8501	54633	Lipid-associated sialic acid (LASA) IVD, control	Липидтэй холбоотой сиалийн хүчил (LASA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lipid-associated sialic acid (LASA) in a clinical specimen.	B
8502	54634	Lipid-associated sialic acid (LASA) IVD, reagent	Липидтэй холбоотой сиалийн хүчил (LASA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lipid-associated sialic acid (LASA) in a clinical specimen.	B

8503	54635	Lung cancer-associated protein IVD, kit, enzyme immunoassay (EIA)	Уушигны хорт хавдартай холбоотой уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lung cancer-associated protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8504	54636	Lung cancer-associated protein IVD, calibrator	Уушигны хорт хавдартай холбоотой уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lung cancer-associated protein in a clinical specimen.	B
8505	54637	Lung cancer-associated protein IVD, control	Уушигны хорт хавдартай холбоотой уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lung cancer-associated protein in a clinical specimen.	B
8506	54638	Lung cancer-associated protein IVD, reagent	Уушигны хорт хавдартай холбоотой уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lung cancer-associated protein in a clinical specimen.	B
8507	54639	Mucin-like carcinoma-associated antigen (MCA) IVD, kit, enzyme immunoassay (EIA)	Муцинтэй төстэй хорт хавдартай холбоотой антиген (MCA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mucin-like carcinoma-associated antigen (MCA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8508	54640	Mucin-like carcinoma-associated antigen (MCA) IVD, reagent	Муцинтэй төстэй хорт хавдартай холбоотой антиген (MCA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of mucin-like carcinoma-associated antigen (MCA) in a clinical specimen.	B
8509	54641	NCC-ST-439 tumour-associated carbohydrate antigen IVD, kit, radioimmunoassay	NCC-ST-439 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of NCC-ST-439 tumour-associated carbohydrate antigen in a clinical specimen, using a radioimmunoassay method.	B

8510	54642	NCC-ST-439 tumour-associated carbohydrate antigen IVD, calibrator	NCC-ST-439 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of NCC-ST-439 tumour-associated carbohydrate antigen in a clinical specimen.	B
8511	54643	NCC-ST-439 tumour-associated carbohydrate antigen IVD, control	NCC-ST-439 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of NCC-ST-439 tumour-associated carbohydrate antigen in a clinical specimen.	B
8512	54644	NCC-ST-439 tumour-associated carbohydrate antigen IVD, reagent	NCC-ST-439 хавдартай холбоотой нүүрс усны эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of NCC-ST-439 tumour-associated carbohydrate antigen in a clinical specimen.	B
8513	54645	Neuron-specific enolase (NSE) IVD, kit, enzyme immunoassay (EIA)	Нейроны өвөрмөц энолаза (NSE) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8514	54646	Neuron-specific enolase (NSE) IVD, reagent	Нейроны өвөрмөц энолаза (NSE) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen.	B
8515	54647	Nuclear mitotic apparatus protein (NuMA) IVD, kit, enzyme immunoassay (EIA)	Цөмийн митоз аппаратын ууураг (NuMA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nuclear mitotic apparatus protein (NuMA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8516	54648	Nuclear mitotic apparatus protein (NuMA) IVD, kit, rapid ICT, clinical	Цөмийн митоз аппаратын уураг (NuMA) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of nuclear mitotic apparatus protein (NuMA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
8517	54649	Nuclear mitotic apparatus protein (NuMA) IVD, calibrator	Цөмийн митоз аппаратын уураг (NuMA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of nuclear mitotic apparatus protein (NuMA) in a clinical specimen.	B
8518	54650	Nuclear mitotic apparatus protein (NuMA) IVD, control	Цөмийн митоз аппаратын уураг (NuMA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of nuclear mitotic apparatus protein (NuMA) in a clinical specimen.	B
8519	54651	Nuclear mitotic apparatus protein (NuMA) IVD, reagent	Цөмийн митоз аппаратын уураг (NuMA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of nuclear mitotic apparatus protein (NuMA) in a clinical specimen.	B
8520	54652	Oncogene protein p21(ras) IVD, kit, enzyme immunoassay (EIA)	Онкогений уураг p21(ras) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oncogene protein p21 (ras) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8521	54653	Oncogene protein p21(ras) IVD, reagent	Онкогений уураг p21(ras) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of oncogene protein p21 (ras) in a clinical specimen.	B
8522	54654	p53 tumour protein IVD, kit, enzyme immunoassay (EIA)	p53 хавдрын уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8523	54655	p53 tumour protein IVD, reagent	p53 хавдрын уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen.	B
8524	54656	p53 tumour protein antibody IVD, kit, enzyme immunoassay (EIA)	p53 хавдрын уургийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to p53 tumour protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8525	54657	p53 tumour protein antibody IVD, calibrator	p53 хавдрын уургийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to p53 tumour protein in a clinical specimen.	B
8526	54658	p53 tumour protein antibody IVD, control	p53 хавдрын уургийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to p53 tumour protein in a clinical specimen.	B
8527	54659	p53 tumour protein antibody IVD, reagent	p53 хавдрын уургийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to p53 tumour protein in a clinical specimen.	B
8528	54660	Progastrin-releasing peptide (ProGRP) IVD, kit, chemiluminescent immunoassay	Прогастрин ялгаруулдаг пептид (ProGRP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progastrin-releasing peptide (ProGRP) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8529	54661	Progastrin-releasing peptide (ProGRP) IVD, calibrator	Прогастрин ялгаруулдаг пептид (ProGRP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of progastrin-releasing peptide (ProGRP) in a clinical specimen.	B
8530	54662	Progastrin-releasing peptide (ProGRP) IVD, control	Прогастрин ялгаруулдаг пептид (ProGRP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of progastrin-releasing peptide (ProGRP) in a clinical specimen.	B

8531	54663	Progastrin-releasing peptide (ProGRP) IVD, reagent	Прогастрин ялгаруулах пептид (ProGRP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of progastrin-releasing peptide (ProGRP) in a clinical specimen.	B
8532	54664	Total prostate specific antigen (tPSA) IVD, kit, enzyme immunoassay (EIA)	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8533	54665	Total prostate specific antigen (tPSA) IVD, kit, chemiluminescent immunoassay	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8534	54666	Total prostate specific antigen (tPSA) IVD, kit, fluorescent immunoassay	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen, using a fluorescent immunoassay method.	B
8535	54667	Total prostate specific antigen (tPSA) IVD, reagent	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen.	B
8536	54668	Free (unbound) prostate specific antigen (fPSA) IVD, kit, enzyme immunoassay (EIA)	Чөлөөт (холбогдоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8537	54669	Free (unbound) prostate specific antigen (fPSA) IVD, kit, chemiluminescent immunoassay	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen, using a chemiluminescent immunoassay method.	B
8538	54670	Free (unbound) prostate specific antigen (fPSA) IVD, kit, fluorescent immunoassay	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen, using a fluorescent immunoassay method.	B
8539	54671	Free (unbound) prostate specific antigen (fPSA) IVD, reagent	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen.	B
8540	54672	Complexed prostate specific antigen (cPSA) IVD, kit, enzyme immunoassay (EIA)	Нарийн төвөгтэй түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8541	54673	Complexed prostate specific antigen (cPSA) IVD, kit, chemiluminescent immunoassay	Түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8542	54674	Complexed prostate specific antigen (cPSA) IVD, kit, fluorescent immunoassay	Түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen, using a fluorescent immunoassay method.	B

8543	54675	Complexed prostate specific antigen (cPSA) IVD, calibrator	Түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen.	B
8544	54676	Complexed prostate specific antigen (cPSA) IVD, control	Түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen.	B
8545	54677	Complexed prostate specific antigen (cPSA) IVD, reagent	Түрүү булчирхайн өвөрмөц антиген (cPSA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of complexed prostate specific antigen (cPSA) in a clinical specimen.	B
8546	54678	Sialyl Lewis x antigen IVD, kit, fluorescent immunoassay	Sialyl Lewis x антиген IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex antigen, in a clinical specimen using a fluorescent immunoassay method.	B
8547	54679	Sialyl Lewis x antigen IVD, kit, enzyme immunoassay (EIA)	Sialyl Lewis x антиген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex antigen, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8548	54680	Sialyl Lewis x antigen IVD, calibrator	Sialyl Lewis x антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex antigen, in a clinical specimen.	B
8549	54681	Sialyl Lewis x antigen IVD, control	Sialyl Lewis x антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex, in a clinical specimen.	B
8550	54682	Sialyl Lewis x antigen IVD, reagent	Sialyl Lewis x антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex antigen, in a clinical specimen.	B

8551	54683	Sialyl Lewis x-i antigen IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Sialyl Lewis xi антиген IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Flow)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x-i antigen, also referred to as sialyl Lex-i antigen, in a clinical specimen using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
8552	54684	Sialyl Lewis x-i antigen IVD, calibrator	Sialyl Lewis xi антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x-i antigen, also referred to as sialyl Lex-i antigen, in a clinical specimen.	B
8553	54685	Sialyl Lewis x-i antigen IVD, control	Sialyl Lewis xi антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x-i antigen, also referred to as sialyl Lex-i antigen in a clinical specimen.	B
8554	54686	Sialyl Lewis x-i antigen IVD, reagent	Sialyl Lewis xi антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of sialyl Lewis x-i antigen, also referred to as sialyl Lex-i, in a clinical specimen.	B
8555	54687	Sialyl Tn antigen IVD, kit, fluorescent immunoassay	Sialyl Tn антиген IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of sialyl Tn antigen in a clinical specimen, using a fluorescent immunoassay method.	B
8556	54688	Sialyl Tn antigen IVD, calibrator	Sialyl Tn антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of sialyl Tn antigen in a clinical specimen.	B
8557	54689	Sialyl Tn antigen IVD, control	Sialyl Tn антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of sialyl Tn antigen in a clinical specimen.	B
8558	54690	Sialyl Tn antigen IVD, reagent	Sialyl Tn антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of sialyl Tn antigen in a clinical specimen.	B

8559	54691	SPan-1 antigen IVD, kit, radioimmunoassay	SPan-1 антиген IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of SPan-1 antigen in a clinical specimen, using a radioimmunoassay method.	B
8560	54692	SPan-1 antigen IVD, calibrator	SPan-1 антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of SPan-1 antigen in a clinical specimen.	B
8561	54693	SPan-1 antigen IVD, control	SPan-1 антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of SPan-1 antigen in a clinical specimen.	B
8562	54694	SPan-1 antigen IVD, reagent	SPan-1 антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of SPan-1 antigen in a clinical specimen.	B
8563	54695	Squamous cell carcinoma antigen IVD, kit, enzyme immunoassay (EIA)	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8564	54696	Squamous cell carcinoma antigen IVD, reagent	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen.	B
8565	54697	Terminal deoxynucleotidyl transferase (TdT) IVD, kit, fluorescent immunoassay	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen, using a fluorescent immunoassay method.	B
8566	54698	Terminal deoxynucleotidyl transferase (TdT) IVD, calibrator	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen.	B

8567	54699	Terminal deoxynucleotidyl transferase (TdT) IVD, control	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen.	B
8568	54700	Terminal deoxynucleotidyl transferase (TdT) IVD, reagent	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen.	B
8569	54701	TNF-alpha/TNF-beta IVD, kit, fluorescent immunoassay	TNF-альфа/TNF-бета IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha and/or tumour necrosis factor-beta (TNF-alpha and/or TNF-beta) in a clinical specimen, using a fluorescent immunoassay method.	B
8570	54702	TNF-alpha/TNF-beta IVD, calibrator	TNF-альфа/TNF-бета IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha and/or tumour necrosis factor-beta (TNF-alpha and/or TNF-beta) in a clinical specimen.	B
8571	54703	TNF-alpha/TNF-beta IVD, control	TNF-альфа/TNF-бета IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha and/or tumour necrosis factor-beta (TNF-alpha and/or TNF-beta) in a clinical specimen.	B
8572	54704	TNF-alpha/TNF-beta IVD, reagent	TNF-альфа/TNF-бета IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha and/or tumour necrosis factor-beta (TNF-alpha and/or TNF-beta) in a clinical specimen.	B
8573	54705	Tissue polypeptide antigen IVD, kit, radioimmunoassay	Эдийн полипептидийн эсрэгтөрөгч IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tissue polypeptide antigen (TPA) in a clinical specimen, using a radioimmunoassay method. This test is used in the monitoring of cancer therapy, typically for treatment of carcinomas of the lung, breast, gastrointestinal tract, and/or urinary bladder.	B

8574	54706	Tissue polypeptide antigen IVD, reagent	Эдийн полипептидийн эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tissue polypeptide antigen in a clinical specimen.	B
8575	54707	Vascular endothelial growth factor (VEGF) IVD, kit, enzyme immunoassay (EIA)	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8576	54708	Vascular endothelial growth factor (VEGF) IVD, calibrator	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen.	B
8577	54709	Vascular endothelial growth factor (VEGF) IVD, control	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen.	B
8578	54710	Vascular endothelial growth factor (VEGF) IVD, reagent	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen.	B
8579	54711	Multiple heavy metal IVD, kit, gas chromatography	Олон хүнд металлын IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple heavy metals in a clinical specimen, using a gas chromatography method.	B
8580	54712	Multiple heavy metal IVD, kit, atomic spectroscopy	Олон хүнд металлын IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple heavy metals in a clinical specimen, using an atomic spectroscopy method.	B
8581	54713	Multiple heavy metal IVD, calibrator	Олон хүнд металлын IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple heavy metals in a clinical specimen.	B

8582	54714	Multiple heavy metal IVD, control	Олон хүнд металлын IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of multiple heavy metals in a clinical specimen.	B
8583	54715	Multiple heavy metal IVD, reagent	Олон хүнд металлын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple heavy metals in a clinical specimen.	B
8584	54716	Aluminium IVD, kit, mass spectrometry	Хөнгөн цагаан IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of aluminium in a clinical specimen, using a mass spectrometry method.	B
8585	54717	Aluminium IVD, reagent	Хөнгөн цагаан IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of aluminium in a clinical specimen.	B
8586	54718	Antimony IVD, kit, gas chromatography	Сурьма IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antimony in a clinical specimen, using a gas chromatography method.	B
8587	54719	Antimony IVD, kit, atomic spectroscopy	Сурьма IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antimony in a clinical specimen, using an atomic spectroscopy method.	B
8588	54720	Antimony IVD, reagent	Сурьма IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antimony in a clinical specimen.	B
8589	54721	Arsenic IVD, kit, gas chromatography	Хүнцэл IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of arsenic in a clinical specimen, using a gas chromatography method.	B
8590	54722	Arsenic IVD, kit, atomic spectroscopy	Арсеник IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of arsenic in a clinical specimen, using an atomic spectroscopy method.	B

8591	54723	Arsenic IVD, reagent	Хүнцэл IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of arsenic in a clinical specimen.	B
8592	54724	Beryllium IVD, kit, mass spectrometry	Бериллий IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beryllium in a clinical specimen, using a mass spectrometry method.	B
8593	54725	Beryllium IVD, calibrator	Бериллий IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of beryllium in a clinical specimen.	B
8594	54726	Beryllium IVD, control	Бериллий IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of beryllium in a clinical specimen.	B
8595	54727	Beryllium IVD, reagent	Бериллий IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of beryllium in a clinical specimen.	B
8596	54728	Bismuth IVD, kit, mass spectrometry	Висмут IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bismuth in a clinical specimen, using a mass spectrometry method.	B
8597	54729	Bismuth IVD, calibrator	Висмут IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of bismuth in a clinical specimen.	B
8598	54730	Bismuth IVD, control	Висмут IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of bismuth in a clinical specimen.	B
8599	54731	Bismuth IVD, reagent	Висмут IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of bismuth in a clinical specimen.	B
8600	54732	Bromide IVD, kit, spectrophotometry	Бромид IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bromide in a clinical specimen, using a spectrophotometry method.	B

8601	54733	Cadmium IVD, kit, mass spectrometry	Кадми IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cadmium in a clinical specimen, using a mass spectrometry method.	B
8602	54734	Cadmium IVD, calibrator	Кадми IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cadmium in a clinical specimen.	B
8603	54735	Cadmium IVD, control	Кадми IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cadmium in a clinical specimen.	B
8604	54736	Cadmium IVD, reagent	Кадми IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cadmium in a clinical specimen.	B
8605	54737	Chromium IVD, kit, mass spectrometry	Chromium IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chromium in a clinical specimen, using a mass spectrometry method.	B
8606	54738	Chromium IVD, calibrator	Chromium IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of chromium in a clinical specimen.	B
8607	54739	Chromium IVD, control	Chromium IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of chromium in a clinical specimen.	B
8608	54740	Chromium IVD, reagent	Chromium IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of chromium in a clinical specimen.	B
8609	54741	Cobalt IVD, kit, mass spectrometry	Кобальт IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cobalt in a clinical specimen, using a mass spectrometry method.	B
8610	54742	Cobalt IVD, calibrator	Кобальт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cobalt in a clinical specimen.	B

8611	54743	Cobalt IVD, control	Кобальт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cobalt in a clinical specimen.	B
8612	54744	Cobalt IVD, reagent	Кобальт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cobalt in a clinical specimen.	B
8613	54745	Copper IVD, kit, mass spectrometry	Зэсийн IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of copper (Cu) in a clinical specimen, using a mass spectrometry method.	B
8614	54746	Copper IVD, calibrator	Зэсийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of copper (Cu) in a clinical specimen.	B
8615	54747	Copper IVD, control	Зэсийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of copper (Cu) in a clinical specimen.	B
8616	54748	Copper IVD, reagent	Зэсийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of copper (Cu) in a clinical specimen.	B
8617	54749	Fluoride IVD, kit, electrometry	Фторын IVD, иж бүрдэл, цахилгаан хэмжигч	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fluoride in a clinical specimen, using an electrometry method.	B
8618	54750	Fluoride IVD, calibrator	Фторын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of fluoride in a clinical specimen.	B
8619	54751	Fluoride IVD, control	Фторын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of fluoride in a clinical specimen.	B
8620	54752	Fluoride IVD, reagent	Фторид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of fluoride in a clinical specimen.	B

8621	54753	Gold IVD, kit, atomic spectroscopy	Алт IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of gold in a clinical specimen, using an atomic spectroscopy method.	B
8622	54754	Gold IVD, calibrator	Алтан IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of gold in a clinical specimen.	B
8623	54755	Gold IVD, control	Алт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of gold in a clinical specimen.	B
8624	54756	Gold IVD, reagent	Алт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of gold in a clinical specimen.	B
8625	54757	Iron IVD, kit, enzyme spectrophotometry	Төмрийн IVD, иж бүрдэл, ферментийн спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of iron in a clinical specimen, using an enzyme spectrophotometry method.	B
8626	54758	Iron IVD, kit, spectrophotometry	Төмөр IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of iron in a clinical specimen, using a spectrophotometry method.	B
8627	54759	Iron IVD, kit, atomic spectroscopy	Төмрийн IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of iron in a clinical specimen, using an atomic spectroscopy method.	B
8628	54760	Iron IVD, calibrator	Төмөр IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of iron in a clinical specimen.	B
8629	54761	Iron IVD, control	Төмөр IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of iron in a clinical specimen.	B
8630	54762	Iron IVD, reagent	Төмрийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of iron in a clinical specimen.	B

8631	54763	Iodine IVD, kit, mass spectrometry	Иодын IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of iodine in a clinical specimen, using a mass spectrometry method.	B
8632	54764	Iodine IVD, kit, spectrophotometry	Иодын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of iodine in a clinical specimen, using a spectrophotometry method.	B
8633	54765	Iodine IVD, calibrator	Иод IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of iodine in a clinical specimen.	B
8634	54766	Iodine IVD, control	Иодын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of iodine in a clinical specimen.	B
8635	54767	Iodine IVD, reagent	Иод IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of iodine in a clinical specimen.	B
8636	54768	Lead IVD, kit, gas chromatography	Хар тугалга IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lead (Pb) in a clinical specimen, using a gas chromatography method.	B
8637	54769	Lead IVD, kit, atomic spectroscopy	Хар тугалга IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lead (Pb) in a clinical specimen, using an atomic spectroscopy method.	B
8638	54770	Lead IVD, reagent	Хар тугалга IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lead in a clinical specimen.	B
8639	54771	Manganese IVD, kit, gas chromatography	Манганы IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of manganese in a clinical specimen, using a gas chromatography method.	B

8640	54772	Manganese IVD, kit, atomic spectroscopy	Манганы IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of manganese in a clinical specimen, using an atomic spectroscopy method.	B
8641	54773	Manganese IVD, calibrator	Манганы IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of manganese in a clinical specimen.	B
8642	54774	Manganese IVD, control	Манганы IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of manganese in a clinical specimen.	B
8643	54775	Manganese IVD, reagent	Манганы IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of manganese in a clinical specimen.	B
8644	54776	Mercury IVD, kit, gas chromatography	Мөнгөн усны IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mercury in a clinical specimen, using a gas chromatography method.	B
8645	54777	Mercury IVD, kit, atomic spectroscopy	Мөнгөн усны IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mercury in a clinical specimen, using an atomic spectroscopy method.	B
8646	54778	Mercury IVD, calibrator	Мөнгөн ус IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of mercury in a clinical specimen.	B
8647	54779	Mercury IVD, control	Мөнгөн ус IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of mercury in a clinical specimen.	B
8648	54780	Mercury IVD, reagent	Мөнгөн ус IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of mercury in a clinical specimen.	B
8649	54781	Molybdenum IVD, kit, mass spectrometry	Молибдений IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of molybdenum in a clinical specimen, using a mass spectrometry method.	B

8650	54782	Molybdenum IVD, calibrator	Молибден IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of molybdenum in a clinical specimen.	B
8651	54783	Molybdenum IVD, control	Молибдений IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of molybdenum in a clinical specimen.	B
8652	54784	Molybdenum IVD, reagent	Молибден IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of molybdenum in a clinical specimen.	B
8653	54785	Nickel IVD, kit, gas chromatography	Никель IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nickel in a clinical specimen, using a gas chromatography method.	B
8654	54786	Nickel IVD, calibrator	Никель IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of nickel in a clinical specimen.	B
8655	54787	Nickel IVD, control	Никель IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of nickel in a clinical specimen.	B
8656	54788	Nickel IVD, reagent	Никель IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of nickel in a clinical specimen.	B
8657	54789	Selenium IVD, kit, mass spectroscopy	Селен IVD, иж бүрдэл, масс спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of selenium in a clinical specimen, using a mass spectroscopy method.	B
8658	54790	Selenium IVD, calibrator	Selenium IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of selenium in a clinical specimen.	B
8659	54791	Selenium IVD, control	Селен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of selenium in a clinical specimen.	B

8660	54792	Selenium IVD, reagent	Селен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of selenium in a clinical specimen.	B
8661	54793	Silver IVD, kit, mass spectroscopy	Мөнгөний IVD, иж бүрдэл, масс спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of silver in a clinical specimen, using a mass spectroscopy method.	B
8662	54794	Silver IVD, calibrator	Мөнгөн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of silver in a clinical specimen.	B
8663	54795	Silver IVD, control	Мөнгөн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of silver in a clinical specimen.	B
8664	54796	Silver IVD, reagent	Мөнгөн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of silver in a clinical specimen.	B
8665	54797	Tin IVD, kit, mass spectroscopy	Цагаан тугалга IVD, иж бүрдэл, масс спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tin in a clinical specimen, using a mass spectroscopy method.	B
8666	54798	Tin IVD, calibrator	Цагаан тугалга IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tin in a clinical specimen.	B
8667	54799	Tin IVD, control	Цагаан тугалга IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tin in a clinical specimen.	B
8668	54800	Tin IVD, reagent	Цагаан тугалга IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tin in a clinical specimen.	B
8669	54801	Thallium IVD, kit, mass spectroscopy	Талийн IVD, иж бүрдэл, масс спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thallium in a clinical specimen, using a mass spectroscopy method.	B

8670	54802	Thallium IVD, calibrator	Tallium IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of thallium in a clinical specimen.	B
8671	54803	Thallium IVD, control	Талийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of thallium in a clinical specimen.	B
8672	54804	Thallium IVD, reagent	Талийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of thallium in a clinical specimen.	B
8673	54805	Zinc IVD, kit, gas chromatography	Цайрын IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of zinc in a clinical specimen, using a gas chromatography method.	B
8674	54806	Zinc IVD, kit, atomic spectroscopy	Цайрын IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of zinc in a clinical specimen, using an atomic spectroscopy method.	B
8675	54807	Zinc IVD, reagent	Цайр IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of zinc in a clinical specimen.	B
8676	54808	Multiple antinuclear antibody (ANA) screening IVD, kit, fluorescent immunoassay	Олон цөмийн эсрэгбие (ANA) скрининг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen, using a fluorescent immunoassay method.	B
8677	54809	Multiple antinuclear antibody (ANA) screening IVD, kit, enzyme immunoassay (EIA)	Олон цөмийн эсрэгбие (ANA) скрининг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8678	54811	Multiple antinuclear antibody (ANA) screening IVD, reagent	Олон цөмийн эсрэгбие (ANA) скрининг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen.	B

8679	54812	Multiple Coeliac disease-associated antibody IVD, kit, enzyme immunoassay (EIA)	Целиакийн олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with Coeliac disease in a clinical specimen, using an enzyme immunoassay (EIA) method. These antibodies may include autoimmune antibodies directed at gliadin (anti-gliadin IgA or IgG), endomysium (anti-endomysial antibodies), immunoglobulin A (anti-IgA) and/or tissue transglutaminase antibodies (anti-tTG).	B
8680	54814	Multiple Coeliac disease-associated antibody IVD, calibrator	Целиакийн олон өвчинтэй холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with Coeliac disease in a clinical specimen. These antibodies may include autoimmune antibodies directed at gliadin (anti-gliadin IgA or IgG), endomysium (anti-endomysial antibodies), immunoglobulin A (anti-IgA) and/or tissue transglutaminase antibodies (anti-tTG).	B
8681	54815	Multiple Coeliac disease-associated antibody IVD, control	Целиакийн олон өвчинтэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with Coeliac disease in a clinical specimen. These antibodies may include autoimmune antibodies directed at gliadin (anti-gliadin IgA or IgG), endomysium (anti-endomysial antibodies), immunoglobulin A (anti-IgA) and/or tissue transglutaminase antibodies (anti-tTG).	B
8682	54816	Multiple Coeliac disease-associated antibody IVD, reagent	Целиакийн олон өвчинтэй холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with Coeliac disease in a clinical specimen. These antibodies may include autoimmune antibodies directed at gliadin (anti-gliadin IgA or IgG), endomysium (anti-endomysial antibodies), immunoglobulin A (anti-IgA) and/or tissue transglutaminase antibodies (anti-tTG).	B

8683	54817	Multiple diabetes mellitus-associated antibody IVD, kit, enzyme immunoassay (EIA)	Чихрийн шижинтэй холбоотой олон төрлийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with diabetes mellitus in a clinical specimen, using an enzyme immunoassay (EIA) method. These antibodies may include autoimmune antibodies directed at insulin, islet cells and/or glutamic acid decarboxylase (anti-GAD).	B
8684	54819	Multiple diabetes mellitus-associated antibody IVD, calibrator	Олон тооны чихрийн шижинтэй холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with diabetes mellitus in a clinical specimen. These antibodies may include autoimmune antibodies directed at insulin, islet cells and/or glutamic acid decarboxylase (anti-GAD).	B
8685	54820	Multiple diabetes mellitus-associated antibody IVD, control	Олон тооны чихрийн шижинтэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with diabetes mellitus in a clinical specimen. These antibodies may include autoimmune antibodies directed at insulin, islet cells and/or glutamic acid decarboxylase (anti-GAD).	B
8686	54821	Multiple diabetes mellitus-associated antibody IVD, reagent	Олон тооны чихрийн шижинтэй холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with diabetes mellitus in a clinical specimen. These antibodies may include autoimmune antibodies directed at insulin, islet cells and/or glutamic acid decarboxylase (anti-GAD).	B
8687	54822	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, kit, fluorescent immunoassay	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen, using a fluorescent immunoassay method.	B

8688	54823	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, kit, enzyme immunoassay (EIA)	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8689	54825	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, kit, precipitation/immunodiffusion	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen, using a precipitation/immunodiffusion method.	B
8690	54826	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, reagent	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen.	B
8691	54827	Multiple extractable nuclear antigen (ENA) IVD, kit, fluorescent immunoassay	Олон гаргаж авах боломжтой цөмийн антиген (ENA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple extractable nuclear antigens (ENA) in a clinical specimen, using a fluorescent immunoassay method.	B
8692	54828	Multiple extractable nuclear antigen (ENA) IVD, kit, enzyme immunoassay (EIA)	Олон хандлах цөмийн антиген (ENA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple extractable nuclear antigens (ENA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8693	54829	Multiple extractable nuclear antigen (ENA) IVD, reagent	Олон хандлах цөмийн эсрэгтөрөгч (ENA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple extractable nuclear antigens (ENA) in a clinical specimen.	B

8694	54830	Multiple liver disease-associated antibody IVD, kit, enzyme immunoassay (EIA)	Элэгний олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with liver disease in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed antibodies may include autoimmune antibodies directed at liver-kidney microsome 1 protein (anti-LKM1), smooth muscle (anti-SMA), F-Actin, soluble liver antigen/liver pancreas (SLA/LP), Sp-100 protein, glycoprotein-210 (gp210), lamin B receptor (LBR) and also liver cytosol specific antibody type 1 (anti-LC1) and/or antimitochondrial antibodies (AMA).	B
8695	54832	Multiple liver disease-associated antibody IVD, calibrator	Элэгний олон өвчинтэй холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with liver disease in a clinical specimen. The assayed antibodies may include autoimmune antibodies directed at liver-kidney microsome 1 protein (anti-LKM1), smooth muscle (anti-SMA), F-Actin, soluble liver antigen/liver pancreas (SLA/LP), Sp-100 protein, glycoprotein-210 (gp210), lamin B receptor (LBR) and also liver cytosol specific antibody type 1 (anti-LC1) and/or antimitochondrial antibodies (AMA).	B
8696	54833	Multiple liver disease-associated antibody IVD, control	Элэгний олон өвчинтэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with liver disease in a clinical specimen. The assayed antibodies may include autoimmune antibodies directed at liver-kidney microsome 1 protein (anti-LKM1), smooth muscle (anti-SMA), F-Actin, soluble liver antigen/liver pancreas (SLA/LP), Sp-100 protein, glycoprotein-210 (gp210), lamin B receptor (LBR) and also liver cytosol specific antibody type 1 (anti-LC1) and/or antimitochondrial antibodies (AMA).	B

