthopaedic surgery. It may be used, e.g., to align a series of bone screws in an implant system for posterior stabilization of the spine, or to align a spinal anatomical fixation implant. It is available in a variety of shapes and sizes and allows the surgeon to engage this device with the implant(s) and align them in the desired configuration. It is typically made of high-grade stainless steel or titanium alloy and will have profiled features to fit into the implant(s) to align them. This is a reusable device.	I
2870	47873	Pelvic C-clamp	Аарцгийн С хавчаар	A manual surgical instrument designed as an emergency stabilization device for unstable injuries and fractures of the pelvic ring; these conditions can be associated with massive blood loss and terminal shock. It is mechanically fixed to either side of the pelvis by means of thick nails permitting quick and efficient compression and stabilization of pelvic fractures and luxations providing time for haemorrhage and embolization control. It is typically designed as a C-shaped frame with a rail, twin adjustable arms, adjusting side screws, and nails made of high-grade stainless steel and/or synthetic material. It is compatible for use in computed tomography (CT). This is a reusable device.	I
2871	47891	Surgical irrigation system nozzle	Мэс заслын усалгааны системийн хошуу	A surgically-invasive device designed to be attached to the distal end of a lavage system or kit handpiece to intraoperatively function as an applicator/nozzle that produces an intentional jet, stream or spray of sterile fluid (typically saline) from its aperture to the site of operation during a surgical intervention (e.g., trauma, soft tissue application and orthopaedic) for the purpose of removing tissue, bone debridement and/or bone cement residue, and to clean the site; it may in addition perform aspiration (suction). It is available in many designs (e.g., fan spray, built-in filter, splash shield, brush); however, it is not a single-hole cannula/tubing. This is a single-use device.	I

2872	47911	Non-rechargeable public semi-automated external defibrillation electrode, adult	Цэнэглэдэггүй нийтийн хагас автоматжуулсан гадны дефибрилляцийн электрод, насанд хүрэгчид	An electrical conductor, with integral batteries and regulated by a dedicated external pulse generator (EPG), designed to create an electrical shock(s) and defibrillate the heart (restore normal rhythm) to treat ventricular fibrillation or pulseless ventricular tachycardia in an adult patient. It is a cartridge-type electrode, in pairs, with non-rechargeable batteries that provide the energy to produce the electrical shock(s) after its adhesive pads are placed on the skin of the patient. This is a single-use device that is replaced after a patient application or after elapse of its expiry date.	I
2873	47912	Non-rechargeable public semi-automated external defibrillation electrode, paediatric	Цэнэглэдэггүй нийтийн хагас автомат гадаад дефибрилляцийн электрод, хүүхдийн	An electrical conductor, with integral batteries and regulated by a dedicated external pulse generator (EPG), designed to create an electrical shock(s) and defibrillate the heart (restore normal rhythm) to treat ventricular fibrillation or pulseless ventricular tachycardia in a pre-pubescent patient. It is a cartridge-type electrode, in pairs, with non-rechargeable batteries that provide the energy to produce the electrical shock(s) after its adhesive pads are placed on the skin of the patient. This is a single-use device that is replaced after a patient application or after elapse of its expiry date.	I
2874	47946	Ophthalmic diagnostic condensing lens	Нүдний оношлогооны конденсацийн линз	An ophthalmic lens intended to be used during binocular indirect ophthalmoscopy and/or slit lamp examination to focus reflected light from the fundus of the eye. The lens is available in a variety of sizes and optical powers. This is a reusable device.	I
2875	47948	Tourniquet cuff bandage, Hevea-latex	Чангалуур ханцуйвчийн боолт, Hevea-латекс	A sterile strip or roll of material containing Hevea natural rubber latex (NRL) intended to be applied around an extremity (arm or leg) before the fitting of a tourniquet cuff over it. This device is intended to protect the patient's skin from wrinkling, pinching, or shearing, and to protect the tourniquet cuff from becoming soiled with blood and other fluids from a surgical wound. It would typically be folded back over the exposed edges of the cuff to provide maximum protection. This is a single-use device.	I

2876	47949	Tourniquet cuff bandage, non-latex	Турникет ханцуйвчийн боолт, латексгүй	A sterile strip or roll of non-latex containing material that is applied around an extremity (arm or leg) before the fitting of a tourniquet cuff on top of it. This device is used to protect the patient's skin from wrinkling, pinching or shearing and to protect the tourniquet cuff from becoming soiled with blood and other fluids from the operative site. It would typically be folded back over the exposed edges of the cuff to provide maximum protection. This is a single-use device.	I
2877	47987	Fixed-diameter cervical dilator, single-use	Тогтмол диаметртэй умайн хүзүүг тэлэгч, нэг удаагийн хэрэглээ	A rod-like, solid surgical instrument designed to dilate the cervical canal after its insertion through the cervical os. Commonly known as a uterine dilator, it is typically made of metal or plastic material and has a tapered, rounded distal tip. It may have one diameter or two different size diameters, one at each end of the instrument. The device is typically available in a set of graduated sizes that are applied in succession. It is used to allow the passage of a curette or other instruments into the uterus and/or enlarge the uterus prior to surgical intervention by pressing on the inner walls of the uterus. This is a single-use device.	I
2878	48010	Nasal lavage system	Хамар угаах систем	A device assembly intended for automated or semi-automated irrigation and washing of tissue and/or debris from the nose and/or the nasal sinuses; it is not intended for oral lavage. It typically consists of a main electromechanical unit that includes a pump for irrigation/infusion of a jet of non-medicated liquid (e.g., saline); controls for the rate and pressure of irrigation; a reservoir for the solution; and a handpiece that may include a set of detachable tips intended for introduction into the nostrils. The system is used mainly for allergy treatment, nasal congestion, and before and after surgery.	I

2879	48011	External orthopaedic fixation system, single-use	Гадны ортопедийн бэхэлгээний систем, нэг удаагийн хэрэглээ	An assembly of devices designed to stabilize fractured bones to promote treatment and healing. It typically consists of an external plastic and/or metallic fixator (a framework) and other external and/or implantable components such as clamps, rods, rings, pins, bolts, and nuts, as well as some reusable instrumentation (e.g., wrenches, depth gauge, tensioner). It is used mainly to help the healing of long bones such as the femur, tibia and humerus, as well as fractures of the foot and ankle, joint fusions, and limb lengthening. This is a single-use device.	I
2880	48012	External orthopaedic fixation system, single-use, sterile	Гадны ортопедийн бэхэлгээний систем, нэг удаагийн, ариутгасан	An assembly of sterile devices designed to stabilize fractured bones of the lower limbs to promote treatment and healing. It typically consists of an external plastic and/or metallic fixator (a framework) and other external and/or implantable components such as clamps, rods, rings, pins, bolts, and nuts, as well as some reusable instrumentation (e.g., wrenches, depth gauge, tensioner). It is used mainly to help the healing of long bones such as the femur and tibia, as well as fractures of the foot and ankle, joint fusions, and limb lengthening. This is a single-use device.	I
2881	48037	Oral care swab	Амны хөндийн арчилгааны арчдас	A device designed as a piece of non-treated, absorbent material on a wooden, paper, or plastic stick and intended to moisten and clean a patient's oral cavity to maintain normal mouth patency and hygiene. It is commonly used on intensive care and long-term care patients to administer moisture, mouthwash, or medications to improve the physical condition of the oral cavity and possibly help reduce the incidence of patient infection. It is typically applied to the patient by nursing staff in hospitals and institutions, or attendants in homecare settings. This is a single-use device.	I

2882	48058	Disposable battery pack	Нэг удаагийн зайны багц	A group of battery cells (e.g., lithium ion cells) held within a container that is sterile used to provide temporary electrical energy to operate a medical device, typically when it is not possible, intentional, or convenient to connect the device being powered to a mains electricity (AC-powered) electrical outlet. This device is typically designed to power cordless surgical power tools (e.g., a non-rechargeable battery-powered surgical drilling system handpiece) and is non-rechargeable. This is a single-use device.	I
2883	48065	Coated unicondylar knee tibia prosthesis	Өвдөгний шилбэний нэг кондиляр бүрсэн протез	A sterile implantable device designed to replace the bearing surface of one tibial condyle (tibial component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is coated with a material (e.g., beads, hydroxyapatite, mesh) intended to improve fixation and stability by promoting bone ingrowth. The device articulates with a femoral component and an insert, and its implantation may be performed with or without bone cement.	I
2884	48070	Unicondylar knee insert	Unicondylar өвдөгний оруулга	A sterile implantable device designed to articulate the femoral and tibial components of a knee joint prosthesis during primary or revision unicompartmental knee joint replacement. It is a one-piece contoured device typically made of polyethylene (PE).	I
2885	48122	Non-submersible device disinfection chamber	Гүний бус төхөөрөмжөөр халдваргүйжүүлэх камер	A vessel designed to protect the part of a device that cannot be exposed to liquid cleaning agents or disinfectant [e.g., the electrical connector of a transoesophageal echocardiography (TOE) probe] in a water-tight vault that may be air-pressurized, so the patient-contact part of the device can be nonthermally, chemically decontaminated and/or high-level disinfected (e.g., in an automated endoscope washer/disinfector). It is typically made of metals and polymers [e.g., stainless steel, silicone, and polycarbonate (PC)] and consists of a housing with a clamp, seal, cap, and/or valves. It is typically used in instrument and endoscopy cleaning rooms. This is a reusable device.	I

2886	48126	Woven gauze roll, non-sterile	Нэхмэл самбай өнхрөх, ариутгагдаагүй	A non-sterile device in the form of a long strip of stretchable, absorbent, woven material (e.g., cotton, cellulose), wound into a roll, and typically designed for a variety of applications (non-dedicated) such as a primary wound dressing, dressing retention, injury padding and compression. It is not a dedicated pressure dressing and does not include latex. This is a single-use device.	I
2887	48127	Woven gauze roll/sheet	Нэхмэл самбай өнхрөх / хуудас	A device in the form of a long length of stretchable, absorbent, woven material (e.g., cotton, cellulose), wound into a roll or folded, and typically designed for a variety of applications (non-dedicated) such as a primary wound dressing, dressing retention, and injury padding and compression. It is not a dedicated pressure dressing and does not include latex. This is a single-use device.	I
2888	48130	Non-woven gauze pad, non-sterile	Нэхмэл бус самбай дэвсгэр, ариутгагдаагүй	A non-medicated, non-sterile device in the form of a patch or swab (also referred to as a sponge) made from non-woven material (e.g., rayon, polyester, cellulose pulp) and primarily designed to absorb fluids for medical purposes. It is typically used to cover/clean wounds or abrasions and absorb their exudates, absorb body-surface exudates, or to apply topical medications; it is intended to produce less lint and be less adherent than basic woven gauze pads; it does not include petrolatum. This is a single-use device.	I
2889	48131	Non-woven gauze pad	Нэхмэл бус самбай дэвсгэр	A non-medicated device in the form of a patch or swab (also referred to as a sponge) made from non-woven material (e.g., rayon/polyester) and primarily designed to absorb fluids for medical purposes. It is typically used to cover/clean wounds or abrasions and absorb their exudates, absorb body-surface exudates, or to apply topical medications; it is intended to produce less lint and be less adherent than basic woven gauze pads; it does not include petrolatum; in some cases, the device’s packaging may be used as a disposable tray. This is a single-use device.	I

2890	51084	Polymeric vaginal stent, non-bioabsorbable	Үтрээний полимер стент, био шингэдэггүй	A sterile non-bioabsorbable tubular device intended for long-term placement in the vagina to provide structural support and/or prevent shrinking. It is typically used for vaginal dilation following surgical or non-surgical treatment of vaginal agenesis or transgender vaginoplasty, or for the prevention of vaginal contracture or stenosis after radiotherapy. It is made of a synthetic polymer(s) [e.g., silicone] and may have various designs (e.g., inflatable tubular envelope with valves and internal drains, semi-soft moulded tube). This is a single-patient device that can be reapplied to the patient during the treatment period (e.g., nightly) before being discarded (reusable).	I
2891	55826	Assistive assembly table	Туслах угсралтын ширээ	A non-personal assistive device designed for a person with a disability to enable the person to assemble products in a manufacturing work environment or a hobby setting. It is configured as a table with the necessary adaptations to allow the person to safely operate it.	I
2892	55827	Assistive welding table	Туслах гагнуурын ширээ	A non-personal assistive device designed for a person with a disability to enable the person to do welding (i.e., the welding together of metal parts that need to be locked into place on the welding table to prevent heat distortion of the finished welded object) in a manufacturing work environment or a hobby setting. It is configured as a table with the necessary adaptations to allow the person to safely operate it.	I
2893	55828	Assistive woodwork bench	Туслах модон вандан сандал	A non-personal assistive device designed for a person with a disability to enable the person to do woodwork (i.e., carpentry, joinery) in a manufacturing work environment or a hobby setting. It is configured as a bench with the necessary adaptations to allow the person to safely operate it.	I
2894	55829	Blanket warming cabinet, dry-heat	Хөнжил дулаацах кабинет, хуурай дулаан	A mains electricity (AC-powered) device designed to warm blankets with hot dry air. It is typically a high capacity (e.g., 0.2 to 0.5 m3) unit with appropriate perforated shelves for blanket positioning, avoiding contact with very hot surfaces to prevent scorching. Hot dry air is usually circulated to heat blankets in a temperature range from 30 to 90° C (90 to 200° F).	I

2895	55830	Assistive talking reading material	Туслах яриа унших материал	A digital medium which presents the content of written publications, e.g., books, in spoken form for the user to comprehend. It is particularly used by a person with a disability and/or a vision impairment or other debilitating condition.	I
2896	55832	Braille reading material	Брайл унших материал	A medium that presents its content in Braille (written language system of raised dots), designed so a person who is blind or visually impaired can read through touch. Included are books and other printed matter in Braille.	I
2897	55833	Press-fit hip femur prosthesis, modular	Модульчлагдсан гуяны гуяны протез	A sterile implantable principal component of a total hip prosthesis (femoral component) designed to replace the femoral head and neck. The device is composed of two or more separate pieces (e.g., head, neck, and stem) designed to be joined, and is contoured to enable fixation by pressing the distal end into the cortex of the remaining natural femur to achieve a mechanical interlock without the use of bone cement. The device may be made of metal and/or ceramic materials; supplemental fixation devices for implantation (e.g., screws and bolts) may be included.	I
2898	56286	Nitrile examination/treatment glove, non-powdered, non-antimicrobial	Нитрил үзлэг/эмчилгээний бээлий, нунтаггүй, нянгийн эсрэг бодисгүй	A device made of nitrile intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	I

2899	56287	Nitrile examination/treatment glove, powdered	Нитрил үзлэг/эмчилгээний бээлий, нунтагласан	A device made of nitrile intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is covered with powder to facilitate donning/removal; it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	I
2900	56288	Polychloroprene examination/treatment glove, non-powdered	Полихлоропренийн үзлэг/эмчилгээний бээлий, нунтаггүй	A device made of polychloroprene (neoprene) intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	I
2901	56291	Nitrile surgical glove, non-powdered	Нитрил мэс заслын бээлий, нунтаггүй	A sterile device made of nitrile intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	I

2902	56292	Nitrile surgical glove, powdered	Нитрил мэс заслын бээлий, нунтагласан	A sterile device made of nitrile intended as a protective barrier when worn on the hands of healthcare providers at the surgical site; its inner surface is covered with powder to facilitate donning and removal; it does not include antimicrobials. It is used mainly as a two-way barrier to protect patient and staff from microorganisms and risk of allergy to latex. It will have appropriate characteristics regarding tactility and comfort of use, and should provide adequate conditions of sterility, appropriate physical properties (e.g., tensile strength, resistance to puncture, elasticity), and uniformity of dimensions (i.e., sizing consistency). This is a single-use device.	I
2903	56300	Liquid nitrous oxide coaxial tubing	Шингэн азотын ислийн коаксиаль хоолой	A sterile length of flexible double-lumen (coaxial) tube, in a straight or spiral design, intended to conduct liquid nitrous oxide (N2O) from an N2O cylinder to a medical device to function as a refrigerant typically for cryotherapy (e.g., cardiac cryoablation). It is typically constructed of synthetic polymer material(s) and may be available in various lengths. The coaxial design (inner and outer tubing) facilitates the removal of the exhaust N2O gases. This is a single-use device.	I
2904	56311	Cryolipolysis body contouring system gel pad	Cryolipolysis биеийн контурын системийн гель дэвсгэр	A non-sterile component of a cryolipolysis body contouring system designed to be applied to the skin of a patient to convey cold energy at the interface between the system’s applicator and the treatment site on the patient during cold-assisted lipolysis treatment (coolsculpting). It consists of a coupling gel in an envelope of thin material. This is a single-use device.	I

2905	56318	LED dental light, battery-powered	Шүдний LED гэрэл, батарейгаар ажилладаг	A battery-powered device designed for use in dentistry to project an intense and focused beam of light directly into or around the oral cavity of a patient via a light-emitting diode (LED), situated as the light head at the distal end of the device's light wand, to illuminate the site of a dental examination or procedure. The light head is connected to a light-intensity control unit, containing rechargeable batteries, via a flexible cable; for oral cavity illumination, the light wand may be attached to a suction cannula, a dental chair headrest, or to a retractor hooked on the patient's lower jaw. This is a reusable device.	I
2906	56320	LED dental light, line-powered	Шүдний LED гэрэл, шугамаар ажилладаг	A mains electricity (AC-powered) device designed for use in dentistry to project an intense focused beam of light directly into or around the oral cavity of a patient via a light-emitting diode (LED) situated as the light head at the distal end of the device's light wand, to illuminate the site of a dental examination or procedure. The light head is connected to a light-intensity control unit and a transformer that supplies mains, stepped-down, low-voltage electricity (e.g., 12 volt), via a flexible cable; for oral cavity illumination, the light wand may be attached to a suction cannula, a dental chair headrest, or to a retractor hooked on the patient's lower jaw. This is a reusable device.	I
2907	56629	Urethral catheterization antimicrobial cartridge	Шээсний сувгийн катетержуулалтын нянгийн эсрэг хайрцаг	A sterile, sealed device (cartridge) containing a silver-releasing material and designed to connect between a short-term indwelling urethral catheter and a urinary collection bag to release silver ions that adhere to all of the internal surfaces of the drainage system (the catheter connector, drainage tube, anti-reflux valve, bag and spigot), creating a silver lining intended to prevent catheter-associated urinary tract infection (CAUTI). It may be fitted by non-skilled or trained personnel. This is a single-use device.	I

2908	56631	Wearable percutaneous catheter/tube holder	Зүүж болох арьсан доорх катетер/гуурс тогтоогч	A device designed to fix a percutaneous catheter, tube, and/or drain (e.g., IV, epidural, or drainage catheter, GI tube) to a patient's body without suturing; it may additionally be intended for holding a non-surgically-invasive tube (e.g., nasogastric tube) to the patient (universal holder). It is designed as an adhesive pad, strip, or bandage that will attach to the patient's skin, sometimes with the exposed side having an integrated fixation mechanism (e.g., Velcro hook/loop closure) or a mechanical closure, to hold the catheter/tube in place. It may include a transparent film portion intended for fixation site monitoring. This is a single-use device.	I
2909	56637	Orthopaedic surgical distractor, internal	Ортопедийн мэс заслын анхаарал сарниулагч, дотоод	A hand-held manual surgical instrument designed to invasively distract (force apart) two bone surfaces to enable a surgical procedure. It typically aids in fracture reduction by helping to temporarily stabilize bones prior to definitive surgical fixation. It typically consists of a central threaded spindle, a static endpiece and a sliding carriage that can be adjusted using spindle nuts to/from the endpiece to widen or shorten the gap; it facilitates the attachment of orthopaedic bone pins (Schanz screws) screwed into the bones to be distracted. It is typically used for multiple injuries when it is advantageous to perform procedures on a standard operating table. This is a reusable device.	I
2910	56646	Ostomy bag low pressure adaptor	Ostomy уутны нам даралтын адаптер	A non-sterile device designed to be used with a two-piece ostomy bag to facilitate pouch to base plate (skin barrier) application while helping to minimize the application of pressure on the abdomen when connecting these components. Once applied to the base plate, the low pressure adaptor allows the fingers to be placed between the base plate and the flange (the coupling on the base plate) while coupling the pouch to the adaptor. It is typically made of synthetic polymer [e.g., low density polyethylene (LDPE)] and is available in a variety of sizes. It is intended for use in the home, hospitals, and care homes. This is a single-use device.	I

2911	57793	Public respirator, single-use	Нийтийн амьсгалын аппарат, нэг удаагийн	A form-shaped filtering mask designed to be placed over the nose and mouth of a member of the general public to permit normal breathing while protecting the wearer from large and small particles when considered necessary (e.g., viral epidemic). It is designed to create an airtight seal against the user’s face, and typically includes ties/head straps; it might incorporate a forming nosepiece (metal wire) and/or an exhalation valve. This is a single-use device.	I
2912	57817	Comedo expressor	Комедо экспрессор	A manual instrument designed for pressing or squeezing out a comedo (black head) from the mouth of sebaceous follicles. It typically consists of a hand-held device with one or both ends appropriately configured (e.g., crimped, spoon-like, forming loops) for the extraction of plugging comedos. The instrument is used in the treatment of acne; it may be used also for plantar warts. This is a reusable device.	I
2913	57818	Sleep apnoea oral mask	Унтах апноэ амны хөндийн маск	A flexible, form-shaped device designed to be fitted to the user's mouth to interface with a sleep apnoea positive airway pressure unit for the delivery of direct ambient air, or medical oxygen (O2) and air, for continuous positive airway pressure higher pressure (CPAP) or bi-level positive airway pressure (BiPAP) ventilation therapy to improve/enhance the sleep of a person experiencing sleep apnoea. It is typically made of plastic and/or silicone materials that create an airtight seal around the patient's mouth; providing a solution for mouth breathers and patients with chronic nasal obstruction. It is available in various sizes and stabilized with a headstrap. This is a reusable device.	I
2914	57833	Medical ruler, single-use	Эмнэлгийн шугам, нэг удаагийн	A small straight-edged strip intended to be used to measure the length of internal or external anatomy, devices or instruments in a clinical setting. It is marked in units of length (i.e., inches, millimetres and/or centimetres), and may be bendable to fit on the measured surfaces. It is not an implant sizer/prosthesis trial of a predetermined size, nor is it dedicated to wound measurements. This is a single-use device.	I

2915	57850	Bulk oxygen concentration system	Хүчилтөрөгчийн бөөнөөр баяжуулах систем	A stationary assembly of mains electricity (AC-powered) devices designed to concentrate oxygen (O2) from ambient air and then deliver the concentrated O2, with purity of up to 99.5%, to the hospital medical gas supply system. It may produce high-purity O2 using pressure swinging adsorption (PSA) technology which processes air through internal molecular sieves having a large total surface area to separate nitrogen (N2) from the air. It typically consists of an air compressor, refrigeration dryer, water and oil separators, high pressure O2 pump and various storage tanks. The concentrated O2 is delivered via the medical gas supply system to the user and/or a gas cylinder filling station.	I
2916	57884	Hearing aid wireless-fitting computer-aided set	Сонсголын аппарат утасгүй холболттой компьютерийн иж бүрдэл	A collection of devices designed to work in conjunction with a computer to transmit wireless data to a hearing aid for computer-aided adjustment of the hearing aid while it is being fitted to a patient by healthcare personnel. It primarily consists of computer application software and a neck loop to establish the wireless link (the radio link protocol) with the hearing aid. The hearing aid must be compatible for wireless data reception and may be behind-the-ear (BTE), in-the-ear (ITE) and completely-in-the-canal (CIC) types.	I
2917	57897	Tracheostomy tube lubricant	Трахеостомийн хоолойн тосолгооны материал	A non-sterile substance made of oil (e.g., paraffin) designed to be applied by healthcare staff or a patient to the outer surface of a tracheostomy tube inner cannula to facilitate its easy sliding into the outer cannula (e.g., after cleaning). The lubrication is intended to reduce frictional forces so that less physical force is required for inner cannula insertion and to help prolong the life of the tube's cannulae. It is typically available in a squeeze or dropper bottle. After application, this device cannot be reused.	I
2918	57940	Oral/upper respiratory tract specimen collection swab	Амны хөндийн/амьсгалын дээд замын сорьц цуглуулах арчдас	A piece of absorbent or non-absorbent material, with no additives, detached or on a stick, and intended to be used by a healthcare professional for the collection, and preservation and/or transport, of a saliva/oral, nasal, nasopharyngeal, and/or oropharyngeal specimen for culture, analysis, and/or other investigation. This is a single-use device.	I

2919	57947	Truncal breast orthosis	Хөхний хөндийн ортез	A non-sterile device designed to reduce female breast compression, displacement, and pain when the user is lying in a prone position following any breast procedure, or for individuals with variations in natural breast structure. It is typically used during clinical examination and/or treatment or at home when sleeping or lying, positioned between the patient's torso and the surface upon which they lie prone, and is typically moulded in soft or firm materials in various sizes. This is a reusable device.	I
2920	57948	Dental guided surgery reference pin	Шүдний удирдамжтай мэс заслын лавлах зүү	A non-sterile device in the form of a metal rod designed for the fabrication of custom-made scan and surgical dental implant templates used by a dentist during the first stage of a guided dental implantation procedure (i.e., drilling of holes in the jawbone for implant placement/fixation). It is a cylindrical metal pin placed in the holes of the reference plate to form a link between the chairside cone beam computerized tomography (CBCT) scan and a coordinate system for dental laboratory fabrication of the scan template (used to scan the patient) and then the surgical dental implant template. This is a single-use device.	I
2921	57949	Dental guided surgery reference plate	Шүдний удирдамжтай мэс заслын лавлах хавтан	A non-sterile device in the form of a plate designed for the fabrication of custom-made scan and surgical dental implant templates used by a dentist during the first stage of a guided dental implantation procedure (i.e., drilling holes in the jawbone for implant placement/fixation). It is a plastic plate of a predefined shape and hole configuration for placement of dental guided surgery reference pins to form a link between a chairside cone beam computerized tomography (CBCT) scan and a coordinate system for dental laboratory fabrication of the scan template (used to scan the patient) and then the surgical dental implant template. This is a single-use device.	I

2922	57961	Hearing aid enhanced audio device, teaching-environment	Сонсголын аппарат сайжруулсан аудио төхөөрөмж, сургалтын орчин	A collection of battery-powered devices designed to be worn by a person (typically a child) wearing a compatible hearing aid to enhance the sound quality they receive by reducing background noise and/or room reverberation potentially found in a teaching environment (e.g., a school room). It uses a set frequency modulation (FM) between a transmitter worn by the speaker (e.g., a microphone worn be the teacher) and the FM receiver worn by the user. It typically consists of the FM receiver, a neck induction loop that emits the sound locally to the hearing aid, a battery charger, and various cables enabling connection to digital music devices.	I
2923	57976	Wheelchair recliner, line-powered	Тэргэнцэрт зориулсан суудал, шугамаар ажилладаг	A mains electricity (AC-powered) mobile device designed to tilt (recline) a standard type wheelchair and occupant (not bariatric) to enable healthcare providers give treatment at a degree of tilt most efficient for them. It includes a platform onto which the wheelchair/occupant is reversed and secured, an electric motor to power the tilting mechanism, and may have battery backup for power outages. It may include additional back- and headrest and may be moved on wheels for repositioning within a room or facility. It is used for treatments in dentistry, ophthalmology, maxillofacial and ear/nose/throat (ENT), podiatry (including diabetic foot care), physical therapy, and personal care.	I
2924	57978	Wheelchair recliner, battery-powered	Тэргэнцэртэй суудалтай, батарейгаар ажилладаг	A battery-powered mobile device designed to tilt (recline) a standard type wheelchair and occupant (not bariatric) to enable healthcare providers give treatment at a degree of tilt most efficient for them. The device includes a platform onto which the wheelchair/occupant is reversed and secured, and rechargeable batteries that drive an electric motor to power the tilting mechanism. It may include additional back- and headrest and may be moved on wheels for repositioning within a room or facility. It is used for treatments in dentistry, ophthalmology, maxillofacial and ear/nose/throat (ENT), podiatry (including diabetic foot care), physical therapy, and personal care.	I

2925	57979	Attendant-only-propelled wheelchair, bariatric	Зөвхөн үйлчлэгчтэй тэргэнцэр, бариа засал	A non-powered wheeled mobility device with an oversized seat designed to enable a healthcare provider/carer to transport a bariatric person without the full capacity to walk, typically over short distances and over smooth ground. Often referred to as a transport wheelchair, it is typically designed with four small wheels and includes rear-fitted handles for attendant control of the chair; it does not provide the occupant a mechanism for self-propulsion (it is not a push-rim wheelchair). It provides no function outside of wheeled mobilization.	I
2926	57980	Bariatric transport wheelchair, collapsible	Бариа тээврийн тэргэнцэр, эвхэгддэг	A wheeled personal mobility device designed for transporting bariatric (obese) persons over short distances and generally limited to indoor use or use outdoors over smooth paved surfaces. It has small wheels that the occupant cannot use for propulsion and incorporates a heavy-duty framework and extra wide seat-support system for an obese person with a disability or obese person without the full capacity to walk. It also includes footrests to keep the occupant's feet raised from the ground. It is typically used in hospitals, institutions, airports, and railway stations. Also known as a transportation chair or transit wheelchair, it may be disassembled or folded for transport.	I
2927	57996	Active implantable device control magnet	Идэвхтэй суулгацыг удирдах соронз	A hand-operated, non-sterile, magnetic device designed to be used by a patient and a healthcare professional to switch an active implantable device (e.g., pulse generator, implantable cardiac monitor) on and off. It typically consists of a small portable magnet (e.g., strontium ferrite) coated with an epoxy that can be carried in the pocket or a handbag (purse) of a patient for convenient access. It is placed by the patient against the skin directly over the site of the implant and turned as prescribed by the manufacturer. This is a reusable device.	I

2928	58006	Endobronchial airway sizing kit	Эндобронхиаль амьсгалын замын хэмжээг тодорхойлох хэрэгсэл	A sterile collection of mechanical devices intended to be used with a balloon catheter for a planned intervention to determine the appropriate endobronchial valve sizes for a patient's lung airways (bronchial lumens). It typically consists of a glass syringe and a plastic calibration gauge with holes representing available endobronchial valve sizes. The syringe is used for filling the balloon with a medium (e.g., sterile saline). Using the same balloon catheter, the volume reading on the syringe made with the balloon in the airway is compared against the volume readings taken with the calibration gauge to select the proper valve size needed for an airway. This is a single-use device.	I
2929	58007	Rectal dilator, single-use	Шулуун гэдсийг тэлэгч, нэг удаагийн хэрэглээ	A sterile surgical instrument designed to dilate the anal sphincter and canal when the size of the anal opening may interfere with its function or the passage of an examining instrument. This is a single-use device.	I
2930	58016	Colorectal sizer	Шулуун гэдэсний хэмжээс	A hand-held manual surgical instrument designed to assess colon and/or rectal lumen diameter to aid the selection of an appropriate size intraluminal stapler (i. e, the stapler head) for bowel anastomosis following transection. It is typically made of high-grade stainless steel and consists of a shaft handle at the proximal end and an oval-shaped head at the distal end that is introduced transanally. The device is typically available in a set of graduated sizes. This is a reusable device.	I
2931	58017	Ultrasonic surgical system handpiece/generator tester	Хэт авианы мэс заслын системийн гар төхөөрөмж/генератор шалгагч	A non-sterile metal [e.g., titanium (Ti)] rod designed to test the ability of an ultrasonic surgical handpiece/generator combination to achieve frequency resonance lock as a means to ascertain that the handpiece and generator function properly together. It is inserted into the handpiece as a substitute for the ultrasonic surgical handpiece tip during testing. It is intended to be used by a healthcare provider in a clinical setting. This is a reusable device intended to be sterilized prior to use.	I

2932	58021	Radiation therapy bolus, single-use	Цацрагийн эмчилгээний bolus, нэг удаагийн	A pliable, solid, non-sterile material (e.g., firm gel, paraffin, silicone) that has the properties of skin when irradiated and is intended to be applied to the skin to modify radiation dose at the skin surface or depth. It is available in various static thicknesses (e.g., 0.5 to 4.0 cm), which may be cut by the operator, to provide a reproducible radiation beam modifier for a prescribed dose depth during treatment of a particular site and disease. This is a single-use device.	I
2933	58022	Radiation therapy bolus, reusable	Цацрагийн эмчилгээний bolus, дахин ашиглах боломжтой	A pliable, solid, non-sterile material (e.g., firm gel, paraffin, silicone) that has the properties of skin when irradiated and is intended to be applied to the skin to modify radiation dose at the skin surface or depth. It is available in various static thicknesses (e.g., 0.5 to 4.0 cm), which may be cut by the operator, to provide a reproducible radiation beam modifier for a prescribed dose depth during treatment of a particular site and disease. This is a reusable device.	I
2934	58029	Foot-switch, pneumatic	Хөлийн унтраалга, пневматик	A gas-powered pedal used by an operator of a medical device to regulate the activation and/or intensity of a parent device (e.g. a pneumatic surgical saw, pneumatic wire driver, pneumatic surgical power tool system control unit) to which it is connected typically via one or more hoses and which is dependent upon pressurized gas [e.g., medical air, nitrogen (N2)]. This is a reusable device.	I
2935	58034	Universal operating table, hydraulic	Бүх нийтийн мэс заслын ширээ, гидравлик	A mobile, manually-operated hydraulic table designed to be adjusted to support a patient during many types of surgical interventions. The table surface consists of many articulated sections that can be elevated or lowered for contouring to accommodate numerous anatomical positions (e.g., the whole table top may be adjusted to form a curved surface) to satisfy the requirements of many clinical specialties. It is typically operated via an integral foot-pedal(s) that adjust the table top position.	I

2936	58036	Pure wool bedding set	Цэвэр ноосон ор дэрний иж бүрдэл	A collection of devices made of pure new wool, typically sheep's wool, intended to be used as therapeutic bedding typically to relieve medical ailments such as pain, muscle tension, poor blood circulation, and to provide comfort for the occupant; it may also absorb body sweat. It has wool body contact surfaces that provide the therapeutic effect and is typically used for rheumatologic treatment, incapacitated and/or elderly patients with disabilities, or patients with low body fat. It typically consists of a memory foam-filled bed mattress overlay covered in pure wool, a duvet and pillows with covers made of pure wool and filled with polyester balls/fabrics. This is a reusable device.	I
2937	58038	Joint/spinal manipulator, battery-powered	Хамтарсан/нугасны манипулятор, зайгаар ажилладаг	A hand-held battery-powered instrument intended to be used by a healthcare professional for the chiropractic adjustment, mobilization, or manipulation of the joints of the spine and/or extremities. The electromechanical instrument is typically pistol-like in shape and uses a plunger-like mechanism to deliver thrust to the patient's body with a rubber-tipped stylus; it typically has several force settings. This is a reusable device.	I
2938	58050	Ligation clip cartridge holder	Ligation хавчаар хайрцаг эзэмшигч	A device designed to hold sterile ligation clip cartridges to facilitate quick reloading of the cartridges into a surgical clip applier during a surgical procedure. It is typically made of metal and plastic materials in the form of a flat and stable base with profiled slots in its upper surface into which many ligation clip cartridges are held ready for loading. This is a reusable device.	I
2939	58061	Instrument rinsing agent	Багаж зайлах бодис	A liquid substance with a neutral or acidic pH intended for the rinsing of medical/surgical instruments (e.g., specula, forceps) after machine cleaning and prior to full sterilization. It is typically a phosphoric acid (H3PO4) in an aqueous solution that neutralizes the alkaline residues from detergents and water (acidic rinse), or lubricants and drying activators (neutral rinse) and may be added, as specified by the manufacturer, to an automated washer. After application, this device cannot be reused.	I

2940	58062	Instrument anti-oxidation agent	Багажны исэлдэлтийн эсрэг бодис	A liquid substance intended to prevent corrosion on the surface of stainless steel medical/surgical instruments (e.g., specula, forceps) through its anti-oxidation properties. It is typically a concentrated phosphoric acid (H3PO4) that is used as specified by the manufacturer in an aqueous solution to treat devices by manual soaking or in an ultrasonic water bath. Also known as an instrument renovating agent, it is intended to remove protein stains, iron oxide deposits, and other oxide stains to prevent rust pitting and help improve instrument longevity. After application, this device cannot be reused.	I
2941	58068	Electrosurgical/ultrasonic surgical system tester interface	Цахилгаан мэс заслын/хэт авианы мэс заслын системийн шалгагч интерфейс	A non-sterile electrical connecting device designed to provide an interface between a commonly used electrical output analyser/equipment and an electrosurgical system generator and an ultrasonic surgical system generator, or a combination electrosurgical/ultrasonic surgical system generator when being tested for power output in a non-clinical setting. Commonly known as a verification key, it is typically used by a hospital clinical engineer when testing the generators during routine maintenance or inspection and provides standard connector components (e.g., banana plug receptacles) to allow simpler interface with a custom generator connector. This is a reusable device.	I
2942	58077	Medical device cleaning/disinfection wipe	Эмнэлгийн хэрэгсэл цэвэрлэх/халдваргүйжүүлэх зориулалттай алчуур	A moist, pre-treated fabric intended to be used to wipe the surface of medical devices and equipment to clean and/or destroy harmful microorganisms or inhibit their activity. The fabric is impregnated with a solution that may include a detergent(s) for cleaning surfaces and/or a disinfectant or a precursor compound that forms a disinfectant when activated (e.g., by a separate solution). This is a single-use device.	I

2943	58080	Freestanding headrest, reusable	Бие даасан толгойны түшлэг, дахин ашиглах боломжтой	A device designed to be placed on a flat surface (e.g., operating/examination table, stretcher) to support and stabilize the head of a recumbent patient, typically in preparation for and during many types of medical procedures or examinations; it is not attached to a parent device. The headrest is typically made of shock-absorbing materials (e.g., memory foam, gel) that cushion the head and is available in various sizes and shapes including head pad, head ring, and concave ergonomic holders with fingered lateral supports to position the head. This is a reusable device after appropriate cleaning.	I
2944	58084	Diaphysis prosthesis	Диафизийн протез	An artificial substitute for the diaphysis (shaft) of a humerus, femur, or tibia intended to be implanted for the long-term stabilization of segmental bone defects (e.g., due to osteomyelitis, trauma, bone tumours, or non-healed fractures after osteosynthesis/revision arthroplasty). It is a modular device that typically includes a resection element (spacer), intramedullary nails (inserted into the intramedullary canal), screws, and connectors all made of metal [e.g., titanium (Ti)]; components are both sterile and non-sterile. Instruments for implantation are typically included and implantation may be performed with or without bone cement.	I
2945	58087	Microbial water purification filter, sterilizable	Микробын ус цэвэршүүлэх шүүлтүүр, ариутгах боломжтой	A device designed to remove general bacteria and other suspended particles from flowing water by creating a mechanical barrier to elements larger than 0.2 micrometres. It typically consists of a plastic housing with a connector to the water source [e.g., a tap (faucet)] and a 0.2 micrometre filtering membrane [e.g., made of nylon, polyvinylidene fluoride (PVDF), or polyethersulfone (PES)]; a prefiltration of the water to remove larger particles is typically recommended. It is typically used for hygienic and surgical hand washing, rinsing of medical devices (e.g., endoscopic), body washing/showering of patients, and balneotherapy. This is a reusable device that must be sterilized daily.	I

2946	58106	Dental impression tray material	Шүдний хэв маягийн тавиурын материал	A material intended to be used to create a custom impression tray intended for filling with dental impression materials; it is not intended for the fabrication of a patient-worn dental appliance. The tray is typically made by applying the material to a preliminary plaster or stone model of the patient's teeth and gums. The material is used in cases in which a preformed impression tray is not suitable. This is a single-use device.	I
2947	58119	Infant-hammock bed mattress overlay	Нялхсын гамактай орны матрас давхарга	A portable pad with a central meshed/netted depression designed to be placed on a cot/crib/bed mattress and to cradle a young infant during sleep/rest. The device is typically foam-filled and wedge-shaped with ventilation channels and securing ribbons. The breathable netting is intended to help reduce the risk of infant injuries/disorders such as suffocation, flat head (plagiocephaly), sudden infant death syndrome (SIDS), and hyperthermia. This is a reusable device.	I
2948	58121	Emergency clothing-removal cutter	Яаралтай хувцас тайлах таслагч	A manually-operated instrument designed for the expeditious removal of clothing from a patient in emergency and rescue situations to expose injuries without patient position changes, which could cause further injury or unnecessary pain, or to start cardiopulmonary resuscitation (CPR). It typically consists of a recessed cutting wheel blade with a guide (intended to protect the patient and operator from self or inadvertent injury) and a handle for the operator to pull the blade and cut the material (e.g., clothing, belt, zip fastener) to facilitate its removal. It is typically used by emergency medical services (EMS). This is a reusable device.	I

2949	58122	Surgical cold therapy pack	Мэс заслын хүйтэн эмчилгээний багц	A sterile device designed to be temporarily applied to an area of the body surface to provide cold therapy. It typically consists of a compact, impermeable soft plastic (e.g., polypropylene) bag filled with water and a reactive polymer in a hydrophobic fabric capable of forming to the contour of the body; prior to use the water/polymer contents are activated and chilled in a freezer. It is intended to be used for anaesthesia, emergency/trauma and wound care applications and in the operating room (OR) for temporary vasoconstriction of superficial blood vessels, to help control bleeding, to inhibit inflammation and microbial activity, and to prevent/control oedema. This is a single-use device.	I
2950	58132	Therapeutic diabetic sock	Чихрийн шижингийн эмчилгээний оймс	A tubular device typically worn on the feet of a diabetic patient intended to help maintain foot health and promote wound healing through specific design features (e.g., non-binding cuff, no/flat seams, moisture control materials, and/or non-wrinkling materials) combined with a special therapeutic feature (e.g., inclusion of fibres intended to absorb patient electromagnetic energy and return energy to the patient to help increase vascular flow and oxygen levels in the blood). The device is intended for daily use in the home and healthcare facility. This is a reusable device.	I
2951	58134	Upper-limb mechanical weight exerciser, gyroscopic	Дээд мөчний механик жингийн дасгал, гироскоп	A hand-held mechanical exercise device intended to encourage use of and strengthen the major muscles of the upper limb (e.g., biceps, triceps, deltoids, brachioradialis, wrist flexors and extensors) through continual applied rotation of the wrist/arm to counteract the pull of a gyroscopic weight. It typically consists of a hollow sphere containing a weighted rotor with an eccentric mass that rotates in the X, Y and Z axes. Once set in motion it may generate a rotational force of more than 15,000 rpm. It is typically used to treat/prevent disorders such as carpal tunnel, repetitive strain injury (RSI), arthritis, tendonitis, tennis elbow, and for rehabilitation after muscle tears/strains.	I

2952	58163	Skin-soothing wipe	Арьсыг тайвшруулах үйлчилгээтэй салфетка	A non-sterile, absorbent fabric pre-soaked in a liquid solution containing skin soothing/refreshing compounds (e.g., aloe vera, menthol) intended to be wiped on the skin to calm localized skin irritation due to insect bites, bruises, minor burns, and/or contact with urticant sources. It is normally available [non-prescription] over-the-counter (OTC). This is a single-use device.	I
2953	58183	Electromagnetic surgical navigation device tracking system	Цахилгаан соронзон мэс заслын навигацийн төхөөрөмжийг хянах систем	An assembly of devices intended to provide a physician with an electromagnetic (EM) tool for image registration and/or tracking of manual surgical instruments with respect to pre-acquired images (e.g., CT/MRI scan) or real-time data [e.g., ultrasound (US)] during surgery. It consists of a workstation with controls/display, a line-powered EM field generator, a tracking unit, instruments and trackers with sensors/spatial markers, and adhesive skin markers. It is used for multiple surgical procedures (e.g., ethmoidectomy, tumour resection, fibroid ablation, biopsy, drilling, vascular access) in various fields [e.g., ENT, craniomaxillofacial (CMF), laparoscopic, or orthopaedic surgery].	I
2954	58204	Electroporation therapy system	Электропорацийн эмчилгээний систем	A mobile assembly of devices designed to apply electrical impulses to tissues to enable reversible electroporation, whereby cell membrane permeability is transiently increased to permit the passage of extrinsic molecules/drugs [electrochemotherapy (ECT)] and genetic materials [electrogenetherapy (EGT)] into the cytoplasm. The system typically consists of a mobile/portable electrical current generator, controls, visual display unit (VDU), software, electrode handles and dedicated needle electrodes; some types make real-time adjustments to impulse voltage in response to feedback on tissue conductivity. It is intended to treat the skin, hard and soft internal tissues, and tumours.	I
2955	58232	Cotton wool roll	Хөвөн ноосны өнхрөх	A device designed as an absorbent mass of cotton or man-made fibres formed in a continuous length (roll) and typically used as a general-purpose absorbent or padding within the healthcare sector or the home; it is not in the form of a bandage or dedicated dressing. This is a single-use device.	I

2956	58233	Cotton wool roll, sterile	Хөвөн ноосны өнхрөх, ариутгасан	A device designed as an absorbent, sterile mass of cotton or man-made fibres formed in a continuous length (roll) and typically used as a general-purpose absorbent or padding within the healthcare sector; it is not in the form of a bandage or dedicated dressing. This is a single-use device.	I
2957	58234	Cotton pleats	Хөвөн атираа	A device designed as an absorbent mass of cotton or man-made fibres formed in a band of zigzag folds (pleats) and used for a variety of applications such as, absorbing or removing fluid/liquid from various parts of the body or for cosmetic purposes in the home. It is intended for use in the home or healthcare facility. This is a single-use device.	I
2958	58251	Lice treatment solution, natural	Бөөсийг эмчлэх шийдэл, байгалийн гаралтай	A non-sterile, liquid substance intended to be applied topically to the scalp and head hair to eradicate human head lice (Pediculus humanus capitis) through physical means. It contains natural coating agents (e.g., plant oils) that kill the lice through a non-poisonous action such as: 1) coating and encapsulating the lice preventing the excretion of water that will eventually smother them; or 2) coating them and causing them to dehydrate (loose water) and die; it does not include a lice comb. After application, this device cannot be reused.	I
2959	58253	Felt tangent screen	Эсгий шүргэгч дэлгэц	A black tangent screen intended for assessing the extent of the patient's peripheral visual field by mapping the visual response to a test object moved from the periphery towards the centre of the screen. It typically consists of a series of concentric circles and a number of radii equally spaced around the circumference and is used in conjunction with a hand-held wand with a distal white spot or illuminated tip and black marking pins. The results are recorded manually on a corresponding chart. Also known as a Bjerrum screen.	I

2960	58258	Hand-held campimeter	Гарын камер	A portable, hand-held device intended for assessing the central 30º visual field. A test grid displays a set of numbers spiralling outward from a central window and an arm ensures that the eye is appropriately placed for the test. The patient is asked to read the numbers whilst the examiner dials a disc so that a black-on-white stimulus briefly appears in a central window. The patient's eye moves in a precise manner so that the stimulus is automatically placed at known points in the visual field. The results are recorded manually on a corresponding chart and the plot is inverted so that the results are comparable to those obtained using conventional methods. This is a single-use device.	I
2961	58262	Vibrating dental retractor	Чичиргээт шүдний татагч	A non-sterile, hand-held, battery-powered dental device intended to retract the lip/cheek and generate vibrations for the administration of a dental injection. The vibration is intended to minimize the pain of the injection by distracting the patient. The device typically consists of a cylindrical handpiece used with an attached disposable rubber-coated tip. The tip retracts the lip/cheek and is simultaneously placed on the gum/palate close to the injection site to transmit the vibrations. The device is powered by a rechargeable battery; it may include a light source and may be supplied with a base for recharging. This is a reusable device.	I
2962	58263	Vibrating dental retractor tip	Чичиргээт шүдний татагч үзүүр	A non-sterile dental device intended to be attached to a battery-powered vibrating dental retractor handpiece to function as the retraction hook and vibration transmitter during the administration of a dental injection. The vibration is intended to minimize the pain of the injection by distracting the patient. The device is rubber coated and hook-like to retract the lip/cheek and is simultaneously placed on the gum/palate close to the injection site to transmit the vibrations. This is a single-use device.	I

2963	58264	Male urinary outflow analysis system	Эрэгтэй шээсний гадагшлах урсгалын шинжилгээний систем	A mains electricity (AC-powered) assembly of devices intended to be used to measure urine flow rate and to estimate iso-volumetric bladder pressure in men with the use of an inflatable penile cuff. It typically consists of a dedicated computer and application software, an automatic cuff inflation/deflation unit, a single-use penile cuff, and a load-measuring cell/stand. Pressure measurements are obtained by inflation of the penile cuff during micturition, and volume/flow rate is measured by collecting urine over time. The system is designed to provide data which can be used to help diagnose lower urinary tract symptoms (LUTS) and bladder outlet obstruction (BOO) in men.	I
2964	58265	Male urinary outflow analysis system cuff	Эрэгтэй шээсний гадагшлах урсгалын шинжилгээний системийн ханцуйвч	A non-sterile inflatable cuff that is a component of a male urinary outflow analysis system. It is intended to be attached around the penis and inflated/deflated according to a software program while the patient is urinating to provide data that can be used to help diagnose lower urinary tract symptoms (LUTS) and bladder outlet obstruction (BOO) in men. This is a single-use device.	I
2965	58268	Staple line-reinforcement strip gel	Үдээсийн шугам арматурын туузан гель	A sterile gelatinous substance designed to be used during staple line buttress (reinforcement) procedures (e.g., lung/bronchus resections, bariatric and small bowel surgery). It is typically applied to the buttress strip material to facilitate rehydration and temporary adherence to the surgical stapler unit prior to the application of the staples and buttress strip to body tissue. It typically consists of a colloidal suspension (hydrogel) applied with an included applicator. This is a single-use device.	I

2966	58269	Vibration platform exerciser, mobile	Чичиргээний платформ дасгалын төхөөрөмж, зөөврийн	A mobile (on wheels) mains electricity (AC-powered) device designed to generate vertical high-intensity vibrations intended to traverse the body [whole body vibration (WBV)] and cause involuntary muscle contractions to help strengthen/tone muscles and tendons, increase blood flow and joint range of motion, and provide body massage and other health benefits. It consists of a motorized platform, which may have a digital display/handrails, upon which the user can stand, sit, lay, or apply a specific body part, and may include accessories for specific training (e.g., resistance). It may be used in the home and athletic/clinical settings for rehabilitation or weight loss applications.	I
2967	58270	Vibration platform exerciser, stationary	Чичиргээний платформ дасгал хийдэг, суурин	A non-mobile, mains electricity (AC-powered) device designed to generate vertical high-intensity vibrations intended to traverse the body [whole body vibration (WBV)] and cause involuntary muscle contractions to help strengthen/tone muscles and tendons, increase blood flow and joint range of motion, and provide body massage and other health benefits. It consists of a motorized platform/plate, typically with a pole with a digital display/handrails, upon which the user can stand, sit, lay, or apply a specific body part. It may include accessories for specific training (e.g., resistance) and may be used in the home and athletic/clinical settings for rehabilitation or weight loss applications.	I
2968	58289	Psychological assessment system	Сэтгэлзүйн үнэлгээний систем	An assembly of computerized devices designed to help provide a psychological assessment of a patient (e.g., personality, intelligence, special abilities) through a series of specialized tests given the patient under the supervision of a psychologist. Also known as the Vienna Test System (VTS), it typically consists of application software installed in an off-the-shelf desktop or laptop computer, dedicated hardware (e.g., various test-specific input devices), keyboard and mouse, and dedicated input panels intended to standardize testing conditions for patients unfamiliar with computers. The system supports up to 120 tests with scoring and patient feedback provided by the psychologist.	I

2969	58299	Allergy testing adhesive strip, epicutaneous	Харшлын шинжилгээний наалдамхай тууз, эпикутан	A band of adhesive material designed to be used for epicutaneous allergy testing. The device typically consists of a central portion containing a series of transparent discs onto which are applied potentially allergenic substances; it includes on one side a hypoallergenic pressure-sensitive adhesive for application to the skin of the patient. The device may include additional strips that can be used for labelling, to aid diagnosis of skin reactions. This is a single-use device.	I
2970	58300	Synthetic polymer semi-permeable film dressing, adhesive, non-sterile	Синтетик полимер хагас нэвчилттэй хальсан боолт, наалдамхай, ариутгагддаггүй	A non-sterile, transparent, semi-permeable (i.e., impermeable to fluids, permeable to vapours and gases) covering applied to skin typically intended to fix a primary dressing or a medical device (e.g. drainage tube), or to provide protection from fluids. It is a thin, clear film made of synthetic polymer material that is covered on one side with a pressure-sensitive adhesive. This is a single-use device.	I
2971	58301	Synthetic polymer semi-permeable film dressing, adhesive	Синтетик полимер хагас нэвчилттэй хальсан боолт, цавуу	A transparent, semi-permeable (i.e., impermeable to fluids, permeable to vapours and gases) covering applied to wounded or diseased tissue intended to provide protection (e.g., from dirt, water) and/or promote healing. It is a thin, clear film made of synthetic polymer material that is covered on one side with a pressure-sensitive adhesive. It may be applied directly to tissue or used in combination with other dressings (e.g., gauze) to protect postsurgical incisions and minor wounds (e.g., cuts, scrapes, burns, skin tears, blisters). It may also be used to secure to skin other devices such as vascular catheters, infusion ports, or tubing. This is a single-use device.	I

2972	58302	Antimicrobial synthetic polymer semi-permeable film dressing, adhesive	Нянгийн эсрэг синтетик полимер хагас нэвчилттэй хальсан боолт, цавуу	A sterile, transparent, semi-permeable (i.e., impermeable to fluids, permeable to vapours and gases) covering applied to wounded or diseased tissue to provide protection (e.g., from dirt, water) and/or promote healing, and that contains an antimicrobial agent. It is a thin, clear film made of synthetic polymer with a pressure-sensitive adhesive on one side that may be applied directly to tissue or used in combination with other dressings (e.g., gauze) to protect postsurgical incisions, ulcers, burns, lacerations, abrasions, device insertion sites, and donor/graft sites. It may also be used to secure to skin other devices (e.g., catheters, drains, leads, ports). This is a single-use device.	I
2973	58316	Synthetic polymer semi-permeable film dressing, wound-nonadherent	Синтетик полимер хагас нэвчилттэй хальсан боолт, шарханд наалддаггүй	A sterile, transparent, semi-permeable (i.e., impermeable to fluids, permeable to vapours and gases) covering applied to wounded or diseased tissue intended to provide protection (e.g., from dirt, water) and/or promote healing. It is a thin, clear film made of synthetic polymer material that is coated with a substance (e.g., petrolatum, silicone) or made of a material that prevents adherence to the wound bed. It may be applied directly to tissue or used in combination with other dressings (e.g., gels) to protect postsurgical incisions and minor wounds (e.g., cuts, scrapes, burns, skin tears, shallow ulcers). This is a single-use device.	I
2974	58344	Tunnelling forceps	Хонгилын хямсаа	A hand-held manual surgical instrument designed to be used to open a soft tissue plane (tunnelling) and to pull an object, typically a tube implant or other device, back through the tunnel. It is made of metal and typically has an elongated, slender, scissors-like design with two blades that close like jaws and ring handles. It may be used during rib/rib cage internal fixation procedures. This is a reusable device intended to be sterilized prior to use.	I
2975	58376	Eye splash shield, single-use	Нүдний хамгаалалт, нэг удаагийн	A device intended to be worn over the eyes to protect (shield) the healthcare worker from blood and other body fluid splashes while performing a clinical or laboratory procedure. It may have an open design like spectacles, or an enclosed design like goggles or a mask. This is a single-use device.	I

2976	58390	Visitor hygiene coverall	Жуулчдын эрүүл ахуйн хувцас	A garment intended to be worn by a visitor, or staff, in a healthcare facility as temporary clean clothing when with patients in non-sterile environments that may require a higher level of hygiene than a normal patient ward [e.g., intensive care unit (ICU), postoperative recovery ward]. Also known as a jump suit, it is a one-piece suit (overall) with sleeves, trouser legs, and fasteners intended to be worn over existing clothing to provide a barrier to help prevent cross-contamination of infectious agents between visitor and patients. This is a single-use garment.	I
2977	58394	Rectal suction biopsy system handpiece	Шулуун гэдэсний сорох биопсийн системийн гар утас	A component of a rectal suction biopsy system designed as a holder for the specimen-taking capsule during a rectal suction biopsy (RSB). It typically consists of a thin, probe-like shaft onto which the capsule is attached distally, a pistol grip for operator manipulation, a trigger for blade activation, and a connector at the proximal end for connection of a suction tube, negative pressure manometer, and syringe/suction device. This is a reusable device.	I
2978	58399	Dental material mixing nozzle	Шүдний материал холих хошуу	A device designed for mixing inactive compounds during a dental procedure to produce a functional dental restorative/impression material which may be applied directly to the oral cavity/teeth of the patient or used for some other dental application. It is nozzle-shaped and has an integral mixing mechanism (e.g., spiralled channels). It is attached to the end of a cartridge consisting of two tubes so that the compounds are mixed as they are expressed simultaneously from the tubes through the nozzle. This is a single-use device.	I

2979	58419	Mobile bariatric examination/treatment chair, electric	Явуулын бариа заслын сандал, цахилгаан	A mobile (on wheels) electronic device designed to support in a seated position an ambulatory or non-ambulatory bariatric (obese) patient, whose body mass exceeds the safe working load of a standard hospital/institution chair (e.g., around 350 kg), for examination/treatment. It incorporates a heavy-duty framework, extra wide seat-support for the patient, and an integrated rechargeable battery pack that powers electromotive functions (e.g., raise/lower/tilt/adjustment functions, motorized wheels). It is designed to be moved by healthcare professional for patient transport to a site for patient support without transfer during outpatient examination/treatment (e.g., surgical, dental, ENT).	I
2980	58431	Probiotic bed mattress cover	Пробиотик ор матрас бүрээс	A device made of soft textile materials shaped to fit over a bed mattress, to protect the mattress and prevent cross-contamination, that is treated/impregnated with probiotic bacteria intended to consume the allergen-containing faecal droppings of house dust mites (HDM) to reduce the risk of patient allergic reactions. The device can be laundered for cleaning. This is a reusable device.	I
2981	58448	Urinary catheter/bladder irrigation solution	Шээсний катетер/давсаг цэвэрлэгээний уусмал	A solution intended for the cleaning/irrigation of a urinary catheter and/or bladder instillation before or during a urological procedure. It may also be used to irrigate urethral wounds. It is typically saline-based, with the possible addition of other inorganic ions. After application, this device cannot be reused.	I
2982	58461	Waterproof probiotic bed mattress cover	Усны хамгаалалттай пробиотик ор матрас бүрээс	A device made of soft, waterproof, textile materials shaped to fit over a bed mattress to protect the mattress, prevent cross-contamination, and prevent exposure to soiling, typically bedwetting or spills of other liquids, which is treated/impregnated with probiotic bacteria intended to consume the allergen-containing faecal droppings of house dust mites (HDM) to reduce the risk of patient allergic reactions. The device can be laundered for cleaning. This is a reusable device.	I