8697	54834	Multiple liver disease-associated antibody IVD, reagent	Элэгний олон өвчинтэй холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with liver disease in a clinical specimen. The assayed antibodies may include autoimmune antibodies directed at liver-kidney microsome 1 protein (anti-LKM1), smooth muscle (anti-SMA), F-Actin, soluble liver antigen/liver pancreas (SLA/LP), Sp-100 protein, glycoprotein-210 (gp210), lamin B receptor (LBR) and also liver cytosol specific antibody type 1 (anti-LC1) and/or antimitochondrial antibodies (AMA).	B
8698	54835	Multiple myositis-associated antibody IVD, kit, enzyme immunoassay (EIA)	Олон миозиттэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with myositis in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed antibodies may include autoimmune antibodies directed at Jo-1 (anti-Jo-1), ribonuclear protein (anti-RNP), Polymyositis-scleroderma (anti-PM-Scl), Ku (anti-Ku) and/or mitochondrial M2 (anti-Mi2).	B
8699	54837	Multiple myositis-associated antibody IVD, calibrator	Олон тооны миозиттэй холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with myositis in a clinical specimen. These antibodies may include autoimmune antibodies directed at Jo-1 (anti-Jo-1), ribonuclear protein (anti-RNP), Polymyositis-scleroderma (anti-PM-Scl), Ku (anti-Ku) and/or mitochondrial M2 (anti-Mi2).	B
8700	54838	Multiple myositis-associated antibody IVD, control	Олон тооны миозиттэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with myositis in a clinical specimen. These antibodies may include autoimmune antibodies directed at Jo-1 (anti-Jo-1), ribonuclear protein (anti-RNP), Polymyositis-scleroderma (anti-PM-Scl), Ku (anti-Ku) and/or mitochondrial M2 (anti-Mi2).	B

8701	54839	Multiple myositis-associated antibody IVD, reagent	Олон тооны миозиттэй холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with myositis in a clinical specimen. These antibodies may include autoimmune antibodies directed at Jo-1 (anti-Jo-1), ribonuclear protein (anti-RNP), Polymyositis-scleroderma (anti-PM-Scl), Ku (anti-Ku) and/or mitochondrial M2 (anti-Mi2).	B
8702	54845	Multiple rheumatoid arthritis-associated antibody IVD, kit, enzyme immunoassay (EIA)	Олон ревматоид артриттай холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with rheumatoid arthritis in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed antibodies may include autoimmune antibodies directed at rheumatoid factor (RF) and/or cyclic citrullinated peptide.	B
8703	54847	Multiple rheumatoid arthritis-associated antibody IVD, calibrator	Олон ревматоид артриттай холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with rheumatoid arthritis in a clinical specimen. These antibodies may include autoimmune antibodies directed at rheumatoid factor (RF) and/or cyclic citrullinated peptide.	B
8704	54848	Multiple rheumatoid arthritis-associated antibody IVD, control	Олон ревматоид артриттай холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with rheumatoid arthritis in a clinical specimen. These antibodies may include autoimmune antibodies directed at rheumatoid factor (RF) and/or cyclic citrullinated peptide.	B
8705	54849	Multiple rheumatoid arthritis-associated antibody IVD, reagent	Олон ревматоид артриттай холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with rheumatoid arthritis in a clinical specimen. These antibodies may include autoimmune antibodies directed at rheumatoid factor (RF) and/or cyclic citrullinated peptide.	B

8706	54850	Multiple systemic lupus erythematosus (SLE)-associated antibody IVD, kit, enzyme immunoassay (EIA)	Олон системийн чонон хөрвөс (SLE)-тэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple different antibodies associated with systemic lupus erythematosus (SLE) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8707	54851	Multiple systemic lupus erythematosus (SLE)-associated antibody IVD, kit, fluorescent immunoassay	Олон системийн чонон хөрвөс (SLE)-тэй холбоотой эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple different antibodies associated with systemic lupus erythematosus (SLE) in a clinical specimen, using an fluorescent immunoassay method.	B
8708	54853	Multiple systemic lupus erythematosus (SLE)-associated antibody IVD, reagent	Олон системийн чонон хөрвөс (SLE)-тэй холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple different antibodies associated with systemic lupus erythematosus (SLE) in a clinical specimen.	B
8709	54854	Multiple vasculitis-associated antibody IVD, kit, enzyme immunoassay (EIA)	Олон васкулиттай холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with vasculitis in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed antibodies may include autoimmune antibodies directed at the glomerular basement membrane (GBM), anti-neutrophil cytoplamic antibodies to myeloperoxidase (ANCA MPO) and/or anti-neutrophil cytoplamic antibodies to proteinase-3 (PR3).	B
8710	54856	Multiple vasculitis-associated antibody IVD, calibrator	Олон тооны васкулиттай холбоотой эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with vasculitis in a clinical specimen. These antibodies may include autoimmune antibodies directed at the glomerular basement membrane (GBM), anti-neutrophil cytoplamic antibodies to myeloperoxidase (ANCA MPO) and/or anti-neutrophil cytoplamic antibodies to proteinase-3 (PR3).	B

8711	54857	Multiple vasculitis-associated antibody IVD, control	Олон тооны васкулиттай холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with vasculitis in a clinical specimen. These antibodies may include autoimmune antibodies directed at the glomerular basement membrane (GBM), anti-neutrophil cytoplamic antibodies to myeloperoxidase (ANCA MPO) and/or anti-neutrophil cytoplamic antibodies to proteinase-3 (PR3).	B
8712	54858	Multiple vasculitis-associated antibody IVD, reagent	Олон тооны васкулиттай холбоотой эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening for multiple antibodies associated with vasculitis in a clinical specimen. These antibodies may include autoimmune antibodies directed at the glomerular basement membrane (GBM), anti-neutrophil cytoplamic antibodies to myeloperoxidase (ANCA MPO) and/or anti-neutrophil cytoplamic antibodies to proteinase-3 (PR3).	B
8713	54859	Acetylcholine receptor antibody IVD, kit, enzyme immunoassay (EIA)	Ацетилхолин рецепторын эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptor in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8714	54860	Acetylcholine receptor antibody IVD, kit, fluorescent immunoassay	Ацетилхолин рецепторын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptor in a clinical specimen, using a fluorescent immunoassay method.	B
8715	54861	Acetylcholine receptor antibody IVD, reagent	Ацетилхолин рецепторын эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptor in a clinical specimen.	B
8716	54862	Adrenal antibody IVD, kit, fluorescent immunoassay	Бөөрний дээд булчирхайн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the adrenal gland in a clinical specimen, using a fluorescent immunoassay method.	B

8717	54863	Adrenal antibody IVD, kit, enzyme immunoassay (EIA)	Бөөрний дээд булчирхайн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the adrenal gland in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8718	54864	Adrenal antibody IVD, calibrator	Бөөрний булчирхайн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the adrenal gland in a clinical specimen.	B
8719	54865	Adrenal antibody IVD, control	Бөөрний дээд булчирхайн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the adrenal gland in a clinical specimen.	B
8720	54866	Adrenal antibody IVD, reagent	Бөөрний булчирхайн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the adrenal gland in a clinical specimen.	B
8721	54867	Asialo-GM1 antibody IVD, kit, fluorescent immunoassay	Asialo-GM1 эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the asialo-GM1 antigen in a clinical specimen, using a fluorescent immunoassay method.	B
8722	54868	Asialo-GM1 antibody IVD, kit, enzyme immunoassay (EIA)	Asialo-GM1 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the asialo-GM1 antigen in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8723	54869	Asialo-GM1 antibody IVD, reagent	Asialo-GM1 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the asialo-GM1 antigen in a clinical specimen.	B
8724	54870	Anticardiolipin antibody IVD, kit, enzyme immunoassay (EIA)	Антикардиолипин эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8725	54871	Anticardiolipin antibody IVD, kit, fluorescent immunoassay	Антикардиолипин эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin in a clinical specimen, using a fluorescent immunoassay method.	B
8726	54873	Anticardiolipin antibody IVD, reagent	Антикардиолипин эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin in a clinical specimen.	B
8727	54874	Anticardiolipin-B2-glycoprotein I complex antibody IVD, kit, enzyme immunoassay (EIA)	Антикардиолипин-B2-гликопротейн I нийлмэл эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin-B2-glycoprotein I complex in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8728	54875	Anticardiolipin-B2-glycoprotein I complex antibody IVD, kit, fluorescent immunoassay	Антикардиолипин-B2-гликопротейн I цогцолбор эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin-B2-glycoprotein I complex in a clinical specimen, using a fluorescent immunoassay method.	B
8729	54877	Anticardiolipin-B2-glycoprotein I complex antibody IVD, reagent	Антикардиолипин-B2-гликопротейн I цогцолбор эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to cardiolipin-B2-glycoprotein I complex in a clinical specimen.	B
8730	54878	Beta-2-glycoprotein I antibody IVD, kit, fluorescent immunoassay	Бета-2-гликопротейн I эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to beta-2-glycoprotein I in a clinical specimen, using a fluorescent immunoassay method.	B
8731	54879	Beta-2-glycoprotein I antibody IVD, kit, enzyme immunoassay (EIA)	Бета-2-гликопротейн I эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to beta-2-glycoprotein I in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8732	54881	Beta-2-glycoprotein I antibody IVD, reagent	Бета-2-гликопротейн I эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple es of antibodies to beta-2-glycoprotein I in a clinical specimen.	B
8733	54882	Cancer-associated retinopathy antibody (anti-CAR) IVD, kit, fluorescent immunoassay	Хорт хавдартай холбоотой ретинопатийн эсрэгбие (анти-CAR) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer-associated retinopathy antibodies (anti-CAR antibodies) in a clinical specimen, using a fluorescent immunoassay method.	B
8734	54883	Cancer-associated retinopathy antibody (anti-CAR) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдартай холбоотой ретинопатийн эсрэгбие (анти-CAR) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer-associated retinopathy antibodies (anti-CAR antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8735	54884	Cancer-associated retinopathy antibody (anti-CAR) IVD, reagent	Хорт хавдартай холбоотой ретинопатийн эсрэгбие (анти-CAR) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cancer-associated retinopathy antibodies (anti-CAR antibodies) in a clinical specimen.	B
8736	54885	Centromere antibody IVD, kit, fluorescent immunoassay	Центромер эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8737	54886	Centromere antibody IVD, kit, enzyme immunoassay (EIA)	Центромер эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8738	54887	Centromere antibody IVD, reagent	Центромер эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen.	B
8739	54888	Centromere protein antibody (anti-CENP) IVD, kit, fluorescent immunoassay	Центромер уургийн эсрэгбие (anti-CENP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to centromere protein (anti-CENP) in a clinical specimen, using a fluorescent immunoassay method.	B
8740	54889	Centromere protein antibody (anti-CENP) IVD, kit, enzyme immunoassay (EIA)	Центромер уургийн эсрэгбие (anti-CENP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to centromere protein (anti-CENP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8741	54891	Centromere protein antibody (anti-CENP) IVD, reagent	Центромер уургийн эсрэгбие (anti-CENP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to centromere protein (anti-CENP) in a clinical specimen.	B
8742	54892	Circulating immune complex (CIC) IVD, kit, fluorescent immunoassay	Цусны эргэлтийн дархлааны цогцолбор (CIC) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of circulating immune complexes (CIC) in a clinical specimen, using a fluorescent immunoassay method.	B
8743	54893	Non-specific circulating immune complex (CIC) IVD, kit, enzyme immunoassay (EIA)	Өвөрмөц бус эргэлтийн дархлааны цогцолбор (CIC) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative non-specific detection of circulating immune complexes (CIC) in a clinical specimen (i.e., no antibody variable region binding and no specific disease/infection identification), using an enzyme immunoassay (EIA) method.	B
8744	54894	Circulating immune complex (CIC) IVD, reagent	Цусны эргэлтийн дархлааны цогцолбор (CIC) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of circulating immune complexes (CIC) in a clinical specimen.	B

8745	54895	Cyclic citrullinated peptide antibody (anti-CCP) IVD, kit, fluorescent immunoassay	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide antibody (anti-CCP) in a clinical specimen, using a fluorescent immunoassay method.	B
8746	54896	Cyclic citrullinated peptide antibody (anti-CCP) IVD, kit, enzyme immunoassay (EIA)	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide antibody (CCP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8747	54898	Cyclic citrullinated peptide antibody (anti-CCP) IVD, calibrator	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide (CCP) in a clinical specimen.	B
8748	54899	Cyclic citrullinated peptide antibody (anti-CCP) IVD, control	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide (CCP) in a clinical specimen.	B
8749	54900	Cyclic citrullinated peptide antibody (anti-CCP) IVD, reagent	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide (CCP) in a clinical specimen.	B
8750	54901	Double stranded DNA antibody (anti-dsDNA) IVD, kit, fluorescent immunoassay	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen, using a fluorescent immunoassay method.	B

8751	54902	Double stranded DNA antibody (anti-dsDNA) IVD, kit, enzyme immunoassay (EIA)	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8752	54904	Double stranded DNA antibody (anti-dsDNA) IVD, reagent	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen.	B
8753	54905	Endomysium antibody (EMA) IVD, kit, fluorescent immunoassay	Endomysium эсрэгбие (EMA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-endomysial antibodies (anti-EMA) in a clinical specimen, using a fluorescent immunoassay method.	B
8754	54906	Endomysium antibody (EMA) IVD, kit, enzyme immunoassay (EIA)	Endomysium эсрэгбие (EMA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-endomysial antibodies (anti-EMA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8755	54907	Endomysium antibody (EMA) IVD, calibrator	Endomysium эсрэгбие (EMA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-endomysial antibodies (anti-EMA) in a clinical specimen.	B
8756	54908	Endomysium antibody (EMA) IVD, control	Endomysium эсрэгбие (EMA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-endomysial antibodies (anti-EMA) in a clinical specimen.	B
8757	54909	Endomysium antibody (EMA) IVD, reagent	Endomysium эсрэгбие (EMA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-endomysial antibodies (anti-EMA) in a clinical specimen.	B
8758	54910	F-Actin antibody IVD, kit, enzyme immunoassay (EIA)	F-Актины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to F-actin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8759	54912	F-Actin antibody IVD, calibrator	F-Актины эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to F-actin in a clinical specimen.	B
8760	54913	F-Actin antibody IVD, control	F-Актины эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to F-actin in a clinical specimen.	B
8761	54914	F-Actin antibody IVD, reagent	F-Актины эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to F-actin in a clinical specimen.	B
8762	54915	Glutamic acid decarboxylase antibody (anti-GAD) IVD, kit, fluorescent immunoassay	Глутамины хүчлийн декарбоксилазын эсрэгбие (anti-GAD) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen, using a fluorescent immunoassay method. It is typically used as a predictive marker for the progression of autoimmune diabetes and the eventual onset of insulin-dependent diabetes mellitus.	B
8763	54916	Glutamic acid decarboxylase antibody (anti-GAD) IVD, kit, enzyme immunoassay (EIA)	Глутамины хүчлийн декарбоксилазын эсрэгбие (anti-GAD) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a predictive marker for the progression of autoimmune diabetes and the eventual onset of insulin-dependent diabetes mellitus.	B
8764	54917	Glutamic acid decarboxylase antibody (anti-GAD) IVD, kit, radioimmunoassay	Глутамины хүчил декарбоксилазын эсрэгбие (anti-GAD) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen, using a radioimmunoassay method. It is typically used as a predictive marker for the progression of autoimmune diabetes and the eventual onset of insulin-dependent diabetes mellitus.	B
8765	54919	Glutamic acid decarboxylase antibody (anti-GAD) IVD, calibrator	Глутамины хүчил декарбоксилазын эсрэгбие (anti-GAD) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen.	B

8766	54920	Glutamic acid decarboxylase antibody (anti-GAD) IVD, control	Глутамины хүчил декарбоксилазын эсрэгбие (anti-GAD) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen.	B
8767	54921	Glutamic acid decarboxylase antibody (anti-GAD) IVD, reagent	Глутамины хүчил декарбоксилазын эсрэгбие (anti-GAD) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen.	B
8768	54922	Gal (beta-1-3) antibody (anti-Gal) IVD, kit, fluorescent immunoassay	Гал (бета-1-3) эсрэгбие (анти-Гал) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Gal (beta-1-3) antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8769	54923	Gal (beta-1-3) antibody (anti-Gal) IVD, kit, enzyme immunoassay (EIA)	Гал (бета-1-3) эсрэгбие (анти-Гал) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Gal (beta-1-3) antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8770	54924	Gal (beta-1-3) antibody (anti-Gal) IVD, calibrator	Гал (бета-1-3) эсрэгбие (анти-Гал) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Gal (beta-1-3) antibodies in a clinical specimen.	B
8771	54925	Gal (beta-1-3) antibody (anti-Gal) IVD, control	Гал (бета-1-3) эсрэгбие (анти-Гал) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Gal (beta-1-3) antibodies in a clinical specimen.	B
8772	54926	Gal (beta-1-3) antibody (anti-Gal) IVD, reagent	Гал (бета-1-3) эсрэгбие (анти-Гал) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Gal (beta-1-3) antibodies in a clinical specimen.	B
8773	54927	N-acetyl galactosamine antibody (anti-GalNAc) IVD, kit, fluorescent immunoassay	N-ацетил галактозамин эсрэгбие (anti-GalNAc) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to N-acetyl galactosamine (anti-GalNAc) in a clinical specimen, using a fluorescent immunoassay method.	B

8774	54928	N-acetyl galactosamine antibody (anti-GalNAc) IVD, kit, enzyme immunoassay (EIA)	N-ацетил галактозамин эсрэгбие (anti-GalNAc) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to N-acetyl galactosamine (anti-GalNAc) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8775	54929	N-acetyl galactosamine antibody (anti-GalNAc) IVD, calibrator	N-ацетил галактозамин эсрэгбие (anti-GalNAc) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to N-acetyl galactosamine (anti-GalNAc) in a clinical specimen.	B
8776	54930	N-acetyl galactosamine antibody (anti-GalNAc) IVD, control	N-ацетил галактозамин эсрэгбие (anti-GalNAc) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to N-acetyl galactosamine (anti-GalNAc) in a clinical specimen.	B
8777	54931	N-acetyl galactosamine antibody (anti-GalNAc) IVD, reagent	N-ацетил галактозамин эсрэгбие (anti-GalNAc) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to N-acetyl galactosamine (anti-GalNAc) in a clinical specimen.	B
8778	54932	Ganglioside total antibody IVD, kit, fluorescent immunoassay	Ганглиозидын нийт эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total anti-ganglioside antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8779	54933	Ganglioside total antibody IVD, kit, enzyme immunoassay (EIA)	Ганглиозидын нийт эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total anti-ganglioside antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8780	54934	Ganglioside total antibody IVD, reagent	Ганглиозидын нийт эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total anti-ganglioside antibodies in a clinical specimen.	B
8781	54935	Ganglioside GD1b antibody (anti-GD1b) IVD, kit, fluorescent immunoassay	Ганглиозидын GD1b эсрэгбие (anti-GD1b) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GD1b (anti-GD1b) in a clinical specimen, using a fluorescent immunoassay method.	B

8782	54936	Ganglioside GD1b antibody (anti-GD1b) IVD, kit, enzyme immunoassay (EIA)	Ганглиозидын GD1b эсрэгбие (anti-GD1b) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GD1b (anti-GD1b) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8783	54937	Ganglioside GD1b antibody (anti-GD1b) IVD, reagent	Ганглиозидын GD1b эсрэгбие (anti-GD1b) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to ganglioside GD1b (anti-GD1b) in a clinical specimen.	B
8784	54938	Ganglioside GM1 antibody (anti-GM1) IVD, kit, fluorescent immunoassay	Ганглиозид GM1 эсрэгбие (anti-GM1) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GM1 (anti-GM1) in a clinical specimen, using a fluorescent immunoassay method.	B
8785	54939	Ganglioside GM1 antibody (anti-GM1) IVD, kit, enzyme immunoassay (EIA)	Ганглиозид GM1 эсрэгбие (anti-GM1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GM1 (anti-GM1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8786	54940	Ganglioside GM1 antibody (anti-GM1) IVD, reagent	Ганглиозид GM1 эсрэгбие (anti-GM1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to ganglioside GM1 (anti-GM1) in a clinical specimen.	B
8787	54941	Ganglioside GQ1 antibody (anti-GQ1) IVD, kit, fluorescent immunoassay	Ганглиозид GQ1 эсрэгбие (anti-GQ1) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GQ1 (anti-GQ1) in a clinical specimen, using a fluorescent immunoassay method.	B
8788	54942	Ganglioside GQ1 antibody (anti-GQ1) IVD, kit, enzyme immunoassay (EIA)	Ганглиозид GQ1 эсрэгбие (anti-GQ1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GQ1 (anti-GQ1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8789	54943	Ganglioside GQ1 antibody (anti-GQ1) IVD, calibrator	Ганглиозидын GQ1 эсрэгбие (anti-GQ1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GQ1 (anti-GQ1) in a clinical specimen.	B
8790	54944	Ganglioside GQ1 antibody (anti-GQ1) IVD, control	Ганглиозид GQ1 эсрэгбие (anti-GQ1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ganglioside GQ1 (anti-GQ1) in a clinical specimen.	B
8791	54945	Ganglioside GQ1 antibody (anti-GQ1) IVD, reagent	Ганглиозидын GQ1 эсрэгбие (anti-GQ1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to ganglioside GQ1 (anti-GQ1) in a clinical specimen.	B
8792	54946	Gliadin antibody IVD, kit, fluorescent immunoassay	Глиадин эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen, using a fluorescent immunoassay method. This test is intended to be used as an aid in the diagnosis of Coeliac disease.	B
8793	54947	Gliadin antibody IVD, kit, enzyme immunoassay (EIA)	Глиадин эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is intended to be used as an aid in the diagnosis of Coeliac disease.	B
8794	54948	Gliadin antibody IVD, kit, chemiluminescent immunoassay	Глиадин эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen, using a chemiluminescent immunoassay method. This test is intended to be used as an aid in the diagnosis of Coeliac disease.	B
8795	54950	Gliadin antibody IVD, reagent	Глиадин эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-gliadin antibodies in a clinical specimen.	B

8796	54951	Glomerular basement membrane antibody (Goodpasture antibody) IVD, kit, fluorescent immunoassay	Гломеруляр суурийн мембраны эсрэгбие (Сайн бэлчээрийн эсрэгбие) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen using a fluorescent immunoassay method.	B
8797	54952	Glomerular basement membrane antibody (Goodpasture antibody) IVD, kit, enzyme immunoassay (EIA)	Гломеруляр суурийн мембраны эсрэгбие (Бэлчээрийн эсрэгбие) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
8798	54954	Glomerular basement membrane antibody (Goodpasture antibody) IVD, calibrator	Гломеруляр суурийн мембраны эсрэгбие (Сайн бэлчээрийн эсрэгбие) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen.	B
8799	54955	Glomerular basement membrane antibody (Goodpasture antibody) IVD, control	Гломеруляр суурийн мембраны эсрэгбие (Сайн бэлчээрийн эсрэгбие) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen.	B
8800	54956	Glomerular basement membrane antibody (Goodpasture antibody) IVD, reagent	Гломеруляр суурийн мембраны эсрэгбие (Сайн бэлчээрийн эсрэгбие) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen.	B
8801	54958	Glycoprotein-210 (gp210) antibody IVD, calibrator	Гликопротейн-210 (gp210) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-glycoprotein-210 antibodies in a clinical specimen.	B
8802	54959	Glycoprotein-210 (gp210) antibody IVD, control	Гликопротейн-210 (gp210) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-glycoprotein-210 antibodies in a clinical specimen.	B

8803	54960	Glycoprotein-210 (gp210) antibody IVD, reagent	Гликопротейн-210 (gp210) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-glycoprotein-210 antibodies in a clinical specimen.	B
8804	54961	Growth hormone antibody IVD, kit, fluorescent immunoassay	Өсөлтийн дааврын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to growth hormone in a clinical specimen, using a fluorescent immunoassay method.	B
8805	54962	Growth hormone antibody IVD, kit, enzyme immunoassay (EIA)	Өсөлтийн дааврын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to growth hormone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8806	54963	Growth hormone antibody IVD, calibrator	Өсөлтийн даавар эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to growth hormone in a clinical specimen.	B
8807	54964	Growth hormone antibody IVD, control	Өсөлтийн даавар эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to growth hormone in a clinical specimen.	B
8808	54965	Growth hormone antibody IVD, reagent	Өсөлтийн даавар эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to growth hormone in a clinical specimen.	B
8809	54966	Histone antibody IVD, kit, fluorescent immunoassay	Гистоны эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen, using a fluorescent immunoassay method.	B
8810	54967	Histone antibody IVD, kit, enzyme immunoassay (EIA)	Гистоны эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8811	54969	Histone antibody IVD, reagent	Гистоны эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen.	B
8812	54970	Hu antibody (anti-Hu) IVD, kit, fluorescent immunoassay	Ху эсрэгбие (anti-Hu) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Hu antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8813	54971	Hu antibody (anti-Hu) IVD, kit, enzyme immunoassay (EIA)	Ху эсрэгбие (anti-Hu) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Hu antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8814	54972	Hu antibody (anti-Hu) IVD, reagent	Ху эсрэгбие (anti-Hu) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Hu antibodies in a clinical specimen.	B
8815	54973	Immunoglobulin A antibody (anti-IgA) IVD, kit, fluorescent immunoassay	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen, using a fluorescent immunoassay method.	B
8816	54974	Immunoglobulin A antibody (anti-IgA) IVD, kit, enzyme immunoassay (EIA)	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8817	54975	Immunoglobulin A antibody (anti-IgA) IVD, kit, chemiluminescent immunoassay	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
8818	54977	Immunoglobulin A antibody (anti-IgA) IVD, calibrator	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen.	B

8819	54978	Immunoglobulin A antibody (anti-IgA) IVD, control	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen.	B
8820	54979	Immunoglobulin A antibody (anti-IgA) IVD, reagent	Иммуноглобулин А эсрэгбие (anti-IgA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to Immunoglobulin A (anti-IgA) in a clinical specimen.	B
8821	54980	Insulin antibody IVD, kit, fluorescent immunoassay	Инсулины эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen, using a fluorescent immunoassay method.	B
8822	54981	Insulin antibody IVD, kit, enzyme immunoassay (EIA)	Инсулины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8823	54982	Insulin antibody IVD, kit, chemiluminescent immunoassay	Инсулины эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen, using a chemiluminescent immunoassay method.	B
8824	54984	Insulin antibody IVD, reagent	Инсулины эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen.	B
8825	54986	Intrinsic factor/parietal cell antibody IVD, kit, enzyme immunoassay (EIA)	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of conditions associated with deficiencies in intrinsic factor and/or parietal cell function/production such as autoimmune gastric disorders (e.g., pernicious anaemia, chronic atrophic gastritis), funicular myelosis, and various autoimmune endocrinopathies.	B

8826	54988	Intrinsic factor/parietal cell antibody IVD, calibrator	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen.	B
8827	54991	Islet cell antibody IVD, kit, fluorescent immunoassay	Арлын эсийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen, using a fluorescent immunoassay method.	B
8828	54992	Islet cell antibody IVD, kit, enzyme immunoassay (EIA)	Арлын эсийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8829	54994	Islet cell antibody IVD, kit, radioimmunoassay	Арлын эсийн эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen, using a radioimmunoassay method.	B
8830	54995	Islet cell antibody IVD, calibrator	Арлын эсийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen.	B
8831	54996	Islet cell antibody IVD, control	Арлын эсийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen.	B
8832	54997	Islet cell antibody IVD, reagent	Арлын эсийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen.	B
8833	54998	Islet cell antibody 512 (anti-ICA512) IVD, kit, fluorescent immunoassay	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen, using a fluorescent immunoassay method.	B

8834	54999	Islet cell antibody 512 (anti-ICA512) IVD, kit, enzyme immunoassay (EIA)	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8835	55000	Islet cell antibody 512 (anti-ICA512) IVD, kit, radioimmunoassay	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen, using a radioimmunoassay method.	B
8836	55001	Islet cell antibody 512 (anti-ICA512) IVD, calibrator	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen.	B
8837	55002	Islet cell antibody 512 (anti-ICA512) IVD, control	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen.	B
8838	55003	Islet cell antibody 512 (anti-ICA512) IVD, reagent	Арлын эсийн эсрэгбие 512 (ICA512-ын эсрэг) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to islet cell antigen ICA512 in a clinical specimen.	B
8839	55004	Jo-1 antibody IVD, kit, fluorescent immunoassay	Jo-1 эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8840	55005	Jo-1 antibody IVD, kit, enzyme immunoassay (EIA)	Jo-1 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8841	55006	Jo-1 antibody IVD, reagent	Жо-1 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen.	B

8842	55007	Ku antibody (anti-Ku) IVD, kit, enzyme immunoassay (EIA)	Ku эсрэгбие (anti-Ku) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Ku antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8843	55009	Ku antibody (anti-Ku) IVD, calibrator	Ku эсрэгбие (anti-Ku) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Ku antibodies in a clinical specimen.	B
8844	55010	Ku antibody (anti-Ku) IVD, control	Ku эсрэгбие (anti-Ku) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Ku antibodies in a clinical specimen.	B
8845	55011	Ku antibody (anti-Ku) IVD, reagent	Ku эсрэгбие (anti-Ku) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Ku antibodies in a clinical specimen.	B
8846	55012	Lamin B receptor antibody (anti-LBR) IVD, kit, enzyme immunoassay (EIA)	Ламин В рецепторын эсрэгбие (anti-LBR) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Lamin B Receptor (anti-LBR) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8847	55014	Lamin B receptor antibody (anti-LBR) IVD, calibrator	Ламин В рецепторын эсрэгбие (эсрэг LBR) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Lamin B Receptor (anti-LBR) in a clinical specimen.	B
8848	55015	Lamin B receptor antibody (anti-LBR) IVD, control	Ламин В рецепторын эсрэгбие (эсрэг LBR) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Lamin B Receptor (anti-LBR) in a clinical specimen.	B
8849	55016	Lamin B receptor antibody (anti-LBR) IVD, reagent	Ламин В рецепторын эсрэгбие (эсрэг LBR) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to Lamin B Receptor (anti-LBR) in a clinical specimen.	B

8850	55017	LDL (low density lipoprotein) antibody (anti-LDL) IVD, kit, fluorescent immunoassay	LDL (бага нягтралтай липопротейн) эсрэгбие (anti-LDL) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to low density lipoprotein (anti-LDL) in a clinical specimen, using a fluorescent immunoassay method.	B
8851	55018	LDL (low density lipoprotein) antibody (anti-LDL) IVD, kit, enzyme immunoassay (EIA)	LDL (бага нягтралтай липопротейн) эсрэгбие (anti-LDL) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to low density lipoprotein (anti-LDL) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8852	55019	LDL (low density lipoprotein) antibody (anti-LDL) IVD, calibrator	LDL (бага нягтралтай липопротейн) эсрэгбие (anti-LDL) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to low density lipoprotein (anti-LDL) in a clinical specimen.	B
8853	55020	LDL (low density lipoprotein) antibody (anti-LDL) IVD, control	LDL (бага нягтралтай липопротейн) эсрэгбие (anti-LDL) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to low density lipoprotein (anti-LDL) in a clinical specimen.	B
8854	55021	LDL (low density lipoprotein) antibody (anti-LDL) IVD, reagent	LDL (бага нягтралтай липопротейн) эсрэгбие (anti-LDL) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to low density lipoprotein (anti-LDL) in a clinical specimen.	B
8855	55022	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, kit, fluorescent immunoassay	Элэг-бөөрний микросом 1-ийн эсрэгбие (LKM1-ийн эсрэг) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen, using a fluorescent immunoassay method.	B

8856	55023	Liver cytosol-specific antibody type 1 (anti-LC1) IVD, kit, enzyme immunoassay (EIA)	Элэгний цитозолын өвөрмөц эсрэгбие 1-р төрлийн (anti-LC1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-liver cytosol specific antibody type 1 (anti-LC1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8857	55024	Liver cytosol-specific antibody type 1 (anti-LC1) IVD, kit, mulitplex	Элэгний цитозолын өвөрмөц эсрэгбие 1-р (эсрэг LC1) IVD, иж бүрдэл, мулитплекс	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-liver cytosol specific antibody type 1 (anti-LC1) in a clinical specimen, using a mulitplex method.	B
8858	55025	Liver cytosol-specific antibody type 1 (anti-LC1) IVD, calibrator	Элэгний цитозолын өвөрмөц эсрэгбие 1-р (эсрэг LC1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-liver cytosol specific antibody type 1 (anti-LC1) in a clinical specimen.	B
8859	55026	Liver cytosol-specific antibody type 1 (anti-LC1) IVD, control	Элэгний цитозол өвөрмөц эсрэгбие 1 төрлийн (эсрэг LC1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-liver cytosol specific antibody type 1 (anti-LC1) in a clinical specimen.	B
8860	55027	Liver cytosol-specific antibody type 1 (anti-LC1) IVD, reagent	Элэгний цитозолын өвөрмөц эсрэгбие 1-р төрлийн (anti-LC1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-liver cytosol specific antibody type 1 (anti-LC1) in a clinical specimen.	B
8861	55028	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, kit, enzyme immunoassay (EIA)	Элэг-бөөрний микросом 1-ийн эсрэгбие (эсрэг LKM1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8862	55029	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, kit, mulitplex	Элэг-бөөрний микросом 1 эсрэгбие (эсрэг LKM1) IVD, иж бүрдэл, мулитплекс	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen, using a mulitplex method.	B

8863	55030	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, reagent	Элэг-бөөрний микросом 1 эсрэгбие (эсрэг LKM1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen.	B
8864	55031	Mitochondrial antibody M2 (anti-Mi2) IVD, kit, fluorescent immunoassay	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen, using a fluorescent immunoassay method.	B
8865	55032	Mitochondrial antibody M2 (anti-Mi2) IVD, kit, enzyme immunoassay (EIA)	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8866	55034	Mitochondrial antibody M2 (anti-Mi2) IVD, calibrator	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen.	B
8867	55035	Mitochondrial antibody M2 (anti-Mi2) IVD, control	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen.	B
8868	55036	Mitochondrial antibody M2 (anti-Mi2) IVD, reagent	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen.	B
8869	55037	Myelin-associated glycoprotein antibody (anti-MAG) IVD, fluorescent immunoassay	Миелинтэй холбоотой гликопротеины эсрэгбие (anti-MAG) IVD, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to myelin associated glycoprotein (anti-MAG) in a clinical specimen, using a fluorescent immunoassay method.	B

8870	55038	Myelin-associated glycoprotein antibody (anti-MAG) IVD, kit, enzyme immunoassay (EIA)	Миелинтэй холбоотой гликопротейн эсрэгбие (anti-MAG) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to myelin associated glycoprotein (anti-MAG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8871	55039	Myelin-associated glycoprotein antibody (anti-MAG) IVD, reagent	Миелинтэй холбоотой гликопротеины эсрэгбие (anti-MAG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to myelin associated glycoprotein (anti-MAG) in a clinical specimen.	B
8872	55041	Multiple myocardium antibody IVD, kit, enzyme immunoassay (EIA)	Олон миокардийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies specific to heart muscle tissue (cardiac muscle) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the diagnosis of autoimmune disorders that affect the heart such as myasthenia gravis (MG).	B
8873	55042	Multiple myocardium antibody IVD, calibrator	Олон миокардийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple antibodies specific to heart muscle tissue (cardiac muscle) in a clinical specimen.	B
8874	55043	Multiple myocardium antibody IVD, control	Олон миокардийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple antibodies specific to heart muscle tissue (cardiac muscle) in a clinical specimen.	B
8875	55044	Multiple myocardium antibody IVD, reagent	Олон миокардийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple antibodies specific to heart muscle tissue (cardiac muscle) in a clinical specimen.	B
8876	55045	Native DNA antibody (anti-nDNA) IVD, kit, fluorescent immunoassay	Төрөлхийн ДНХ-ийн эсрэгбие (anti-nDNA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to native DNA (anti-nDNA) in a clinical specimen, using a fluorescent immunoassay method.	B

8877	55046	Native DNA antibody (anti-nDNA) IVD, kit, enzyme immunoassay (EIA)	Төрөлхийн ДНХ-ийн эсрэгбие (anti-nDNA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to native DNA (anti-nDNA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8878	55047	Native DNA antibody (anti-nDNA) IVD, calibrator	Төрөлхийн ДНХ-ийн эсрэгбие (anti-nDNA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to native DNA (anti-nDNA) in a clinical specimen.	B
8879	55048	Native DNA antibody (anti-nDNA) IVD, control	Төрөлхийн ДНХ-ийн эсрэгбие (anti-nDNA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to native DNA (anti-nDNA) in a clinical specimen.	B
8880	55049	Native DNA antibody (anti-nDNA) IVD, reagent	Төрөлхийн ДНХ-ийн эсрэгбие (anti-nDNA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to native DNA (anti-nDNA) in a clinical specimen.	B
8881	55050	Nuclear pore glycoprotein 210 (gp210) antibody IVD, kit, enzyme immunoassay (EIA)	Цөмийн нүх сүвний гликопротейн 210 (gp210) эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to nuclear pore glycoprotein 210 (gp210) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8882	55052	Nuclear pore glycoprotein 210 (gp210) antibody IVD, calibrator	Цөмийн нүхний гликопротейн 210 (gp210) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to nuclear pore glycoprotein 210 (gp210) in a clinical specimen.	B
8883	55053	Nuclear pore glycoprotein 210 (gp210) antibody IVD, control	Цөмийн нүхний гликопротейн 210 (gp210) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to nuclear pore glycoprotein 210 (gp210) in a clinical specimen.	B
8884	55054	Nuclear pore glycoprotein 210 (gp210) antibody IVD, reagent	Цөмийн нүхний гликопротейн 210 (gp210) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to nuclear pore glycoprotein 210 (gp210) in a clinical specimen.	B

8885	55055	Nucleosomal antibody IVD, kit, fluorescent immunoassay	Нуклеосомын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis and monitoring of systemic lupus erythematosus (SLE) or lupus nephritis.	B
8886	55056	Nucleosomal antibody IVD, kit, enzyme immunoassay (EIA)	Нуклеосомын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis and monitoring of systemic lupus erythematosus (SLE) or lupus nephritis.	B
8887	55058	Nucleosomal antibody IVD, calibrator	Нуклеосомын эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen.	B
8888	55059	Nucleosomal antibody IVD, control	Нуклеосомын эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen.	B
8889	55060	Nucleosomal antibody IVD, reagent	Нуклеосомын эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen.	B
8890	55061	Multiple anti-neutrophil cytoplasmic antibody (ANCA) IVD, kit, fluorescent immunoassay	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие (ANCA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) in a clinical specimen, using a fluorescent immunoassay method.	B

8891	55062	Multiple anti-neutrophil cytoplasmic antibody (ANCA) IVD, kit, enzyme immunoassay (EIA)	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие (ANCA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8892	55064	Multiple anti-neutrophil cytoplasmic antibody (ANCA) IVD, calibrator	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие (ANCA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) in a clinical specimen.	B
8893	55065	Multiple anti-neutrophil cytoplasmic antibody (ANCA) IVD, control	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие (ANCA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) in a clinical specimen.	B
8894	55066	Multiple anti-neutrophil cytoplasmic antibody (ANCA) IVD, reagent	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие (ANCA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) in a clinical specimen.	B
8895	55067	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, kit, fluorescent immunoassay	Миелопероксидазын эсрэг нейтрофил цитоплазмын эсрэгбие (MPO-ANCA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen, using a fluorescent immunoassay method.	B
8896	55068	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, kit, enzyme immunoassay (EIA)	Миелопероксидазын эсрэг нейтрофилын цитоплазмын эсрэгбие (MPO-ANCA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8897	55070	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, reagent	Миелопероксидазын эсрэг нейтрофил цитоплазмын эсрэгбие (MPO-ANCA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen.	B
8898	55071	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, kit, fluorescent immunoassay	Протеиназа 3 антинейтрофил цитоплазмын эсрэгбие (PR3-ANCA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase 3 (PR3) in a clinical specimen, using a fluorescent immunoassay method.	B
8899	55072	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, kit, enzyme immunoassay (EIA)	Протеиназа 3-н нейтрофилын эсрэг цитоплазмын эсрэгбие (PR3-ANCA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase 3 (PR3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8900	55074	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, reagent	Протеиназа 3 антинейтрофил цитоплазмын эсрэгбие (PR3-ANCA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase 3 (PR3) in a clinical specimen.	B
8901	55075	Intrinsic factor/parietal cell antibody IVD, kit, fluorescent immunoassay	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of conditions associated with deficiencies in intrinsic factor and/or parietal cell function/production such as autoimmune gastric disorders (e.g., pernicious anaemia, chronic atrophic gastritis), funicular myelosis, and various autoimmune endocrinopathies.	B
8902	55079	Intrinsic factor/parietal cell antibody IVD, control	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen.	B

8903	55080	Intrinsic factor/parietal cell antibody IVD, reagent	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen.	B
8904	55081	Phosphatidylserine antibody IVD, kit, fluorescent immunoassay	Фосфатидилсериний эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antiphosphatidylserine antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8905	55082	Phosphatidylserine antibody IVD, kit, enzyme immunoassay (EIA)	Фосфатидилсериний эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antiphosphatidylserine antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8906	55083	Phosphatidylserine antibody IVD, reagent	Фосфатидилсериний эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antiphosphatidylserine antibodies in a clinical specimen.	B
8907	55084	Phospholipid antibody IVD, kit, fluorescent immunoassay	Фосфолипидын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple antiphospholipid antibodies associated with antiphospholipid syndrome, in a clinical specimen, using a fluorescent immunoassay method.	B
8908	55085	Phospholipid antibody IVD, kit, enzyme immunoassay (EIA)	Фосфолипидын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple antiphospholipid antibodies associated with antiphospholipid syndrome, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8909	55087	Phospholipid antibody IVD, reagent	Фосфолипидын эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple antiphospholipid antibodies associated with antiphospholipid syndrome in a clinical specimen.	B

8910	55088	Prothrombin antibody (anti-prothrombin) IVD, kit, enzyme immunoassay (EIA)	Протромбины эсрэгбие (протромбины эсрэг) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antiprothrombin antibodies associated with antiphospholipid syndrome, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8911	55090	Prothrombin antibody (anti-prothrombin) IVD, calibrator	Протромбины эсрэгбие (протромбины эсрэг) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antiprothrombin antibodies associated with antiphospholipid syndrome in a clinical specimen.	B
8912	55091	Prothrombin antibody (anti-prothrombin) IVD, control	Протромбины эсрэгбие (протромбины эсрэг) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antiprothrombin antibodies associated with antiphospholipid syndrome in a clinical specimen.	B
8913	55092	Prothrombin antibody (anti-prothrombin) IVD, reagent	Протромбины эсрэгбие (протромбины эсрэг) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antiprothrombin antibodies associated with antiphospholipid syndrome in a clinical specimen.	B
8914	55093	Proliferating cell nuclear antigen (PCNA) antibody IVD, kit, enzyme immunoassay (EIA)	Үрждэг эсийн цөмийн эсрэгтөрөгч (PCNA) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to proliferating cell nuclear antigen (PCNA) protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8915	55095	Proliferating cell nuclear antigen (PCNA) antibody IVD, kit, precipitation/immunodiffusion	Үрждэг эсийн цөмийн эсрэгтөрөгч (PCNA) эсрэгбие IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to proliferating cell nuclear antigen (PCNA) protein in a clinical specimen, using a precipitation/immunodiffusion method.	B

8916	55096	Proliferating cell nuclear antigen (PCNA) antibody IVD, calibrator	Үрждэг эсийн цөмийн эсрэгтөрөгч (PCNA) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to proliferating cell nuclear antigen (PCNA) protein in a clinical specimen.	B
8917	55097	Proliferating cell nuclear antigen (PCNA) antibody IVD, control	Үрждэг эсийн цөмийн эсрэгтөрөгч (PCNA) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to proliferating cell nuclear antigen (PCNA) protein in a clinical specimen.	B
8918	55098	Proliferating cell nuclear antigen (PCNA) antibody IVD, reagent	Үрждэг эсийн цөмийн эсрэгтөрөгч (PCNA) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to proliferating cell nuclear antigen (PCNA) protein in a clinical specimen.	B
8919	55099	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, kit, fluorescent immunoassay	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen, using a fluorescent immunoassay method.	B
8920	55100	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, kit, enzyme immunoassay (EIA)	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8921	55101	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, reagent	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen.	B
8922	55102	RA33 (anti-RA33) antibody IVD, kit, enzyme immunoassay (EIA)	RA33 (anti-RA33) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-RA33 antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8923	55104	RA33 (anti-RA33) antibody IVD, calibrator	RA33 (anti-RA33) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-RA33 antibodies in a clinical specimen.	B
8924	55105	RA33 (anti-RA33) antibody IVD, control	RA33 (anti-RA33) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-RA33 antibodies in a clinical specimen.	B
8925	55106	RA33 (anti-RA33) antibody IVD, reagent	RA33 (anti-RA33) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-RA33 antibodies in a clinical specimen.	B
8926	55107	Rheumatoid factor IVD, kit, enzyme immunoassay (EIA)	Ревматоид хүчин зүйл IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8927	55109	Rheumatoid factor IVD, kit, fluorescent immunoassay	Ревматоид хүчин зүйл IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen, using a fluorescent immunoassay method.	B
8928	55110	Rheumatoid factor IVD, kit, chemiluminescent immunoassay	Ревматоид хүчин зүйл IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen, using a chemiluminescent immunoassay method.	B
8929	55111	Rheumatoid factor IVD, kit, nephelometry/turbidimetry	Ревматоид хүчин зүйл IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen, using a nephelometry/turbidimetry method.	B
8930	55112	Rheumatoid factor IVD, kit, agglutination	Ревматоид хүчин зүйл IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen, using an agglutination method.	B
8931	55113	Rheumatoid factor IVD, reagent	Ревматоид хүчин зүйл IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen.	B

8932	55114	Ri antibody (anti-Ri) IVD, kit, fluorescent immunoassay	Ri эсрэгбие (anti-Ri) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Ri antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8933	55115	Ri antibody (anti-Ri) IVD, kit, enzyme immunoassay (EIA)	Ri эсрэгбие (anti-Ri) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Ri antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8934	55116	Ri antibody (anti-Ri) IVD, reagent	Ri эсрэгбие (anti-Ri) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Ri antibodies in a clinical specimen.	B
8935	55117	Ribosomal phosphoprotein antibody IVD, kit, fluorescent immunoassay	Рибосомын фосфопротеины эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen, using a fluorescent immunoassay method.	B
8936	55118	Ribosomal phosphoprotein antibody IVD, kit, enzyme immunoassay (EIA)	Рибосомын фосфопротеины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8937	55119	Ribosomal phosphoprotein antibody IVD, reagent	Рибосомын фосфопротеины эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen.	B
8938	55121	Ro52 antibody (anti-Ro52)/Trim21 antibody IVD, kit, enzyme immunoassay (EIA)	Ro52 эсрэгбие (anti-Ro52)/Trim21 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Ro52 antibodies, also known as Trim21 antibodies, in a clinical specimen using an enzyme immunoassay (EIA) method.	B

8939	55122	Ro52 antibody (anti-Ro52)/Trim21 antibody IVD, calibrator	Ro52 эсрэгбие (anti-Ro52)/Trim21 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-Ro52 antibodies, also known as Trim21antibodies in a clinical specimen.	B
8940	55123	Ro52 antibody (anti-Ro52)/Trim21 antibody IVD, control	Ro52 эсрэгбие (anti-Ro52)/Trim21 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-Ro52 antibodies, also known as Trim21 antibodies, in a clinical specimen.	B
8941	55124	Ro52 antibody (anti-Ro52)/Trim21 antibody IVD, reagent	Ro52 эсрэгбие (anti-Ro52)/Trim21 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Ro52 antibodies, also known as Trim21 antibodies, in a clinical specimen.	B
8942	55125	Scleroderma-70 antibody (anti-Scl-70) IVD, kit, fluorescent immunoassay	Scleroderma-70 эсрэгбие (anti-Scl-70) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen, using a fluorescent immunoassay method.	B
8943	55126	Scleroderma-70 antibody (anti-Scl-70) IVD, kit, enzyme immunoassay (EIA)	Склеродерма-70 эсрэгбие (эсрэг Scl-70) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8944	55127	Scleroderma-70 antibody (anti-Scl-70) IVD, reagent	Склеродерма-70 эсрэгбие (эсрэг Scl-70) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen.	B
8945	55128	SSA/Ro antibody (Sjogren's antibody) IVD, kit, fluorescent immunoassay	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen, using a fluorescent immunoassay method.	B

8946	55129	SSA/Ro antibody (Sjogren's antibody) IVD, kit, enzyme immunoassay (EIA)	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8947	55130	SSA/Ro antibody (Sjogren's antibody) IVD, reagent	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen.	B
8948	55131	SSB/La antibody (Sjogren's antibody) IVD, kit, fluorescent immunoassay	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen, using a fluorescent immunoassay method.	B
8949	55132	SSB/La antibody (Sjogren's antibody) IVD, kit, enzyme immunoassay (EIA)	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8950	55133	SSB/La antibody (Sjogren's antibody) IVD, reagent	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen.	B
8951	55134	Skeletal muscle antibody IVD, kit, fluorescent immunoassay	Араг ясны булчингийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to skeletal muscle in a clinical specimen, using a fluorescent immunoassay method.	B

8952	55135	Skeletal muscle antibody IVD, kit, enzyme immunoassay (EIA)	Араг ясны булчингийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to skeletal muscle in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8953	55136	Skeletal muscle antibody IVD, calibrator	Араг ясны булчингийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to skeletal muscle in a clinical specimen.	B
8954	55137	Skeletal muscle antibody IVD, control	Араг ясны булчингийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to skeletal muscle in a clinical specimen.	B
8955	55138	Skeletal muscle antibody IVD, reagent	Араг ясны булчингийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to skeletal muscle in a clinical specimen.	B
8956	55139	Skin antibody IVD, kit, fluorescent immunoassay	Арьсны эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to skin in a clinical specimen, using a fluorescent immunoassay method. This test is typically used to aid the diagnosis of skin disorders (e.g., autoimmune bullous dermatoses such as pemphigus vulgaris, paraneoplastic pemphigus, or dermatitis herpetiformis); antibodies detected are typically directed at structural proteins of the skin and/or superficial mucosa (e.g., gliadin, desmoglein, collagen, endomysium).	B
8957	55140	Skin antibody IVD, kit, enzyme immunoassay (EIA)	Арьсны эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to skin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8958	55141	Skin antibody IVD, calibrator	Арьсны эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to skin in a clinical specimen.	B

8959	55142	Skin antibody IVD, control	Арьсны эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to skin in a clinical specimen.	B
8960	55143	Skin antibody IVD, reagent	Арьсны эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to skin in a clinical specimen.	B
8961	55144	Smith antibody (anti-Sm) IVD, kit, fluorescent immunoassay	Смитийн эсрэгбие (anti-Sm) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8962	55145	Smith antibody (anti-Sm) IVD, kit, enzyme immunoassay (EIA)	Смитийн эсрэгбие (anti-Sm) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8963	55146	Smith antibody (anti-Sm) IVD, reagent	Смитийн эсрэгбие (anti-Sm) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen.	B
8964	55147	Smooth muscle antibody IVD, kit, fluorescent immunoassay	Гөлгөр булчингийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to smooth muscle in a clinical specimen, using a fluorescent immunoassay method.	B
8965	55148	Smooth muscle antibody IVD, kit, enzyme immunoassay (EIA)	Гөлгөр булчингийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to smooth muscle in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8966	55150	Smooth muscle antibody IVD, reagent	Гөлгөр булчингийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to smooth muscle in a clinical specimen.	B

8967	55151	Striated muscle antibody IVD, kit, fluorescent immunoassay	Судалчлагдсан булчингийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to striated muscle in a clinical specimen, using a fluorescent immunoassay method. It is used as an aid in the diagnosis of skeletal and cardiac muscle autoimmune disorders such as myasthenia gravis (MG) and inflammatory myopathies, and various autoimmune endocrinopathies.	B
8968	55152	Striated muscle antibody IVD, kit, enzyme immunoassay (EIA)	Судалчлагдсан булчингийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to striated muscle in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of skeletal and cardiac muscle autoimmune disorders such as myasthenia gravis (MG) and inflammatory myopathies, and various autoimmune endocrinopathies.	B
8969	55153	Striated muscle antibody IVD, calibrator	Судалчлагдсан булчингийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to striated muscle in a clinical specimen.	B
8970	55154	Striated muscle antibody IVD, control	Судалчлагдсан булчингийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to striated muscle in a clinical specimen.	B
8971	55155	Striated muscle antibody IVD, reagent	Судалчлагдсан булчингийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to striated muscle in a clinical specimen.	B
8972	55156	Ribonucleoprotein antibody (anti-RNP) IVD, kit, fluorescent immunoassay	Рибонуклеопротеины эсрэгбие (anti-RNP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ribonucleoprotein (anti-RNP) in a clinical specimen, using a fluorescent immunoassay method.	B

8973	55157	Ribonucleoprotein antibody (anti-RNP) IVD, kit, enzyme immunoassay (EIA)	Рибонуклеопротеины эсрэгбие (anti-RNP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ribonucleoprotein (anti-RNP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8974	55158	Ribonucleoprotein antibody (anti-RNP) IVD, reagent	Рибонуклеопротеины эсрэгбие (anti-RNP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to ribonucleoprotein (anti-RNP) in a clinical specimen.	B
8975	55159	Sm/RNP antibody IVD, kit, fluorescent immunoassay	Sm/RNP эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen, using a fluorescent immunoassay method.	B
8976	55160	Sm/RNP antibody IVD, kit, enzyme immunoassay (EIA)	Sm/RNP эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8977	55161	Sm/RNP antibody IVD, calibrator	Sm/RNP эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen.	B
8978	55162	Sm/RNP antibody IVD, control	Sm/RNP эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen.	B
8979	55163	Sm/RNP antibody IVD, reagent	Sm/RNP эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen.	B

8980	55164	U1-RNP antibody IVD, kit, fluorescent immunoassay	U1-RNP эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen, using a fluorescent immunoassay method.	B
8981	55165	U1-RNP antibody IVD, kit, enzyme immunoassay (EIA)	U1-RNP эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8982	55166	U1-RNP antibody IVD, reagent	U1-RNP эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen.	B
8983	55167	Soluble liver antigen/liver pancreas (SLA/LP) antibody IVD, kit, fluorescent immunoassay	Элэгний уусдаг антиген/элэгний нойр булчирхай (SLA/LP) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to soluble liver antigen/liver pancreas (SLA/LP) in a clinical specimen, using a fluorescent immunoassay method. This test is typically used as an aid in the diagnosis of autoimmune hepatitis.	B
8984	55168	Soluble liver antigen/liver pancreas (SLA/LP) antibody IVD, kit, enzyme immunoassay (EIA)	Элэгний уусдаг антиген/элэгний нойр булчирхай (SLA/LP) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to soluble liver antigen/liver pancreas (SLA/LP) in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is typically used as an aid in the diagnosis of autoimmune hepatitis.	B
8985	55170	Soluble liver antigen/liver pancreas (SLA/LP) antibody IVD, calibrator	Элэгний уусдаг антиген/элэгний нойр булчирхай (SLA/LP) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to soluble liver antigen/liver pancreas (SLA/LP) in a clinical specimen.	B
8986	55171	Soluble liver antigen/liver pancreas (SLA/LP) antibody IVD, control	Элэгний уусдаг антиген/элэгний нойр булчирхай (SLA/LP) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to soluble liver antigen/liver pancreas (SLA/LP) in a clinical specimen.	B

8987	55172	Soluble liver antigen/liver pancreas (SLA/LP) antibody IVD, reagent	Элэгний уусдаг антиген/элэгний нойр булчирхай (SLA/LP) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to soluble liver antigen/liver pancreas (SLA/LP) in a clinical specimen.	B
8988	55173	Sp-100 protein antibody IVD, kit, fluorescent immunoassay	Sp-100 уургийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Sp-100 protein in a clinical specimen, using a fluorescent immunoassay method.	B
8989	55174	Sp-100 protein antibody IVD, kit, enzyme immunoassay (EIA)	Sp-100 уургийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Sp-100 protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8990	55176	Sp-100 protein antibody IVD, calibrator	Sp-100 уургийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Sp-100 protein in a clinical specimen.	B
8991	55177	Sp-100 protein antibody IVD, control	Sp-100 уургийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to Sp-100 protein in a clinical specimen.	B
8992	55178	Sp-100 protein antibody IVD, reagent	Sp-100 уургийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to Sp-100 protein in a clinical specimen.	B
8993	55179	Sperm antibody IVD, kit, fluorescent immunoassay	Спермийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-sperm antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
8994	55180	Sperm antibody IVD, kit, enzyme immunoassay (EIA)	Спермийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-sperm antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

8995	55181	Sperm antibody IVD, reagent	Спермийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-sperm antibodies in a clinical specimen.	B
8996	55182	Single stranded DNA antibody (anti-ssDNA) IVD, kit, fluorescent immunoassay	Нэг судалтай ДНХ-ийн эсрэгбие (эсрэг ssDNA) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to single stranded DNA (anti-ssDNA) in a clinical specimen, using a fluorescent immunoassay method.	B
8997	55183	Single stranded DNA antibody (anti-ssDNA) IVD, kit, enzyme immunoassay (EIA)	Нэг судалтай ДНХ-ийн эсрэгбие (эсрэг ssDNA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to single stranded DNA (anti-ssDNA) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
8998	55184	Single stranded DNA antibody (anti-ssDNA) IVD, reagent	Нэг хэлхээтэй ДНХ-ийн эсрэгбие (эсрэг ssDNA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to single stranded DNA (anti-ssDNA) in a clinical specimen.	B
8999	55185	Sulfatide antibody IVD, kit, fluorescent immunoassay	Сульфатидын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-sulfatide antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
9000	55186	Sulfatide antibody IVD, kit, enzyme immunoassay (EIA)	Сульфатидын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-sulfatide antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9001	55187	Sulfatide antibody IVD, calibrator	Сульфатидын эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of anti-sulfatide antibodies in a clinical specimen.	B
9002	55188	Sulfatide antibody IVD, control	Сульфатидын эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of anti-sulfatide antibodies in a clinical specimen.	B

9003	55189	Sulfatide antibody IVD, reagent	Сульфатидын эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-sulfatide antibodies in a clinical specimen.	B
9004	55190	Teichoic acid antibody IVD, kit, fluorescent immunoassay	Тейхойн хүчлийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to teichoic acid in a clinical specimen, using a fluorescent immunoassay method.	B
9005	55191	Teichoic acid antibody IVD, kit, enzyme immunoassay (EIA)	Тейхойн хүчлийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to teichoic acid in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9006	55192	Teichoic acid antibody IVD, calibrator	Тейхойн хүчлийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to teichoic acid in a clinical specimen.	B
9007	55193	Teichoic acid antibody IVD, control	Тейхойн хүчлийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to teichoic acid in a clinical specimen.	B
9008	55194	Teichoic acid antibody IVD, reagent	Тейхойн хүчлийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to teichoic acid in a clinical specimen.	B
9009	55195	Thyroglobulin antibody IVD, kit, fluorescent immunoassay	Тироглобулины эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen, using a fluorescent immunoassay method.	B
9010	55196	Thyroglobulin antibody IVD, kit, enzyme immunoassay (EIA)	Тироглобулины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9011	55198	Thyroglobulin antibody IVD, kit, radioimmunoassay	Тироглобулины эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen, using a radioimmunoassay method.	B
9012	55199	Thyroglobulin antibody IVD, calibrator	Тироглобулины эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen.	B
9013	55200	Thyroglobulin antibody IVD, control	Тироглобулины эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen.	B
9014	55201	Thyroglobulin antibody IVD, reagent	Тироглобулины эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen.	B
9015	55202	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, kit, fluorescent immunoassay	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase [anti-TPO, also known as anti-microsomal antibody] in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of chronic lymphocytic thyroiditis (also known as hashimoto thyroiditis).	B
9016	55203	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase [anti-TPO, also known as anti-microsomal antibody] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of chronic lymphocytic thyroiditis (also known as hashimoto thyroiditis).	B
9017	55205	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, calibrator	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase (anti-TPO); also known as anti-microsomal antibody, in a clinical specimen.	B

9018	55206	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, control	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase (anti-TPO); also known as anti-microsomal antibody, in a clinical specimen.	B
9019	55207	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, reagent	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase (anti-TPO); also known as anti-microsomal antibody, in a clinical specimen.	B
9020	55208	Multiple thyroid antibody IVD, kit, fluorescent immunoassay	Олон бамбай булчирхайн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies to the thyroid gland and/or specific products of thyroid gland metabolism in a clinical specimen, using a fluorescent immunoassay method. This test detects autoantibodies directed at antigens such as thyroid gland tissue, thyroglobulin, and thyroid peroxidase (TPO) [known as anti-microsomal antibody] to aid in the diagnosis of autoimmune thyroid diseases such as autoimmune thyroiditis (Hashimoto’s disease) and Graves’ disease.	B
9021	55209	Multiple thyroid antibody IVD, kit, enzyme immunoassay (EIA)	Олон бамбай булчирхайн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the thyroid gland and/or specific products of thyroid gland metabolism in a clinical specimen, using an enzyme immunoassay (EIA) method. This test detects autoantibodies directed at antigens such as thyroid gland tissue, thyroglobulin, and thyroid peroxidase (TPO) [known as anti-microsomal antibody] to aid in the diagnosis of autoimmune thyroid diseases such as autoimmune thyroiditis (Hashimoto’s disease) and Graves’ disease.	B
9022	55210	Multiple thyroid antibody IVD, calibrator	Олон бамбай булчирхайн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the thyroid gland and/or specific products of thyroid gland metabolism in a clinical specimen.	B