2983	58462	Probiotic pillowcase	Пробиотик дэрний уут	A protective envelope for a pillow typically made of a thin textile material that creates a physical barrier to soiling and cross-contamination, which is treated/impregnated with probiotic bacteria intended to consume the allergen-containing faecal droppings of house dust mites (HDM) to reduce the risk of patient allergic reactions. The device is laundered for cleaning, usually at regular intervals. This is a reusable device.	I
2984	58484	Multi-purpose surgical adhesive tape, sterile	Олон зориулалттай мэс заслын наалдамхай тууз, ариутгасан	A long thin band of sterile synthetic material coated on one side with a pressure-sensitive adhesive, intended to be used for a variety of surgical/clinical intervention external taping applications [e.g., draping a patient for surgery and /or creating a window around a site of intervention, creating a sterile barrier, fixing/sealing items to a patient (e.g., a stockinette), managing/organizing tubing, cables, and other operating room (OR) devices]. It is typically made of a plastic material or combination of materials. This is a single-use device.	I
2985	58500	Body flywheel exerciser	Биеийн нисдэг дугуйтай дасгалын төхөөрөмж	An exercise apparatus intended to strengthen several of the major muscle groups of the body (i.e., in the arms, legs, chest, back) through repetitive body motion against a flywheel. During the muscle contraction phase resistance is provided by the inertia of the flywheel, which is subsequently set spinning to provide resistance during the muscle lengthening phase. It typically consists of a floor-standing platform with a pulley, axle, and connection disc for the attachment of flywheel weights, with an assortment of harnesses, straps and grips. The device typically enables the performance of a wide variety of exercise motions including curls, presses, lunges and raises.	I

2986	58504	Geometric shape exerciser	Геометр хэлбэрийн дасгал хийдэг	A physical training and rehabilitation device in various geometric shapes designed to be placed on the floor to support a patient’s body while performing gymnastic movements to regain and/or improve body movement and balance, and/or for strengthening the limbs and the trunk of the body; some types may provide a motion (e.g., rocking). It is typically used by a person with a physical disability/disorder. It is available in various shapes (e.g., cylindrical, square, oblong or curved) and sizes and typically consists of polyurethane foam covered with high-density non-slip, waterproof, washable polyvinyl chloride (PVC) fabrics. The device may be available in a set of different shapes and sizes.	I
2987	58704	Radial artery compression device	Радиал артерийг шахах төхөөрөмж	A device intended to provide compression for haemostasis to the puncture site on a patient having undergone radial artery catheterization, and can be used as an alternative to direct hand pressure. It typically consists of one or more pad/strap(s), which may also have a compression/decompression knob and a time indicator; it may be applied so that it does not compress the ulna artery or block venous return. It is typically used following coronary angiography/ventriculography or percutaneous transluminal coronary angioplasty (PTCA). This is a single-use device.	I
2988	58705	Tracheostoma protective filter	Трахеостома хамгаалалтын шүүлтүүр	A non-sterile device designed as a filter for protecting a stomal opening in the windpipe (surgically-created artificial opening between the trachea and the body surface through which the patient can breathe) against harmful external influences. It may also function as a heat & moisture exchanger (HME) intended to capture the patient's exhaled breath so that it can be used to warm and moisten inspired air to help keep the trachea lubricated and prevent its mucosa from drying. It is typically designed as a hydrophobic foam filter of various sizes held in place with an adhesive strip. This is a single-use device changed regularly according to the manufacturer's instructions.	I

2989	58718	Tracheostomy tube cannula cleaning swab, non-sterile	Трахеостомийн хоолойн суваг цэвэрлэх арчдас, ариутгагдаагүй	A non-sterile device intended to be used to clean the inner cannula of a tracheostomy tube that has been removed from the in situ tracheostomy tube. It typically consists of a flexible shaft, which in itself can act as a handle, with a swab made of foam or bristles at the distal end. It is used by a patient or healthcare provider to remove secretions from the inside of the inner cannula. This is a single-use device.	I
2990	58726	Mobile extracorporeal gas exchange system catheter kit	Хөдөлгөөнт экстракорпораль хийн солилцооны системийн катетерийн хэрэгсэл	A collection of sterile devices that is a component of a mobile extracorporeal gas exchange system and which includes a dedicated dual-lumen venous catheter. The catheter is designed to conduct blood from the patient and return it to the venous system (veno-venous) after extracorporeal circulation and gas exchange; it is intended for use with femoral or jugular veins and is designed for low-resistance to flow while also resisting kinks. In addition to the catheter, the kit typically includes a syringe, needles, guidewires, a scalpel, and dilators. This is a single-use device.	I
2991	58727	Vaginal rectocele reduction instrument	Үтрээний шулуун гэдсээр бууруулах хэрэгсэл	A non-sterile, hand-held, retractor-like device intended to be used to manually reduce a rectocele (herniation of lower bowel/rectum through a vaginal wall tear) during defecation to facilitate bowel emptying. It is intended to be used by direct application into the vagina by the patient during routine self-treatment to replace digital reduction and as an alternative to the more permanent pessary or surgical repair. It is typically made of plastic material and can be reused after appropriate cleaning.	I
2992	58737	Self-expandable heart valve bioprosthesis collapsing tool, reusable	Өөрөө тэлэх боломжтой зүрхний хавхлагын биопротез нурах хэрэгсэл, дахин ашиглах боломжтой	A dedicated, manually-operated device designed to reduce the diameter of a self-expanding cardiac valve prosthesis during open and/or transcatheter cardiovascular surgery so the collapsed valve can be mounted onto a dedicated holder or catheter to facilitate implantation. It is available in a variety of designs. This is a reusable device intended to be sterilized prior to use.	I

2993	58746	Pure wool quilt-blanket	Цэвэр ноосон хөнжил-хөнжил	A bed cover (quilt-blanket) made of pure new wool, typically sheep's wool, filled with various soft materials (e.g., non-woven or polyester fabric) intended to maintain a constant body temperature and to help relieve medical ailments such as pain, muscle tension, poor blood circulation, and to provide comfort by improving overall mobility. It is typically designed as two layers of material, where at least one side (the skin application side) is made of 100% wool. It is typically used for rheumatologic treatment after injury, inflammation of tendons, muscles, degenerative changes and pain syndrome in joints and spine, arthritic symptoms, migraine pain and neuralgia. This is a reusable device.	I
2994	58747	Pure wool bed mattress overlay	Цэвэр ноосон ор матрас давхарлана	A pad made of pure new wool, typically sheep's wool, intended to be placed on top of a bed mattress and contact an occupant’s body to help relieve medical ailments such as pain, muscle tension, poor blood circulation, and to provide comfort by improving overall mobility. It is available in various sizes and is typically used for rheumatologic treatment after injury, inflammation of tendons, muscles, degenerative changes and pain syndrome in joints and spine, arthritic symptoms, migraine pain and neuralgia. It consist of at least one side made of 100% wool and may be filled with various materials (e.g., non-woven or polyester fabric, memory foam). This is a reusable device.	I
2995	58748	Pure wool pillow	Цэвэр ноосон дэр	A device made of pure new wool, typically sheep's wool, intended to support the head, especially during rest and sleep, to help relieve medical ailments such as pain, muscle tension, poor blood circulation, and to provide comfort by improving overall mobility and warmth. It is available in various shapes and sizes. It is typically used for rheumatologic treatment after injury, inflammation of tendons, muscles, degenerative changes and pain syndrome in joints and spine, arthritic symptoms, migraine pain and neuralgia. It consists of a case with at least one side made of 100% wool filled with various materials (e.g., polyester fabric, memory foam, latex foam). This is a reusable device.	I

2996	58753	Arthroscopic obturator	Артроскопийн бөглөрөл	A non-sterile, hand-held manual surgical instrument designed to fill the lumen of an arthroscopic sleeve (not included) to facilitate insertion of the sleeve into a joint (e.g., shoulder, knee) during arthroscopic examination or surgery. It is typically cannulated, made of metal, and available in a variety of sizes. This is a reusable device intended to be sterilized prior to use.	I
2997	58755	Arm splint system, thermoplastic	Гар чигийн систем, термопластик	An assembly of non-sterile devices designed to produce a thermoformable splint intended to be applied around the upper limb of a patient who requires support or immobilization (e.g., to treat fractures, injuries, sprains). It typically consists of a low-temperature thermoplastic material and a textile (e.g., cotton) in the form of the limb and into which the thermoplastic is inserted; the combination is warmed in a water bath for adaptability to the shape of the patient's arm. It is available in various dimensions and may be used in various clinical specialties. This is a single-patient device that may be reapplied over a short term (single-use) before being discarded.	I
2998	58756	Leg splint system, thermoplastic	Хөл чиглүүлэгч систем, термопластик	An assembly of non-sterile devices designed to produce a thermoformable splint intended to be applied around the lower limb of a patient who requires support or immobilization (e.g., to treat fractures, injuries, sprains). It typically consists of a low-temperature thermoplastic material and a textile (e.g., cotton) in the form of the limb and into which the thermoplastic is inserted; the combination is warmed in a water bath for adaptability to the shape of the patient's leg. It is available in various dimensions and may be used in various clinical specialties. This is a single-patient device that may be reapplied over a short term (single-use) before being discarded.	I

2999	58757	Spine thermoplastic splint system	Нурууны термопластик дам нурууны систем	An assembly of non-sterile devices designed to produce a thermoformable splint intended to be applied externally to the spine of a patient who requires support or immobilization (e.g., to treat fractures, injuries, sprains). It typically consists of a low-temperature thermoplastic material and a textile (e.g., cotton) in the form of the spine and into which the thermoplastic is inserted; the combination is warmed in a water bath for adaptability to the shape of the patient's spine. It is available in various dimensions and may be used in various clinical specialties. This is a single-patient device that may be reapplied over a short term (single-use) before being discarded.	I
3000	58773	Patient-monitoring bed mattress cover	Өвчтөнд хяналт тавих орны матрас бүрээс	A device shaped to fit over a bed mattress and intended to monitor the status of patient movement in relation to the bed while providing comfort for the patient in bed. It consists of soft, waterproof textiles with built-in light sensors/optical cable(s) to detect patient movement and connects to a control unit which interfaces with a healthcare monitoring/call system to signal an alarm situation. It may be used to prevent falls over the bedrails, provide monitoring of patient movement/breathing, and/or monitor patient presence/absence. It is treated with an antibacterial agent to inhibit bacterial growth on the cover and can be laundered for cleaning. This is a reusable device.	I
3001	58774	Patient-monitoring bed mattress cover control unit	Өвчтөнд хяналт тавих орны матрас бүрээсийн хяналтын хэсэг	A mains electricity (AC-powered) device designed to connect to a patient-monitoring bed mattress cover via a fibreoptic cable to provide an interface with a healthcare monitoring/call system to signal an alarm situation. It may be used to prevent falls over the bedrails, provide monitoring of patient movement/breathing, and/or monitor patient presence/absence.	I

3002	58776	Surgical screwdriver, single-use	Мэс заслын халив, нэг удаагийн	A non-powered tool that fits into a screw head in order to apply rotation to tighten/loosen/remove a screw during a surgical procedure. It typically has a high-grade stainless steel shaft with a distal end dedicated to fit into a screw head that may be slotted, Phillips (cross head), Pozidriv (Supadriv), Torx, Hex (Allen), Robertson (square), spanner head (twin pins), Polydrive, or one-way (clutch). The proximal end of the shaft may have a handle for manual use, or it may have a profiled tang that fits into an interchangeable screwdriver handle, a manually-operated chuck, or a power driver. This is a single-use device.	I
3003	58795	Urinary catheter/drainage bag connection facilitator	Шээсний катетер/ус зайлуулах уут холбох хэрэгсэл	A non-sterile device intended to provide a patient or healthcare provider a means of rapid and leak-proof bag exchange during replacement of a urine bag that connects to an in situ urinary catheter. It is typically made of plastic and consists of two separate blades, each with a scissors-like handle and which terminates distally in a half-cylinder channel. The distal ends of the blades are inserted into the stretchable connector of the urine bag to form a full-cylinder channel through which the proximal end of an indwelling ureteral or urinary condom catheter is inserted to form a connection with the bag, after which the blades are removed. This is a single-use device.	I
3004	58805	Absorbent wound compression pad	Шингээгч шархыг шахах дэвсгэр	A rolled strip of fabric material (e.g., non-woven polyester) intended to be applied around a wound (e.g., venous stasis ulcer of the leg) as a supplemental padded layer for a pressure bandage, primarily to help evenly distribute pressure and absorb exudates during the compression treatment of the wound. It is intended for use in the home or a clinical setting. This is a single-use device.	I

3005	58827	Assistive ergonomic chair, manually-adjusted	Гараар тохируулсан туслах эргономик сандал	A non-electrical device, that may include pneumatically-assisted features, intended to support and position a patient (disabled and/or discomforted) in a sitting posture while performing activities of daily living, including work-related activities. It is designed with manually-operated ergonomic adjustments (e.g., height and position adjustments) to provide improved personal body posture and/or to help prevent/reduce physical problems associated with poor mobility or sedentary lifestyle. It is not a wheelchair.	I
3006	58831	Antimicrobial sock	Нянгийн эсрэг оймс	A tubular, fabric device intended to be worn on the feet of a patient to help maintain foot health and reduce the growth of fungi and bacteria through inclusion of an antimicrobial agent [e.g., pure cotton yarn containing silver (Ag) nanoparticles]. It is typically indicated for a patient who suffers from athlete's foot, diabetic foot, neurological sensory disorders (e.g., unable to feel micro traumas, touch, or temperature), and impaired blood circulation; it is generally intended to reduce the risk of primary and secondary infection. The device is normally available for daily use in the home or healthcare facility. This is a reusable device.	I
3007	58837	Eyelid solution	Зовхины уусмал	A fluid material intended to be applied to the eyelids for various therapeutic ocular applications that typically include provision of supplemental lipids on the eyelid margin to stabilize the natural tear film lipid layer in the treatment of tear film deficiencies (e.g., dry eye syndrome), or to clean the eyelid or eyelid margin in the treatment of blepharitis and/or meibomian gland dysfunction. It is typically a liposomal (e.g., phospholipid) suspension or a saline solution, and is intended for use in the home or healthcare facility (single dose or multidose). After application, this device cannot be reused.	I

3008	58848	Extracorporeal circuit waste bag	Биеийн гадуурх хэлхээний хог хаягдлын уут	A flexible container intended to be used for the collection of waste fluids during preparation and processing of an extracorporeal circuit (e.g., autotransfusion, haemodialysis, haemofiltration, apheresis, adsorption treatment), including the collection and rinsing of ultrafiltrate fluid which may contain blood components. The device typically consists of a plastic pouch with a piece of short tubing and a connector (e.g., Luer-lock) intended to be connected to the tubing system of the extracorporeal circuit and possibly an outlet tap. The contents are considered potentially contaminated and should be disposed of according to local requirements. This is a single-use device.	I
3009	58849	Sacroiliac joint transarticular fixation/arthrodesis implantation kit	Sacroiliac хамтарсан үе дамжсан бэхэлгээ/артродез суулгах иж бүрдэл	A collection of surgical instruments and devices intended to be used for the implantation of a sacroiliac joint transarticular fixation/arthrodesis implant during a minimally-invasive procedure. It typically consists of a tray, dedicated soft-tissue protectors, depth gauges, pin sleeves, drill sleeves, drill bits, broaches, a parallel pin guide, handles, slide hammer shafts, impactors, and a removal/adaptor tool; the implant(s) is not included. This is a reusable device.	I
3010	58851	Massage oil/cream/gel	Массажны тос/тос/гель	A non-sterile substance intended to be applied to the skin and/or external mucosa to facilitate therapeutic massage, such as massage to treat musculoskeletal injury, perineal massage during pregnancy, or breast massage to help reduce the painful symptoms of mastodynia (breast tension). It is in the form of a gel, cream, or ointment intended to lubricate tissues during massage, and possibly help increase tissue elasticity and flexibility. It is typically available [non-prescription] over-the-counter for use in the home and healthcare facility. After application, this device cannot be reused.	I

3011	58854	Absorbent stomal dressing	Шингээгч ходоодны боолт	An absorbent protective covering/pad intended to be placed over a urinary or enteric stoma to protect it from harmful external influences, absorb and prevent the spread of sweat and stomal fluid/waste/leaks, and to protect the surrounding skin from irritation. It typically has a central hole and is typically attached by the patient directly over the stomal opening and held in place by its pressure-sensitive adhesive (e.g., polyacrylate or silicone) to the surrounding skin, or attached around the connection between an ostomy base plate and an ostomy bag. This is a single-use device.	I
3012	58857	Multi-purpose digital medical camera	Олон зориулалттай дижитал эмнэлгийн камер	An electrically-powered, hand-held digital electro-optical device designed to capture video or still image data for multiple medical applications (e.g., ophthalmoscopic, otoscopic, and dermatoscopic) using dedicated interchangeable lenses/attachments. It typically consists of a lightproof chamber with an aperture fitted with a lens and a shutter, through which the image of an object is projected onto a surface for recording. It may include a user display screen for visualization before image capture, and sometimes a docking cradle for battery recharging and connection to a personal computer.	I
3013	58858	Multi-purpose digital medical camera lens, otoscopic	Олон зориулалттай дижитал эмнэлгийн камерын линз, отоскоп	A non-sterile optical device intended for attachment to a multi-purpose digital medical camera to provide high-resolution focusing of digital imaging data from the external auditory canal and tympanic membrane. It typically facilitates recording of the colour, position, and translucency of the tympanic membrane and is intended to be used with a disposable speculum to limit patient cross-infection. This is a reusable device.	I
3014	58859	Multi-purpose digital medical camera lens, dermatological	Олон зориулалттай дижитал эмнэлгийн камерын линз, арьсны	A non-sterile optical device intended for attachment to a multi-purpose digital medical camera to provide high-resolution focusing of digital imaging data from the surface of the skin, and to facilitate measurement of skin lesions, typically to document changes in skin and skin lesions. This is a reusable device.	I

3015	58862	Multi-purpose digital medical camera calibrator	Олон зориулалттай дижитал эмнэлгийн камерын калибратор	A mains electricity (AC-powered) electronic device designed to test and calibrate a multi-purpose digital medical camera by a technician at the manufacturer, distributor, or end-user site. It is intended to be used in conjunction with an off-the-self computer that is configured with dedicated software. The procedure is software-controlled and semi- automatic, and typically includes automatic light control, image capturing and analysing, and automatic focus motor calibrations.	I
3016	58868	Extracorporeal circuit waste bag, non-sterile	Биеийн гадуурх хэлхээний хог хаягдлын уут, ариутгагдаагүй	A non-sterile flexible container intended to be used for the collection of waste fluids during preparation and processing of an extracorporeal circuit (e.g., haemodialysis, haemofiltration, apheresis, adsorption treatment), including the collection and rinsing of ultrafiltrate fluid which may contain blood components. The device typically consists of a plastic pouch with a piece of short tubing and a connector (e.g., Luer-lock) intended to be connected to the tubing system of the extracorporeal circuit and possibly an outlet tap. The contents are considered potentially contaminated and should be disposed of according to local requirements. This is a single-use device.	I
3017	58873	Treadmill/elliptical gait rehabilitation system robotic orthosis	Гүйлтийн зам/зууван алхаа нөхөн сэргээх систем робот ортез	An electrically-powered robotic orthosis system that is a component of an automated-guidance gait rehabilitation system designed to assist a patient with a walking disability (neurogenic, muscular, or osseous in origin) regain lost motor function. The device provides lower-leg orthoses into which the patient’s feet are secured and which enable autonomous movement and the simulation of life-like gait synchronized with, and regulated by, the movement of a treadmill or elliptical to which it is attached. It consists of a mechanical part with attached orthoses, a control box, and a clamping assembly for attachment to a treadmill/elliptical.	I

3018	58875	Gait rehabilitation frame, electric	Алхаа нөхөн сэргээх хүрээ, цахилгаан	An electrically-powered, body-weight unloading, gait rehabilitation device designed to assist a patient with a walking/balance disability (neurogenic, muscular, or osseous in origin) regain lost motor function, by enabling them to hang in a dedicated harness in a vertical position and exercise (e.g., walk over the ground or moving surface of an elliptical/treadmill, climb stairs, perform sit-to-stand movements). It consists of a ceiling- or wall-mounted beam, or floor-standing frame with a motorized attachment assembly connected to the harness which supports the body weight. It is intended to be used in a clinical setting under professional supervision.	I
3019	58876	Gait rehabilitation system harness	Алхааг нөхөн сэргээх системийн оосор	A lifting device, in the form of belts and straps, which is a component of a gait rehabilitation system designed to assist a patient with a walking disability (neurogenic, muscular, or osseous in origin) regain lost motor function. The device is designed to be secured around the patient’s upper body and hips and is intended to help suspend the patient vertically over the floor or a treadmill while attached to the supporting frame of a suspension device; it may be used in conjunction with a robotic orthosis device for the training of normal gait.	I
3020	58877	Freestanding torso positioner	Бие даасан байрлал тогтоогч	A non-sterile device designed to be placed on a flat surface (e.g., operating/examination table, stretcher) to support, stabilize and reduce pressure on the bony prominences of the torso including the coccyx of a recumbent patient, typically in preparation for and during many types of medical procedures or examinations; it is not attached to a parent device. The torso positioner is typically made of shock-absorbing materials (e.g., memory foam), formed as a wedge-shaped cushion and used in pairs, one on either side of the torso. It is available in various sizes. This is a reusable device after appropriate cleaning.	I

3021	58878	Freestanding patient positioner, reusable	Бие даасан өвчтөний байрлал тогтоогч, дахин ашиглах боломжтой	A preformed patient-contact device (e.g., cushion, pad, bolster, wedge, elevation pillow) designed to be placed freely on a flat surface (e.g., operating table, stretcher) to position and stabilize a patient or body part typically in preparation for and during various medical procedures [e.g., to align the head, neck and thorax to optimise laryngoscopy in anaesthesia]; it is not attached to a parent device. It is made of shock-absorbing materials (e.g., memory foam) to reduce pressure on the bony prominences of a body part (e.g., torso, arm, leg), and some types are inflatable to provide variable support (e.g., to level the spine in a lateral position). This is a reusable device.	I
3022	58879	Freestanding foot positioner	Бие даасан хөлийн байрлал тогтоогч	A non-sterile device designed to be placed on a flat surface (e.g., operating/examination table, stretcher) to support and stabilize the foot and help reduce the risk of pressure sores on the heel of a recumbent patient, typically in preparation for and during many types of medical procedures or examinations; it is not attached to a parent device. The foot positioner is typically made of shock-absorbing materials (e.g., memory foam), formed as an angle-shaped cushion and used in pairs; one under each foot. It is available in various sizes and it also helps prevent hyper-rotation of the leg. This is a reusable device after appropriate cleaning.	I
3023	58880	Freestanding arm positioner	Бие даасан гарны байрлал тогтоогч	A non-sterile device designed to be placed on a flat surface, typically an armboard that is attached to an operating/examination table or used on a stretcher, to support, stabilize, and reduce pressure on the bony prominences of the arm and reduce the risk of nerve damage of a recumbent patient, typically in preparation for and during many types of medical procedures or examinations; it is not attached to a parent device. The arm positioner is typically made of shock-absorbing materials (e.g., memory foam), formed as a concave-shaped cushion that is placed under the arm; it may be used in pairs, one under each arm. This is a reusable device after appropriate cleaning.	I

3024	58881	Dry-heat humidifier disinfection tube	Хуурай дулаан чийгшүүлэгч халдваргүйжүүлэлтийн хоолой	A non-sterile, electrically-powered device intended for total elimination and/or inactivation of microorganisms from non-heat sensitive component(s) of humidifiers designed for dry-heat, high-level disinfection to comply with established infection control practices for respiratory devices used on multiple patients. It consists of a flexible tube that connects between the breathing tube components of the humidifier electrical control unit to create a circuit through which forced air is circulated and heated to the appropriate temperature by its integral electrical heating element. The process is controlled by the humidifier electrical control unit. This is a reusable device.	I
3025	58888	Colostomy irrigation kit, reusable	Колостоми усалгааны иж бүрдэл, дахин ашиглах боломжтой	A collection of non-sterile devices designed to wash out the colon through a colostomy site. It typically includes a colostomy irrigation bag, a flow regulator, a cone-shaped irrigation nozzle/tip, or a soft and flexible catheter with a retention shield; it may include an irrigation ring/belt and some disposables (e.g., irrigation sleeve). This is a reusable device after appropriate cleaning.	I
3026	58905	Sodium carbonate haemodialysis system cleaning cartridge	Натрийн карбонатын гемодиализийн системийг цэвэрлэх хайрцаг	A non-sterile cartridge containing anhydrous sodium carbonate designed to be connected to the fluid circuit of an institutional haemodialysis system for the in-line preparation of a sodium carbonate solution to clean the fluid pathways of the system (remove organic deposits, fats, proteins) in combination with a heat disinfection program. The solution is typically rinsed or flushed in a closed loop for a specified period. This is a single-use device.	I
3027	58906	Citric acid haemodialysis system cleaning cartridge	Нимбэгийн хүчил гемодиализийн системийг цэвэрлэх хайрцаг	A non-sterile cartridge containing anhydrous citric acid designed to be connected to the fluid circuit of an institutional haemodialysis system for the in-line preparation of a citric acid solution to clean/disinfect the fluid pathways of the system (remove calcium and magnesium deposits) in combination with a heat disinfection program. The solution is typically rinsed or flushed in a closed loop for a specified period. This is a single-use device.	I

3028	58910	Total knee prosthesis implantation guide-instrument kit	Нийт өвдөгний протез суулгах гарын авлага-хэрэгслийн иж бүрдэл	A collection of sterile hand-held surgical instruments intended to be used during total knee arthroplasty (TKA), either manually or as a computer-assisted surgery (CAS) device, to aid in the navigation/placement of the prosthesis or other instruments. Components may be used for the following applications: 1) to hold/align/fix bone preparation instruments, prosthesis, or prosthesis component; 2) to provide relative position landmarks; 3) to ascertain correct spatial orientation or limb alignment; and/or 4) as an interface between prosthesis components; the implant is not included. This is a single-use device.	I
3029	58917	Non-wearable adult urine collection bag, closed-ended	Насанд хүрэгчдийн шээс цуглуулах хувцас өмсдөггүй уут, хаалттай	A flexible plastic pouch designed to connect to a urinary catheter to collect discharged urine from an adult/adolescent patient; it is not designed with an opening for urine drainage. The device is not directly attached to the patient and is disposed of when full. This is a single-use device.	I
3030	58918	Closed-ended non-wearable urine collection bag, non-sterile	Шээс цуглуулах зориулалтын битүү уут, ариутгаагүй	A non-sterile flexible plastic pouch designed to connect to a urinary catheter or a urinary condom catheter to collect discharged urine from a patient; it is not designed with an opening for urine drainage. The device is not directly attached to the patient and is disposed of when full. This is a single-use device.	I
3031	58919	Wearable adult urine collection bag, closed-ended	Насанд хүрэгчдийн шээс цуглуулах зүүж болох уут, хаалттай	A flexible plastic pouch designed to connect to a urinary catheter and to be strapped to or worn on the leg of an adult/adolescent patient to collect discharged urine; it is not designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility and is disposed of when full. This is a single-use device.	I
3032	58920	Closed-ended wearable urine collection bag, non-sterile	Шээс цуглуулах зориулалтын битүү уут, ариутгагдаагүй	A non-sterile flexible plastic pouch designed to connect to a urinary catheter and to be strapped to the leg of a patient to collect discharged urine; it is not designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility and is disposed of when full. This is a single-use device.	I

3033	58921	Non-wearable adult urine collection bag, open-ended	Насанд хүрэгчдийн шээс цуглуулах хувцас өмсөх боломжгүй, нээлттэй уут	A flexible plastic pouch designed to connect to a urinary catheter or a urinary condom catheter to collect discharged urine from an adult/adolescent patient; it is designed with an opening for urine drainage. The device is not directly attached to the patient. This is a single-use device.	I
3034	58922	Open-ended non-wearable urine collection bag, non-sterile	Шээс цуглуулах зориулалтын нээлттэй уут, өмсдөггүй, ариутгагддаггүй	A non-sterile flexible plastic pouch designed to connect to a urinary catheter or a urinary condom catheter to collect discharged urine from a patient; it is designed with an opening for urine drainage. The device is not directly attached to the patient. This is a single-use device.	I
3035	58923	Wearable adult urine collection bag, open-ended	Насанд хүрэгчдийн шээс цуглуулах зүүж болох нээлттэй уут	A flexible plastic pouch designed to connect to a urinary catheter or a urinary condom catheter and to be strapped to or worn on the leg of an adult/adolescent patient to collect discharged urine; it is designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility. This is a single-use device.	I
3036	58924	Open-ended wearable urine collection bag, non-sterile	Шээс цуглуулах зориулалтын нээлттэй уут, ариутгаагүй	A non-sterile flexible plastic pouch designed to connect to a urinary catheter, a urinary condom catheter, or a urostomy bag, and to be strapped to the leg of a patient to collect discharged urine; it is designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility. This is a single-use device.	I
3037	58932	Tongue-adjustment sleep apnoea treatment system patch	Хэлний тохируулгатай нойрны апноэ эмчилгээний системийн нөхөөс	A non-sterile, self-adhesive patch designed to be used as part of a tongue-adjustment sleep apnoea treatment system to hold in place a neck-worn vibration transducer intended to stimulate a patient’s hypoglossal nerve and neurologically increase tone in the genioglossus muscle. It is typically a layer of foam, in which the transducer is lodged, coated with a pressure-sensitive adhesive for attachment to the skin. This is a single-use device.	I
3038	58933	Infant blanket, single-use, sterile	Нялхсын хөнжил, нэг удаагийн, ариутгасан	A sterile piece of fabric material intended to be used to wrap newborns/infants to retain their body heat and/or absorb fluids. Commonly known as a baby blanket, it is available in a variety of fabrics (e.g., wool, cotton, or synthetic materials) and textures (e.g., cellular or smooth). This is a single-use device.	I

3039	58934	Infant blanket, single-use	Нялх хүүхдийн хөнжил, нэг удаагийн	A piece of fabric material intended to be used to wrap newborns/infants to retain their body heat and/or absorb fluids. Commonly known as a baby blanket, it is available in a variety of fabrics (e.g., wool, cotton, or synthetic materials) and textures (e.g., cellular or smooth). This is a single-use device.	I
3040	58939	Enteral feeding tube clearing kit	Гуурсан хоолойг цэвэрлэх хэрэгсэл	A collection of non-sterile compounds and devices intended to be used to prevent and/or remove, through biochemical action, an enteral formula clog in an in situ enteral feeding tube to maintain luminal patency. It typically includes a combination of enzymes, acids, and buffers (e.g., papain, cellulase, citric acid) and devices (e.g., syringe, tubing) to administer the cocktail into the enteral feeding tube. This is a single-patient device that may be reapplied to the patient for a limited number of times (single-use) before being discarded.	I
3041	58940	Podiatry kit, single-use	Хүүхдийн эмчилгээний иж бүрдэл, нэг удаагийн хэрэглээ	A collection of devices intended for treatment of cutaneous foot disorders such as hardened skin, corns, and ingrown/ingrowing toenails. It typically consists of two or more of the following items: nail cutters, nail file, dermal curette, scalpel handle and blades, probe, gauze applicators, and/or dressings (e.g., coverings, protection/treatment solutions); it may be used in the home and healthcare facility. This is a single-use device.	I
3042	58963	Pressure-management bandage, padded	Даралт зохицуулах боолт, жийргэвчтэй	A non-sterile padded material designed to be worn over pressure-point areas of the body to help prevent the development of, and/or treat, pressure and friction sores in patients with restricted mobility in healthcare facilities. It is typically composed of a polyurethane foam layer bonded to a fabric layer (e.g., cotton, elastane, polyester) in the form of a tube intended to be worn on the limbs, or in the form of a flat sheet with fasteners intended to be worn around the pelvis to cover the sacral area. This is a single-patient, reusable device.	I

3043	58964	Non-adhesive device retention bandage	Наалдамхай бус төхөөрөмж барих боолт	A piece or roll of material intended to be wrapped around a part of the body to secure a device (e.g., skin dressing, catheter, cannula) to the patient, without adhering to or compressing the body. It may be made from a variety or combination of materials, including cotton, viscose, and plastic (e.g., polyamide), and some types are cohesive (i.e., the bandage adheres to itself but not to other surfaces); it is used in various clinical specialties (e.g., dermatology, general/plastic surgery). This is a single-use device.	I
3044	58968	Instrument management bag	Багаж удирдах цүнх	A flexible plastic container intended to hold/collect instruments, cables, or other equipment during a surgical procedure or other clinical intervention, typically being attached to a drape or other support close to or inside the sterile field of operation/intervention. It may have a variety of designs, e.g., number of pouches, adhesive/non-adhesive, overall shape and size. This is a single-use device.	I
3045	58978	Synthetic-polymer liquid barrier dressing	Синтетик-полимер шингэн саадтай боолт	A liquid preparation composed of synthetic polymer materials intended to form a thin protective film when applied to superficial wounds (e.g., minor cuts, abrasions) and/or intact skin (typically sensitive areas such as around a stoma), to reduce exposure to external contaminants; may also be intended to augment the adherence of medical adhesives, or provide a protective interface when removing medical adhesives. It may be presented as a wipe, swab, or spray. After application, this device cannot be reused.	I
3046	58981	Salivary stone retrieval basket	Шүлсний чулуу цуглуулах сагс	A sterile, flexible, manual instrument designed to remove salivary stones (calculi) from a salivary duct during an endoscopic procedure. It is typically designed with a long, thin, flexible shank that has an expandable basket of wire at its distal end in which the stones are caught for extraction. It is typically introduced through the working channel of a sialendoscope. This is a single-use device.	I

3047	58983	Compression bandaging kit	Шахалтын боолтны иж бүрдэл	A collection of various types of bandages intended for use in the treatment of venous leg ulcers, and related conditions, by sequential bandage application to provide graduated ascending-decreasing compression from the ankle to the knee. Typically the bandages are applied in a sequence of layers: a padding/exudate absorbing layer (e.g., polyester), a retention layer (e.g., cotton/polyester/elastane), a compression layer (e.g., viscose/polyester covered elastane) and a self-adherent compression/outer retention layer (e.g., latex/polyester/elastane). It is intended to be applied by a healthcare professional for use in the home and healthcare facility. This is a single-use device.	I
3048	58984	Intraoperative freestanding patient positioning frame	Мэс заслын үед бие даан өвчтөний байрлал тогтоох хүрээ	A non-sterile device designed to support and stabilize a patient's arm or leg in a desired posture during a surgical procedure, typically an orthopaedic procedure where it is intended to be used with an arm or leg ring. It is typically in the form of a frame with a base and support arch that is not attached to a parent device (freestanding); it is typically constructed of plastic materials. This is a reusable device intended to be sterilized prior to use.	I
3049	58987	Self-expandable heart valve bioprosthesis collapsing tool, single-use	Өөрөө тэлэх боломжтой зүрхний хавхлагын биопротез нурах хэрэгсэл, нэг удаагийн хэрэглээ	A dedicated, manually-operated device designed to reduce the diameter of a self-expanding cardiac valve prosthesis during open and/or transcatheter cardiovascular surgery so the collapsed valve can be mounted onto a dedicated holder or catheter to facilitate implantation. It is available in a variety of designs. This is a single-use device.	I
3050	58989	Knee arthroplasty force sensor balance kit	Өвдөгний үений мэс заслын хүч мэдрэгчийг тэнцвэржүүлэх хэрэгсэл	A collection of non-sterile devices intended for use with a knee arthroplasty force sensor to measure forces acting across the joint to facilitate assessment of bone resection lines and size of prosthesis components to be implanted. It is intended to help achieve correct femoral rotation, flexion stability, proper patella tracking, and/or medial-lateral ligament balance. It typically consists of femoral components, tibial spacers, positioning guides, fixation screws, and an adjustment wrench. This is a reusable device intended to be sterilized prior to use.	I

3051	58991	Fully-implantable middle ear implant system	Дунд чихний суулгацыг бүрэн суулгах боломжтой	An implanted assembly of sterile devices intended to compensate for impaired hearing by transmitting vibrations to the middle ear. It is powered by a battery that is recharged inductively, via an external device. It consists of a capsule, containing the battery and processor unit, and an attached microphone and transducer that are fully implanted. The microphone receives sound waves that are converted into electrical signals which drive the transducer to vibrate the middle ear bones, stimulating the auditory pathway. A middle ear implant (MEI) is typically used to treat sensorineural hearing loss (SNHL) or hearing impairment due to middle and/or outer ear obstructive pathologies.	I
3052	58993	General-purpose medical foam padding, single-use	Ерөнхий зориулалтын эмнэлгийн хөөсөн дэвсгэр, нэг удаагийн	A roll, sheet or preformed shape of synthetic foam material [e.g., styrene-butadiene rubber (SBR)] intended to be applied to and/or compress a local area of the body for various preventative/therapeutic applications (e.g., in compression bandaging, padding under casts and splints, padding for anatomical depressions), typically over intact and healthy skin. It is intended for use in the home or a clinical setting. This is a single-use device.	I
3053	59006	Elasticated full-body orthosis	Бүтэн биеийн уян хатан ортез	A soft full-body orthosis intended to be used to facilitate correction of muscle dysfunction and postural disturbances associated with central nervous system disease (e.g., cerebral palsy, stroke, traumatic paraplegia) principally by normalization of proprioceptive impulses and inhibition of tone in spastic muscles. It consists of several parts of a suit: vest, belt, shorts, knee pads, shoes and cap, all interconnected with a system of adjustable elastic bands and worn by the patient while participating in a variety of activities (e.g., exercises, gait training, playing) under the supervision of a healthcare provider. It is available in a range of sizes. This is a reusable device.	I

3054	59009	Orthopaedic implant/instrument assembling device	Ортопедийн суулгац/багаж угсрах төхөөрөмж	A non-sterile, noninvasive tool designed to support assembly of the component parts of an orthopaedic implant or surgical instrument during an orthopaedic surgical procedure, typically when component sizes are determined during the procedure [e.g., stem, neck, and head femoral components of a total hip arthroplasty (THA)]. It is available in one of a variety of forms (e.g., holder, clamp/press), however it is not a component of the final instrument/implant and is not a surgical screwdriver or wrench. This is a reusable device intended to be sterilized prior to use.	I
3055	59012	Peripheral nerve-block blunt needle access cannula	Захын мэдрэлийг блоклодог мохоо зүүгээр нэвтрэх суваг	A sterile flexible tube designed to provide percutaneous access to a peripheral nerve group for the insertion of a nerve-block blunt needle and injection of an anaesthetic/analgesic agent for nerve-block/pain control. It is typically made of plastic and contains a sharp-tipped metal needle to facilitate its introduction which may be guided by fluoroscopy. Once introduced, the sharp needle is intended to be removed so the cannula can be used as a conduit for the nerve-block blunt needle. This is a single-use device.	I
3056	59049	General-purpose medical fibre padding	Ерөнхий зориулалтын эмнэлгийн шилэн дэвсгэр	A roll, sheet or preformed shape of synthetic (e.g., polyester, polypropylene) or natural (e.g., cotton) fibre intended to be applied to and/or compress a local area of the body for various preventative/therapeutic applications (e.g., in compression bandaging, padding under casts and splints, padding for anatomical depressions), typically over intact and healthy skin. It is intended for use in the home or a clinical setting. This is a single-use device.	I
3057	59064	Salivation stimulation lozenge	Шүлсийг өдөөх шахмал	An orally-administered tablet intended to increase the secretion of saliva, by stimulating the taste receptors of the tongue via the gustatory-salivary reflex, to alleviate the dry mouth symptom (xerostomia) associated with a medical condition or treatment. It typically contains malic acid (the chemical that gives fruit a pleasant sour taste) and may be available in a variety of flavours. It is available [non-prescription] over-the counter (OTC) for home use. This is a single-use device.	I

3058	59078	Enteral tube tracking system	Гуурсан хоолойн хяналтын систем	A mains electricity (AC-powered) portable electronic device assembly, typically with rechargeable battery, designed to detect, record, and display an electromagnetic (EM) signal emitted from a transmitter in an enteral feeding tube stylet to facilitate the placement of the enteral tube, by providing a graphic display representing the path of the tube tip. It consists of an electromagnetic receiver placed on the epigastrium, a visual display/control unit which displays real-time anterior and cross-sectional representational views of the transmitter location and track, and a separately supplied single-use enteral feeding tube stylet which incorporates an electromagnetic transmitter in the tip.	I
3059	59098	Orthotic insole, prefabricated, antimicrobial	Ортотик улавч, угсармал, нянгийн эсрэг үйлчилгээтэй	A prefabricated orthopaedic shoe insert typically available for use by a layperson intended to provide supplemental support for the arch and/or heel of the foot, whilst inhibiting microbes such as viruses, bacteria and fungi. It is typically made of fabric and/or synthetic polymer materials (e.g., wool, viscose, silicone gel, foam) impregnated with an antimicrobial substance, which is designed to resist extreme load and may provide thermal insulation. This is a reusable device.	I
3060	59167	Bladder-supporting pessary	Давсагийг дэмжих пессари	A non-sterile plastic device designed for insertion into the vagina to facilitate management of female urinary incontinence and/or to reduce bladder prolapse. Otherwise known as a bladder-neck support prosthesis, it is designed in the form of a ring with two prongs at one end. The ring is intended to be placed and held in the vagina with the prongs projecting forwards on each side of the urethral opening, thereby supporting the urethra, bladder neck, and bladder. This is a reusable device after appropriate cleaning.	I

3061	59215	Non-adherent bed sheet	Наалддаггүй орны даавуу	A large piece of sterile material intended to cover the mattress of a bed occupied by a patient receiving open-wound treatment, primarily in cases of wounds that have breached the dermis (e.g., extensive burns, cauterizations, and abrasions). It is typically composed of a skin-contact surface (e.g., aluminized, non-woven fabric) designed to prevent adherence to wounds, and thus decrease the potential for trauma, with multiple additional layers designed to diffuse/absorb wound exudate. This is a single-use device.	I
3062	59371	Remotely-controlled tissue expander remote control	Алсын удирдлагатай эдийн тэлэгчийн алсын удирдлага	A battery-powered device designed to remotely control expansion of an implanted inflatable tissue expander and intended to be operated intermittently by the patient or physician over a prescribed period to develop tissue coverage prior to the placement of a permanent breast implant. The operator sends a coded instruction by telemetry to release a controlled volume of gas contained in a cylinder within the implant to cause the expansion. It is typically paired with the implant, which contains a programmable identification (ID) chip, in the operating room during implantation. This is a reusable device intended for single-patient use.	I
3063	59447	External pacemaker cover	Зүрхний аппаратын гаднах бүрээс	A non-sterile device, typically made of disposable transparent plastic, intended to be attached over the control panel of a pacemaker external pulse generator (EPG) to form a protective enclosure to help prevent accidental changes to the EPG control settings. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I
3064	59692	Neuromuscular transmission motion sensor	Мэдрэлийн булчингийн дамжуулалтын хөдөлгөөн мэдрэгч	A device intended to be placed on the thumb and index finger of a patient to detect movements and convert them into electrical neuromuscular transmission (NMT) signals during nerve stimulation. The device, also known as a mechanosensor, is a piezoelectric sensor that functions with an NMT sensor cable and skin surface NMT electrodes to transmit electrical signals to a patient monitoring module dedicated to the monitoring of patient relaxation to determine level of neuromuscular block. This is a reusable device.	I

3065	59821	Ethylene vinyl acetate examination/treatment glove, non-powdered	Этилен винил ацетат үзлэг/эмчилгээний бээлий, нунтаг биш	A device made of ethylene vinyl acetate (EVA) copolymer intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; its inner surface is not covered with powder and it does not include antimicrobial agents/materials. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	I
3066	60065	Configurable electronic form web-based application software	Тохируулах боломжтой цахим хэлбэрийн вэб програм хангамж	An application software program designed as an Internet-based information system intended to replace paper forms by electronically collecting and recording all types of patient clinical information, investigation results, and treatment data. It is a generic system which can be used in healthcare by configuration of workflows, metadata, and data lifecycles; and by integration into electronic medical record (EMR) systems using standard protocols. The electronic forms are intended to provide predefined workflow, input, search, and display functionalities, typically to manage a particular treatment or condition [e.g., hyposensitization (allergy desensitization), cleft lip].	I
3067	60111	Magnetic cell separation system	Соронзон эсийг тусгаарлах систем	A assembly of devices intended to process heterogeneous human cell preparations (e.g., bone marrow aspirates, peripheral blood cell preparations, semen) to separate cells of specific characteristics (e.g., specific cell types or subpopulations like stem cells or cytokine secreting cells, apoptotic spermatozoa) using magnetic bead conjugates that recognize specific cell characteristics. Cells that are magnetically labelled are retained in a magnetic field in a column, while other (unlabelled) cells pass through. It typically includes a magnet or a processing unit (including software), tubing sets, a buffered washing solution, and specific reagents with magnetic bead suspension.	I

3068	60112	Magnetic cell separation system processing unit	Соронзон эсийг салгах системийг боловсруулах нэгж	A mains electricity (AC-powered) device that is a component of a magnetic cell separation system designed to magnetically separate specific cell types or subpopulations from heterogeneous human cell preparations. It is a programmable device typically consisting of pumping/agitating mechanisms, a magnet, valves, bag hangers and a user display screen. It functions in combination with a magnetizing reagent, a buffered washing solution and a tubing set to separate the target cell population by retention in a magnetic field. The cells are typically used in regenerative medicine (e.g., cardiovascular, haematogenic) or disease treatment (e.g., oncology). This is a reusable device.	I
3069	60171	Corpus cavernosum dilator, reusable	Корпус каверноз өргөсгөгч, дахин ашиглах боломжтой	A non-sterile, hand-held, manual surgical instrument designed to dilate the corpora cavernosa of the penis prior to the insertion of a penile prosthesis. The device is rod-like in design and typically made of metal (e.g., stainless steel); it is available in a set of graduated sizes that are applied in succession. This is a reusable device.	I
3070	60264	Multiple physiological parameter simulation kit	Олон физиологийн параметрийн симуляцийн хэрэгсэл	A collection of portable devices intended to imitate a variety of physiological parameters [e.g., electrocardiogram (ECG), noninvasive blood pressure (NIBP), pulse rate, temperature, and haemoglobin oxygen saturation (SpO2)] and conditions in order to test and calibrate patient monitoring and recording equipment, check patient cable continuity, or train healthcare providers. It typically includes a programming unit with a digital display, an ECG attachment unit, a SpO2 simulation unit, and connection cables. This device is intended to be used by a healthcare provider in a clinical setting.	I

3071	60272	Hearing aid neck induction loop, wireless input	Сонсголын аппаратын хүзүүний индукцийн гогцоо, утасгүй оролт	A portable, battery-powered device worn around the neck intended to receive sound from an audio source [e.g., mobile (cellular) telephone] wirelessly (e.g., via Bluetooth) and transfer it via an audio frequency magnetic field to a hearing aid with an induction coil (i.e., bypassing the hearing aids microphone) when it is switched to the "T" or ‘’MT’’ position, in order for the hearing aid user to hear (e.g., telephone conversation, music) more clearly. It typically consists of small active amplifier with a wire loop worn around the neck. It may also include a microphone for hands-free telephone conversation.	I
3072	60273	Hearing aid neck induction loop, passive	Сонсголын аппаратын хүзүүний индукцийн гогцоо, идэвхгүй	A portable, passive device worn around the neck intended to receive sound from an audio source [e.g., mp3 player] via a wire (e.g., 3.5mm Jack plug) and transfer it via an audio frequency magnetic field to a hearing aid with an induction coil (i.e., bypassing the hearing aids microphone) when it is switched to the "T" or ‘’MT’’ position, in order for the hearing aid user to hear (e.g., music) more clearly. It typically consists of an input cable leading to a small amplifier with a wire loop worn around the neck whereby power is received from the audio source device and does not require batteries.	I
3073	60274	Hearing aid neck induction loop, active	Сонсголын аппаратын хүзүүний индукцийн гогцоо, идэвхтэй	A portable, battery-powered device worn around the neck intended to receive sound from an audio source [e.g., mp3 player] via a wire (e.g., 3.5mm Jack plug) and transfer it via an audio frequency magnetic field to a hearing aid with an induction coil (i.e., bypassing the hearing aids microphone) when it is switched to the "T" or ‘’MT’’ position, in order for the hearing aid user to hear (e.g., music) more clearly. It typically consists of an input cable leading to a small active amplifier with a wire loop worn around the neck.	I
3074	60310	Body infrared reflective phototherapy skin patch	Биеийн хэт улаан туяаны цацруулагч фото эмчилгээний арьсны наалт	A skin patch intended to reflect naturally emitted infrared energy back into the body, with a reduced range of wavelength (phototherapeutic stimulation of the skin), to assist one or more of the following therapeutic outcomes: wound healing, pain relief, improved energy, improved sleep, reduced cravings, and general wellbeing. It can be applied as a single, double or multiple patch(es). This is a single-use device.	I

3075	60333	Ventilator tester, line-powered	Агааржуулагч шалгагч, шугамаар ажилладаг	A mains electricity (AC-powered) device intended to give a detailed performance of a ventilator by collecting and processing pressure, flow, and oxygen (O2) concentration measurements. It will typically measure additional parameters (e.g., temperature, barometric pressure), perform leak tests and be used for simulation purposes (with or without a test lung) to train healthcare personnel. It typically consists of an electronic unit with a digital/graphical display, appropriate pneumatic line connections, computer connections (for external control/recording). It may be capable of additional general-purpose applications and is intended to be used by a healthcare provider in a clinical setting.	I
3076	60335	Ventilator test system	Агааржуулагчийн туршилтын систем	An assembly of devices intended to give a detailed performance of a ventilator by collecting and processing pressure, flow, and oxygen (O2) concentration measurements. It will typically measure additional parameters (e.g., temperature, barometric pressure), perform leak tests and be used for simulation purposes (with or without a test lung) to train healthcare personnel. It is consists of an battery-powered electronic unit typically with a digital or graphical display, appropriate pneumatic line connections, a flowmeter, computer connections (for external control/recording) and may include a test lung. It is intended to be used by a healthcare provider in a clinical setting.	I
3077	60351	Skin surface sampling kit	Арьсны гадаргуугаас дээж авах иж бүрдэл	A collection of non-sterile devices intended to be used to obtain a coherent specimen of the upper layers of the skin’s stratum corneum to enable its microscopic examination, typically to facilitate the diagnosis of dermatological lesions and disorders. It consists of an adhesive mediator (e.g., cyanoacrylate) and flexible slides which are applied to the skin for skin surface stripping. This is a single-use device.	I

3078	60353	General physical examination set	Ерөнхий биеийн үзлэгийн багц	A collection of hand-held devices, battery-powered but may include manual, intended to be used by a physician to help perform parts of a general physical examination of a patient [i.e., ear/nose/throat (ENT) and ophthalmic examinations, blood pressure measurements, temperature] commonly conducted in a primary care setting. The devices (e.g., aneroid sphygmomanometer, otoscope, ophthalmoscope, electronic thermometer) are typically housed within a line-powered charging station (e.g., desktop, wall-mounted) or carry case, which may include accessories (e.g., ear specula, spare light bulbs). This is a reusable device that may contain some disposable devices.	I
3079	60356	Rectal/colonic irrigation nozzle, reusable	Шулуун гэдэсний/ бүдүүн гэдэсний усалгааны цорго, дахин ашиглах боломжтой	An invasive luminal device intended to be inserted into the rectum and/or colostomy site for the administration of irrigation fluid into the rectum and/or large intestines during a rectal irrigation, colonic lavage, enema, and/or colostomy site irrigation procedure. Available in a variety of designs, it may be referred to as a cone, tip, speculum, or rectal catheter, and may include an inflatable balloon for retention. This is a reusable device.	I
3080	60364	Buckwheat-husk-filled bed mattress	Сагаган хальсаар дүүргэсэн орны матрас	A large, durable, fabric case filled with buckwheat husks (also known as buckwheat hulls) designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie, rest and sleep and intended to distribute body weight over a large surface area, typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. It is available in various sizes and may be used to treat musculoskeletal, nervous, and digestive disorders, and physical injuries that cause paralysis or prevent patient mobilization. This is a reusable device.	I

3081	60371	Nasal air filter	Хамрын агаар шүүгч	A device intended to be applied to the nose to filter micro-particles such as pollen, dust, and microorganisms from air inspired through the nose. It consists of a fabric filtering material (e.g., within a nose bud or in the form of a mask) designed to be inserted into the nostrils or placed in front of the nostrils/nose. It is intended for use in the home or a clinical setting (e.g., by an allergy sufferer, or occupationally exposed person). This is a single-patient, reusable device.	I
3082	60374	Laryngeal airway introducer	Хоолойн амьсгалын замыг нэвтрүүлэх	A non-sterile device intended to aid insertion of a laryngeal airway into the pharyngeal cavity of a patient while reducing or eliminating the need for finger manipulation within the mouth. It is typically in the form of a metal blade with a handle and may be mounted onto the laryngeal airway during insertion. This is a reusable device intended to be sterilized prior to use.	I
3083	60376	Endotracheal tube stabilization rod	Дотор хоолой тогтворжуулах саваа	A non-sterile device intended to be used to facilitate exchange of an in situ laryngeal airway for an endotracheal tube (ETT) by stabilizing the position of the inserted ETT as the laryngeal airway is withdrawn. It typically consists of a semi-flexible rod which functions as an extension of the ETT during the exchange. This is a reusable device intended to be sterilized prior to use.	I
3084	60385	Atrial septal defect sizing plate	Тосгуурын таславчийн согогийн хэмжээг тодорхойлох хавтан	A sterile, plastic plate containing a series of holes of varying diameters intended to be used to measure the diameter of an inflated sizing balloon of a cardiac catheter to assist in determining the size of an atrial septal defect. It is typically used during transcatheter closure of the defect by positioning the balloon within the defect, recording the amount of fluid required to fill the balloon to the size of the defect, then refilling the balloon outside the body and passing it through the various holes of the plate to determine the diameter. This is a single-use device.	I

3085	60393	ENT cartilage cutter	Чих хамар хоолойн мөгөөрсний таслагч	A portable, manual surgical instrument intended to cut a harvested cartilage specimen (e.g., tragus-derived autograft) to an accurate predetermined thickness for patient implantation during an ear/nose/throat (ENT) procedure (e.g., middle ear surgery). It typically consists of an adjustable cutting assembly with a handle, base, and thickness dial used in conjunction with a removable ENT cartilage cutter blade. This is a reusable device intended to be sterilized prior to use.	I
3086	60398	Cervical spine immobilization head ring surgical adaptor	Умайн хүзүүний нурууг хөдөлгөөнгүй болгох толгойн цагираг мэс заслын адаптер	A non-sterile metallic device intended to be used to help stabilize the head and neck for surgery on the cervical spine by acting as a connector between a cervical spine immobilization head ring and a multi-jointed framework that is attached to an operating table. It is available in different forms depending on whether the patient is to be supported in a supine or prone position. This is a reusable device.	I
3087	60399	Ultrasound scar strip	Хэт авианы сорви тууз	A non-sterile, ultrasound-reflective strip intended to be applied to a patient's unbroken skin surface to protect scar tissue (which has an elevated ultrasound absorption rate) from overheating/burning during therapeutic procedures involving ultrasound. It typically consists of a flexible band of foam intended to be adhered to the skin using an included adhesive tape. This is a single-use device.	I
3088	60403	Buckwheat-husk-filled chair cushion	Сагаган хальсаар дүүргэсэн сандлын дэр	A fabric case filled with buckwheat husks (also known as buckwheat hulls) intended to be placed on the seat of a chair to distribute an occupant's body weight over the surface of the buttocks, typically to relieve pressure points for comfort and to prevent pressure sores. It is available in various sizes and shapes including chair pad and ring-hole cushions. This is a reusable device.	I
3089	60415	Insulin infusion cannula introducer	Инсулин дусаах суваг нэвтрүүлэх төхөөрөмж	A non-sterile, hand-held, mechanical device intended to aid introduction of a cannula/needle subcutaneously into fatty tissue for use with an insulin infusion pump. It typically consists of a small housing that chambers the cannula and a triggered release mechanism for automated insertion of the cannula/needle into tissues. It is intended for use in the home. This is a reusable device.	I

3090	60416	Ultrasonic blood flowmeter transducer electronic-signal simulator	Хэт авианы цусны урсгал хэмжигч хувиргагч электрон дохионы симулятор	A portable instrument intended to be used to mimic the electrical output of an ultrasonic blood flowmeter transducer to test an ultrasonic blood flowmeter and/or transducer cable. It typically includes an exposed piezoelectric crystal which when rubbed produces a Doppler signal response in the connected flowmeter. It is intended to be used by a healthcare provider (i.e., clinical technician) in a clinical setting.	I
3091	60422	Gel-filled bed mattress	Гель дүүргэсэн орны матрас	A large, durable, fabric case filled with various densities of foam that support a gel structure, designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie, rest, and sleep, and intended to distribute body weight over a large surface area typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. This is a reusable device.	I
3092	60425	Dressing-supportive lower-body garment	Хувцаслах-дэмжих биеийн доод хэсэг	A piece of clothing (e.g., leggings, shorts) intended to be worn on the hips/leg(s) where there is a wound/injury (e.g., burn, postoperative, skin condition) to cover and support a dressing. It is constructed from synthetic material (e.g., nylon/elastane) and is typically worn as an under garment. It is available in various sizes for daily use in the home or healthcare facility. This is a reusable device.	I
3093	60426	Dressing-supportive upper-body garment	Хувцаслах-дэмжих дээд биеийн хувцас	A piece of clothing (e.g., long-sleeved, short-sleeved, single-sleeve top) intended to be worn on the torso/upper body where there is a wound/injury (e.g., burn, postoperative, skin condition) to cover and support a dressing. It is constructed from synthetic material (e.g., nylon/elastane) and is typically worn as an under garment. It is available in various sizes for daily use in the home or healthcare facility. This is a reusable device.	I
3094	60447	Surgical power tool maintenance adaptor	Мэс заслын цахилгаан хэрэгсэл засвар үйлчилгээ адаптер	A device intended to connect a surgical power tool (e.g., pneumatically or electrically driven motors, turbines, or attachments) to a maintenance device (i.e., maintenance unit or lubricant container) during maintenance/lubrication of the surgical power tool. It is typically a metal attachment designed to connect a specific type of tool and maintenance device together.	I