9023	55211	Multiple thyroid antibody IVD, control	Олон бамбай булчирхайн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the thyroid gland and/or specific products of thyroid gland metabolism in a clinical specimen. Assayed antibodies include autoantibodies directed at antigens such as thyroid gland tissue, thyroglobulin, and thyroid peroxidase (TPO) [known as anti-microsomal antibody].	B
9024	55212	Multiple thyroid antibody IVD, reagent	Олон бамбай булчирхайн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the thyroid gland and/or specific products of thyroid gland metabolism in a clinical specimen.	B
9025	55213	Thyrosin phosphatase antibody (anti-IA2) IVD, kit, fluorescent immunoassay	Тирозин фосфатазын эсрэгбие (анти-IA2) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyrosin phosphatase (anti-IA2) in a clinical specimen, using a fluorescent immunoassay method.	B
9026	55214	Thyrosin phosphatase antibody (anti-IA2) IVD, kit, enzyme immunoassay (EIA)	Тирозин фосфатазын эсрэгбие (анти-IA2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyrosin phosphatase (anti-IA2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9027	55215	Thyrosin phosphatase antibody (anti-IA2) IVD, calibrator	Тирозин фосфатазын эсрэгбие (анти-IA2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyrosin phosphatase (anti-IA2) in a clinical specimen.	B
9028	55216	Thyrosin phosphatase antibody (anti-IA2) IVD, control	Тирозин фосфатазын эсрэгбие (анти-IA2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyrosin phosphatase (anti-IA2) in a clinical specimen.	B
9029	55217	Thyrosin phosphatase antibody (anti-IA2) IVD, reagent	Тирозин фосфатазын эсрэгбие (анти-IA2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to thyrosin phosphatase (anti-IA2) in a clinical specimen.	B

9030	55218	Thyroxine antibody IVD, kit, fluorescent immunoassay	Тироксин эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroxine in a clinical specimen, using a fluorescent immunoassay method.	B
9031	55219	Thyroxine antibody IVD, kit, enzyme immunoassay (EIA)	Тироксин эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroxine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9032	55220	Thyroxine antibody IVD, calibrator	Тироксин эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroxine in a clinical specimen.	B
9033	55221	Thyroxine antibody IVD, control	Тироксин эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to thyroxine in a clinical specimen.	B
9034	55222	Thyroxine antibody IVD, reagent	Тироксин эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to thyroxine in a clinical specimen.	B
9035	55223	Tissue transglutaminase antibody IVD, kit, enzyme immunoassay (EIA)	Эдийн трансглутаминазын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9036	55225	Tissue transglutaminase antibody IVD, kit, fluorescent immunoassay	Эдийн трансглутаминазын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen, using a fluorescent immunoassay method.	B
9037	55226	Tissue transglutaminase antibody IVD, calibrator	Эдийн трансглютаминазын эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen.	B

9038	55227	Tissue transglutaminase antibody IVD, control	Эдийн трансглютаминазын эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen.	B
9039	55228	Tissue transglutaminase antibody IVD, reagent	Эд эсийн трансглютаминазын эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen.	B
9040	55229	Yo antibody IVD, kit, immunoblot	Yo эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen, using an immunoblot method.	B
9041	55230	Yo antibody IVD, kit, enzyme immunoassay (EIA)	Эсрэгбиеийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9042	55231	Yo antibody IVD, kit, fluorescent immunoassay	Yo эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
9043	55232	Yo antibody IVD, reagent	Эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of anti-Yo antibodies in a clinical specimen.	B
9044	55233	Multiple-therapy therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antibiotic, anticonvulsant, and cardiovascular) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9045	55234	Multiple-therapy therapeutic drug monitoring IVD, calibrator	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antibiotic, anticonvulsant, and cardiovascular) in a clinical specimen.	B

9046	55235	Multiple-therapy therapeutic drug monitoring IVD, control	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antibiotic, anticonvulsant, and cardiovascular) in a clinical specimen.	B
9047	55236	Multiple-therapy therapeutic drug monitoring IVD, reagent	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antibiotic, anticonvulsant, and cardiovascular) in a clinical specimen.	B
9048	55237	Aminophylline therapeutic drug monitoring IVD, kit, spectrophotometry	Аминофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug aminophylline in a clinical specimen, using a spectrophotometry method.	B
9049	55238	Aminophylline therapeutic drug monitoring IVD, calibrator	Аминофиллин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug aminophylline in a clinical specimen.	B
9050	55239	Aminophylline therapeutic drug monitoring IVD, control	Аминофиллин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug aminophylline in a clinical specimen.	B
9051	55240	Aminophylline therapeutic drug monitoring IVD, reagent	Аминофиллин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug aminophylline in a clinical specimen.	B
9052	55241	Caffeine therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Кофеины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug caffeine in a clinical specimen, using a chemiluminescent immunoassay method.	B
9053	55242	Caffeine therapeutic drug monitoring IVD, calibrator	Кофеины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug caffeine in a clinical specimen.	B

9054	55243	Caffeine therapeutic drug monitoring IVD, control	Кофеины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug caffeine in a clinical specimen.	B
9055	55244	Caffeine therapeutic drug monitoring IVD, reagent	Кофеины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug caffeine in a clinical specimen.	B
9056	55245	Theophylline therapeutic drug monitoring IVD, kit, spectrophotometry	Теофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen, using a spectrophotometry method.	B
9057	55246	Theophylline therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Теофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen, using a fluorescent immunoassay method.	B
9058	55247	Theophylline therapeutic drug monitoring IVD, calibrator	Теофиллин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen.	B
9059	55248	Theophylline therapeutic drug monitoring IVD, reagent	Теофиллин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen.	B
9060	55249	5-Fluorocytosine therapeutic drug monitoring IVD, kit, fluorescent immunoassay	5-Флюроцитозины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug 5-fluorocytosine in a clinical specimen, using a fluorescent immunoassay method.	B
9061	55250	5-Fluorocytosine therapeutic drug monitoring IVD, calibrator	5-Фтороцитозын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug 5-fluorocytosine in a clinical specimen.	B

9062	55251	5-Fluorocytosine therapeutic drug monitoring IVD, control	5-Фтороцитозын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug 5-fluorocytosine in a clinical specimen.	B
9063	55252	5-Fluorocytosine therapeutic drug monitoring IVD, reagent	5-Фтороцитозын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug 5-fluorocytosine in a clinical specimen.	B
9064	55253	Amikacin therapeutic drug monitoring IVD, kit, enzyme radiometry	Амикацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн радиометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen, using an enzyme radiometry method.	B
9065	55254	Amikacin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Амикацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen, using a fluorescent immunoassay method.	B
9066	55255	Amikacin therapeutic drug monitoring IVD, kit, radioimmunoassay	Амикацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen, using a radioimmunoassay method.	B
9067	55256	Amikacin therapeutic drug monitoring IVD, reagent	Амикацин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen.	B
9068	55257	Chloramphenicol therapeutic drug monitoring IVD, kit, liquid chromatography	Хлорамфениколын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug chloramphenicol in a clinical specimen, using a liquid chromatography method.	B
9069	55258	Chloramphenicol therapeutic drug monitoring IVD, calibrator	Хлорамфениколын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug chloramphenicol in a clinical specimen.	B

9070	55259	Chloramphenicol therapeutic drug monitoring IVD, control	Хлорамфениколын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug chloramphenicol in a clinical specimen.	B
9071	55260	Chloramphenicol therapeutic drug monitoring IVD, reagent	Хлорамфениколын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug chloramphenicol in a clinical specimen.	B
9072	55261	Dibekacin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Дибекацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug dibekacin in a clinical specimen, using a fluorescent immunoassay method.	B
9073	55262	Dibekacin therapeutic drug monitoring IVD, calibrator	Дибекацин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug dibekacin in a clinical specimen.	B
9074	55263	Dibekacin therapeutic drug monitoring IVD, control	Дибекацин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug dibekacin in a clinical specimen.	B
9075	55264	Dibekacin therapeutic drug monitoring IVD, reagent	Дибекацин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug dibekacin in a clinical specimen.	B
9076	55265	Ethambutol therapeutic drug monitoring IVD, kit, liquid chromatography	Этамбутолын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ethambutol in a clinical specimen, using a liquid chromatography method.	B
9077	55266	Ethambutol therapeutic drug monitoring IVD, calibrator	Этамбутолын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ethambutol in a clinical specimen.	B

9078	55267	Ethambutol therapeutic drug monitoring IVD, control	Этамбутолын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ethambutol in a clinical specimen.	B
9079	55268	Ethambutol therapeutic drug monitoring IVD, reagent	Этамбутолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ethambutol in a clinical specimen.	B
9080	55269	Fluconazole therapeutic drug monitoring IVD, kit, liquid chromatography	Флуконазолын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug fluconazole in a clinical specimen, using a liquid chromatography method.	B
9081	55270	Fluconazole therapeutic drug monitoring IVD, calibrator	Флуконазолын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug fluconazole in a clinical specimen.	B
9082	55271	Fluconazole therapeutic drug monitoring IVD, control	Флуконазолын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug fluconazole in a clinical specimen.	B
9083	55272	Fluconazole therapeutic drug monitoring IVD, reagent	Флуконазолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug fluconazole in a clinical specimen.	B
9084	55273	Gentamicin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Гентамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen, using a fluorescent immunoassay method.	B
9085	55274	Gentamicin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Гентамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9086	55275	Gentamicin therapeutic drug monitoring IVD, calibrator	Гентамицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen.	B
9087	55276	Gentamicin therapeutic drug monitoring IVD, control	Гентамицин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen.	B
9088	55277	Gentamicin therapeutic drug monitoring IVD, reagent	Гентамицин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen.	B
9089	55278	Isepamicin therapeutic drug monitoring IVD, kit, liquid chromatography	Изепамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug isepamicin in a clinical specimen, using a liquid chromatography method.	B
9090	55279	Isepamicin therapeutic drug monitoring IVD, calibrator	Исепамицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug isepamicin in a clinical specimen.	B
9091	55280	Isepamicin therapeutic drug monitoring IVD, control	Исепамицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug isepamicin in a clinical specimen.	B
9092	55281	Isepamicin therapeutic drug monitoring IVD, reagent	Исепамицины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug isepamicin in a clinical specimen.	B
9093	55282	Itraconazole therapeutic drug monitoring IVD, kit, liquid chromatography	Итраконазолын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug itraconazole in a clinical specimen, using a liquid chromatography method.	B

9094	55283	Itraconazole therapeutic drug monitoring IVD, calibrator	Итраконазолын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug itraconazole in a clinical specimen.	B
9095	55284	Itraconazole therapeutic drug monitoring IVD, control	Итраконазолын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug itraconazole in a clinical specimen.	B
9096	55285	Itraconazole therapeutic drug monitoring IVD, reagent	Итраконазолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug itraconazole in a clinical specimen.	B
9097	55286	Kanamycin therapeutic drug monitoring IVD, kit, radioimmunoassay	Канамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug kanamycin in a clinical specimen, using a radioimmunoassay method.	B
9098	55287	Kanamycin therapeutic drug monitoring IVD, calibrator	Канамицин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug kanamycin in a clinical specimen.	B
9099	55288	Kanamycin therapeutic drug monitoring IVD, control	Канамицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug kanamycin in a clinical specimen.	B
9100	55289	Kanamycin therapeutic drug monitoring IVD, reagent	Канамицин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug kanamycin in a clinical specimen.	B
9101	55290	Ketoconazole therapeutic drug monitoring IVD, kit, liquid chromatography	Кетоконазолын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ketoconazole in a clinical specimen, using a liquid chromatography method.	B

9102	55291	Ketoconazole therapeutic drug monitoring IVD, calibrator	Кетоконазолын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ketoconazole in a clinical specimen.	B
9103	55292	Ketoconazole therapeutic drug monitoring IVD, control	Кетоконазолын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ketoconazole in a clinical specimen.	B
9104	55293	Ketoconazole therapeutic drug monitoring IVD, reagent	Кетоконазолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ketoconazole in a clinical specimen.	B
9105	55294	Netilmycin therapeutic drug monitoring IVD, kit, liquid chromatography	Нетилмицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug netilmycin in a clinical specimen, using a liquid chromatography method.	B
9106	55295	Netilmycin therapeutic drug monitoring IVD, calibrator	Нетилмицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug netilmycin in a clinical specimen.	B
9107	55296	Netilmycin therapeutic drug monitoring IVD, control	Нетилмицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug netilmycin in a clinical specimen.	B
9108	55297	Netilmycin therapeutic drug monitoring IVD, reagent	Нетилмицин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug netilmycin in a clinical specimen.	B
9109	55298	Sisomycin therapeutic drug monitoring IVD, kit, liquid chromatography	Сисомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug sisomycin in a clinical specimen, using a liquid chromatography method.	B

9110	55299	Sisomycin therapeutic drug monitoring IVD, reagent	Сисомицины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug sisomycin in a clinical specimen.	B
9111	55300	Streptomycin therapeutic drug monitoring IVD, kit, liquid chromatography	Стрептомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug streptomycin in a clinical specimen, using a liquid chromatography method.	B
9112	55301	Streptomycin therapeutic drug monitoring IVD, calibrator	Стрептомицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug streptomycin in a clinical specimen.	B
9113	55302	Streptomycin therapeutic drug monitoring IVD, control	Стрептомицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug streptomycin in a clinical specimen.	B
9114	55303	Streptomycin therapeutic drug monitoring IVD, reagent	Стрептомицины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug streptomycin in a clinical specimen.	B
9115	55304	Tobramycin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Тобрамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen, using a fluorescent immunoassay method.	B
9116	55305	Tobramycin therapeutic drug monitoring IVD, kit, radioimmunoassay	Тобрамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen, using a radioimmunoassay method.	B
9117	55306	Tobramycin therapeutic drug monitoring IVD, calibrator	Тобрамицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen.	B

9118	55307	Tobramycin therapeutic drug monitoring IVD, control	Тобрамицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen.	B
9119	55308	Tobramycin therapeutic drug monitoring IVD, reagent	Тобрамицины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen.	B
9120	55309	Vancomycin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Ванкомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen, using a fluorescent immunoassay method.	B
9121	55310	Vancomycin therapeutic drug monitoring IVD, calibrator	Ванкомицины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen.	B
9122	55311	Vancomycin therapeutic drug monitoring IVD, control	Ванкомицины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen.	B
9123	55312	Vancomycin therapeutic drug monitoring IVD, reagent	Ванкомицины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen.	B
9124	55313	Voriconazole therapeutic drug monitoring IVD, kit, liquid chromatography	Вориконазолын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug voriconazole in a clinical specimen, using a liquid chromatography method.	B
9125	55314	Voriconazole therapeutic drug monitoring IVD, calibrator	Вориконазолын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug voriconazole in a clinical specimen.	B

9126	55315	Voriconazole therapeutic drug monitoring IVD, control	Вориконазолын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug voriconazole in a clinical specimen.	B
9127	55316	Voriconazole therapeutic drug monitoring IVD, reagent	Вориконазолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug voriconazole in a clinical specimen.	B
9128	55317	Teicoplanin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Тейкопланины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug teicoplanin in a clinical specimen, using a fluorescent immunoassay method.	B
9129	55318	Teicoplanin therapeutic drug monitoring IVD, calibrator	Тейкопланины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug teicoplanin in a clinical specimen.	B
9130	55319	Teicoplanin therapeutic drug monitoring IVD, control	Тейкопланины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug teicoplanin in a clinical specimen.	B
9131	55320	Teicoplanin therapeutic drug monitoring IVD, reagent	Тейкопланины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug teicoplanin in a clinical specimen.	B
9132	55321	Methotrexate therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Метотрексат эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-neoplastic drug methotrexate in a clinical specimen, using a fluorescent immunoassay method.	B
9133	55322	Methotrexate therapeutic drug monitoring IVD, calibrator	Метотрексат эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the anti-neoplastic drug methotrexate in a clinical specimen.	B

9134	55323	Methotrexate therapeutic drug monitoring IVD, reagent	Метотрексат эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the anti-neoplastic drug methotrexate in a clinical specimen.	B
9135	55324	Digoxin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Дигоксины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9136	55325	Digoxin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Дигоксины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen, using a fluorescent immunoassay method.	B
9137	55326	Digoxin therapeutic drug monitoring IVD, kit, chemiluminescent assay	Дигоксины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen, using a chemiluminescent method.	B
9138	55327	Digoxin therapeutic drug monitoring IVD, calibrator	Дигоксины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen.	B
9139	55328	Digoxin therapeutic drug monitoring IVD, reagent	Дигоксин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen.	B
9140	55329	Digitoxin therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Дигитоксин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen, using a fluorescent immunoassay method.	B

9141	55330	Digitoxin therapeutic drug monitoring IVD, calibrator	Дигитоксин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen.	B
9142	55331	Digitoxin therapeutic drug monitoring IVD, reagent	Дигитоксин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen.	B
9143	55332	Disopyramide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Дисопирамидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug disopyramide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9144	55333	Disopyramide therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Дисопирамидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug disopyramide in a clinical specimen, using a fluorescent immunoassay method.	B
9145	55334	Disopyramide therapeutic drug monitoring IVD, calibrator	Дисопирамидын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug disopyramide in a clinical specimen.	B
9146	55335	Disopyramide therapeutic drug monitoring IVD, control	Дисопирамидын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug disopyramide in a clinical specimen.	B
9147	55336	Disopyramide therapeutic drug monitoring IVD, reagent	Дисопирамидын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug disopyramide in a clinical specimen.	B
9148	55337	Flecainide therapeutic drug monitoring IVD, kit, liquid chromatography	Flecainide эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug flecainide in a clinical specimen, using an liquid chromatography method.	B

9149	55338	Flecainide therapeutic drug monitoring IVD, calibrator	Flecainide эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug flecainide in a clinical specimen.	B
9150	55339	Flecainide therapeutic drug monitoring IVD, control	Flecainide эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug flecainide in a clinical specimen.	B
9151	55340	Flecainide therapeutic drug monitoring IVD, reagent	Flecainide эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug flecainide in a clinical specimen.	B
9152	55341	Lidocaine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Лидокаины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug lidocaine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9153	55342	Lidocaine therapeutic drug monitoring IVD, calibrator	Лидокаины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug lidocaine in a clinical specimen.	B
9154	55343	Lidocaine therapeutic drug monitoring IVD, reagent	Лидокаины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug lidocaine in a clinical specimen.	B
9155	55344	Mexiletine therapeutic drug monitoring IVD, kit, liquid chromatography	Мексилетиний эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug mexiletine in a clinical specimen, using an liquid chromatography method.	B
9156	55345	Mexiletine therapeutic drug monitoring IVD, calibrator	Мексилетиний эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug mexiletine in a clinical specimen.	B

9157	55346	Mexiletine therapeutic drug monitoring IVD, control	Мексилетиний эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug mexiletine in a clinical specimen.	B
9158	55347	Mexiletine therapeutic drug monitoring IVD, reagent	Мексилетиний эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug mexiletine in a clinical specimen.	B
9159	55348	N-acetylprocainamide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	N-acetylprocainamide эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug N-acetylprocainamide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9160	55349	N-acetylprocainamide therapeutic drug monitoring IVD, calibrator	N-acetylprocainamide эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug N-acetylprocainamide in a clinical specimen.	B
9161	55350	N-acetylprocainamide therapeutic drug monitoring IVD, reagent	N-acetylprocainamide эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug N-acetylprocainamide in a clinical specimen.	B
9162	55351	Procainamide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Прокаинамид эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9163	55352	Procainamide therapeutic drug monitoring IVD, kit, liquid chromatography	Procainamide эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen, using an liquid chromatography method.	B

9164	55353	Procainamide therapeutic drug monitoring IVD, calibrator	Прокаинамид эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen.	B
9165	55354	Procainamide therapeutic drug monitoring IVD, reagent	Прокайнамид эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen.	B
9166	55355	Propranolol therapeutic drug monitoring IVD, kit, liquid chromatography	Пропранолол эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug propranolol in a clinical specimen, using an liquid chromatography method.	B
9167	55356	Propranolol therapeutic drug monitoring IVD, calibrator	Пропранолол эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug propranolol in a clinical specimen.	B
9168	55357	Propranolol therapeutic drug monitoring IVD, control	Пропранолол эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug propranolol in a clinical specimen.	B
9169	55358	Propranolol therapeutic drug monitoring IVD, reagent	Пропранолол эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug propranolol in a clinical specimen.	B
9170	55359	Quinidine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Хинидиний эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug quinidine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9171	55360	Quinidine therapeutic drug monitoring IVD, calibrator	Квинидин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug quinidine in a clinical specimen.	B

9172	55361	Quinidine therapeutic drug monitoring IVD, control	Квинидин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug quinidine in a clinical specimen.	B
9173	55362	Quinidine therapeutic drug monitoring IVD, reagent	Квинидин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug quinidine in a clinical specimen.	B
9174	55365	Amoxapine therapeutic drug monitoring IVD, kit, gas chromatography	Амоксапины эмчилгээний эмийн хяналт IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug amoxapine in a clinical specimen, using a gas chromatography method.	B
9175	55366	Amoxapine therapeutic drug monitoring IVD, calibrator	Амоксапины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug amoxapine in a clinical specimen.	B
9176	55367	Amoxapine therapeutic drug monitoring IVD, control	Амоксапины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug amoxapine in a clinical specimen.	B
9177	55368	Amoxapine therapeutic drug monitoring IVD, reagent	Амоксапины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug amoxapine in a clinical specimen.	B
9178	55369	Carbamazepine therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Карбамазепин эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen, using a fluorescent immunoassay method.	B
9179	55370	Carbamazepine therapeutic drug monitoring IVD, calibrator	Карбамазепин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen.	B

9180	55371	Carbamazepine therapeutic drug monitoring IVD, control	Карбамазепин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen.	B
9181	55372	Carbamazepine therapeutic drug monitoring IVD, reagent	Карбамазепин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen.	B
9182	55373	Chlorpromazine therapeutic drug monitoring IVD, kit, liquid chromatography	Хлорпромазин эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chlorpromazine in a clinical specimen, using a liquid chromatography method.	B
9183	55374	Chlorpromazine therapeutic drug monitoring IVD, calibrator	Хлорпромазин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chlorpromazine in a clinical specimen.	B
9184	55375	Chlorpromazine therapeutic drug monitoring IVD, control	Хлорпромазин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chlorpromazine in a clinical specimen.	B
9185	55376	Chlorpromazine therapeutic drug monitoring IVD, reagent	Хлорпромазин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chlorpromazine in a clinical specimen.	B
9186	55377	Clomipramine/norclomipramine therapeutic drug monitoring IVD, kit, liquid chromatography	Кломипрамин/норкломипрамины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug clomipramine and/or norclomipramine in a clinical specimen, using a liquid chromatography method.	B
9187	55378	Clomipramine/norclomipramine therapeutic drug monitoring IVD, calibrator	Кломипрамин/норкломипрамины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug clomipramine and/or norclomipramine in a clinical specimen.	B

9188	55379	Clomipramine/norclomipramine therapeutic drug monitoring IVD, control	Кломипрамин/норкломипрамины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug clomipramine and/or norclomipramine in a clinical specimen.	B
9189	55380	Clomipramine/norclomipramine therapeutic drug monitoring IVD, reagent	Кломипрамин/норкломипрамины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug clomipramine and/or norclomipramine in a clinical specimen.	B
9190	55381	Desipramine drug monitoring IVD, kit, liquid chromatography	Десипрамины эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug desipramine in a clinical specimen, using a liquid chromatography method.	B
9191	55382	Desipramine therapeutic drug monitoring IVD, calibrator	Десипрамины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug desipramine in a clinical specimen.	B
9192	55383	Desipramine therapeutic drug monitoring IVD, control	Десипрамины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug desipramine in a clinical specimen.	B
9193	55384	Desipramine therapeutic drug monitoring IVD, reagent	Десипрамины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug desipramine in a clinical specimen.	B
9194	55385	Escitalopram therapeutic drug monitoring IVD, kit, gas chromatography	Эскиталопрамын эмчилгээний эмийн хяналт IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug escitalopram in a clinical specimen, using a gas chromatography method.	B

9195	55386	Escitalopram therapeutic drug monitoring IVD, escitalopram, calibrator	Эсциталопрамын эмчилгээний эмийн хяналт IVD, эсциталопрам, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug escitalopram in a clinical specimen.	B
9196	55387	Escitalopram therapeutic drug monitoring IVD, control	Эскиталопрамын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug escitalopram in a clinical specimen.	B
9197	55388	Escitalopram therapeutic drug monitoring IVD, reagent	Эскиталопрам эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug escitalopram in a clinical specimen.	B
9198	55389	Ethosuximide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Этосуксимидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug ethosuximide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9199	55390	Ethosuximide therapeutic drug monitoring IVD, calibrator	Этосуксимидын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug ethosuximide in a clinical specimen.	B
9200	55391	Ethosuximide therapeutic drug monitoring IVD, control	Этосуксимидын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug ethosuximide in a clinical specimen.	B
9201	55392	Ethosuximide therapeutic drug monitoring IVD, reagent	Этосуксимидын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug ethosuximide in a clinical specimen.	B

9202	55393	Haloperidol (haldol) therapeutic drug monitoring IVD, kit, liquid chromatography	Haloperidol (haldol) эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug haloperidol (haldol) in a clinical specimen, using a liquid chromatography method.	B
9203	55394	Haloperidol (haldol) therapeutic drug monitoring IVD, calibrator	Haloperidol (haldol) эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug haloperidol (haldol) in a clinical specimen.	B
9204	55395	Haloperidol (haldol) therapeutic drug monitoring IVD, control	Haloperidol (haldol) эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug haloperidol (haldol) in a clinical specimen.	B
9205	55396	Haloperidol (haldol) therapeutic drug monitoring IVD, reagent	Haloperidol (haldol) эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug haloperidol (haldol) in a clinical specimen.	B
9206	55397	Hydroxyzine chloride (atarax) therapeutic drug monitoring IVD, kit, gas chromatography	Гидроксизин хлорид (атаракс) эмчилгээний эмийн хяналт IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug hydroxyzine chloride (atarax) in a clinical specimen, using a gas chromatography method.	B
9207	55398	Hydroxyzine chloride (atarax) therapeutic drug monitoring IVD, calibrator	Гидроксизин хлорид (атаракс) эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug hydroxyzine chloride (atarax) in a clinical specimen.	B
9208	55399	Hydroxyzine chloride (atarax) therapeutic drug monitoring IVD, control	Гидроксизин хлорид (атаракс) эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug hydroxyzine chloride (atarax) in a clinical specimen.	B
9209	55400	Hydroxyzine chloride (atarax) therapeutic drug monitoring IVD, reagent	Гидроксизин хлорид (атаракс) эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug hydroxyzine chloride (atarax) in a clinical specimen.	B

9210	55401	Imipramine therapeutic drug monitoring IVD, kit, liquid chromatography	Имипрамины эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug imipramine in a clinical specimen, using a liquid chromatography method.	B
9211	55402	Imipramine therapeutic drug monitoring IVD, calibrator	Имипрамины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug imipramine in a clinical specimen.	B
9212	55403	Imipramine therapeutic drug monitoring IVD, control	Имипрамины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug imipramine in a clinical specimen.	B
9213	55404	Imipramine therapeutic drug monitoring IVD, reagent	Имипрамины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug imipramine in a clinical specimen.	B
9214	55405	Lithium therapeutic drug monitoring IVD, kit, atomic spectroscopy	Литийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen, using an atomic spectroscopy method.	B
9215	55406	Lithium therapeutic drug monitoring IVD, kit, electrometry	Литийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, цахилгаан хэмжигдэхүүн	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen, using an electrometry method.	B
9216	55407	Lithium therapeutic drug monitoring IVD, calibrator	Лити эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen.	B
9217	55408	Lithium therapeutic drug monitoring IVD, control	Лити эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen.	B

9218	55409	Lithium therapeutic drug monitoring IVD, reagent	Лити эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen.	B
9219	55410	Methsuximide therapeutic drug monitoring IVD, kit, gas chromatography	Метсуксимидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug methsuximide in a clinical specimen, using a gas chromatography method.	B
9220	55411	Methsuximide therapeutic drug monitoring IVD, calibrator	Метсуксимидын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug methsuximide in a clinical specimen.	B
9221	55412	Methsuximide therapeutic drug monitoring IVD, control	Метсуксимидын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug methsuximide in a clinical specimen.	B
9222	55413	Methsuximide therapeutic drug monitoring IVD, reagent	Метсуксимидын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug methsuximide in a clinical specimen.	B
9223	55414	Phenobarbital therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Фенобарбитал эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen, using a fluorescent immunoassay method.	B
9224	55415	Phenobarbital therapeutic drug monitoring IVD, calibrator	Фенобарбитал эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen.	B
9225	55416	Phenobarbital therapeutic drug monitoring IVD, control	Фенобарбитал эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen.	B

9226	55417	Phenobarbital therapeutic drug monitoring IVD, reagent	Фенобарбитал эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen.	B
9227	55418	Phenothiazine therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Фенотиазины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenothiazine in a clinical specimen, using a fluorescent immunoassay method.	B
9228	55419	Phenothiazine therapeutic drug monitoring IVD, calibrator	Фенотиазины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenothiazine in a clinical specimen.	B
9229	55420	Phenothiazine therapeutic drug monitoring IVD, control	Фенотиазины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenothiazine in a clinical specimen.	B
9230	55421	Phenothiazine therapeutic drug monitoring IVD, reagent	Фенотиазины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenothiazine in a clinical specimen.	B
9231	55422	Phenytoin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Фенитоины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., dilantin) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9232	55423	Phenytoin therapeutic drug monitoring IVD, calibrator	Фенитоины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., dilantin) in a clinical specimen.	B