3095	60448	Capsular tension ring inserter	Капсул суналтын цагираг оруулагч	A non-sterile hand-operated surgical instrument intended for the implantation of a capsular tension ring (CTR) into the crystalline lens capsular bag during intraocular lens (IOL) surgery (e.g., cataract extraction). It typically consists of a tubular distal tip with internal hooking wire connected to a proximal plunger mechanism, whereby the CTR is hooked and retracted into the tip, the tip inserted into the eye, and the CTR deployed using the plunger. This is a reusable device intended to be sterilized prior to use.	I
3096	60449	Embolic protection filtering catheter	Эмболиос хамгаалах шүүлтүүр катетер	A flexible tube with a distal filter intended for temporary, percutaneous introduction within a blood vessel (e.g., aortic arch) during a cardiovascular procedure, to provide protection from cerebral and/or pulmonary embolism by filtering emboli while maintaining blood vessel patency; some types provide a working channel for additional interventional devices; it is not intended for use in the coronary or cerebral vasculature. The filter expands upon deployment and imparts an outward radial force on the luminal surface of the blood vessel to facilitate stability and full filtering; the emboli may be captured or deflected. This is a single-use device.	I
3097	60458	Visual input/output switching adaptor	Визуал оролт/гаралтыг солих адаптер	A mains electricity (AC-powered) device intended to be used to manage the distribution of four digital visual interface (DVI) video sources to four DVI peripheral devices. It is typically used during endoscopic, microsurgical or open surgical procedures in an operating room (OR) or clinic to switch DVI-D (DVI-digital) compatible video signals from video capture sources (e.g., endoscope-/microscope-cameras, multi-purpose digital medical camera, surgical video camera, ultrasonic devices) to output devices (e.g., monitors, transmitters or encoding devices).	I

3098	60459	Proximal interphalangeal joint prosthesis, modular	Проксимал фаланга хоорондын хамтарсан протез, модульчлагдсан	A sterile, implantable artificial substitute for the proximal interphalangeal (PIP) joint(s) of the hand (finger) which typically has been damaged by rheumatoid, degenerative, or traumatic arthritis. The device typically consists of proximal and distal metal (e.g., titanium) stems, which may be coated with a material (e.g., hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth, for insertion into the prepared phalanges of the joint. The stems may have articulating surfaces or there may be separate metal [e.g., cobalt-chrome (Co-Cr)] and/or plastic (e.g., polyethylene) articulating surface components. Dedicated tools for implantation may be included.	I
3099	60463	Carbon dioxide gas cartridge	Нүүрстөрөгчийн давхар ислийн хийн хайрцаг	A small, sealed cylinder containing pressurized carbon dioxide (CO_2) gas intended to be inserted into a parent device (e.g., an antishock unit, a tourniquet unit, a mechanical intracorporeal lithotriptor, or a cryo-unit) where the cylinder is perforated to release the gas, which typically serves as a source of power or as a refrigerant. This is a single-use device.	I
3100	60466	Cardiovascular implant implantation tool base	Зүрх судасны суулгац суулгах хэрэгслийн суурь	A plate-like device intended to function as a sturdy support (base) for the holder/implantation tool of a cardiovascular implant (e.g., biologic-polymer aorta graft, heart valve bioprosthesis). It may be made of plastic and/or metallic material and includes means (e.g., slots, posts) for temporary attachment of the holder/implantation tool to enable vertical positioning and/or loading during the procedure. This is a reusable device intended to be sterilized prior to use.	I
3101	60470	Pressure-management bandage, silicone	Даралт зохицуулах боолт, силикон	A non-sterile piece of material containing silicone intended to be worn over pressure-point areas of the body to help prevent the development of, and/or treat, pressure and friction sores. It is available in various shapes (e.g., concave shapes for the ball of the foot, heel or elbow, tubular forms for the ankle, pads for the sacrum, and sheets or strips for other areas of the body) and sizes, and may be used in a healthcare facility or in the home. This is a single-patient, reusable device.	I

3102	60475	Haemorrhoid therapy dressing	Геморрой эмчилгээний боолт	A substance (e.g., liquid, spray or ointment) intended to be applied to haemorrhoidal tissue to reduce the symptoms associated with haemorrhoids (i.e., swelling, pain, and/or itching). It typically includes natural active ingredients (e.g., lanolin, lavender extract, and/or menthol), and is intended for use in the home or healthcare facility. After application, this device cannot be reused.	I
3103	60486	Surgical instrument battery insertion guide	Мэс заслын багажийн батерейг оруулах гарын авлага	A non-sterile device intended to protect a sterile, battery-powered surgical instrument during insertion of a non-sterile battery such that the sterility of the surgical instrument is maintained; it may be intended for use preoperatively and/or during surgery. It is typically a shaped template which is designed to fit and cover the profile of the battery insertion port. This is a reusable device intended to be sterilized prior to use.	I
3104	60487	Ambulance stretcher, electrohydraulic	Түргэн тусламжийн дамнуурга, цахилгаан гидравлик	A battery-powered device consisting of a platform mounted on a wheeled frame, intended for use by emergency medical services (EMS) primarily to facilitate easy transport of a recumbent patient to and from ambulance vehicles (e.g., automobiles, aircraft, boats), whilst allowing the operator to raise and lower the platform using powered switches. It has an electrically-powered hydraulic undercarriage (e.g., X-frame) which can raise/lower the patient and is collapsible for ambulance loading; ambulance-mounted locking/docking devices may be included. The patient platform is typically hydraulically adjustable.	I
3105	60488	Ambulance stretcher loader	Түргэн тусламжийн дамнуурга ачигч	A battery-powered, hydraulically-operated device designed to be installed within an ambulance to support the loading and unloading of an ambulance stretcher, to improve the safety and ease of patient transfer to and from the ambulance. It is typically a semi-automated docking/locking, lifting, and conveying mechanism that may include additional guides and adaptors.	I
3106	60489	Ambulance stretcher docking device	Түргэн тусламжийн дамнуурга залгах төхөөрөмж	A device designed to be installed within an ambulance to facilitate the manual docking and locking of an ambulance stretcher to an ambulance, and secure the stretcher during transportation. It consists of a docking point(s) that may include a manual lifting/guiding mechanism.	I

3107	60490	Video camera surgical microscope system	Видео камерын мэс заслын микроскопын систем	An assembly of noninvasive devices intended to transmit detailed, magnified, video images from a surgical site (non-specific) to a monitor to facilitate visualization of the surgical site by the surgeon; it may include recording equipment for teaching applications. It typically includes a fibreoptic telescope, illumination hardware, video camera, positioning arm, appropriate hardware/cabling, and may include recording unit, monitor and transportation cart.	I
3108	60491	Surgical microscope video camera, sterilizable	Мэс заслын микроскопын видео камер, ариутгах боломжтой	An optical device intended to be used as part of a video camera surgical microscope system to send magnified images of a surgical site, via a camera and appropriate hardware, to a monitor to facilitate visualization of the surgical site by the surgeon or for teaching applications. It is typically a housing containing a distal lens, fibreoptic cabling, and an illumination port. It is intended to be fixed (using a positioning arm) at an appropriate distance from the surgical site (e.g., 25-75cm), and is not intended to contact the patient. This is a reusable device intended to be sterilized prior to use.	I
3109	60492	Surgical microscope video camera, non-sterilizable	Мэс заслын микроскопын видео камер, ариутгагддаггүй	A non-sterile optical device intended to be used as part of a video camera surgical microscope system to send magnified images of a surgical site, via a camera and appropriate hardware, to a monitor to facilitate visualization of the surgical site by the surgeon or for teaching applications.. It is typically a housing containing a distal lens, fibreoptic cabling, and an illumination port. It is intended to be fixed (using a positioning arm) at an appropriate distance from the surgical site (e.g., 25-75cm), and is not intended to contact the patient. This is a reusable device after appropriate cleaning.	I
3110	60506	Pulmonary function testing kit	Уушигны үйл ажиллагааг шалгах иж бүрдэл	A collection of non-sterile devices intended to be used in conjunction with pulmonary function analysis equipment to perform a pulmonary function test. It may include a breathing mouthpiece, filter (intended to reduce contamination of parent device), and a nose clip. This is a single-use device.	I

3111	60509	Nitrous oxide gas cartridge	Азотын ислийн хийн хайрцаг	A small sealed cylinder containing pressurized nitrous oxide (N_2O) gas intended to be inserted into a parent device (e.g., cryosurgical system) where the cylinder is perforated to release the gas, which typically serves as a refrigerant (Joule-Thomson effect). This is a single-use device.	I
3112	60543	Hearing aid wax guard	Сонсголын аппаратын лав хамгаалалт	A device intended to shield the sound outlet of a hearing aid receiver (speaker) to prevent debris (e.g., wax, sweat) from entering. It typically consists of a plastic or metal perforated cover or gauze that may be changed periodically. Attachment and removal device may be included.	I
3113	60579	Luer-ended blood collection tube spike	Luer төгсгөлтэй цус цуглуулах хоолойн баяжуулалт	A device intended to be used during patient blood collection to facilitate transfer of a clinical blood specimen from blood collection tubing or a needle to a blood specimen receptacle (e.g., evacuated blood collection tube, adapted syringe). It is designed to be fitted to a blood collection tube holder, where it connects to the tubing or needle via a Luer connection at one end, and penetrates an evacuated blood collection tube at the other end for blood collection. This is a single-use device.	I
3114	60608	Body-orifice ultrasound imaging transducer cover, basic	Биеийн нүхний хэт авианы дүрс хувиргагчийн бүрээс, үндсэн	A sheath intended to be used as a physical barrier for protection against the effects of environmental exposure (e.g., body fluids, gliding creams) and/or to maintain the required hygienic level of an ultrasound imaging system transducer (probe) used in natural body orifices (e.g., vagina, rectum, oesophagus) during an ultrasound examination; it has no additional functionality. This is a single-use device.	I
3115	60635	Electrocardiographic electrode connector	Электрокардиографийн электродын холбогч	A small clip designed to enable an electrical connection between an electrocardiographic electrode and an electrocardiographic lead wire. It is typically made of plastic materials, with a metallic part to provide electrical connection, and can be manually applied to a dedicated area of a disk-like electrode that is placed on the patient’s skin, with a socket at the other end for a plug on the lead. This is a reusable device.	I

3116	60660	Nitrile examination/treatment glove, non-powdered, antimicrobial	Нитрил үзлэг/эмчилгээний бээлий, нунтаггүй, нянгийн эсрэг үйлчилгээтэй	A device made of nitrile intended as a protective barrier when worn on the hands of healthcare providers during patient examination/treatment or for other sanitary purposes; it includes an antimicrobial or antiviral agent/properties to reduce viable-microbe transmission/exposure and its inner surface is not covered with powder. The device is used mainly as a two-way barrier to protect patient/staff against contaminants and risk of allergy to latex. It will have appropriate characteristics regarding tactility/comfort of use, and should provide appropriate physical properties (e.g., strength, elasticity), and uniformity of dimensions. This is a single-use device.	I
3117	60661	Carboxymethylcellulose sodium/polymer denture adhesive, zinc-containing	Карбоксиметилцеллюлоз натри/полимер хиймэл шүдний цавуу, цайр агуулсан	An adhesive compound composed of carboxymethylcellulose sodium and a polymer (e.g., polyvinyl methylether maleic acid salt), that contains zinc (i.e., has a zinc salt), intended to be used to stabilize a removable prosthesis in the mouth, particularly a denture, by adhering the prosthesis to the oral mucosa. The compound is typically applied to the base of a denture before it is inserted in the mouth. After application, this device cannot be reused.	I
3118	60709	Draping incontinence liner	Шээс задгайруулж буй доторлогоо	A non-sterile padded sheet intended to cover and protect a device/piece of furniture (e.g., wheelchair, bed, sofa) occupied by an incontinent person by catching and retaining urine. It is typically a multi-layered piece of fabric containing a mixture material types [e.g., synthetic (e.g., polypropylene fabric) and plant-derived materials (e.g., cellulose)] that is available in a variety of sizes. It is intended to be used in the home or healthcare facility. This is a single-use device.	I

3119	60711	Home CPAP unit	Гэрийн CPAP нэгж	A portable, mains electricity (AC-powered) device, which may include rechargeable batteries, intended to assist noninvasive ventilation (i.e., without use of an artificial airway) using continuous positive airway pressure (CPAP) during spontaneous respiration, primarily to treat adult patients affected by obstructive sleep apnoea (OSA); it may also be intended to treat snoring. It is a small desktop unit, which may include a built-in humidifier, intended to be used with a separate nose/mouth mask; the airway pressure may be automatically adjusted by a sensor to help provide optimal CPAP (auto CPAP). The device is intended for use in the home but may also be used in healthcare facilities.	I
3120	60712	Home BPAP unit	Гэрийн BPAP нэгж	A portable mains electricity (AC-powered) device, which may include rechargeable batteries, intended to assist noninvasive ventilation (i.e., without use of an artificial airway) using bi-level positive airway pressure (BPAP) during spontaneous respiration for adult/child (non-infant) patients affected by obstructive sleep apnoea (OSA), and/or to treat patients with conditions requiring respiratory assistance in the home [e.g., chronic obstructive pulmonary disease (COPD)]. It is a small desktop unit, which may include a built-in humidifier, intended to be used with a separate nose/mouth mask. The device is intended for use in the home but may also be used in healthcare facilities.	I
3121	60715	Enteral feeding pole	Энтерал тэжээлийн туйл	A freestanding pole with an elevated hook intended to enable an enteral feeding container, and associated tubing, to be suspended for the delivery of nutrient fluids to a patient; it is not intended for intravenous (IV) fluid administration. It may be of tabletop or floor-standing design, and may allow for an enteral feeding pump to be attached for powered, rate-controlled feeding. It is intended for use in the home and healthcare facility.	I

3122	60723	Medical image management system	Эмнэлгийн зургийн удирдлагын систем	A computerized system designed to electronically receive, collect, store, and display a broad range of medical imaging/video data, including patient demographics, and to distribute the data within and between healthcare facilities to facilitate data organization, reporting, and sharing (e.g., teaching). The system consists of combined hardware (e.g., network switch, controller) and server/client software (e.g., as a turnkey solution) intended to relay image data from a broad range of imaging/audiovisual devices (e.g., endoscopic camera, ultrasound imaging system, radiography digital imaging system) to off-the-shelf devices [e.g., monitors, personal computers (PCs)].	I
3123	60734	Needle guide, reusable	Зүү хөтлөгч, дахин ашиглах боломжтой	A non-powered device designed to direct a sharp needle (not included) into its proper course when performing a clinical and/or surgical procedure. Dedicated needle guides are available for many different procedures such as plastic guides for urethral injections, stainless steel guides for transrectal prostate biopsy, guides for ultrasound-guided percutaneous punctures and nerve blocks, guides for electromagnetic device tracking systems, and guides for stereotactic breast biopsies. This is a reusable device intended to be sterilized/disinfected prior to use.	I
3124	60741	Spinal rod bending system	Нуруу нугасны гулзайлтын систем	An assembly of mains electricity (AC-powered) computerized devices intended to be used to determine the relative locations of internal spinal fixation system implants (e.g., screws, hooks) for the production of bend instructions to shape a spinal rod during spinal fusion surgery. It primarily consists of an electronic spatial measurement system used with manual tools to determine implant location and to take measurements; computer/software to convert implant locations to a series of bend instructions; and an orthopaedic rod bender to execute bend instructions. This is a reusable device.	I

3125	60742	Electric orthopaedic bender	Цахилгаан ортопед нугалагч	A mains electricity (AC-powered) surgical instrument, which may include a rechargeable battery, designed to bend orthopaedic devices, typically those for implantation (e.g., orthopaedic rods, bone fixation plates), to an appropriate anatomical shape. The bending process is typically performed within the operating room (OR), inside or outside of the operative sterile field. This is a reusable device.	I
3126	60758	Endoscope air/water valve, single-use	Дурангийн агаар/усны хавхлага, нэг удаагийн	A device intended to be fitted to an endoscope air/water channel to enable the operator to control inflow of medical gases [i.e., air, carbon dioxide (CO_2)] for insufflation, and/or water for irrigation, whilst preventing backflow. It is in the form of an attachable inflow valve with closed and open settings. This is a single-use device.	I
3127	60759	Endoscope suction valve, single-use	Дурангийн сорох хавхлага, нэг удаагийн	A device intended to be fitted to an endoscope suction channel to enable the operator to control suction whist preventing inflow of air. It is in the form of an attachable valve that controls (opens/closes) the suction channel. This is a single-use device.	I
3128	60823	Bed linen set	Орны цагаан хэрэглэлийн багц	A collection of bedding materials including a bed sheet, pillow cover, and a duvet cover all typically made of a thin non-woven or textile laminate intended to create a physical barrier to soiling and cross-contamination. It does not include antimicrobial properties. This set is intended to be used by one patient for a limited time, without laundering, and then discarded (e.g., incinerated).	I
3129	60840	Therapeutic ultrasound impedance matching pad	Эмчилгээний хэт авианы эсэргүүцэлтэй тохирох дэвсгэр	A sterile device intended to be used in conjunction with a therapeutic ultrasound system (e.g., ultrasonic cough stimulation system) to decrease the amount of ultrasound energy lost between the therapeutic ultrasound system transducer and the patient, and reduce patient contact with the transducer/handpiece. It typically consists of a pouch filled with gel/fluid intended to be interposed between the patient and transducer to eliminate air and reduce impedance mismatching; it is intended for extracorporeal use. This is a single-use device.	I

3130	60902	Pacing lead implantation adaptor	Pacing хар тугалга суулгацын адаптер	A small, sterile device intended to be connected to the proximal end of a compatible cardiac pacing lead containing a lumen for over-guidewire implantation, to enable flushing of the lumen (typically with heparinized saline) and aid insertion of a guidewire during implantation. The distal end of the device is intended to connect to the pacing lead; the proximal end is intended to act as both a Luer connector, for attachment of a syringe, and a wire guide for guidewire insertion; it is not intended to be implanted. This is a single-use device.	I
3131	60908	Sterilization container liner	Ариутгалын савны доторлогоо	A non-sterile device intended to be used to line containers used for steam or solvent sterilization (e.g., trays, wraps, pouches) to absorb moisture and protect the container's finish. It is typically made of an absorbent, non-woven material or paper. This is a single-use device.	I
3132	60916	Incontinence hospital bed	Шээс задгайрах эмнэлгийн ор	A mains electricity (AC-powered) bed intended to improve comfort and/or hygiene for a hospitalized incontinent patient by clearing excrement in situ. The bed (i.e., a framework on wheels with a headboard, footboard, and siderails) includes a waste management system that typically consists of a suction cup which protrudes through the mattress and conforms to the patient’s perineum; relevant tubing; and an air/water pumping unit with heated water reservoir, waste container, and controls. Waste (i.e., faeces, urine, and waste water) is intended to be removed through suction; a supply of water and air is used to clean and dry the patient after waste removal.	I

3133	60917	Bed incontinence system	Орны шээс задгайрах систем	An assembly of devices intended to be fitted to a home bed and used by an incontinent/bed-bound patient for the removal of excrement and subsequent washing during bed occupancy. It includes a mains electricity (AC-powered) air/water pumping unit with heated water reservoir; waste container; and controls connected via relevant tubing to a suction cup, which conforms to the patient's perineum. It may also include a bed washing/suction hose for general body cleaning, and a shaped mattress to accommodate the system tubing. Waste (i.e., faeces, urine, and waste water) is intended to be removed through suction; a supply of water and air is used to clean and dry the patient after waste removal.	I
3134	60920	Infant-hammock bed mattress	Нярайн гамактай орны матрас	A foam-filled case with a central meshed/netted depression/hole designed to be placed in a cot/crib/bassinet/bed/incubator and to cradle a young infant during sleep/rest, and can used for phototherapy, transportation and burns patients. It is available in various shapes and sizes and is not intended to be placed on an existing mattress. The breathable netting is intended to help reduce the risk of infant injuries/disorders such as suffocation, flat head (plagiocephaly), sudden infant death syndrome (SIDS), pressure sores, and hyperthermia. This is a reusable device.	I
3135	60925	Virtual-display rehabilitation system, non-supportive, clinical	Виртуал дэлгэцийн нөхөн сэргээх систем, дэмжлэг үзүүлэхгүй, клиник	An assembly of devices intended to be used in a clinical setting to provide non-gravity-compensating rehabilitation therapy for neuromuscular/musculoskeletal conditions affecting the back/trunk/limbs (e.g., impaired limb function) through patient interaction with a videogame-like display prompting repeated motion of a body part (e.g., arm, hand, leg) for functional improvement; it may also provide performance feedback. It does not provide weight support and is based on motion-sensing devices [e.g., battery-powered patient-worn infrared (IR) glove, motion tracking heel pad, movement tracking camera, software] that communicate wirelessly to provide a virtual-display interface.	I

3136	60926	Virtual-display rehabilitation system, non-supportive, home-use	Виртуал дэлгэцийн нөхөн сэргээх систем, дэмжихгүй, гэрийн хэрэглээ	An assembly of devices intended to be used both in a home and clinical setting and to provide non-gravity-compensating rehabilitation therapy for neuromuscular/musculoskeletal conditions affecting the back, trunk, and/or limbs (e.g., impaired limb function) through patient interaction with a videogame-like display prompting repeated motion of a body part (e.g., arm, hand, leg) for functional improvement; it may also provide performance feedback. It does not provide weight support and is based on motion-sensing devices [e.g., patient-worn infrared (IR) glove, motion tracking heel pad or camera, software] that communicate to provide a virtual-display interface.	I
3137	60964	Medical product temperature point indicator, thermochemical	Эмнэлгийн бүтээгдэхүүний температурын цэгийн үзүүлэлт, термохимийн	A small device intended to be attached to a bag containing a temperature-sensitive medical product (e.g., blood, pharmaceutical) to indicate, by non-reversible chemical colour change, when a predetermined temperature is reached and exceeded, potentially making the product non-viable. It typically consists of a self-adhesive plastic container that holds a patch of heat-sensitive material which is activated when the container is attached to the product of interest. This is a single-use device.	I
3138	60969	Passive spinal distractor	Нурууны идэвхгүй анхаарал сарниулагч	An arcuate-shaped device intended to be positioned under the spine of a patient lying in the supine position to relieve spinal symptoms (e.g., pain, spasm, stiffness) and/or deformity (e.g., kyphosis). It is in the form of a shaped orthopaedic device (e.g., moulding, frame with nodules) used to encourage decompression of the spinal elements by gravity. It is normally available [non-prescription] over-the-counter (OTC) for use in the home. This is a reusable device.	I

3139	61023	Eye heat therapy pack, reusable	Нүдний дулаан эмчилгээний багц, дахин ашиглах боломжтой	A device intended to be placed over closed eyes to apply heat/steam for the treatment of meibomian gland dysfunction (MGD), dry eye syndromes, blepharitis (inflammation of the eyelid), and other related ocular conditions. It is typically in the form of a mask-shaped fabric envelope which either: 1) contains a heat-retaining substance intended to be heated in a microwave oven prior to use; or 2) includes an envelope(s) filled with a material that produces an exothermic chemical reaction when activated. This is a reusable device.	I
3140	61050	Dental bib	Шүдний хавчаар	A non-sterile device intended to be worn by a patient during a dental examination or treatment procedure to function as a barrier to soiling and cross-contamination. It typically consists of a shaped piece of natural and/or synthetic material intended to be fastened around the neck and cover the front side of the upper body. This is a single-use device.	I
3141	61071	Salivary irrigation catheter	Шүлсний усалгааны катетер	A sterile, thin flexible tube intended to noninvasively access the salivary ducts for the introduction of fluids (e.g., saline, pharmaceutical solution) to treat conditions of the salivary duct [e.g., irrigation to remove salivary stones (calculi)]. This is a single-use device.	I
3142	61111	Intracranial catheter holder	Гавлын доторх катетер эзэмшигч	A small, sterile device designed to secure an intracranial catheter (e.g., intracerebral sensor catheter, intracerebral infusion/drainage catheter, epidural sensor catheter) to the skin; it may also be used as a marker for the planned depth of the catheter insertion. It typically has a gripping mechanism which creates a right angle bend in the tube, and is intended to be held in place with sutures. This is a single-use device.	I
3143	61121	Wound irrigation nozzle	Шархыг усжуулах цорго	A device intended to be fitted to a microbial water purification filter to direct a flow of purified water for wound washing/irrigation, especially of an immunocompromised patient, and is also typically intended to assist in protecting the filter from retrograde contamination; it is not primarily intended for intraoperative use. It is typically designed as a moulded nozzle (e.g., shower rose). This is a single-use device.	I

3144	61122	Autoinjector data transmitter	Автоинжектор өгөгдөл дамжуулагч	A mains electricity (AC-powered) electronic device designed to transmit data from a compatible electronic autoinjector, to collect patient treatment compliance information and to trace device performance and error events. Data can be transmitted wirelessly or by USB connection to a computer running the appropriate software. It is intended for use in the home or healthcare facility and is powered via a step-down transformer or by a USB connection.	I
3145	61152	Cochlear implant system waterproof kit	Чихний дунгийн суулгацын систем ус нэвтэрдэггүй иж бүрдэл	A collection of non-sterile devices intended to be used with a cochlear implant system to protect the externally worn components in wet and/or rugged environments (e.g. for swimming, showering). The set typically consists of a sound processor case, waterproof microphone, and a connection cable. This is a reusable device.	I
3146	61153	Infusion/transfusion trolley	Судсаар хийх/цус сэлбэх тэргэнцэр	A cart designed to accommodate the equipment necessary for infusion/transfusion of intravenous products. The trolley will typically have stands, hangers, drawers, and/or shelves to hold equipment and tubing during the treatment process. It may be equipped with additional elements such as trays, needle, and/or catheter containers and clinical waste bins. It is intended to be used in clinical environments where transfusion/infusion procedures occur [e.g., a blood transfusion centre, intensive care unit (ICU), and accident and emergency (A&E) unit].	I
3147	61155	Electromagnetic bed mattress overlay	Цахилгаан соронзон орны матрас давхарга	A mains electricity (AC-powered) device intended to be placed on a mattress, under a fitted bed sheet, to help induce sleep, alter mood, and/or reduce stress by creating a low frequency alternating electromagnetic field. It may also be intended to stimulate muscle contraction to help reduce surrounding visceral and subcutaneous fat. It consists of a mattress overlay with integral conductor, and a remote control unit. This is a reusable device.	I

3148	61157	Female wearable urinal, single-use	Эмэгтэй хүний өмсдөг шээс, нэг удаагийн	A non-sterile, urine drainage device designed for women that typically consists of a moulded collection cup, which may be partially inserted into the vagina, and a flexible tube attached to a collector that is specially formed to securely fit around the female genitals to provide a route to channel urine, via a tube, into a collection bag. This device provides an alternative to inserting a catheter through the urethra, especially when difficulty is encountered in insertion or retention. It may be used to treat urinary incontinence or for non-ambulatory patients. This is a single-use device.	I
3149	61164	Oral/upper respiratory tract specimen collection kit	Амны хөндийн/амьсгалын дээд замын сорьц цуглуулах иж бүрдэл	A collection of devices intended exclusively for professional use for the collection, and preservation and/or transport, of a saliva/oral, nasal, nasopharyngeal, and/or oropharyngeal specimen for subsequent laboratory analysis [e.g., nucleic acid technique (NAT), microbiological culture]. The kit consists of a non-suctioning sampling/collection tool(s) [e.g., swab, brush, spatula, saliva collection mouthpiece/funnel] and a covered specimen receptacle with or without an additive/medium [e.g., preservative solution, microbiological medium (e.g., Amies, Stuart, viral transport/inactivation medium)]. This is a single-use device.	I
3150	61211	Manual orthopaedic bender, single-use	Гараар ортопед гулзайлгагч, нэг удаагийн	A sterile, manually-operated surgical instrument designed to bend orthopaedic devices, typically those for implantation (e.g., orthopaedic rods, bone fixation plates), to an appropriate anatomical shape. The bending process is typically performed within the operating room (OR), inside or outside of the operative sterile field. The device may be hand held or table mounted. This is a single-use device.	I
3151	61228	External cuff/pad connection tubing	Гаднах ханцуйвч / дэвсгэр холбох хоолой	A length of flexible tube intended to be used to deliver air and/or fluid from a pump to a noninvasive, patient-contact pad, pack or cuff. It may be intended for use with a specific type of assembly (e.g., circulating-air/fluid thermal therapy system, electronic sphygmomanometer, venous compression system). It is typically made of synthetic material and may be intended to be permanently attached to the system control unit. This is a reusable device.	I

3152	61238	Vascular anastomosis coupling approximator	Судасны анастомозын холболтын ойролцоолуулагч	A non-sterile, hand-held manual surgical instrument designed for use during vascular (including microvascular) anastomosis surgical procedures to hold the rings of a vascular anastomosis coupler while the blood vessel ends are secured to the rings, and then to approximate the rings to create the anastomosis. It is made of metal. This is a reusable device intended to be sterilized prior to use.	I
3153	61239	Vascular anastomosis coupling kit, reusable	Судасны анастомоз холбох хэрэгсэл, дахин ашиглах боломжтой	A collection of devices intended to be used to implant a vascular anastomosis coupler [not included] to join vascular (including microvascular) structures by the coupling of two ring-shaped components. It consists of two or more items typically amongst: a coupling approximator for holding the rings of the coupler during approximation, a dedicated forceps/everter for placing the ends of the blood vessel over the pins of the coupler, a vessel diameter guide (sizer), and a sterilization tray. This is a reusable device.	I
3154	61240	Vascular anastomosis coupling sizer	Судасны анастомозын холболтын хэмжээс	A non-sterile, hand-held manual surgical instrument designed for use during vascular (including microvascular) anastomosis surgical procedures to estimate the outer diameter of a blood vessel for selection of the appropriate size vascular anastomosis coupler. It is made of metal. This is a reusable device intended to be sterilized prior to use.	I
3155	61246	Surgical implant/trial-implant/sizer holder, single-use	Мэс заслын имплант/туршилтын суулгац/хэмжээ эзэмшигч, нэг удаагийн	A hand-held manual surgical instrument designed to connect to and hold an implant (e.g., bone screw, bone graft), trial implant, or implantable device sizer/template (e.g., glenoid defect sizer, hearing implant template) to facilitate guidance, gauging/sizing, and/or monitoring of the held device during orthopaedic or ear/nose/throat (ENT) surgery. The instrument is typically made of metal or synthetic polymer materials and is typically constructed in the form of a long shaft with a handle at the proximal end and a device holding/fixation mechanism at the distal end. This is a single-use device.	I

3156	61247	Orthopaedic cement restrictor sizer	Ортопедийн цемент хязгаарлагч хэмжигч	A non-sterile, hand-held manual orthopaedic surgical instrument designed to be used to measure the diameter of the medullary canal of a bone (e.g., femur, humerus) in order to select the appropriate size of an orthopaedic cement restrictor implant. It may be in the form of a trial prosthesis attached to an inserter, or a rod with a measuring gauge at the distal end. This is a reusable device intended to be sterilized prior to use.	I
3157	61251	External circulating-fluid core temperature regulation system pad, single-use	Гадны эргэлтийн шингэний үндсэн температурыг зохицуулах системийн дэвсгэр, нэг удаагийн хэрэглээ	An underlay, overlay, or wrap(s) through which temperature-regulated fluid is circulated, as part of an external circulating-fluid core temperature regulation system, intended to elevate and/or lower a patient's core body temperature, typically in the operating room (OR), intensive care unit (ICU), or a recovery unit. The underlay/overlay is available in a variety of lengths, widths, and thicknesses to accommodate body size and application (e.g., adult/paediatric, full-/partial-body). It is intended to be used by a healthcare professional in a clinical setting. This is a single-use device.	I
3158	61364	Medical gas flowmeter, Bourdon gauge	Эмнэлгийн хийн зарцуулалт хэмжигч, Бурдон хэмжигч	A device intended to measure and regulate the flow of a medical gas [e.g., oxygen (O_2), carbon dioxide (CO_2), nitrous oxide (N_2O), helium/oxygen gas mixture (heliox), medical air] during various procedures (e.g., therapeutic administration, anaesthesia, insufflation during surgery). It is a fixed-orifice device with an adjustable valve that controls the gas flow rate, and includes a calibrated Bourdon tube pressure gauge intended to measure pressure and display it as flow rate. It will be calibrated to a specific medical gas and have a dedicated flow rate range, therefore some types may be dedicated to a specific patient group (e.g., neonate, infant, adult) or clinical use.	I

3159	61365	Medical gas flowmeter, Thorpe tube	Эмнэлгийн хийн зарцуулалт хэмжигч, Торп хоолой	A device intended to measure and regulate the flow of a medical gas [e.g., oxygen (O2), carbon dioxide (CO2), nitrous oxide (N2O), helium/oxygen gas mixture (heliox), medical air] during various procedures (e.g., therapeutic administration, anaesthesia, insufflation during surgery). It consists of an upright tube containing a float, which rises and falls in relation to gas flow, and a distal valve (compensated flowmeter) to control gas flow rate; some types include a pressure gauge/regulator. It will be calibrated to a specific medical gas and have a dedicated flow rate range, therefore some types may be dedicated to a specific patient group (e.g., neonate, infant, adult) or clinical use.	I
3160	61366	Medical gas flowmeter, dial-type	Эмнэлгийн хийн зарцуулалт хэмжигч, залгах төрөл	A device intended to regulate the flow of a medical gas [e.g., oxygen (O2), carbon dioxide (CO2), nitrous oxide (N2O), helium/oxygen gas mixture (heliox), medical air] during various procedures (e.g., therapeutic administration, anaesthesia, insufflation during surgery). It has a pre-calibrated adjustable flow selection dial intended to control the gas flow rate; it is not intended to provide flow rate measurements. It will be calibrated to a specific medical gas and have a dedicated flow rate range, therefore some types may be dedicated to a specific patient group (e.g., neonate, infant, adult) or clinical use.	I
3161	61367	Urethral self-catheterization assistive guide, single-use	Шээсний сувгийг өөрөө катетержуулах туслах гарын авлага, нэг удаагийн хэрэглээ	A non-surgically invasive device intended to assist a female patient during self-insertion of a urethral drainage catheter (not included). It is typically a moulded plastic device intended to be inserted into the vagina, to allow correct alignment of a guide which directs the catheter to the urethral opening; it does not include antimicrobial materials. This is a single-use device.	I
3162	61368	Urethral self-catheterization assistive guide, reusable	Шээсний сувгийг өөрөө катетержуулах туслах гарын авлага, дахин ашиглах боломжтой	A non-surgically invasive device intended to assist a female patient during self-insertion of a urethral drainage catheter (not included). It is typically a moulded plastic device intended to be inserted into the vagina, to allow correct alignment of a guide which directs the catheter to the urethral opening; it does not include antimicrobial materials. This is a single-patient, reusable device.	I

3163	61378	Endoscopic guidewire holder	Дурангийн чиглүүлэгч утас эзэмшигч	A device intended to be used during diagnostic and/or therapeutic endoscopy of the gastrointestinal (GI) tract [e.g., endoscopic retrograde cholangiopancreatography (ERCP)] to hold a guidewire in place at a given insertion depth through the working channel of an endoscope. It is typically a small plastic device intended to be attached to the proximal end of the endoscope, with a feature to hold the guidewire in place (e.g., j-slot). This is a single-use device.	I
3164	61406	Optical surgical navigation device tracking system camera aligner	Оптик мэс заслын навигацийн төхөөрөмж хянах системийн камер тохируулагч	A mains electricity (AC-powered via a parent device) component of an optical surgical navigation device tracking system intended to be used as a repositioning device for the system's camera [e.g., infrared (IR) light camera] during computer assisted surgery (CAS). It consists of a robotic multi-axial drive mechanism that receives instrument motion information from the camera allowing moving/repositioning/pointing of the camera with regard to the movement of the patient and instruments.	I
3165	61428	Endodontic lavage system	Эндодонт угаах систем	An assembly of devices intended to enable lavage, through simultaneous irrigation and aspiration, of a prepared root canal to remove debris/bacteria. It is intended to be connected to the central vacuum line and includes appropriate vacuum line/syringe adaptor(s), tubing, and one or more suction cannulae (typically disposable). The suction cannulae are intended to draw irrigation solution to the apex of the root canal to flush the entire canal.	I
3166	61435	Intracranial/compartmental-pressure monitor calibrator/cable	Интракраниаль/тасалгааны даралт хэмжигч калибратор/кабель	An electronic device intended to generate a reference baseline for the standardization of readings of intracranial pressure (ICP) and/or pressure in a muscle compartment, and to transfer the readings from a catheter (i.e., intracerebral sensor or compartmental-pressure catheter) to a pressure monitor. It consists of a small unit with input and output cables to make electrical connections between a catheter connection cable and the patient monitor. This is a reusable device.	I

3167	61453	Surgical sponge-counting tray	Хагалгааны хөвөн тоолох тавиур	A device in the form of a tray intended to be used in the operating room (OR) to store and maintain the count of surgical sponges/swabs during a surgical procedure, typically to prevent these items from being inadvertently left in a patient. It is a tray with individual sections; it may be weighed following sponge/swab collection to calculate blood loss. This is a single-use device.	I
3168	61454	Surgical tray stand	Мэс заслын тавиурын тавиур	A mobile, freestanding device intended to be used during a surgical procedure onto/into which a surgical tray (e.g., surgical sponge-counting tray) can be placed. It consists of a metal vertical upright on a wheeled base with a top surface that may allow for integration of dedicated surgical trays. This is a reusable device.	I
3169	61468	Manual orthopaedic cement mixer, single-use	Гарын авлагын ортопед цемент холигч, нэг удаагийн	A sterile hand-operated device designed to mix polymethylmethacrylate (PMMA) powder with methylmethacrylate monomer in order to produce polymerizing bone cement. It typically consists of a vessel with attached/attachable mixing blades where the cement is mixed. It may include a plunger unit used to transfer the mixed cement from the vessel into an applicator prior to the surgical procedure, and a suction tube to enable connection to a separate fume extraction device. It is typically operated outside of the sterile surgical field and is not intended to contact the patient. This is a single-use device.	I
3170	61482	Dental cement trial	Шүдний цементийн туршилт	A non-sterile substance intended to be used as a guide for selecting a good aesthetic match to the final dental cement to be used in a dental restoration of appliance procedure. It is typically supplied as a water-soluble paste consisting of glycerin, mineral fillers and pigments that does not cure and is intended to be washed off from the restoration and preparation surface prior to final cementation. After application, this device cannot be reused.	I
3171	61490	Eye patch	Нүдний наалт	A device intended to be used to close/cover one or both eyes, for the purpose of protecting the eye after a procedure or as part of an ophthalmic therapeutic intervention. It is made of a synthetic or biological material. This is a single-use device.	I

3172	61497	Endoscope hood	Дурангийн бүрээс	A sterile, Hevea-latex, bell-shaped device designed to be placed onto the distal end of an endoscope (e.g., oesophagoscope) to facilitate the removal of a foreign body. The device everts to create a dome around the (sharp) foreign object to protect the wall of the viscus as the endoscope/foreign body is extracted. This is a single-use device.	I
3173	61504	Penis wearable urinal	Бэлэг эрхтэнд өмсдөг шээсний суваг	An externally-worn urine drainage device intended to be worn over the penis of an incontinent male patient to channel urine, via a tube, into a collection bag. It consists of a urinary incontinence penis attachment (e.g., sheath or adhesive port), tubing, and a wearable urine collection bag. The device is intended to provide an alternative to inserting a catheter through the urethra, especially when difficulty is encountered in insertion or retention, and eliminates the need for groin and waist straps. It may be used to treat urinary incontinence or for non-ambulatory patients. This is a single-use device.	I
3174	61508	Core-body mechanical weight exerciser	Үндсэн биеийн механик жинтэй дасгал хийдэг	A fixed mechanical exercise apparatus intended to enable a patient with a lumbar spine injury to perform controlled extension, contraction, and/or twisting movements of the lumbar/thoracic spine back region and the abdomen, for testing and rehabilitation. It typically consists of a metal frame containing a lever or pulley-cable system that may incorporate changeable weights, and a seat with appropriate supports which allows for resistive movement via connected adjustable weights.	I
3175	61511	Endoscopic spray catheter, single-use	Дурангийн шүршигч катетер, нэг удаагийн	A flexible tube intended to be used with an endoscope (e.g., colonoscope) to administer fluids (e.g., dyes for mucosal colouration) in spray form. The spray is produced by an atomizing nozzle at the distal end of the device. This is a single-use device.	I
3176	61575	Skin marking pen, single-use	Арьс тэмдэглэгээний үзэг, нэг удаагийн хэрэглээ	A dedicated pen intended to be used to delineate areas on the skin surface of a patient (e.g., to outline surgical incision sites, for dermatology applications) utilizing non-toxic ink. It is typically a felt-tip pen which may include a sterile disposable ruler. This is a single-use device.	I

3177	61576	Skin marking pen, single-use, non-sterile	Арьс тэмдэглэгээний үзэг, нэг удаагийн, ариутгагдаагүй	A non-sterile, dedicated pen (typically a felt-tip pen) intended to be used to delineate areas on the skin surface of a patient (e.g., for dermatology applications) utilizing non-toxic ink. This is a single-use device.	I
3178	61577	Skin marking sticker	Арьс тэмдэглэгээний наалт	A hypoallergenic adhesive device (sticker) intended to be affixed to a patient's skin (e.g., forehead) as a point of reference (marker), typically for use with external diagnostic imaging techniques. This is a single-use device.	I
3179	61596	Moist-cold upper-body garment	Биеийн дээд хэсэгт чийгтэй хүйтэн хувцас	A piece of clothing (e.g., t-shirt) which includes a cold therapy solution (e.g., alcohol based) intended to be worn on the torso/upper body to provide moist cooling. It is intended to be soaked in the solution which works in combination with the moisture-wicking fabric materials of the garment to facilitate localized cooling through evaporation; it does not include antimicrobial materials/agents. This is a reusable device.	I
3180	61601	Total metatarsophalangeal joint prosthesis, modular	Нийт metatarsophalangeal хамтарсан протез, модульчлагдсан	An implantable substitute for the metatarsophalangeal (MTP) joint of the foot (toe) intended to repair both articulating surfaces with matching metatarsal and phalangeal components, typically to treat degenerative or traumatic arthritis, hallux valgus, hallus rigidus, and/or an unstable or painful MTP joint. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr)] and polymer materials and implantation may be performed with or without bone cement. Disposable instruments associated with implantation may be included.	I
3181	61606	House dust mite barrier bed mattress cover	Гэрийн тоосны хачигнаас хамгаалах орны матрас бүрээс	A device made of soft textile materials shaped to fit over a bed mattress, to protect the mattress and prevent cross-contamination, intended to contain house dust mites (HDM) and their allergen-containing faecal droppings by the tight weaving and stitching of the product; it does not use any other chemical or agent. The device can be laundered for cleaning. This is a reusable device.	I

3182	61651	Rectal/colonic lavage support kit	Шулуун гэдэс / бүдүүн гэдэсний угаалга туслах хэрэгсэл	A collection of non-sterile, noninvasive devices intended to be used in conjunction with a rectal and/or colonic irrigation system to support the introduction of an irrigation solution into the rectum/colon. It includes non-powered, supportive devices typically intended to assist introduction/securing of irrigation devices; it does not include a colonic/rectal irrigation nozzle/catheter. This is a reusable device.	I
3183	61658	Radiological imaging system transport kit	Рентген шинжилгээний системийн тээврийн хэрэгсэл	A collection of devices intended to support the transport and utilization of a portable or mobile radiological imaging system (e.g., a portable/mobile ultrasound system). It typically consists of portable or mobile containers, a stand, and sometimes items such as a kickstand, tripod, and holder for mounting/securing mobile system components (e.g. imaging display unit, probes).	I
3184	61666	Surgical container holder	Мэс заслын савны тавиур	A non-sterile device intended to hold a container (e.g., jar, cup, beaker, vial, test-tube) during a surgical procedure to improve its stability and prevent overturning and spillage. It is typically a formed block with an appropriately shaped opening to accept a suitably sized container(s); it is not a test tube rack. This is a single-use device intended to be sterilized prior to use.	I
3185	61679	Thoracic electrical impedance electrode array, single-use	Цээжний цахилгаан эсэргүүцэлтэй электродын массив, нэг удаагийн хэрэглээ	A noninvasive configuration of multiple electrodes (e.g., patches, belt-like) intended to be affixed to the thorax to perform continuous bioimpedance measurements for assessment of lung function (e.g., respiratory rate) or pulmonary conditions (e.g., atelectasis, pneumothorax, endotracheal tube misplacement) of a ventilated or spontaneous breathing patient; it is intended to be used in conjunction with a parent device [e.g., monitor, thoracic electrical impedance tomography (EIT) or segmentography system]. This is a single-use device.	I
3186	61694	Skin cleaning wipe	Арьс цэвэрлэх салфетка	A device consisting of an absorbent fabric pre-soaked in a liquid solution [e.g., with a detergent, alcohol, saline, hyaluronic acid (HA), plant extracts] intended for cleaning a localized body surface before a procedure or device application, and/or to maintain skin hygiene. It is commonly known as a wet wipe and is intended for use in the home or healthcare facility. This is a single-use device.	I

3187	61695	Skin-cleaning wipe, sterile	Арьс цэвэрлэх салфетка, ариутгасан	A sterile device consisting of an absorbent fabric pre-soaked in a liquid solution (e.g. a detergent, alcohol, saline) intended for cleaning a localized body surface before a procedure or device application, and/or to maintain skin hygiene. It is commonly known as a wet wipe and is intended for use in the home or healthcare facility. This is a single-use device.	I
3188	61700	Manual stander	Гарын авлагын тавиур	A manually-powered, mobile device designed to support and lift a disabled (paraplegic) patient to an upright standing position to provide the health benefits associated with standing (e.g., improved breathing, circulation, and flexibility); it is neither intended to facilitate gait nor assist standing transfer. It typically consists of a seat, sling and/or platform with appropriate supports (e.g., footplates, kneepads, chest pad), wheels, and a manual mechanical lifting mechanism whereby the patient is raised from a supine, prone, and/or seated position by themselves or with the assistance of a healthcare provider. It includes wheels for reorientation.	I
3189	61701	Pneumatic stander	Пневматик тавиур	A pneumatically-powered device designed to support and lift a disabled (paraplegic) patient to an upright standing position to provide the health benefits associated with standing (e.g., improved breathing, circulation, digestion, and flexibility); it is not intended to facilitate gait. It typically consists of a seat, sling and/or platform with appropriate supports (e.g., footplates, kneepads, chest pad), a compressed gas cylinder, and a pneumatic lifting mechanism to raise the patient from a supine, prone, and/or seated position to standing. It includes wheels for reorientation and may include a manual mechanism to allow the occupant a degree of mobility.	I

3190	61702	Electric stander	Цахилгаан тавиур	An electrically-powered device designed to support and lift a disabled (paraplegic) patient to an upright standing position to provide the health benefits associated with standing (e.g., improved breathing, circulation, digestion, and flexibility); it is neither intended to facilitate gait nor assist standing transfer. It typically consists of a seat, sling and/or platform with appropriate supports (e.g., footplates, kneepads, chest pad) and an electrically-powered lifting mechanism to raise the patient from a supine, prone, and/or seated position to standing. It includes wheels for reorientation.	I
3191	61703	Electric stander/exerciser	Цахилгаан зогсоол/дасгагч	An electrically-powered device designed to support and lift a disabled (paraplegic) patient to an upright standing position, and to enable the occupant to perform an exercise, to provide the health benefits associated with standing/exercising; it is neither intended to facilitate gait, provide patient mobility, nor assist standing transfer. It typically consists of a seat and/or platform with appropriate supports (e.g., footplates, kneepads, chest pad), an exercise mechanism (e.g., moveable handles with reciprocal leg movement) and an electrically-powered lifting mechanism to raise the patient from a supine and/or seated position to standing.	I
3192	61704	Manual stander/exerciser	Гарын авлагын зогсоол/дасгалчин	A manually-powered device designed to support and lift a disabled (paraplegic) patient to an upright standing position, and to enable the occupant to perform an exercise, to provide the health benefits associated with standing/exercising; it is neither intended to facilitate gait, provide patient mobility, nor assist standing transfer. It typically consists of a seat and/or platform with appropriate supports (e.g., footplates, kneepads, chest pad), an exercise mechanism (e.g., moveable handles with reciprocal leg movement), and a manual mechanical lifting mechanism; the patient is raised from a supine and/or seated position by themselves or with the assistance of a healthcare provider.	I

3193	61713	Laparoscopic access cannula seal, reusable	Дурангийн сувгийн битүүмжлэл, дахин ашиглах боломжтой	A small, noninvasive device intended to be fitted into the proximal end of a laparoscopic access cannula to create a seal between the cannula and an introduced laparoscopic instrument, for inhibition of insufflation gas leakage. It is intended to be fitted directly to the proximal end of the sleeve and is typically available in a variety of sizes appropriate for given sleeve/instrument diameters. This is a reusable device intended to be sterilized prior to use.	I
3194	61731	Spirometry/pulmonary function pressure tube	Спирометр / уушигны үйл ажиллагааны даралтын хоолой	A non-sterile plastic tube intended to conduct airflow pressure from a breathing mouthpiece to a parent device (e.g., spirometer) during pulmonary function testing (e.g., respiratory gas volume and flow). It is intended to function with a separate spirometry device and/or a pulmonary function analyser and is not intended to be integrated into a breathing circuit during respiration. A tube holder may be included as an accessory device. This is a reusable device intended to be cleaned/disinfected prior to use.	I
3195	61739	Corneal marker handpiece tip	Эвэрлэгийн тэмдэглэгээний гарны үзүүр	A sterile device intended to be fitted to a corneal marker handpiece to directly ink mark corneal tissue prior to an ophthalmic surgical procedure. It is typically a small device preloaded with ink. This is a single-use device.	I
3196	61740	Corneal marker handpiece	Эвэрлэгийн маркер гар багаж	A manually-operated instrument intended to be used with a disposable handpiece tip (not included) to ink mark corneal tissue prior to an ophthalmic surgical procedure. It is a pen-like device with a weighted, self-levelling mechanism intended to accept the ink-loaded tip; it may include a battery-powered fixation light intended to draw the patient’s focus during the marking procedure. It is not intended to directly contact the eye. This is a reusable device.	I
3197	61745	Head-worn bone-conduction hearing aid holder, reusable	Толгойд зүүсэн яс дамжуулагч сонсголын аппарат, дахин ашиглах боломжтой	A device intended to be fixed/worn on a patient’s head to hold a head-worn bone-conduction hearing aid. It may be adhered to the skin, magnetically held in place on the side of the head by an implantable magnet (not included), attached to existing clothing (e.g., hat) or worn like a headband. It may include dedicated devices (e.g., scale) used in the fitting process. This is a reusable device.	I

3198	61768	Catheter-exchange guidewire holder	Катетер солих чиглүүлэгч утас эзэмшигч	A sterile hand-held device intended for use during guidewire-assisted intravascular interventional procedures [e.g., percutaneous transluminal coronary angioplasty (PTCA)] to facilitate the exchange of one catheter for another (e.g., coronary angioplasty balloon catheter) while maintaining the position of the guidewire. It consists of a clip for mechanical attachment to part of the catheterization device set, and a magnetic channel through which the catheter/guidewire is passed to enable removal of the catheter while the metal guidewire is magnetically held in place. This is a single-use device.	I
3199	61792	Endoscope air/water valve, reusable	Дурангийн агаар/усны хавхлага, дахин ашиглах боломжтой	A device intended to be fitted to an endoscope air/water channel to enable the operator to control inflow of medical gases [i.e., air, carbon dioxide (CO_2)] and/or water whilst preventing backflow. It is in the form of an attachable valve with one or more settings such as closed, insufflation (allowing air/gas in), and irrigation/rinse (allowing water in). This is a reusable device intended to be reprocessed prior to use.	I
3200	61793	Endoscope suction valve, reusable	Дурангийн сорох хавхлага, дахин ашиглах боломжтой	A device intended to be fitted to an endoscope suction channel to enable the operator to control suction whist preventing inflow of air. It is in the form of an attachable valve that controls (opens/closes) the suction channel. This is a reusable device.	I
3201	61810	Multi-chamber venous compression system garment, reprocessed	Олон камерт венийн шахалтын системийн хувцас, дахин боловсруулсан	A non-sterile inflatable device in the form of a stocking, sleeve, or suit intended to be applied to the limbs externally to promote venous blood flow. As part of a compression system, the device applies pressure to the extremities through the sequential inflation of several chambers. The resulting increased venous blood flow may help to treat/prevent oedema, deep vein thrombosis (DVT) and pulmonary embolism (PE) in non-ambulatory patients or patients at risk. This is a previously used single-use device that has been processed for an additional single-use patient application.	I

3202	61812	Electrocardiographic lead set, reprocessed	Электрокардиографийн хар тугалганы багц, дахин боловсруулсан	A collection of noninvasive devices intended to conduct electrical signals from a patient's heart, via an electrode attached to the surface of the chest/limbs, to an electrocardiograph (ECG) machine or a patient monitoring system. It is designed as an insulated wire(s), which may additionally include a detachable or permanently attached electrode and/or cable with connector. Some types may be designed as a pre-configured array to assist electrode placement. This is a previously used single-use device that has been processed for an additional single-use patient application.	I
3203	61825	Tourniquet cuff, reprocessed	Чангалуур ханцуйвч, дахин боловсруулсан	A band-like device intended to be applied around an extremity (arm or leg) and connected to a tourniquet unit to apply a controlled pressure to restrict blood circulation and prevent normal blood flow to or from the distal area during a surgical intervention or following serious injury. The tourniquet unit is used to provide the pressure within the cuff and display the pressure applied. The cuff may comprise a dual-chamber allowing alternation of the pressure site to avoid tissue damage or necrosis. This is a previously used single-use device that has been processed for an additional single-use patient application.	I
3204	61848	Absorbent underpad, antimicrobial	Шингээгч доод дэвсгэр, нянгийн эсрэг үйлчилгээтэй	A flat piece of absorbent fabric material [e.g., non-woven polyethylene (PE), cellulose] intended to be placed on a surface (e.g., bed mattress, table, floor) and underneath a patient to absorb bodily fluids resulting from surgical procedures or incontinence. It includes a pharmaceutical antibacterial agent [e.g., silver (Ag)] and typically helps to eliminate unwanted odours. It is intended to be used in the healthcare facility and in the home. This is a single-use device.	I

3205	61850	Absorbent underpad, non-antimicrobial, single-use	Шингээгч доод дэвсгэр, нянгийн эсрэг үйлчилгээтэй, нэг удаагийн хэрэглээ	A flat piece of absorbent fabric material [e.g., non-woven polyethylene (PE), cellulose] intended to be placed on a surface (e.g., bed mattress, table, floor) and underneath a patient to absorb bodily fluids resulting from surgical procedures, childbirth and/or incontinence; it does not include an antimicrobial agent(s). It is intended to be used in the healthcare facility and in the home. This is a single-use device.	I
3206	61852	Metacarpophalangeal joint prosthesis, modular	Metacarpophalangeal хамтарсан протез, модульчлагдсан	A implantable artificial substitute for the metacarpophalangeal (MCP) joint(s) of the hand (finger) which typically has been damaged by rheumatoid, degenerative, or traumatic arthritis. It consists of multiple components made of metal [e.g., cobalt-chrome (Co-Cr)] and/or plastic (e.g., polyethylene) with stems and articulating surfaces. Dedicated tools for implantation may be included.	I
3207	61855	Lip wetting set	Уруул чийгшүүлэх иж бүрдэл	A collection of non-sterile devices intended to administer small quantities of water to the lips of a patient to prevent drying of the lips/mouth, typically prior to, during, or after invasive ventilation/surgery. It includes a fluid bag, tubing, and a patient-worn device intended to direct a small gravity-driven flow of water to the patient’s lips. This is a single-use device.	I
3208	61866	Inhaler dose sensor	Амьсгалах төхөөрөмжийн тун мэдрэгч	A small, non-sterile, battery-powered device intended to be attached to a portable inhaler [e.g., metered dose inhaler (MDI), dry powder inhaler (DPI), soft mist inhaler (SMI)] to detect when a dose of inhaled medication has been taken, and to transmit this data wirelessly to a separate device (e.g., smartphone with appropriate software) to evaluate dosing interval. It is typically used in conjunction with software that may, e.g., set reminders. This is a single-patient reusable device.	I

3209	61901	Medical printer paper	Эмнэлгийн принтерийн цаас	A thin sheet of fibrous material intended to be used to produce a hard copy of printed data/images generated by a medical device (e.g., laboratory instrument/analyser, electrocardiograph, x-ray imaging system, hospital printer). It is typically available as a continuous length of paper (e.g., roll or accordion) or as individual sheets of paper; some types are pre-treated with thermochromic ink for use with thermal printers. This is a single-use device.	I
3210	61906	Electronic surgical sponge-counter	Цахим мэс заслын хөвөн тоолуур	A hand-held battery-powered computerized device intended to be used in the operating room (OR) by professional staff to electronically maintain the count of surgical sponges/swabbing materials during a surgical procedure to prevent swabs from being inadvertently left in a patient. It typically has controls/keyboard, display and built-in bar-code reader, whereby packs of surgical sponges entering the surgical field are intended to be scanned in and counted out. It may include device for battery recharging or connection to a personal computer.	I
3211	61907	Hallux valgus metatarsophalangeal orthosis	Hallux valgus metatarsophalangeal orthosis	A prefabricated (non-customized) non-rigid, home-use device intended to be worn on the foot to help prevent and/or reduce hallux valgus deformity, thereby reducing walking pain and bunion formation. It is made of elastic fabric materials and may encompass only the metatarsophalangeal region or extend around the heel for tensioning. This is a single-patient reusable device.	I
3212	61908	Cardiac resuscitator, battery-powered	Зүрхний сэхээн амьдруулах, батарейгаар ажилладаг	A battery-powered external device designed for the application of rhythmic compression to the chest in the region of the heart to provide blood flow during treatment of cardiac arrest [cardiopulmonary resuscitation (CPR)]. It may be available in a variety of forms but includes a mechanical chest compressor (e.g., plunger-type), a battery-powered control unit, and patient straps/supports. The device is typically used as an adjunct to or substitute for manual external cardiac compression in cases where manual compression is not ideal, or to prevent fatigue and improve consistency (i.e., of force, rate).	I

3213	61929	Orthopaedic implant aiming/guiding block attachment tool	Ортопедийн суулгацыг чиглүүлэх/хөтөч блок холбох хэрэгсэл	A manually-operated surgical instrument intended to be used to attach an orthopaedic implant aiming/guiding block to an implant (e.g., orthopaedic plate) to facilitate implantation. This is a reusable device.	I
3214	61937	Shoe cover, non-conductive, sterile	Гутлын бүрээс, цахилгаан дамжуулахгүй, ариутгасан	A sterile device made of a non-conductive, non-woven synthetic fabric materials intended to be worn over the shoes of healthcare staff typically during a surgical procedure to maintain hygiene and prevent cross-contamination of microorganisms, body fluids, and particulate material between the patient and staff. This is a single-use device.	I
3215	61943	Surgical eye pressure shield	Мэс заслын нүдний даралтын хамгаалалт	A non-sterile device intended to cover and mechanically protect the eyes of a patient during surgery to prevent potential ocular pressure hazards/injury associated with surgery (e.g., resulting from inadvertent pressure being applied to the eye by healthcare professionals, equipment, or due to the orientation of the patient). It is designed as a rigid external eye shield (e.g., goggle like) intended to adhere to the face. This is a single-use device.	I
3216	61944	Guidewire holder	Хөтөч утас эзэмшигч	A sterile tubular device intended to be used for the storage and retrieval of one or more guidewires within the sterile field during a procedure. It is typically a long (approximately three metres) tube, that can be secured to surgical drapes, with a funnel-shaped proximal end and sometimes a sealed, vented distal end. This is a single-use device.	I
3217	61952	Frame/rail/pole device holder	Хүрээ / төмөр зам / шон төхөөрөмж эзэмшигч	A clamp-like device intended to be affixed to a bed frame, standard rail or standing pole [e.g., intravenous (IV) pole] to provide a means to fix/mount a medical device (e.g., suction/irrigation pump, display monitor), or other non-medical device, to the support. It typically has a gripping profile that is compatible with the device it is intended to fit. This is a reusable device.	I