9233	55424	Phenytoin therapeutic drug monitoring IVD, control	Фенитоины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., dilantin) in a clinical specimen.	B
9234	55425	Phenytoin therapeutic drug monitoring IVD, reagent	Фенитоины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., dilantin) in a clinical specimen.	B
9235	55426	Primidone therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Примидон эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug primidone in a clinical specimen, using a fluorescent immunoassay method.	B
9236	55427	Primidone therapeutic drug monitoring IVD, calibrator	Примидон эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug primidone in a clinical specimen.	B
9237	55428	Primidone therapeutic drug monitoring IVD, control	Примидон эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug primidone in a clinical specimen.	B
9238	55429	Primidone therapeutic drug monitoring IVD, reagent	Примидон эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug primidone in a clinical specimen.	B
9239	55430	Valproic acid therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Вальпро хүчлийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen, using a fluorescent immunoassay method.	B
9240	55431	Valproic acid therapeutic drug monitoring IVD, calibrator	Вальпро хүчил эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen.	B

9241	55432	Valproic acid therapeutic drug monitoring IVD, control	Вальпро хүчил эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen.	B
9242	55433	Valproic acid therapeutic drug monitoring IVD, reagent	Вальпро хүчил эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen.	B
9243	55434	Zonisamide therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Зонисамидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug zonisamide in a clinical specimen, using a fluorescent immunoassay method.	B
9244	55435	Zonisamide therapeutic drug monitoring IVD, calibrator	Zonisamide эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug zonisamide in a clinical specimen.	B
9245	55436	Zonisamide therapeutic drug monitoring IVD, control	Zonisamide эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug zonisamide in a clinical specimen.	B
9246	55437	Zonisamide therapeutic drug monitoring IVD, reagent	Зонисамидын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug zonisamide in a clinical specimen.	B
9247	55438	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen, using a fluorescent immunoassay method.	B

9248	55439	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, calibrator	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen.	B
9249	55440	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, control	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen.	B
9250	55441	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, reagent	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen.	B
9251	55442	Tacrolimus therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Такролимус эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug tacrolimus in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9252	55443	Tacrolimus therapeutic drug monitoring IVD, calibrator	Такролимус эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug tacrolimus in a clinical specimen.	B
9253	55444	Tacrolimus therapeutic drug monitoring IVD, control	Такролимус эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug tacrolimus in a clinical specimen.	B
9254	55445	Tacrolimus therapeutic drug monitoring IVD, reagent	Такролимус эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug tacrolimus in a clinical specimen.	B

9255	55446	Rapamycin (sirolimus) therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Рапамицин (сиролимус) эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug rapamycin (sirolimus) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9256	55447	Rapamycin (sirolimus) therapeutic drug monitoring IVD, calibrator	Рапамицин (сиролимус) эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug rapamycin (sirolimus) in a clinical specimen.	B
9257	55448	Rapamycin (sirolimus) therapeutic drug monitoring IVD, control	Рапамицин (сиролимус) эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug rapamycin (sirolimus) in a clinical specimen.	B
9258	55449	Rapamycin (sirolimus) therapeutic drug monitoring IVD, reagent	Рапамицин (сиролимус) эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug rapamycin (sirolimus) in a clinical specimen.	B
9259	55450	Mycophenolate therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Микофенолатын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (Cellcept) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9260	55451	Mycophenolate therapeutic drug monitoring IVD, calibrator	Микофенолатын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (Cellcept) in a clinical specimen.	B
9261	55452	Mycophenolate therapeutic drug monitoring IVD, control	Микофенолатын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (Cellcept) in a clinical specimen.	B

9262	55453	Mycophenolate therapeutic drug monitoring IVD, reagent	Микофенолатын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (e.g., Cellcept) in a clinical specimen.	B
9263	55454	Multiple therapeutic drugs/drugs of abuse IVD, kit, thin layer chromatography	Олон төрлийн эмчилгээний эмүүд / урвуулан ашиглах эмүүд IVD, иж бүрдэл, нимгэн давхаргын хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple therapeutic drugs and drugs of abuse in a clinical specimen, using a thin layer chromatography method.	B
9264	55455	Multiple therapeutic drugs/drugs of abuse IVD, calibrator	Олон тооны эмчилгээний эмүүд / хүчирхийллийн эмүүд IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple therapeutic drugs and drugs of abuse in a clinical specimen.	B
9265	55456	Multiple therapeutic drugs/drugs of abuse IVD, reagent	Олон тооны эмчилгээний эмүүд / урвуулан ашиглах эмүүд IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple therapeutic drugs and drugs of abuse in a clinical specimen.	B
9266	55457	Multiple drugs of abuse IVD, kit, thin layer chromatography	IVD, иж бүрдэл, нимгэн давхаргын хроматографи бүхий олон төрлийн эмүүд	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen, using a thin layer chromatography method.	B
9267	55458	Multiple drugs of abuse IVD, kit, liquid chromatography	IVD, иж бүрдэл, шингэний хроматографи зэрэг олон төрлийн эмүүд	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen, using a liquid chromatography method.	B
9268	55459	Multiple drugs of abuse IVD, kit, fluorescent immunoassay	IVD, иж бүрдэл, флюресцент дархлааны шинжилгээг бууруулаар хэрэглэдэг олон эм	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen, using a fluorescent immunoassay method.	B
9269	55460	Multiple drugs of abuse IVD, calibrator	Олон төрлийн эм зүй бусаар хэрэглэх IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen.	B

9270	55461	Multiple drugs of abuse IVD, control	Олон төрлийн эм зүй бусаар хэрэглэх IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen.	B
9271	55462	Multiple drugs of abuse IVD, reagent	IVD, урвалжийг бууруугаар хэрэглэдэг олон эм	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen.	B
9272	55463	Drug/toxicology screen adulteration IVD, kit, rapid spectrophotometry, clinical	Мансууруулах бодис/хордлогын скрининг хуурамчаар үйлдэх IVD, иж бүрдэл, түргэн спектрофотометр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of drug and/or toxicology screen adulteration of a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid spectrophotometry method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9273	55464	6-Acetyl morphine IVD, kit, thin layer chromatography	6-Ацетил морфины IVD, иж бүрдэл, нимгэн давхаргын хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 6-acetyl morphine in a clinical specimen, using a thin layer chromatography method.	B
9274	55465	6-Acetyl morphine IVD, calibrator	6-Ацетил морфин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of 6-acetyl morphine in a clinical specimen.	B
9275	55466	6-Acetyl morphine IVD, control	6-Ацетил морфин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of 6-acethyl morphine in a clinical specimen.	B
9276	55467	6-Acetyl morphine IVD, reagent	6-Ацетил морфин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of 6-acetyl morphine in a clinical specimen.	B
9277	55468	Acetone IVD, kit, gas chromatography	Ацетон IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acetone in a clinical specimen, using a gas chromatography method.	B

9278	55469	Acetone IVD, calibrator	Ацетон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of acetone in a clinical specimen.	B
9279	55470	Acetone IVD, control	Ацетон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of acetone in a clinical specimen.	B
9280	55471	Acetone IVD, reagent	Ацетон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of acetone in a clinical specimen.	B
9281	55472	Acetaminophen IVD, kit, chromogenic	Ацетаминофен IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen, using a chromogenic method.	B
9282	55473	Acetaminophen IVD, kit, enzyme immunoassay (EIA)	Ацетаминофен IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9283	55474	Acetaminophen IVD, reagent	Ацетаминофен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen.	B
9284	55475	Acetazolamide IVD, kit, liquid chromatography	Ацетазоламид IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acetazolamide in a clinical specimen, using a liquid chromatography method.	B
9285	55476	Acetazolamide IVD, calibrator	Ацетазоламид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of acetazolamide in a clinical specimen.	B
9286	55477	Acetazolamide IVD, control	Ацетазоламид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of acetazolamide in a clinical specimen.	B

9287	55478	Acetazolamide IVD, reagent	Ацетазоламид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of acetazolamide in a clinical specimen.	B
9288	55479	Amanitin IVD, kit, liquid chromatography	Аманитин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of amanitin in a clinical specimen, using a liquid chromatography method.	B
9289	55480	Amanitin IVD, reagent	Аманитин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of amanitin in a clinical specimen.	B
9290	55481	Amiodarone IVD, kit, liquid chromatography	Амиодарон IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of amiodarone in a clinical specimen, using a liquid chromatography method.	B
9291	55482	Amiodarone IVD, calibrator	Амиодарон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of amiodarone in a clinical specimen.	B
9292	55483	Amiodarone IVD, control	Амиодарон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of amiodarone in a clinical specimen.	B
9293	55484	Amiodarone IVD, reagent	Амиодарон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of amiodarone in a clinical specimen.	B
9294	55485	Amitriptyline IVD, kit, liquid chromatography	Амитриптилин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of amitriptyline in a clinical specimen, using a liquid chromatography method.	B
9295	55486	Amitriptyline IVD, reagent	Амитриптилин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of amitriptyline in a clinical specimen.	B

9296	55487	Amphetamine/methamphetamine group IVD, kit, enzyme immunoassay (EIA)	Амфетамин/метамфетамины бүлэг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9297	55488	Amphetamine/methamphetamine group IVD, kit, gas chromatography/mass spectrometry (GC/MS)	Амфетамин/метамфетамин бүлэг IVD, иж бүрдэл, хийн хроматографи/масс спектрометр (GC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen, using a gas chromatography/mass spectrometry (GC/MS) method.	B
9298	55489	Amphetamine/methamphetamine group IVD, kit, rapid ICT, clinical	Амфетамин/метамфетамин бүлэг IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) [e.g., 3,4-methylenedioxymethamphetamine (MDMA), also known as ecstasy] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9299	55490	Amphetamine/methamphetamine group IVD, calibrator	Амфетамин/метамфетамин бүлэг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen.	B
9300	55491	Amphetamine/methamphetamine group IVD, control	Амфетамин/метамфетамин бүлэг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen.	B
9301	55492	Amphetamine/methamphetamine group IVD, reagent	Амфетамин/метамфетамин бүлэг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen.	B

9302	55493	Amphetamine-specific IVD, kit, enzyme immunoassay (EIA)	Амфетамины өвөрмөц IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a specific amphetamine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9303	55494	Amphetamine-specific IVD, kit, gas chromatography/mass spectrometry (GC/MS)	Амфетамины тусгай IVD, иж бүрдэл, хийн хроматографи/масс спектрометр (GC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a specific amphetamine in a clinical specimen, using a gas chromatography/mass spectrometry (GC/MS) method.	B
9304	55495	Amphetamine-specific IVD, reagent	Амфетамины өвөрмөц IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of a specific amphetamine in a clinical specimen.	B
9305	55496	Methamphetamine-specific IVD, kit, enzyme immunoassay (EIA)	Метамфетамины өвөрмөц IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9306	55497	Methamphetamine-specific IVD, kit, gas chromatography/mass spectrometry (GC/MS)	Метамфетамины тусгай IVD, иж бүрдэл, хийн хроматографи/масс спектрометр (GC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen, using a gas chromatography/mass spectrometry (GC/MS) method.	B
9307	55498	Methamphetamine-specific IVD, kit, rapid ICT, clinical	Метамфетамины өвөрмөц IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of a specific methamphetamine in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9308	55499	Methamphetamine-specific IVD, calibrator	Метамфетамины тусгай IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen.	B

9309	55500	Methamphetamine-specific IVD, control	Метамфетамины өвөрмөц IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen.	B
9310	55501	Methamphetamine-specific IVD, reagent	Метамфетамины өвөрмөц IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of a specific methamphetamine in a clinical specimen.	B
9311	55502	Multiple antihistamine IVD, kit, gas chromatography	Олон тооны антигистамин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple administered antihistamine drug(s) and/or metabolites in a clinical specimen, using a chromatography method.	B
9312	55503	Multiple antihistamine IVD, calibrator	Олон тооны антигистамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple administered antihistamine drug(s) and/or metabolites in a clinical specimen.	B
9313	55504	Multiple antihistamine IVD, control	Олон тооны антигистамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple administered antihistamine drug(s) and/or metabolites in a clinical specimen.	B
9314	55505	Multiple antihistamine IVD, reagent	Олон тооны антигистамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple administered antihistamine drug(s) and/or its metabolites in a clinical specimen.	B
9315	55506	Brompheniramine IVD, kit, gas chromatography	Бромфенирамин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine brompheniramine in a clinical specimen, using a gas chromatography method.	B
9316	55507	Chlorpheniramine IVD, kit, gas chromatography	Хлорфенирамин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine chlorpheniramine in a clinical specimen, using a gas chromatography method.	B

9317	55508	Diphenhydramine IVD, kit, gas chromatography	Димедрол IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine diphenhydramine in a clinical specimen, using a gas chromatography method.	B
9318	55509	Doxylamine IVD, kit, gas chromatography	Доксиламин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine doxylamine in a clinical specimen, using a gas chromatography method.	B
9319	55510	Methapyrilene IVD, kit, gas chromatography	Метапирилен IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine methapyrilene in a clinical specimen, using a gas chromatography method.	B
9320	55511	Orphenadrine IVD, kit, gas chromatography	Орфенадрин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the antihistamine orphenadrine in a clinical specimen, using a gas chromatography method.	B
9321	55513	Atenolol IVD, kit, liquid chromatography	Атенолол IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of atenolol in a clinical specimen, using a liquid chromatography method.	B
9322	55514	Atenolol IVD, calibrator	Атенолол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of atenolol in a clinical specimen.	B
9323	55515	Atenolol IVD, control	Атенолол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of atenolol in a clinical specimen.	B
9324	55516	Atenolol IVD, reagent	Атенолол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of atenolol in a clinical specimen.	B
9325	55521	Barbiturate IVD, kit, enzyme immunoassay (EIA)	Барбитурат IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of barbiturates in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9326	55522	Barbiturate IVD, calibrator	Барбитурат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of barbiturates in a clinical specimen.	B
9327	55523	Barbiturate IVD, control	Барбитурат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of barbiturates in a clinical specimen.	B
9328	55524	Barbiturate IVD, reagent	Барбитурат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of barbiturates in a clinical specimen.	B
9329	55525	Benzodiazepine group IVD, kit, enzyme immunoassay (EIA)	Бензодиазепин бүлгийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple benzodiazepines in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9330	55526	Benzodiazepine group IVD, calibrator	Бензодиазепин бүлгийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple benzodiazepines in a clinical specimen.	B
9331	55527	Benzodiazepine group IVD, control	Бензодиазепин бүлгийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple benzodiazepines in a clinical specimen.	B
9332	55528	Benzodiazepine group IVD, reagent	Бензодиазепин бүлгийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple benzodiazepines in a clinical specimen.	B
9333	55529	Clonazepam IVD, kit, enzyme immunoassay (EIA)	Клоназепам IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clonazepam in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9334	55530	Clonazepam IVD, calibrator	Клоназепам IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clonazepam in a clinical specimen.	B

9335	55531	Clonazepam IVD, control	Клоназепам IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clonazepam in a clinical specimen.	B
9336	55532	Clonazepam IVD, reagent	Клоназепам IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the benzodiazepine drug clonazepam in a clinical specimen.	B
9337	55533	Clorazepate (nordiazepam) IVD, kit, enzyme immunoassay (EIA)	Клоразепат (нордиазепам) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clorazepate (nordiazepam) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9338	55534	Clorazepate (nordiazepam) IVD, calibrator	Клоразепат (нордиазепам) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clorazepate (nordiazepam) in a clinical specimen.	B
9339	55535	Clorazepate (nordiazepam) IVD, control	Клоразепат (нордиазепам) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug clorazepate (nordiazepam) in a clinical specimen.	B
9340	55536	Clorazepate (nordiazepam) IVD, reagent	Клоразепат (нордиазепам) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the benzodiazepine drug clorazepate (nordiazepam) in a clinical specimen.	B
9341	55537	Diazepam IVD, kit, liquid chromatography	Диазепам IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen, using a liquid chromatography method.	B
9342	55538	Diazepam IVD, kit, enzyme immunoassay (EIA)	Диазепам IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9343	55539	Diazepam IVD, calibrator	Диазепам IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen.	B
9344	55540	Diazepam IVD, control	Диазепам IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen.	B
9345	55541	Diazepam IVD, reagent	Диазепам IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen.	B
9346	55542	Flurazepam IVD, kit, gas chromatography	Флуразепам IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug flurazepam in a clinical specimen, using a gas chromatography method.	B
9347	55543	Flurazepam IVD, calibrator	Флуразепам IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug flurazepam in a clinical specimen.	B
9348	55544	Flurazepam IVD, control	Флуразепам IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the benzodiazepine drug flurazepam in a clinical specimen.	B
9349	55545	Flurazepam IVD, reagent	Флуразепам IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the benzodiazepine drug flurazepam in a clinical specimen.	B
9350	55546	Caffeine IVD, kit, enzyme immunoassay (EIA)	Кофейн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of caffeine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9351	55547	Caffeine IVD, calibrator	Кофейн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of caffeine in a clinical specimen.	B

9352	55548	Caffeine IVD, control	Кофейн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of caffeine in a clinical specimen.	B
9353	55549	Caffeine IVD, reagent	Кофейн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of caffeine in a clinical specimen.	B
9354	55550	Cannabinoid/cannabinoid metabolite IVD, kit, enzyme immunoassay (EIA)	Каннабиноид/каннабиноид метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9355	55551	Cannabinoid/cannabinoid metabolite IVD, calibrator	Каннабиноид/каннабиноид метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen.	B
9356	55552	Cannabinoid/cannabinoid metabolite IVD, control	Каннабиноид / каннабиноид метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen.	B
9357	55553	Cannabinoid/cannabinoid metabolite IVD, reagent	Каннабиноид/каннабиноид метаболит IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cannabinoids and/or cannabinoid metabolites (i.e., natural, synthetic) in a clinical specimen.	B
9358	55554	Clonidine IVD, kit, liquid chromatography	Клонидин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of clonidine in a clinical specimen, using a liquid chromatography method.	B
9359	55555	Clonidine IVD, calibrator	Клонидин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of clonidine in a clinical specimen.	B

9360	55556	Clonidine IVD, control	Клонидин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of clonidine in a clinical specimen.	B
9361	55557	Clonidine IVD, reagent	Клонидин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of clonidine in a clinical specimen.	B
9362	55558	Clozapine IVD, kit, liquid chromatography	Клозапин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of clozapine in a clinical specimen, using a liquid chromatography method.	B
9363	55559	Clozapine IVD, calibrator	Клозапин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of clozapine in a clinical specimen.	B
9364	55560	Clozapine IVD, control	Клозапин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of clozapine in a clinical specimen.	B
9365	55561	Clozapine IVD, reagent	Клозапин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of clozapine in a clinical specimen.	B
9366	55562	Cocaine/cocaine metabolite IVD, kit, enzyme immunoassay (EIA),	Кокаин/кокаины метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA),	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9367	55563	Cocaine/cocaine metabolite IVD, kit, gas chromatography	Кокаин/кокаины метаболит IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using a gas chromatography method.	B
9368	55564	Cocaine/cocaine metabolite IVD, kit, radioimmunoassay	Кокаин/кокаин метаболит IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using a radioimmunoassay method.	B

9369	55565	Cocaine/cocaine metabolite IVD, kit, liquid chromatography	Кокаин/кокаины метаболит IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using a liquid chromatography method.	B
9370	55566	Cocaine/cocaine metabolite IVD, kit, agglutination	Кокаин/кокаины метаболит IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using an agglutination method.	B
9371	55567	Cocaine/cocaine metabolite IVD, kit, free radical assay	Кокаин/кокаины метаболит IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen, using a free radical assay method.	B
9372	55568	Cocaine/cocaine metabolite IVD, calibrator	Кокаин/кокаин метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen.	B
9373	55569	Cocaine/cocaine metabolite IVD, control	Кокаин/кокаин метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen.	B
9374	55570	Cocaine/cocaine metabolite IVD, reagent	Кокаин/кокаин метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cocaine and/or cocaine metabolites in a clinical specimen.	B
9375	55571	Codeine IVD, kit, enzyme immunoassay (EIA)	Кодеин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9376	55572	Codeine IVD, kit, fluorescent immunoassay	Кодеин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen, using a fluorescent immunoassay method.	B
9377	55573	Codeine IVD, kit, gas chromatography	Кодеин IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen, using a gas chromatography method.	B

9378	55574	Codeine IVD, kit, liquid chromatography	Кодеин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen, using a liquid chromatography method.	B
9379	55575	Codeine IVD, calibrator	Кодеин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen.	B
9380	55576	Codeine IVD, control	Кодеин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of codeine in a clinical specimen.	B
9381	55577	Codeine IVD, reagent	Кодеин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of codeine in a clinical specimen.	B
9382	55578	Cotinine (nicotine metabolite) IVD, kit, fluorescent immunoassay	Котинин (никотины метаболит) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen, using a fluorescent immunoassay method.	B
9383	55579	Cotinine (nicotine metabolite) IVD, kit, enzyme immunoassay (EIA)	Котинин (никотины метаболит) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9384	55580	Cotinine (nicotine metabolite) IVD, calibrator	Котинин (никотины метаболит) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen.	B
9385	55581	Cotinine (nicotine metabolite) IVD, control	Котинин (никотины метаболит) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen.	B
9386	55582	Cotinine (nicotine metabolite) IVD, reagent	Котинин (никотины метаболит) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen.	B

9387	55583	Cyanide IVD, kit, atomic spectroscopy	Цианидын IVD, иж бүрдэл, атомын спектроскопи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cyanide in a clinical specimen, using an atomic spectroscopy method.	B
9388	55584	Cyanide IVD, kit, liquid chromatography	Цианидын IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cyanide in a clinical specimen, using a liquid chromatography method.	B
9389	55585	Cyanide IVD, calibrator	Цианид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of cyanide in a clinical specimen.	B
9390	55586	Cyanide IVD, control	Цианид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of cyanide in a clinical specimen.	B
9391	55587	Cyanide IVD, reagent	Цианид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of cyanide in a clinical specimen.	B
9392	55588	Dapsone (sulphonamide) IVD, kit, spectrophotometry	Дапсон (сульфонамид) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dapsone (sulphonamide) in a clinical specimen, using a spectrophotometry method.	B
9393	55589	Dapsone (sulphonamide) IVD, calibrator	Дапсон (сульфонамид) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of dapsone (sulphonamide) in a clinical specimen.	B
9394	55590	Dapsone (sulphonamide) IVD, control	Дапсон (сульфонамид) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of dapsone (sulphonamide) in a clinical specimen.	B
9395	55591	Dapsone (sulphonamide) IVD, reagent	Дапсон (сульфонамид) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of dapsone (sulphonamide) in a clinical specimen.	B

9396	55592	Desethylamiodarone IVD, kit, liquid chromatography	Desethylamiodarone IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of desethylamiodarone in a clinical specimen, using a liquid chromatography method.	B
9397	55593	Desethylamiodarone IVD, calibrator	Desethylamiodarone IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of desethylamiodarone in a clinical specimen.	B
9398	55594	Desethylamiodarone IVD, control	Desethylamiodarone IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of desethylamiodarone in a clinical specimen.	B
9399	55595	Desethylamiodarone IVD, reagent	Desethylamiodarone IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of desethylamiodarone in a clinical specimen.	B
9400	55596	Desipramine IVD, kit, liquid chromatography	Десипрамины IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of desipramine in a clinical specimen, using a liquid chromatography method.	B
9401	55597	Desipramine IVD, calibrator	Десипрамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of desipramine in a clinical specimen.	B
9402	55598	Desipramine IVD, control	Десипрамины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of desipramine in a clinical specimen.	B
9403	55599	Desipramine IVD, reagent	Десипрамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of desipramine in a clinical specimen.	B
9404	55600	Diphenhydramine IVD, calibrator	Димедрол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of diphenhydramine in a clinical specimen.	B

9405	55601	Diphenhydramine IVD, control	Димедрол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of diphenhydramine in a clinical specimen.	B
9406	55602	Diphenhydramine IVD, reagent	Димедрол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of diphenhydramine in a clinical specimen.	B
9407	55603	Doxepin/doxepin metabolite IVD, kit, liquid chromatography	Doxepin/doxepin метаболит IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of doxepin and/or doxepin metabolites in a clinical specimen, using a liquid chromatography method.	B
9408	55604	Doxepin/doxepin metabolite IVD, calibrator	Доксепин/доксепин метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of doxepin and/or doxepin metabolites in a clinical specimen.	B
9409	55605	Doxepin/doxepin metabolite IVD, control	Доксепин/доксепин метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of doxepin and/or doxepin metabolites in a clinical specimen.	B
9410	55606	Doxepin/doxepin metabolite IVD, reagent	Доксепин/доксепин метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of doxepin and/or doxepin metabolites in a clinical specimen.	B
9411	55608	Ethanol (ETOH) IVD, kit, spectrophotometry	Этанол (ETOH) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethyl alcohol (ETOH) in a clinical specimen, using a spectrophotometry method. It is typically used to assess for alcohol intoxication and in the management of alcoholism.	B
9412	55609	Ethanol (ETOH) IVD, kit, freezing point	Этанол (ETOH) IVD, иж бүрдэл, хөлдөх цэг	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ethyl alcohol (ETOH) in a clinical specimen, using a freezing point method.	B
9413	55610	Ethanol (ETOH) IVD, calibrator	Этанол (ETOH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of ethyl alcohol (ETOH) in a clinical specimen.	B

9414	55611	Ethanol (ETOH) IVD, control	Этанол (ETOH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of ethyl alcohol (ETOH) in a clinical specimen.	B
9415	55612	Ethanol (ETOH) IVD, reagent	Этанол (ETOH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of ethyl alcohol (ETOH) in a clinical specimen.	B
9416	55613	Ethchlorvynol IVD, kit, gas chromatography	Этхлорвинол IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethchlorvynol in a clinical specimen, using a gas chromatography method.	B
9417	55614	Ethchlorvynol IVD, calibrator	Этхлорвинол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ethchlorvynol in a clinical specimen.	B
9418	55615	Ethchlorvynol IVD, control	Этхлорвинол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ethchlorvynol in a clinical specimen.	B
9419	55616	Ethchlorvynol IVD, reagent	Этхлорвинол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ethchlorvynol in a clinical specimen.	B
9420	55617	Ethotoin IVD, kit, gas chromatography	Этотоин IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethotoin in a clinical specimen, using a gas chromatography method.	B
9421	55618	Ethotoin IVD, calibrator	Этотоин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ethotoin in a clinical specimen.	B
9422	55619	Ethotoin IVD, control	Этотоин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ethotoin in a clinical specimen.	B
9423	55620	Ethotoin IVD, reagent	Этотоин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ethotoin in a clinical specimen.	B

9424	55621	Ethylene glycol IVD, kit, gas chromatography	Этилен гликол IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethylene glycol in a clinical specimen, using a gas chromatography method.	B
9425	55622	Ethylene glycol IVD, calibrator	Этилен гликол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ethylene glycol in a clinical specimen.	B
9426	55623	Ethylene glycol IVD, control	Этилен гликол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ethylene glycol in a clinical specimen.	B
9427	55624	Ethylene glycol IVD, reagent	Этилен гликол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ethylene glycol in a clinical specimen.	B
9428	55625	Felbamate (felbatol) IVD, kit, liquid chromatography	Фелбамат (фельбатол) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of felbamate (felbatol) in a clinical specimen, using a liquid chromatography method.	B
9429	55626	Felbamate (felbatol) IVD, calibrator	Фелбамат (фелбатол) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of felbamate (felbatol) in a clinical specimen.	B
9430	55627	Felbamate (felbatol) IVD, control	Фелбамат (фельбатол) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of felbamate (felbatol) in a clinical specimen.	B
9431	55628	Felbamate (felbatol) IVD, reagent	Фелбамат (фельбатол) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of felbamate (felbatol) in a clinical specimen.	B
9432	55629	Fentanyl IVD, kit, liquid chromatography	Фентанил IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fentanyl in a clinical specimen, using a liquid chromatography method.	B

9433	55630	Fentanyl IVD, calibrator	Фентанил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of fentanyl in a clinical specimen.	B
9434	55631	Fentanyl IVD, control	Фентанил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of fentanyl in a clinical specimen.	B
9435	55632	Fentanyl IVD, reagent	Фентанил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of fentanyl in a clinical specimen.	B
9436	55633	Fluoxetine (prozac) IVD, kit, liquid chromatography	Флуоксетин (прозак) IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fluoxetine (prozac) in a clinical specimen, using a liquid chromatography method.	B
9437	55634	Fluoxetine (prozac) IVD, calibrator	Флуоксетин (прозак) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of fluoxetine (prozac) in a clinical specimen.	B
9438	55635	Fluoxetine (prozac) IVD, control	Флуоксетин (прозак) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of fluoxetine (prozac) in a clinical specimen.	B
9439	55636	Fluoxetine (prozac) IVD, reagent	Флуоксетин (прозак) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of fluoxetine (prozac) in a clinical specimen.	B
9440	55637	Fluphenazine IVD, kit, liquid chromatography	Fluphenazine IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fluphenazine in a clinical specimen, using a liquid chromatography method.	B
9441	55638	Fluphenazine IVD, calibrator	Флуфеназин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of fluphenazine in a clinical specimen.	B
9442	55639	Fluphenazine IVD, control	Флуфеназин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of fluphenazine in a clinical specimen.	B

9443	55640	Fluphenazine IVD, reagent	Флуфеназин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of fluphenazine in a clinical specimen.	B
9444	55641	Gamma-hydroxybutyrate (GHB) IVD, kit, gas chromatography	Гамма-гидроксибутират (GHB) IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of gamma-hydroxybutyrate (GHB) in a clinical specimen, using a gas chromatography method.	B
9445	55642	Gamma-hydroxybutyrate (GHB) IVD, kit, rapid spectrophotometry, clinical	Гамма-гидроксибутират (GHB) IVD, иж бүрдэл, хурдан спектрофотометр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of gamma-hydroxybutyrate (GHB) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid spectrophotometry method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9446	55643	Gamma-hydroxybutyrate (GHB) IVD, calibrator	Гамма-гидроксибутират (GHB) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of gamma-hydroxybutyrate (GHB) in a clinical specimen.	B
9447	55644	Gamma-hydroxybutyrate (GHB) IVD, control	Гамма-гидроксибутират (GHB) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of gamma-hydroxybutyrate (GHB) in a clinical specimen.	B
9448	55645	Gamma-hydroxybutyrate (GHB) IVD, reagent	Гамма-гидроксибутират (GHB) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of gamma-hydroxybutyrate (GHB) in a clinical specimen.	B
9449	55650	Ibuprofen IVD, kit, liquid chromatography	Ибупрофен IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ibuprofen in a clinical specimen, using a liquid chromatography method.	B
9450	55651	Ibuprofen IVD, calibrator	Ибупрофен IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ibuprofen in a clinical specimen.	B

9451	55652	Ibuprofen IVD, control	Ибупрофен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ibuprofen in a clinical specimen.	B
9452	55653	Ibuprofen IVD, reagent	Ибупрофен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ibuprofen in a clinical specimen.	B
9453	55654	Imipramine IVD, kit, liquid chromatography	Имипрамины IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of imipramine in a clinical specimen, using a liquid chromatography method.	B
9454	55655	Imipramine IVD, calibrator	Имипрамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of imipramine in a clinical specimen.	B
9455	55656	Imipramine IVD, control	Имипрамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of imipramine in a clinical specimen.	B
9456	55657	Imipramine IVD, reagent	Имипрамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of imipramine in a clinical specimen.	B
9457	55658	Isoniazid IVD, kit, spectrophotometry	Изониазидын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of isoniazid in a clinical specimen, using a spectrophotometry method.	B
9458	55659	Isoniazid IVD, kit, rapid spectrophotometry, clinical	Изониазидын IVD, иж бүрдэл, түргэн спектрофотометр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of isoniazid (isonicotinic acid) and its metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures using a rapid spectrophotometry method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to aid in the rapid screening of isoniazid levels during treatment of tuberculosis (TB). It is not intended to be used for self-testing.	B

9459	55660	Isoniazid IVD, calibrator	Изониазид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of isoniazid in a clinical specimen	B
9460	55661	Isoniazid IVD, control	Изониазид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of isoniazid in a clinical specimen	B
9461	55662	Isoniazid IVD, reagent	Изониазид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of isoniazid in a clinical specimen	B
9462	55663	Isopropanol alcohol IVD, kit, gas chromatography	Изопропанолын спирт IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of isopropanol alcohol in a clinical specimen, using a gas chromatography method.	B
9463	55664	Isopropanol alcohol IVD, calibrator	Изопропанол спирт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of isopropanol alcohol in a clinical specimen.	B
9464	55665	Isopropanol alcohol IVD, control	Изопропанолын спирт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of isopropanol alcohol in a clinical specimen.	B
9465	55666	Isopropanol alcohol IVD, reagent	Изопропанол спирт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of isopropanol alcohol in a clinical specimen.	B
9466	55667	Leflunomide IVD, kit, spectrophotometry	Лефлуномид IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of leflunomide in a clinical specimen, using a spectrophotometry method.	B
9467	55668	Leflunomide IVD, calibrator	Лефлуномид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of leflunomide in a clinical specimen.	B
9468	55669	Leflunomide IVD, control	Лефлуномид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of leflunomide in a clinical specimen.	B

9469	55670	Leflunomide IVD, reagent	Лефлуномид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of leflunomide in a clinical specimen.	B
9470	55671	Levetiracetam therapeutic drug monitoring IVD, kit, liquid chromatography	Леветирацетам эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug levetiracetam (e.g., Keppra) in a clinical specimen, using a liquid chromatography method.	B
9471	55672	Levetiracetam therapeutic drug monitoring IVD, calibrator	Леветирацетам эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug levetiracetam (e.g., Keppra) in a clinical specimen.	B
9472	55673	Levetiracetam therapeutic drug monitoring IVD, control	Леветирацетам эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug levetiracetam (e.g., Keppra) in a clinical specimen.	B
9473	55674	Levetiracetam therapeutic drug monitoring IVD, reagent	Леветирацетам эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug levetiracetam (e.g., Keppra) in a clinical specimen.	B
9474	55675	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, spectrophotometry	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen, using a spectrophotometry method.	B
9475	55676	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, gas chromatography	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen, using a gas chromatography method.	B
9476	55677	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, liquid chromatography	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, шингэн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen, using a liquid chromatography method.	B

9477	55678	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, radioimmunoassay	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen, using a radioimmunoassay method.	B
9478	55679	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, calibrator	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen.	B
9479	55680	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, control	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen.	B
9480	55681	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, reagent	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen.	B
9481	55682	Methadone IVD, kit, enzyme immunoassay (EIA)	Метадон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9482	55683	Methadone IVD, kit, gas chromatography	Метадон IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen, using a gas chromatography method.	B
9483	55684	Methadone haemagglutination inhibition IVD, kit, agglutination	Метадон гемагглютинацийг дарангуйлах IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative inhibition of haemagglutination by methadone present in a clinical specimen, using an agglutination method.	B
9484	55685	Methadone IVD, kit, liquid chromatography	Метадон IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen, using a liquid chromatography method.	B

9485	55686	Methadone IVD, kit, free radical assay	Метадон IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen, using a free radical assay method.	B
9486	55687	Methadone IVD, calibrator	Метадон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen.	B
9487	55688	Methadone IVD, control	Метадон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of methadone in a clinical specimen.	B
9488	55689	Methadone IVD, reagent	Метадон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of methadone in a clinical specimen.	B
9489	55690	Methanol IVD, kit, liquid chromatography	Метанол IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methyl alcohol in a clinical specimen, using a liquid chromatography method.	B
9490	55691	Methanol IVD, calibrator	Метанол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of methyl alcohol in a clinical specimen.	B
9491	55692	Methanol IVD, reagent	Метанол IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of methyl alcohol in a clinical specimen.	B
9492	55693	Methaqualone IVD, kit, radioimmunoassay	Метаквалон IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen, using a radioimmunoassay method.	B
9493	55694	Methaqualone IVD, calibrator	Метаквалон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen.	B

9494	55695	Methaqualone IVD, control	Метаквалон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen.	B
9495	55696	Methaqualone IVD, reagent	Метаквалон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen.	B
9496	55697	Morphine/morphine metabolite IVD, kit, spectrophotometry	Морфин/морфины метаболит IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen, using a spectrophotometry method.	B
9497	55698	Morphine/morphine metabolite IVD, kit, gas chromatography	Морфин/морфины метаболит IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen, using a gas chromatography method.	B
9498	55699	Morphine/morphine metabolite IVD, kit, liquid chromatography	Морфин/морфины метаболит IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen, using a liquid chromatography method.	B
9499	55700	Morphine/morphine metabolite haemagglutination inhibition IVD, kit, agglutination	Морфин/морфины метаболит гемагглютинацийг дарангуйлах IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative inhibition of haemagglutination by morphine and/or morphine metabolites present in a clinical specimen, using an agglutination method.	B
9500	55701	Morphine/morphine metabolite IVD, kit, rapid ICT, clinical	Морфин/морфины метаболит IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of morphine and/or morphine metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9501	55702	Morphine/morphine metabolite IVD, kit, free radical assay	Морфин/морфины метаболит IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen, using a free radical assay method.	B

9502	55703	Morphine/morphine metabolite IVD, calibrator	Морфин/морфины метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen.	B
9503	55704	Morphine/morphine metabolite IVD, control	Морфин/морфины метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen.	B
9504	55705	Morphine/morphine metabolite IVD, reagent	Морфин/морфины метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen.	B
9505	55706	Neurontin (gabapentin) IVD, kit, liquid chromatography	Нейронтин (габапентин) IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neurontin (gabapentin) in a clinical specimen, using a liquid chromatography method.	B
9506	55707	Neurontin (gabapentin) IVD, calibrator	Нейронтин (габапентин) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of neurontin (gabapentin) in a clinical specimen.	B
9507	55708	Neurontin (gabapentin) IVD, control	Нейронтин (габапентин) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of neurontin (gabapentin) in a clinical specimen.	B
9508	55709	Neurontin (gabapentin) IVD, reagent	Нейронтин (габапентин) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neurontin (gabapentin) in a clinical specimen.	B
9509	55710	Nortriptyline IVD, kit, fluorescent immunoassay	Нортриптилин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nortriptyline in a clinical specimen, using a fluorescent immunoassay method.	B
9510	55711	Nortriptyline IVD, kit, liquid chromatography	Нортриптилин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nortriptyline in a clinical specimen, using a liquid chromatography method.	B

9511	55712	Nortriptyline IVD, reagent	Нортриптилин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of nortriptyline in a clinical specimen.	B
9512	55713	Norverapamil IVD, kit, liquid chromatography	Норверапамил IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of norverapamil in a clinical specimen, using a liquid chromatography method.	B
9513	55714	Norverapamil IVD, calibrator	Норверапамил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of norverapamil in a clinical specimen.	B
9514	55715	Norverapamil IVD, control	Норверапамил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of norverapamil in a clinical specimen.	B
9515	55716	Norverapamil IVD, reagent	Норверапамил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of norverapamil in a clinical specimen.	B
9516	55717	Opiate/opiate metabolite IVD, kit, enzyme immunoassay (EIA)	Опиат/опиатын метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9517	55718	Opiate/opiate metabolite IVD, kit, gas chromatography	Опиат/опиатын метаболит IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen, using a gas chromatography method.	B
9518	55719	Opiate/opiate metabolite IVD, kit, liquid chromatography	Опиат/опиатын метаболит IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen, using a liquid chromatography method.	B
9519	55720	Opiate hemagglutination inhibition IVD, kit, agglutination	Опиатын гемагглютинацийг дарангуйлах IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative inhibition of opiate drug induced haemagglutination in a clinical specimen, using an agglutination method.	B

9520	55721	Opiate/opiate metabolite IVD, kit, free radical assay	Опиат/опиатын метаболит IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen, using a free radical assay method.	B
9521	55722	Opiate/opiate metabolite IVD, calibrator	Опиат/опиатын метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen.	B
9522	55723	Opiate/opiate metabolite IVD, control	Опиат/опиатын метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen.	B
9523	55724	Opiate/opiate metabolite IVD, reagent	Опиат/опиатын метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of opiate and/or opiate metabolites in a clinical specimen.	B
9524	55726	Organophosphate pesticide IVD, kit, liquid chromatography	Органофосфатын пестицид IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or semi-quantitative detection of organophosphate pesticides in a clinical specimen, using a liquid chromatography method.	B
9525	55727	Organophosphate pesticide IVD, calibrator	Органофосфатын пестицид IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or semi-quantitative detection of organophosphate pesticides in a clinical specimen.	B
9526	55728	Organophosphate pesticide IVD, control	Органофосфатын пестицид IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or semi-quantitative detection of organophosphate pesticides in a clinical specimen.	B
9527	55729	Organophosphate pesticide IVD, reagent	Органофосфатын пестицид IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or semi-quantitative detection of organophosphate pesticides in a clinical specimen.	B
9528	55730	Oxocarbazepine IVD, kit, liquid chromatography	Оксокарбазепин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oxocarbazepine in a clinical specimen, using a liquid chromatography method.	B

9529	55731	Oxocarbazepine IVD, calibrator	Оксокарбазепин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of oxocarbazepine in a clinical specimen.	B
9530	55732	Oxocarbazepine IVD, control	Оксокарбазепин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of oxocarbazepine in a clinical specimen.	B
9531	55733	Oxocarbazepine IVD, reagent	Оксокарбазепин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of oxocarbazepine in a clinical specimen.	B
9532	55734	Oxycodone IVD, kit, rapid ICT, clinical	Оксикодон IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of oxycodone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9533	55735	Oxycodone IVD, kit, liquid chromatography	Оксикодон IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oxycodone in a clinical specimen, using a liquid chromatography method.	B
9534	55736	Oxycodone IVD, calibrator	Оксикодон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of oxycodone in a clinical specimen.	B
9535	55737	Oxycodone IVD, control	Оксикодон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of oxycodone in a clinical specimen.	B
9536	55738	Oxycodone IVD, reagent	Оксикодон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of oxycodone in a clinical specimen.	B

9537	55739	Perphenazine IVD, kit, liquid chromatography	Перфеназин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of perphenazine in a clinical specimen, using a liquid chromatography method.	B
9538	55740	Perphenazine IVD, calibrator	Перфеназин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of perphenazine in a clinical specimen.	B
9539	55741	Perphenazine IVD, control	Перфеназин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of perphenazine in a clinical specimen.	B
9540	55742	Perphenazine IVD, reagent	Перфеназин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of perphenazine in a clinical specimen.	B
9541	55743	Phencyclidine (PCP) IVD, kit, liquid chromatography	Phencyclidin (PCP) IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen, using a liquid chromatography method.	B
9542	55744	Phencyclidine (PCP) IVD, kit, gas chromatography	Phencyclidin (PCP) IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen, using a gas chromatography method.	B
9543	55745	Phencyclidine (PCP) IVD, kit, enzyme immunoassay (EIA)	Фенциклидин (PCP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9544	55746	Phencyclidine (PCP) IVD, kit, radioimmunoassay	Фенциклидин (PCP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen, using a radioimmunoassay method.	B
9545	55747	Phencyclidine (PCP) IVD, calibrator	Phencyclidin (PCP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen.	B

9546	55748	Phencyclidine (PCP) IVD, control	Фенциклидин (PCP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen.	B
9547	55749	Phencyclidine (PCP) IVD, reagent	Фенциклидин (PCP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of phencyclidine (PCP) in a clinical specimen.	B
9548	55750	Phenobarbital IVD, kit, enzyme immunoassay (EIA)	Фенобарбитал IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9549	55751	Phenobarbital IVD, kit, radioimmunoassay	Фенобарбитал IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a radioimmunoassay method.	B
9550	55752	Phenobarbital IVD, kit, fluorescent immunoassay	Фенобарбитал IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a fluorescent immunoassay method.	B
9551	55753	Phenobarbital IVD, kit, spectrophotometry	Фенобарбитал IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a spectrophotometry method.	B
9552	55754	Phenobarbital IVD, kit, gas chromatography	Фенобарбитал IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a gas chromatography method.	B
9553	55755	Phenobarbital IVD, kit, liquid chromatography	Фенобарбитал IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a liquid chromatography method.	B
9554	55756	Phenobarbital IVD, kit, nephelometry/turbidimetry	Фенобарбитал IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen, using a nephelometry/turbidimetry method.	B

9555	55757	Phenobarbital IVD, calibrator	Фенобарбитал IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen.	B
9556	55758	Phenobarbital IVD, control	Фенобарбитал IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen.	B
9557	55759	Phenobarbital IVD, reagent	Фенобарбитал IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of phenobarbital in a clinical specimen.	B
9558	55760	Polychlorinated bipheny (PCB) IVD, kit, enzyme immunoassay (EIA)	Полихлорт бифени (ПХБ) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of polychlorinated bipheny (PCB) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9559	55761	Polychlorinated bipheny (PCB) IVD, calibrator	Полихлорт бифени (ПХБ) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of polychlorinated bipheny (PCB) in a clinical specimen.	B
9560	55762	Polychlorinated bipheny (PCB) IVD, control	Полихлорт бифени (ПХБ) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of polychlorinated bipheny (PCB) in a clinical specimen.	B
9561	55764	Propoxyphene IVD, kit, enzyme immunoassay (EIA)	Пропоксифен IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9562	55765	Propoxyphene IVD, kit, liquid chromatography	Пропоксифен IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen, using a liquid chromatography method.	B
9563	55766	Propoxyphene IVD, kit, gas chromatography	Пропоксифен IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen, using a gas chromatography method.	B

9564	55767	Propoxyphene IVD, calibrator	Пропоксифен IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen.	B
9565	55768	Propoxyphene IVD, control	Пропоксифен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen.	B
9566	55769	Propoxyphene IVD, reagent	Пропоксифен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen.	B
9567	55770	Organic solvent metabolite IVD, kit, spectrophotometry	Органик уусгагч метаболит IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers associated with occupational or environmental exposure to volatile organic solvents (e.g., benzene, styrene, toluene, xylene) in a clinical specimen, using a spectrophotometry method. Compounds detected typically include phenol, cresol, hippuric acid, methylhippuric acid, mandelic acid, muconic acid, and/or phenylglyoxylic acid; detection of polycyclic aromatic hydrocarbon (PAH) metabolites is not included.	B
9568	55771	Organic solvent metabolite IVD, kit, gas chromatography	Органик уусгагч метаболит IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers associated with occupational or environmental exposure to volatile organic solvents (e.g., benzene, styrene, toluene, xylene) in a clinical specimen, using a gas chromatography method. Compounds detected typically include phenol, cresol, hippuric acid, methylhippuric acid, mandelic acid, muconic acid, and/or phenylglyoxylic acid; detection of polycyclic aromatic hydrocarbon (PAH) metabolites is not included.	B

9569	55772	Organic solvent metabolite IVD, kit, liquid chromatography	Органик уусгагч метаболит IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers associated with occupational or environmental exposure to volatile organic solvents (e.g., benzene, styrene, toluene, xylene) in a clinical specimen, using a liquid chromatography method. Compounds detected typically include phenol, cresol, hippuric acid, methylhippuric acid, mandelic acid, muconic acid, and/or phenylglyoxylic acid; detection of polycyclic aromatic hydrocarbon (PAH) metabolites is not included.	B
9570	55773	Organic solvent metabolite IVD, kit, electrometry	Органик уусгагч метаболит IVD, иж бүрдэл, цахилгаан хэмжигдэхүүн	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers associated with occupational or environmental exposure to volatile organic solvents (e.g., benzene, styrene, toluene, xylene) in a clinical specimen, using an electrometry method. Compounds detected typically include phenol, cresol, hippuric acid, methylhippuric acid, mandelic acid, muconic acid, and/or phenylglyoxylic acid; detection of polycyclic aromatic hydrocarbon (PAH) metabolites is not included.	B
9571	55774	Organic solvent metabolite IVD, calibrator	Органик уусгагч метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers (e.g., phenol) associated with occupational or environmental exposure to volatile organic solvents [e.g., benzene, styrene, toluene, xylene] in a clinical specimen.	B
9572	55775	Organic solvent metabolite IVD, control	Органик уусгагч метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers (e.g., phenol) associated with occupational or environmental exposure to volatile organic solvents [e.g., benzene, styrene, toluene, xylene] in a clinical specimen.	B

9573	55776	Organic solvent metabolite IVD, reagent	Органик уусгагч метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple metabolites/biomarkers (e.g., phenol) associated with occupational or environmental exposure to volatile organic solvents [e.g., benzene, styrene, toluene, xylene] in a clinical specimen.	B
9574	55777	Psilocin/Bufotenine IVD, kit, enzyme immunoassay (EIA)	Псилоцин/Буфотенин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of psilocin or bufotenine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9575	55778	Psilocin/Bufotenine IVD, calibrator	Псилоцин/буфотенин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of psilocin or bufotenine in a clinical specimen.	B
9576	55779	Psilocin/Bufotenine IVD, control	Псилоцин/буфотенин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of psilocin or bufotenine in a clinical specimen.	B
9577	55780	Psilocin/Bufotenine IVD, reagent	Псилоцин/буфотенин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of psilocin or bufotenine in a clinical specimen.	B
9578	55781	Quetiapine IVD, kit, liquid chromatography	Кетиапины IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of quetiapine in a clinical specimen, using a liquid chromatography method.	B
9579	55782	Quetiapine IVD, calibrator	Кетиапины IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of quetiapine in a clinical specimen.	B
9580	55783	Quetiapine IVD, control	Кетиапины IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of quetiapine in a clinical specimen.	B

9581	55784	Quetiapine IVD, reagent	Кетиапины IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of quetiapine in a clinical specimen.	B
9582	55785	Quinine IVD, kit, liquid chromatography	Хинин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of quinine in a clinical specimen, using a liquid chromatography method.	B
9583	55786	Quinine IVD, calibrator	Хинин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of quinine in a clinical specimen.	B
9584	55787	Quinine IVD, control	Хинин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of quinine in a clinical specimen.	B
9585	55788	Quinine IVD, reagent	Хинин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of quinine in a clinical specimen.	B
9586	55789	Rifabutin IVD, kit, liquid chromatography	Рифабутин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of rifabutin in a clinical specimen, using a liquid chromatography method.	B
9587	55790	Rifabutin IVD, calibrator	Рифабутин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of rifabutin in a clinical specimen.	B
9588	55791	Rifabutin IVD, control	Рифабутин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of rifabutin in a clinical specimen.	B
9589	55792	Rifabutin IVD, reagent	Рифабутин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of rifabutin in a clinical specimen.	B
9590	55794	Salicylate IVD, kit, gas chromatography	Салицилат IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen, using a gas chromatography method.	B

9591	55795	Salicylate IVD, kit, liquid chromatography	Салицилат IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen, using a liquid chromatography method.	B
9592	55796	Salicylate IVD, kit, rapid ICT, clinical	Салицилат IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of salicylate in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9593	55797	Salicylate IVD, reagent	Салицилат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of salicylate in a clinical specimen.	B
9594	55798	Snake venom IVD, kit, enzyme immunoassay (EIA)	Могойн хор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection and/or identification of snake venom in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9595	55800	Snake venom IVD, calibrator	Могойн хор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection and/or identification of snake venom in a clinical specimen.	B
9596	55801	Snake venom IVD, control	Могойн хор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection and/or identification of snake venom in a clinical specimen.	B
9597	55802	Snake venom IVD, reagent	Могойн хор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection and/or identification of snake venom in a clinical specimen.	B
9598	55803	Trichloroacetic acid IVD, kit, spectrophotometry	Trichloroacetic acid IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of trichloroacetic acid in a clinical specimen, using a spectrophotometry method.	B

9599	55804	Trichloroacetic acid IVD, kit, gas chromatography	Trichloroacetic acid IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of trichloroacetic acid in a clinical specimen, using a gas chromatography method.	B
9600	55805	Trichloroacetic acid IVD, calibrator	Trichloroacetic acid IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of trichloroacetic acid in a clinical specimen.	B
9601	55806	Trichloroacetic acid IVD, control	Trichloroacetic acid IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of trichloroacetic acid in a clinical specimen.	B
9602	55807	Trichloroacetic acid IVD, reagent	Trichloroacetic acid IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of trichloroacetic acid in a clinical specimen.	B
9603	55808	Trichloroethylene IVD, kit, gas	Трихлорэтилен IVD, иж бүрдэл, хий	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of trichloroethylene (TCE) in a clinical specimen, using a gas chromatography method.	B
9604	55809	Trichloroethylene IVD, calibrator	Трихлорэтилен IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of trichloroethylene (TCE) in a clinical specimen.	B
9605	55810	Trichloroethylene IVD, control	Трихлорэтилен IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of trichloroethylene (TCE) in a clinical specimen.	B
9606	55811	Trichloroethylene IVD, reagent	Трихлорэтилен IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of trichloroethylene (TCE) in a clinical specimen.	B
9607	55812	Tricyclic antidepressant IVD, kit, liquid chromatography	Трициклик антидепрессант IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using a liquid chromatography method.	B

9608	55813	Tricyclic antidepressant IVD, kit, gas chromatography	Трициклик антидепрессант IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using a gas chromatography method.	B
9609	55814	Tricyclic antidepressant IVD, kit, fluorescent immunoassay	Трициклик антидепрессант IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using a fluorescent immunoassay method.	B
9610	55815	Tricyclic antidepressant IVD, kit, spectrophotometry	Трициклик антидепрессант IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using a spectrophotometry method.	B
9611	55816	Tricyclic antidepressant IVD, calibrator	Трициклик антидепрессант IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen.	B
9612	55817	Tricyclic antidepressant IVD, control	Трициклик антидепрессант IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen.	B
9613	55818	Tricyclic antidepressant IVD, reagent	Трициклик антидепрессант IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen.	B
9614	55819	Verapamil IVD, kit, liquid chromatography	Верапамил IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of verapamil in a clinical specimen, using a liquid chromatography method.	B
9615	55820	Verapamil IVD, calibrator	Верапамил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of verapamil in a clinical specimen.	B
9616	55821	Verapamil IVD, control	Верапамил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of verapamil in a clinical specimen.	B

9617	55822	Verapamil IVD, reagent	Верапамил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of verapamil in a clinical specimen.	B
9618	55964	Leukocyte myeloperoxidase (MPO) IVD, calibrator	Лейкоцит миелопероксидаза (MPO) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in leukocytes from a clinical specimen.	B
9619	55965	Leukocyte myeloperoxidase (MPO) IVD, control	Лейкоцит миелопероксидаза (MPO) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in leukocytes from a clinical specimen.	B
9620	55966	Leukocyte myeloperoxidase (MPO) IVD, reagent	Лейкоцит миелопероксидаза (MPO) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in leukocytes from a clinical specimen.	B
9621	56241	Myeloperoxidase (MPO) IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Миелопероксидаза (MPO) IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ялгах/урсгалын цитометр (FACS/Урсгал)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myeloperoxidase (MPO) in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method. MPO is used as a marker of cardiovascular disease (e.g., atherosclerosis, coronary artery disease, heart failure).	B
9622	56614	Placental growth factor (PLGF) IVD, calibrator	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen.	B
9623	56615	Placental growth factor (PLGF) IVD, control	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen.	B
9624	56616	Placental growth factor (PLGF) IVD, kit, chemiluminescent immunoassay	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen, using a chemiluminescent immunoassay method.	B

9625	56617	Placental growth factor (PLGF) IVD, kit, enzyme immunoassay (EIA)	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9626	56619	Placental growth factor (PLGF) IVD, kit, fluorescent immunoassay	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen, using a fluorescent immunoassay method.	B
9627	56620	Placental growth factor (PLGF) IVD, reagent	Ихэсийн өсөлтийн хүчин зүйл (PLGF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of placental growth factor (PLGF) in a clinical specimen.	B
9628	56656	Human epididymis protein 4 (HE4) IVD, kit, chemiluminescent immunoassay	Хүний эпидидимисийн уураг 4 (HE4) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human epididymis protein 4 (HE4) ovarian cancer marker in a clinical specimen, using a chemiluminescent immunoassay method.	B
9629	56657	Human epididymis protein 4 (HE4) IVD, control	Хүний эпидидимисийн уураг 4 (HE4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human epididymis protein 4 (HE4) ovarian cancer marker, in a clinical specimen.	B
9630	56658	Human epididymis protein 4 (HE4) IVD, calibrator	Хүний эпидидимисийн уураг 4 (HE4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human epididymis protein 4 (HE4) ovarian cancer marker, in a clinical specimen.	B
9631	56659	Human epididymis protein 4 (HE4) IVD, reagent	Хүний эпидидимисийн уураг 4 (HE4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human epididymis protein 4 (HE4) ovarian cancer marker, in a clinical specimen.	B

9632	56695	Vascular endothelial growth factor (VEGF) IVD, kit, enzyme immunohistochemistry	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9633	56735	Vascular endothelial growth factor (VEGF) IVD, antibody	Судасны эндотелийн өсөлтийн хүчин зүйл (VEGF) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of vascular endothelial growth factor (VEGF) in a clinical specimen.	B
9634	56764	Adrenocorticotropic hormone (ACTH) IVD, antibody	Адренокортикотроп даавар (ACTH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen.	B
9635	56766	Albumin IVD, antibody	Альбумин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen.	B
9636	56768	Alpha-1-antichymotrypsin IVD, antibody	Альфа-1-антихимотрипсин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-1-antichymotrypsin in a clinical specimen.	B
9637	56770	Alpha-fetoprotein (AFP) IVD, antibody	Альфа-фетопротейн (AFP) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen.	B
9638	56842	Beta-2-microglobulin IVD, kit, enzyme immunohistochemistry	Бета-2-микроглобулин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9639	56843	Beta-2-microglobulin IVD, antibody	Бета-2-микроглобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen.	B
9640	56870	Calcitonin IVD, antibody	Кальцитонин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of calcitonin in a clinical specimen.	B

9641	56887	Cancer antigen 15-3 (CA15-3) IVD, antibody	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen.	B
9642	56889	Cancer antigen 19-9 (CA19-9) GI IVD, antibody	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) GI IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of gastrointestinal and pancreatic cancer antigen 19-9 (CA19-9) in a clinical specimen.	B
9643	56891	Cancer antigen 125 (CA125) IVD, antibody	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen.	B
9644	56893	Cancer antigen 130 (CA130) IVD, antibody	Хорт хавдрын эсрэгтөрөгч 130 (CA130) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of cancer antigen 130 (CA130), a pulmonary adenocarcinoma antigen, in a clinical specimen.	B
9645	56895	Carcinoembryonic antigen (CEA) IVD, antibody	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen.	B
9646	57052	Chromogranin A IVD, antibody	Хромогранин A IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen.	B
9647	57055	Collagen type IV IVD, kit, enzyme immunohistochemistry	Коллагены IV төрлийн IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of collagen type IV in a clinical specimen, using an enzyme immunohistochemistry method.	B
9648	57056	Collagen type IV IVD, antibody	Коллаген IV төрлийн IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of collagen type IV in a clinical specimen.	B

9649	57057	Complement component C1q IVD, kit, enzyme immunohistochemistry	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade component C1q in a clinical specimen, using an enzyme immunohistochemistry method. It is typically used for the characterization and/or diagnosis of complement cascade component C1q deficiency, which may be associated with systemic lupus erythematosus (SLE) and glomerulonephritis.	B
9650	57058	Complement component C1q IVD, antibody	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of complement cascade component C1q in a clinical specimen.	B
9651	57059	Complement components C3/C3c IVD, kit, enzyme immunohistochemistry	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade components C3 and/or C3c in a clinical specimen, using an enzyme immunohistochemistry method.	B
9652	57060	Complement components C3/C3c IVD, antibody	Нэмэлт бүрэлдэхүүн хэсгүүд C3/C3c IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of complement cascade components C3 and/or C3c in a clinical specimen.	B
9653	57061	Complement components C4/C4c IVD, kit, enzyme immunohistochemistry	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade components C4 and/or C4c in a clinical specimen, using an enzyme immunohistochemistry method.	B
9654	57062	Complement components C4/C4c IVD, antibody	Нэмэлт бүрэлдэхүүн хэсгүүд C4/C4c IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of complement cascade components C4 and/or C4c in a clinical specimen.	B
9655	57210	Estrogen (oestrogen)/progesterone receptor IVD, antibody	Эстроген (эстроген) / прогестерон рецептор IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of estrogen (oestrogen) and/or progesterone receptors in a clinical specimen.	B

9656	57211	Estrogen (oestrogen)/progesterone receptor IVD, calibrator	Эстроген (эстроген) / прогестерон рецептор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of estrogen (oestrogen) and/or progesterone receptors in a clinical specimen.	B
9657	57212	Estrogen (oestrogen)/progesterone receptor IVD, control	Эстроген (эстроген) / прогестерон рецептор IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of estrogen (oestrogen) and/or progesterone receptors in a clinical specimen.	B
9658	57213	Estrogen (oestrogen)/progesterone receptor IVD, reagent	Эстроген (эстроген) / прогестерон рецептор IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of estrogen (oestrogen) and/or progesterone receptors in a clinical specimen.	B
9659	57221	Fibronectin IVD, kit, enzyme immunohistochemistry	Фибронектин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fibronectin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9660	57222	Fibronectin IVD, antibody	Фибронектин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of fibronectin in a clinical specimen.	B
9661	57224	Follicle stimulating hormone (FSH) IVD, antibody	Фолликул өдөөгч даавар (FSH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of follicle stimulating hormone (FSH) in a clinical specimen.	B
9662	57236	Gastrin IVD, antibody	Гастрин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of gastrin in a clinical specimen.	B
9663	57243	Glucagon IVD, antibody	Глюкагон IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of glucagon in a clinical specimen.	B