3218	62028	Antimicrobial bed linen set	Нянгийн эсрэг ор дэрний цагаан хэрэглэл	A collection of non-sterile devices including, but not limited to, a bed sheet(s), pillowcase, duvet cover and mattress cover, intended to be used to provide cover/protection to a bed and associated items. The components are treated/impregnated with an antimicrobial substance to control bacterial and fungal growth on the fabric and reduce the levels of house dust mites (HDM) and their allergen-containing faecal droppings. The device is typically made of a thin-textile or reinforced-paper material, to be used in the home or healthcare facility. This is a reusable device.	I
3219	62047	Tracheostoma shower shield	Tracheostoma шүршүүрийн бамбай	A non-sterile, waterproof, patient-worn device intended to cover a tracheal stoma or tracheostomy tube to prevent inhalation of water during showering. It is typically in the form of a waterproof bib worn around the patient’s neck. This is a reusable device intended for single-patient use.	I
3220	62054	Laboratory tubing welder	Лабораторийн хоолойн гагнуурчин	A mains electricity (AC-powered) device intended to make a sterile connection (weld) between two segments of plastic tubing (typically blood transfer tubing during blood/blood component processing applications) in a clinical laboratory setting. It is a tabletop device which includes a blade, realignment mechanism, heating element and clamps intended to enable tubing dissection/reconnection while maintaining a closed system (sterile fluid path). This is a reusable device.	I
3221	62062	Surgical irrigation tubing set, reusable	Мэс заслын усалгааны хоолойн багц, дахин ашиглах боломжтой	A collection of flexible, noninvasive, single-lumen tubing and associated items intended to provide a conduit to deliver a sterile irrigation solution (e.g., saline) from its source (e.g., gravity feed bag, feed pump) to a surgical cannula (not included) during a surgical procedure (endoscopy, laparoscopy); it is not intended to navigate through an anatomical lumen. The tubing set includes devices such as clamps, filters, spikes, and Y-piece connectors, and may in addition include an integrated manual pump (e.g., a squeeze bulb) or handpiece. This is a reusable device.	I

3222	62072	Orthodontic elastomeric appliance pusher	Ортодонтийн эластомер аппарат түлхэгч	A hand-held device intended to be used by laypersons to remove/apply orthodontic elastomeric appliances (e.g., inter-arch bands, inter-bracket chains) from/to orthodontic brackets. It is typically a thin plastic device with a hook on one end and a pusher on the other, intended to be used by a patient in the home (e.g., before and after eating or sleep). This is a single-use device.	I
3223	62095	Airway device cleaning utensil, invasive	Амьсгалын замын төхөөрөмжийг цэвэрлэх хэрэгсэл, инвазив	A non-sterile hand-held device intended to be used to clean an in situ airway device (e.g., indwelling tracheoesophageal speech valve, laryngeal airway). It is inserted into the central lumen of the device and typically rotated multiple times to remove organic matter (e.g., phlegm); it may also be used to clean an airway device ex situ (i.e., once it has been removed from the patient). It is in the form of a flexible or rigid handle with distal soft or stiff bristles, fibres or spines, or a swab; it may be used in the home or healthcare facility. This is a reusable device.	I
3224	62096	Tracheoesophageal speech valve irrigation device	Гуурсан хоолойн ярианы хавхлагын усалгааны төхөөрөмж	A non-sterile hand-held device intended to be used for the in situ washing of an indwelling tracheoesophageal speech valve by water irrigation to remove organic matter (e.g., phlegm). It is in the form of a water-fillable squeeze bulb with a distal nozzle that is inserted through the tracheostoma into the central lumen of the valve; it is intended to be used routinely by a patient in the home. This is a reusable device.	I
3225	62109	Endoscopic gastrointestinal stenosis dilator	Ходоод гэдэсний замын нарийсал өргөсгөгч дурангийн эмчилгээ	A sterile invasive device intended to be used to dilate or expand a narrowing lesion (e.g., oesophageal stricture, stenosis) in the lumen of the gastrointestinal [GI] tract, under endoscopic visualization. It is made of transparent synthetic polymer material and is available in various forms (e.g., a slender hollow tube through which is passed the endoscope before introduction into the GI tract, or a tapered cap applied to the distal end of the endoscope); the dilator is advanced through the lesion site with direct visualization through the endoscope. This is a single-use device.	I

3226	62127	Tracheoesophageal device introducer	Гуурсан хоолойн аппаратыг нэвтрүүлэх төхөөрөмж	A hand-held manual instrument designed to assist in the non-surgical placement of a tracheoesophageal device (e.g., speech valve, speech valve occluder, fistula gauge/dilator). It is a synthetic polymer holder onto which the tracheoesophageal device is distally mounted and directed to the target site through the tracheostoma. It is intended to be used by the patient at home (for non-indwelling devices) and clinician in the healthcare facility (for indwelling devices). This is a single-use device.	I
3227	62137	Medical/surgical interventional tube/cable securement clip, single-use	Эмнэлгийн/мэс заслын хөндлөнгийн хоолой/кабель бэхэлгээний хавчаар, нэг удаагийн	A device intended to hold, position, and organize medical/surgical interventional tubing (e.g., arterial/venous lines, gas lines, drainage catheters, irrigation tubing) or cables to an equipment, drape or gown; it is not intended to affix the tubing to the patient directly. It is typically designed as a clip or a block with clips. This is a single-use device.	I
3228	62145	Endoscope working-channel valve, single-use	Дурангийн ажлын сувгийн хавхлага, нэг удаагийн	A device in the form of a small attachment intended to be fitted to the working channel (including biopsy port) of an endoscope to enable access for, and/or exchange of, an endoscopic device while minimizing leakage of liquids and gasses during an endoscopic procedure. Also referred to as a seal, it may be Luer formatted and include features to allow for simultaneous irrigation/biopsy or suction via the working channel. This is a single-use device.	I
3229	62146	Tracheoesophageal speech test catheter	Гуурсан хоолойн ярианы тестийн катетер	A non-sterile flexible tube intended to conduct exhaled air from the tracheostoma of a laryngectomized patient, via the nasal cavity, to the oesophagus as part of an oesophageal insufflation test to assess the patient’s ability to produce tracheoesophageal voice and the potential benefit of speech valve placement (via creation of a tracheoesophageal fistula). Disposable devices intended to assist catheter introduction/function (e.g., tracheostoma connector, adhesive tape) may be included. This is a single-use device.	I

3230	62154	Tracheostomy base plate, single-use	Трахеостомийн суурь хавтан, нэг удаагийн	A non-sterile flexible device designed to adhere to the skin around a tracheostoma to function as an anchor for a tracheostomal device (e.g., shower shield, hands-free speech valve). It is a synthetic polymer annular disc with a slightly protruding hollow centre designed to accept the intended device; it typically includes an adhesive backing. This is a single-use device.	I
3231	62155	Tracheostomy base plate, reusable	Трахеостомийн суурь хавтан, дахин ашиглах боломжтой	A non-sterile flexible device designed to adhere to the skin around a tracheostoma to function as an anchor for a tracheostomal device (e.g., shower shield, hands-free speech valve). It is made of synthetic polymer and/or metal materials and is available in various forms (e.g., an annular disc with a slightly protruding hollow centre designed to accept the intended device, or a ring on a vertical support); it may include an adhesive backing or be intended to adhere with a separate medical adhesive or tape. This is a reusable device.	I
3232	62162	Abortion suction system manual aspirator	Үр хөндөлтийн сорох системийн гарын авлагын аспиратор	A non-sterile, manual, syringe-like device intended to be used in conjunction with an intrauterine cannula (not included) to aspirate fluid from the uterus for treatment of incomplete abortion, first trimester abortion, and/or for menstrual regulation; it may also be intended for endometrial biopsy. It includes a plunger with syringe barrel and appropriate connectors, seals, and valves, whereby fluid is intended to be aspirated directly into the barrel (i.e., not via a collection bottle). This is a reusable device after appropriate cleaning/disinfection.	I
3233	62175	Removable ambulatory appliance skin-adherent patch	Амбулаторийн зөөврийн аппаратны арьсанд наалддаг наалт	A patch with a pressure-sensitive adhesive coating designed to be adhered to the skin to temporarily secure/affix a removable patient-worn ambulatory appliance (e.g., tracheostomy base plate, insulin infusion pump) to the body. It is made of synthetic polymer materials [e.g., polyurethane] and is available in various designs (e.g., round, slot, spiral, with a central opening to fit the wearable appliance). It is not intended to adhere an external aesthetic restoration prosthesis (e.g., artificial nose, breast prosthesis) to the skin surface. This is a single-use device.	I

3234	62207	Urethral catheter introduction sheath, reusable	Шээсний сүвийн катетер нэвтрүүлэх бүрээс, дахин ашиглах боломжтой	A rigid device intended to be inserted into the urethra of a female patient to enable atraumatic insertion of a urinary catheter to access the bladder; it may also be intended to allow access for a urinary instrument (e.g., urethrascopes). It typically includes an obturator and appropriate fluid management valves. This is a reusable device intended to be sterilized prior to use.	I
3235	62229	Test tube/reservoir cap	Туршилтын хоолой/усан сангийн таг	A covering intended to be used to seal the top of a test tube or reagent reservoir to protect the contents against contamination from the external environment, and to prevent spillage and/or evaporation of contents during transportation or processing. The top of the cap may be penetrable to enable injection or aspiration of contents. This is a single-use device.	I
3236	62234	Home-use dental cement	Гэрийн хэрэглээний шүдний цемент	A non-sterile substance intended to be used as a dental cement/restorative material by a layperson in the home for immediate and temporary replacement of a lost filling or cementation of a dental crown, and to relieve pain, until a dental professional is accessed. It may be either a multicomponent material intended to be pre-mixed before application or a single-component paste; it is intended to be applied directly to the tooth and harden in situ. After application, this device cannot be reused.	I
3237	62239	Tongue-training sleep-disordered breathing orthosis	Хэл сургах нойрны эмгэг амьсгалын orthosis	A removable, custom-made, intraoral device intended to improve tongue function/positioning through retraining of the tongue, by prohibiting certain tongue positions, primarily to alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea). It is intended to fit onto the upper dental arcade and is made from polymer and metal materials manufactured to meet the specifications of an individual patient. This is a single-patient reusable device.	I
3238	62260	Air-conduction hearing aid acoustic tube	Агаар дамжуулагч сонсголын аппаратын акустик хоолой	A small tubular detachable device designed to conduct sound waves from an air-conduction hearing aid [e.g., behind-the-ear (BTE)] to an earmould to convey acoustic output to the eardrum. It is made of soft synthetic polymer materials. This is a reusable device.	I

3239	62265	Cranial orthosis	Гавлын ясны ортоз	A custom-made helmet-like device intended to be worn on the head of an infant with an abnormal head shape (e.g., due to plagiocephaly, brachycephaly, scaphocephaly), or after craniosynostosis repair surgery, to apply pressure to the cranium and improve cranial symmetry/shape during growth over a period of months. It is made of durable materials (e.g., plastic, solid foam) and is designed with patient-specific characteristics (e.g., size, shape) based on head measurements (e.g., clinical pictures, 3-D scans, casts). It is typically worn during daily activities and sleep. This is a single-patient device that can be reapplied during the treatment period (reusable) before being discarded.	I
3240	62270	Enteral feed fat-digestion cartridge	Өөх-задаргаатай хоол боловсруулах хайрцаг	A non-sterile, noninvasive device intended to be connected to an enteral feeding tube to digest (i.e., hydrolyse) the fat content in an enteral feeding solution as it passes through the device, typically used for patients unable to produce pancreatic fat digestive enzymes. It is a small plastic housing with connectors that contains a porous filter and the enzyme lipase. This is a single-use device.	I
3241	62285	Ambulance stretcher, pneumatically-assisted	Түргэн тусламжийн дамнуурга, пневматик тусламжтай	A power-assisted, manually-operated device consisting of a platform mounted on a wheeled frame, intended for use by emergency medical services (EMS) primarily to facilitate easy transport of a recumbent patient to and from ambulance vehicles (e.g., automobiles, aircraft, boats), whilst minimizing the effort required by the operator to raise the platform. It has an undercarriage fitted with pneumatic springs intended to raise/lower the patient, and is collapsible for ambulance loading; the pneumatic springs are intended to store energy (during lowering of the frame) to assist lifting; it does not include a power supply.	I
3242	62296	Liquid-crystal patient thermometer, reusable	Шингэн болор өвчтөний термометр, дахин ашиглах боломжтой	A device designed to measure a patient's skin, oral, rectal, or axillary (armpit) body temperature. It uses liquid-crystal sensors (usually formed from esters of cholesterol) that are sealed in a plastic band and appear to change colour at indicated temperatures. The device may be used in the home. This is a reusable device.	I

3243	62311	Oxygenator holder disinfection tubing	Хүчилтөрөгч эзэмшигчийн халдваргүйжүүлэлтийн хоолой	A collection of non-sterile flexible tubing intended to allow connection between an appropriate disinfector (e.g., container with disinfectant solution) and a holder of an oxygenator (e.g., of a cardiopulmonary bypass system), to enable flow of disinfectant solution through the holder. It is typically used for holders designed to channel fluids from a heat exchanger to the oxygenator; a pump is used to assist circulation of the disinfectant solution. This is a single-use device.	I
3244	62339	Catheter flush syringe connector	Катетер угаах тариурын холбогч	A sterile tubular device intended to connect to a syringe to channel a solution (e.g., sterile water) from the syringe into the proximal end of a catheter during catheter flushing. It contains a noncoring needle designed to be inserted into the catheter lumen for injection of the flushing solution. This is a single-use device.	I
3245	62342	Urethral catheter introduction sheath, single-use	Шээсний сүвийн катетер нэвтрүүлэх бүрээс, нэг удаагийн	A sterile, rigid device intended to be inserted into the urethra of a female patient to enable atraumatic insertion of a urinary catheter to access the bladder; it may also be intended to allow access for a urinary instrument (e.g., urethrascopes). It typically includes an obturator and appropriate fluid management valves. This is a single-use device.	I
3246	62346	Centrifuge tube counterbalance	Центрифугийн хоолойн тэнцвэржилт	A device in the form of a centrifuge tube intended to balance weight across a centrifuge rotor when processing uneven numbers of tubes or tubes containing different volumes of fluid. This is a reusable device.	I
3247	62356	Water jet knife system pump-cartridge	Усны тийрэлтэт хутганы систем насос-корт	A sterile, non-electrical component of a water jet knife system intended to be inserted into the system’s generator to pressurize a fluid medium, typically sterile saline, and conduct the resulting high-pressure stream to the system’s handpiece for soft-tissue cutting and submucosal injection during surgery. It is in the form of a plastic housing containing pistons mechanically powered by the generator; it includes a port for connection to the handpiece, which may facilitate changing of the handpiece intraoperatively. This is a single-use device.	I

3248	62365	Bed mattress/cover set	Орны матрас / бүрээсний багц	A collection of devices designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie and rest/sleep, and which may help to promote therapeutic postures. It typically consists of a bed mattress, mattress overlay/cover and wedge-shaped cushion which are typically made of knitted polyester, polyurethane foam, buckwheat husk or combinations of materials. This is a reusable device after appropriate cleaning.	I
3249	62379	Surgical instrument assist arm system, manually-adjusted	Мэс заслын багажны туслах гарын систем, гараар тохируулна	A manually-powered/-adjusted device assembly intended to be used to hold, maintain in a desired position, and enable positional adjustment of surgical and/or endoscopic instruments during an endoscopic examination/surgical procedure (i.e., during use). It typically consists of rigid or semi-rigid arms with joints, instrument holding and locking mechanisms, and a clamping mechanism for fixation to a stable object (e.g., the operating table) or is mounted on a mobile (on wheels) base.	I
3250	62393	Orthopaedic cement dispensing controller	Ортопедийн цементийн хуваарилах хянагч	A mains electricity (AC-powered), electromechanical, bench-top unit designed to drive orthopaedic bone cement through a connected hydraulic cement dispensing device (e.g., syringe, dispensing gun) during arthroplastic/osteosynthetic procedures (e.g., vertebroplasty, kyphoplasty). It may additionally be intended to regulate the temperature of the cement to help modulate its viscosity during delivery.	I
3251	62411	Ultrasound coupling pad holder	Хэт авианы холболтын дэвсгэр эзэмшигч	A non-sterile device intended to hold an ultrasound coupling pad (not included) over the distal end of a noninvasive therapeutic ultrasound system applicator during treatment. It is typically a small attachment with a window designed to support the coupling pad in place while not obstructing transmission of ultrasound. This is a reusable device.	I

3252	62426	External haemorrhage clamp	Гадны цус алдалтын хавчаар	A non-sterile, manually-adjusted, vice-like device intended to apply external pressure to a wound to rapidly arrest severe bleeding in an emergency situation (e.g., battlefield). It is typically of a screw-clamp design with a base plate and a wound compression disk, intended to be used with an appropriate wound contact dressing. It is primarily intended to control bleeding in anatomical areas where standard tourniquets cannot be used (e.g., inguinal, axilla, neck). This is a single-use device.	I
3253	62454	Medical tubing clip/clamp, permanent	Эмнэлгийн хоолойн хавчаар / хавчаар, байнгын	A non-sterile, small, metallic or plastic, clip-like device designed to irreversibly (permanently) compress a piece of medical device tubing to occlude its lumen and stop the flow of material within; it is not intended for patient-contact. It is intended to be compressed onto the tubing and retain its compressed form. It may be referred to as a clip or a clamp. This is a single-use device.	I
3254	62470	Surgical bulldog clamp, reusable	Мэс заслын бульдог хавчаар, дахин ашиглах боломжтой	A manual surgical instrument designed to grasp, join, compress or support an organ, vessel or soft-tissue. It has a flat, pincer-like design with self-retaining jaws that open upon squeezing of the handles and close upon release; it is typically made of high-grade stainless steel. It is commonly used for vascular clamping and is not dedicated to a specific type of non-vascular surgery. This is a reusable device.	I
3255	62471	Coronary artery clamp	Титэм артерийн хавчаар	A hand-held, manual surgical instrument designed to directly compress a coronary artery during coronary artery graft surgery to create a temporary atraumatic haemostasis (arrest or prevention of bleeding). It may be referred to as a clip or a clamp, is made of plastic, and has a self-retaining design; it is not in the form of a bulldog clamp nor scissors-like forceps. This is a single-use device.	I

3256	62475	Surgical utensil washer/disinfector test system	Мэс заслын сав суулга угаагч/халдваргүйжүүлэгчийн туршилтын систем	An assembly of devices designed for in situ detection and semi-quantitative measurement of residual proteins (e.g., prions) on the surface of washed and disinfected surgical utensils (e.g., surgical instruments) as a means to validate the washing/disinfection process performed by a washer/disinfector. It includes a reagent (typically a spray) designed to produce fluorescence upon contact with residual proteins, after a short incubation period, and a mains electricity (AC-powered) darkroom viewing cabinet with ultraviolet (UV) light and a camera for fluorescence imaging.	I
3257	62482	Limb/torso/head restraint, reusable	Хөл/их бие/толгойн бэхэлгээ, дахин ашиглах боломжтой	A non-rigid device, typically a strap(s) or band(s) or garment-like, intended to be temporarily placed on or around one or more parts of a patient’s body (e.g., torso, limbs, head) to restrict movement, to facilitate patient positioning and stabilization during a medical procedure, and/or to prevent injury/hazards while potentially permitting limited movement. It is made of various materials (e.g., fabric, nylon, leather, or foam) and typically anchored to a fixture or furniture part (e.g., a bedrail, operating table). It is not intended for immobilization of specific joint. This is a reusable device.	I
3258	62517	Chordae tendinae sizer	Chordae шөрмөсний хэмжээс	A sterile, hand-held manual surgical instrument intended to be used during mitral valve repair to determine the proper length of a chordal replacement prosthesis used to repair the chordae tendinae. It is a slender tool with a gauge and extendable distal hooks designed to measure the distance between the edge of the valve leaflet and the planned site of attachment of the chordal replacement to the papillary muscle. This is a single-use device.	I
3259	62535	Skin-cover sealant	Арьсыг бүрхсэн чигжээс	A biodegradable, synthetic (e.g., cyanoacrylate) substance intended to be applied over a superficial wound to set and form a barrier to reduce skin exposure to external contaminants. Sometimes referred to as a liquid bandage, it is intended for use in the home or a clinical setting and may be intended as an alternative to a conventional skin-cover adhesive strip. After application, this device cannot be reused.	I

3260	62563	Arthroplasty force sensor display unit	Үе мөчний мэс заслын хүч мэдрэгчийг харуулах нэгж	An electronic device designed to connect to an arthroplasty force sensor to display sensor readings in a graphical representation to facilitate assessment of bone resection lines and/or size or positioning of prosthesis components to be implanted. It consists of a computing device with installed dedicated application software, which may have a dedicated receiver.	I
3261	62564	Cochlear implant implantable magnet inserter/remover	Чихний дунгийн суулгацыг суулгаж болох соронз суулгагч/ арилгагч	A hand-held manual surgical instrument designed to aid insertion, reinsertion and/or removal of the subcutaneous magnet component of a cochlear implant system. It is made of high-grade stainless steel and is in a form suited for its application. This is a reusable device intended to be sterilized prior to use.	I
3262	62581	Nasogastric tube holder, intranasal	Nasogastric гуурс эзэмшигч, intranasal	A non-sterile, non-surgically invasive device intended to be used to secure a nasogastric tube to the nose of a patient to prevent displacement or removal of the tube. It includes a strap, a clip, and typically devices intended to assist nasal introduction (e.g., magnetic probes, stylet). The strap is introduced into one nostril, passed around the vomer bone, pulled through the other nostril, tied, and secured to the nasogastric tube with the clip to prevent movement. This is a single-use device.	I
3263	62593	Meibomian gland camera/ophthalmic interferometer	Мейбомын булчирхайн камер/нүдний интерферометр	A mains electricity (AC-powered) multi-purpose optical device intended for: 1) infrared (IR) image capture of the meibomian glands for evaluation of structural abnormalities of the meibomian glands; 2) measurement of the tear film lipid layer using white light image/video capture interferometry; and 3) image capture of the external ocular anatomy. It includes patient head/chin supports, an IR source(s), appropriate cameras, controls and software intended to allow analysis of the images/video and interferometry; it may include an eyelid everter to assist imaging of the meibomian glands.	I

3264	62628	Artificial airway washing/disinfection jar	Хиймэл амьсгалын замыг угаах/халдваргүйжүүлэх сав	A container designed to hold artificial airway devices [e.g., endotracheal tube (ET), tracheostomy tube, laryngeal airway] to facilitate their washing/disinfection. It is made of a sterilizable material (e.g., high-grade stainless steel, plastic) and is designed to be filled with a cleaning/disinfecting solution while in use. This is a reusable device.	I
3265	62642	Medical device wiping pad	Эмнэлгийн хэрэгсэл арчих дэвсгэр	A small non-sterile pad made of absorbent material intended as a convenient means of wiping debris from a surgical/dental instrument during a procedure, having an adhesive surface so that it may be fixed to a glove, drape or other medical device. It does not contain a medication. This is a single-use device that may be sterilized prior to use.	I
3266	62676	Hearing device model	Сонсголын төхөөрөмжийн загвар	A collection of various components of a hearing device intended to be used by a clinician for presentation to a potential user of the hearing device for mutual experience/familiarisation with the device; it is not intended to be used for patient treatment. This is a reusable device.	I
3267	62683	Tongue-training dental orthosis	Хэл сургах шүдний ортез	A non-sterile intraoral device intended to be fixed/cemented to the teeth long-term (> 30 days) to stimulate the tongue to reposition itself during swallowing, speech, and resting posture to retrain the tongue such as to reduce the pressure on the teeth. Often referred to as a lingual spur it includes a sharp/pointed stem(s) intended to discourage undesirable tongue positioning, and is often used in conjunction with preventing/reducing overbite. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I
3268	62787	Orthopaedic surgical distractor, external	Ортопедийн мэс заслын анхаарал сарниулагч, гаднах	A hand-operated surgical instrument designed to noninvasively distract (force apart) a joint to facilitate an orthopaedic surgical procedure (e.g., hip arthroscopy). It is a mechanical tool with a manual trigger, for distraction and release, intended to be stabilized against a fixation point adjacent to the target joint (e.g., between the knee and the thigh for knee distraction, or between the joint and a patient positioner attached to the operating table). This is a reusable device.	I

3269	62826	Hospital bed confinement canopy	Эмнэлгийн орны хорионы халхавч	A fabric canopy intended to be affixed to a frame which encompasses a hospital bed to enclose a patient and thereby prevent the patient from exiting the bed without assistance. This is a reusable device.	I
3270	62845	Medical gas tubing replacement kit	Эмнэлгийн хийн хоолойг солих хэрэгсэл	A collection of devices including a length of tube and cutting devices (e.g., razor, scissors) intended to be used to rapidly and temporarily replace a blocked or otherwise faulty medical gas connection between a medical gas cylinder/regulator and another medical device. The cutting devices are used to remove the existing tube from the gas regulator and/or medical device so that the new tube can be fixed as a replacement or bypass. This is a reusable device.	I
3271	62851	Surgical instrument interim-placement holder, reusable	Мэс заслын багажийн завсрын тавиур, дахин ашиглах боломжтой	A device intended to be used in the operating room (OR) by staff to safely hold a manual, surgical instrument(s) [e.g., needle, scalpel, scissors] when not in use during surgery, to avoid damage to the instrument, and/or for temporary storage (e.g., to enable easy transfer/handling of the instrument at reduced risk of injury). It is available in various forms (e.g., rack, puncture cushion, telescopic tube, magnetic mat), and may be attached to a surgical drape; it is not a numbered tray and is not intended for counting of sharps. This is a reusable device.	I
3272	62870	Orthotic insole, custom-made	Ортотик улавч, захиалгаар хийнэ	A shoe insert intended to provide supplemental support for the sole, arch, and/or heel of the foot and specifically produced to meet an individual's special requirements, having been prescribed by a relevant healthcare professional. It is made of various materials (e.g., cork, rubber, foam, textile) and may be of modular design by assembly of various pre-made components. This is a reusable device intended for single-patient use.	I
3273	62895	Orthopaedic osteotome handle	Ортопедийн остеотомын бариул	A hand-held component of an orthopaedic osteotome intended to be attached to an interchangeable blade (not included) to become a chisel-like surgical instrument designed to cut and/or shape bone by percussion during an orthopaedic procedure. The operator holds this part of the instrument and manually imparts a force to it using a surgical mallet or hammer; it is made of metal and/or polymer materials. This is a reusable device.	I

3274	62929	Dental restoration fixation cleaning solution	Шүдний нөхөн сэргээх бэхэлгээний цэвэрлэгээний уусмал	A non-sterile liquid substance intended to be used to extra-orally clean the adherent surface of a dental restorative/prosthetic device (e.g., veneer, crown, inlay, onlay), after it has been assessed in situ as a trial, to improve adhesion when it is permanently fixed in place. The solution is typically a water-based gel containing potassium hydroxide supplied in a syringe with a number of applicator tips. It is not intended to be used as a tooth etching solution. After application, this device cannot be reused.	I
3275	62943	Cochlear implant system external kit	Чихний дунгийн суулгацын системийн гадаад иж бүрдэл	A collection of non-sterile devices intended to be given to a cochlear implant patient, typically after the first fitting, as a convenience kit of various external components of a cochlear implant system. It typically includes a cochlear implant sound processor and associated devices such as a coil, coil cable, external magnet, remote control, batteries, and battery holder.	I
3276	62951	Ostomy appliance belt	Остоми аппаратын бүс	An adjustable and/or elastic, strip-like device intended to secure an ostomy appliance [e.g., bag, irrigation sleeve] (not included) to a patient’s stoma (e.g., in the intestine/colon) during use. The appliance is attached to the device which is worn by the patient; the device does not include an attachment flange, plate, or ring and is not intended to protect the ostomy site or appliance (i.e., does not include a shield). It is typically made of synthetic polymer materials and is intended for use in the home and healthcare facility. This is a reusable device.	I
3277	62956	Airway device cleaning utensil, noninvasive, single-use	Амьсгалын замын төхөөрөмжийг цэвэрлэх хэрэгсэл, инвазив бус, нэг удаагийн хэрэглээ	A hand-held device intended to be used to clean an ex situ non-endoscopic airway device [e.g., endotracheal (ET) tube, tracheoesophageal speech valve, laryngeal airway, tracheostomy tube inner cannula], once it has been removed from the patient, to remove organic matter (e.g., phlegm, secretions). It is in the form of a flexible or rigid handle with distal soft or stiff bristles, fibres or spines, or a swab; it may be used in the home or healthcare facility. This is a single-use device.	I

3278	62964	External negative-pressure airway patency collar	Гадны сөрөг даралттай амьсгалын замыг нэвтрүүлэх хүзүүвч	A non-sterile, noninvasive device intended to be used to assist upper airway patency of a spontaneously breathing patient by applying external suction to the neck to hold the airway open, typically as an alternative to an artificial airway, continuous positive airway pressure (CPAP) device or chin lift. It consists of a moulded concave collar intended to be worn around the neck to function like a suction cup, and may include connection tubing (for connection to a suction pump); the suction pump is not included. This is a single-use device.	I
3279	62972	General-purpose medical foam padding, reusable	Ерөнхий зориулалтын эмнэлгийн хөөсөн дэвсгэр, дахин ашиглах боломжтой	A roll, sheet or preformed shape of synthetic foam material [e.g., styrene-butadiene rubber (SBR)] intended to be applied to and/or compress a local area of the body for various preventative/therapeutic applications (e.g., in compression bandaging, padding under casts and splints, padding for anatomical depressions), typically over intact and healthy skin. It is intended for use in the home or a clinical setting. This is a reusable device.	I
3280	62978	Padded stays splint, single-use	Жийргэвчтэй, нэг удаагийн хэрэглээтэй	A padded device designed to immobilize and protect an injured body extremity (arm or leg) during the healing process. It is typically in the form of a preshaped rigid mould (with padding) intended to be held in place with straps/bandages (not included); it is not primarily intended for use in an emergency setting. This is a single-use device.	I
3281	62994	Canalith repositioning procedure chair, manual	Canalith-ийн байршлыг өөрчлөх процедурын сандал, гарын авлага	A device intended to be occupied by a patient and manually operated by a healthcare professional to facilitate therapeutic physical manoeuvres of the patient’s head and trunk (multiaxial accelerations and decelerations) to treat balance disorders [e.g., benign paroxysmal positional vertigo (BPPV), canalithiasis] caused by displaced canaliths (otoconia) in the inner ear of the patient. It consists of a non-electric multiaxial rotating patient chair, a floor-standing harness, and securing straps; goggles with a video-camera to diagnose involuntary eye movement (nystagmus) in response to the stimulation of the vestibular system may be included with the chair.	I

3282	63001	Breast reduction surgery belt	Хөхөө багасгах мэс заслын бүс	A sterile strap/band intended to be tightened around the base of a patient's breast to help stabilize the breast during breast reduction surgery; also referred to as a breast tourniquet. This is a single-use device.	I
3283	63014	MRI examination catheter holder	MRI үзлэгийн катетер эзэмшигч	A small, non-sterile device intended to be used to secure a catheter (e.g., intracranial, peritioneal) during magnetic resonance imaging (MRI) examination. It is made of synthetic polymer materials and designed to hold the catheter in place to maintain its order and to avoid overheating, typically by coiling onto a spool; it is not a patient-worn device. This is a reusable device.	I
3284	63053	Height-adjustable toilet bracket, manual	Өндөр тохируулгатай жорлонгийн хаалт, гарын авлага	A wall fixture with a manual height-adjustable mechanism designed to accept a toilet enabling disabled patients to adjust the toilet height to meet their needs. It includes a manually-operated mechanism (e.g., lever) which might include a gas cylinder for pneumatic assistance (power-assisted, not pneumatic power) and is designed to accommodate specific plumbing/weight requirements.	I
3285	63055	Height-adjustable toilet bracket, electric	Өндөр тохируулгатай жорлонгийн хаалт, цахилгаан	A wall fixture with an electrically-powered height-adjustment mechanism designed to accept a toilet enabling disabled patients to adjust the toilet height to meet their needs. It includes an electronic height controller and is designed to accommodate specific plumbing/weight requirements.	I
3286	63115	Robotic surgical training instrument	Робот мэс заслын сургалтын хэрэгсэл	A non-surgical device intended to be used in conjunction with a robotic surgical system to enable a surgeon to train for a robotic endoscopic procedure; it is not intended for surgery. It may be one of several types of instruments (e.g., electrosurgical instrument, forceps, scissors) and is designed as a long shaft with a distal working end and a proximal housing intended to be connected directly to an arm of the robotic surgical system. It is typically used in conjunction with a training model. This is a reusable device.	I

3287	63180	Neonatal hypothermia cot	Нярайн гипотерми ор	An assembly of non-powered devices intended to induce and sustain mild hypothermia in a neonatal patient to treat hypoxic-ischemic encephalopathy (HIE). It consists of an insulated cradle, a heat-retention pad(s), and a patient-contact heat-conduction mattress. The heat-retention pad(s) is intended to be cooled in a refrigerator prior to use, and is constructed of a phase change material designed to help maintain patient hypothermia for a prolonged period. This is a reusable device.	I
3288	63181	Neonatal hypothermia cot cooling pad	Нярайн гипотермитэй орны хөргөлтийн дэвсгэр	A non-powered component of a neonatal hypothermia cot assembly intended to be used to induce and sustain mild hypothermia in a neonatal patient to treat hypoxic-ischemic encephalopathy (HIE). It is intended to be cooled in a refrigerator prior to use, and is constructed of a phase change material designed to conduct and retain heat from the patient help maintain patient hypothermia for a prolonged period. This is a reusable device.	I
3289	63182	Neonatal hypothermia cot heat-conduction mattress	Нярайн гипотермитэй хүүхдийн ор, дулаан дамжуулагч матрас	A non-sterile, patient-contact component of a neonatal hypothermia cot assembly intended to be used during induction of mild hypothermia in a neonatal patient by allowing heat transfer away from the recumbent patient. It is typically gel-filled and intended to be placed between the patient and a cooled heat-retention pad. This is a reusable device.	I
3290	63211	Surgical probe/cannula bending tool	Мэс заслын датчик/суваг нугалах хэрэгсэл	A sterile non-powered device designed to assist in the manual bending of a surgical handpiece tip, probe, or cannula to adjust the shape of the surgical device during surgery. It consists of a curved mould with a channel(s) to accept the surgical device and enable controlled manual bending. This is a single-use device.	I

3291	63212	Surgical suction system Y-piece valve-connector	Мэс заслын сорох систем Y хэсэг хавхлага-холбогч	A noninvasive tubular device intended to provide a connection between devices so that it is integrated within the tubing line of a suction assembly (e.g., of a tissue morcellation system with suction) where it can be used to introduce fluid into the suction line, typically to bathe a tissue sample captured within a filter. The device provides a channel for continuous suction and a side connector with an integrated valve to allow infusion of fluid without loss of suction; it may include a length of infusion line tubing. This is a single-use device.	I
3292	63237	Foam bed mattress	Хөөсөн ор матрас	A large, durable, fabric case filled with foam, which may be segmented/compartmentalised, designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie, rest, and sleep, and intended to distribute body weight over a large surface area typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. It may contain weight-distribution air cells. This is a reusable device.	I
3293	63241	Alternating-pressure bed mattress system	Хувьсах даралтын ор матрас систем	An assembly of devices consisting of an alternating-pressure bed mattress (inflation-patterned air cells with or without foam component) and a dedicated electric pump, which also functions as the control unit, designed to actively alternate a bed occupant's bed-contact points, typically to relieve pressure points for comfort and to prevent pressure sores. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers), patients with disabilities, or patients with low body fat.	I
3294	63257	Urethral/suprapubic catheter valve-connector	Шээсний суваг/супрапубик катетер хавхлага-холбогч	A small, sterile valve intended to be connected to a urethral and/or suprapubic catheter to allow intermittent bladder drainage/filling (as an alternative to continuous drainage). As the bladder is intended to store urine between drainage it may be intended to help maintain bladder tone/capacity. It is typically a small plastic two-way connector with an integrated faucet (stopcock). This is a single-use device.	I

3295	63267	Surgical hair clippers blade	Мэс заслын үсний хайчны ир	A non-sterile cutting component of powered surgical hair clippers designed for removal of long hair from the head or body of a patient prior to surgery/treatment. It is typically designed as a small cartridge-like device with integrated shearing blades intended to be attached to the powered handpiece. This is a single-use device.	I
3296	63268	Emergency junctional haemorrhage compression set	Яаралтай үе мөчний цус алдалтын шахалтын багц	A collection of non-sterile, noninvasive devices intended to be used in an emergency situation (e.g., battlefield) to provide compression for haemostasis to a traumatic wound occurring proximal to where a limb meets the torso/pelvis. Often referred to as a junctional tourniquet, it consists of a belt(s)/binder(s), an inflatable bulb(s), and a hand pump. The inflatable bulb is intended to be secured at the point of the wound with the belt, then inflated to provide compression and prevent bleeding. The belt component may be additionally intended to be used as a binder. This is a single-use device.	I
3297	63270	Scalpel handle, single-use	Хушийн бариул, нэг удаагийн	A sterile device that is an interchangeable component of a scalpel and that functions as a handle designed to mount a compatible blade. This device with the blade become a single-bladed surgical instrument intended to be used by a physician for cutting or dissecting tissue. The device is typically made of metal (e.g., stainless steel or brass). This is a single-use device.	I
3298	63278	Tongue/lip exerciser	Хэл/уруул дасгалын төхөөрөмж	A hand-held mechanical device intended to provide resistance to tongue and/or lip movements for rehabilitation of oral motor function, typically to aid in swallow and speech therapy, following impairment (e.g., dysphagia, dysarthria) from stroke or other neurological conditions. It consists of an intraoral bulb with a connected handle, similar to an infant pacifier in appearance, made of flexible silicone. This is a single-patient, reusable device.	I
3299	63281	Cotton wool ball	Хөвөн ноосны бөмбөг	A non-dedicated device designed as an absorbent, spherical mass of cotton or man-made fibres intended for use as a swab to apply medications to or remove fluid/liquid from various parts of the body. It is intended for use in the home or a clinical setting. This is a single-use device.	I

3300	63282	Cotton wool ball, sterile	Хөвөн ноосон бөмбөг, ариутгасан	A sterile, non-dedicated device designed as an absorbent, spherical mass of cotton or man-made fibres intended for use to absorb fluids, typically in a surgical setting. It may be radiopaque to make it visible on x-ray, and may have an attached cord to improve traceability in a surgical setting. This is a single-use device.	I
3301	63314	Electronic torsional hand exerciser	Мушгих электрон гар дасгалын төхөөрөмж	An electronic desktop component of a biomechanical function analysis or rehabilitation system intended to be used by a patient during rehabilitation/analysis of the arms/hands/fingers, whereby it provides rotational resistance and may be intended as a controller/exerciser with an interactive videogame-like display. It is intended to be used with software/computer interface devices (not included) and with an off-the-shelf computer/laptop.	I
3302	63315	Dental cheek retractor, professional, single-use	Шүдний хацар татагч, мэргэжлийн, нэг удаагийн	A hands-free, self-retaining frame intended to allow a dental professional to retract the lips/cheeks of a patient during an orthodontic or restorative dental procedure for easy access to the field of operation. It is designed to be placed in and around the lips/cheeks and may also be designed to displace the tongue. It is a synthetic polymer device which may include suction adaptors/tubing for saliva removal to maintain a dry field. It is not intended to be placed between the teeth (i.e., not a mouth gag). This is a single-use device.	I
3303	63322	Cool therapy powder	Хүйтэн эмчилгээний нунтаг	A non-sterile powder in a container intended for localized topical skin application to provide a cooling effect at the skin surface to treat heat rash (prickly heat) or to sooth irritation. After application, this device cannot be reused.	I
3304	63341	Gastrointestinal catheter/endoscope tracking system sensor, body-surface	Ходоод гэдэсний катетер/дурангийн хяналтын системийн мэдрэгч, биеийн гадаргуу	A noninvasive component of an electromagnetic (EM) catheter/endoscope tracking system intended to be placed on the skin surface as a reference for locating/tracking an internalized gastrointestinal catheter/endoscope. It includes a coil, which when placed within the EM field of the tracking system receives EM field data, sends a current back to the system (through induction) and allows for location to be acquired. It may be intended for use during catheter/endoscope tracking and/or for recalibration of another system sensor. This is a reusable device.	I

3305	63347	Sleep-disordered breathing nasopharyngeal stent, single-use	Унтах амьсгалын эмгэг хамар залгиурын стент, нэг удаагийн хэрэглээ	A sterile tubular device designed to alleviate sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea) by splinting to increase nasopharyngeal/velopharyngeal airway patency. It consists of a tube or a self-expanding mesh made of metal [e.g., nickel-titanium alloy (Nitinol)] and/or polymer material, and is intended to be self-introduced through the nose and into the nasopharynx/velopharynx before sleep; devices associated with insertion and cleaning of the device may be included. This is a single-use device.	I
3306	63350	Teeth whitening tray	Шүд цайруулах тавиур	A custom-made device intended to retain a bleaching agent for whitening natural teeth through bleaching. It is made of polymer materials in the form of a mould to fit precisely over the teeth for a specified patient. This is a single-patient reusable device.	I
3307	63358	Dental abrasive strip, reusable	Шүдний зүлгүүрийн тууз, дахин ашиглах боломжтой	A manual dental device in the form of a strip coated with abrasive particles on one or both sides intended to be used for modifying (e.g., polishing, finishing, contouring, reducing) the surface of a tooth or restoration during a dental procedure. This is a reusable device.	I
3308	63378	Tracheostoma protector, single-use	Трахеостома хамгаалагч, нэг удаагийн хэрэглээ	A patient-worn device in the form of a self-adhesive patch designed to protect a tracheostoma orifice against harmful external influences and to absorb secretions; it may also act as a tracheal air filter. It is typically made of porous textile, foam or synthetic fabric materials; it is not intended to be used as a shower shield. This is a single-use device.	I
3309	63407	Assistive sleeping cushion set	Унтлагын дэрний багцны туслах төхөөрөмж	A collection of cushions, pads, pillows and bolsters intended to provide support and optimal positioning for a disabled person during sleep. The items are typically made of soft textile or synthetic materials and include pieces designed for specific body parts (e.g., head, shoulders, back, hips, knees, feet) used during different sleeping positions (supine, side, or prone lying). This is a reusable device.	I
3310	63414	Mouth gag cover	Амны хаалт	A preshaped disposable strip of material intended to cover the mouth-contact parts of an adjustable mouth gag to provide protection/hygiene. It is made of a synthetic material (e.g., silicone). This is a single-use device.	I

3311	63415	Laser protective mouthguard	Лазер хамгаалалтын амны хамгаалалт	A sterile, preformed oral device designed to protect tooth enamel from the adverse side effects of laser treatment administered to other parts of the head/neck. It is made of synthetic materials (e.g., silicone). This is a single-use device.	I
3312	63426	Joint/spinal manipulator, mechanical	Хамтарсан / нугасны манипулятор, механик	A hand-held, non-electric, mechanically-powered instrument intended to be used by a healthcare professional for the chiropractic adjustment, mobilization, or manipulation of the joints of the spine and/or extremities. The instrument uses a manually-operated, mechanical, plunger-like mechanism (e.g., spring-loaded) to deliver thrust to the patient's body via its rounded distal end (e.g., rubber-tipped stylus); it typically has two or more force settings. This is a reusable device.	I
3313	63438	Tracheostomy tube neck holder, single-use	Трахеостомийн гуурсан хоолойн хүзүү эзэмшигч, нэг удаагийн	A non-sterile, noninvasive device designed to be fastened around the neck of a patient to secure a tracheostomy device (tube, button) in situ. It is typically in the form of a dedicated strap/collar intended to connect to the tracheostomy device, which is not included. This is a single-use device.	I
3314	63450	Pressure algometer, mechanical	Даралтын алгометр, механик	A hand-held, non-electric instrument designed for measurement of a patient's sensitivity to pain (pain threshold) through manual application of a measured mechanical force to the skin. It typically consists of a patient-contact tip, and a strain gauge with an analogue dial. Also referred to as a pressure algesimeter or algesiometer, it is typically used to evaluate the effects of pain after the use of analgesics and/or during diagnosis or treatment of nerve injuries and neuropathies. This is a reusable device.	I
3315	63451	Pressure algometer tip/attachment, reusable	Даралтын алгометрийн үзүүр/хавсралт, дахин ашиглах боломжтой	A non-powered component of an algometer designed to be attached to the force gauge of the algometer to enable the device to function during pain testing and/or calibration. It may be in the form of a pain-testing tip or calibration pad; it is not intended for strength testing. This is a reusable device.	I

3316	63452	Pressure algometer, electronic	Даралтын алгометр, электрон	A hand-held, electronic instrument designed to measure a patient's sensitivity to pain (pain threshold) through manual application of a measured mechanical force to the skin. It typically consists of a patient-contact tip, and a strain gauge where results are displayed digitally. Also referred to as a pressure algesimeter or algesiometer, it is typically used to evaluate the effects of pain after the use of analgesics and/or during diagnosis or treatment of nerve injuries and neuropathies. This is a reusable device.	I
3317	63453	Back/leg/chest dynamometer, mechanical	Нуруу/хөл/цээжний динамометр, механик	A non-powered, analogue instrument designed to assess neuromuscular function by measuring the force or power exerted by the back, chest, and leg muscles during flexion. It includes a mechanical force gauge, which may be attached to a handle or strap, to assess a variety of movements (e.g., leg abduction, lifting) and is typically used to test and control a patient's muscle strength as part of a rehabilitation program.	I
3318	63458	Infant whole-body immobilizer, single-use	Нярай хүүхдийн бүх биеийг хөдөлгөөнгүй болгодог, нэг удаагийн хэрэглээ	A non-sterile, non-rigid device, usually made of a fabric and/or plastic materials, intended to be used to temporarily render an infant's whole body immovable (strait-jacket effect) while the patient undergoes therapeutic (e.g., phototherapy) or diagnostic interventions. This is a single-use device.	I
3319	63464	Lower limb sliding exerciser, non-powered	Доод мөчний гулсах дасгалын төхөөрөмж, цахилгаангүй	A non-powered device intended to encourage active movement of a patient’s lower limb(s) by assisting linear (or circular) movement of the foot, by flexion/extension at the knee, for rehabilitation and/or to help prevent deep vein thrombosis. It can be in the form of pad worn on the heel for sliding on a floor (or other smooth surface), or a frame with a moveable section placed on a bed. This is a reusable device.	I
3320	63484	Dental implantation drilling template, custom-made	Шүдний суулгацын өрөмдлөгийн загвар, захиалгаар	A custom-made device intended to be used by a dental surgeon to guide drilling in the jawbone of a patient during the first stage of a guided dental implantation procedure for dental implant or orthodontic mini-implant placement/fixation. It is in the form of a shaped plate with a predefined hole(s) or a thermoformed mouldable cylinder and is capable of being used on fully and partially edentulous patients. This is a single-use device.	I

3321	63494	Instrument tray corner protector, reusable	Багажны тавиурын булангийн хамгаалалт, дахин ашиглах боломжтой	A device designed to cover the sharp corners of an instrument tray before the tray is wrapped with sterilization packaging (wrap), to protect the wrap from tearing and the tray corners from damage. It is typically made of synthetic polymer materials. This is a reusable device.	I
3322	63509	Skin surface device adhesive, sterile	Арьсны гадаргуугийн төхөөрөмжийн цавуу, ариутгасан	A sterile substance (e.g., gel, aerosol) intended to adhere a medical device (e.g., dressing, ostomy device, aesthetic restoration prosthesis) to the skin surface; it is not intended for invasive/surgical use but may be intended for other non-patient contact uses. It may be used in the home or healthcare facility. After application, this device cannot be reused.	I
3323	63518	Instrument warmer, exothermic chemical	Багаж халаагуур, экзотермик химийн бодис	A sterile heating device intended to warm patient-contact instruments (e.g., rigid endoscopes or trocars) before they are introduced into body orifices or other parts of the body. It typically consists of an envelope that is wrapped around the instrument (e.g., laparoscope), and filled with a material which produces an exothermic chemical reaction when activated. This is a single-use device.	I
3324	63537	Guidewire-retention prevention box	Хөтөч утас хадгалахаас сэргийлэх хайрцаг	A non-sterile, empty container intended to be filled with appropriate catheterization support devices/sutures, and designed so that the content is only accessible following guidewire removal, to prevent guidewire retention (guidewire left inside the patient). It is designed so that it can only be opened using the guidewire (e.g., has a channel for the guidewire to be passed so the guidewire can be used to pull the lid open). Devices intended to be contained (catheterization support devices/sutures) are not included. This is a single-use device.	I
3325	63542	Cardiac implantation catheter holder	Зүрхний суулгацын катетер эзэмшигч	A sterile noninvasive device designed to externally support a cardiac implant delivery catheter to secure and position the catheter during delivery of a cardiac implant. It is fixed onto a dedicated catheter table and is typically a metallic or plastic structure with slots for fixing the catheter. It may be provided with additional supporting devices (e.g., the dedicated catheter table and table base). This is a single-use device.	I

3326	63543	Cardiac implantation catheter table	Зүрхний суулгацын катетерийн хүснэгт	A non-sterile, noninvasive device designed to provide a flat surface to support the holder of a cardiac implant delivery catheter during delivery of a cardiac implant. It is typically a height-adjustable device with legs that is placed on an operating table. This is a single-use device.	I
3327	63544	Cardiac implantation catheter table base	Зүрхний суулгацын катетерын ширээний суурь	A non-sterile, noninvasive, plate-like device designed to provide a flat surface on an operating table to support a table on which is placed the holder of a cardiac implant delivery catheter during delivery of a cardiac implant. This is a single-use device.	I
3328	63554	Ophthalmic soft-tissue surgical forceps probe-tip, reusable	Нүдний зөөлөн эдийн мэс заслын хямсаа, дахин ашиглах боломжтой	A distal component of a probe-like ophthalmic soft-tissue surgical forceps assembly designed to grasp and manipulate intraocular tissues during ophthalmic surgery (e.g., anterior segment surgery, vitreo-retinal procedures, iridectomy, capsulorhexis). It is a probe-/cannula-like shaft with small grasping blades that protrude from the end of the shaft, and is intended to be attached to an appropriate ophthalmic surgical instrument handle (not included). This is a reusable device intended to be sterilized prior to use.	I
3329	63561	Orthopaedic graft tensioner, single-use	Ортопедийн залгаас чангалагч, нэг удаагийн	A sterile, hand-held, manual surgical instrument intended to be used during an open-surgery procedure [e.g., acromioclavicular joint repair, anterior cruciate ligament (ACL) reconstruction] to apply appropriate tension to a ligament graft/prosthesis, or flexible cord, to remove slack and facilitate adequate positioning of the device during implantation; it may also be used to apply tension to flexible instruments used during the procedure (e.g., graft sizer or gauge). Tension is applied to the graft after one end of the graft has been secured. The device is typically made of metal and in the form of a shaft with distal prongs. This is a single-use device.	I
3330	63569	Urethral manipulator	Шээсний сувгийн манипулятор	A non-sterile, hand-held, rigid, stylet-like rod designed to be inserted into the lumen of an in situ urological catheter (not included) to facilitate lateral manipulation of the urethra/bladder during surgical intervention (e.g., female stress urinary incontinence surgical mesh implantation), typically to avoid trauma to the urethra/bladder. This is a reusable device.	I

3331	63574	Dynamic seat platform	Динамик суудлын тавцан	A device designed to be placed on a chair seat as a sitting platform consisting of two wooden plates separated by a hard spherical object so the plates can pivot/rotate relative to each other. The ability to allow body/torso movement in the seated position is intended to improve posture and/or relieve backache. This is a reusable device.	I
3332	63584	Water jet flosser/sonic electric toothbrush	Усны тийрэлтэт утас/sonic цахилгаан шүдний сойз	An electrically-powered device intended to provide a high-pressure water jet for dental flossing (removal of plaque and/or debris from between teeth) using a dedicated handpiece, and to provide (sonic) vibration for toothbrush heads attached to the handpiece for brushing the teeth. It is normally available [non-prescription] over-the-counter (OTC) fo use in the home or healthcare facility.	I
3333	63585	Water jet flosser	Усны тийрэлтэт утас	An electrically-powered device intended to provide a high-pressure water jet for dental flossing (removal of plaque and/or debris from between teeth) using a dedicated handpiece. It is normally available [non-prescription] over-the-counter (OTC) fo use in the home or healthcare facility.	I
3334	63588	Thoracic cage orthosis	Цээжний торны ортоз	A custom-made apparatus intended to be worn by a patient to help correct pectus carinatum or other protruding deformities of the chest wall. It is in the form of a semi-rigid belt with an anterior compression plate, suspended by straps. It is made for a specific patient using clinical measurements and can be adjusted during use. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I
3335	63596	Suprapubic needle handle	Suprapubic зүү бариул	A hand-held manual surgical device designed to be attached to the proximal end of a suprapubic needle to function as a handle to allow manipulation of the needle, typically during implantation a female stress urinary incontinence (SUI) surgical mesh/sling. This is a reusable device.	I
3336	63605	Catheter/tubing connector securement clip	Катетер/хоолойн холбогчийг бэхлэх хавчаар	A small noninvasive device intended to be attached to a catheter connector (a device that connects the proximal end of a catheter to tubing), to hold the locking mechanism of the connector (typically lever mechanism) in place to prevent disconnection of the catheter. This is a single-use device.	I

3337	63641	Alternating-pressure bed mattress	Хувьсах даралтын ор матрас	A mattress-like device consisting of an arrangement of alternating-pressure air cells designed to be placed on a bed mattress support platform to provide a comfortable surface on which an occupant can lie, rest, and sleep, and intended to distribute body weight over a large surface area typically to help relieve pressure points for comfort and improve blood circulation to prevent pressure sores. It is connected to an alternating-pressure pump (not included) which provides the inflation/deflation control. It is commonly used for elderly immobilized (especially in cases of decubitus ulcers) patients, patients with disabilities, or patients with low body fat.	I
3338	63653	Surgical suction system collection container lid	Мэс заслын сорох систем цуглуулах савны таг	A device intended to be attached to and cover the top of a suction system collection container to prevent spillage/leakage of, and contact with, its contents. It may include an overflow trap or tubing. This is a reusable device.	I
3339	63658	Surgical soft-tissue manipulation forceps, alligator, single-use	Мэс заслын зөөлөн эдийг засах хямсаа, матар, нэг удаагийн хэрэглээ	A long, thin, hand-held manual surgical instrument designed to facilitate grasping and manipulation of soft-tissues/anatomical structures, typically during ear/nose/throat (ENT) surgery; it is not intended for insertion through an endoscope, nor into the eye and is not a dedicated biopsy device. Commonly referred to as alligator- or crocodile-forceps, it has a slender body (to allow for restricted access) and small grasping blades which are hinged close to the distal (working) end. It is a metallic device available in various sizes/lengths; some types may include an integrated suction channel. This is a single-use device.	I
3340	63670	Intraoral dental suction tip holder	Амны хөндийн шүдний сорох үзүүр эзэмшигч	A non-sterile semi-flexible device intended to be attached to the distal end of a dental suction tip and held between the teeth and cheek of a patient, to allow for hands-free suction during a dental procedure. It is typically a flat disk made of synthetic polymer materials with a clip/loop for attachment to the suction tip. This is a single-use device.	I

3341	63672	Intraoral camera	Амны хөндийн камер	An electro-optical device designed for image and/or video capture of the teeth and other intraoral anatomy, to assist with the diagnosis/management of dental/intraoral conditions (e.g., caries, plaque, calculus). It may be provided with specialized camera heads for specific types of examination (e.g., acquiring high resolution pictures/videos, emitting violet or infrared light), as well as camera holders and cables; it connects to an off-the-shelf computer (not included) for the power/processing/display.	I
3342	63674	Gait rehabilitation electronic walker	Алхааг сэргээх электрон алхагч	An all-wheeled, battery-powered device designed to assist a patient with a walking disability (neurogenic, muscular, or orthopaedic in origin) to regain lost motor function, which may include rising from sitting to standing and/or ambulation over ground (not on a treadmill). It consists of a mobile rigid framework, on non-powered wheels, which includes a platform intended for forearm/elbow support and a patient harness; handgrips; and an electronic control unit for powered functions such as variable height support. It is intended to be used in a clinical setting (e.g., gait lab, rehabilitation centre, nursing home) under healthcare professional supervision.	I
3343	63675	Orthodontic retainer support kit	Ортодонт тогтоогчийг дэмжих хэрэгсэл	A collection of devices intended to be used to facilitate use of an orthodontic teeth retainer (positioner), including placement, removal and cleaning. It typically consists of an orthodontic appliance remover, an orthodontic retainer seater, and an orthodontic appliance cleanser. The aligner, appliance or retainer is not included. This is a single-patient, reusable device.	I
3344	63676	Orthodontic aligner/retainer seater, single-use	Шүдний гажиг засах / тогтоогч суудал, нэг удаагийн	A small cylindrical pledget intended to be used to facilitate placement and proper seating of an orthodontic progressive aligner or teeth retainer (positioner), by being placed between the partially-aligned aligner/retainer and the opposing set of teeth, allowing the patient to bite down on the device to push the aligner/retainer into place. This is a single-use device.	I

3345	63677	Orthodontic appliance remover	Ортодонтийн хэрэгсэл арилгагч	A small hook-shaped device designed for manual removal of orthodontic devices (e.g., retainer, teeth positioner) from around the teeth. It is made of plastic materials. This is a single-patient, reusable device.	I
3346	63708	Orthodontic separator	Ортодонт тусгаарлагч	A non-surgical orthodontic device typically in the form of a loop or ring intended to be placed between adjacent teeth to slowly move them apart to help achieve improved positioning and/or appearance of the teeth; it is not intended for separation of tooth roots. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I
3347	63709	Patient isolation tent	Өвчтөнийг тусгаарлах майхан	A mobile device designed to be erected to provide environmental isolation of a contagious patient to protect hospital personnel and other patients from exposure to non-airborne infections (e.g., diphtheria, meningococcus) whilst the patient is being treated. It includes a collapsible frame with a canopy, designed to create a small room environment for healthcare personnel to enter, and it includes an electric air filtration mechanism; the air in the chamber is filtered before it is returned to the normal external atmosphere. It may include additional features (e.g., electric door mechanism). This is a reusable device.	I
3348	63710	Patient isolation tent canopy	Өвчтөнийг тусгаарлах майхны халхавч	A non-sterile covering designed to be used with a frame (not included) to provide environmental isolation of a contagious patient to protect hospital personnel and other patients from exposure to non-airborne infections (e.g., diphtheria, meningococcus) whilst the patient is being treated. This is a single-patient device intended to be used for the duration of the treatment (single-use) before being discarded.	I