9664	57255	Gross cystic disease fluid protein-15 IVD, antibody	Цистик өвчний шингэний ууараг-15 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of gross cystic disease fluid protein-15 (GCDFP-15), also known as BRST-2 antigen or prolactin-inducible protein (PIP), in a clinical specimen.	B
9665	57298	Total human chorionic gonadotropin IVD, kit, enzyme immunohistochemistry	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen using an enzyme immunohistochemistry method. It is used to aid detection of pregnancy, or as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome).	B
9666	57299	Total human chorionic gonadotropin IVD, antibody	Хүний нийт chorionic gonadotropin IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen.	B
9667	57302	Human growth hormone (HGH) IVD, kit, enzyme immunohistochemistry	Хүний өсөлтийн даавар (HGH) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9668	57303	Human growth hormone (HGH) IVD, antibody	Хүний өсөлтийн даавар (HGH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of human growth hormone (HGH) in a clinical specimen.	B
9669	57305	Human placental lactogen (HPL) IVD, antibody	Хүний ихэсийн лактоген (HPL) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of human placental lactogen (HPL), also known as chorionic somatomammotropin, in a clinical specimen.	B

9670	57306	Polyvalent human immunoglobulin antibody IVD, kit, enzyme immunohistochemistry	Хүний поливалент иммуноглобулины эсрэгбие IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of all es of human immunoglobulin (i.e., IgA, IgE, IgD, IgG, IgM) and/or specific immunoglobulin chains in a clinical specimen, using an enzyme immunohistochemistry method.	B
9671	57307	Polyvalent human immunoglobulin antibody IVD, antibody	Поливалент хүний иммуноглобулины эсрэгбие IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of all es of human immunoglobulin (i.e, IgA, IgE, IgD, IgG, IgM) and/or specific immunoglobulin chains in a clinical specimen.	B
9672	57308	Polyvalent human immunoglobulin antibody IVD, reagent	Хүний поливалент иммуноглобулины эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of all es of human immunoglobulin (i.e, IgA, IgE, IgD, IgG, IgM) and/or specific immunoglobulin chains in a clinical specimen.	B
9673	57309	Total immunoglobulin A (IgA total) IVD, kit, enzyme immunohistochemistry	Нийт иммуноглобулин А (нийт IgA) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9674	57310	Total immunoglobulin A (IgA total) IVD, antibody	Нийт иммуноглобулин А (IgA нийт) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen.	B
9675	57311	Total immunoglobulin D (IgD total) IVD, kit, enzyme immunohistochemistry	Нийт иммуноглобулин D (IgD нийт) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9676	57312	Total immunoglobulin D (IgD total) IVD, antibody	Нийт иммуноглобулин D (IgD нийт) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total immunoglobulin D (IgD total) in a clinical specimen.	B
9677	57313	Total immunoglobulin E (IgE total) IVD, kit, enzyme immunohistochemistry	Нийт иммуноглобулин E (нийт IgE) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen, using an enzyme immunohistochemistry method.	B

9678	57314	Total immunoglobulin E (IgE total) IVD, antibody	Нийт иммуноглобулин E (нийт IgE) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen.	B
9679	57315	Total immunoglobulin G (IgG total) IVD, kit, enzyme immunohistochemistry	Нийт иммуноглобулин G (нийт IgG) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9680	57316	Total immunoglobulin G (IgG total) IVD, antibody	Нийт иммуноглобулин G (IgG нийт) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen.	B
9681	57317	Total immunoglobulin M (IgM total) IVD, kit, enzyme immunohistochemistry	Нийт иммуноглобулин M (нийт IgM) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9682	57318	Total immunoglobulin M (IgM total) IVD, antibody	Нийт иммуноглобулин M (IgM нийт) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen.	B
9683	57319	Kappa/lambda light chain messenger RNA IVD, kit, nucleic acid technique (NAT)	Kappa/lambda хөнгөн гинжин хэлхээний дамжуулагч РНХ IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of kappa and/or lambda light chain messenger RNA in a clinical specimen, using a nucleic acid technique (NAT).	B
9684	57320	Kappa/lambda light chain messenger RNA IVD, probe	Kappa/lambda хөнгөн гинжин хэлхээний элч РНХ IVD, датчик	A defined piece of single-stranded nucleic acid which is used to identify specific complementary-sequence nucleic acid molecules in an assay intended to be used for the qualitative and/or quantitative detection of kappa and/or lambda light chain messenger RNA in a clinical specimen.	B
9685	57321	Kappa/lambda light chain messenger RNA IVD, calibrator	Kappa/lambda хөнгөн гинжин хэлхээний элч РНХ IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of kappa and/or lambda light chain messenger RNA in a clinical specimen.	B
9686	57322	Kappa/lambda light chain messenger RNA IVD, control	Kappa/lambda хөнгөн гинжин хэлхээний элч РНХ IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of kappa and/or lambda light chain messenger RNA in a clinical specimen.	B

9687	57323	Kappa/lambda light chain messenger RNA IVD, reagent	Kappa/lambda хөнгөн гинжин хэлхээний элч РНХ IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of kappa and/or lambda light chain messenger RNA in a clinical specimen.	B
9688	57325	Kappa/lambda light chain immunoglobulin IVD, antibody	Kappa/lambda хөнгөн гинжин иммуноглобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of kappa and/or lambda light chain immunoglobulins in a clinical specimen.	B
9689	57326	Inhibin A IVD, kit, enzyme immunohistochemistry	Inhibin A IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of inhibin A in a clinical specimen, using an enzyme immunohistochemistry method.	B
9690	57327	Inhibin A IVD, antibody	Inhibin A IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of inhibin A in a clinical specimen.	B
9691	57328	Inhibin B IVD, kit, enzyme immunohistochemistry	Inhibin B IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of inhibin B in a clinical specimen, using an enzyme immunohistochemistry method.	B
9692	57329	Inhibin B IVD, antibody	Inhibin B IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of inhibin B in a clinical specimen.	B
9693	57331	Insulin IVD, antibody	Инсулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of insulin in a clinical specimen.	B
9694	57348	Lactoferrin IVD, kit, enzyme immunohistochemistry	Лактоферрин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9695	57349	Lactoferrin IVD, antibody	Лактоферрин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of lactoferrin in a clinical specimen.	B

9696	57351	Laminin IVD, antibody	Ламинин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of laminin in a clinical specimen.	B
9697	57362	Luteinizing hormone (LH) IVD, antibody	Luteinizing гормон (LH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of luteinizing hormone (LH) in a clinical specimen.	B
9698	57363	Lysozyme (muramidase) IVD, kit, enzyme immunohistochemistry	Лизоцим (мурамидаза) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9699	57364	Lysozyme (muramidase) IVD, antibody	Лизоцим (мурамидаза) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen.	B
9700	57375	Mammaglobin IVD, kit, enzyme immunohistochemistry	Маммаглобин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen, using an enzyme immunohistochemistry method.	B
9701	57376	Mammaglobin IVD, antibody	Маммаглобин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of mammaglobin protein in a clinical specimen.	B
9702	57382	Matrix metalloproteinase-9 (MMP-9) IVD, kit, enzyme immunohistochemistry	Матриц металлопротейназа-9 (MMP-9) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9703	57383	Matrix metalloproteinase-9 (MMP-9) IVD, antibody	Матриц металлопротейназа-9 (MMP-9) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen.	B

9704	57384	Matrix metalloproteinase-9 (MMP-9) IVD, calibrator	Матриц металлопротейназа-9 (MMP-9) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen.	B
9705	57385	Matrix metalloproteinase-9 (MMP-9) IVD, control	Матриц металлопротейназа-9 (MMP-9) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen.	B
9706	57386	Matrix metalloproteinase-9 (MMP-9) IVD, reagent	Матриц металлопротейназа-9 (MMP-9) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen.	B
9707	57437	Mucin IVD, kit, enzyme immunohistochemistry	Муцин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mucin protein in a clinical specimen, using an enzyme immunohistochemistry method.	B
9708	57438	Mucin IVD, antibody	Муцин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a mucin protein in a clinical specimen.	B
9709	57449	Myelin basic protein IVD, kit, enzyme immunohistochemistry	Миелин үндсэн уураг IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myelin basic protein in a clinical specimen, using an enzyme immunohistochemistry method.	B
9710	57450	Myelin basic protein IVD, antibody	Миелин үндсэн уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of myelin basic protein in a clinical specimen.	B
9711	57456	Myeloperoxidase (MPO) IVD, kit, enzyme immunohistochemistry	Миелопероксидаза (MPO) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myeloperoxidase (MPO) in a clinical specimen, using an enzyme immunohistochemistry method. MPO is used as a marker of cardiovascular disease (e.g., atherosclerosis, coronary artery disease, heart failure).	B

9712	57457	Leukocyte myeloperoxidase (MPO) IVD, antibody	Лейкоцит миелопероксидаза (MPO) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the enzyme myeloperoxidase (MPO) in leukocytes from a clinical specimen.	B
9713	57468	Myoglobin IVD, kit, enzyme immunohistochemistry	Миоглобин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myoglobin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9714	57469	Myoglobin IVD, antibody	Миоглобин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of myoglobin in a clinical specimen.	B
9715	57485	Neuron-specific enolase (NSE) IVD, kit, enzyme immunohistochemistry	Нейроны өвөрмөц энолаза (NSE) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9716	57486	Neuron-specific enolase (NSE) IVD, antibody	Нейроны өвөрмөц энолаза (NSE) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen.	B
9717	57488	Neutrophil elastase IVD, antibody	Нейтрофил эластаза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of neutrophil elastase, also known as PMN elastase, in a clinical specimen.	B
9718	57489	Neutrophil elastase IVD, calibrator	Нейтрофил эластаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of neutrophil elastase, also known as PMN elastase, in a clinical specimen.	B
9719	57490	Neutrophil elastase IVD, control	Нейтрофил эластаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of neutrophil elastase, also known as PMN elastase, in a clinical specimen.	B

9720	57491	Neutrophil elastase IVD, reagent	Нейтрофил эластаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neutrophil elastase, also known as PMN elastase, in a clinical specimen.	B
9721	57492	Oncogene protein p21(ras) IVD, kit, enzyme immunohistochemistry	Онкогений уураг p21(ras) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oncogene protein p21(ras) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9722	57493	Oncogene protein p21(ras) IVD, antibody	Онкогений уураг p21(ras) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of oncogene protein p21(ras) in a clinical specimen.	B
9723	57504	p501s IVD, kit, enzyme immunohistochemistry	p501s IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of p501s prostate specific marker, also known as prostein, in a clinical specimen using an enzyme immunohistochemistry method.	B
9724	57505	p501s IVD, antibody	p501s IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p501s prostate specific marker, also known as prostein, in a clinical specimen.	B
9725	57506	p501s IVD, calibrator	p501s IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of p501s prostate specific marker, also known as prostein, in a clinical specimen.	B
9726	57507	p501s IVD, control	p501s IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of p501s prostate specific marker, also known as prostein, in a clinical specimen.	B
9727	57508	p501s IVD, reagent	p501s IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of p501s prostate specific marker, also known as prostein, in a clinical specimen.	B

9728	57509	p504s IVD, kit, enzyme immunohistochemistry	p504s IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of p504s prostate specific marker, also known as alpha methylacyl-CoA-racemase or AMACR, in a clinical specimen using an enzyme immunohistochemistry method.	B
9729	57510	p504s protein IVD, antibody	p504s уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p504s prostate specific marker, also known as alpha methylacyl-CoA-racemase or AMACR, in a clinical specimen.	B
9730	57511	p504s protein IVD, calibrator	p504s уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of p504s prostate specific marker, also known as alpha methylacyl-CoA-racemase or AMACR, in a clinical specimen.	B
9731	57512	p504s protein IVD, control	p504s уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of p504s prostate specific marker, also known as alpha methylacyl-CoA-racemase or AMACR, in a clinical specimen.	B
9732	57513	p504s protein IVD, reagent	p504s уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of p504s prostate specific marker, also known as alpha methylacyl-CoA-racemase or AMACR, in a clinical specimen.	B
9733	57514	p53 tumour protein IVD, kit, enzyme immunohistochemistry	p53 хавдрын уураг IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen, using an enzyme immunohistochemistry method.	B
9734	57515	p53 tumour protein IVD, antibody	p53 хавдрын уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p53 tumour protein in a clinical specimen.	B
9735	57516	p63 tumour protein IVD, kit, enzyme immunohistochemistry	p63 хавдрын уураг IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of p63 tumour protein in a clinical specimen, using an enzyme immunohistochemistry method.	B

9736	57517	p63 tumour protein IVD, antibody	p63 хавдрын уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p63 tumour protein in a clinical specimen.	B
9737	57518	p63 tumour protein IVD, calibrator	p63 хавдрын уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of p63 tumour protein in a clinical specimen.	B
9738	57519	p63 tumour protein IVD, control	p63 хавдрын уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of p63 tumour protein in a clinical specimen.	B
9739	57520	p63 tumour protein IVD, reagent	p63 хавдрын уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of p63 tumour protein in a clinical specimen.	B
9740	57532	Prealbumin (transthyretin) IVD, antibody	Преальбумин (транстиретин) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of prealbumin (transthyretin) in a clinical specimen.	B
9741	57534	Progesterone receptor IVD, antibody	Прогестерон рецептор IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of progesterone receptors in a clinical specimen.	B
9742	57536	Prolactin IVD, antibody	Пролактин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen.	B
9743	57542	Multiple prostate cancer-associated marker IVD, kit, enzyme immunohistochemistry	Олон түрүү булчирхайн хорт хавдартай холбоотой маркер IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple markers potentially associated with prostate cancer in a clinical specimen, using an enzyme immunohistochemistry method. Examples of detectable markers include prostatic intraepithelial neoplasia markers (e.g., cytokeratin HMW), prostate specific antigen (PSA), alpha-methylacyl-CoA racemase (AMACR), and p63 tumour protein.	B

9744	57543	Multiple prostate cancer-associated marker IVD, antibody	Олон түрүү булчирхайн хорт хавдартай холбоотой маркер IVD, эсрэгбие	Multiple immunoglobulins (antibody cocktail) capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple markers potentially associated with prostate cancer in a clinical specimen. Examples of detectable markers include prostatic intraepithelial neoplasia markers (e.g., cytokeratin HMW), prostate specific antigen (PSA), alpha-methylacyl-CoA racemase (AMACR), and p63 tumour protein.	B
9745	57544	Multiple prostate cancer-associated marker IVD, calibrator	Олон түрүү булчирхайн хорт хавдартай холбоотой маркер IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple markers potentially associated with prostate cancer in a clinical specimen.	B
9746	57545	Multiple prostate cancer-associated marker IVD, control	Олон түрүү булчирхайн хорт хавдартай холбоотой маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple markers potentially associated with prostate cancer in a clinical specimen.	B
9747	57546	Multiple prostate cancer-associated marker IVD, reagent	Олон түрүү булчирхайн хорт хавдартай холбоотой маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple markers potentially associated with prostate cancer in a clinical specimen.	B
9748	57547	Prostate-specific membrane antigen (PSMA) IVD, kit, enzyme immunohistochemistry	Түрүү булчирхайн өвөрмөц мембраны эсрэгтөрөгч (PSMA) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostate-specific membrane antigen (PSMA), also known as glutamate carboxypeptidase 2, in a clinical specimen, using an enzyme immunohistochemistry method.	B
9749	57548	Prostate-specific membrane antigen (PSMA) IVD, antibody	Түрүү булчирхайн өвөрмөц мембраны эсрэгтөрөгч (PSMA) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of prostate-specific membrane antigen (PSMA), also known as glutamate carboxypeptidase 2, in a clinical specimen.	B

9750	57549	Prostate-specific membrane antigen (PSMA) IVD, calibrator	Түрүү булчирхайн өвөрмөц мембраны эсрэгтөрөгч (PSMA) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of prostate-specific membrane antigen (PSMA), also known as glutamate carboxypeptidase 2, in a clinical specimen.	B
9751	57550	Prostate-specific membrane antigen (PSMA) IVD, control	Түрүү булчирхайн өвөрмөц мембраны эсрэгтөрөгч (PSMA) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of prostate-specific membrane antigen (PSMA), also known as glutamate carboxypeptidase 2, in a clinical specimen.	B
9752	57551	Prostate-specific membrane antigen (PSMA) IVD, reagent	Түрүү булчирхайн өвөрмөц мембраны эсрэгтөрөгч (PSMA) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of prostate-specific membrane antigen (PSMA), also known as glutamate carboxypeptidase 2, in a clinical specimen.	B
9753	57567	S100-beta (S100-B) protein IVD, kit, enzyme immunohistochemistry	S100-бета (S100-B) уураг IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen, using an enzyme immunohistochemistry method. This test is typically used as an aid in the diagnosis and monitoring of malignant melanoma.	B
9754	57568	S100-beta (S100-B) protein IVD, antibody	S100-бета (S100-B) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen.	B
9755	57569	S100-beta (S100-B) protein IVD, calibrator	S100-бета (S100-B) уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen.	B
9756	57570	S100-beta (S100-B) protein IVD, control	S100-бета (S100-B) уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen.	B
9757	57571	S100-beta (S100-B) protein IVD, reagent	S100-бета (S100-B) уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen.	B

9758	57573	Secretin IVD, antibody	IVD нууц, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of secretin in a clinical specimen.	B
9759	57574	Serotonin IVD, kit, enzyme immunohistochemistry	Серотонин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of serotonin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9760	57575	Serotonin IVD, antibody	Серотонин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of serotonin in a clinical specimen.	B
9761	57577	Sialyl Lewis x antigen IVD, antibody	Sialyl Lewis x антиген IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x antigen, also referred to as sialyl Lex antigen, in a clinical specimen.	B
9762	57579	Sialyl Lewis x-i antigen IVD, antibody	Sialyl Lewis xi эсрэгтөрөгч IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of sialyl Lewis x-i antigen, also referred to as sialyl Lex-i antigen, in a clinical specimen.	B
9763	57596	Somatostatin IVD, antibody	Соматостатин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of somatostatin, also known as growth hormone inhibiting hormone, in a clinical specimen.	B
9764	57616	Surfactant protein D IVD, antibody	Гадаргуугийн идэвхит уураг D IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of surfactant protein D in a clinical specimen.	B
9765	57617	Surfactant protein D IVD, calibrator	Гадаргуугийн идэвхит уураг D IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of surfactant protein D in a clinical specimen.	B

9766	57618	Surfactant protein D IVD, control	Гадаргуугийн идэвхит уураг D IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of surfactant protein D in a clinical specimen.	B
9767	57619	Surfactant protein D IVD, reagent	Гадаргуугийн идэвхит уураг D IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of surfactant protein D in a clinical specimen.	B
9768	57641	Tau protein IVD, kit, enzyme immunohistochemistry	Тау уураг IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen, using an enzyme immunohistochemistry method. It is typically used to aid the diagnosis of neurodegenerative disorders such as Alzheimer's disease.	B
9769	57642	Tau protein IVD, antibody	Тау уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen.	B
9770	57643	Terminal deoxynucleotidyl transferase (TdT) IVD, kit, enzyme immunohistochemistry	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9771	57644	Terminal deoxynucleotidyl transferase (TdT) IVD, antibody	Терминал дезоксинуклеотидил трансфераза (TdT) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of terminal deoxynucleotidyl transferase (TdT) in a clinical specimen.	B
9772	57655	Thyroglobulin IVD, kit, enzyme immunohistochemistry	Тироглобулин IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thyroglobulin in a clinical specimen, using an enzyme immunohistochemistry method.	B
9773	57656	Thyroglobulin IVD, antibody	Тироглобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of thyroglobulin in a clinical specimen.	B

9774	57657	Thyroid peroxidase (TPO) IVD, kit, enzyme immunohistochemistry	Бамбай булчирхайн пероксидаза (TPO) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thyroid peroxidase (TPO) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9775	57658	Thyroid peroxidase (TPO) IVD, antibody	Бамбай булчирхайн пероксидаза (TPO) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of thyroid peroxidase (TPO) in a clinical specimen.	B
9776	57660	Thyroid peroxidase (TPO) IVD, control	Бамбай булчирхайн пероксидаза (TPO) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of thyroid peroxidase (TPO) in a clinical specimen.	B
9777	57661	Thyroid peroxidase (TPO) IVD, reagent	Бамбай булчирхайн пероксидаза (TPO) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of thyroid peroxidase (TPO) in a clinical specimen.	B
9778	57662	Thyroid stimulating hormone (TSH) IVD, kit, enzyme immunohistochemistry	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thyroid stimulating hormone (TSH) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9779	57663	Thyroid stimulating hormone (TSH) IVD, antibody	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of thyroid stimulating hormone (TSH) in a clinical specimen.	B
9780	57664	Thyroid transcription factor-1 (TTF1) IVD, kit, enzyme immunohistochemistry	Бамбай булчирхайн транскрипцийн хүчин зүйл-1 (TTF1) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thyroid transcription factor-1 (TTF1) in a clinical specimen, using an enzyme immunohistochemistry method.	B
9781	57665	Thyroid transcription factor-1 (TTF1) IVD, antibody	Бамбай булчирхайн транскрипцийн хүчин зүйл-1 (TTF1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of thyroid transcription factor-1 (TTF1) in a clinical specimen.	B

9782	57666	Thyroid transcription factor-1 (TTF1) IVD, calibrator	Бамбай булчирхайн транскрипцийн хүчин зүйл-1 (TTF1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of thyroid transcription factor-1 (TTF1) in a clinical specimen.	B
9783	57667	Thyroid transcription factor-1 (TTF1) IVD, control	Бамбай булчирхайн транскрипцийн хүчин зүйл-1 (TTF1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of thyroid transcription factor-1 (TTF1) in a clinical specimen.	B
9784	57668	Thyroid transcription factor-1 (TTF1) IVD, reagent	Бамбай булчирхайн транскрипцийн хүчин зүйл-1 (TTF1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of thyroid transcription factor-1 (TTF1) in a clinical specimen.	B
9785	57674	Transferrin/transferrin isoform IVD, kit, enzyme immunohistochemistry	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using an enzyme immunohistochemistry method.	B
9786	57675	Transferrin/transferrin isoform IVD, antibody	Трансферрин/трансферрин изоформ IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen.	B
9787	57830	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, chemiluminescent immunoassay	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9788	57913	Citrate IVD, kit, spectrophotometry	Цитрат IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of citrate in a clinical specimen, typically a 24-hour urine to determine rate of citrate excretion, using a spectrophotometry method.	B
9789	57915	Citrate IVD, reagent	Цитрат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of citrate in a clinical specimen.	B

9790	58011	Vaginal pH screening IVD, kit, rapid colorimetric, self-testing	Үтрээний pH-ийн скрининг IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi)-quantitative screening of vaginal secretions to determine pH range, within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to assess for pH imbalance resulting from potential bacterial or parasitic infection.	B
9791	58063	Placental alpha-1-microglobulin (PAMG-1) IVD, kit, rapid ICT, clinical	Ихэсийн альфа-1-микроглобулин (PAMG-1) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of placental alpha-1-microglobulin (PAMG-1) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to determine the presence of PAMG-1 or amniotic fluid in vaginal secretions. It is not intended to be used for self-testing.	B
9792	58064	Placental alpha-1-microglobulin (PAMG-1) IVD, kit, enzyme immunoassay (EIA)	Ихэсийн альфа-1-микроглобулин (PAMG-1) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of placental alpha-1-microglobulin (PAMG-1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9793	58065	Placental alpha-1-microglobulin (PAMG-1) IVD, calibrator	Ихэсийн альфа-1-микроглобулин (PAMG-1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of placental alpha-1-microglobulin (PAMG-1) in a clinical specimen.	B
9794	58066	Placental alpha-1-microglobulin (PAMG-1) IVD, control	Ихэсийн альфа-1-микроглобулин (PAMG-1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of placental alpha-1-microglobulin (PAMG-1) in a clinical specimen.	B
9795	58067	Placental alpha-1-microglobulin (PAMG-1) IVD, reagent	Ихэсийн альфа-1-микроглобулин (PAMG-1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of placental alpha-1-microglobulin (PAMG-1) in a clinical specimen.	B

9796	58104	Sperm hyaluronic acid (HA) binding IVD, kit, binding assay	Спермийн гиалуроны хүчил (HA) холбох IVD, иж бүрдэл, холбох шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative determination of the hyaluronic acid (HA) binding capacity of sperm in a clinical specimen, using a binding assay. This assay is also referred to as a sperm-hyaluronan binding assay and may be used as an indicator of sperm maturity during fertility assessment.	B
9797	58124	Total bile acid IVD, calibrator	Нийт цөсний хүчлийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total bile acids in a clinical specimen.	B
9798	58125	Total bile acid IVD, control	Нийт цөсний хүчлийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total bile acids in a clinical specimen.	B
9799	58126	Total bile acid IVD, kit, spectrophotometry	Нийт цөсний хүчлийн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total bile acids in a clinical specimen, using a spectrophotometry method.	B
9800	58127	Total bile acid IVD, reagent	Нийт цөсний хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total bile acids in a clinical specimen.	B
9801	58178	5-Fluorouracil (5-FU) therapeutic drug monitoring IVD, calibrator	5-Фторурацил (5-FU) эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug 5-fluorouracil (5-FU) in a clinical specimen.	B
9802	58179	5-Fluorouracil (5-FU) therapeutic drug monitoring IVD, control	5-Fluorouracil (5-FU) эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug 5-fluorouracil (5-FU) in a clinical specimen.	B
9803	58180	5-Fluorouracil (5-FU) therapeutic drug monitoring IVD, reagent	5-Фторурацил (5-FU) эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug 5-fluorouracil (5-FU) in a clinical specimen.	B

9804	58190	Multiple amino acid/carnitine metabolite IVD, kit, mass spectrometry	Олон тооны амин хүчил/карнитины метаболит IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple amino acids, nucleosides, lysophospholipids, and/or carnitine metabolites associated with metabolic disorders of a newborn in a clinical specimen, using a mass spectrometry method. Analytes detected may include all amino acids, free carnitine, acylcarnitine, succinylacetone, adenosine and/or lysophosphatidylcholine.	B
9805	58191	Multiple amino acid/carnitine metabolite IVD, calibrator	Олон тооны амин хүчил/карнитины метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple amino acids and carnitine metabolites associated with metabolic disorders of a newborn in a clinical specimen. Analytes detected may include all amino acids, free carnitine, acylcarnitine and/or succinylacetone.	B
9806	58192	Multiple amino acid/carnitine metabolite IVD, control	Олон тооны амин хүчил/карнитины метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple amino acids and carnitine metabolites associated with metabolic disorders of a newborn in a clinical specimen. Analytes detected may include all amino acids, free carnitine, acylcarnitine and/or succinylacetone.	B
9807	58193	Multiple amino acid/carnitine metabolite IVD, reagent	Олон төрлийн амин хүчил/карнитины метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple amino acids and carnitine metabolites associated with metabolic disorders of a newborn in a clinical specimen. Analytes detected may include all amino acids, free carnitine, acylcarnitine and/or succinylacetone.	B
9808	58194	Unsaturated iron binding capacity (UIBC) IVD, calibrator	Ханаагүй төмрийг холбох чадвар (UIBC) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of unsaturated iron binding capacity (UIBC) of a clinical specimen.	B
9809	58195	Unsaturated iron binding capacity (UIBC) IVD, control	Ханаагүй төмрийг холбох чадвар (UIBC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of unsaturated iron binding capacity (UIBC) of a clinical specimen.	B

9810	58196	Unsaturated iron binding capacity (UIBC) IVD, kit, spectrophotometry	Ханаагүй төмрийг холбох чадвар (UIBC) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of unsaturated iron binding capacity (UIBC) of a clinical specimen, using a spectrophotometry method. UIBC is typically determined by measuring the available capacity of the transport protein transferrin to bind free iron.	B
9811	58197	Unsaturated iron binding capacity (UIBC) IVD, reagent	Ханаагүй төмрийг холбох чадвар (UIBC) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of unsaturated iron binding capacity (UIBC) of a clinical specimen.	B
9812	58198	Copper IVD, kit, spectrophotometry	Зэсийн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of copper (Cu) in a clinical specimen, using a spectrophotometry method.	B
9813	58206	Saliva quantification IVD, kit, spectrophotometry	Шүлсний хэмжээг тодорхойлох IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative determination of the saliva content of a clinical specimen, collected using a saliva collection system that incorporates use of an extraction/dilution solution containing a standardized amount of tartrazin (yellow) colouring agent. The final volume of collected saliva is determined using a spectrophometry method which compares the optical density of the collected specimen with that of a series of calibrator solutions containing the same tartrazin colouring agent diluted to known concentrations. This is a single-use device.	B
9814	58221	Presepsin/sCD14-ST IVD, kit, chemiluminescent immunoassay	Пресепсин/sCD14-ST IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of presepsin, also known as soluble CD14-subtype (sCD14-ST) which is found in association with infection in a clinical specimen, using a chemiluminescent immunoassay method.	B
9815	58222	Presepsin/sCD14-ST IVD, control	Пресепсин/sCD14-ST IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of presepsin, also known as soluble CD14-subtype (sCD14-ST) which is found in association with infection in a clinical specimen.	B

9816	58223	Presepsin/sCD14-ST IVD, kit, enzyme immunoassay (EIA)	Пресепсин/sCD14-ST IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of presepsin, also known as soluble CD14-subtype (sCD14-ST) which is found in association with infection in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9817	58224	Presepsin/sCD14-ST IVD, reagent	Пресепсин/sCD14-ST IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of presepsin, also known as soluble CD14-subtype (sCD14-ST) which is found in association with infection in a clinical specimen.	B
9818	58229	5-Fluorouracil (5-FU) therapeutic drug monitoring IVD, kit, fluorescent immunoassay	5-Fluorouracil (5-FU) эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug 5-fluorouracil (5-FU) in a clinical specimen, using a fluorescent immunoassay method.	B
9819	58230	5-Fluorouracil (5-FU) therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	5-Фторурацил (5-FU) эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug 5-fluorouracil (5-FU) in a clinical specimen, using a nephelometry/turbidimetry method.	B
9820	58240	Atrial natriuretic peptide (ANP) IVD, kit, enzyme immunoassay (EIA)	Тосгуурын натриуретик пептид (ANP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of atrial natriuretic peptide (ANP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9821	58241	Atrial natriuretic peptide (ANP) IVD, kit, fluorescent immunoassay	Тосгуурын натриуретик пептид (ANP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of atrial natriuretic peptide (ANP) in a clinical specimen, using a fluorescent immunoassay method.	B
9822	58242	Atrial natriuretic peptide (ANP) IVD, reagent	Тосгуурын натриуретик пептид (ANP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of atrial natriuretic peptide (ANP) in a clinical specimen.	B