3349	63797	Urine-sampling urethral catheter, Hevea-latex	Шээсний дээж авах шээсний сувгийн катетер, Hevea-латекс	A flexible tube made of Hevea natural rubber latex (NRL) intended to be inserted into the bladder via the urethra to obtain a sample of urine that has not been contaminated by urethral passage. The distal end can have various tip designs, and the proximal end may terminate in a soft connecting piece to connect to a urine specimen collection container. The device is intended to be applied to the patient by a healthcare provider and may be coated with a lubricating substance to facilitate insertion. This is a reusable device.	I
3350	63799	Flatus tube, reusable	Хавтгай хоолой, дахин ашиглах боломжтой	A tube intended to be inserted through the anus to remove flatus and relieve distention in the rectum. It is made of made of Hevea natural rubber latex (NRL) and intended to be operated by a healthcare professional in a clinical setting. This is a reusable device.	I
3351	63812	Warm-bonded endodontic obturation system sizer, single-use	Дулаан холболттой эндодонт бөглөрөлтийн системийн хэмжээс, нэг удаагийн хэрэглээ	A non-sterile hand-held manual dental instrument designed to be used to determine (verify) the size of a prepared root canal so that the appropriate endodontic obturator is selected for use inside the canal for the application of a resin-based sealing, filling, and core material; it may also allow for radiographic confirmation of the root canal. It is available in a series of incrementing root-canal sizes. This is a single-use device.	I
3352	63827	Dental cuspidor silencing valve	Шүдний cuspidor дуу намсгах хавхлаг	An electrically- and pneumatically-powered unit designed to be installed within the plumbing of a dental delivery system cuspidor, between the cuspidor (also known as a spittoon) and suction pump, to reduce suction noises emanating from the cuspidor. It is typically a compact housing designed with the appropriate connectors, fluid collector, sensors, valves, and vents. Fluid is intended to fill the collector until a fill level is reached whereby the suction pump is automatically activated and an electropneumatic valve mechanism opened.	I

3353	63828	Dental suction system activation valve	Шүдний сорох системийг идэвхжүүлэх хавхлаг	An electrically-powered device intended to be permanently integrated within a dental suction system, between the pump and the suction handpiece, to open (activate) and close the suction line between uses. It includes an electronic switching mechanism which allows the valve to be opened using the vacuum generated by the pump.	I
3354	63829	Dental suction system pump	Шүдний сорох системийн насос	An electrically-powered device intended to be permanently integrated within a dental suction/delivery system to generate a vacuum as part of the aspiration of water, blood, saliva, and tooth debris from the oral cavity of a patient and/or for connection to a dental cuspidor. It may or may not be designed to handle fluids (i.e., may be a wet or dry pump). It is not a complete system and does not include any patient contact devices.	I
3355	63830	Dental suction system rinsing unit	Шүдний сорох системийн зайлах төхөөрөмж	An electrically-powered, non-patient-contact unit designed to be permanently integrated within a dental suction system (dry or wet type) to channel water into the suction piping, to dilute and allow for more effective removal of aspirated fluids (e.g., blood, saliva) from the system. It consists of fresh water and waste water connections, internal valves, sensors and an electronic switching mechanism.	I
3356	63840	Laryngeal mirror, single-use, sterile	Хоолойн толь, нэг удаагийн, ариутгасан	A sterile, hand-held manual surgical instrument with a mirror or a surface sufficiently polished to reflect enough undiffused light to form a virtual image of an object placed before it at the distal end, intended to be used for a laryngeal examination. The mirror is affixed at an angle to a long, slender shaft with a handle at the proximal end that is held by the doctor who can manipulate the mirror close to the site of interest in the throat. This is a single-use device.	I
3357	63841	Laryngeal mirror, single-use	Хоолойн толь, нэг удаагийн	A hand-held manual surgical instrument with a mirror or a surface sufficiently polished to reflect enough undiffused light to form a virtual image of an object placed before it at the distal end, intended to be used for a laryngeal examination. The mirror is affixed at an angle to a long, slender shaft with a handle at the proximal end that is held by the doctor who can manipulate the mirror close to the site of interest in the throat. This is a single-use device.	I

3358	63858	Blood donor bag tube divider/sealer	Цусны донорын уутны хоолой хуваагч/битүүмжлэгч	An electrically-powered device designed to use heat to segment the plastic input tube of a blood donor bag, with automatic sealing of the ends of the divided segments. It may be used to create two or more segments, using heat to make a seal, after which the tube can be transected (e.g., for cross-testing sampling). It is typically used in blood donation centres and blood banks and is available in a variety of forms (e.g., hand-held, desktop); some types have barcode reading and labelling capabilities.	I
3359	63867	Assistive ergonomic chair/table base	Туслах эргономик сандал/ширээний суурь	A manually-operated, non-powered device intended to support an assistive ergonomic chair or table (not included) to facilitate mobility and/or maintain the seated position of a disabled (often paediatric) patient; it is intended to be operated by a healthcare provider/carer. It typically consists of a framework on legs or wheels with a chair/seat/table mount, a handle, and brake; it may include a non-powered or hydraulically-assisted lifting or tilting mechanism. It is not a wheelchair component.	I
3360	63877	Dental material mixing surface, chairside, reusable	Шүдний материал холих гадаргуу, сандал, дахин ашиглах боломжтой	A slab, tray, or well, or palette with wells intended to be used as a surface for mixing inactive dental component materials chairside to produce a functional dental restorative/impression material that is immediately applied to the oral cavity/teeth of the patient, or extraorally to a dental restoration, during a dental procedure. It is typically made of plastic or glass and the user will ordinarily mix the component materials on or in the device by hand (e.g., with a spatula or brush). This is a reusable device.	I
3361	63931	Toe intraoperative aligner	Хагалгааны үеийн хөлийн хурууны тохируулагч	A non-sterile, flat, metal sheet intended to be used to align a toe during a metatarsophalangeal arthrodesis. It is placed against the sole of the foot to provide a flat reference point for supporting the toe in the correct position. This is a reusable device.	I
3362	63953	Dental material application tool, reusable	Шүдний материал хэрэглэх хэрэгсэл, дахин ашиглах боломжтой	A hand-held manual dental instrument intended to be used for the application of a dental material (e.g., composite resin) to a dental prosthesis or to a patient’s tooth/teeth; the material is not included. It includes a handle with an application tip which holds the material on its surface; it is not a syringe- or pistol-like device. This is a reusable device.	I

3363	63973	Tracheal surgery dilator, single-use	Гуурсан хоолойн мэс засал өргөсгөгч, нэг удаагийн	A sterile, hand-held, manual surgical instrument intended to be used during surgical intervention of the trachea to dilate tracheal structures/passages, typically during the creation of a tracheostoma and/or for expanding the margins of a tracheostoma to assist in the insertion of a tracheostomy tube. It may be in the form of a slender hollow or solid cylinder or a scissors-like instrument. This is a single-use device.	I
3364	63983	Denture trial fabrication wax	Шүдний туршилт хийх лав	A material made primarily of wax, intended to be used in the dental laboratory to manufacture a trial denture/denture base. It is not intended to be used as an anatomical impression material nor is it intended to be used to manufacture a final dental prosthesis/appliance. It is commonly supplied in sheets and may be referred to as denture sheet wax. This is a single-patient, reusable device.	I
3365	63999	Mandible-repositioning sleep-disordered breathing orthosis valve	Эрүүний байрлалыг өөрчлөх нойрны эмгэгтэй амьсгалын ортоз хавхлага	A non-sterile device intended to be optionally attached to a mandible-repositioning sleep-disordered breathing orthosis to create expiratory resistance in the treatment of sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea). It consists of a mechanism that creates low resistance on inspiration and higher resistance on expiration, and is typically made of synthetic polymer materials. This is a reusable device.	I
3366	64020	Inflatable hot/cold therapy pack/manual pump	Хийлдэг халуун/хүйтэн эмчилгээний багц/гарын авлагын насос	A non-sterile assembly of devices intended for localized thermal and compression therapy to facilitate the treatment of a variety of adverse conditions resulting from musculoskeletal injury (e.g., pain, swelling, inflammation). It includes a hot and/or cold therapy pack(s) with an air inflation sleeve and a manual air pump (e.g., squeeze bulb) with connection tubing; the pack(s) is heated/cooled independently of the system (e.g., cooled using chilling unit) and may be anatomically specific. It is intended for use in both professional and home settings.	I
3367	64029	Dental mirror, single-use	Шүдний толь, нэг удаагийн	A sterile, hand-held dental instrument intended to be used by a dentist for intraoral inspection or inspection and retraction. It typically consists of a stainless steel shaft terminating at the distal end in a small round mirror that is angled to the shaft. This is a single-use device.	I

3368	64030	Nail scissors, single-use	Хумсны хайч, нэг удаагийн	A sterile, hand-held device designed specifically for cutting the nails of a patient. It is comprised of two pivoted blades with finger and thumb ring-handles, which cut the nails with a shearing action (i.e., the fine blades cut when the sharpened edges pass one another as they are closed); the blades may be curved to follow the natural curvature of human nails. It is not a pair of nail clippers. This is a single-use device.	I
3369	64032	Nail clippers, single-use	Хумс хайч, нэг удаагийн	A sterile, hand-held device designed specifically for trimming the nails of a patient. Also known as a nail cutter, it is a robust instrument comprised of two hinged cutting blades that are conjoined at the handle end of the device. The blades are sprung to hold them apart when not activated; when activated, the two blades are pressed together in a chopping motion to bite off (clip) the nail that has been positioned between them. It is not a pair of nail scissors. This is a single-use device.	I
3370	64036	Dental restoration carver, amalgam, single-use	Шүдний нөхөн сэргээх сийлбэрч, амальгам, нэг удаагийн	A hand-held manual dental instrument intended to be used for producing and perfecting anatomical forms in dental amalgam restorations, typically by cutting, scraping, paring, and smoothing finishes and modelling patterns intraorally. It will typically be a double-ended instrument with working ends of various shapes and designs, and a central handle. This is a single-use device.	I
3371	64051	Dental amalgam condenser, single-use	Шүдний амальгам конденсатор, нэг удаагийн	A sterile, hand-held manual dental instrument intended for packing amalgam or direct filling gold (Au). It may be smooth or serrated in design and flat or curved in shape. This is a single-use device.	I
3372	64072	Mass spectrometry specimen target holder	Масс спектрометрийн сорьцын зорилтот эзэмшигч	A supportive device intended to hold a mass spectrometry specimen target (e.g., MALDI plate) in order to facilitate positioning and ensure correct electrical contact of the target in the mass spectrometry analyser during analysis. This is a reusable device.	I

3373	64078	Manual dental burnisher, reusable	Шүдний гараар шатаагч, дахин ашиглах боломжтой	A hand-held manual dental device with a smooth or ribbed working head intended to be used to create thin margins between a dental restoration and the enamel at the cavo-surface angle, and/or to polish the surface of metallic restorations by rubbing. Its terminus is round or ball-shaped and is typically made of metal. This is a reusable device.	I
3374	64088	Oedema osmotic pack	Хавангийн осмотик багц	A noninvasive device intended to be applied to the surface of the body at the site of oedema to remove retained fluid by osmosis; it is not intended to heal wounds. It is in the form of a pack typically filled with materials/chemicals of high osmotic potential designed to be held in place with a wrap (not included). This is a single-use device.	I
3375	64089	Oedema osmotic pack/wrap	Хаван осмотик савлагаа/боодол	A noninvasive collection of devices intended to be applied to the surface of the body at the site of oedema to remove retained fluid by osmosis; it is not intended to heal wounds. It consists of a pack typically filled with materials/chemicals of high osmotic potential, which may be disposable, and a wrap designed to hold the pack in place. This is a reusable device.	I
3376	64119	Surgical irrigation/aspiration cannula, non-illuminating, reusable	Мэс заслын усалгаа/сорох суваг, гэрэлтүүлдэггүй, дахин ашиглах боломжтой	An atraumatic, invasive, hand-operated tube designed as a conduit for irrigation and aspiration (i.e., capable of both functions) of body cavities/wounds during a surgical procedure (e.g., neurosurgery, laparoscopy), typically to facilitate observation. It is not dedicated to dental or intrauterine procedures, not an ophthalmic device, and is not designed to administer parenteral fluids or drugs. It might incorporate a handle with a valve(s) and hole(s) on its side for the control of irrigation/aspiration, and may be provided with a stylet, a sheath, and/or connection tubing; it is typically made of metal. This is a reusable device.	I

3377	64126	Medical product temperature point indicator, electronic	Эмнэлгийн бүтээгдэхүүний температурын цэгийн үзүүлэлт, электрон	A small electronic device intended to be attached to a bag containing a temperature-sensitive medical product (e.g., blood, allergenic extract, pharmaceutical) to monitor the product temperature and indicate when it exceeds predetermined temperature limits, potentially making the product non-viable. It may signal through warning lights and/or transmit data to a computing device for analysis/display via dedicated configurable software (not included). This is a reusable device.	I
3378	64134	Patient radiation shielding pad/drape, single-use	Өвчтөний цацраг туяанаас хамгаалах дэвсгэр/даавуу, нэг удаагийн хэрэглээ	A protective device intended to be placed on/draped over part of a patient's body during a diagnostic or therapeutic radiological procedure to shield specific patient anatomies from unnecessary exposure to radiation and/or help block scatter radiation from the patient to protect healthcare workers. It commonly consists of a fluid-resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material; it is not a piece of clothing such as an apron. This is a single-use device.	I
3379	64135	Patient radiation shielding pad/drape, reusable	Өвчтөний цацраг туяанаас хамгаалах дэвсгэр, дахин ашиглах боломжтой	A protective device intended to be placed on/draped over part of a patient's body during a diagnostic or therapeutic radiological procedure to shield specific patient anatomies from unnecessary exposure to radiation and/or help block scatter radiation from the patient to protect healthcare workers.. It commonly consists of a fluid-resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material; it is not a piece of clothing such as an apron. This is a reusable device.	I
3380	64136	Electronically-controlled radiation shielding system	Цацрагаас хамгаалах цахим удирдлагатай систем	An assembly of electrically-powered devices designed for use during a diagnostic radiological procedure to shield the patient and attending healthcare staff from unnecessary exposure to scattered radiation. It consists of electronically-adjustable radiation shields with a control unit and is typically designed to be integrated into a diagnostic X-ray system (not included).	I

3381	64138	Bone cleaning gas-jet nozzle, reusable	Яс цэвэрлэх хийн тийрэлтэт цорго, дахин ашиглах боломжтой	A device designed to be attached to the distal end of a bone cleaning gas-jet handpiece to function as a nozzle that produces a jet of gas [usually carbon dioxide (CO_2)] from its aperture to clean bone during an open surgical orthopaedic procedure. It is available in many designs, shapes and sizes and may be used with a Y-piece adaptor and suction pump to allow suction through its aperture. This is a reusable device.	I
3382	64142	Capillary patient thermometer, gallium-alloy	Капилляр өвчтөний термометр, галлийн хайлш	An instrument designed to measure a patient's body temperature which is formed as a slender, hollow, sealed tube made of glass with a bulb at one end filled with a non-toxic liquid gallium alloy (typically alloyed with indium and tin). It works on the capillary principle whereby the registered heat proportionally expands the medium, filling a graduated column. This is a reusable device.	I
3383	64147	Surgical gastrointestinal clamp	Мэс заслын ходоод гэдэсний хавчаар	A manual, clip-like, surgical device designed specifically to clamp tissues of the gastrointestinal tract (e.g., colon) during open surgery; it does not have handles (i.e., not forceps-like) and is not intended for general manipulation/dissection of tissues. It may be referred to as a Demartel-Wolfson Clamp and is designed with blades hinged at one end and with a locking bar at the other. This is a reusable device intended to be sterilized prior to use.	I
3384	64169	Patient transfer assistive bed/mobile chair	Өвчтөн шилжүүлэх туслах ор/зөөврийн сандал	An electrically-powered bed and mobile chair (e.g., wheelchair, shower chair) combination intended to assist a patient with a disability to move between bed and wheelchair to facilitate daily activities and nursing care. The bed mattress includes an integral conveyor belt which moves the occupant of the bed and is adjustable in height and/or angle; the wheelchair can be temporarily attached to the foot of the bed for patient transfer to/from the conveyor belt, is adjustable in height and/or angle, and has detachable back/feet.	I
3385	64180	Cochlear implant system sound processor microphone cover	Чихний дунгийн суулгацын системийн дууны процессорын микрофоны бүрээс	A device intended to be used as a cover for the sound processor of a cochlear implant system to protect the processor microphones from dirt/debris. It is typically made of plastic material and designed to be clipped onto the top of the sound processor case. This is a single-use device.	I

3386	64185	Stereotactic radiotherapy breast positioning system pad	Стереотактик туяа эмчилгээний хөхний байрлал тогтоох системийн дэвсгэр	A cushion-like device designed to help facilitate reproducible positioning/immobilization of a female breast during stereotactic radiotherapy (SRT) imaging and treatment, by providing a bulking agent within a confined cup applied to the breast(s). This is a single-use device.	I
3387	64186	Ophthalmic examination target holder	Нүдний үзлэгийн зорилтот эзэмшигч	A supportive device intended to be used during an ophthalmic examination (e.g., general eye test, dynamic retinoscopy, ophthalmoscopy) to hold a patient's visual target in direct line of sight of the clinician, facilitating clinical observations and measurements along the visual axis. It is designed as a frame to support the visual target (e.g., mobile phone, eye test card) and has an opening through which eye observations are made; it typically includes connectors/clamps for fixation to an ophthalmic examination station and ophthalmic instruments. This device is typically used to help engage the patient when cooperation is difficult (e.g., a child or a person with a disability).	I
3388	64218	Hearing aid floss	Сонсголын аппаратын утас	A thin, string-like device typically made of synthetic fibres intended to be used in the home to clean and dry a hearing aid and associated devices (e.g., acoustic tube) by manually passing it through them. This is a single-use device.	I
3389	64220	Hearing aid drying gas	Сонсголын аппарат хатаах хий	A gaseous substance (e.g., a mixture of propane and isobutane), typically supplied in a spray container, intended to be used in the home to dry a hearing aid and associated devices (e.g., earmould, acoustic tube). After application, this device cannot be reused.	I
3390	64236	Medication spray nozzle	Эмийн шүршигч цорго	A tubular device with an atomizing distal tip intended to be attached to the container (e.g., squeeze bottle, syringe) of a medication (e.g., local anaesthetic) [not included] for administration of the medication in spray (atomized) form. It may be used externally (i.e., on skin) and/or non-surgical invasively via a natural orifice (e.g., oral, laryngeal) during a clinical procedure (e.g., endotracheal intubation, prior to percutaneous injection); it is typically made of polymer materials. This is a single-use device.	I

3391	64240	Ear canal suction handle	Чихний сувгийн сорох бариул	A noninvasive, non-powered, hand-held device intended to be connected to, and facilitate manipulation of, an appropriate cannula (not included) for suction/removal (aspiration) of debris from the ear canal during an ear/nose/throat (ENT) procedure; it is not intended for irrigation. It is in the form of a cylinder with an inner lumen which may incorporate a side-hole for low-level suction control (e.g., using the thumb); it does not incorporate a switch(es), valve(s) or button(s). It may include connection tubing. This is a single-use device.	I
3392	64252	Distraction rod locator	Анхаарал сарниулах саваа байршуулагч	A noninvasive, non-powered device intended to be used to accurately locate the magnet within an implanted spinal distraction rod (nail) so that a distraction rod controller can then be used to adjust the length of the distraction rod. This is a reusable device.	I
3393	64281	Densitometry body composition analyser	Биеийн бүтцийн нягтралын анализатор	An electrically-powered stationary device intended to use whole-body densitometry to determine body composition (percent and absolute body fat, and fat-free mass) based on manually-entered subject demographic data (e.g., age, gender, height), body weight, and body volume. The system includes controls and display, a scale for body weight measurement, and a closable cabin-like chamber with pre-calibrated air pressure sensors for determining body volume using air displacement plethysmography (by the application of pressure-volume relationships).	I
3394	64291	Mobile bariatric examination/treatment chair, manual	Явуулын бариа заслын үзлэг/эмчилгээний сандал, гарын авлага	A mobile (on wheels) non-powered device designed to support in a seated position an ambulatory or non-ambulatory bariatric (obese) patient, whose body mass exceeds the safe working load of a standard hospital/institution chair (e.g., around 350 kg), during outpatient examination/treatment (e.g., surgical, dental, ENT). It incorporates a heavy-duty framework, extra wide seat-support for the patient, and may be intended to be docked to an electrically-powered device (e.g., electric wheelchair recliner) to electronically recline the patient.	I

3395	64293	Dry medical towel/wipe, reusable	Хуурай эмнэлгийн алчуур/арчиж, дахин ашиглах боломжтой	A dry fabric intended to be used to wipe or dry medical devices/equipment (e.g., endoscopes, ultrasound systems) and/or clean the general environment (e.g., fluid spill). It may be moistened (e.g., with water or used together with disinfectant/cleaning solutions) however no solutions are included. Some devices may be sterilized, for use under sterile conditions [e.g., within an operating room (OR)]. This is a reusable device.	I
3396	64295	Metal-cutting bur	Металл хайчлах бур	A rotary cutting device consisting of a shaft and a cutting working end made of hard materials (e.g., high-grade steel, carbide, diamond) which is designed to fit into an appropriate powered handpiece that provides the rotation, and is intended for cutting hard metal, typically a device/implant during orthopaedic surgery. This is a single-use device.	I
3397	64304	Manual non-rotary dental instrument handle	Шүдний эргэдэггүй гарын авлагын бариул	A hand-held, manual device designed to hold and facilitate manipulation of a non-powered, non-rotary dental instrument (e.g., endodontic file/rasp, implant extractor). It is designed to accept the patient-contact endpiece (not included) for ease of handling. This is a reusable device.	I
3398	64320	Air-filled chair cushion, dynamic	Агаараар дүүргэсэн сандлын дэр, динамик	An electrically-powered, air-inflated arrangement of cushions and supports intended to be attached to a chair (e.g., wheelchair, dining chair) to provide comfort, improve posture, and help prevent pressure sores for the occupant, who is typically a patient affected by neuromuscular dysfunction. The device is composed of different cushions (e.g., lumbar, pelvic) which are independently inflated/deflated by an attendant and/or the occupant via electronic controls; the device may feature automatic inflation/deflation with occupant movement.	I
3399	64341	Muscular pain soap pad	Булчингийн өвдөлтийн савангийн дэвсгэр	A fabric pouch filled with natural soap intended to be placed on/near the skin surface to prevent/relieve muscular pain (typically cramping). It is a complementary therapy device (non-pharmaceutical) whereby the soap ingredients (e.g., oils, fragrance ions) are intended to relax the muscles. This is a reusable device.	I

3400	64351	Urine stream separator	Шээс ялгаруулагч	A device intended to be used to separate a urine specimen into a first-pass specimen and a midstream specimen during micturition. It is in the form of a funnel, tube and ball assembly that functions by using the ball as a valve between the tube and funnel so that the tube can fill with the first-pass specimen and subsequently the funnel can fill with the midstream specimen. Typically, these specimens have different diagnostic use cases (e.g., first-pass for urethritis, midstream for urinary tract infection). This is a reusable device.	I
3401	64356	Maddox lens	Маддокс линз	A circular-shaped, coloured, ophthalmic lens made of glass or plastic intended to be connected to a rod and/or frame (not included) to dissociate the eyes, by covering each eye in sequence, in the evaluation of eye extraocular muscle dysfunction [method to evaluate the alignment or deviation (i.e., heterophoria/heterotropia also known as strabismus) of a pair of eyes]. This is a reusable device.	I
3402	64366	Endoscope working-channel valve, reusable	Дурангийн ажлын сувгийн хавхлага, дахин ашиглах боломжтой	A device in the form of a small attachment intended to be fitted to the working channel (including biopsy port) of an endoscope to enable access for, and/or exchange of, an endoscopic device while minimizing leakage of liquids and gasses during an endoscopic procedure. Also referred to as a seal, it may be Luer formatted and include features to allow for simultaneous irrigation/biopsy or suction via the working channel. This is a reusable device.	I
3403	64367	Instrument tray cover, single-use	Багажны тавиурын таг, нэг удаагийн	A flexible, synthetic polymer cover designed to be placed on an instrument tray to provide a protective barrier for the transport and short-term storage of clinical instruments (typically endoscopes or surgical instruments). It is typically available in two colours to indicate clean/sterile or contaminated; a tray liner is typically supplied with the device. This is a single-use device.	I

3404	64371	Dental implantation drilling template guide-sleeve	Шүдний суулгацын өрөмдлөгийн загвар хөтөч-ханцуй	A small tubular device intended to be inserted within the guide holes of a dental implantation drilling template (a device used to guide drilling in the jawbone during dental implant placement/fixation) to guide the implant into position. This is a single-use device.	I
3405	64397	Thoracic cage orthosis shape modifier	Цээжний торны ортозын хэлбэрийг өөрчилдөг	A manual device intended to be used to modify, typically by bending, the shape of the body contact parts of a thoracic cage orthosis so that the orthosis adopts the most appropriate custom shape for a patient. This is a reusable device.	I
3406	64406	Thoracic electrical impedance electrode array, reusable	Цээжний цахилгаан эсэргүүцэлтэй электродын массив, дахин ашиглах боломжтой	A noninvasive configuration of multiple electrodes (e.g., patches, belt-like) intended to be affixed to the thorax to perform continuous bioimpedance measurements for assessment of lung function (e.g., respiratory rate) or pulmonary conditions (e.g., atelectasis, pneumothorax, endotracheal tube misplacement) of a ventilated or spontaneous breathing patient; it is intended to be used in conjunction with a parent device [e.g., monitor, thoracic electrical impedance tomography (EIT) or segmentography system]. This is a reusable device.	I
3407	64408	Thoracic electrical impedance electrode array conductive skin adhesive tape	Цээжний цахилгаан эсэргүүцэл бүхий электродын массив дамжуулагч арьсны наалдамхай тууз	A flat, flexible tape with an electrical conductive medium (gel) designed to be used during thoracic electrical impedance (bioimpedance) tomography (EIT) or segmentography to adhere an electrode array (typically belt-like) to the skin surface, and to function as a body-electrode interface to enable continuous bioimpedance measurements. This is a single-use device.	I
3408	64413	Freestanding headrest, single-use	Бие даасан толгойны түшлэг, нэг удаагийн	A device designed to be placed on a flat surface (e.g., operating/examination table, stretcher) to support and stabilize the head of a recumbent patient, typically in preparation for and during many types of medical procedures or examinations; it is not attached to a parent device. The headrest is typically made of shock-absorbing materials (e.g., memory foam, gel) that cushion the head and is available in various sizes and shapes including head pad, head ring, and concave ergonomic holders with fingered lateral supports to position the head. This is a single-use device.	I

3409	64416	Surgical anti-adhesion material, nonimplantable	Хагалгааны наалдацын эсрэг материал, суулгацгүй	A material intended to be placed in the body short term (<= 30 days) to prevent the abnormal fibrous union (adhesion) between one body part/tissue to another, or between one body part/tissue and a dressing, following a surgical procedure. It is made of a single or composite polymer (e.g., hydrogel, silicone) in the form of a barrier membrane or fluid dressing, and may be cut to a desired size/shape. This is a single-use device.	I
3410	64422	Dental prosthesis removal instrument	Шүдний протез арилгах хэрэгсэл	A non-electric, hand-held dental instrument intended to be used to remove a permanent or temporary cemented dental prosthesis restoration (e.g., crown, denture, bridge) from a tooth or implant abutment; it is not a thermal detacher. It consists of a metallic instrument with a handle and a pointed, angled distal end used to secure the instrument at the margin of the prosthesis to be removed; it may be designed as a manual, pneumatic or spring-loaded instrument whereby light force is applied to detach the restoration. This is a reusable device.	I
3411	64430	Carbon dioxide breath analyser sampling chamber	Нүүрстөрөгчийн давхар ислийн амьсгалын анализаторын дээж авах камер	A tube-like device designed to be attached to a carbon dioxide (CO_2) breath analyser to provide an enclosed breath pathway and a breath sampling area of known geometry for analyser measurement of exhaled carbon dioxide (CO_2) concentration in normal tidal breathing. The chamber is designed to accept a breathing mouthpiece to enable breath sampling. This is a reusable device.	I
3412	64476	Dental restoration position holder	Шүдний нөхөн сэргээх байрлал эзэмшигч	A hand-held manual device intended to be used to hold an indirect restoration (e.g., veneer, overlay, inlay) in place on the surface of the tooth during cementation. It consists of a handle with a restoration holding tip(s); the tip may be disposable. This is a reusable device.	I
3413	64477	Dental restoration position holder tip	Шүдний нөхөн сэргээх байрлал эзэмшигчийн үзүүр	A small, distal component of a hand-held manual dental restoration position-holder intended to be used to hold an indirect restoration (e.g., veneer, overlay, inlay) in place on the surface of the tooth during cementation. It is available in different designs (e.g., pointed, pronged) intended to be attached to a dedicated handle. This is a single-use device.	I

3414	64483	Urethral self-access syringe camera holder	Шээсний сувгийн өөрөө нэвтрэх тариурын камер эзэмшигч	A small, non-powered device designed for fixation of a small home-use video camera (typically endoscope-like) to a syringe so that images from the camera can assist urethral self-access for female patients during self-administration of intravesical fluids (e.g., pharmaceuticals), using a catheter and/or urethral intravesical infusion tip. It includes syringe attachment and camera holding features; neither the camera nor syringe are included. This is a reusable device.	I
3415	64484	Patient tube cushion	Өвчтөний хоолойн дэр	A small patient-worn padding intended to function as a barrier between a patient tube/catheter (e.g., nasogastric tube, oxygen tube, surgical drain, laryngectomy or tracheostomy tube) and the skin to prevent irritation, maceration, and ulceration. It is typically made of a skin-friendly material (e.g., foam, silicone gel) designed to wrap/fit around the tube/catheter. This is a single-use device.	I
3416	64490	Examination/treatment table paper holder	Үзлэг/эмчилгээний ширээний цаас эзэмшигч	A device designed to be attached to an examination/treatment table or trolley to hold a paper roll to facilitate use of the paper. This is a reusable device.	I
3417	64491	Medical/surgical interventional tube/cable securement strap	Эмнэлгийн/мэс заслын интервенцийн хоолой/кабель бэхэлгээний оосор	A strip of material in the form of tape/strap intended to be used to secure interventional patient tubes/cables to drapes or device covers in surgical/medical settings; it is not intended to attach to the patient and has no additional intended uses. It may be comprised of, e.g., an adhesive on one side to allow attachment to a drape/cover and Velcro on the other side for securing tubing/cables. This is a single-use device.	I
3418	64499	Vascular anastomosis coupling kit, single-use	Судасны анастомоз холбох хэрэгсэл, нэг удаагийн хэрэглээ	A collection of devices intended to be used to implant a vascular anastomosis coupler [not included] to join vascular (including microvascular) structures by the coupling of two ring-shaped components. It consists of two or more items typically amongst: a coupling approximator for holding the rings of the coupler during approximation, a dedicated forceps/everter for placing the ends of the blood vessel over the pins of the coupler, and a vessel diameter guide (sizer). This is a single-use device.	I

3419	64501	Catheter/tubing connection protector	Катетер/хоолойн холболтын хамгаалалт	A small, rigid box/clip/pouch intended to be fitted over/around the connection juncture between a catheter and a tube, or between tubing (i.e., where there is a connector, stopcock, or valve/manifold), to create a physical barrier for protection against accidental handling and contamination. It may include a foam containing a disinfectant or intended to be soaked in disinfectant prior to use. This is a single-use device.	I
3420	64507	Rectal medication/infusion catheter	Шулуун гэдэсний эм / дусаах катетер	A flexible tube intended to be inserted into the rectum (may be held in position by an inflatable retention balloon) for administration of a medication solution (e.g. opioids, anti-inflammatory, antibiotics) or infusion of hydration fluid; it may be retained short-term for multiple administrations. It may be supplied with additional disposable devices associated with insertion (e.g. syringe) or medication preparation (e.g., grinder). This is a single-use device.	I
3421	64509	Endoscope leak tester tubing	Дурангийн битүүмжлэл шалгагч хоолой	A length of flexible tube with connectors intended to deliver a medium (typically air) from a leak tester to the interior of an endoscope during a leak test; it may in addition be intended for other endoscope pre- or post-procedural processing (e.g., allow connection of a fluid seal). This is a reusable device.	I
3422	64543	Tissue cryostorage straw holder	Эд эсийн криосторын сүрэл эзэмшигч	A tubular or semi-tubular device designed to hold/cover one or more tissue cryostorage straw(s) during cold [e.g., liquid nitrogen (LN2)] storage for convenient and safe storage and to facilitate identification of tissue specimens within. This is a reusable device.	I
3423	64552	Corneal resection holder, reusable	Эвэрлэгийн тайралт эзэмшигч, дахин ашиглах боломжтой	A device designed to hold donated corneal tissue so that it can be resected in preparation for transplantation. The device may be in the form of a pedestal, with retention and locking rings, upon which the donated cornea is placed and inflated with air, or some other material, to simulate the pressure of the anterior chamber of the eye for the procedure. This method allows resection from the epithelial side of the cornea. The device may also include tubing and clips, and inflation is typically achieved manually with a syringe. This is a reusable device.	I

3424	64555	Device/equipment fixation underpad	Төхөөрөмж/тоног төхөөрөмжийн бэхэлгээний доод дэвсгэр	An adhesive, non-slip pad intended to be placed underneath a medical device or medical equipment (e.g., generator, control unit, console) to fix it in a secure position onto a flat surface [e.g., worktop, trolley, floor]. This is a single-use device.	I
3425	64556	Custom-made dental anatomy model	Захиалгат шүдний анатомийн загвар	A dental device made of gypsum (e.g., plaster, dental stone) intended to be used as a replica (model) of a specific patient's teeth and gums, to assist with a dental treatment-related procedure (e.g., production of a dental restoration, design of a teeth whitening tray). It is created via casting (i.e., taking the impression of the patient's teeth/gums, pouring plaster into the impression, and then removing the impression). This is a single-use device.	I
3426	64580	Middle ear implant system vibrator assembly implantation tool	Дунд чихний суулгацын системийн доргиурын угсралт суулгац суулгах хэрэгсэл	A hand-held manual surgical instrument designed to aid handling/implantation of a middle ear implant system vibrator assembly. It has a hand-controlled grasping mechanism intended to position the vibrator assembly to contact an ossicle (middle ear bone); it is not in the form of tweezers-like or scissors-like forceps. This is a single-use device.	I
3427	64583	One-piece urostomy bag, open-ended	Нэг хэсэг уростомийн уут, задгай	A one-piece plastic pouch designed to be attached with adhesive to a patient's skin around a stoma for use as a urine collection device in the management of urinary diversions; it includes a drainage tap to permit the emptying of fluids (open-ended). The entire device is removed when changed. This is a single-use device.	I
3428	64584	One-piece urostomy bag, closed-ended	Уростомийн нэг ширхэг уут, хаалттай	A one-piece plastic pouch designed to be attached with adhesive to a patient's skin around a stoma for use as a urine collection device in the management of urinary diversions; it is removed and disposed of when full [i.e., it does not include a drainage tap (closed-ended)]. The entire device is removed when changed. This is a single-use device.	I
3429	64593	Medical/surgical interventional tube/cable securement clip, reusable	Эмнэлгийн/мэс заслын хөндлөнгийн хоолой/кабель бэхэлгээний хавчаар, дахин ашиглах боломжтой	A device intended to hold, position, and organize medical/surgical interventional tubing (e.g., arterial/venous lines, gas lines, drainage catheters, irrigation tubing) or cables to an equipment, drape or gown; it is not intended to affix the tubing to the patient directly. It is typically designed as a clip or a block with clips. This is a reusable device.	I

3430	64598	Endoscopic video imaging electrical interface set	Дурангийн видео дүрслэлийн цахилгаан интерфэйсийн багц	A combination of electrical devices intended to electrically connect/interface two or more endoscopic video imaging system subunits. It includes an electrical cable(s), an interface unit, and may typically include additional supportive accessories (e.g., equipment fixation underpad); it does not include any image processing/recording devices. This is a reusable device.	I
3431	64601	Radiation shielding table drape	Цацрагаас хамгаалах ширээний хөшиг	A protective device intended to be placed on/draped over part of an operating table for a radiological examination during a surgical procedure (e.g. fluoroscopy using a C-arm) to shield attending healthcare personnel from unnecessary exposure to radiation. It commonly consists of a fluid-resistant outer covering that surrounds a thin sheet of lead (Pb) or lead-equivalent material which may in part be segmented into strips to allow passage of equipment under the table. This is a reusable device.	I
3432	64667	Noninvasive device battery charger/transceiver/cable	Инвазив бус төхөөрөмжийн батерейны цэнэглэгч / дамжуулагч / кабель	An electrically-powered device designed to supply an electrical charge to the battery of a noninvasive device to recharge it for operation, and to both receive data from and transmit data to noninvasive devices via a direct/wired or wireless connection. It is typically in the form of an electronic circuitry housing with a cable.	I
3433	64676	Ophthalmic surgical microscope	Нүдний мэс заслын микроскоп	An electrically-powered ophthalmic magnification instrument, usually stereoscopic, designed for use in the operating room (OR) to magnify structures within the eye or its surroundings, and/or provide slit-lamp functionality to delineate intraocular structures or defects, during ophthalmic surgical procedures. It can be fixed or mobile (on wheels) and is typically equipped with motorized controls (foot-switch) for adjusting focus, magnification [zoom], illumination, and position, and with articulating arms; some types have integrated video cameras along with digital imaging and user interface screens.	I

3434	64710	Cardiac resuscitator articulated arm extension	Зүрхний сэхээн амьдруулах эмч үе мөчний гар сунгалт	A device designed to be a vertical extension of the articulated arm of an electromechanical cardiac resuscitator to compensate for the higher position of the resuscitator when mounted on a cardiac compression board during cardiopulmonary resuscitation (CPR). It is designed as a metallic cylinder for connection between the resuscitator's articulated arm and the patient-contact thorax compression plunger. This is a reusable device.	I
3435	64711	Cardiac resuscitator thorax compression plunger	Зүрхний сэхээн амьдруулах аппаратын цээжний шахалтын цохилт	A removable endpiece designed to function as the patient-contact component of an electromechanical cardiac resuscitator intended to apply rhythmic compression to a patient's chest to provide blood flow during treatment of cardiac arrest [cardiopulmonary resuscitation (CPR)]. It is in the form of a plunger- or piston-like flanged cylinder designed to be attached to the articulated arm of the resuscitator for application of recurrent vertical strokes to the patient. This is a reusable device.	I
3436	64715	External lower-limb prosthesis suspensory component, non-powered	Доод мөчний гадна протезийн түдгэлзүүлэх бүрэлдэхүүн хэсэг, цахилгаангүй	A non-powered device intended to be integrated in the socket shell of an external lower limb prosthesis to reduce the axial movement between the residual limb and the prosthesis, when the prosthesis is unloaded. It may be designed in various forms (e.g., strap, sleeve, cuff, thigh corset, shell, belt, pin, lock, valves).	I
3437	64740	Wall-mounted foldable seat	Хананд суурилуулсан эвхэгддэг суудал	A non-powered device designed to be affixed to a wall and intended to be sat upon by a disabled, unstable or elderly patient typically for momentary rest (e.g., while walking down a long corridor, going up/down the stairs, in an elevator). The device is foldable and may be mounted at a fixed height or be manually height-adjustable; it may include armrests, side supports, or grab handles.	I
3438	64767	Glenoid defect sizer	Гленоидын согог хэмжигч	A manual orthopaedic surgical instrument intended to be placed on the surface of a defective glenoid fossa to measure the angle (slope) of its bone defect for selection of an appropriately-sized glenoid reamer and/or prosthesis (not included) prior to glenoid repair/replacement. It is intended to be locked into a holder (not included) and has two arms of different lengths for angle measurement; it is available in various arm lengths. This is a reusable device.	I

3439	64768	Orthodontic palate expander screw key	Ортодонтийн тагнай тэлэгч шураг түлхүүр	A hand-held device designed to manually adjust an orthodontic palate expander (not included), by rotating the expander's screw, to help create space for correct upper teeth alignment. It is comprised of a handle with an expander-engaging pin at the distal end which is inserted into the screw and rotated to adjust the width of the expander. This is a reusable device intended for single patient use.	I
3440	64769	Orthodontic palate expander/teeth aligner, bonded	Ортодонтийн тагнай тэлэгч/шүд тэгшлэгч, наасан	An orthodontic device intended to gradually spread the maxillary arch and/or improve teeth alignment. It is typically in the form of either: 1) a segmented body separated by a palate expander screw; or 2) a spring-like mechanism, positioned in the palate cavity with wires extending laterally, ending in bonded teeth-engaging bands. It is intended to remain in the oral cavity for the duration of treatment (fixed), and may be periodically adjusted by an orthodontist to effect skeletal and/or dental changes. This is a single-patient device intended to be used for the duration of treatment (single-use) before being discarded.	I
3441	64795	Dental coating, tooth-desensitizing, home-use	Шүдний бүрээс, шүдний мэдрэмжгүйжүүлэх, гэрийн хэрэглээ	A material available for use by a patient/layperson outside a clinical setting designed to be applied to exposed dentine (resulting from enamel erosion, breakage, or gingival recession) to treat dental hypersensitivity caused by physical, chemical, and/or physiological agents (e.g., cold, heat, contact, acid, bruxism) by forming a barrier within the dentine tubules. It is a mixture of synthetic and/or plant-derived ingredients in fluid form (e.g., gel, mouth-rinse resin, strips); it may also have antimicrobial properties or contain fluoride for caries prevention. After application, this device cannot be reused.	I

3442	64813	Endodontic instrument chairside holder set	Эндодонтийн багажийн сандал эзэмшигчийн иж бүрдэл	A collection of devices intended to be used chairside during a endodontic procedure to facilitate the access, handling, temporary storage and convenient selection of endodontic instruments (e.g., files/rasps). The set may be positioned on a surface or worn by the operator (e.g., ring design) and typically includes a plastic housing/rack, disposable spongy foam inserts for holding delicate and sharp rotary endpieces, holders for fluid containers, colour-coded identification labels/tags, and a ruler to help select an appropriate size instrument. This is a reusable device.	I
3443	64815	Endodontic instrument-holding insert, single-use	Эндодонтийн багаж барих оруулга, нэг удаагийн	A device intended to be fitted into an endodontic instrument holder housing and used chairside during a dental endodontic procedure to hold and temporarily store sharp endodontic instruments (e.g., files/rasps). It is in the form of a spongy foam insert into which the sharp end of instruments is inserted, thereby reducing risk of injury. This is a single-use device.	I
3444	64816	Endodontic instrument identification tag	Эндодонт хэрэгслийн таних тэмдэг	A label or a tag intended to be used to facilitate clear and easy identification of endodontic instruments (e.g., files/rasps) before or during a procedure (e.g., clinical, sterilization). It is typically colour-coded, with a writing surface, and with a hook or spike for insertion in a spongy foam insert that holds the instruments. This is a reusable device.	I
3445	64823	Dental material chairside light-protection container	Шүдний материал сандал дээр гэрлээс хамгаалах сав	A container (e.g., tray with lid) intended to be used chairside during a dental procedure to protect light-cured dental materials (e.g., adhesive, sealant, composite resin) from ambient light, to prevent premature activation and/or light contamination of the material before use. This is a single-use device.	I
3446	64833	Endodontic instrument-holding insert, reusable	Эндодонтийн багаж барих, дахин ашиглах боломжтой	A device intended to be fitted into a container designed to store endodontic instruments (e.g., files/rasps), typically chairside prior to a clinical procedure or during a sterilization procedure. It is in the form of a spongy foam insert into which the sharp end of instruments is inserted, thereby reducing risk of injury. This is a reusable device.	I

3447	64852	Surgical gown, reprocessed	Хагалгааны халат, дахин боловсруулсан	A garment intended to be worn by healthcare staff over a scrub suit to cover the arms, trunk, and upper legs, during a medical or surgical procedure; it may be fluid resistant or impervious to fluids. Also known as an operating room (OR) gown or isolation gown, it is used to help protect healthcare workers from the transfer of microorganisms, body fluids, and particulate material or transmission of a contagious agent which has infected the patient. This is a previously used single-use device that has been processed for an additional single-use patient application.	I
3448	64860	Endodontic cold/bite test instrument	Эндодонтийн хүйтэн/хазалтыг шалгах хэрэгсэл	A manual hand-held dental instrument designed to be used by an endodontist to perform a cold and/or bite test that involves eliciting a painful response in a tooth and observing the patient’s response, typically for detection of a dental fracture hidden beneath tooth enamel or a cusp, and/or to assess dental pulp health. It has a double-ended design in which one end has a sturdy segment for bite testing, whilst the other end is designed to hold a precooled foam piece for cold sensitivity testing; disposable foam pieces and tweezers-like holding tips may be included with the device. This is a reusable device.	I
3449	64861	Endodontic cold test foam wedge	Эндодонтийн хүйтэн туршилтын хөөс шаантаг	A section of soft, spongy, compressible material intended to be used to perform a dental cold sensitivity test for detection of a dental fracture hidden beneath tooth enamel or a cusp, and/or to assess dental pulp health. It is designed to be submitted to very low temperatures, typically by being sprayed or injected with a coolant fluid, and then applied to a patient’s tooth surface to elicit a painful response. Tweezers-like tips intended to be mounted on a hand-held instrument while holding the foam wedges may be included with the device. This is a single-use device.	I

3450	64863	Medical device holding garment	Хувцас барьсан эмнэлгийн төхөөрөмж	A non-powered device in the form of a garment (e.g., vest, shirt, pants) specifically designed to hold one or more independent medical device(s) [e.g., infusion pump, medicine cassette], connected to the body via tubes or leads, close to the body to minimize risk of detachment/displacement during daily movement and sleep. It is typically made of textile materials with pockets for the medical device(s), holes for the tubing, and may be secured with a zip fastener and/or Velcro. This is a single-patient reusable device.	I
3451	64880	Biopsy syringe holder, single-use	Биопсийн тариур эзэмшигч, нэг удаагийн хэрэглээ	A hand-operated device designed to hold a biopsy syringe to facilitate precision aspiration of a tissue specimen through a biopsy needle. The holder is typically made of metal and plastic materials and typically designed as a lightweight, hand-held frame in which the syringe is placed and its piston withdrawn using a sliding handle in the frame; a stopper may be included to prevent further aspiration at a predetermined point. This is a single-use device.	I
3452	64987	Hearing implant system sound processor activation kit	Сонсголын суулгацын системийн дууны процессорыг идэвхжүүлэх хэрэгсэл	A collection of non-powered devices intended to be used by a healthcare professional in a clinical setting to assist with the activation/programming of a hearing implant system sound processor (not included). It typically includes a battery cover opener/closer, magnet inserter/remover, and temporary cover intended to protect the sound processor from environmental exposure during its connection to an external device (e.g., computer) for adjustment of settings. This is a reusable device.	I
3453	64988	Hearing implant system external magnet inserter/remover	Сонсголын суулгацын системийн гадна соронз оруулагч/арчигч	A noninvasive hand-held manual instrument designed to aid insertion, reinsertion and/or removal of the external magnet component of a hearing implant system (typically the sound processor magnet). It is typically made of polymer and magnetic materials. This is a reusable device.	I

3454	64999	Stretcher all-terrain wheeled undercarriage	Дамнуурга бүхий бүх газар ашиглах дугуйт тэрэг	A non-powered, manually-operated (hand-pushed) undercarriage consisting of a heavy-duty frame with large wheels designed to accept a patient stretcher/board (not included) on its top and intended to facilitate transport of a recumbent patient by emergency medical services, primarily over difficult terrain inaccessible to conventional ambulance stretchers (e.g., off-road, mountain sites), typically to and from ambulances, emergency shelters, and mobile hospitals. It is constructed of sturdy materials, includes locks/clamps for securing the stretcher, and is foldable.	I
3455	65005	Wheelchair legrest pad	Тэргэнцэрт зориулсан хөлний дэвсгэр	A contoured or padded device intended to be attached to wheelchair footrests so that it can provide a comfortable platform to support the calves of the legs (legrest).	I
3456	65017	Transcutaneous incontinence-control electrical stimulator electrode pad	Арьсаар дамждаг шээс ялгаруулахгүй-хяналтын цахилгаан өдөөгч электродын дэвсгэр	A noninvasive electrical conductor which is a component of a transcutaneous incontinence-control electrical stimulation system intended for the treatment of urinary and/or faecal incontinence through the transcutaneous (noninvasive) application of electrical stimuli to the muscles of the pelvic floor to induce Kegel-like contractions. It connects to an external pulse generator (via a cable or wirelessly) and is in the form of a skin gel pad with surface electrodes designed to be placed on the pubic area. This is a reusable device.	I
3457	65034	Wearable dental procedure holding ring	Зүүж болохуйц шүдний эмчилгээ хийх цагираг	A plastic, ring-like device intended to be worn on the finger of a dental professional to accept and hold various dedicated accessories (e.g., instrument cleaning pads, instrument holders, dental substance receptacles) used during a dental procedure. This is a reusable device.	I
3458	65035	Wearable dental procedure holding ring cleaning pad	Бөгж цэвэрлэх дэвсгэртэй зүүж болох шүдний эмчилгээ	A rough, foam-like device intended for use with (inserted into) a wearable dental procedure holding ring (not included) to clean and remove debris from dental instruments during procedures. This is a single-use device.	I
3459	65036	Wearable dental procedure holding ring well	Бөгжийг сайн барьдаг зүүж болох шүдний эмчилгээ	A shallow open receptacle intended for use with (inserted into) a wearable dental procedure holding ring (not included) to hold liquid, paste and gel-like dental substances or other small materials used during procedures. This is a single-use device.	I

3460	65058	Endoscopic surgical ligation clip applier, reusable	Дурангийн мэс заслын хавчаар түрхэгч, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used during an endoscopic (e.g., laparoscopic) surgical procedure to apply small atraumatic clips (not included) for the ligation of blood vessels, or similar tubular anatomy, mainly to prevent and/or stop bleeding (i.e., haemostasis). It is neither designed to apply aneurysm clips nor gastrointestinal clips. It typically includes distal jaws, a slender shaft, and a proximal handle (e.g., trigger-like). The ligation clips are not included. This is a reusable device.	I
3461	65072	Wheelchair caster cap	Тэргэнцэрт зориулсан малгай	A device made of durable materials designed to be fitted to a wheelchair front wheel (caster) to protect its bearing from damage and wear, and to keep it free from dust and dirt particles.	I
3462	65076	Tinnitus pressure therapy device	Чих шуугих даралтыг эмчлэх төхөөрөмж	A noninvasive, non-powered device intended to be worn around the ear to apply constant stimulating pressure to nerves and fasciae at multiple points around the ear lobe (e.g., musculus temporalis, musculus auricularis superior, tragus) to help minimize tinnitus noise.	I
3463	65077	Dental restoration carver, multiple-material	Шүдний нөхөн сэргээх сийлбэрчин, олон материалтай	A hand-held manual dental instrument intended to be used for producing and perfecting anatomical forms in multiple dental restoration materials such as amalgam, cement, and acrylic or composite resin/plastic (i.e., not dedicated to a particular material) by cutting, scraping, paring, and smoothing finishes and modelling patterns intraorally. It is typically a double-ended instrument with working ends of various shapes and designs, and a central handle. This is a reusable device.	I
3464	65081	Dental amalgam waste separator, centrifugation	Шүдний амальгам хаягдал ялгагч, центрифуг	An electromechanical device intended to separate by centrifugation dental amalgam from dental suction waste in order to stop amalgam from entering a suction pump and the mains drainage system during a dental procedure. It is typically automatically switched on upon receiving waste water from the dental delivery system.	I
3465	65086	Hearing implant system sound processor pad	Сонсголын суулгацын системийн дууны процессорын дэвсгэр	A thin layer of foam intended to be adhered to the inner side of a hearing implant system sound processor (not included) to provide supplemental stability and comfort to the wearer of the sound processor. This is a reusable device.	I

3466	65101	Surgical laminar airflow unit nozzle	Мэс заслын ламинар агаарын урсгалын нэгжийн хошуу	A device designed to be connected to a surgical laminar airflow unit to channel filtered air directly to the site of operation during a surgical intervention to provide an area free of contaminants and reduce the risk of patient infection. It is in the form of a tubing hose with a distal nozzle that is typically adhered to the patient's skin in proximity to the surgical wound to direct air across the site. This is a single-use device.	I
3467	65126	Surgical instrument handle grip	Мэс заслын багажны бариулын бариул	A device designed specifically to be attached to the handle (or holding portion) of a surgical instrument to provide grip for improved manipulation of the handle during surgical procedures. It is typically a synthetic polymer device designed for attachment to a handle and is not intended to provide a physical sterile barrier between the handle and the hand of a healthcare professional (i.e., not a handle cover). This is a single-use device.	I
3468	65128	Tracheostomy care kit, reusable	Трахеостомийн эмчилгээний иж бүрдэл, дахин ашиглах боломжтой	A collection of devices and supplies intended to be used for the maintenance of a tracheostomy (i.e., cleaning of tracheostomy tube prior to reinsertion). It typically includes a cleaning agent and cleaning utensils (e.g., swabs, brushes, bowl). This device is reusable after appropriate cleaning of the reusable products, and when the consumable products have been replenished.	I
3469	65130	Dental x-ray film holder, single-use	Шүдний рентген хальс тогтоогч, нэг удаагийн хэрэглээ	A device designed to stabilize a dental x-ray film intraorally during the taking of a dental x-ray. It is typically an adhesive-backed device designed to fold into a T-shape which adheres to the x-ray film and provides a tab that, when bitten down on, stabilizes the film adjacent to the teeth whilst the x-ray is being taken. This is a single-use device.	I
3470	65137	Vision corrective spectacles centration image analysis software	Алсын харааг засах нүдний шилний төвлөрөл дүрсний шинжилгээний программ хангамж	An application software program intended to be used to analyse images of a patient wearing spectacle frames to measure centration data (e.g., pupil position relative to frame, angle of frame relative to face) used to manufacture customized corrective spectacles.	I

3471	65138	Assisted reproduction specimen management system software	Тусламжтай нөхөн үржихүйн сорьцын удирдлагын системийн програм хангамж	An application software program intended to act as the user interface to the operating software for a robotic assisted reproduction specimen management system, to facilitate optimal inventory and storage management of reproductive biological materials (e.g., gametes, embryos). It is typically a cloud-based application which records environmental conditions (e.g., temperature, airflow) onboard the management system, and makes necessary adjustments as required. It also captures, stores and/or transmits specimen identification information for accurate tracking of patient samples and inventory management.	I
3472	65141	Arterial tourniquet, pneumatic	Артерийн чангалуур, пневматик	An inflatable cuff with fastening mechanism intended to be placed around a patient's limb (arm or leg) and pneumatically inflated from an integrated small gas cartridge to reduce and/or occlude arterial blood circulation to the distal portion of the limb during an emergency situation. It is typically used by emergency medical services (EMS) for emergency blood loss prevention. This is a single-use device.	I
3473	65146	Podiatry kit, reusable	Хүүхдийн эмчилгээний иж бүрдэл, дахин ашиглах боломжтой	A collection of devices intended for treatment of cutaneous foot disorders such as hardened skin, corns, and ingrown/ingrowing toenails. It typically consists of two or more of the following items: nail cutters, nail file, dermal curette, scalpel handle and blades, probe, gauze applicators, and/or dressings (e.g., coverings, protection/treatment solutions); it may be used in the home and healthcare facility. This is a reusable device.	I
3474	65161	Instrument tray, single-use	Багажны тавиур, нэг удаагийн	A container intended to provide a suitable platform for placing/containing many medical/surgical/dental instruments and related items for use during a clinical procedure. It is in the form of a shallow receptacle with a raised rim and moulded positions for placing the instruments. This is a single-use device.	I

3475	65173	Urine drainage extension tubing	Шээс гадагшлуулах өргөтгөлийн хоолой	A length of noninvasive flexible tubing intended to connect between a patient contact urinary drainage device (e.g., urethral catheter, urostomy pouch) and a receptacle; some types may in addition be intended for extra-urinary passive drainage applications (e.g., intestinal ostomy or wound drainage). It is typically self-applied; it does not include a valve or clamp (i.e., not a tubing set). This is a single-use device.	I
3476	65181	Anti-tremor gyroscopic orthotic glove	Чичиргээний эсрэг гироскопийн ортотик бээлий	An electrically-powered device designed to be worn on the hand/forearm of a patient with hand tremors [e.g., due to Parkinson's disease, essential tremor (ET)] to reduce tremors and facilitate activities of daily living using the hand. It is in the form of a glove with forearm sleeve and built-in gyroscopes which generate tremor-countering forces to promote hand stabilization.	I
3477	65187	Ear canal irrigation tip	Чихний сувгийн усалгааны үзүүр	A small, rigid, funnel-shaped device intended to provide a conduit for irrigation of the ear canal to flush out cerumen (ear wax) in conjunction with a flushing device (e.g., pump, spray bottle, syringe) [not included] during an ear/nose/throat (ENT) procedure; it is not intended for examination, suction or instrument insertion. This is a single-use device.	I
3478	65192	Calf/shin orthosis	Тугал / шилбэний ортоз	A prefabricated (non-customized) externally applied and wearable appliance intended to be wrapped around the calf and shin to prevent or treat muscular conditions (e.g., shin splints). It is in the form of a wrap/sleeve with straps made of synthetic and textile materials intended to apply select pressure to specific muscles for support/relief. This is a reusable device.	I
3479	65194	Flatus tube, single-use	Хавтгай хоолой, нэг удаагийн	A tube intended to be inserted through the anus to remove flatus and relieve distention in the rectum; it may be used to relieve colic in infants. It is made of synthetic polymer materials and may be used in healthcare settings and by laypersons in the home. This is a single-use device.	I

3480	65197	Rectal/faecal specimen collection kit	Шулуун гэдсээр/баасанд сорьц цуглуулах иж бүрдэл	A collection of devices intended exclusively for professional use for the collection, and preservation and/or transport, of a rectal/faecal specimen for subsequent laboratory analysis [e.g., nucleic acid technique (NAT), microbiological culture]. The kit consists of a specimen sampling/collection tool(s) [e.g., swab, spatula], and a covered receptacle with or without an additive/medium (e.g., cell or nucleic acid preservation solution, Carey-Blair transport medium). This is a single-use device.	I
3481	65223	Dental material heater	Шүдний материал халаагч	An electrically-powered device designed to be used to heat, through conduction, a variety of materials/substances (e.g., composite resin, root canal cleaning solution, local anaesthetic agent) to facilitate application of the material (e.g., optimum performance, patient comfort) during a dental procedure. It consists of a heating element with a temperature controller and a heater plate.	I
3482	65224	Dental material heater plate	Шүдний материал халаагч хавтан	A non-powered component of a dental material heater designed to conduct heat from the heater's heating element to a container holding a dental material/substance (e.g., composite resin, root canal cleaning solution, local anaesthetic agent). It is typically in the form of a metal block which incorporates holders of different shapes designed to accept specific devices/containers (e.g., vials, syringes, cartridges) for heating; it may include a cover. This is a reusable device.	I
3483	65234	Ear canal material application syringe/cannula	Чихний сувгийн материалын хэрэглээний тариур/суваг	A device consisting of a barrel (cylinder) with plunger and a permanently attached blunt cannula intended for the application of a liquid/semi-liquid material/pharmaceutical (e.g., corticosteroid or antibiotic cream, local anaesthetic agent) into the external auditory canal, as part of a treatment or during a procedure. This is a single-use device.	I
3484	65314	Dental veneer, home-use	Шүдний өнгөлгөө, гэрийн хэрэглээ	A polymer-based material intended to be used by a layperson in the home to custom build a dental veneer which can be applied to the teeth for short periods of time to create a temporary cosmetic affect, typically via a clip-on feature. This is a reusable device.	I

3485	65318	Transcutaneous electrical stimulation electrode, reusable	Арьсаар дамждаг цахилгаан өдөөх электрод, дахин ашиглах боломжтой	An electrical conductor intended to be attached to a patient's skin (noninvasive) to provide therapeutic electrical stimuli through the body surface [e.g., transcutaneous electrical nerve stimulation (TENS), electrical muscle stimulation (EMS), cranial electrotherapy stimulation (CES)]. It is typically a flat, flexible, conductive pad with an adhesive (e.g., gel), or a preformed shape/mechanism designed for attachment to a particular body part (e.g., earclip), connected to a conductive wire. This is a reusable device.	I
3486	65327	Nasal endoscope face mask entry valve	Хамрын дурангийн нүүрний маск оруулах хавхлаг	A device intended to be fitted to a surgical/medical face mask worn by a patient during nasal endoscopy, to enable introduction of the endoscope (e.g., sinoscope, nasopharyngoscope, rhinoscope) through the mask and into the nasal passage whilst preventing saliva/sputum/respiratory droplets to pass through the mask. It is in the form of a valve which is intended to be retrofitted to a standard surgical/medical face mask and intended to help prevent cross-contamination of infectious agents (e.g., SARS-CoV-2) from patient to clinician. This is a single-use device.	I
3487	65353	Stretcher attachment connector	Дамнуурга холбох холбогч	A device intended to connect dedicated stretcher attachments (e.g., stretcher headguard) to a stretcher for use during transport of the patient. It is typically made of metal and is designed to connect a specific type of attachment. This is a reusable device.	I
3488	65357	Home nail specimen collection kit	Гэрийн хумсны дээж цуглуулах хэрэгсэл	A collection of items intended to be used by a layperson in the home for the collection of a nail (i.e., fingernail and/or toenail) specimen, and its subsequent transport to a remote clinical laboratory for diagnostic testing (e.g., osteoporosis screening). The kit includes a specimen container, instructions for use, a test order form, and a specimen container mailer. This is a single-use device.	I
3489	65395	Wearable paediatric urine collection bag	Хүүхдийн шээс цуглуулах зүүж болох уут	A flexible plastic pouch designed to connect to a urinary catheter or a urinary condom catheter and to be strapped to or worn on the leg of a pre-adolescent paediatric patient to collect discharged urine; it is designed with an opening for urine drainage. Also known as a leg bag, it is worn on the body to facilitate patient mobility. This is a single-use device.	I

3490	65398	Synoptophore slide	Синоптофор слайд	A small, flat plate upon which is a drawing/image (e.g., of an animal or object), intended to be fitted into a synoptophore to assist with the evaluation and training of a patient's binocular function [e.g., positions of gaze, perception of depth (stereopsis), sensory fusion]. It may be viewed from different angles, orientations, depths and/or while superimposed on another slide. This is a reusable device.	I
3491	65405	Endoscopic spray catheter, reusable	Дурангийн шүршигч катетер, дахин ашиглах боломжтой	A flexible tube intended to be used with an endoscope (e.g., colonoscope) to administer fluids (e.g., dyes for mucosal colouration) in spray form. The spray is produced by an atomizing nozzle at the distal end of the device. This is a reusable device.	I
3492	65418	Ultraviolet-activated air cleaner	Хэт ягаан туяагаар идэвхжсэн агаар цэвэрлэгч	An air purification device intended to destroy airborne pathogens and pollutants (e.g., volatile organic compounds) in the ambient air of an enclosed room/area using ultraviolet (UV) radiation light applied to the air before being ventilated/recirculated to the room. It consists of an electrically-powered unit with an enclosed optic chamber in which air is exposed to UV energy whereby disinfection is achieved through hydroxyl radicals (produced by the reaction between UV energy and water vapour), or by a UV-activated photocatalyst (e.g., titanium dioxide). It may be a floor-standing device or a unit integrated into the facility ventilation system, and may include air filters (e.g., HEPA).	I
3493	65435	Multi-layer-mesh pressure-relieving pad	Олон давхаргат торон даралт бууруулах дэвсгэр	A pad/overlay constructed of multiple layers of mesh intended to be placed on top of a bed mattress, chair, or other device upon which a patient rests the body, to relieve pressure points for comfort and to prevent pressure sores. The mesh layers are intended to allow lateral movement over each other, and airflow between, to help maximally change patient contact points upon movement. It is available in a variety of shapes and sizes. This is a reusable device.	I

3494	65436	Orthodontic resin positioning tray	Ортодонт давирхайг байрлуулах тавиур	A custom-made dental device in the form of a patient's dentition which contains cavities intended to hold and facilitate positioning of light-cured dental resin onto teeth for subsequent attachment of an orthodontic appliance (e.g. aligner) after curing. It is typically made of synthetic polymer materials and is manufactured from an orthodontic treatment plan based on an oral cavity impression or oral scan for a specific patient. This is a single-use device.	I
3495	65438	Wound therapy system applicator cover holder	Шарх эмчилгээний систем түрхэгч бүрээс эзэмшигч	A small device shaped as an o-ring designed to secure the cover/sleeve of a wound therapy system applicator during treatment. This is a single-use device.	I
3496	65458	Eye dropper bottle nozzle	Нүдний дусаагуурын шилний цорго	A nozzle intended to be fitted to an eye dropper bottle (not included) to allow administration of an eye irrigation/treatment solution from the bottle in droplet form during self-administration. It is intended to be used for the expected duration of the content of a single bottle. This is a single-use device.	I
3497	65464	Wheelchair tray pressure pad	Тэргэнцэрт зориулсан тавиурын даралтын дэвсгэр	A padded device designed to cover a wheelchair tray to reduce pressure on the occupant's arms for the prevention of pressure sores. It is typically made of polymer materials and designed to distribute pressure. This is a reusable device.	I
3498	65482	Radio-frequency toothbrush	Радио давтамжтай шүдний сойз	An electrically-powered toothbrush, that additionally applies to dentition a radio-frequency (RF) alternating current, designed to be used to brush clean teeth and gums (i.e., remove plaque, tartar, stains). It consists of a proximal handle, and an exchangeable distal head with rows of bristles (e.g., nylon) and electrodes to generate the RF current into toothpaste and along dentition. This is a reusable device.	I
3499	65492	Air-conduction hearing aid fitting kit	Агаар дамжуулагч сонсголын аппарат суурилуулах хэрэгсэл	A collection of non-surgical instruments and materials intended to be used by a healthcare professional during sizing/fitting of an air-conduction hearing aid. It includes sizers, fitting tools and may include additional devices/materials (e.g., ear speculum, lubricant). This is a reusable device.	I

3500	65508	Assistive ergonomic chair, electrically-adjusted	Туслах эргономик сандал, цахилгаан тохируулгатай	An electrically-powered device intended to support and position a patient (disabled and/or discomforted) in a sitting posture while performing activities of daily living, including work-related activities. It is designed with at least one electrically-operated ergonomic adjustment (e.g., height and position adjustments) to provide improved personal body posture and/or to help prevent/reduce physical problems associated with poor mobility or sedentary lifestyle. It is not a wheelchair.	I
3501	65514	Dental suction system cannula soft tip	Шүдний сорох системийн сувгийн зөөлөн үзүүр	A spongy tubular device designed to be fitted on the distal end of a dental suction cannula to provide intraoral cushioning and prevent intraoral tissue damage and irritation during a dental procedure. This is a single-use device.	I
3502	65516	Bed rescue sheet	Орны аврах хуудас	A device in the form of a sheet with handles and belts/straps intended to fit over or under a bed mattress to allow the bed occupant to be pulled to safety in the case of an emergency (e.g., fire in the healthcare facility). It is designed to be fitted to the bed during routine use and may be made of waterproof materials to create a physical barrier for mattress protection and cross-contamination prevention. This is a reusable device.	I
3503	65527	Sleep-disordered breathing soft palate exerciser	Унтах эмгэгтэй амьсгалах зөөлөн тагнай дасгалын төхөөрөмж	A hand-held intraoral device intended to be used by a layperson in the home to exercise the muscles of the pharynx to strengthen the soft palate and throat tissues for reduction of sleep-disordered breathing conditions (e.g., snoring, obstructive sleep apnoea). It includes a curved intraoral portion placed in front of the teeth and an extraoral handle designed to pull the device outwards, whilst keeping the lips sealed, thereby generating resistance. This is a reusable device.	I

3504	65547	Hearing implant implantable-component tester, intraoperative	Сонсголын суулгац суулгац-бүрэлдэхүүн шалгагч, мэс заслын үед	A noninvasive, electrically-powered device designed to send a wireless signal to an appropriate hearing implant (e.g., bone-conduction hearing implant system vibrator assembly) during surgical implantation, to generate a positive response (e.g., a tune) from the implant to establish that it is functioning properly prior to finalizing implantation. As a tester it is neither intended to facilitate more complex assessment of the implant nor assist implant positioning. This is a reusable device.	I
3505	65550	Luminal device flushing tubing set, single-use	Гэрэлтүүлгийн төхөөрөмж угаах хоолойн багц, нэг удаагийн	A collection of devices which includes connection tubing intended to be fitted to a luminal device (e.g., catheter, endoscope channel, ophthalmic handpiece) to assist flushing the device lumen during a medical/surgical procedure, and/or to assist the washing, disinfection and/or sterilization of the lumen. In addition to tubing, the set includes connectors/valves to allow appropriate fluids (e.g., sterilant, disinfectant) and gases to flow through the device lumen. It may be used in conjunction with a syringe, device washer/disinfector, and/or water tap. This is a single-use device.	I
3506	65559	Lower limb sliding exerciser, powered	Доод мөчний гулсах дасгалын төхөөрөмж, хөдөлгүүртэй	An electrically-powered device intended to encourage active movement of a patient’s lower limb(s) by assisting linear (or circular) movement of the foot, by flexion/extension at the knee and hip, for exercise, pre- and post-surgery rehabilitation, and/or to help prevent deep vein thrombosis. It is in the form of pad worn on the heel for sliding on a floor (or other smooth surface) that includes force plate/sensors to measure force/motion parameters which may be conveyed to and displayed on a computing device (e.g., desktop, laptop, smartphone), which may also provide a gamification motivation interface.	I
3507	65562	Orthodontic archwire protection sleeve	Ортодонтийн нуман утаснаас хамгаалах ханцуй	A small, hollow tube/cylinder intended to be cut to a selected length and placed around an orthodontic archwire to protect the archwire from damage and to protect teeth, gums, and cheeks from archwire exposure during orthodontic treatment. This is a single-use device.	I

3508	65575	Bone cleaning gas-jet nozzle, single-use	Яс цэвэрлэх хийн тийрэлтэт цорго, нэг удаагийн	A device designed to be attached to the distal end of a bone cleaning gas-jet handpiece to function as a nozzle that produces a jet of gas [usually carbon dioxide (CO_2)] from its aperture to clean bone during an open surgical orthopaedic procedure. It is available in many designs, shapes and sizes and may be used with a Y-piece adaptor and suction pump to allow suction through its aperture. This is a single-use device.	I
3509	65581	Instrument transport trolley rack	Багаж тээвэрлэх тэргэнцэрийн тавиур	A structure typically consisting of a frame on wheels with shelves and handles intended to be used with trays (not included) for the protective transport and short-term storage of reusable clinical instruments (typically endoscopes or surgical instruments). It is not a complete instrument transport trolley system.	I
3510	65582	Instrument tray cover, reusable	Багажны тавиурын таг, дахин ашиглах боломжтой	A flexible, synthetic polymer cover designed to be placed on an instrument tray to provide a protective barrier for the transport and short-term storage of clinical instruments (typically endoscopes or surgical instruments). It is typically available in two colours to indicate clean/sterile or contaminated; a tray liner is typically supplied with the device. This is a reusable device.	I
3511	65583	Instrument tray locking bar	Багажны тавиурыг түгжих баар	A rigid locking rod intended to be securely attached to an instrument tray(s) [e.g., containing surgical instruments or endoscopes], to prevent the instruments from being stolen or falling. A padlock may be included; the tray is not included.	I
3512	65605	Skull clamp operating table attachment	Гавлын хавчаар хагалгааны ширээний хавсралт	A non-patient-contact device intended to stabilize a skull clamp (not included) to the operating table. It typically includes jointed, adjustable arms and protruding ends for fitting to slots. This is a reusable device.	I
3513	65648	Obstetrical labour chair	Эх барих эмэгтэйчүүдийн сандал	A supportive device intended to be straddled by a woman in the first stage of labour to encourage foetal alignment with the maternal pelvis; is not intended for use during childbirth. It is a backwards orientated chair, with a narrow waist and a supportive front panel extending to a headrest/arm platform top, designed to help facilitate optimal maternal spine/pelvic angle and positioning before delivery. This is a reusable device.	I

3514	65660	Finger/toe buddy strap	Хөл/хурууны боолт	A flexible prefabricated (non-customized) wearable device designed to be wrapped around an injured/diseased finger or toe and the adjacent digit to function as a splint-like strap for immobilization of the injured/diseased digit to facilitate healing and/or pain relief. It is made of soft materials and has self-retaining fastening. This is a reusable device.	I
3515	65663	Lower-limb warming sock/stocking, single-use	Доод мөчийг дулаацуулах оймс/оймс, нэг удаагийн	A tubular covering intended to worn on the feet and/or legs of a patient to minimize loss of body heat during treatment, birthing, or general hospitalization. It is typically made of fabric or paper material. This is a single-use device.	I
3516	65683	Safe environment patient enclosure	Өвчтөний аюулгүй орчин	A freestanding, framed, tent-like structure designed to be constructed on site to function as a temporary enclosure for safe playing, resting or sleeping, typically for a patient with autism, epilepsy, challenging behaviours and/or learning difficulties. It has a soft fabric/plastic interior with padded regions to prevent injury, and a limiting and low-stimulation environment. It can be used in the home or during travel for a patient of any age. This is a reusable device.	I
3517	65693	Colour discrimination non-prescription spectacles	Өнгийг ялгах жоргүй нүдний шил	An ophthalmic device consisting of a spectacle frame with a pair of coloured/tinted lenses (non-refractive) designed to be worn in front of the patient’s eyes to enhance colour discrimination in patients with colour vision deficiency; it is not intended to correct refractive vision conditions and is not customized for a specific patient.	I
3518	65720	Ostomy bag pressure release valve	Остоми уутны даралт тайлах хавхлаг	A plug-like device intended to be attached to an ostomy bag at a bag penetration site to facilitate the release of gas pressure within the bag for the prevention of unwanted inflation. It is typically in the form of single-piece adhesive ring and removable stopper. This is a single-use device.	I
3519	65726	Wearable spinal alignment indicator	Зүүж болох нуруу нугасны тэгшитгэлийн үзүүлэлт	A non-powered, rod-like device designed to be worn along the length of a patient’s back to indicate spinal alignment through tactile feedback when simultaneous anatomical contacts occur (back of head, thoracic spine, sacrum) typically used during rehabilitation exercises to help improve proprioception.	I

3520	65743	Towel clamp, single-use	Алчуур хавчаар, нэг удаагийн	A manual instrument designed to hold together surgical towels and/or drapes, or for securing other devices such as cables/leads, during an operation/intervention; some types may in addition be used for compressing tubes. It is made of metallic and/or polymer materials and is available in a variety of sizes and designs (e.g., two blades joined at their midpoints, single alpha-shaped device, various gripping jaws); it is commonly known as a towel clamp, towel forceps, or towel clip. This is a single-use device.	I
3521	65748	Neurosurgical retraction obturator/probe adaptor	Мэдрэлийн мэс заслын таталтын бөглөрөл/датчик адаптер	A manual device intended to connect a neurosurgical retraction obturator to a probe (e.g., stereotactic/electromagnetic surgery system probe), typically of incompatible sizes. It typically incorporates a male rod-like attachment intended to fit into the lumen of the obturator, and a female attachment intended to accept the probe; the obturator and probe are not included. This is a single-use device.	I
3522	65752	Hearing implant system sound processor case, single-use	Сонсголын суулгацын системийн дууны процессорын хайрцаг, нэг удаагийн	A container intended to be used to house and protect a hearing implant system (e.g., cochlear implant, auditory brainstem implant) sound processor (not included) from water and particulates, enabling a patient to use it in wet and rugged environments (e.g., for swimming, showering). It is typically made of waterproof and dustproof synthetic polymer materials, with a watertight seal. This is a single-use device.	I
3523	65753	Eye heat therapy pack, single-use	Нүдний дулаан эмчилгээний багц, нэг удаагийн	A device intended to be placed over closed eyes to apply heat/steam for the treatment of meibomian gland dysfunction (MGD), dry eye syndromes, blepharitis (inflammation of the eyelid), and other related ocular conditions. It is typically in the form of a mask-shaped fabric envelope which either: 1) contains a heat-retaining substance intended to be heated in a microwave oven prior to use; or 2) includes an envelope(s) filled with a material that produces an exothermic chemical reaction when activated. This is a single-use device.	I

3524	65763	Orthodontic phototherapy unit	Шүдний гажиг заслын фото эмчилгээний хэсэг	An electrically-powered device intended to be worn within the oral cavity and emit near infrared (NIR) light to facilitate orthodontic treatment (i.e., to stimulate tooth movement and soft tissue regeneration) with an in situ orthodontic appliance (not included). It is in the form of a mouthguard with incorporated small light sources and connected cable/adaptor.	I
3525	65875	Neonatal CPAP nasal mask holder	Нярайн CPAP хамрын маск эзэмшигч	A non-latex, head-worn device designed to be used during continuous positive airway pressure (CPAP) therapy to hold a CPAP nasal mask/cannula in place on a neonatal/infant patient. It is typically in the form of a band or bonnet; it is not a pull-tight mask strap with a buckle. This is a single-use device.	I
3526	65877	Knee distraction orthosis	Өвдөгний анхаарал сарниулах ортоз	A prefabricated (non-customized) external articulated device intended to distract the knee joint to reduce pain and improve function in cases of osteoarthritis, potentially delaying the need for a knee joint replacement. It is attached to implanted percutaneous pins (not included) fixed into the femur and tibia, on each side of the joint, to provide a distraction force to the joint while allowing movement and limited ambulation for a period (e.g., around 6 weeks). Dedicated reusable instruments intended to assist with introduction and assembly of the associated implantable fixation devices are included with the device. This is a reusable device.	I
3527	65962	Craniofacial abutment dressing holder	Гавал нүүрний тулгуур боолт эзэмшигч	A noninvasive device intended to be attached to an implantable craniofacial abutment (e.g., of an external facial prosthesis attachment or hearing implant system) to hold a dressing over the implant site for tissue healing prior to the connection of another device to the abutment. It is typically in the form of a small disc and may incorporate a plug to secure positioning; the dressing and abutment are not included. This is a single-use device.	I

3528	65970	Breast-contact infant feeding tube	Хөхтэй холбоотой нярайн хооллох хоолой	A thin, soft, hollow tube intended to be attached to/near the breast nipple of a nursing mother during infant feeding, to simulate breast feeding with mouth-to-nipple contact while feeding from an alternative source at the other end of the tube such as a syringe/container filled with expressed milk, fortified human milk, or formula milk. It is designed with an ENFit formatted (designed according to ISO 80369-3 for enteral applications) connection, and may include a wearable tube holder (e.g., adhesive plaster). This is a reusable device.	I
3529	66055	Custom-made upper-limb orthosis	Захиалгат дээд мөчний ортез	An externally-applied wearable appliance constructed with specific characteristics (e.g., size, shape, material), as prescribed by a healthcare provider for a specified patient (custom-made), intended to support and correct deformities of the arm and/or hand. It may be one of numerous different designs and is typically made of synthetic and textile materials. This is a single-patient reusable device.	I
3530	66056	Custom-made lower-limb orthosis	Захиалгат доод мөчдийн ортез	An externally-applied wearable appliance constructed with specific characteristics (e.g., size, shape, material), as prescribed by a healthcare provider for a specified patient (custom-made), intended to support and correct deformities of the leg and/or feet. It may be one of numerous different designs and is typically made of synthetic and textile materials. This is a single-patient reusable device.	I
3531	66057	Custom-made spine orthosis	Захиалгат нурууны ортез	An externally-applied wearable appliance constructed with specific characteristics (e.g., size, shape, material), as prescribed by a healthcare provider for a specified patient (custom-made), intended to support and correct deformities of the spine. It may be one of numerous different designs and is typically made of synthetic and textile materials. This is a single-patient reusable device.	I
3532	66080	Ultrasound coupling pad	Хэт авианы холболтын дэвсгэр	A synthetic polymer pad intended for use in noninvasive ultrasound procedures to provide a contact interface between the ultrasound transducer and the patient’s skin, typically used in conjunction with topical coupling gel to improve ultrasound energy transmission. This is a single-use device.	I

3533	66085	Multiple-joint lower limb orthosis	Доод мөчний олон үений ортоз	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to support, align, prevent, or correct deformities/injuries or to improve function of multiple joints of the lower body which will include the knee (e.g., hip and knee, knee and ankle). The device is typically adjustable and articulating. This is a reusable device.	I
3534	66086	Multiple spinal region orthosis	Олон нугасны бүс нутгийн ортоз	A prefabricated (non-customized) externally applied and wearable orthopaedic appliance or apparatus designed to encompass two or more regions of the spine (e.g., sacroiliac, lumbosacral, thoracolumbosacral) to support or immobilize deformities, fractures, sprains, or strains of the spine, and may additionally provide support for the abdomen. This is a reusable device.	I
3535	66090	Cannulated manual toothbrush	Сувагтай гарын авлагын шүдний сойз	A non-powered instrument designed to be used by a healthcare provider/caregiver to manually brush clean the teeth and gums of a disabled/geriatric patient while simultaneously removing excess oral fluid (saliva, toothpaste). It consists of a proximal handle with a distal bristle head and an integrated suction cannula. It is intended to be used in conjunction with a suction pump (not included). This is a single-use device.	I
3536	66117	Absorbent underpad, non-antimicrobial, reusable	Шингээгч доод дэвсгэр, нянгийн эсрэг үйлчилгээтэй, дахин ашиглах боломжтой	A flat piece of absorbent fabric material (e.g., polyester, cotton) intended to be placed on a surface (e.g., bed mattress, table, floor) and underneath a patient to absorb bodily fluids (typically urine associated with bladder weakness/incontinence); it does not include an antimicrobial agent(s). It is intended to be used in the healthcare facility and in the home. This is a reusable device.	I
3537	66200	Suction/irrigation system canister/bottle holder, reusable	Сорох/усалгааны системийн сав/лонх баригч, дахин ашиглах боломжтой	A device intended to be used to hold a dedicated fluid or collection/specimen canister or bottle that is used within a suction and/or irrigation system. This device can be used to mount the canister/bottle(s) to the parent system when it is mobile (on wheels), or to mount the canister/bottle to a medical device service rail system or a wall rail (typically used on the ward). This is a reusable device.	I

3538	66210	Hearing implant sound processor tester	Сонсголын суулгац дууны процессор шалгагч	An electrically-powered device intended to be connected to the sound processor of a cochlear implant or auditory brainstem implant system to test the function of its microphone. It typically includes a small hardware unit connected to headphones and the sound processor, where the user can listen to the sounds received by the sound processor. This is a reusable device.	I
3539	66211	Oral/enteral syringe drawing-up cannula	Амны хөндийн/дотоод тариур зурах суваг	A rigid, blunt, tubular device intended to be connected to an oral/enteral syringe for the convenient transfer of fluids (e.g., dissolved medication, liquid nutrition) from a container into the syringe prior to oral/enteral administration; it is designed to be able to puncture the seal of a vial/container. It is not intended for patient contact. This is a single-use device.	I
3540	66264	Alternating-pressure bed mattress system remote control	Хувьсах даралтын ор матрас систем алсын удирдлага	A hand-operated electronic device designed to functionally connect to an electrically-powered, alternating-pressure bed mattress system to control its operation (e.g., pressure, inflation/deflation). It may connect to the mattress system via an electrical cable or operate wirelessly. It is intended to be operated by the healthcare provider.	I
3541	66303	Allergy testing adhesive strip, intradermal	Харшлын сорилын наалдамхай тууз, арьсны доторх	A band of adhesive material designed to be applied to a patient’s skin for minimally-invasive skin prick allergy testing. It consists of a series of thin chambers into which solutions of potentially allergenic substances are added, and includes an adhesive side with skin-puncturing tines/needles which are pressed down to insert the allergens into the dermis. Labels may be included to aid diagnosis of skin reactions to multiple allergens. This is a single-use device.	I
3542	66305	Therapeutic bean bag seat, non-customized	Эмчилгээний шошны уутны суудал, захиалгаар хийгдээгүй	A prefabricated (non-customized), non-powered, floor-standing cushioned seat containing small balls/granulate (bean bag) designed to support a patient in a seated position and provide a therapeutic effect (e.g., a sensation of gentle pressure/weight for sensory stimulation and comfort, or body postural support while performing activities of daily living). It is available in various forms/sizes with features/components specific to the therapeutic application.	I

3543	66337	Limb immobilization/support skin adhesive tape	Мөчрийг хөдөлгөөнгүй болгох/туслах арьсны наалдамхай тууз	A flexible band of fabric, plastic, or other material intended to noninvasively adhere to the skin surface to immobilize a joint and/or support a limb. It may be referred to as sports tape, functional tape, or kinesiology tape and is coated on one side with a pressure-sensitive adhesive and designed with a lower potential for producing an allergic reaction (i.e., hypoallergenic). This is a single-use device.	I
3544	66351	Assistive remote-control transceiver	Туслах алсын удирдлагатай дамжуулагч	An electronic device designed to assist a person with a disability to control and operate other devices remotely in their local environment by functioning as an infrared/radio signal receiver and transmitter interface between a user-operated control unit and the target devices. It enables turning devices on/off and controlling various device functions (e.g., motion control).	I
3545	66373	Mixed-respiratory-gas low pressure hose	Холимог амьсгалын замын хийн нам даралтын хоолой	A length of reinforced colour-coded flexible tubing produced according to ISO5359 intended to conduct a specific compressed medical gas mixture (e.g., helium/oxygen, nitrous oxide/oxygen mixture) from a specific terminal unit or cylinder to an appropriate respiratory/ventilatory medical device. The gas pressure in the tubing will be low, a "working pressure" (e.g., 3 - 5 bar), having been reduced by a regulator from a high pressure. The tubing is reinforced with, e.g., woven polyester or cotton and intended for use within a static clinical environment (e.g., intensive care). It is available in various lengths, including standard coil lengths. This is a reusable device.	I
3546	66374	Carbon dioxide low pressure hose	Нүүрстөрөгчийн давхар ислийн нам даралтын хоолой	A length of reinforced colour-coded flexible tubing produced according to ISO5359 and intended to conduct compressed carbon dioxide (CO_2) from a CO_2 terminal unit or CO_2 cylinder to a medical device that functions with CO_2 (e.g., ventilator, insufflation system). The gas pressure in the tubing will be low, a "working pressure" (e.g., 3 - 5 bar), having been reduced by a regulator from a high pressure. The tubing is reinforced with, e.g., woven polyester or cotton, and intended for use within a static clinical environment (e.g., intensive care). It is available in various lengths, including standard coil lengths. This is a reusable device.	I

3547	66377	Noninvasive vascular ultrasound system probe holder	Инвазив бус судасны хэт авианы системийн датчик эзэмшигч	A non-powered device designed to hold a noninvasive vascular ultrasound probe immobile over a vessel to facilitate vascular canulation. It is in the form of a circular, lightweight frame to be mounted on a limb, with a bracket into which the probe is placed. This is a reusable device.	I
3548	66407	Dental impression material storage container	Шүдний даралтын материал хадгалах сав	A container with a lid/cover intended to be used to securely store a dental impression material (e.g., alginate powder), typically to protect the material's integrity and prevent inhalation by dental clinic staff. This is a reusable device.	I
3549	66423	Thrombectomy wire-net introduction set	Тромбектомийн утас-тор танилцуулга багц	A dedicated collection of manual invasive devices intended to provide percutaneous vascular access to enable the introduction, and safe retrieval, of a thrombectomy wire-net (not included) during a thrombectomy procedure. It includes a non-steerable sheath typically with an expanding distal funnel to facilitate wire-net retrieval, an obturator/dilator, a haemostatic valve to control blood loss, and a side port. It is typically also designed to allow removal of residual clotted blood, trapped in the sheath funnel upon retrieval, through manual suction (aspiration). This is a single-use device.	I
3550	66444	Lower-limb orthosis ankle/foot component, mechanical-resistance	Доод мөчний ортозын шагай / хөлийн бүрэлдэхүүн хэсэг, механик эсэргүүцэл	A non-powered prefabricated (non-customized) component of an externally applied and wearable lower-limb appliance or apparatus intended to encompass the ankle joint, or the ankle and foot, to support, align, prevent, or correct deformities/injuries (e.g., paralysis) or to improve function of the ankle and/or foot through actions such as alignment, hinge-support, or dorsiflexion assistance. It is intended to provide motion control functionality through a media-free mechanical resistance mechanism [i.e., spring-actuation with no fluid or gas operating media]. This is a reusable device.	I

3551	66445	Lower-limb orthosis knee component, mechanical-resistance	Доод мөчний ортоз өвдөгний бүрэлдэхүүн хэсэг, механик эсэргүүцэл	A non-powered prefabricated (non-customized) knee component of an externally applied and wearable lower-limb appliance or apparatus designed to support, align, prevent, or correct deformities/injuries (e.g., paralysis) or to improve function of the knee. It is intended to provide motion control functionality through a media-free mechanical resistance mechanism [i.e., spring-actuation with no fluid or gas operating media]. This is a reusable device.	I
3552	66446	Lower-limb orthosis knee component, electromechanical/electrohydraulic	Доод мөчний ортозын өвдөгний бүрэлдэхүүн хэсэг, цахилгаан механик / цахилгаан гидравлик	A battery-powered prefabricated (non-customized) knee component of an externally applied and wearable lower-limb appliance or apparatus designed to support, align, prevent, or correct deformities/injuries (e.g., paralysis) or to improve function of the knee. It is intended to provide motion control functionality (primarily control of joint locking/unlocking) through an electromechanical or electrohydraulic mechanism which includes an integrated motion sensor. It may include wireless connectivity features for user-friendly control via a mobile app. This is a reusable device.	I
3553	66483	Contrast medium injection system hand controller	Тодосгогч бодисын тарилгын системийн гар хянагч	A hand-held, electronic device designed to be used as part of a contrast medium injection system to instantaneously stop/start the administration of a contrast medium or saline solution to a patient undergoing a diagnostic imaging procedure. It is commonly designed as controller/handpiece with thumb operated electronic switch(es) and a connection cable. This is a reusable device.	I
3554	66493	Pilates reformer exerciser	Пилатесын шинэчлэгч дасгалын төхөөрөмж	A non-powered, whole-body exercise apparatus intended primarily to strengthen and improve flexibility of the core, lower body, and upper body muscle groups, and to improve posture and range of motion, through repetitive movements against spring resistance. It consists of a floor-standing frame with a sliding sled/platform upon which the user stands, sits, kneels or lies, and adjustable ropes, loops/handles, rollers, anchoring bars, and springs of various resistances. This device is designed for therapeutic programs in physiotherapy, rehabilitation, sports therapy, prevention, functional fitness, and recreational sports.	I

3555	66532	Indirect monocular ophthalmoscope, non-powered	Шууд бус монокуляр офтальмоскоп, цахилгаангүй	A non-powered, hand-held, ophthalmic instrument designed to be held arm’s length from the patient to examine the interior of the eye and related structures [e.g., fundus (retina), cornea, aqueous, lens, vitreous] using the examiner’s one eye (monocular). It produces an inverted (reversed/mirror) magnified image of the eye structures. The device consists of concave and flat mirrors, diaphragms and a hand-held frame, and requires a separate light source to illuminate the interior of the eyeball and magnifying lenses to examine the eye.	I
3556	66533	Multiple clinical application customizable tubing	Эмнэлзүйн олон төрлийн хэрэглээнд тохируулж болох хоолой	A length of flexible or semi-flexible tube made of synthetic polymer materials [e.g., silicone, polyurethane, polyvinyl chloride (PVC)] designed to be adapted/customized, typically by cutting to a required length, by healthcare professionals for use in a variety of clinical applications such as medical gas administration, body fluid drainage, enteral feeding, medication transfer, and catheter manufacturing.	I
3557	66545	Temperature telemetric monitoring system transmitter, dermal	Температурын телеметрийн хяналтын системийн дамжуулагч, арьсны	A body-worn, battery-powered component of a temperature telemetric monitoring system designed to be attached to the skin to continuously measure and wirelessly transmit skin temperature signals to the system's receiver/recorder (not included). It typically consists of a temperature sensor and transmitter. This is a single-use device.	I
3558	66546	Temperature telemetric monitoring system transmitter, ingestible	Температурын телеметрийн хяналтын системийн дамжуулагч, залгих боломжтой	A small, battery-powered, capsule-like component of a temperature telemetric monitoring system designed to be swallowed by a patient to continuously measure and wirelessly transmit core temperature signals to a system receiver/recorder (not included). It includes a temperature sensor and transmitter. This is a single-use device.	I
3559	66582	Eyelid clamp, single-use	Зовхины хавчаар, нэг удаагийн	A hand-held manual surgical instrument designed specifically to atraumatically grasp and hold the eyelid or isolate a portion of eyelid tissue during an ophthalmic surgical intervention (e.g., chalazion surgery, blepharostoplasty). It includes an appropriate self-retaining clamping mechanism which may be one of a variety of designs (e.g., ring and disk), and may be referred to as entropion forceps, Downes lid clamp, or chalazion clamp. This is a single-use device.	I

3560	66583	Cast removal protective tape	Цутгамал арилгах хамгаалалтын тууз	A long and narrow flexible band, coated on one side with a pressure-sensitive adhesive, designed to be placed between a cast stockinette (to which it adheres) and the lining of a cast, along the line where subsequent cast cutting is intended to occur, to prevent cuts and burns to the skin caused by the cast cutter/saw. It is made of tough, waterproof textile material. This is a single-use device.	I
3561	66604	Patient fall-recovery chair, electric	Өвчтөнийг буух-дээш гарах зориулалттай сандал, цахилгаан	An electrically-powered device designed to enable one person to lift an incapacitated or disabled patient safely and with minimal physical effort from a supine position on the floor (e.g., following a fall) to a seated position. Sometimes referred to as an emergency lifting chair, it consists of a motorized seat with detachable legs and back supports, and a seatbelt, intended to be assembled beneath the patient like a scoop stretcher, prior to lifting them to a seated position using an electronic controller. It is intended for use in both the home and clinical setting.	I
3562	66640	Intravascular probe, reusable	Судсан доторх датчик, дахин ашиглах боломжтой	A slender, rod-like, hand-held manual surgical instrument intended to facilitate vessel stenting, retraction, and occlusion. It is inserted into the vessel lumen via a small incision to locate occlusions, explore the proximal/distal artery for size, patency and location of stenosis, and to arrest blood flow (proximally, distally, or both) to enable operative field visualization during coronary or peripheral vascular bypass grafting and vessel repair surgery. It may be single- or double-ended with a blunt bulbous tip (an olive) at the working end(s); It is typically made of polyester/silicone materials and is available in various sizes. This is a reusable device.	I
3563	66646	Orthopaedic implant impactor, single-use	Ортопедийн импульс импульс, нэг удаагийн	A metal and/or plastic hand-held manual surgical instrument designed to position an orthopaedic implant within the body by transmission of an impact force that drives the implant into its final position. The proximal end of the instrument is a handle usually designed to absorb the impact from a surgical hammer or mallet, and the distal end is usually shaped to conform to the implant shape (flat or anatomically curved) or is shaped like a chisel handle to facilitate implant positioning. This is a single-use device.	I

3564	66671	Commode, electrically-powered	Комод, цахилгаанаар ажилладаг	An electrically-powered transportable device in the form of chair with a motorized height-adjustable seat and receptacle for collecting urine and faeces intended to enable a patient with a disability to urinate/defecate away from a bathroom or fixed toilet (e.g., in the bedroom); it may additionally be used to assist with sitting on the toilet or washing in a shower or bath, however it is not a dedicated toilet seat or shower seat. Also known as a sanichair, it may incorporate wheels (castors).	I
3565	66675	Therapeutic bean bag seat, custom-made	Эмчилгээний шошны ууттай суудал, захиалгаар	A custom-made, non-powered, floor-standing cushioned seat containing small balls/granulate (bean bag) designed to support a patient in a seated position and provide a therapeutic effect (e.g., a sensation of gentle pressure/weight for sensory stimulation and comfort, or body postural support while performing activities of daily living). It is designed and constructed with specific characteristics (e.g., size, shape, material, features, components) as prescribed by a healthcare provider for a specified patient and therapeutic application.	I
3566	66676	Portable stretcher handle	Зөөврийн дамнуургатай бариул	A portable device designed to be attached to each end of an appropriate portable stretcher for easier and more ergonomic carrying of a patient, typically in areas inaccessible to conventional ambulance stretchers. It is usually designed to be attached to a metal basket stretcher and is commonly a U-shaped device with a pair of handles. This is a reusable device.	I
3567	66722	Orthodontic aligner/retainer seater, reusable	Шүдний засалт тохируулагч/багтаагч суудал, дахин ашиглах боломжтой	A small cylindrical pledget intended to be used to facilitate placement and proper seating of an orthodontic progressive aligner or teeth retainer (positioner), by being placed between the partially-aligned aligner/retainer and the opposing set of teeth, allowing the patient to bite down on the device to push the aligner/retainer into place. This is a reusable device intended for single-patient use.	I

3568	66723	Aortic valve cusp height ruler	Аортын хавхлагын өндрийн хэмжигч	A hand-held manual surgical instrument intended to be used during aortic valve repair and root remodelling to measure aortic valve cusp height. It is a double-ended graduated tool with one straight-edged end used to measure effective cusp height, and one hooked end used to measure geometric cusp height. It is typically available in a set of varying sizes. This is a reusable device.	I
3569	66741	Robotic surgical system arm-instrument connector	Робот мэс заслын системийн гар багажийн холбогч	An adaptor intended to function as a connecting interface between a robotic surgical system articulated arm and an attached surgical instrument. This is a single-use device.	I
3570	66753	Percutaneous radio-frequency ablation probe cooling tubing set	Арьсан доорхи радио давтамжийн датчик хөргөх хоолойн иж бүрдэл	A collection of flexible tubing and associated items that may include clamps, filters, and connectors, intended to be used with a peristaltic pump to deliver closed-loop circulation of a cooling solution (e.g., saline, sterile water) to a percutaneous radio-frequency ablation probe at a specified flow rate during a percutaneous ablation procedure. The tubing is made of synthetic material and is of a fixed diameter that is specific to the requirements of the pump. This is a single-use device.	I
3571	66793	Handsfree crutch	Гаргүй таяг	A mobility aid in the form of a rod-like floor support intended to substitute indefinitely for the lower leg of a person with a disability, injury or amputation below the knee, providing a means of walking without using the arms and hands. It includes shin and thigh straps, and a padded knee support where the patient’s curled leg rests. The device may be of fixed or adjustable length and may be collapsible or non-collapsible.	I
3572	66812	Dental laboratory mixing/application brush	Шүдний лабораторийн холих/хэрэглэх сойз	A hand-held manual instrument comprised of a proximal handle and distal bristles intended to be used in the dental laboratory for the mixing and/or application of dental materials (e.g., ceramics, stains) during the manufacturing of dental prostheses. This is a reusable device.	I

3573	66818	Orthopaedic implant fabrication material	Ортопедийн суулгац үйлдвэрлэх материал	A metallic powder intended to be used to manufacture a custom-made orthopaedic implant (e.g., joint prosthesis component) using computer-aided design/computer-aided manufacturing (CAD/CAM) technology; anthropometric measurements are collected from a patient's CT, MRI and/or Xray images to provide the necessary data. After application, this material cannot be reused for fabrication.	I
3574	66829	Canalith repositioning procedure chair, automated	Canalith-ийн байршлыг өөрчлөх процедурын сандал, автоматжуулсан	An electrically-powered, chair-based device assembly intended to be occupied by a patient and provide automated manoeuvres of the patient's entire body (multiaxial accelerations and decelerations) to treat balance disorders [e.g., benign paroxysmal positional vertigo (BPPV)] caused by displaced canaliths (otoconia) in the inner ear. It consists of a multiaxial rotating patient chair with integrated motors and appropriate harnesses, and a computer/control unit with integrated software. It is designed for use with infrared video goggles (Frenzel goggles) and appropriate software, for the calculation of automated treatment.	I
3575	66858	Respiratory counterirritant therapy pack/patch	Амьсгалын замын цочроох эмчилгээний багц/навалт	A device intended to be applied externally to a body area (e.g., chest, back) for skin surface irritation to promote expansion of capillaries and increase blood circulation in the treatment and prevention of symptoms of acute respiratory disease (e.g., bronchitis, pneumonia); it may in addition be used to treat musculoskeletal pain and discomfort (e.g., muscle spasms, joint stiffness). It typically consists of an impregnated/enveloped dressing containing a plant-derived counterirritant (e.g., mustard powder, nutmeg oil, menthol) and is intended for patient use in the home. It may require activation (e.g., soaking in water) prior to use. After application, this device cannot be reused.	I
3576	66868	Traumatic brain injury protection compression collar	Тархины гэмтлээс хамгаалах шахалтын хүзүүвч	A device designed to be worn around the neck during impact-prone activities (e.g., sports, military) to restrict brain movement [slosh] inside the skull, by slightly compressing the jugular veins and subsequently increasing blood volume in the skull, for protection against the potentially damaging effects of repetitive sub-concussion head impacts. A fitting-size verification tool and carrying case may be included with the device. This is a reusable device.	I

3577	66882	Surgical/procedural instrument trolley	Мэс заслын/процедурын багажны тэргэнцэр	An open mobile cart intended to store and/or transport instruments for use during surgical and/or medical procedures within a hospital/institution department (e.g., transport between operating and central sterilization rooms). It is typically in the form of a table on wheels with an open shelf/platform underneath and may be used as a surface on which to place instruments in a hygienic manner during procedures. It does not include doors (i.e., not a cabinet). It is not intended to be used to perform procedures or for sterilization of instruments.	I
3578	66895	Electron beam air cleaner	Электрон цацраг агаар цэвэрлэгч	An air purification device intended to destroy airborne pathogens and pollutants (e.g., volatile organic compounds) in the ambient air of an enclosed room/area by applying electron beams (accelerated electrons) to the air before it is ventilated/recirculated into the room; it additionally provides particle filtration (e.g., via built-in HEPA filters). It consists of an electrically-powered unit with an electron beam source and an enclosed chamber in which air is exposed to the electron beam. It may be a floor-standing device or a unit integrated into the facility ventilation system.	I
3579	66910	Phoropter, electric	Фороптер, цахилгаан	An electrically-powered ophthalmic device intended to be placed in front of a patient's eyes to assist with measuring the refractive error of the eye (the inaccuracies of focusing light upon the retina) during an examination, typically to determine a patient's prescription for glasses. Also known as an automated or digital refractor, it typically consists of two mounted disk-like housings (head) which contain lenses of different characteristics. The optometrist changes the lenses and other settings via an electrical control unit, while asking the patient to read an eye chart and provide subjective feedback on which settings give best vision.	I

3580	66911	Phoropter, manual	Фороптер, гарын авлага	A manually-operated ophthalmic device intended to be placed in front of a patient's eyes to assist with measuring the refractive error of the eye (the inaccuracies of focusing light upon the retina) during an examination, typically to determine a patient's prescription for glasses. Also known as a manual refractor, it typically consists of two mounted disk-like housings (head) which contain lenses of different characteristics. The optometrist manually changes the lenses and other settings while asking the patient to read an eye chart and provide subjective feedback on which settings give best vision.	I
3581	66923	Knee walker	Өвдөгний алхагч	A non-powered mobility aid in the form of a framework with wheels, a padded knee rest, and a steering handle directly connected to the front wheels, intended to be operated by a person with a lower leg injury who propels the device by pushing on the ground with one foot while resting the knee of the injured leg on the knee rest. Also known as a knee scooter, it is intended as an alternative to crutches and walking frames for patients with non-weight-bearing lower leg injuries.	I
3582	66929	Penile cooling/warming gel	Бэлэг эрхтнийг хөргөх/дулаацуулах гель	A gel/jelly-like substance intended to be applied to the head of the penis for the management of erectile dysfunction (ED) (commonly known as impotence) by enabling the maintenance of a penile erection adequate for sexual intercourse. The gel stimulates erection by providing a cooling effect as the volatile components (e.g., alcohol, water) evaporate, followed by a warming effect due to the body’s efferent response (thermoregulation), resulting in increased blood flow to the penis. After application, this device cannot be reused.	I

3583	66956	Hypoxic-hypercapnic breathing exerciser	Гипоксик-гиперкапник амьсгалын дасгалын төхөөрөмж	A non-powered, hand-held device intended to be used in the home to perform breathing exercises for the prevention and treatment of respiratory/cardiovascular disorders (e.g., asthma, hypertension) based on: 1) the generation of a closed-circuit hypoxic-hypercapnic breathing gas mixture intended to stimulate physiological mechanisms; and 2) the creation of breathing resistance to facilitate airway opening. It might in addition be used for inhalation of vapours from warmed fluid medications or solutions to moisten the airways to improve expectoration and liquefy sputum. It consists of an air chamber, capnometer valve, tubing and a mouth/nose piece. This is a reusable device.	I
3584	66958	Anti-suffocation bed pillow	Амьсгалахын эсрэг орны дэр	A specially designed cushion made of layers of porous foam with channels to encourage airflow and a mesh cover intended to be used by at-risk patients (e.g., infants, the elderly, patients with epilepsy) to support the head and prevent suffocation while sleeping. This is a reusable device.	I
3585	66981	Pacemaker site protection skin-adherent pad	Зүрхний аппаратны талбайг хамгаалах арьсанд наалддаг дэвсгэр	A skin-adherent device intended to be applied to chest skin over the pocket of an implantable cardiac device (e.g., pacemaker) to protect the area from impact/injury during the recipient's daily activities. It is in the form of an adhesive cushioned pad made of spongy materials (e.g., foam, gel). This is a single-use device.	I
3586	67020	Foot-press calf exerciser	Тугалын хөлийн дасгалын төхөөрөмж	A non-powered device intended to be used by a layperson to exercise the calf muscles whilst sitting by extension and flexion of the ankle in a downward direction (also known as foot or ankle pump exercises), to increase venous blood flow and help prevent deep vein thrombosis (DVT). It is in the form of a cushioned dome or foam wedge designed to be placed on the floor or secured to the plantar midfoot (e.g., by an elasticated band), and is typically used in the home or other settings involving extended periods of sitting (e.g., post-surgical, airflights, workplace, care homes, pregnancy, gaming). This is a reusable device.	I

3587	67027	Resistance-training breathing exerciser, analogue	Эсэргүүцлийн дасгалын амьсгалын дасгалын төхөөрөмж, аналог	A non-powered, hand-held device intended to be used to perform routine breathing exercises solely in response to changes in breathing resistance to train the muscles of respiration and improve breathing capacity. It consists of an air chamber with a resistance-creating valve, a mouthpiece, a manually adjustable resistance control; some types include a nose clip. It may be used in the home and healthcare facility. This is a reusable device.	I
3588	67028	Resistance-training breathing exerciser, digital	Эсэргүүцлийн дасгалын амьсгалын дасгал, дижитал	An electrically-powered, hand-held device intended to be used to perform routine breathing exercises solely in response to changes in breathing resistance to train the muscles of respiration and improve breathing capacity. It consists of an air chamber with a resistance-creating valve, a mouthpiece, an adjustable resistance digital control; some types include a nose clip. It may be used in the home and healthcare facility. This is a reusable device.	I
3589	67029	External circulating-fluid core temperature regulation system start kit	Гадны эргэлтийн шингэний үндсэн температурын зохицуулалтын системийг эхлүүлэх хэрэгсэл	A collection of consumable devices intended to be used to facilitate the function of an external circulating-fluid core temperature regulation system. It typically includes tubing to connect the pump mechanism of the system control unit to a patient pad, a heat exchange coil, and other necessary components (e.g., water reservoir, air trap, flow indicator). This is a single-use device.	I
3590	67065	Ophthalmic surgical microscope lens	Нүдний мэс заслын микроскопын линз	A lens intended to be used with an ophthalmic surgical microscope to facilitate stereoscopic imaging during posterior segment surgery. The lens is typically attached to the parent device such that it enters the surgical field, however is not intended for patient contact. It may be available in a variety of sizes and optical powers. This is a single-use device.	I
3591	67096	Cervical dilatation balloon catheter stylet	Умайн хүзүүг тэлэх бөмбөлөг катетер стилет	A thin, semi-rigid rod intended to be inserted into the lumen of a cervical dilatation balloon catheter (not included) to allow for catheter introduction into the cervical canal. It has a J-shaped proximal end to allow manipulation/stabilization. This is a single-use device.	I

3592	67110	Lower-limb rehabilitation centrifugal bed	Доод мөчний нөхөн сэргээх төвөөс зугтах ор	A fixed, electrically-powered pod intended to enclose a supine patient while rotating, to improve blood/body fluid circulation in the lower limbs based on the application of centrifugal force. Also known as an artificial gravity unit, it is intended to be used as part of a rehabilitation program. It includes a floor mount with an integrated motor and a control unit; the centre of rotation is designed to be at the position of the patient's head.	I
3593	67179	Implantable electrical stimulation lead anchor	Суулгах боломжтой цахилгаан өдөөлттэй хар тугалга зангуу	A non-powered, implantable device intended to stabilize/fix an implantable electrical stimulation lead (for e.g., spinal, peripheral nerve, or cardiac stimulation) to an appropriate adjacent tissue surface, to allow electrical impulses from a co-implanted pulse generator to be delivered to the target nerves/tissue. It is typically in the form of a small tubular structure for passage of the lead, with holes for attachment sutures; the lead and generator are not included.	I
3594	67182	Hearing implant system external magnet, single-use	Сонсголын суулгацын системийн гадаад соронз, нэг удаагийн	An external magnetic device intended to be adhered to the skin/scalp near the site of a cochlear implant, to hold an external component (e.g., sound processor, coil) in place through magnetic coupling. It is intended for use in patients without an implanted magnet (e.g., following magnet explantation). It is a magnetized metal disc contained within a polymer case that includes a pressure-sensitive adhesive on the patient-contact side. This is a single-use device.	I
3595	67197	Ergonomic surgeon's chair	Эргономик мэс заслын эмчийн сандал	An electrically-powered, wheeled device designed to be occupied by a surgeon in a seated position during ophthalmic surgery or microsurgery to provide the surgeon with support for the back and arms. It is designed with at least one electrically operated ergonomic adjustment (e.g., height and position adjustments) which is typically adjusted by hand or foot-operated controls. It typically features wheels (castors) and breaks.	I

3596	67198	Field hospital tent	Хээрийн эмнэлгийн майхан	A non-powered, flexible enclosure with a collapsable frame intended to be rapidly assembled in a required location as a shelter for the temporary provision of healthcare, typically in response to an emergency situation (e.g., military conflict, natural disaster). It consists of a waterproof canopy with a modular metal frame or inflatable walls, an insulated floor, interfacing structures for connection to mobile stations and facilities, and features for installing power cabling, network, ventilation and heating systems.	I
3597	67225	Bed pillow/duvet set	Орны дэр/хөнжилний багц	A collection of devices consisting of a pillow and duvet intended to provide support, comfort and insulation to a patient in bed. It may or may not be used with bedding. This is a reusable device.	I
3598	67233	Body temperature screening thermometer station	Биеийн температурыг хэмжих термометрийн станц	A freestanding electrically-powered unit designed for contactless measurement of temperature on the forehead/face of a person for screening purposes (e.g., to detect those with a fever). It may be a benchtop device or intended for attachment to a floor mount, and consists of a built-in infrared thermometer, integrated camera, face detection software, and image display screen to help adequate positioning of a person’s face during measurement; it may include a printer for labelling/identification of personnel/patients. It is typically used within healthcare facilities, public or work environments.	I
3599	67432	Pacifier-activated speaker system sensor	Соосог идэвхжүүлсэн чанга яригч системийн мэдрэгч	An electrically-powered device, intended to be attached to a dedicated pacifier (dummy) [not included] to detect pacifier use by monitoring changes in pressure and transmit this information to an auditory-reinforcement speaker (not included), which plays recorded audio (e.g., music, parents voice) in response to reward an infant for effective non-nutritive sucking. This is a reusable device.	I

3600	10425	Blood culture kit	Цусны өсгөвөрлөх багц	A collection of sterile devices, usually including two bottles of nutrient broth, used to grow aerobic and anaerobic bacteria from a sample or samples of a patient's blood. Positive blood cultures can be subcultured for identification and sensitivity. Blood cultures are used to evaluate fevers of unknown origin and sepsis in patients. This is a single-use device.	A
3601	10447	Blood/fluid warmer	Цус/шингэн халаагч	A mains electricity (AC-powered) device that is used to heat banked blood, blood products, and intravenous (IV) fluids from about 4 degrees Celsius to near body temperature (35 to 37 degrees Celsius) before infusion. The heating is typically applied directly to a bag, a special set, or plastic tubing coil through which the blood/fluid runs. Heating is achieved by a variety of means, e.g., dry heating plates, circulating fluid, water bath, or radio-frequency and temperature controls/alarms ensure that the set temperature limits are maintained. Some types may also be used to heat irrigation fluids for use in arthroscopy, laparoscopy, and other procedures.	A
3602	10943	Sputum specimen container IVD	Цэрний сорьцын сав IVD	A covered plastic receptacle containing no additives intended to be used for the collection, and preservation and/or transport, of a sputum specimen for culture, analysis, and/or other investigation. This is a single-use device.	A
3603	10944	Urine specimen collector	Шээсний сорьц цуглуулагч	A small cylindrical sterile or non-sterile vessel, typically made of plastic, that is used by the patient to collect a sample of their urine, usually required midstream, to provide a specimen for analysis. It typically includes a screw cap or sealed lid to prevent spillage and labelling for patient identification (ID). This is a single-use device.	A
3604	12542	Midstream urine specimen container IVD	Дунд урсгалын шээсний сорьцын сав IVD	A covered plastic receptacle with no additives intended to be used for the collection, and preservation and/or transport, of a midstream urine specimen for analysis and/or other investigation. The midstream is collected after an initial pre-measured volume of first-voided urine is diverted to a separate reservoir for discarding. Additional items may be included (e.g., towelettes). This is a single-use device.	A

3605	13912	Swab	Арчдас	A piece of absorbent material, e.g., cotton or foam, attached to the end of a stick made of wood, plastic, or wire. It is used for the application of medication, the removal of material, or the collection of bacteria.	A
3606	15105	Heating block IVD	IVD халаалтын блок	An electrically-powered device which is primarily a heating element, with or without a thermostat, that is built into a compact block and intended to be used as a stable dry heat source to heat in vitro diagnostic specimens/laboratory materials. It is typically a stand-alone instrument, or an interchangeable component of an in vitro diagnostic instrument/analyser. It is available in various sizes to accommodate microplates of varying sizes, and may include covers to minimize evaporation from microplates.	A
3607	15110	Microscope slide maker IVD	Микроскопын слайд үйлдвэрлэгч IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to prepare, transfer and/or fix blood, tissue, cytology specimens, or other clinical specimens onto microscope examination slides so they are suitable for subsequent staining and/or microscopic analysis.	A
3608	15126	Colony counter IVD, manual	Колонийн тоолуур IVD, гарын авлага	A device designed to provide a lighted surface upon which bacteria colonies can be manually counted with a high degree of accuracy. The surface divides an agar plate into grids so that the operator can manually count the colonies in each grid and keep track of which units have already been counted.	A
3609	15132	Cell morphology analyser IVD, manual	Эсийн морфологийн анализатор IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the qualitative microscopic examination of blood or other clinical specimens in order to view, count, record and evaluate the morphological characteristics of cells and other biological components. The device typically includes a microscope, camera, monitor and software package.	A

3610	15155	Inoculating tool IVD, manual	Тарилт хийх хэрэгсэл IVD, гарын авлага	A hand-held device intended to be used to transfer and spread inoculum from a clinical specimen and/or culture isolate into a culture medium (e.g., agar or broth) for subsequent in vitro diagnostic processing and/or testing. It typically consists of a slender handle with an attached loop or swab on the proximal end to collect and transfer a specimen into the culture medium. This is a single-use device.	A
3611	15157	Cryostat microtome IVD	Криостат микротом IVD	A precision cutting instrument contained within a temperature-controlled cabinet (i.e., a cryostat) intended to be used for the sectioning of rapidly-frozen tissue specimens without prior fixation to expedite subsequent in vitro diagnostic analysis of the tissue specimen.	A
3612	15158	Rotary microtome IVD	Эргэдэг микротом IVD	A precision cutting instrument intended to be used to cut tissue sections, fixed in paraffin wax, into thin slices for subsequent in vitro diagnostic analysis. The device has a vertically-fixed knife which cuts through the paraffin block vertically, and a flywheel mechanism which cuts sections with each turn.	A
3613	15159	Sliding microtome IVD	Гүйдэг микротом IVD	A precision cutting instrument intended to be used to cut tissue sections, fixed in celloidin, into thin slices for subsequent in vitro diagnostic analysis. It has a horizontally-fixed knife which cuts across the fixed tissue section. It may in addition be used to cut paraffin wax embedded sections.	A
3614	15160	Ultramicrotome IVD	Хэт микротомын IVD	An electrically-powered device designed to cut ultra-thin sections of embedded (fixed) tissues for electron microscopy. The basic principle of operation is similar to that of a standard microtome used in light-microscopic histotechnology, but some modifications are incorporated such as a binocular stereo-microscope to allow viewing of the sectioning process, illumination of the blade edge, or a precision advance mechanism which may be thermal or mechanical. The excursion of the tissue block past the blade edge and through its return stroke generally has a two-speed control cycle allowing slow sectioning and rapid return.	A

3615	15163	Nephelometry/turbidimetry analyser IVD, manual	Нефелометр/турбидиметрийн анализатор IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of light absorption and/or light scatter caused by particles (e.g., bacteria) and/or other biological components suspended in a clinical specimen using a photometric detection system. It is generally used to measure the concentration of a target analyte in solution.	A
3616	15164	pH meter IVD	pH хэмжигч IVD	A manual, semi-automated, or automated instrument intended to be used for the qualitative and/or quantitative in vitro determination of the pH of a clinical specimen (i.e., its degree of acidity or alkalinity) by measuring hydrogen ion concentration.	A
3617	15599	Microscope slide stainer IVD	Микроскопын слайд будагч IVD	An automated mains electricity (AC-powered) laboratory instrument intended to be used to stain blood, tissue and/or other clinical specimens fixed to microscope examination slides, using one or more biological or cytochemical staining solutions in preparation for subsequent microscopic analysis. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
3618	15687	Microscope slide coverslip IVD	Микроскопын слайд IVD	A thin piece of glass or a plastic sheath placed over a specimen on a microscope slide, to serve as a physical barrier to protect the specimen from mechanical forces and environmental exposure. This is a single-use device.	A
3619	16291	Sweat specimen container IVD	Хөлс сорьцын сав IVD	A covered plastic receptacle with no additives intended to be used for the collection, and preservation and/or transport, of induced sweat for analysis and/or other investigation. This is a single-use device.	A
3620	16384	Blood tube mixer IVD	Цусны хоолой холигч IVD	An electrically-powered laboratory instrument intended to be used for the mixing of blood or other biological fluids contained in blood tubes or other similar specimen receptacles using continuous motion or agitation. It is typically used to provide movement that will prevent the blood from coagulating and/or to agitate the blood with movement for mixing with other solutions.	A

3621	16865	Radioimmunoassay analyser IVD, manual	Радиоиммун шинжилгээний анализатор IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen using an immunological method which utilizes a radiometric detection system to detect the presence of immune complexes labelled using a radioisotope, together with sample processing, data processing and/or data display software.	A
3622	16877	High performance liquid chromatography analyser syringe IVD	Өндөр хүчин чадалтай шингэн хроматографийн анализатор тариур IVD	A device consisting of a barrel (cylinder) with plunger intended to be used in the laboratory to inject a sample into the injection port of high performance liquid chromatography (HPLC) analyser. It is typically gas-/liquid-tight and frequently includes a reinforced plunger (e.g., made of stainless steel) and tips (e.g., Luer-lock) that allow high pressure injection of liquids [e.g., 14 to 35 bar or 200 to 500 pounds per square inch (psi)]. Some types are dedicated to a specific injection port such as the split/splitless or the packed-column injection port. This is a reusable device.	A
3623	17452	Microsample centrifuge IVD	Микро сорьцын центрифуг IVD	An electrically-powered device intended to be used mainly in the clinical laboratory to centrifuge small sample volumes (typically from 0.25 to 2.2 ml) through centrifugal force. It is typically a compact stationary structure with an electric motor, a rotor, a shaft, and speed and time controls. It may include a vortex mixing function and/or refrigerating capabilities to keep cool the rotor chamber or to perform temperature sensitive procedures. The device is intended to spin down microorganisms, cells, precipitates, or reagent solutions prior to subsequent in vitro diagnostic procedures; it may also sediment viruses and cellular organelles.	A

3624	17474	Infrared spectrometry breath analyser IVD	Хэт улаан туяаны спектрометр амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use infrared spectrometry technology for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is typically used to measure analytes such as ingested carbon isotopes that have been metabolized (e.g., 13C, 14C) to establish a correlation with metabolic profiles or disorders [e.g., gastrointestinal H. pylori infection]. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
3625	17489	Microplate washer IVD	Микроплас угаагч IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for washing microplates containing multiple individual sample wells (i.e., the removal of biological specimen residue, stains, or impurities) by dispensing and aspirating measured volumes of washing solution as part of the processing required to perform an in vitro diagnostic assay.	A
3626	17965	Microtome drive IVD	Микротомын хөтөч IVD	An electrically-powered device intended to be used to advance or return a specimen in a microtome. The device may be set to run at various speeds and set to section at intermittent, single-stroke, or continuous modes.	A
3627	18128	Culture bottle	Соёлын шил	A glass or plastic container typically with a relatively narrow neck and possibly a lid/cap, used to hold culture media for growing microbiological specimens. This is a single-use device.	A
3628	30593	Calcium chloride coagulation reagent IVD	Кальцийн хлоридын бүлэгнэлтийн урвалж IVD	A calcium chloride solution intended to be used alone or in combination with other IVDs in the performance of coagulation tests or other laboratory investigations of clinical specimens.	A

3629	30623	Nucleic acid hybridization detection IVD, kit	Нуклейн хүчлийн эрлийзжилтийг илрүүлэх IVD, иж бүрдэл	A collection of reagents and other associated materials intended to be used for the detection of nucleic acid (e.g., DNA, RNA) probes [not included] hybridized to their target nucleotide sequences in a clinical specimen. It may be based on different techniques [e.g., fluorescent in situ hybridization (FISH), chromogenic ISH (CISH), or line probe assay (LPA)] and is used to detect and localize the presence or absence of specific nucleic acid sequences.	A
3630	30670	Cell culture line IVD	IVD эсийн өсгөвөрийн шугам	A cell line of known origin intended to be used alone or in combination with other IVDs, for cytogenetic analyses and/or for the detection/cultivation of viruses present in clinical laboratory specimens.	A
3631	30863	Reticulocyte analyser IVD	Ретикулоцит анализатор IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of reticulocytes, or immature red blood cells in a clinical specimen. The instrument uses a specified light source (e.g., laser) to determine the number and/or the degree of maturity of red blood cells by identifying the presence of RNA (ribonucleic acid) which has been stained for visualization, or bound using a fluorescent marker.	A
3632	31400	Sterile urine specimen container IVD	Ариутгасан шээсний сорьцын сав IVD	A sterile covered plastic receptacle with no additives intended to be used for the collection, and preservation and/or transport, of a urine specimen for culture, analysis, and/or other investigation. This is a single-use device.	A
3633	31646	Lead (Pb) analyser IVD	Хар тугалга (Pb) анализатор IVD	An electrically-powered laboratory instrument intended to be used for the quantitative determination of the heavy metal lead (Pb) in a clinical specimen, using technology which may incorporate fluorometry or electrometry. The analyser requires the use of specific reagents and test strips, packaged together in a test kit. The analyser is intended to be used by health professionals at the point-of-care, and often also in the laboratory.	A

3634	32429	Microhaematocrit centrifuge IVD	Микрогематокрит центрифуг IVD	An electrically-powered device intended to be used for the processing of whole blood specimens using centrifugal force to determine the haematocrit, i.e., the ratio of red blood cell volume to whole blood volume expressed as a decimal, fraction, or percentage. The device typically requires a smaller sample volume than conventional centrifuges (macrohaematocrit method). The haematocrit is typically used to diagnose blood loss and erythrocyte count above or below normal.	A
3635	32435	Haemoglobin analyser IVD, point-of-care	Гемоглобины анализатор IVD, тусламж үйлчилгээний цэг	A mains electricity (AC-powered) instrument, which may include internal rechargeable batteries, intended to be used by health professionals at the point-of-care, and often also in the laboratory, to determine the concentration of haemoglobin in a clinical specimen, using technology which may include colorimetry, electrometry or photometry.	A
3636	32930	Microtome freezing attachment IVD	Microtome хөлдөөх хавсралт IVD	A device, typically containing liquid nitrogen (LN2), intended to be attached to a microtome to freeze a tissue specimen in preparation for sectioning.	A
3637	33489	Paraformaldehyde solution IVD	Параформальдегидийн уусмал IVD	A solution of paraformaldehyde intended to be used as a fixative in the processing of biological tissues and clinical specimens. Paraformaldehyde solution initiates cross-linking between the free amino groups of proteins without disrupting protein structure and is therefore recommended for use with immunoperoxidase techniques for detecting specific antigenic structures.	A
3638	33936	Karyotyping cell-image analyser IVD	Кариотипийн эсийн дүрсний анализатор IVD	An automated laboratory instrument designed for analysis of cell images, either directly from cell preparations (e.g., smears) or from cell images obtained from other devices (e.g., microscopes), that can identify and classify abnormalities in the chromosome (e.g., translocations). It usually provides results as a graphic (karyotype) normally applied for the pre and postnatal diagnosis of birth defects, chromosomal abnormalities, genetic disorders (e.g., Down syndrome), cancer, and cancer treatment follow up. The device typically includes display, recording, and communication capabilities.	A

3639	34549	Clinical chemistry analyser, dry	Эмнэлзүйн химийн анализатор, хуурай	A mains electricity (AC-powered) automatic or semi-automated instrument used for the quantitative/qualitative analysis of a chemical substance or sample of human tissue, or of a chemical substance that resulted from the reaction between a reagent and human tissue, that functions by measuring the amount of light reflected from a reagent permeated test strip or laminated film on which the sample has been placed.	A
3640	34550	Clinical chemistry analyser, packed	Эмнэлзүйн химийн анализатор, савласан	A mains electricity (AC-powered) automatic or semi-automated instrument used for the quantitative/qualitative analysis of a chemical substance or sample of human tissue that functions through the photometric analysis of a sample that has been combined with a packaged reagent. This device has graphic and data output capabilities.	A
3641	34989	Water purification system, demineralization	Ус цэвэршүүлэх систем, эрдэсгүйжүүлэлт	An assembly of activated carbon-resin columns and other devices/items used to purify water. The system functions principally by removing inorganic and/or organic chemical contaminants from the water.	A
3642	35347	Specimen container, general-purpose	Сорьцын сав, ерөнхий зориулалттай	A general-purpose (universal) sterile or non-sterile vessel intended for the short-term storage and/or transportation of a clinical specimen (e.g., urine, faeces, sputum, mucous) so that it can be used effectively for analytical/diagnostic purposes. To assist in sample collection the device may contain a tipped swab shaft, a spatula, or a coiled thread as an integral part of its design. It typically includes a screw cap or sealed lid to prevent spillage and labelling for patient identification (ID). This is a single-use device.	A
3643	35464	Alcohol body-fluid analyser IVD	Архины биеийн шингэний анализатор IVD	A mains electricity (AC-powered) automated laboratory instrument intended to determine the concentration of alcohol in a body-fluid specimen (typically blood). This device is typically used for the determination of blood alcohol concentration in patients with diabetes mellitus, those under anaesthesia, or those suspected of alcohol intoxication.	A

3644	35466	Dry clinical chemistry analyser IVD, automated	Хуурай клиник химийн анализатор IVD, автоматжуулсан	A mains electricity (AC-powered) laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of one or multiple general clinical chemistry analytes, including electrolytes [e.g. Sodium (Na+), potassium (K+), chloride (Cl-)], glucose, urea, creatinine, liver enzymes [e.g. Lactate dehydrogenase (LDH), alkaline phosphatase (ALP)] and/or lipids and lipoproteins. It functions by measuring the amount of light reflected from strips or laminated film impregnated with dry reagents onto which a clinical specimen is placed. The device operates with minimal technician involvement and complete automation of all procedural steps.	A
3645	35476	Haematological cell analyser IVD	Гематологийн эсийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the enumeration of a haematological cell population, using technology which may include cell lysis, electrical impedance, conductivity, cytometry, and/or light scatter to measure and/or calculate white cell, red cell and platelet parameters and indices in a clinical specimen. Some types may also include measurement of haemoglobin.	A
3646	35488	Erythrocyte sedimentation rate analyser	Эритроцит тунадасжих хурдны анализатор	A mains electricity (AC-powered) instrument used in the laboratory for the automated measurement of erythrocyte sedimentation rate (ESR), the sinking velocity of red blood cells in a sample of whole blood, as an indicator of inflammation. The device will typically employ photometric techniques to make the measurement.	A
3647	35489	Microtome blade sharpener IVD	Microtome ир ирлэгч IVD	An electrically-powered device intended to be used to restore the sharp cutting edge of reusable microtome blades used to cut tissue sections for subsequent in vitro diagnostic analysis.	A
3648	35505	Coagulation timer IVD	Коагуляцийн таймер IVD	An electronic device intended to be used to measure, indicate, and/or record the length of time taken for plasma or a whole blood sample to form a clot following the initiation of a reaction, typically as part of in vitro coagulation studies.	A

3649	35737	Desiccator IVD	Хатаагч IVD	An in vitro diagnostic device designed as a tightly sealed chamber intended to contain objects, chemicals or materials (e.g., agarose gel) that are to be kept moisture free. It will typically contain a desiccant [e.g., calcium oxide (CaO), silica]. This is a reusable device.	A
3650	35743	Clinical chemistry analyser, discrete automated	Клиникийн химийн анализатор, салангид автоматжуулсан	A mains electricity (AC-powered), laboratory instrument, that automates or mechanizes a manual clinical chemistry analytical procedure, step by step, without significant changes in the original manual method. Each test is performed in a separate test tube or cuvette, which is transported on a conveyor or in a carousel past the various stations, where specimens, diluents, and reagents are dispensed. Time is allowed for mixing, incubation, and colour development, after which the absorbance of the reaction mixture is measured by a built-in filter photometer or spectrophotometer.	A
3651	35744	Centrifugal clinical chemistry analyser	Төвөөс зугтах эмнэлзүйн химийн анализатор	A mains electricity (AC-powered) automatic or semi-automated instrument that uses centrifugal force to transfer and mix liquids. It also monitors the resulting reactions in the centrifuge with, e.g., a photometer. A separate unit is required for dispensing samples and reagents.	A
3652	35881	Cytological centrifuge IVD	Цитологийн центрифуг IVD	An electrically-powered device intended to be used in a clinical laboratory setting to separate the cellular components of suspensions in a clinical specimen through centrifugal force for subsequent cytological analysis. It is typically a compact unit with an electric motor, a vertical shaft, and a special horizontal rotor attached that enables cells to be separated from a liquid suspension and deposited directly onto a microscope slide for microscopic examination.	A
3653	35885	Lactate monitoring system IVD, home-use	Лактатын хяналтын систем IVD, гэрийн хэрэглээ	A collection of devices including a dedicated, portable, electrically-powered instrument (self-testing meter) reagents, test strips, and/or other associated disposable materials intended to be used for the quantitative measurement of lactate in a whole blood specimen. It is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. It is typically used to monitor physical performance and conditioning in sport, and/or to support patient management.	A

3654	35901	Cell washer IVD	Эс угаагч IVD	An automated mains electricity (AC-powered) laboratory instrument intended to be used to separate red blood cells from whole blood and wash the intact red blood cells, typically through low-speed centrifugal force, to remove plasma, debris and/or any other extraneous material so they are free from interfering substances and suitable for use in subsequent in vitro clinical testing (e.g., antiglobulin). The device operates with minimal technician involvement and complete automation of all procedural steps.	A
3655	35918	Urine analyser IVD, laboratory	Шээсний анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of various chemical and cellular constituents of a clinical urine specimen, which typically include bilirubin, glucose, haemoglobin, ketones, nitrites, pH, protein, urobilinogen, specific gravity, blood, red cells, white cells, casts, crystals, sperm, and/or microorganisms (e.g., bacteria). The device uses technology which may include electrical impedance, conductivity, enzyme spectrophotometry, nephelometry and/or photometry.	A
3656	35968	Glycated haemoglobin (HbA1C) analyser IVD	Гликатжуулсан гемоглобины (HbA1C) анализатор IVD	A mains electricity (AC-powered) laboratory instrument intended to be used for the quantitative measurement of glycated haemoglobin (HbA1c), also known as glycohaemoglobin, glycosylated haemoglobin or glucosylated haemoglobin, in a clinical specimen. It typically uses a separation technique that is based on charge differences (i.e., ion-exchange chromatography, high pressure liquid chromatography, electrophoresis), chemical analysis (i.e., colorimetry, spectrophotometry), or structural differences (i.e., affinity chromatography and immunoassay).	A

3657	36416	Tissue embedding unit IVD	Эд эс оруулах нэгж IVD	An electrically-powered, electronic unit intended to be used in the laboratory for encapsulating (embedding) histologic tissue samples in liquid paraffin wax which when cooled and fixed to a sample holder can be further processed, e.g., placed in a microtome for cutting into samples for microscopy and/or for histological storage. This device will typically have a large storage capacity for the liquid paraffin (e.g., 4 litres) with heating facilities and heated work area, excess paraffin drainage facility, a cold plate area, and possibly a built-in forceps heater.	A
3658	36465	General-purpose centrifuge IVD	Ерөнхий зориулалтын центрифуг IVD	An electrically-powered device intended to be used to separate the components of multiple types and various volumes of clinical suspensions using centrifugal force. It is a self-contained unit with an electric motor, a vertical shaft, and a horizontal rotor attached to the upper end. It is typically used to centrifuge various types of clinical specimens, either alone or after addition of reagents or other additives, for subsequent in vitro diagnostic analysis. It may additionally have refrigeration capabilities to perform temperature-sensitive procedures.	A
3659	37974	Microscope slide maker/stainer IVD	Микроскоп слайд үйлдвэрлэгч/будагч IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to prepare, transfer or fix blood, tissue or other clinical specimens onto microscope examination slides, and then stain the slides using one or more biological or cytochemical staining solutions in preparation for subsequent microscopic analysis.	A

3660	38244	Mass spectrometry breath analyser IVD	Масс спектрометр амьсгалын анализатор IVD	An electrically-powered laboratory or point-of-care instrument designed to use mass spectrometry technology for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a specimen of air exhaled from a patient. It is typically used to measure analytes such as volatile organic compounds (e.g., aldehydes), hydrogen, methane, ingested carbon isotopes [e.g., 13C, 14C] that correlate with metabolic profiles or disorders (e.g., lipid peroxidation levels, gastrointestinal H. pylori infection). The device operates with minimal technician involvement and complete automation of all procedural steps.	A
3661	41413	Lymphocyte stabilization reagent IVD	Лимфоцит тогтворжуулах урвалж IVD	A substance or reactant intended to be used for the stabilization, preservation and/or storage of lymphocytes following separation from a whole blood clinical specimen.	A
3662	41906	Nucleic acid hybridization detection IVD, control	Нуклейн хүчлийн эрлийзжилтийг илрүүлэх IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the generic detection of nucleic acid (e.g., DNA, RNA) probes hybridized to their target nucleotide sequences in a clinical specimen [e.g., fluorescent in situ hybridization (FISH), chromogenic ISH (CISH)].	A
3663	41955	Blood diluting fluid	Цус шингэлэх шингэн	A device used to dilute whole blood for further testing, usually for blood cell counting.	A
3664	42280	Tissue specimen x-ray system IVD	Эд эсийн дээжийн рентген систем IVD	An assembly of devices designed to produce an x-ray image of a tissue sample (e.g., stereotactic biopsy cores taken during mammographic procedures) and/or an amputated body part, by generating and controlling x-ray beams and recording the absorption patterns of the x-rays. The system typically includes a cabinet where the specimen is placed and a screen; the image is generated via digital imaging methods.	A

3665	42439	Microtome blade IVD, reusable	Микротомын ир IVD, дахин ашиглах боломжтой	A flat, wedge-shaped, sharp blade intended to be mounted into a microtome to cut micro-thin slices of tissue that may either be frozen or fixed, and usually impregnated, with paraffin wax. The resulting sections are mounted onto glass slides for staining and then viewing with a microscope. The cutting edge will typically need to be sharpened at intervals. This is a reusable device.	A
3666	42440	Microtome blade IVD, single-use	Микротомын ир IVD, нэг удаагийн	A flat, wedge-shaped, sharp blade intended to be mounted into a microtome to cut micro-thin slices of tissue that has been fixed, and usually impregnated, with paraffin wax. The resulting sections are mounted onto slides for staining and then viewing with a microscope. This is a single-use device.	A
3667	42624	Sputum liquefaction/decontamination reagent IVD	Цэр шингэрүүлэх/халдваргүйжүүлэх урвалж IVD	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the liquefaction, digestion, and/or decontamination of a sputum specimen suspected of containing microorganisms associated with respiratory disease (e.g., Streptococcus pneumoniae, Mycobacterium tuberculosis) in preparation for further processing.	A
3668	42625	Photometric/spectroscopic immunoassay analyser IVD	Фотометрийн/спектроскопийн дархлааны анализатор IVD	An electrically-powered instrument intended to be used to scan an immunoassay reagent vehicle (e.g., test strip, cassette, or card), after vehicle exposure to a clinical specimen, to provide a quantitative, semi-quantitative and/or qualitative in vitro determination of chemical substances and/or biological markers in the clinical specimen. The instrument uses photometry and/or light spectroscopy to detect visual markers that result from the immunological reaction between the reagents and the specimen. It is intended to be used by healthcare professionals for rapid in vitro diagnostic measurements [e.g., lateral flow immunochromatographic (ICT) test] at the point-of-care or in the laboratory.	A
3669	42651	Buffered isotonic saline reagent IVD	Буферт изотоник давсны урвалж IVD	A buffered isotonic saline solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A

3670	42653	Atmospheric generation IVD, control	Агаар мандлын үеийн IVD, хяналт	A material which is used to verify the performance of a product intended to be used to generate specific atmospheric conditions [e.g., increased carbon dioxide (CO2), reduced or depleted oxygen (AnO2)] to create an environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3671	42674	Trichrome Blue/Ryan Blue solution IVD	Trichrome Blue/Ryan Blue шийдэл IVD	A trichrome blue or Ryan blue solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3672	42675	Crystal violet solution IVD	Кристал ягаан уусмал IVD	A crystal violet solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3673	42680	Silver sulfate solution IVD	Мөнгөний сульфатын уусмал IVD	A silver sulfate solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3674	42682	Aceto-carmine solution IVD	Ацетокармины уусмал IVD	A solution/stain of acetic acid and carmine intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3675	42684	Bismarck brown Y solution IVD	Бисмарк хүрэн Y уусмал IVD	A Bismarck brown Y solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3676	42688	Alcian blue solution IVD	Алсиан цэнхэр уусмал IVD	An Alcian blue solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3677	42690	Acridine orange solution IVD	Акридины жүржийн уусмал IVD	An acridine orange solution/stain intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3678	42692	Sodium thiosulfite solution IVD	Натрийн тиосульфитын уусмал IVD	A sodium thiosulfite solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3679	42693	pH-adjusted buffer solution IVD	pH тохируулсан буфер уусмал IVD	A pH-adjusted buffer solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A
3680	42696	Alizarin red S solution IVD	Ализарины улаан S уусмал IVD	An alizarin red S solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3681	42697	Ammoniacal silver solution IVD	Аммиакийн мөнгөний уусмал IVD	An ammoniacal silver solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3682	42699	Amylase solution IVD	Амилаза уусмал IVD	An amylase (diastase) solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3683	42702	Boric acid/borate buffer solution IVD	Борын хүчил/боратын буфер уусмал IVD	A boric acid/borate buffer solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3684	42703	Specimen preparation enzyme reagent IVD	Сорьц бэлтгэх ферментийн урвалж IVD	An enzymatic substance or reactant intended to be used alone or in combination with other IVDs for the liquefaction or digestion of clinical laboratory specimens containing mucoid or clumped material in preparation for further processing.	A
3685	42706	Biebrich scarlet solution IVD	Бибрихийн час улаан уусмал IVD	A Biebrich scarlet solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3686	42707	Albert solution IVD	Альберт шийдэл IVD	An Albert solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3687	42709	Biological stain solution kit IVD	Биологийн будгийн уусмалын иж бүрдэл IVD	A collection of chemical agents, dyes and/or solutions intended for the artificial colouration of specific target tissue structures, intra/extracellular elements and/or infectious microorganisms in a clinical specimen for subsequent visualization, examination, identification and/or differentiation.	A

3688	42710	Basic fuchsin solution IVD	Фуксины үндсэн уусмал IVD	A basic fuchsin solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3689	42711	Atmospheric generation IVD, reagent	Агаар мандлын үеийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in the generation of specific atmospheric conditions [e.g., increased carbon dioxide (CO_2), reduced or depleted oxygen (AnO_2)] to create an environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3690	42712	Ferric ammonium sulfate solution IVD	Төмрийн аммонийн сульфатын уусмал IVD	A ferric ammonium sulfate solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3691	42714	Shorr staining solution IVD	Шорр будгийн уусмал IVD	A Shorr staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3692	42717	Ferric chloride solution IVD	Төмрийн хлоридын уусмал IVD	An ferric chloride solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3693	42719	Brilliant cresyl blue solution IVD	Бриллиант крезил цэнхэр уусмал IVD	A brilliant cresyl blue solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3694	42732	Auramine-rhodamine solution IVD	Аурамин-родамин уусмал IVD	An Auramine-rhodamine solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3695	42741	Wright staining solution IVD	Райт будгийн уусмал IVD	A Wright staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3696	42746	Saffron solution IVD	Гүргэмийн уусмал IVD	A saffron solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3697	42747	Colloidal iron solution IVD	Коллоид төмрийн уусмал IVD	A colloidal iron solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3698	42752	Bluing solution IVD	Хөхрөх уусмал IVD	A bluing solution, which may include Scott's's's tap water substitute, intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3699	42838	Laboratory analyser operation system software IVD	Лабораторийн анализаторын үйлдлийн системийн программ хангамж IVD	Mainframe or personal computer (PC) based operating system software (or firmware) that is specific to the central processing unit (CPU) incorporated into an in vitro diagnostic analyser or analyser system. This includes the software or firmware based programs and routines supplied by the computer manufacturer that drive a specific computer in the performance of its tasks and assists the operators, applications programmers and programs with various supporting functions. A proprietary name and a "version number" are commonly used to identify different operating system versions.	A
3700	42959	May-Grünwald staining solution IVD	Май-Грюнвальд будгийн уусмал IVD	A May-Grünwald staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3701	43086	Cell cycle DNA stain kit IVD	Эсийн мөчлөгийн ДНХ будгийн иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used to prepare and stain the deoxyribonucleic acid (DNA) content of cells in a clinical specimen, for the quantitative detection of cells in the various stages of the cell cycle, typically using a fluorescent activated cell sorting/flow cytometry (FACS/flow) method. It typically consists of a nucleic acid fluorescent dye (e.g., propidium iodide), RNA-removal enzymes, and cell permeabilization and fixation reagents (e.g., ethanol). This determination is typically used to aid gene or drug therapy for immunological disorders or cancer.	A

3702	43440	Dry clinical chemistry analyser IVD, semi-automated	Хуурай клиник химийн анализатор IVD, хагас автоматжуулсан	A mains electricity (AC-powered) laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of one or multiple general clinical chemistry analytes, including electrolytes [e.g., sodium (Na+), potassium (K+), chloride (Cl-)], glucose, urea, creatinine, liver enzymes [e.g. Lactate dehydrogenase (LDH), alkaline phosphatase (ALP)] and/or lipids and lipoproteins. It functions by measuring the amount of light reflected from strips or laminated film impregnated with dry reagents onto which a clinical specimen is placed. The device operates with reduced technician involvement and automation of some, but not all, procedural steps.	A
3703	43472	Laboratory instrument/analyser application software IVD	Лабораторийн багаж/анализаторын хэрэглээний программ хангамж IVD	An in vitro diagnostic software program intended to be used with an instrument/analyser (e.g., microscope slide digital imaging scanner, immunoassay analyser, real-time PCR machine), or a data management device connected to the instrument/analyser, to: 1) facilitate user-controlled device function [e.g., incubation control]; 2) assist data processing, display, or communication [e.g., image conversion]; and/or 3) produce raw-data-derived qualitative result calculations based on specified criteria [positive or negative assay result]. This software does not use demographic or clinical data to produce a patient score (i.e., it is not interpretive).	A
3704	43486	Human immunoglobulin A (IgA) animal conjugate antibody reagent IVD	Хүний иммуноглобулин A (IgA) амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin A (IgA) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A
3705	43487	Toluene solution IVD	Толуолын уусмал IVD	A toluene solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A
3706	43490	Field staining solution IVD	Талбайн будгийн уусмал IVD	A Field staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3707	43491	Indian ink solution IVD	Энэтхэгийн бэхний уусмал IVD	An indian/india ink solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3708	43503	Human immunoglobulin G (IgG) animal conjugate antibody reagent IVD	Хүний иммуноглобулин G (IgG) амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin G (IgG) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A
3709	43510	Biological stain control IVD	Биологийн толбо хянах IVD	A prepared slide(s) and/or other associated material(s) used to verify the performance of a stain or staining kit that is intended to be used for the artificial colouration of specific target tissue structures, intra/extracellular elements and/or infectious microorganisms in a clinical specimen.	A
3710	43514	Human immunoglobulin M (IgM) animal conjugate antibody reagent IVD	Хүний иммуноглобулин M (IgM) амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin M (IgM) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A
3711	43516	Carbon dioxide (CO2) atmospheric generation IVD	Агаар мандлын нүүрстөрөгчийн давхар исэл (CO2) үүсэх IVD	A pouch or unit intended to be used to generate increased atmospheric carbon dioxide (CO2) to create an environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3712	43518	Dithiothriotol (DTT) reagent IVD	Дитиотриотол (DTT) урвалж IVD	A dithiothriotol (DTT) solution intended to be used alone or in combination with other IVDs for reducing disulphide bridges in peptides present in clinical laboratory specimens.	A
3713	43519	Acetone solution IVD	Ацетон уусмал IVD	An acetone solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A

3714	43520	Atmospheric generation kit IVD	Агаар мандал үүсгэх иж бүрдэл IVD	A pouch, unit, and/or other accessories intended to be used in combination to generate specific atmospheric conditions [e.g., increased carbon dioxide (CO2), reduced or depleted oxygen (AnO2)] as an environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3715	43522	Human immunoglobulin A (IgA)/IgG/IgM animal conjugate antibody reagent IVD	Хүний иммуноглобулин A (IgA)/IgG/IgM амьтны коньюгат эсрэгбиеийн урвалж IVD	One or multiple immunoglobulins sourced from an animal (e.g., goat, sheep, mouse, rabbit) intended to be used in combination with other IVDs for the qualitative and/or quantitative detection of antihuman immunoglobulin A (IgA), immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies. The immunoglobulin molecules are conjugated or bound by additional substances (e.g., fluorescent markers, peroxidase enzymes) for the detection of immune complexes in clinical specimens.	A
3716	43530	Anaerobic (AnO2) atmospheric generation IVD	Анаэроб (AnO2) атмосферийн үеийн IVD	A pouch or unit intended to be used to reduce or deplete atmospheric oxygen (AnO2) to create an anaerobic environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3717	43533	Sputum specimen liquefaction/decontamination kit IVD	Цэрний сорьцыг шингэрүүлэх/халдваргүйжүүлэх иж бүрдэл IVD	A collection of reagents and other associated materials intended to be used alone or in combination with other IVDs for the liquefaction, digestion, and/or decontamination of a sputum specimen suspected of containing microorganisms associated with respiratory disease (e.g., Streptococcus pneumoniae, Mycobacterium tuberculosis) in preparation for further processing.	A
3718	43543	Sudan III solution IVD	Судан III шийдэл IVD	A Sudan III solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3719	43550	Microscopy mounting medium IVD	Микроскоп суурилуулах орчин IVD	A substance intended to be used to create a seal between a microscope slide, clinical specimen and/or coverslip, to preserve the specimen and/or the integrity of any dye(s) used for staining, and enhance image quality during microscopic examination.	A

3720	43560	Sudan black solution IVD	Суданы хар уусмал IVD	A Sudan black solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3721	43561	Bromthymol blue solution IVD	Бромтимол хөх уусмал IVD	A bromthymol blue solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3722	43563	Aldehyde Fuchsin solution IVD	Альдегидийн фуксины уусмал IVD	An aldehyde fuchsin solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3723	43578	Schiff solution IVD	Шиффийн шийдэл IVD	A Schiff solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3724	43581	Safranin O solution IVD	Safranin O уусмал IVD	A safranin O solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3725	43584	Acid-alcohol solution IVD	Хүчиллэг-спиртийн уусмал IVD	An acid-alcohol solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A
3726	43587	Biological stain IVD	Биологийн толбо IVD	A chemical agent(s), dye(s) and/or solution(s) intended for the artificial colouration of specific target tissue structures, intra/extracellular elements and/or infectious microorganisms, in a clinical specimen, for their subsequent visualization, examination, identification and/or differentiation.	A
3727	43594	Tartrazine solution IVD	Тартразины уусмал IVD	A tartrazine solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3728	43595	Toluidine blue O solution IVD	Толуидин хөх О-ийн уусмал IVD	A toluidine blue O solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3729	43606	Differentiation solution IVD	IVD ялгах шийдэл	A differentiation solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3730	43607	Azocarmine solution IVD	Азокармины уусмал IVD	An azocarmine solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3731	43629	Decolourising solution IVD	Өнгө арилгагч уусмал IVD	A decolourizing solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3732	43632	Aceto-orcein solution IVD	Ацето-орцеины уусмал IVD	A solution/stain of acetic acid and orcein intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3733	43634	Gold chloride solution IVD	Алт хлоридын уусмал IVD	A gold chloride solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3734	43640	Brilliant green solution IVD	Гялалзсан ногоон шийдэл IVD	A brilliant green solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3735	43647	Iodine solution IVD	Иодын уусмал IVD	An iodine solution (includes Weigert's's iodine, Gram's iodine, and/or Lugol's's iodine) intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3736	43649	Giemsa staining solution IVD	Giemsa будгийн уусмал IVD	A Giemsa staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3737	43652	Sudan IV solution IVD	Суданы IV уусмал IVD	A Sudan IV solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3738	43658	Azure B solution IVD	Azure B шийдэл IVD	An azure B solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3739	43673	Microscope counting chamber IVD	Микроскоп тоолох камер IVD	A counting chamber intended to be used for the microscopic enumeration of cells, cellular particles, or other biological components present in clinical laboratory specimens.	A
3740	43674	Isotonic saline reagent IVD	Изотоник давсны урвалж IVD	An unbuffered isotonic saline solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A
3741	43679	Van Gieson's's solution IVD	Ван Гисоны шийдэл IVD	A Van Gieson's's solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3742	43690	Haematoxylin substitute solution IVD	Гематоксилин орлуулагч уусмал IVD	A haematoxylin substitute solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3743	43696	Jenner staining solution IVD	Женнер будгийн уусмал IVD	A Jenner staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3744	43704	Congo red solution IVD	Конго улаан уусмал IVD	A Congo red solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3745	43727	Eosin Y/phloxine B solution IVD	Eosin Y/phloxine B уусмал IVD	An eosin Y-phloxine B solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3746	43728	Armand staining solution IVD	Арманд будах уусмал IVD	An Armand staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3747	43729	Eosin Y solution IVD	Eosin Y уусмал IVD	An eosin Y solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3748	43733	Gram stain IVD, reagent	Грам толбо IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in a Gram stain (also referred to as Brown and Benn or Brown-Hopps stain), that is used for the demonstration and differentiation of bacteria in biological/clinical specimens.	A
3749	43735	Aniline blue solution IVD	Анилины цэнхэр уусмал IVD	An aniline blue solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3750	43738	Gomori trichrome stain IVD, kit	Гомори трихромын толбо IVD, иж бүрдэл	A collection of chemical agents, dyes, and/or other associated materials referred to as a Gomori trichrome stain, intended to be used for the demonstration of collagen, muscle, and fibrin in biological/clinical specimens.	A
3751	43739	Gentian violet solution IVD	Gentian violet уусмал IVD	A gentian violet solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3752	43761	Centrifuge tube IVD	Центрифугийн хоолой IVD	A tube intended to be used in the laboratory to contain a clinical specimen, reagent, or other material associated with in vitro diagnostic testing, for separation by centrifugation. It is designed to be placed in a centrifuge rotor for the procedure; it may also be placed in a rack for short-term storage of its contents. It is typically transparent to facilitate observation of its contents, frequently includes a cap (e.g., screw or press-fit), and may have graduations along the side. This is a single-use device.	A
3753	43777	Humidity atmospheric generation IVD	Агаар мандлын чийгшил үүсгэх IVD	A pouch or unit intended to be used to generate increased atmospheric humidity to create an environment suitable for the cultivation, processing, or testing of clinical laboratory specimens.	A
3754	43781	Xylene solution IVD	Ксилений уусмал IVD	A xylene solution intended to be used alone or in combination with other IVDs in the processing, staining, and/or testing of clinical laboratory specimens.	A
3755	43804	Light green solution IVD	IVD цайвар ногоон шийдэл	A light green solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A

3756	43805	Immunoglobulin removal reagent IVD	Иммуноглобулиныг арилгах урвалж IVD	A substance or reactant intended to be used alone or in combination with other IVDs for the removal, adsorption, absorption, or inactivation of non-specific immunoglobulins and/or rheumatoid factor antibodies present in a clinical specimen, to prevent interference when testing for other specific classes of immunoglobulin.	A
3757	43898	Laboratory instrument/analyser pump IVD	Лабораторийн багаж/анализаторын насос IVD	An electromechanical component of a laboratory instrument/analyser used for in vitro diagnostic procedures [e.g., high performance liquid chromatograph (HPLC), coagulation analyser] designed to produce positive and negative (vacuum) pressure during analyser/instrument operation.	A
3758	43899	High performance liquid chromatography analyser injection port IVD	Өндөр хүчин чадалтай шингэн хроматографийн анализатор тарилгын порт IVD	A component of a high performance liquid chromatograph (HPLC) analyser designed to provide the means to introduce a specimen for analysis into the continuous flow of pressurized carrier liquid. It is typically a piece of hardware attached to the column head.	A
3759	43900	High performance liquid chromatography analyser detector IVD	Өндөр хүчин чадалтай шингэн хроматографийн анализатор детектор IVD	A component of a high performance liquid chromatograph (HPLC) analyser designed to identify/quantify the chemical constituents of a liquid mixture of chemical compounds by electronically registering their rate of exit at the end of the analyser's column(s). Results are displayed graphically. Some analysers are connected to a mass spectrometer which acts as the detector.	A
3760	43905	Gas chromatography analyser detector IVD	Хийн хроматографийн анализатор илрүүлэгч IVD	A component of a gas chromatography analyser designed to identify/quantify the chemical constituents of a vapourised mixture of chemical compounds by electronically registering their rate of exit at the end of the analyser's column(s). Results are displayed graphically. The most common types are flame ionization and thermal conductivity; both are sensitive to a wide range of chemical constituents and work over a wide range of concentrations. Others (e.g., discharge ionization, electron capture) are sensitive only to specific types of substances or work well only in narrower ranges of concentrations. Some analysers are connected to a mass spectrometer which acts as the detector.	A

3761	44407	High performance liquid chromatography analyser column IVD	Өндөр хүчин чадалтай шингэн хроматографийн анализаторын багана IVD	A component of a high performance liquid chromatograph (HPLC) analyser that functions as a narrow flow-through tube through which different chemical constituents of a sample pass in a high pressure liquid stream at different rates, depending on their various chemical and physical properties and their interaction with a specific column filling. The internal diameter of the HPLC tubing (typically ranges from under 0.3 mm to greater than 10 mm) determines the quantity of analyte that can be loaded and analyser sensitivity. The tubes are made of various materials including stainless steel and fused silica.	A
3762	44957	Picric acid-acetone solution IVD	Пикрин хүчил-ацетоны уусмал IVD	A picric acid and acetone solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3763	44958	Picrosirius red solution IVD	Picrosirius улаан уусмал IVD	A Picrosiruis red solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3764	45306	Group O R2r reagent red blood cell IVD, antigen	O R2r бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their classification as blood group O R2r. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype R2r or ccDEe.	A
3765	45307	Anti-By red blood cell grouping IVD, antibody	Anti-By цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for By [700002], a low frequency red blood cell antigen, using an agglutination method.	A
3766	45308	ABO/Rh multiple blood grouping IVD, kit, agglutination	ABO/Rh олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of multiple ABO system and Rh group red blood cell antigens, using an agglutination method.	A
3767	45309	Rhesus (Rh) phenotype (CcDEe)/Kell phenotype multiple blood grouping IVD, kit, agglutination	Rhesus (Rh) фенотип (CcDEe)/Келл фенотип олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen to determine the Rh phenotype (CcDEe) [RH:1,2,3,4,5] and Kell phenotype [KEL:1,2] of red blood cells, using an agglutination method.	A

3768	45310	Multiple immunohaematology test IVD, control	Олон тооны дархлаа судлалын шинжилгээ IVD, хяналт	A collection of reagent red blood cells and/or immunoglobulins directed at red blood cell antigens that are supplied together and intended to be used when testing a clinical specimen to verify the performance of multiple immunohaematological tests.	A
3769	45311	Anti-C [RH004] standard reference solution IVD	Anti-C [RH004] стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to C [RH004] red blood cell antigens from the rhesus system, in a clinical specimen.	A
3770	45312	Anti-C [RH002] standard reference solution IVD	Anti-C [RH002] стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to C [RH002] red blood cell antigens from the rhesus system, in a clinical specimen.	A
3771	45313	Anti-Ch^a red blood cell grouping IVD, antibody	Анти-Ч^а цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ch^a [CH/RG001] red blood cell antigens or Chido blood group substance, using an agglutination method.	A
3772	45314	Anti-Cs^a red blood cell grouping IVD, antibody	Anti-Cs^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Cs^a [COST001] red blood cell antigens from the Cost blood group, using an agglutination method.	A
3773	45774	A/B transferase IVD, calibrator	A/B трансфераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of A and/or B transferase enzymes associated with ABO blood group expression on all cells in a clinical specimen.	A
3774	45775	A/B transferase IVD, control	A/B трансфераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of A and/or B transferase enzymes associated with ABO blood group expression on all cells in a clinical specimen.	A

3775	45810	Cryogenic specimen container IVD	Криоген сорьцын сав IVD	A container or tube intended to be used in the laboratory for the preservation, storage and/or transport of a clinical specimen at temperatures of -130˚ Celsius (-200˚ Fahrenheit) or colder, using liquid nitrogen (LN2) as the cooling agent. It is typically made of plastic, or other strong synthetic material, and has an internal or external screw thread for screw caps, and may have marking spots, colour codes and/or graduations along the side. This is a single-use device.	A
3776	45811	Polyspecific antihuman globulin IVD, antibody	Полиспецифик хүний эсрэг глобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to all classes of human immunoglobulin antibodies fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human immunoglobulin, using an agglutination or solid-phase red blood cell adherence method.	A
3777	45967	Faecal specimen container IVD, DNA preservation solution	Өтгөний сорьцын сав IVD, ДНХ хадгалах уусмал	A covered plastic receptacle containing a deoxyribonucleic acid (DNA) preservation solution intended to be used for the collection, preservation, and transport of DNA present in a faecal specimen for analysis and/or other investigation [e.g., evaluation for the presence of genetic markers for certain gastrointestinal cancers (e.g., colorectal, pancreatic)]. This is a single-use device.	A
3778	46023	Non-evacuated urine specimen container IVD, no additive	Нүүлгэн шилжүүлээгүй шээсний сорьцын сав IVD, нэмэлт бодисгүй	A covered receptacle with no additives intended to be used for the collection, and preservation and/or transport, of a urine specimen for culture, analysis, and/or other in vitro diagnostic investigation. This is a single-use device.	A
3779	46172	Ryu flagella staining solution IVD	Ryu flagella будах уусмал IVD	A Ryu flagella staining solution intended to be used alone, or in combination with other solutions/stains, for the visualization of biological/clinical specimen tissue structures and/or intra/extracellular elements.	A
3780	46175	Enzyme immunohaematology reagent IVD, control	Ферментийн иммуногематологийн урвалж IVD, хяналт	A material intended to be used in immunohaematological testing of a clinical specimen to verify that enzyme treatment of red cells to remove sialic acid residues in order to enhance or potentiate red cell agglutination has been adequate.	A

3781	46260	Clinical chemistry analyser, discrete-automated, microsample	Клиникийн химийн анализатор, салангид автоматжуулсан, бичил дээж	A mains electricity (AC-powered) automated or semi-automated instrument used for the qualitative/quantitative analysis of a chemical substance in a human microliter sample. It is intended to duplicate manual analytical procedures by performing automatically various steps such as pipetting, preparing filtrates, heating, and measuring colour intensity. The distinguishing characteristic of the device is that it requires only microvolume samples typically obtained from paediatric patients. This device is intended for use in conjunction with certain materials to measure a variety of analytes.	A
3782	46333	Colony counter IVD, automated/semi-automated	Колонийн тоолуур IVD, автоматжуулсан/хагас автоматжуулсан	A mains electricity (AC-powered) automated or semi-automated laboratory device designed to count bacterial colonies in a culture. It typically consists of a sample container (e.g., Petri dish, pour or spiral plate, culture flask), appropriate light sources, a camera and/or microscope, a display, and dedicated software. The device may be used to count microorganisms in different colony configurations – separating, highlighting, and making computerized counts of the colonies. It may also perform zone measuring (e.g., for antibacterial susceptibility tests) and/or additional tests that may include particle counting, such as cell tests for mutagenicity (i.e., Ames tests).	A
3783	46441	Anti-A1 red blood cell grouping IVD, lectin	Цусны улаан эсийн эсрэг A1 бүлгийн IVD, лектин	Lectin molecules extracted from Dolichos biflorus, capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for group A1 [ABO004] red blood cell antigens, using an agglutination method.	A
3784	46442	Anti-AB red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for group AB [ABO003] red blood cell antigens, using an agglutination method.	A
3785	46519	Partial (variant) Rh(D) multiple blood grouping IVD, kit, agglutination	Хэсэгчилсэн (хувилбар) Rh(D) олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen to detect multiple categories or components of Rh(D) [RH001] partial (variant) red blood cell antigens, using an agglutination method.	A

3786	46607	Group B Rh(D) positive reagent red blood cell IVD, antigen	B бүлгийн Rh(D) эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their classification as blood group B Rh(D) positive. These reagent cells are positive for blood group antigens B [ABO002] and Rh(D) [RH001].	A
3787	46623	Blood cell diluent	Цусны эсийн шингэрүүлэгч	An agent (e.g., a reagent or isotonic solution) used to dilute a specimen of blood for testing, evaluation, or examination (e.g., blood cell counting). This is a single-use device.	A
3788	46947	Anti-Yt^b red blood cell grouping IVD, antibody	Anti-Yt^b цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Yt^b [YT002] red blood cell antigens from the Cartwright system, using an agglutination method.	A
3789	46948	Monospecific immunoglobulin G antihuman globulin (IgG AHG) IVD, antibody	Нэг өвөрмөц иммуноглобулин G хүний эсрэг глобулин (IgG AHG) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to human antibodies from immunoglobulin G (IgG) that are fixed to red blood cell antigens. This immunoglobulin, known as monospecific immunoglobulin G antihuman globulin (IgG AHG) is intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human IgG, using an agglutination or solid-phase red blood cell adherence method.	A
3790	46949	Multiple monospecific antihuman globulin/anti-complement cell coat typing IVD, kit, agglutination	Олон төрлийн нэг төрлийн хүний эсрэг глобулин/комплементийн эсрэг эсийн бүрхэвч IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to individuals of human immunoglobulin and/or complement components fixed to red blood cell antigens, and intended to be used together in testing a clinical specimen to detect red blood cell sensitization by specific molecules, using an agglutination technique. The specific molecules intended to be detected may include immunoglobulin A (IgA), immunoglobulin G (IgG), immunoglobulin M (IgM), C3c, and/or C3d.	A
3791	46963	Anti-C [RH0004] antibody screen IVD, control	Anti-C [RH0004] эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to C red blood cell antigens [RH0004] from the Rhesus system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A

3792	47009	ABO/Rh(D)/Kell multiple blood grouping IVD, kit, agglutination	ABO/Rh(D)/Kell олон цусны бүлэг IVD, иж бүрдэл, агглютинаци	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of multiple ABO system, Rh(D) [RH001] and Kell [KEL001] red blood cell antigens, using an agglutination method.	A
3793	47094	Anti-K antibody screen IVD, control	Anti-K эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to K red blood cell antigens [KEL001] from the Kell system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3794	47095	Anti-Fy^a antibody screen IVD, control	Anti-Fy^a эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to Fy^a red blood cell antigens [FY001] from the Duffy system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3795	47197	Gas chromatography analyser column IVD	Хийн хроматографийн анализаторын багана IVD	A component of a gas chromatography analyser that functions as a narrow flow-through tube through which different chemical constituents of a sample pass in a gas stream at different rates, depending on their various chemical and physical properties and their interaction with a specific column filling. The tubing is typically: 1) Packed: usually stainless steel or glass and containing a packing of finely divided, inert, solid support material (e.g., diatomaceous earth) that is coated with a liquid or solid; or 2) Capillary: usually fused silica with synthetic polymer coating and with very small internal diameter (few tenths of a mm) coated with active materials and sometimes micropores.	A
3796	47198	Gas chromatography analyser injection port IVD	Хийн хроматографийн анализатор тарилгын порт IVD	A component of a gas chromatography analyser designed to provide the means to introduce a specimen for analysis into the continuous flow of carrier gas. It is typically a piece of hardware attached to the column head.	A

3797	47534	Blood volume analyser IVD	Цусны эзэлхүүний анализатор IVD	A mains electricity (AC-powered) instrument intended to be used for the quantitative in vitro measurement of a patient's circulating blood volume, plasma volume and/or red cell volume. Measurements are typically performed on blood specimens collected at specified intervals following the introduction of a radioactive tracer (e.g., iodine isotope 131) through an intravenous line, and the dispersion or rate of dilution of the tracer solution is used to determine blood volume by comparing sequential samples to a calculated ideal blood volume based on height, weight, gender and deviation from the patient's ideal weight. It operates with automation of some procedural steps.	A
3798	47571	Colonic cytology specimen container IVD, transport buffer	Бүдүүн гэдэсний цитологийн сорьцын сав IVD, тээвэрлэлтийн буфер	A covered plastic receptacle containing transport buffer solution that is intended to be used for the collection, preservation, and transport of colonic cytology specimens (colonocytes) between the sampling procedure location and receipt at the laboratory for analysis. It is typically a dedicated container used in conjunction with a cell sampling device for the surface collection of rectal mucosa from the patient. It is typically used for colorectal cancer investigation and/or patient screening. This is a single-use device.	A
3799	47775	General specimen container IVD, no additive/medium	Ерөнхий сорьцын сав IVD, нэмэлт бодисгүй/дунд	An empty covered receptacle containing no additives or media intended to be used for the collection, and preservation and/or transport, of more than one type of clinical specimen (e.g., urine, faeces, sputum, mucous, tissue) derived from different body regions for in vitro diagnostic investigation. It does not contain patient-contact specimen sampling/extraction devices such as swabs/brushes. This is a single-use device.	A
3800	47776	General specimen container IVD, no additive, sterile	Ерөнхий сорьцын сав IVD, нэмэлт бодисгүй, ариутгасан	A sterile covered plastic receptacle containing no additives intended to be used for the collection, and preservation and/or transport, of any type of diagnostic specimen (e.g., urine, faeces, sputum, mucous, tissue) for analysis and/or other investigation. This is a single-use device.	A

3801	47988	Bilirubinometer IVD	Билирубинометр IVD	A mains electricity (AC-powered) laboratory instrument designed to determine, by direct or indirect measurement, the concentration of bilirubin in the blood or other clinical specimen most commonly to rapidly assess hyperbilirubinemia in neonates. It typically performs the measurement using spectrophotometry or haemofluorometry.	A
3802	48014	Fluorescent immunoassay analyser IVD, point-of-care	Флюресцент дархлааны анализатор IVD, тусламж үйлчилгээний цэг	A portable, electrically-powered instrument typically used to scan an immunoassay reagent vehicle (e.g., test strip, cassette, or card) after exposure to a clinical specimen, to provide a quantitative, semi-quantitative, and/or qualitative in vitro determination of chemical substances and/or biological markers in a clinical specimen. The instrument detects fluorescent markers that result from the immunological reaction between the reagents and the specimen. It is mostly used for rapid in vitro diagnostic measurements at the point-of-care and in the laboratory.	A
3803	48030	Isothermal nucleic acid amplification analyser IVD, laboratory	Изотерм нуклейн хүчлийн олшруулалтын анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to amplify target deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) in a clinical specimen at a constant (isothermal) temperature, using a series of transcription and reverse transcription reactions, and to detect and/or identify the amplified product using oligonucleotide markers as it is produced (e.g., in real-time).	A
3804	48031	Thermal cycler nucleic acid amplification analyser IVD, laboratory	Дулааны циклер нуклейн хүчлийг олшруулах анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to amplify target deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) in a clinical specimen using heat-stable polymerase enzymes and cycles of repeated heating and cooling (i.e., thermal cycling) to replicate a product [i.e., a polymerase chain reaction (PCR)]. Amplified product is detected and/or identified using oligonucleotide markers as it is produced (i.e., in real-time) or at the end-point. The analyser may also isolate, extract and/or prepare nucleic acid from the clinical specimen and/or culture isolate prior to amplification.	A

3805	48032	Thermal cycler nucleic acid amplification instrument IVD, manual	Дулааны циклер нуклейн хүчлийг олшруулах төхөөрөмж IVD, гарын авлага	An electrically-powered laboratory instrument intended to amplify target deoxyribonucleic acid (DNA) or ribonucleic acid (RNA) in a clinical specimen using heat-stable polymerase enzymes and cycles of repeated heating and cooling (i.e., thermal cycling) to replicate a product [i.e., a polymerase chain reaction (PCR)]. The instrument may also isolate, extract and/or prepare nucleic acid from a clinical specimen prior to amplification and the characterization of amplified product may occur separately following the amplification process using electrophoresis genetic-based probes or other investigative methods. The device operates with technician involvement in most procedural steps.	A
3806	52521	Nucleic acid extraction/isolation kit IVD	Нуклейн хүчлийн олборлолт/тусгаарлах хэрэгсэл IVD	A collection of reagents and other associated materials intended to be used for the extraction and/or isolation of nucleic acid from clinical specimens and/or biological cultures in preparation for subsequent analysis using a nucleic acid-based method. Some types may include controls for the subsequent nucleic acid technique (NAT) analysis.	A
3807	52524	Group A1 Rh (D) positive reagent red blood cell IVD, antigen	A1 бүлгийн Rh (D) эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group A1 Rh(D) positive. These reagent cells are positive for blood group antigens A1 [ABO004] and Rh(D) [RH001].	A
3808	52525	Group A2 Rh (D) positive reagent red blood cell IVD, antigen	A2 бүлгийн Rh (D) эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group A2 Rh(D) positive. These reagent cells are positive for blood group antigen A [ABO001] and Rh(D) [RH001] but negative for blood group antigen A1 [ABO004].	A
3809	52526	Group AB Rh (D) positive reagent red blood cell IVD, antigen	AB Rh (D) бүлгийн эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group AB Rh(D) positive. These reagent cells are positive for blood group antigens A [ABO001], B [ABO002], AB [ABO003] and positive for blood group antigens Rh(D) [RH001].	A

3810	52527	Group O Rh (D) positive reagent red blood cell IVD, antigen	О бүлгийн Rh (D) эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O Rh (D) positive. These reagent cells are negative for blood group antigens A [ABO001], B [ABO002] and AB [ABO003], and positive for blood group antigen Rh (D) [RH001].	A
3811	52532	Anti-A red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for group A [ABO001] red blood cell antigens, using an agglutination method.	A
3812	52533	Anti-An^a red blood cell grouping IVD, antibody	Анти-Ан^а цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for An^a [GE007] red blood cell antigens from the Gerbich blood group system, using an agglutination method.	A
3813	52534	Anti-AnWj (Anton) red blood cell grouping IVD, antibody	Anti-AnWj (Антон) цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for AnWj [901009], the high frequency red blood cell antigen Anton, using an agglutination method.	A
3814	52535	Anti-At^a red blood cell grouping IVD, antibody	Anti-At^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for At^a [901003], a high frequency red blood cell antigen, using an agglutination method.	A
3815	52536	Anti-Au^a red blood cell grouping IVD, antibody	Anti-Au^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Au^a [LU018] red blood cell antigens from the Lutheran blood group system, using an agglutination method.	A
3816	52537	Anti-Au^b red blood cell grouping IVD, antibody	Anti-Au^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Au^b [LU019] red blood cell antigens from the Lutheran blood group system, using an agglutination method.	A

3817	52538	Anti-B red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг B бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for group B [ABO002] red blood cell antigens, using an agglutination method.	A
3818	52539	Anti-Be^a red blood cell grouping IVD, antibody	Anti-Be^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Be^a [RH036] red blood cell antigens from the rhesus system, using an agglutination method.	A
3819	52540	Anti-Bg^a red blood cell grouping IVD, antibody	Anti-Bg^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Bg^a red blood cell antigens (red cell expressed HLA-B7), using an agglutination method.	A
3820	52541	Anti-Bg^b red blood cell grouping IVD, antibody	Anti-Bg^b цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Bg^b (red cell expressed HLA-B17) red blood cell antigens, using an agglutination method.	A
3821	52542	Anti-Bg^c red blood cell grouping IVD, antibody	Anti-Bg^c цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Bg^c red blood cell antigens (red cell expressed HLA-A28), using an agglutination method.	A
3822	52543	Antibody identification panel reagent red blood cell IVD, kit, agglutination	Эсрэгбие тодорхойлох самбарын урвалж цусны улаан эсийн IVD, иж бүрдэл, наалдуулах	A collection of four or more specifically characterized reagent red blood cells that are supplied together as a set and intended to be used to determine the exact specificity of antibodies to red blood cell antigens present in a clinical specimen, using an agglutination method.	A
3823	52544	Antibody screening reagent red blood cell IVD, kit, agglutination	Цусны улаан эсийн эсрэгбие илрүүлэх урвалж IVD, иж бүрдэл, наалдуулах	A collection of two or three specifically characterized reagent red blood cells that are supplied together as a set and intended to be used when screening a clinical specimen to detect antibodies to red blood cell antigens, using an agglutination method.	A
3824	52545	Anti-Bp^a red blood cell grouping IVD, antibody	Anti-Bp^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Bp^a [DI010] red blood cell antigens from the Diego blood group system, using an agglutination method.	A

3825	52546	Anti-C [RH002] red blood cell grouping IVD, antibody	Anti-C [RH002] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for C [RH002] red blood cell antigens from the rhesus system, using an agglutination method.	A
3826	52547	Anti-C [RH004] red blood cell grouping IVD, antibody	Anti-C [RH004] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for C [RH004] red blood cell antigens from the rhesus system, using an agglutination method.	A
3827	52548	Anti-C^w red blood cell grouping IVD, antibody	Anti-C^w цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for C^w [RH008] red blood cell antigens from the rhesus system, using an agglutination method.	A
3828	52549	Anti-C^x red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг C^x бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for C^x [RH009] red blood cell antigens from the rhesus system, using an agglutination method.	A
3829	52550	Anti-CDE red blood cell grouping IVD, antibody	Anti-CDE цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for CDE [RH:2,1,3] red blood cell antigens from the rhesus system, using an agglutination method.	A
3830	52551	Anti-Ce [RH007] red blood cell grouping IVD, antibody	Anti-Ce [RH007] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ce [RH007] red blood cell antigens from the rhesus system, using an agglutination method.	A
3831	52552	Anti-Ce [RH027] red blood cell grouping IVD, antibody	Anti-Ce [RH027] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ce [RH027] red blood cell antigens from the rhesus system, using an agglutination method.	A

3832	52553	Anti-Co^a red blood cell grouping IVD, antibody	Anti-Co^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Co^a [CO001] red blood cell antigens from the Colton system, using an agglutination method.	A
3833	52554	Anti-Co^b red blood cell grouping IVD, antibody	Anti-Co^b цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Co^b [CO002] red blood cell antigens from the Colton system, using an agglutination method.	A
3834	52555	Anti-Cr^a red blood cell grouping IVD, antibody	Анти-Cr^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Cr^a [CROM001] red blood cell antigens from the Cromer system, using an agglutination method.	A
3835	52556	Anti-Dantu red blood cell grouping IVD, antibody	Анти-Данту цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Dantu [MNS025] red blood cell antigens from the MNS blood group system, using an agglutination method.	A
3836	52557	Anti-Di^a red blood cell grouping IVD, antibody	Anti-Di^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Di^a [DI001] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3837	52558	Anti-Di^b red blood cell grouping IVD, antibody	Anti-Di^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Di^b [DI002] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3838	52559	Anti-Do^a red blood cell grouping IVD, antibody	Anti-Do^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Do^a [DO001] red blood cell antigens from the Dombrock system, using an agglutination method.	A

3839	52560	Anti-Do^b red blood cell grouping IVD, antibody	Anti-Do^b цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Do^b [DO002] red blood cell antigens from the Dombrock system, using an agglutination method.	A
3840	52561	Anti-Dr^a red blood cell grouping IVD, antibody	Anti-Dr^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Dr^a [CROM005] red blood cell antigens from the Cromer system, using an agglutination method.	A
3841	52562	Anti-E [RH003] red blood cell grouping IVD, antibody	Anti-E [RH003] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for E [RH003] red blood cell antigens from the rhesus system, using an agglutination method.	A
3842	52563	Anti-E [RH005] red blood cell grouping IVD, antibody	Anti-E [RH005] цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for E [RH005] red blood cell antigens from the rhesus system, using an agglutination method.	A
3843	52564	Anti-ELO red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг ELO бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for ELO [DI008] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3844	52565	Anti-Emm red blood cell grouping IVD, antibody	Анти-Эмм цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Emm [901008], a high frequency red blood cell antigen, using an agglutination method.	A
3845	52566	Anti-En^a red blood cell grouping IVD, antibody	Анти-En^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for En^a [MNS028] red blood cell antigen from the MNS blood group system, using an agglutination method.	A

3846	52567	Anti-Er^a red blood cell grouping IVD, antibody	Anti-Er^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Er^a [ER001] red blood cell antigen from the ER blood group collection, using an agglutination method.	A
3847	52568	Anti-F red blood cell grouping IVD, antibody	Анти-F улаан цусны эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for F [RH006] red blood cell antigens from the rhesus system, using an agglutination method.	A
3848	52569	Anti-Fy^a red blood cell grouping IVD, antibody	Anti-Fy^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Fy^a [FY001] red blood cell antigens from the Duffy system, using an agglutination method.	A
3849	52570	Anti-Fy^b red blood cell grouping IVD, antibody	Anti-Fy^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Fy^b [FY002] red blood cell antigens from the Duffy system, using an agglutination method.	A
3850	52571	Anti-Fy3 red blood cell grouping IVD, antibody	Anti-Fy3 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Fy3 [FY003] red blood cell antigens from the Duffy system, using an agglutination method.	A
3851	52572	Anti-G red blood cell grouping IVD, antibody	Anti-G улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for G [RH012] red blood cell antigens from the rhesus system, using an agglutination method.	A
3852	52573	Anti-Ge2 red blood cell grouping IVD, antibody	Anti-Ge2 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ge2 [GE002] red blood cell antigens from the Gerbich system, using an agglutination method.	A

3853	52574	Anti-Ge3 red blood cell grouping IVD, antibody	Anti-Ge3 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ge3 [GE003] red blood cell antigens from the Gerbich system, using an agglutination method.	A
3854	52575	Anti-Go^a red blood cell grouping IVD, antibody	Anti-Go^a цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Go^a [RH030] red blood cell antigens from the rhesus system, using an agglutination method.	A
3855	52576	Anti-Gy^a red blood cell grouping IVD, antibody	Anti-Gy^a цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Gy^a [DO003] red blood cell antigens from the Dombrock system, using an agglutination method.	A
3856	52577	Anti-H red blood cell grouping IVD, lectin	Цусны улаан эсийн эсрэг бүлгийн IVD, лектин	Lectin molecules extracted from plants (e.g., Ulex europaeus, Laburnum alpinum) with the capability of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for H [H001] red blood cell antigens or H substance from the ABO system, using an agglutination or solid-phase red blood cell adherence method.	A
3857	52578	Anti-He red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for He [MNS006] red blood cell antigens from the MNS blood group system, using an agglutination method.	A
3858	52579	Anti-Hg^a red blood cell grouping IVD, antibody	Анти-Hg^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hg^a [DI012] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3859	52580	Anti-Hr^b red blood cell grouping IVD, antibody	Анти-Hr^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hr^b [RH031] red blood cell antigens from the rhesus system, using an agglutination method.	A

3860	52581	Anti-Hr^s red blood cell grouping IVD, antibody	Anti-Hr^s цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hr^s [RH019] red blood cell antigens from the rhesus system, using an agglutination method.	A
3861	52582	Anti-Hr-0 red blood cell grouping IVD, antibody	Anti-Hr-0 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hr-0 [RH017] red blood cell antigens from the rhesus system, using an agglutination method.	A
3862	52583	Anti-Hut/anti-Mur red blood cell grouping IVD, antibody	Anti-Hut/anti-Mur цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hut [MNS019] and Mur [MNS010] red blood cell antigens from the MNS blood group system, using an agglutination method.	A
3863	52584	Anti-Hy red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Hy [DO004] red blood cell antigens from the Dombrock system, using an agglutination method.	A
3864	52585	Anti-In^b red blood cell grouping IVD, antibody	Anti-In^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for In^b [IN002] red blood cell antigens from the Indian system, using an agglutination method.	A
3865	52586	Anti-Jk^a red blood cell grouping IVD, antibody	Anti-Jk^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Jk^a [JK001] red blood cell antigens from the Kidd system, using an agglutination method.	A
3866	52587	Anti-Jk^b red blood cell grouping IVD, antibody	Anti-Jk^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Jk^b [JK002] red blood cell antigens from the Kidd system, using an agglutination method.	A

3867	52588	Anti-Jk3 red blood cell grouping IVD, antibody	Anti-Jk3 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Jk3 [JK003] red blood cell antigens from the Kidd system, using an agglutination method.	A
3868	52589	Anti-JMH red blood cell grouping IVD, antibody	Anti-JMH цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for JMH [JMH001] red blood cell antigens from the JMH system, using an agglutination method.	A
3869	52590	Anti-Jr^a red blood cell grouping IVD, antibody	Anti-Jr^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Jr^a [901005] red blood cell antigens, using an agglutination method.	A
3870	52591	Anti-Js^a red blood cell grouping IVD, antibody	Anti-Js^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Js^a [KEL006] red blood cell antigens from the Kell system, using an agglutination method.	A
3871	52592	Anti-Js^b red blood cell grouping IVD, antibody	Anti-Js^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Js^b [KEL007] red blood cell antigens from the Kell system, using an agglutination method.	A
3872	52593	Anti-K (KEL001) red blood cell grouping IVD, antibody	Anti-K (KEL001) цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for K [KEL001] red blood cell antigens from the Kell system, using an agglutination method.	A
3873	52594	Anti-K11 red blood cell grouping IVD, antibody	Anti-K11 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for K11 [KEL011] red blood cell antigens from the Kell system, using an agglutination method.	A

3874	52595	Anti-K14 red blood cell grouping IVD, antibody	Anti-K14 цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for K14 [KEL014] red blood cell antigens from the Kell system, using an agglutination method.	A
3875	52596	Anti-K17 red blood cell grouping IVD, antibody	Anti-K17 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for K17 [KEL017] red blood cell antigens from the Kell system, using an agglutination method.	A
3876	52597	Anti-K22 red blood cell grouping IVD, antibody	Anti-K22 цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for K22 [KEL022] red blood cell antigens from the Kell system, using an agglutination method.	A
3877	52598	Anti-Kn^a red blood cell grouping IVD, antibody	Anti-Kn^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kn^a [KN001] red blood cell antigens from Knops blood group system, using an agglutination method.	A
3878	52599	Anti-Kn^a/anti-McC^a red blood cell grouping IVD, antibody	Anti-Kn^a/anti-McC^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kn^a [KN001] and McC^a [KN003] red blood cell antigens from Knops blood group system, using an agglutination method.	A
3879	52600	Anti-Kn^b red blood cell grouping IVD, antibody	Anti-Kn^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kn^b [KN002] red blood cell antigens from Knops blood group system, using an agglutination method.	A
3880	52601	Anti-Kp^a red blood cell grouping IVD, antibody	Anti-Kp^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kp^a [KEL003] red blood cell antigens from the Kell system, using an agglutination method.	A

3881	52602	Anti-Kp^b red blood cell grouping IVD, antibody	Anti-Kp^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kp^b [KEL004] red blood cell antigens from the Kell system, using an agglutination method.	A
3882	52603	Anti-Kp^c red blood cell grouping IVD, antibody	Anti-Kp^c цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kp^c [KEL021] red blood cell antigens from the Kell system, using an agglutination method.	A
3883	52604	Anti-Ku red blood cell grouping IVD, antibody	Anti-Ku цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ku [KEL005] red blood cell antigens from the Kell system, using an agglutination method.	A
3884	52605	Anti-Kx red blood cell grouping IVD, antibody	Anti-Kx цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Kx [XK001] red blood cell antigens from the XK system, using an agglutination method.	A
3885	52606	Anti-Lan red blood cell grouping IVD, antibody	Анти-Лан цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lan [901002], the high frequency red blood cell antigen Langereis, using an agglutination method.	A
3886	52607	Anti-Le^a red blood cell grouping IVD, antibody	Anti-Le^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Le^a [LE001] red blood cell antigens from the Lewis system, using an agglutination method.	A
3887	52608	Anti-Le^b red blood cell grouping IVD, antibody	Anti-Le^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Le^b [LE002] red blood cell antigens from the Lewis system, using an agglutination method.	A

3888	52609	Anti-Le^bH red blood cell grouping IVD, antibody	Anti-Le^bH цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Le^bH [LE002] red blood cell antigens from the Lewis system, and also capable of binding with H-substance on Group O red cells (but not group A1 or B cells), using an agglutination method.	A
3889	52610	Anti-Ls^a red blood cell grouping IVD, antibody	Anti-Ls^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ls^a [GE006] red blood cell antigens from the Gerbich system, using an agglutination method.	A
3890	52611	Anti-Lu^a red blood cell grouping IVD, antibody	Anti-Lu^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu^a [LU001] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3891	52612	Anti-Lu^b red blood cell grouping IVD, antibody	Anti-Lu^b цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu^b [LU002] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3892	52613	Anti-Lu^b/Au^b red blood cell grouping IVD, antibody	Anti-Lu^b/Au^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu^b [LU002] and Au^b [LU019] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3893	52614	Anti-Lu14 red blood cell grouping IVD, antibody	Anti-Lu14 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu14 [LU014] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3894	52615	Anti-Lu17 red blood cell grouping IVD, antibody	Anti-Lu17 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu17 [LU017] red blood cell antigens from the Lutheran system, using an agglutination method.	A

3895	52616	Anti-Lu3 red blood cell grouping IVD, antibody	Anti-Lu3 цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu3 [LU003] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3896	52617	Anti-Lu6 red blood cell grouping IVD, antibody	Anti-Lu6 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu6 [LU006] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3897	52618	Anti-Lu7 red blood cell grouping IVD, antibody	Anti-Lu7 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu7 [LU007] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3898	52619	Anti-Lu8 red blood cell grouping IVD, antibody	Anti-Lu8 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Lu8 [LU008] red blood cell antigens from the Lutheran system, using an agglutination method.	A
3899	52620	Anti-LW^a red blood cell grouping IVD, antibody	Anti-LW^a цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for LW^a [LW005] red blood cell antigens from the Landsteiner-Weiner system, using an agglutination method.	A
3900	52621	Anti-LW^ab red blood cell grouping IVD, antibody	Anti-LW^ab цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for LW^ab [LW007] red blood cell antigens from the Landsteiner-Weiner system, using an agglutination method.	A
3901	52622	Anti-M red blood cell grouping IVD, antibody	Анти-М улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for M [MNS001] red blood cell antigens from the MNS system, using an agglutination method.	A

3902	52623	Anti-M red blood cell grouping IVD, lectin	Анти-M улаан эсийн бүлэг IVD, лектин	Lectin molecules extracted from Iberis amara, with the capability of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for M [MNS001] red blood cell antigens from the MNS system, using an agglutination method.	A
3903	52624	Anti-M^g red blood cell gouping IVD, antibody	Anti-M^g улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for M^g [MNS011] red blood cell antigens from the MNS system, using an agglutination method.	A
3904	52625	Anti-MARS red blood cell grouping IVD, antibody	Анти-MARS цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for MARS [MNS043] red blood cell antigens from the MNS system, using an agglutination method.	A
3905	52626	Anti-McC^a red blood cell gouping IVD, antibody	Anti-McC^a цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for McC^a [KN003] red blood cell antigens from the Knops blood group system, using an agglutination method.	A
3906	52627	Anti-McC^b red blood cell gouping IVD, antibody	Anti-McC^b цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for McC^b [KN006] red blood cell antigens from the Knops blood group system, using an agglutination method.	A
3907	52628	Anti-Mi^a red blood cell gouping IVD, antibody	Anti-Mi^a цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Mi^a [MNS007] red blood cell antigens from the MNS system, using an agglutination method.	A
3908	52629	Anti-Mit red blood cell gouping IVD, antibody	Цусны улаан эсийн эсрэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Mit [MNS024] red blood cell antigens from the MNS system, using an agglutination method.	A

3909	52630	Anti-Mt^a red blood cell gouping IVD, antibody	Anti-Mt^a цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Mt^a [MNS014] red blood cell antigens from the MNS system, using an agglutination method.	A
3910	52631	Anti-N red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг N бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for N [MNS002] red blood cell antigens from the MNS system, using an agglutination method.	A
3911	52632	Anti-N red blood cell grouping IVD, lectin	Цусны улаан эсийн эсрэг N бүлэг IVD, лектин	Lectin molecules extracted from Vicia graminea, with the capability of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for N [MNS002] red blood cell antigens from the MNS system, using an agglutination method.	A
3912	52633	Anti-Ny^a red blood cell gouping IVD, antibody	Anti-Ny^a цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ny^a [MNS018] red blood cell antigens from the MNS system, using an agglutination method.	A
3913	52634	Anti-Ok^a red blood cell gouping IVD, antibody	Anti-Ok^a цусны улаан эсийг нэмэгдүүлэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ok^a [OK001] red blood cell antigens from the Ok system, using an agglutination method.	A
3914	52635	Anti-Ol^a red blood cell grouping IVD, antibody	Anti-Ol^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Ol^a [700043], a low frequency red blood cell antigen, using an agglutination method.	A
3915	52636	Anti-Or red blood cell gouping IVD, antibody	Цусны улаан эсийн эсрэг буюу эсрэгбие IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Or [MNS031] red blood cell antigens from the MNS system, using an agglutination method.	A

3916	52637	Anti-Os^a red blood cell gouping IVD, antibody	Anti-Os^a цусны улаан эсийн бөөгнөрөл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Os^a [MNS038] red blood cell antigens from the MNS system, using an agglutination method.	A
3917	52638	Anti-P red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for P [GLOB001] red blood cell antigens from the Globo system, using an agglutination method.	A
3918	52639	Anti-P1 red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг P1 бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for P1 [P001] red blood cell antigens from the P system, using an agglutination method.	A
3919	52640	Anti-PEL red blood cell grouping IVD, antibody	Anti-PEL цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for PEL [901014], a high frequency red blood cell antigen, using an agglutination method.	A
3920	52641	Anti-PP1P^k red blood cell grouping IVD, antibody	Анти-PP1P^k цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for PP1P^k [GLOB003] red blood cell antigens from the Globo system, using an agglutination method.	A
3921	52642	Anti-Pt^a red blood cell grouping IVD, antibody	Anti-Pt^a цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Pt^a [700018], a low frequency red blood cell antigen, using an agglutination method.	A
3922	52643	Anti-R^N red blood cell grouping IVD, antibody	Анти-R^N цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for R^N [RH032] red blood cell antigens from the rhesus system, using an agglutination method.	A

3923	52644	Anti-Rb^a red blood cell grouping IVD, antibody	Анти-Rb^a цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Rb^a [DI006] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3924	52645	Anti-Rg^a red blood cell grouping IVD, antibody	Анти-Rg^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Rg^a red blood cell antigens [CH/RG011] or Rodgers blood group substance, using an agglutination method.	A
3925	52646	Anti-Rh total red blood cell grouping IVD, antibody	Rh-ийн эсрэг нийт улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for total Rh [RH029] red blood cell antigens from the rhesus system, using an agglutination method.	A
3926	52647	Anti-Rh(D) red blood cell grouping IVD, antibody	Анти-Rh(D) цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Rh(D) [RH001] red blood cell antigens from the rhesus system, using an agglutination method.	A
3927	52648	Anti-S [MNS003] red blood cell grouping IVD, antibody	Anti-S [MNS003] цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for S [MNS003] red blood cell antigens from the MNS system, using an agglutination method.	A
3928	52649	Anti-S [MNS004] red blood cell grouping IVD, antibody	Anti-S [MNS004] цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for S [MNS004] red blood cell antigens from the MNS system, using an agglutination method.	A
3929	52650	Anti-S^d red blood cell grouping IVD, antibody	Anti-S^d цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for S^d [MNS023] red blood cell antigens from the MNS system, using an agglutination method.	A

3930	52651	Anti-SARA red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг SARA бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for SARA [700052], a low frequency red blood cell antigen, using an agglutination method.	A
3931	52652	Anti-Sc1 red blood cell grouping IVD, antibody	Anti-Sc1 цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sc1 [SC001] red blood cell antigens from the Scianna system, using an agglutination method.	A
3932	52653	Anti-Sc2 red blood cell grouping IVD, antibody	Anti-Sc2 цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sc2 [SC002] red blood cell antigens from the Scianna system, using an agglutination method.	A
3933	52654	Anti-Sc3 red blood cell grouping IVD, antibody	Anti-Sc3 цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sc3 [SC003] red blood cell antigens from the Scianna system, using an agglutination method.	A
3934	52655	Anti-Sd^a red blood cell grouping IVD, antibody	Anti-Sd^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sd^a [901011], the high frequency red blood cell antigen Sid, using an agglutination method.	A
3935	52656	Anti-Sl1 red blood cell grouping IVD, antibody	Anti-Sl1 цусны улаан эсийн бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sl1 [KN004] red blood cell antigens from the Knops blood group system, using an agglutination method.	A
3936	52657	Anti-Sw^a red blood cell grouping IVD, antibody	Anti-Sw^a цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Sw^a [DI014] red blood cell antigens from the Diego blood group system, using an agglutination method.	A

3937	52658	Anti-Tar red blood cell grouping IVD, antibody	Тарийн эсрэг улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Tar [RH040] red blood cell antigens from the rhesus system, using an agglutination method.	A
3938	52659	Anti-Tc^a red blood cell grouping IVD, antibody	Anti-Tc^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Tc^a [CROM002] red blood cell antigens from the Cromer system, using an agglutination method.	A
3939	52660	Anti-Tr^a red blood cell grouping IVD, antibody	Anti-Tr^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Tr^a [DI019] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3940	52661	Anti-U red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for U [MNS005] red blood cell antigens from the MNS system, using an agglutination method.	A
3941	52662	Anti-V red blood cell grouping IVD, antibody	Цусны улаан эсийн эсрэг V бүлгийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for V [RH010] red blood cell antigens from the Rhesus system, using an agglutination method.	A
3942	52663	Anti-Vel red blood cell grouping IVD, antibody	Anti-Vel цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Vel [901001], a high frequency red blood cell antigen, using an agglutination method.	A
3943	52664	Anti-Vg^a red blood cell grouping IVD, antibody	Anti-Vg^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Vg^a [DI013] red blood cell antigens from the Diego blood group system, using an agglutination method.	A

3944	52665	Anti-VS red blood cell grouping IVD, antibody	Anti-VS цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for VS [RH020] red blood cell antigens from the Rhesus system, using an agglutination method.	A
3945	52666	Anti-Vw red blood cell grouping IVD, antibody	Anti-Vw цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Vw [MNS009] red blood cell antigens from the MNS system, using an agglutination method.	A
3946	52667	Anti-WARR red blood cell grouping IVD, antibody	Anti-WARR цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for WARR [DI007] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3947	52668	Anti-Wd^a red blood cell grouping IVD, antibody	Anti-Wd^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Wd^a [DI005] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3948	52669	Anti-Wr^a red blood cell grouping IVD, antibody	Anti-Wr^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Wr^a [DI003] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3949	52670	Anti-Wr^b red blood cell grouping IVD, antibody	Anti-Wr^b цусны улаан эсийн бүлэг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Wr^b [DI004] red blood cell antigens from the Diego blood group system, using an agglutination method.	A
3950	52671	Anti-Wu red blood cell grouping IVD, antibody	Anti-Wu цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Wu [DI009] red blood cell antigens from the Diego blood group system, using an agglutination method.	A

3951	52672	Group A reagent cord blood cell IVD, antigen	А бүлгийн урвалж хүйн цусны эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells sourced from an umbilical cord intended to be used in testing a clinical specimen due to their ification as blood group A [ABO001] cord blood cells.	A
3952	52673	Group A1 Rh (D) negative reagent red blood cell IVD, antigen	А1 бүлгийн Rh (D) сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group A1 Rh(D) negative. These reagent cells are positive for blood group antigen A1 [ABO004] and negative for blood group antigen Rh(D) [RH001].	A
3953	52674	Group A2 Rh (D) negative reagent red blood cell IVD, antigen	А2 бүлгийн Rh (D) сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group A2 Rh(D) negative. These reagent cells are positive for blood group antigen A [ABO001] but negative for blood group antigens A1 [ABO004] and Rh(D) [RH001].	A
3954	52675	Group AB Rh (D) negative reagent red blood cell IVD, antigen	АВ Rh (D) бүлгийн сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group AB Rh(D) negative. These reagent cells are positive for blood group antigens A [ABO001], B [ABO002] and AB [ABO003], and negative for blood group antigen Rh(D) [RH001].	A
3955	52676	Group B reagent cord blood cell IVD, antigen	Б бүлгийн урвалж хүйн цусны эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells sourced from an umbilical cord intended to be used in testing a clinical specimen due to their ification as blood group B [ABO002] cord blood cells.	A
3956	52677	Group B Rh(D) negative reagent red blood cell IVD, antigen	В бүлгийн Rh(D) сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group B Rh(D) negative. These reagent cells are positive for blood group antigen B [ABO002], and negative for blood group antigen Rh(D) [RH001].	A
3957	52678	Group O r"r reagent red blood cell IVD, antigen	О r"r бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O r"r. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype r"r or ccdEe.	A

3958	52679	Group O R1^wR1 reagent red blood cell IVD, antigen	O R1^wR1 бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O R1^wR1. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype R1^wR1 or C^wCDee.	A
3959	52680	Group O R1r reagent red blood cell IVD, antigen	O R1r бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O R1r. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype R1r or CcDee.	A
3960	52681	Group O R1R1 reagent red blood cell IVD, antigen	O R1R1 бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O R1R1. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype R1R1 or CCDee.	A
3961	52682	Group O R2R2 reagent red blood cell IVD, antigen	O R2R2 бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O R2R2. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype R2R2 or ccDEE.	A
3962	52683	Group O reagent cord blood cell IVD, antigen	бүлгийн урвалж хүйн цусны эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells sourced from an umbilical cord intended to be used in testing a clinical specimen due to their ification as blood group O cord blood cells.	A
3963	52684	Group O Rh (D) negative reagent red blood cell IVD, antigen	O Rh (D) бүлгийн сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O Rh (D) negative. These reagent cells are negative for blood group antigens A [ABO001], B [ABO002] and AB [ABO003], and negative for blood group antigen Rh (D) [RH001].	A
3964	52685	Group O r'r reagent red blood cell IVD, antigen	O r'r бүлгийн урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as blood group O r'r. These reagent cells are negative for blood group antigens A and B, and exhibit the Rhesus phenotype r'r or Ccdee.	A

3965	52686	Kell negative reagent red blood cell IVD, antigen	Келлийн сөрөг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as Kell negative. These reagent cells are negative for blood group antigen K [KEL001].	A
3966	52687	Kell positive reagent red blood cell IVD, antigen	Келлийн эерэг урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as Kell positive. These reagent cells are positive for blood group antigen K [KEL001].	A
3967	52688	Partial (variant) Rh(D) category VI red blood cell grouping IVD, antibody	Хэсэгчилсэн (хувилбар) Rh(D) ангилал VI цусны улаан эсийн бүлэгт IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for partial (variant) Rh(D) category VI red blood cell antigens from the rhesus system, using an agglutination or solid-phase red blood cell adherence method.	A
3968	52689	Partial (variant) Rh(D) reagent red blood cell IVD, antigen	Хэсэгчилсэн (хувилбар) Rh (D) урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as partial or variant Rh(D) red cells. The Rh(D) antigen of these reagent cells is only partially expressed due to genetic mosaicism or due to one or more missing categories of the Rh(D) antigen.	A
3969	52690	Pooled antibody screening reagent red blood cell IVD, antigen	Цусны улаан эсийн IVD, эсрэгтөрөгчийг нэгтгэсэн эсрэгбие илрүүлэх урвалж	A collection of two or three specifically characterized reagent red blood cells pooled together into a single sample, and intended to be used in screening a clinical specimen to detect antibodies to red blood cell antigens.	A
3970	52691	Reverse ABO grouping reagent red blood cell (A1/A2/B/AB/O) IVD, kit, agglutination	Урвуу ABO бүлгийн урвалж цусны улаан эс (A1/A2/B/AB/O) IVD, иж бүрдэл, наалдуулах	A collection of specifically characterized reagent red blood cells that are supplied together and intended to be used in reverse ABO blood group testing of a clinical specimen using an agglutination method. Cells are selected due to their individual blood group specificities, which may include blood group antigens A1, A2, B, AB and/or O.	A
3971	52692	Rhesus phenotype-specific reagent red blood cell (C/c/D/E/e/C^w) IVD, kit, agglutination	Rhesus фенотипийн өвөрмөц урвалж цусны улаан эс (C/c/D/E/e/C^w) IVD, иж бүрдэл, наалдуулах	A collection of specifically characterized reagent red blood cells that are supplied together and intended to be used in Rhesus phenotype testing of a clinical specimen, using an agglutination method. Cells are selected due to their expression of individual blood group antigens which may include Rhesus blood group antigens C, c, D, E, e and/or C^w.	A

3972	52693	Weak Rh(D) reagent red blood cell IVD, antigen	Сул Rh (D) урвалж цусны улаан эсийн IVD, эсрэгтөрөгч	A sample of specifically characterized reagent red blood cells intended to be used in testing a clinical specimen due to their ification as Weak Rh(D) red cells. These reagent cells only weakly exhibit the Rh(D) antigen due to a low number of antigenic sites on the red cell membrane.	A
3973	52695	ABO multiple blood grouping IVD, kit, agglutination	ABO олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for multiple ABO system red blood cell antigens, using an agglutination method.	A
3974	52696	Anti-C [RH0002] antibody screen IVD, control	Anti-C [RH0002] эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to C red blood cell antigens [RH0002] from the Rhesus system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3975	52697	Anti-E [RH0003] antibody screen IVD, control	Anti-E [RH0003] эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to E red blood cell antigens [RH0003] from the Rhesus system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3976	52698	Anti-E [RH0005] antibody screen IVD, control	Anti-E [RH0005] эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to E red blood cell antigens [RH0005] from the Rhesus system intended to be used in immunohaematological testing of a clinical specimen to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3977	52699	Anti-E [RH003] standard reference solution IVD	Anti-E [RH003] стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to E [RH003] red blood cell antigens from the rhesus system, in a clinical specimen.	A
3978	52700	Anti-E [RH005] standard reference solution IVD	Anti-E [RH005] стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to E [RH005] red blood cell antigens from the rhesus system, in a clinical specimen.	A

3979	52701	Anti-Fy^a standard reference solution IVD	Anti-Fy^a стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to Fy^a [FY001] red blood cell antigens from the Duffy system, in a clinical specimen.	A
3980	52702	Anti-K standard reference solution IVD	Anti-K стандарт лавлагаа шийдэл IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to K [KEL001] red blood cell antigens from the Kell system, in a clinical specimen.	A
3981	52703	Anti-Rh(D) antibody screen IVD, control	Anti-Rh(D) эсрэгбиеийн дэлгэц IVD, хяналт	A material containing antibodies to Rh(D) red blood cell antigens [RH001] from the Rhesus system intended to be used in immunohaematological testing of a clinical specimen, to verify the performance of an antibody screening assay that is used for detecting red cell alloantibodies.	A
3982	52704	Anti-Rh(D) standard reference solution IVD	Anti-Rh(D) стандарт лавлагаа уусмал IVD	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to Rh(D) [RH001] red blood cell antigens from the rhesus system, in a clinical specimen.	A
3983	52705	Antisera matrix (non-reactive) IVD, control	Антисера матриц (реактив бус) IVD, хяналт	A material consisting of antisera matrix but containing no active immunoglobulins that is intended be used as a negative control to verify the performance of an assay when testing a clinical specimen for red blood cell antigens.	A
3984	52706	Anti-Xg^a red blood cell grouping IVD, antibody	Anti-Xg^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Xg^a [XG001] red blood cell antigens from the Xg system, using an agglutination method.	A
3985	52707	Anti-Yk^a red blood cell grouping IVD, antibody	Anti-Yk^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Yk^a [KN005] red blood cell antigens from Knops blood group system, using an agglutination method.	A

3986	52708	Bovine serum albumin (BSA) immunohaematology reagent IVD	Үхрийн сийвэнгийн альбумин (BSA) дархлаа судлалын урвалж IVD	A substance or reactant that is a bovine serum albumin (BSA) solution intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions by reducing the zeta potential of red blood cells.	A
3987	52709	Bromelin immunohaematology reagent IVD	Bromelin иммуногематологийн урвалж IVD	A substance or reactant that is a bromelin enzyme solution intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions by enzymatically digesting red cell membrane proteins and removing sialic acid residues.	A
3988	52710	Column agglutination IVD	Баганын наалдуулах IVD	A non-reactive suspension medium containing beaded particles, with or without added agglutination enhancing reagents (e.g., LISS, enzymes), presented as a set of gels or solid phase columns and intended to be used in testing a clinical specimen for red blood cell antigens and/or antibodies, using a column agglutination technique.	A
3989	52711	Complement coated reagent red blood cell IVD, control	Цусны улаан эсийн IVD, хяналтын нэмэлт бүрсэн урвалж	A sample of specifically characterized reagent red blood cells intended to be used when testing a clinical specimen due to their sensitization or cell coating with complement associated proteins, to verify the performance of an assay.	A
3990	52712	Duffy (Fy^a & Fy^b) multiple blood grouping IVD, kit, agglutination	Даффи (Fy^a & Fy^b) олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for Fy^a [FY001] and Fy^b [FY002] red blood cell antigens, using an agglutination method.	A
3991	52713	Duffy (Fy^a & Fy^b)/Kidd (Jk^a & Jk^b) multiple blood grouping IVD, kit, agglutination	Даффи (Fy^a & Fy^b)/Kidd (Jk^a & Jk^b) олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of Fy^a [FY001], Fy^b [FY002], Jk^a [JK001] and Jk^b [JK002] red blood cell antigens, using an agglutination method.	A
3992	52714	Ficin immunohaematology reagent IVD	Фицин иммуногематологийн урвалж IVD	A substance or reactant that is a ficin enzyme solution intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions by enzymatically digesting red cell membrane proteins and removing sialic acid residues.	A

3993	52715	Group AB serum IVD, control	АВ бүлгийн ийлдэс IVD, хяналт	A material which is used to verify ABO blood group testing performed on a clinical specimen due to its ification as blood group AB serum. This serum lacks antibodies to group A [ABO001], group B [ABO002] and group AB [ABO003] blood group antigens.	A
3994	52716	Immunoglobulin-sensitized reagent red blood cell IVD, control	Иммуноглобулинд мэдрэмтгий урвалж цусны улаан эсийн IVD, хяналт	A sample of reagent red blood cells sensitized to or coated with antibodies [e.g., immunoglobulin G (IgG) or immunoglobulin M (IgM)] intended to be used to verify the performance of an assay (e.g., Coombs control) for evaluation of a clinical specimen.	A
3995	52717	Kidd (Jk^a & Jk^b) multiple blood grouping IVD, kit, agglutination	Кидд (Jk^a & Jk^b) олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for Jk^a [JK001] and Jk^b [JK002] red blood cell antigens, using an agglutination method.	A
3996	52718	Low ionic-strength salt solution (LISS) immunohaematology reagent IVD	Бага ионы бат бэх давсны уусмал (LISS) дархлаа судлалын урвалж IVD	A substance or reactant known as low ionic-strength salt solution (LISS), or low ionic strength saline, intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions. It is a solution typically consisting of a sodium salt, glycine and low-salt albumin.	A
3997	52719	Monospecific anti-complement component C3 (anti-C3) IVD, antibody	С3 (анти-С3) IVD, эсрэгбиеийн нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг	One or multiple immunoglobulins capable of binding to C3 complement components fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitisation by complement C3, using an agglutination technique.	A
3998	52720	Monospecific anti-complement component C3b (anti-C3b) IVD, antibody	Нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг C3b (anti-C3b) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to C3b complement components fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitisation by complement C3b, using an agglutination technique.	A
3999	52721	Monospecific anti-complement component C3b/C3d (anti-C3b/anti-C3d) IVD, antibody	Нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг C3b/C3d (anti-C3b/anti-C3d) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to C3b and/or C3d complement components fixed to red blood cells, and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by complement C3b and/or C3d, using an agglutination technique.	A

4000	52722	Monospecific anti-complement component C3c (anti-C3c) IVD, antibody	Нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг C3c (anti-C3c) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to C3c complement components fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitisation by complement C3c, using an agglutination technique.	A
4001	52723	Monospecific anti-complement component C3d (anti-C3d) IVD, antibody	Нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг C3d (anti-C3d) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to C3d complement components fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitisation by complement C3d, using an agglutination technique.	A
4002	52724	Monospecific anti-complement component C4 (anti-C4) IVD, antibody	C4 (анти-C4) IVD, эсрэгбиеийн нэг өвөрмөц антикомплемент бүрэлдэхүүн хэсэг	One or multiple immunoglobulins capable of binding to C4 complement components fixed to red blood cells and intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitisation by complement C4, using an agglutination technique.	A
4003	52725	Monospecific immunoglobulin A antihuman globulin (IgA AHG) IVD, antibody	Нэг өвөрмөц иммуноглобулин А хүний эсрэг глобулин (IgA AHG) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to human antibodies from immunoglobulin A (IgA) that are fixed to red blood cell antigens. This immunoglobulin, known as monospecific immunoglobulin A antihuman globulin (IgA AHG) is intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human IgA, using an agglutination technique.	A
4004	52726	Monospecific immunoglobulin M antihuman globulin (IgM AHG) IVD, antibody	Моно өвөрмөц иммуноглобулин М хүний эсрэг глобулин (IgM AHG) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to human antibodies from immunoglobulin M (IgM) that are fixed to red blood cell antigens. This immunoglobulin, known as monospecific immunoglobulin M antihuman globulin (IgM AHG) is intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human IgM, using an agglutination technique.	A
4005	52727	Multiple lectin panel IVD, kit, agglutination	Олон лектин самбар IVD, иж бүрдэл, наалдуулах	A collection of lectins and other associated reagents intended to be used in immunohaematological testing of a clinical specimen to investigate and/or characterize red blood cell polyagglutination ability, using multiple lectins.	A

4006	52728	Papain immunohaematology reagent IVD	Папайны иммуногематологийн урвалж IVD	A substance or reactant that is a papain enzyme solution intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions by enzymatically digesting red cell membrane proteins and removing sialic acid residues.	A
4007	52729	Anti-Yt^a red blood cell grouping IVD, antibody	Anti-Yt^a цусны улаан эсийг бүлэглэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used in testing a clinical specimen for Yt^a [YT001] red blood cell antigens from the Cartwright system, using an agglutination method.	A
4008	52730	Polyethylene glycol (PEG) immunohaematology reagent IVD	Полиэтилен гликол (PEG) дархлаа судлалын урвалж IVD	A substance or reactant that is a polyethylene glycol (PEG) solution, intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate agglutination reactions by reducing the zeta potential of red blood cells.	A
4009	52731	Polyspecific antihuman globulin/complement IVD, antibody	Олон төрлийн хүний эсрэг глобулин/комплемент IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to all es of human immunoglobulin antibodies and/or complement components when fixed to red blood cells. This solution is intended to be used in immunohaematological testing of a clinical specimen to detect red blood cell sensitization by human immunoglobulin and/or complement components, using an agglutination or solid-phase red blood cell adherence method.	A
4010	52732	Protease immunohaematology reagent IVD	Протеазын иммуногематологийн урвалж IVD	A substance or reactant which may include bromelin, ficin, papain and/or trypsin enzymes intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate agglutination reactions by enzymatically digesting red cell membrane proteins and removing sialic acid residues.	A
4011	52733	Red cell antibody eluting IVD, kit	IVD ялгаруулдаг улаан эсийн эсрэгбие, иж бүрдэл	A collection of reagents and other associated materials intended to be used for the elution of antibodies bound to antigens present on the surface of red blood cells in a clinical specimen.	A
4012	52734	Red cell freezing/cryoprotectant solution IVD	Улаан эсийн хөлдөөх/криопротектор ын уусмал IVD	A substance or reactant intended to be used for the preservation and/or cryoprotection of red blood cells during frozen storage of a clinical specimen so as to maintain their suitability for further in vitro testing.	A

4013	52735	Cell preservation/storage/dilution solution IVD	Эсийг хадгалах/хадгалах/шингэрүүлэх уусмал IVD	A solution intended to be used for the preservation, storage, washing, dilution and/or resuspension of cells (e.g., red and/or white blood cells, epithelial, bacterial, fungal, etc.) in a clinical specimen or a cell isolate, to maintain cell stability and/or facilitate further in vitro diagnostic testing.	A
4014	52736	Red cell thawing solution IVD	Улаан эсийг гэсгээх уусмал IVD	A substance or reactant intended to be used for the recovery of red cells of a clinical specimen from a frozen state so as to maintain their suitability for further in vitro testing.	A
4015	52737	Rh(D)/Kell multiple blood grouping IVD, kit, agglutination	Rh(D)/Kell олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen for a combination of multiple Rh(D) [RH001] and Kell [KEL001] red blood cell antigens, using an agglutination method.	A
4016	52738	Rhesus (Rh) phenotype (CcDEe) multiple blood grouping IVD, kit, agglutination	Rhesus (Rh) фенотип (CcDEe) олон цусны бүлэг IVD, иж бүрдэл, наалдуулах	A collection of immunoglobulins capable of binding to specific antigenic determinants and intended to be used together in testing a clinical specimen to determine the Rh phenotype (CcDEe) [RH:1,2,3,4,5] of red blood cells, using an agglutination method.	A
4017	52739	Trypsin immunohaematology reagent IVD	Трипсиний иммуногематологийн урвалж IVD	A substance or reactant that is a trypsin enzyme solution intended to be used in immunohaematological testing of a clinical specimen to enhance or potentiate red cell agglutination reactions by enzymatically digesting red cell membrane proteins and removing sialic acid residues.	A
4018	52740	Red cell antibody eluting IVD, reagent	IVD ялгаруулдаг улаан эсийн эсрэгбие, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in the process of eluting antibodies bound to antigens present on the surface of red blood cells of a clinical specimen.	A
4019	52741	Weak anti-D IVD, control	D IVD-ийн эсрэг сул, хяналт	A material containing weak antibodies directed towards Rh(D) [RH001] red blood cell antigens from the Rhesus system, which is used to verify the performance of an assay intended to be used in testing a clinical specimen for red blood cell antigens, using an antiglobulin technique.	A

4020	56661	Blood gas analyser IVD, laboratory	Цусны хийн анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative in vitro measurement of blood pH, partial pressure of oxygen (pO2) and/or partial pressure of carbon dioxide (pCO2), and the calculation of other blood gas parameters [e.g., bicarbonate (HCO3-), base excess, arterial-alveolar gradient] in a clinical specimen.	A
4021	56663	Blood gas/haemoximetry analyser IVD, laboratory	Цусны хий/гемоксиметрийн анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative in vitro measurement of blood pH, partial pressure of oxygen (pO2) and/or partial pressure of carbon dioxide (pCO2), and the measurement or calculation of other blood gas and co-oximetry parameters [e.g., bicarbonate (HCO3-), base excess, arterial-alveolar gradient, oxyhaemoglobin (O2Hb), deoxyhaemoglobin (HHb) or reduced haemoglobin (RHb), carboxy-haemoglobin (COHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb), and total haemoglobin (totHb)] in a clinical specimen.	A
4022	56665	Co-oximetry analyser IVD, laboratory	Кооксиметрийн анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative in vitro measurement of oxygen saturation, haemoglobin derivatives and other calculated haemoximetry parameters in a whole blood specimen. Measurements typically include haemoglobin oxygen saturation (SpO2), arterial oxygen saturation (SaO2), blood oxygen content and capacity, and haemoglobin forms such as oxyhaemoglobin (O2Hb), deoxyhaemoglobin (HHb) or reduced haemoglobin (RHb), carboxy-haemoglobin (COHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb), and total haemoglobin (totHb).	A

4023	56667	Metabolic profile clinical chemistry analyser IVD	Бодисын солилцооны профайл эмнэлзүйн химийн анализатор IVD	A portable, electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro measurement of multiple clinical chemistry analytes to generate a metabolic profile. Analytes may include pH, blood gas parameters (e.g., pO2, pCO2), electrolytes [e.g., Sodium (Na2+), potassium (K+), chloride (Cl-)], glucose, urea, creatinine and sometimes in addition haemoximetry parameters [e.g., carboxy-haemoglobin (COHb), methaemoglobin (MetHb), total haemoglobin (totHb), hematrocrit (Hct)].	A
4024	56671	Blood gas analyser IVD, point-of-care	Цусны хийн анализатор IVD, тусламж үйлчилгээний цэг	A mains electricity (AC-powered) instrument intended to be used by health professionals at the point-of-care, and often in the laboratory, for the quantitative in vitro measurement of blood pH, partial pressure of oxygen (pO2) and/or partial pressure of carbon dioxide (pCO2), and the calculation of other blood gas parameters [e.g., bicarbonate (HCO3-), base excess, arterial-alveolar gradient] in a clinical specimen.	A
4025	56672	Blood gas/haemoximetry analyser IVD, point-of-care	Цусны хий/гемоксиметрийн анализатор IVD, тусламж үйлчилгээний цэг	A mains electricity (AC-powered) instrument intended to be used by health professionals at the point-of-care, and often in the laboratory, for the quantitative in vitro measurement of blood pH, partial pressure of oxygen (pO2) and/or partial pressure of carbon dioxide (pCO2), and the measurement or calculation of other blood gas and co-oximetry parameters [e.g., bicarbonate (HCO3-), base excess, arterial-alveolar gradient, oxyhaemoglobin (O2Hb), deoxyhaemoglobin (HHb) or reduced haemoglobin (RHb), carboxy-haemoglobin (COHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb), and total haemoglobin (totHb)] in a clinical specimen.	A

4026	56673	Co-oximetry analyser IVD, point-of-care	Ко-оксиметрийн анализатор IVD, тусламж үйлчилгээний цэг	A mains electricity (AC-powered) instrument, which may include internal rechargeable batteries, intended to be used by health professionals at the point-of-care, and often in the laboratory, for the quantitative in vitro measurement of oxygen saturation, haemoglobin derivatives and other calculated haemoximetry parameters in a whole blood specimen. Measurements may include haemoglobin oxygen saturation (SpO2), arterial oxygen saturation (SaO2), blood oxygen content/capacity, and haemoglobin forms such as oxyhaemoglobin (O2Hb), deoxyhaemoglobin (HHb) or reduced haemoglobin (RHb), carboxy-haemoglobin (COHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb), and total haemoglobin (totHb).	A
4027	56675	Multiple clinical chemistry analyser IVD, home-use	Олон тооны эмнэлзүйн химийн анализатор IVD, гэрийн хэрэглээ	An electrically-powered instrument intended to be used by a layperson in the home or similar environment for the qualitative and/or quantitative in vitro detection of multiple clinical chemistry analytes in a clinical specimen; it does not include test reagents or disposable items. Analytes detected may include electrolytes, specific proteins, clinical chemistry substrates (e.g., lipid profile), liver and/or cardiac function test analytes, and/or enzymes, using one or more technology(ies) [e.g., microfluidics, electrometry, spectrophotometry, colorimetry, fluorimetry, radiometry, chemiluminescence].	A
4028	56676	Multiple clinical chemistry analyser IVD, laboratory	Олон тооны эмнэлзүйн химийн анализатор IVD, лабораторий	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro detection of multiple clinical chemistry analytes in a clinical specimen, using one or more technologies (e.g., microfluidics, electrometry, spectrophotometry, colorimetry, fluorimetry, radiometry, chemiluminescence). Analytes detected may include electrolytes, specific proteins, clinical chemistry substrates (e.g., lipid profile), liver and/or cardiac function test analytes, and/or enzymes.	A

4029	56682	Ion-selective analyser IVD	Ион сонгомол анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative measurement of electrolytes and/or other ions in a clinical specimen using ion-specific membranes to selectively measure electrical potential against a reference electrode to determine the target ion concentration.	A
4030	56686	Glucose analyser IVD, laboratory, automated/semi-automated	Глюкозын анализатор IVD, лаборатори, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the quantitative in vitro measurement of glucose levels in whole blood, serum, plasma and/or other body fluid.	A
4031	56689	Coagulation analyser IVD, laboratory	Коагуляцийн анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of one or multiple coagulation components involved in haemostasis in a clinical specimen [e.g., performs tests such as prothrombin time (PT), partial thromboplastin time (PTT)]. Analyser design may incorporate spectrophotometry, turbidimetry, nephelometry, electrometry, electromagnetic and/or mechanical means of clot formation or end point detection.	A
4032	56691	Erthrocyte sedimentation rate (ESR) analyser IVD	Эртроцитын тунадасны хурд (ESR) анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to determine the erythrocyte sedimentation rate (ESR) of red blood cells in an anticoagulated whole blood specimen.	A
4033	56693	Haemoglobin analyser IVD, laboratory	Гемоглобины анализатор IVD, лаборатори	An automated or semi-automated laboratory instrument intended to be used to determine the concentration of haemoglobin in a clinical specimen, using technology which may include colorimetry, electrometry or photometry.	A
4034	56696	Haematocrit analyser IVD	Гематокрит анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to determine the red cell haematocrit or packed red cell volume of a whole blood specimen, using technology which may incorporate centrifugation, photometry or electrometry.	A

4035	56699	Platelet aggregation analyser IVD	Тромбоцит нэгтгэх анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro examination of platelet function in a clinical specimen, by inducing platelet aggregation through the addition of platelet aggregating agents. The instrument may incorporate various technologies including electrical impedance, photometry, turbidimetry and/or luminescence together with sample processing, data processing and/or data display software.	A
4036	56701	Chemiluminescent immunoassay analyser IVD	Химилюминесцент дархлааны анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers (e.g., protein, drug, hormone, microbial toxin) in a clinical specimen, using an immunological method that utilizes a chemiluminescent detection system together with sample processing, data processing and/or data display software.	A
4037	56703	Faecal occult blood immunoassay analyser IVD	Өтгөний далд цусны дархлааны анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of faecal occult blood, using an immunological method to detect or measure haemoglobin in a clinical stool (faeces) specimen.	A
4038	56705	Fluorescent immunoassay analyser IVD, laboratory	Флюресцент дархлааны анализатор IVD, лабораторий	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen. The instrument detects fluorescent markers that result from an immunological reaction between the reagents and the specimen, and typically includes an autosampler, reagent dispenser, light source, filter or monochromator, a fluorescent detection system (fluorometer or spectrofluorometer), data processing and/or data display software.	A

4039	56712	ABO/Rh(D) blood grouping analyser IVD	ABO/Rh(D) цусны бүлгийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to perform blood group testing to determine the ABO and Rh(D) status of clinical specimens. Testing typically involves forward and reverse ABO blood grouping and may use microplate-based serological methods, cassettes or column agglutinating technology.	A
4040	56714	Blood group/antibody screening analyser IVD	Цусны бүлэг/эсрэгбие илрүүлэх анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to perform pre-transfusion blood group testing, red cell antibody screening/identification and/or red cell phenotyping of clinical specimens or donor specimens in order to determine suitability for transfusion or transplantation. Testing may include ABO, Rhesus or other red cell blood group systems and may use microplate-based serological methods, cassettes or column agglutinating technology.	A
4041	56716	Donor blood/tissue testing analyser IVD	Донорын цус/эд эсийн шинжилгээний анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to test donor blood or tissue specimens to determine suitability for transfusion or transplantation. Testing performed may include determination of ABO, Rhesus and/or other red cell blood group systems, red cell antibody screening/identification, and/or detecting the presence of one or multiple transmissible infectious diseases. Methodology may include microplate-based serological methods, microarray, cassette or column agglutinating technology for blood group testing, and serology or nucleic acid technology for infectious disease testing.	A

4042	56718	Enzyme immunoassay (EIA) analyser IVD	Ферментийн дархлааны шинжилгээ (EIA) анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers, in a clinical specimen, using an immunological method which utilizes an enzyme-based detection system with sample processing, data processing and/or data display software. It uses enzyme-labelled antigens or antibodies and a solid-phase binding support (e.g., beads, microplates) to measure the substance of interest, typically antigens, antibodies, drugs, or endogenous substances in body fluids.	A
4043	56721	Radioimmunoassay analyser IVD, automated/semi-automated	Radioimmunoassay анализатор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen using an immunological method which utilizes a radiometric detection system to detect the presence of immune complexes labelled using a radioisotope, together with sample processing, data processing and/or data display software.	A
4044	56722	Liquid-phase immunoassay analyser IVD	Шингэн фазын дархлааны анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen, using an immunological method which utilizes liquid-phase binding whereby immunological reactants combine without a solid phase and are detected using an enzyme, fluorescence and/or chromatographic separation detection system.	A
4045	56724	Multichannel immunoassay analyser IVD	Олон сувгийн дархлаа судлалын анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of multiple chemical and/or biological markers in a clinical specimen. The analyser typically includes sample processing, requires analyte specific test kits or reagents, and incorporates multiple channels using two or more immunological methods which may include chromatographic or electrochemical separation, together with enzyme, fluorescent, chemiluminescent, nephelometric, radiometric, electrometric and/or photometric detection systems.	A

4046	56727	Multiplex analyser IVD, laboratory	Мультиплекс анализатор IVD, лаборатори	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative simultaneous determination of multiple chemical and/or biological markers in a single clinical specimen using an immunological method which incorporates multiple antibodies arranged on a solid surface (e.g., slide, plate, membrane) or coated to micro-particles. It typically includes a system for the detection of bound target antigen (e.g., chemiluminescent, fluorescent, photometric, magnetic detector), together with sample processing, data processing and data display software.	A
4047	56728	Nephelometry immunoassay analyser IVD	Нефелометрийн дархлааны анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of chemical and/or biological markers in a clinical specimen using an immunological method which utilizes a nephelometric detection system to determine the rate and/or quantity of particle agglutination occurring through the formation of immune complexes, together with sample processing, data processing and/or data display software.	A
4048	56737	Antimicrobial susceptibility analyser IVD	Нянгийн эсрэг мэдрэмтгий байдлын анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the in vitro determination of an antimicrobial susceptibility profile by monitoring the growth rate of a microbiological organism from a clinical specimen and/or culture isolate when exposed to a range of antimicrobials. Growth detection technology used may include immunoassay, colorimetry, chromatography, photometric and/or carbon dioxide production.	A

4049	56739	Blood culture analyser IVD	Цусны өсгөвөрийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of microorganism growth in a blood culture preparation or other clinical specimen, with or without subsequent identification of the organism. Changes in metabolite production which indicate growth may be detected using radiometric labelled substrate uptake, infrared spectrophotometric detection of CO2, fluorometric detection of fluorescent substrate uptake, photometric detection of turbidity change and/or colorimetric detection of pH induced colour change.	A
4050	56742	Microorganism identification analyser IVD, manual	Бичил биетнийг тодорхойлох анализатор IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the identification of bacteria and/or yeast isolated from clinical specimens by characterizing their morphology, substrate utilization and/or biochemical reactivity, using growth detection technology which may include immunoassay, colorimetry, chromatography and/or carbon dioxide (CO2) production.	A
4051	56743	Microorganism identification analyser IVD, automated/semi-automated	Бичил биетнийг тодорхойлох анализатор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the identification of bacteria and/or yeast isolated from clinical specimens by characterizing their morphology, substrate utilization and/or biochemical reactivity, using growth detection technology which may include immunoassay, colorimetry, chromatography and/or carbon dioxide (CO2) production.	A
4052	56744	Yeast/fungi identification analyser IVD, automated/semi-automated	Мөөгөнцөр/мөөгөнцөр тодорхойлох анализатор IVD, автоматжуулсан/хагас автоматжуулсан	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the identification of yeast and/or fungi isolated from clinical specimens by characterizing their morphology, substrate utilization and/or biochemical reactivity, using growth detection technology which may include immunoassay, colorimetry, chromatography and/or carbon dioxide (CO2) production.	A

4053	56745	Yeast/fungi identification analyser IVD, manual	Мөөгөнцөр/мөөгөнцөр тодорхойлох анализатор IVD, гарын авлага	An electrically-powered manual laboratory instrument intended to be used for the identification of yeast and/or fungi isolated from clinical specimens by characterizing their morphology, substrate utilization and/or biochemical reactivity, using growth detection technology which may include immunoassay, colorimetry, chromatography and/or carbon dioxide (CO2) production.	A
4054	56747	Microorganism identification/antimicrobial-susceptibility analyser IVD	Бичил биетнийг тодорхойлох/нянгийн эсрэг мэдрэмтгий байдлын анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the identification of bacteria and/or yeast isolated from clinical specimens and for the determination of their antimicrobial susceptibility profile using morphology, substrate utilization and/or biochemical reactivity and by monitoring growth rates and/or determining endpoint growth, against a range of antimicrobials. Growth detection technology used may include immunoassay, colorimetry, fluorimetry, chromatography and/or carbon dioxide production.	A
4055	56750	A/B transferase IVD, kit, enzyme immunohistochemistry	A/B трансфераза IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of A and/or B transferase enzymes associated with expression of ABO blood group antigens on all cells in a clinical specimen, using an enzyme immunohistochemistry method.	A
4056	56751	A/B transferase IVD, antibody	A/B трансфераза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of A and/or B transferase enzymes associated with expression of ABO blood group antigens on all cells in a clinical specimen.	A
4057	56752	A/B transferase IVD, reagent	A/B трансфераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of A and/or B transferase enzymes associated with ABO blood group expression on all cells in a clinical specimen.	A
4058	57724	Reagent grade alcohol solution IVD	Урвалжийн спиртийн уусмал IVD	A reagent grade alcohol solution (e.g., methanol, ethanol, isopropanol) intended to be used as a dehydrant and/or fixative in the processing of biological tissues or clinical specimens.	A

4059	57743	Cytology fixative solution IVD	Цитологийн бэхэлгээний уусмал IVD	An alcohol-based solution intended to be used as a fixative for a cytology specimen obtained directly from a patient, or processing of a clinical specimen, for subsequent preservation, transportation and/or in vitro diagnostic analysis.	A
4060	57769	Immunohistochemistry antibody diluent IVD	Immunohistochemistry эсрэгбие шингэрүүлэгч IVD	A substance or reactant intended to be used for the dilution of antibody solution for use in an enzyme immunohistochemistry assay performed on biological tissues or clinical specimens.	A
4061	57801	Amino acid analyser IVD	Амин хүчлийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of individual amino acids in a protein sample obtained from a clinical specimen.	A
4062	57810	Atomic absorption spectrophotometer IVD	Атом шингээлтийн спектрофотометр IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to measure the emission, absorption, or fluorescence of electromagnetic radiation by atomic particles following atomization, most commonly by flame or furnace, to determine the concentration of a chemical and/or biological marker in a clinical specimen (e.g., electrolytes, essential trace elements, or metals in body tissues/fluids that may have been used in therapy or resulted from exposure to industrial and environmental pollutants).	A
4063	57836	Densitometry analyser IVD	Денситометрийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used for the qualitative and/or quantitative in vitro determination of the staining pattern intensity on film, acetate or other composite medium which has been created as the result of electrophoresis, thin-layer chromatography or immunoblot, to separate and/or visualize the individual components of a clinical specimen.	A
4064	57837	Electrophoresis analyser IVD	Электрофорез анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument or system intended to be used for the qualitative and/or quantitative in vitro determination of various molecules (e.g., DNA, RNA, proteins) in a clinical specimen based on their size, ionic charge and/or rate of migration through an electrically charged field.	A

4065	57839	Flow cytometry analyser IVD	Урсгалын цитометрийн анализатор IVD	An electrically-powered automated or semi-automated laboratory instrument intended to be used to count, examine and/or sort cells or microscopic particles in a clinical specimen (e.g., blood, urine). Detection of individual components is performed using an optical or electrical detection system based on physical or chemical characteristics, or by detecting immunological markers introduced to the sample during the preanalytical phase and bound via antigen-antibody reactions.	A