9823	58259	Zinc IVD, kit, spectrophotometry	Цайрын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of zinc in a clinical specimen, using a spectrophotometry method.	B
9824	58305	Procalcitonin (PCT) IVD, kit, rapid ICT, clinical	Прокальцитонин (PCT) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended for the qualitative and/or (semi-)quantitative detection of procalcitonin (PCT) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9825	58306	Neopterin IVD, kit, enzyme immunoassay (EIA)	Неоптерин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neopterin in a clinical specimen, using an enzyme immunoassay (EIA) method. Neopterin is typically used as a marker commonly associated with viral infections and inflammatory diseases.	B
9826	58307	Beta-2-microglobulin IVD, kit, radioimmunoassay	Бета-2-микроглобулин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-2-microglobulin in a clinical specimen, using a radioimmunoassay method.	B
9827	58308	Carcinoembryonic antigen (CEA) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч (CEA) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carcinoembryonic antigen (CEA) in a clinical specimen, using a radioimmunoassay method.	B
9828	58309	Alpha-fetoprotein (AFP) IVD, kit, radioimmunoassay	Альфа-фетопротейн (AFP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen, using a radioimmunoassay method.	B
9829	58310	Albumin IVD, kit, radioimmunoassay	Альбумин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen, using a radioimmunoassay method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	B

9830	58311	Angiotensin I IVD, kit, radioimmunoassay	Ангиотензин I IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen, using a radioimmunoassay method.	B
9831	58312	Angiotensin I IVD, reagent	Ангиотензин I IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen.	B
9832	58313	Angiotensin I IVD, kit, enzyme immunoassay (EIA)	Ангиотензин I IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to determine plasma renin activity (PRA) to aid in the diagnosis of diseases associated with increased or reduced PRA.	B
9833	58314	Angiotensin I IVD, control	Ангиотензин I IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen.	B
9834	58315	Angiotensin I IVD, calibrator	Ангиотензин I IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen.	B
9835	58318	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, kit, radioimmunoassay	Циклоспорин A/циклоспорины эмчилгээний эмийн хяналт IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen, using a radioimmunoassay method.	B
9836	58319	Cytokeratin IVD, kit, radioimmunoassay	Цитокетин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen, using a radioimmunoassay method.	B
9837	58320	Insulin IVD, kit, radioimmunoassay	Инсулин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of insulin in a clinical specimen, using a radioimmunoassay method.	B

9838	58321	Total thyroxine (TT4) IVD, kit, radioimmunoassay	Нийт тироксин (TT4) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen, using a radioimmunoassay method.	B
9839	58322	Total thyroxine (TT4) IVD, kit, chemiluminescent immunoassay	Нийт тироксин (TT4) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9840	58323	Total thyroxine (TT4) IVD, kit, enzyme immunoassay (EIA)	Нийт тироксин (TT4) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9841	58324	Total thyroxine (TT4) IVD, calibrator	Нийт тироксин (TT4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen.	B
9842	58325	Total thyroxine (TT4) IVD, control	Нийт тироксин (TT4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen.	B
9843	58326	Total thyroxine (TT4) IVD, reagent	Нийт тироксин (TT4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total thyroxine (TT4) in a clinical specimen.	B
9844	58327	Total triiodothyronine (TT3) IVD, kit, radioimmunoassay	Нийт триодотиронин (TT3) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen, using a radioimmunoassay method.	B
9845	58330	Total triiodothyronine (TT3) IVD, kit, chemiluminescent immunoassay	Нийт триодотиронин (TT3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9846	58332	Total triiodothyronine (TT3) IVD, kit, enzyme immunoassay (EIA)	Нийт триодотиронин (TT3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9847	58333	Total triiodothyronine (TT3) IVD, calibrator	Нийт триодотиронин (TT3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen.	B
9848	58334	Total triiodothyronine (TT3) IVD, control	Нийт триодотиронин (TT3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen.	B
9849	58335	Total triiodothyronine (TT3) IVD, reagent	Нийт триодотиронин (TT3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total triiodothyronine (TT3) in a clinical specimen.	B
9850	58346	17-Hydroxyprogesterone IVD, kit, chemiluminescent immunoassay	17-гидроксипрогестерон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen, using a chemiluminescent immunoassay method.	B
9851	58348	Alpha-fetoprotein (AFP) IVD, kit, chemiluminescent immunoassay	Альфа-фетопротейн (AFP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid diagnosis of foetal open neural defects, or in the management of nonseminomatous testicular cancer.	B
9852	58349	Neuron-specific enolase (NSE) IVD, kit, radioimmunoassay	Нейроны өвөрмөц энолаза (NSE) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen, using a radioimmunoassay method.	B
9853	58351	Pregnancy-associated plasma protein A (PAPP-A) IVD, kit, radioimmunoassay	Жирэмслэлттэй холбоотой плазмын уураг A (PAPP-A) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen, using a radioimmunoassay method. It is used in foetal screening of Down syndrome and other chromosomal abnormalities during pregnancy.	B
9854	58352	Total prostate specific antigen (tPSA) IVD, kit, radioimmunoassay	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen, using a radioimmunoassay method.	B

9855	58353	Free (unbound) prostate specific antigen (fPSA) IVD, kit, radioimmunoassay	Чөлөөт (холбоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen, using a radioimmunoassay method.	B
9856	58354	Sex hormone binding globulin (SHBG) IVD, kit, radioimmunoassay	Бэлгийн даавар холбогч глобулин (SHBG) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sex hormone binding globulin (SHBG) in a clinical specimen, using a radioimmunoassay method.	B
9857	58355	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, kit, radioimmunoassay	Инсулин шиг өсөлтийн хүчин зүйлийг холбогч уураг 3 (IGFBP-3) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen, using a radioimmunoassay method.	B
9858	58356	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, kit, radioimmunoassay	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen, using a radioimmunoassay method.	B
9859	58361	Complement component C3 proactivator IVD, kit, nephelometry/turbidimetry	Нэмэлт бүрэлдэхүүн хэсэг C3 идэвхжүүлэгч IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C3 proactivator in a clinical specimen, using a nephelometry/turbidimetry method.	B
9860	58362	Complement component C3 proactivator IVD, calibrator	Нэмэлт бүрэлдэхүүн хэсэг C3 идэвхжүүлэгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of complement cascade component C3 proactivator in a clinical specimen.	B
9861	58363	Complement component C3 proactivator IVD, control	Нэмэлт бүрэлдэхүүн хэсэг C3 идэвхжүүлэгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of complement cascade component C3 proactivator in a clinical specimen.	B

9862	58364	Complement component C3 proactivator IVD, reagent	Нэмэлт бүрэлдэхүүн хэсэг C3 идэвхжүүлэгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of complement cascade component C3 proactivator in a clinical specimen.	B
9863	58367	Total cortisol IVD, kit, radioimmunoassay	Нийт кортизолын IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen, using a radioimmunoassay method.	B
9864	58368	Estrone sulfate (oestrone sulfate) IVD, kit, radioimmunoassay	Эстрон сульфат (эстрон сульфат) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone sulfate (oestrone sulfate) in a clinical specimen, using a radioimmunoassay method.	B
9865	58369	Estrone sulfate (oestrone sulfate) IVD, kit, calibrator	Эстрон сульфат (эстрон сульфат) IVD, иж бүрдэл, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone sulfate (oestrone sulfate) in a clinical specimen.	B
9866	58370	Estrone sulfate (oestrone sulfate) IVD, kit, control	Эстрон сульфат (эстрон сульфат) IVD, иж бүрдэл, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone sulfate (oestrone sulfate) in a clinical specimen.	B
9867	58371	Estrone sulfate (oestrone sulfate) IVD, kit, enzyme immunoassay (EIA)	Эстрон сульфат (эстрон сульфат) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone sulfate (oestrone sulfate) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9868	58372	Estrone sulfate (oestrone sulfate) IVD, kit, reagent	Эстрон сульфат (эстрон сульфат) IVD, иж бүрдэл, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the estrogen (oestrogen) hormone estrone sulfate (oestrone sulfate) in a clinical specimen.	B
9869	58373	Estrone (oestrone) IVD, kit, radioimmunoassay	Эстрон (эстрон) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estrone (oestrone) in a clinical specimen, using a radioimmunoassay method.	B

9870	58374	Dehydroepiandrosterone sulfate (DHEAS) IVD, kit, radioimmunoassay	Дегидроэпиандростерон сульфат (DHEAS) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen, using a radioimmunoassay method.	B
9871	58375	Thymidine kinase IVD, kit, enzyme radiometry	Тимидин киназа IVD, иж бүрдэл, ферментийн радиометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of thymidine kinase in a clinical specimen, using an enzyme radiometry method. It is typically used as a prognostic marker to monitor the progression of haematological malignancies [e.g., non-Hodgkin lymphoma, chronic lymphocytic leukaemia (CLL)] and assess the response to treatment.	B
9872	58377	Total testosterone IVD, kit, radioimmunoassay	Нийт тестостероны IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen, using a radioimmunoassay method.	B
9873	58378	Total testosterone IVD, reagent	Нийт тестостероны IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen.	B
9874	58379	Total testosterone IVD, kit, enzyme immunoassay (EIA)	Нийт тестостероны IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9875	58380	Total testosterone IVD, control	Нийт тестостероны IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen.	B
9876	58381	Total testosterone IVD, calibrator	Нийт тестостероны IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen.	B

9877	58395	C-reactive protein (CRP) IVD, kit, rapid ICT, clinical	С-реактив уураг (CRP) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-reactive protein (CRP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. CRP is a marker associated with bacterial infection and inflammatory conditions. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9878	58400	Androstenedione IVD, kit, radioimmunoassay	Андростендион IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of androstenedione in a clinical specimen, using a radioimmunoassay method.	B
9879	58403	Insulin-like growth factor I (IGF1) IVD, kit, radioimmunoassay	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen, using a radioimmunoassay method.	B
9880	58404	Adrenocorticotropic hormone (ACTH) IVD, kit, radioimmunoassay	Адренокортикотроп даавар (ACTH) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen, using a radioimmunoassay method.	B
9881	58405	Cancer antigen 15-3 (CA15-3) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen using a radioimmunoassay method.	B
9882	58406	Cancer antigen 125 (CA125) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen using a radioimmunoassay method.	B

9883	58407	Cancer antigen 19-9 (CA19-9) IVD, kit, radioimmunoassay	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 19-9 (CA19-9) in a clinical specimen, using a radioimmunoassay method. CA19-9 is typically used as a marker commonly associated with gastrointestinal, pancreatic, bile duct and gallbladder cancer.	B
9884	58408	Insulin-like growth factor I (IGF1) IVD, kit, enzyme immunoassay (EIA)	Инсулин шиг өсөлтийн хүчин зүйл I (IGF1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9885	58409	Insulin-like growth factor binding protein 3 (IGFBP-3) IVD, kit, enzyme immunoassay (EIA)	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 3 (IGFBP-3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 3 (IGFBP-3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9886	58410	Anti-Mullerian hormone (AMH) IVD, reagent	Мюллерийн эсрэг даавар (AMH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of anti-Mullerian hormone (AMH) in a clinical specimen.	B
9887	58411	Anti-Mullerian hormone (AMH) IVD, control	Мюллерийн эсрэг даавар (AMH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of anti-Mullerian hormone (AMH) in a clinical specimen.	B
9888	58412	Anti-Mullerian hormone (AMH) IVD, calibrator	Мюллерийн эсрэг даавар (AMH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of anti-Mullerian hormone (AMH) in a clinical specimen.	B
9889	58413	Anti-Mullerian hormone (AMH) IVD, kit, enzyme immunoassay (EIA)	Мюллерийн эсрэг даавар (AMH) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of anti-Mullerian hormone (AMH) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9890	58424	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, kit, radioimmunoassay	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, иж бүрдэл, радиоиммун шинжилгээний	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase (anti-TPO, also known as anti-microsomal antibody] in a clinical specimen, using a radioimmunoassay method. It is typically used to aid in the diagnosis of chronic lymphocytic thyroiditis (also known as hashimoto thyroiditis).	B
9891	58433	Cancer antigen 15-3 (CA15-3) IVD, kit, fluorescent immunoassay	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen using a fluorescent immunoassay method.	B
9892	58435	Cancer antigen 125 (CA125) IVD, kit, fluorescent immunoassay	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen using a fluorescent immunoassay method.	B
9893	58441	Multiple glycoprotein hormone alpha-subunit IVD, kit, radioimmunoassay	Олон гликопротейн гормоны альфа дэд нэгж IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-subunits from multiple human glycoprotein hormones, including human chorionic gonadotropin (HCG), follicle stimulating hormone (FSH), luteinizing hormone (LH) and/or thyroid stimulating hormone (TSH) in a clinical specimen, using a radioimmunoassay method.	B
9894	58442	Multiple glycoprotein hormone alpha-subunit IVD, calibrator	Олон гликопротейн гормоны альфа дэд нэгж IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-subunits from multiple human glycoprotein hormones, including human chorionic gonadotropin (HCG), follicle stimulating hormone (FSH), luteinizing hormone (LH) and/or thyroid stimulating hormone (TSH) in a clinical specimen.	B
9895	58443	Multiple glycoprotein hormone alpha-subunit IVD, control	Олон гликопротейн гормоны альфа дэд нэгж IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-subunits from multiple human glycoprotein hormones, including human chorionic gonadotropin (HCG), follicle stimulating hormone (FSH), luteinizing hormone (LH) and/or thyroid stimulating hormone (TSH) in a clinical specimen.	B

9896	58444	Multiple glycoprotein hormone alpha-subunit IVD, reagent	Олон гликопротейн гормоны альфа дэд нэгж IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-subunits from multiple human glycoprotein hormones, including human chorionic gonadotropin (HCG), follicle stimulating hormone (FSH), luteinizing hormone (LH) and/or thyroid stimulating hormone (TSH) in a clinical specimen.	B
9897	58485	Insulin antibody IVD, kit, radioimmunoassay	Инсулины эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to insulin in a clinical specimen, using a radioimmunoassay method.	B
9898	58719	Trisomy 21-risk hormone IVD, kit, fluorescent immunoassay	Trisomy 21-эрсдлийн даавар IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple hormone levels in a clinical specimen using a fluorescent immunoassay method, in order to predict the risk of trisomy 21 (Down syndrome) as part of a first or second trimester screening assessment. Hormones assayed may include alpha-fetoprotein (AFP), human chorionic gonadotropin (HCG), pregnancy associated plasma protein A (PAPP-A), estriol and/or inhibin A.	B
9899	58728	Thyroglobulin antibody IVD, kit, chemiluminescent immunoassay	Тироглобулины эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen, using a chemiluminescent immunoassay method.	B
9900	58729	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, kit, chemiluminescent immunoassay	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase [anti-TPO, also known as anti-microsomal antibody] in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of chronic lymphocytic thyroiditis (also known as hashimoto thyroiditis).	B
9901	58730	Calcitonin IVD, kit, radioimmunoassay	Кальцитонин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of calcitonin in a clinical specimen, using a radioimmunoassay method.	B

9902	58731	Procalcitonin (PCT) IVD, kit, chemiluminescent immunoassay	Прокальцитонин (PCT) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procalcitonin (PCT) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9903	58732	Osteocalcin IVD, kit, radioimmunoassay	Остеокальцин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen, using a radioimmunoassay method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget's disease).	B
9904	58758	Osteocalcin IVD, kit, fluorescent immunoassay	Остеокальцин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen, using a fluorescent immunoassay method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget's disease).	B
9905	58759	Neuron-specific enolase (NSE) IVD, kit, fluorescent immunoassay	Нейроны өвөрмөц энолаза (NSE) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neuron-specific enolase (NSE) in a clinical specimen, using a fluorescent immunoassay method.	B
9906	58764	Arginine vasopressin IVD, kit, fluorescent immunoassay	Аргинин вазопрессин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of arginine vasopressin in a clinical specimen, using a fluorescent immunoassay method.	B
9907	58765	Prolactin IVD, kit, fluorescent immunoassay	Prolactin IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prolactin in a clinical specimen, using a fluorescent immunoassay method.	B
9908	58767	Cytokeratin IVD, kit, fluorescent immunoassay	Cytokeratin IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen, using a fluorescent immunoassay method.	B

9909	58768	C-reactive protein (CRP) IVD, kit, fluorescent immunoassay	С-реактив ууpаг (CRP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using a fluorescent immunoassay method [includes high-sensitivity CRP (hsCRP) types]. CRP is a marker associated with bacterial infection, inflammatory conditions, and cardiovascular disease.	B
9910	58769	Ferritin IVD, kit, fluorescent immunoassay	Ферритин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ferritin in a clinical specimen, using a fluorescent immunoassay method.	B
9911	58787	Total human chorionic gonadotropin IVD, kit, fluorescent immunoassay	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen using a fluorescent immunoassay method. It is used to aid detection of pregnancy, or as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage) and/or trisomy 21 (Down syndrome).	B
9912	58788	Cancer antigen 19-9 (CA19-9) IVD, kit, fluorescent immunoassay	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 19-9 (CA19-9) in a clinical specimen, using a fluorescent immunoassay method. CA19-9 is typically used as a marker commonly associated with gastrointestinal, pancreatic, bile duct and gallbladder cancer.	B
9913	58790	Midregional pro-adrenomedullin (MR-proADM) IVD, kit, fluorescent immunoassay	Дунд бүсийн про-адреномедуллин (MR-proADM) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of midregional pro-adrenomedullin (MR-proADM) in a clinical specimen, using a fluorescent immunoassay method.	B
9914	58791	Midregional pro-adrenomedullin (MR-proADM) IVD, calibrator	Дунд бүсийн про-адреномедуллин (MR-proADM) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of midregional pro-adrenomedullin (MR-proADM) in a clinical specimen.	B

9915	58792	Midregional pro-adrenomedullin (MR-proADM) IVD, control	Дунд бүсийн про-адреномедуллин (MR-proADM) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of midregional pro-adrenomedullin (MR-proADM) in a clinical specimen.	B
9916	58797	Squamous cell carcinoma antigen IVD, kit, fluorescent immunoassay	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen, using a fluorescent immunoassay method.	B
9917	58826	Protease IVD, kit, rapid ICT, clinical	Протеаз IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of protease in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
9918	58896	Adiponectin IVD, kit, enzyme immunoassay (EIA)	Адипонектин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of adiponectin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9919	58897	Cartilage oligomeric matrix protein (COMP) IVD, kit, enzyme immunoassay (EIA)	Мөгөөрсний олигомер матриц ууураг (COMP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of cartilage oligomeric matrix protein (COMP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9920	58898	Neutrophil elastase IVD, kit, enzyme immunoassay (EIA)	Нейтрофил эластаза IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neutrophil elastase, also known as PMN elastase, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9921	58899	Soluble transferrin receptor IVD, kit, enzyme immunoassay (EIA)	Уусдаг трансферрин рецептор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of soluble transferrin receptor protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9922	58900	Surfactant protein D IVD, kit, enzyme immunoassay (EIA)	Гадаргуугийн идэвхит уураг D IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of surfactant protein D in a clinical specimen using an enzyme immunoassay (EIA) method.	B
9923	58901	Leptin receptor IVD, kit, enzyme immunoassay (EIA)	Лептин рецептор IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of leptin receptors in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9924	58902	Tumour necrosis factor receptor superfamily IVD, kit, enzyme immunoassay (EIA)	Хавдрын үхжилийн хүчин зүйлийн рецепторын дээд бүлгийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple members of the tumour necrosis factor receptor superfamily (e.g., GITR, TNFR1, 4-1BB) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9925	58913	Clara cell protein IVD, kit, enzyme immunoassay (EIA)	Клара эсийн уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of Clara cell protein, also known as Clara cell protein 10 (CC10), CC16, uteroglobin, urinary protein 1 and Clara cell secretory protein, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
9926	58914	Cystatin C IVD, kit, enzyme immunoassay (EIA)	Цистатин С IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cystatin C protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9927	58915	Alpha-2-HS-glycoprotein (AHSG)/fetuin-A IVD, kit, enzyme immunoassay (EIA)	Альфа-2-HS-гликопротейн (AHSG)/фетуин-А IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-2-HS-glycoprotein (AHSG), also referred to as fetuin-A, in a clinical specimen using an enzyme immunoassay (EIA) method.	B

9928	58916	Resistin/adipose tissue-specific secretory factor (ADSF) IVD, kit, enzyme immunoassay (EIA)	Резистин/өөх тосны эдийн өвөрмөц шүүрлийн хүчин зүйл (ADSF) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of resistin, also known as adipose tissue-specific secretory factor (ADSF), in a clinical specimen using an enzyme immunoassay (EIA) method.	B
9929	58942	Multiple form 25-hydroxy Vitamin D IVD, kit, enzyme immunoassay (EIA)	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy Vitamin D in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9930	58945	Allergen-specific immunoglobulin G (IgG) antibody IVD, kit, enzyme immunoassay (EIA)	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B
9931	58946	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, kit, enzyme immunoassay (EIA)	Харшлын өвөрмөц/нийт иммуноглобулин E (IgE) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) and total immunoglobulin E (IgE total) antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9932	58947	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, control	Харшлын өвөрмөц/нийт иммуноглобулин E (IgE) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) and total immunoglobulin E (IgE total) antibodies in a clinical specimen.	B
9933	58948	Immunoglobulin G sub (IgG sub) IVD, kit, enzyme immunoassay (EIA)	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9934	58960	Phenylalanine IVD, kit, fluorimetry	Фенилаланин IVD, иж бүрдэл, флюориметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of phenylalanine in a clinical specimen, using a fluorimetry method.	B
9935	58965	Tissue transglutaminase antibody IVD, kit, chemiluminescent immunoassay	Эдийн трансглютаминазын эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9936	59005	Minichromosome maintenance protein 5 (MCM5) IVD, kit, enzyme immunoassay (EIA)	Минихромосомын засвар үйлчилгээ уураг 5 (MCM5) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of minichromosome maintenance protein 5 (MCM5) in a clinical specimen, using an enzyme immunoassay method.	B
9937	59007	Anticardiolipin antibody IVD, kit, chemiluminescent immunoassay	Антикардиолипин эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to cardiolipin in a clinical specimen, using a chemiluminescent immunoassay method.	B
9938	59008	Myeloperoxidase anti-neutrophil cytoplasmic antibody (MPO-ANCA) IVD, kit, chemiluminescent immunoassay	Миелопероксидазын эсрэг нейтрофил цитоплазмын эсрэгбие (MPO-ANCA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to myeloperoxidase (MPO) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9939	59017	Multiple steroid hormone IVD, kit, mass spectrometry	Олон стероид гормоны IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple steroid hormones in a clinical specimen, using a mass spectrometry method.	B
9940	59027	Docetaxel therapeutic drug monitoring IVD, calibrator	Доцетакселийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug docetaxel in a clinical specimen.	B

9941	59028	Docetaxel therapeutic drug monitoring IVD, control	Доцетакселийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug docetaxel in a clinical specimen.	B
9942	59029	Docetaxel therapeutic drug monitoring IVD, reagent	Доцетакселийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug docetaxel in a clinical specimen.	B
9943	59030	Docetaxel therapeutic drug monitoring IVD, kit, nephelometry/turbidimtery	Доцетакселийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр / булингар	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug docetaxel in a clinical specimen, using a nephelometry/turbidimetry method.	B
9944	59031	Paclitaxel therapeutic drug monitoring IVD, control	Паклитакселийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug paclitaxel in a clinical specimen.	B
9945	59032	Paclitaxel therapeutic drug monitoring IVD, calibrator	Паклитакселийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug paclitaxel in a clinical specimen.	B
9946	59033	Paclitaxel therapeutic drug monitoring IVD, reagent	Паклитакселийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug paclitaxel in a clinical specimen.	B
9947	59034	Paclitaxel therapeutic drug monitoring IVD, kit, nephelometry/turbidimtery	Паклитакселийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр / булингар	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug paclitaxel in a clinical specimen, using a nephelometry/turbidimetry method.	B
9948	59041	Transferrin/transferrin isoform IVD, kit, nephelometry/turbidimetry	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using a nephelometry/turbidimetry method.	B

9949	59042	Myoglobin IVD, kit, nephelometry/turbidimetry	Миоглобин IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myoglobin in a clinical specimen, using a nephelometry/turbidimetry method.	B
9950	59050	2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) IVD, kit, enzyme immunoassay (EIA)	2-этилидин-1,5-диметил-3,3-дифенилпирролидин (EDDP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the methadone metabolite 2-ethylidine-1,5-dimethyl-3,3-diphenylpyrrolidine (EDDP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9951	59051	Acetaminophen IVD, kit, spectrophotometry	Ацетаминофен IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of acetaminophen in a clinical specimen, using a spectrophotometry method.	B
9952	59053	Valproic acid therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Вальпро хүчлийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9953	59056	Theophylline therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Теофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9954	59057	Carbamazepine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Карбамазепин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9955	59065	Glomerular basement membrane antibody (Goodpasture antibody) IVD, kit, chemiluminescent immunoassay	Гломеруляр суурийн мембраны эсрэгбие (Сайн бэлчээрийн эсрэгбие) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen using a chemiluminescent immunoassay method.	B
9956	59066	Proteinase 3 anti-neutrophil cytoplasmic antibody (PR3-ANCA) IVD, kit, chemiluminescent immunoassay	Протеиназа 3-н эсрэг нейтрофил цитоплазмын эсрэгбие (PR3-ANCA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to proteinase-3 (PR3) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9957	59067	Jo-1 antibody IVD, kit, chemiluminescent immunoassay	Jo-1 эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Jo-1 antibodies in a clinical specimen, using a chemiluminescent immunoassay method.	B
9958	59071	Albumin IVD, kit, spectrophotometry	Альбумин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen, using a spectrophotometry method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	B
9959	59072	Beta-hydroxybutyrate dehydrogenase IVD, kit, spectrophotometry	Бета-гидроксибутиратдегидрогеназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta-hydroxybutyrate dehydrogenase in a clinical specimen, using a spectrophotometry method.	B
9960	59074	Chromogen indicator IVD, kit, spectrophotometry	Хромогений үзүүлэлт IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or semi-quantitative indication of chromogens in a clinical specimen, using a spectrophotometry method. This test is typically used in the assessment of lipaemia, turbidity, icterus caused by bilirubin and/or haemolysis of red blood cells.	B

9961	59077	Drug/toxicology adulteration IVD, kit, spectrophotometry	Мансууруулах бодис / хор судлалын хуурамчаар үйлдэх IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for detection of the adulteration of a clinical specimen for drug and/or toxicology testing, using a spectrophotometry method.	B
9962	59083	Digoxin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Дигоксин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digoxin in a clinical specimen, using a nephelometry/turbidimetry method.	B
9963	59084	Digitoxin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Дигитоксин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen, using a nephelometry/turbidimetry method.	B
9964	59085	Microprotein IVD, kit, spectrophotometry	Микропротейн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total microprotein in a clinical specimen, using a spectrophotometry method.	B
9965	59087	Cardiac risk assessment IVD, kit, chemiluminescent immunoassay	Зүрхний эрсдэлийн үнэлгээ IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents, software and other associated materials intended to be used together in the assessment of risk for having a cardiovascular event such as heart attack, ischemic stroke, unstable angina and/or coronary revascularization. This system uses an interpretive application software program that typically combines patient demographics and the results of the qualitative and/or quantitative detection of one or multiple lipoproteins, lipids, proteins and/or cell markers in a clinical specimen, measured using a chemiluminescent assay.	B
9966	59089	T-cell receptor excision circle (TREC) IVD, kit, nucleic acid technique (NAT)	Т-эсийн рецепторыг хасах тойрог (TREC) IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of T-cell receptor excision circles, or circular remnants of deoxyribonucleic acid (DNA) formed during normal T-cell development, in a clinical specimen using a nucleic acid technique (NAT).	B

9967	59090	Glycated haemoglobin (HbA1c) IVD, kit, nephelometry/turbidimetry	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c) in a clinical specimen, using a nephelometry/turbidimetry method.	B
9968	59123	Inorganic phosphate (PO43-) IVD, kit, spectrophotometry	Органик бус фосфат (PO43-) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of inorganic phosphate (PO43-) [phosphorus] in a clinical specimen using a spectrophotometry method.	B
9969	59125	Complement factor H antibody IVD, kit, enzyme immunoassay (EIA)	Комплемент хүчин зүйл H эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to complement factor H in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9970	59200	Neonatal thyroxine (neonatal T4) IVD, reagent	Нярайн тироксин (нярайн T4) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen.	B
9971	59216	Neonatal thyroxine (neonatal T4) IVD, calibrator	Нярайн тироксин (нярайн T4) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen.	B
9972	59217	Neonatal thyroxine (neonatal T4) IVD, control	Нярайн тироксин (нярайн T4) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen.	B
9973	59218	Neonatal thyroxine (neonatal T4) IVD, kit, chemiluminescent immunoassay	Нярайн тироксин (нярайн T4) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen, using a chemiluminescent immunoassay method.	B
9974	59219	Neonatal thyroxine (neonatal T4) IVD, kit, enzyme immunoassay (EIA)	Нярайн тироксин (нярайн T4) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

9975	59220	Neonatal thyroxine (neonatal T4) IVD, kit, radioimmunoassay	Нярайн тироксин (нярайн T4) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen, using a radioimmunoassay method.	B
9976	59221	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, kit, fluorescent immunoassay	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen, using a fluorescent immunoassay method.	B
9977	59222	Neonatal thyroxine (neonatal T4) IVD, kit, fluorescent immunoassay	Нярайн тироксин (нярайн T4) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal thyroxine (neonatal T4) in a clinical specimen, using a fluorescent immunoassay method.	B
9978	59236	Myeloperoxidase (MPO) IVD, kit, enzyme immunoassay	Миелопероксидаза (MPO) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myeloperoxidase (MPO) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9979	59238	Ion selective electrode (ISE) reference solution IVD, reagent	Ион сонгомол электродын (ISE) лавлагаа уусмал IVD, урвалж	A substance or reactant intended to be used together with a reference electrode to perform a specific function in an assay that is used for the quantitative measurement of one or multiple electrolytes in a clinical specimen.	B
9980	59239	Calcium (Ca2+) electrode IVD	Кальцийн (Ca2+) электрод IVD	An electrochemical sensor intended to be used to selectively measure electrical potential against a reference electrode to determine the concentration of calcium (Ca2+) ions in a clinical specimen.	B
9981	59240	Chloride (Cl-) electrode IVD	Хлорид (Cl-) электрод IVD	An electrochemical sensor intended to be used to selectively measure electrical potential against a reference electrode to determine the concentration of chloride (Cl-) ions in a clinical specimen.	B
9982	59241	Reference electrode IVD	Лавлагаа электрод IVD	An electrochemical sensor intended to be used as a known reference for electrical potential in an assay that is used for the quantitative measurement of one or multiple electrolytes in a clinical specimen.	B
9983	59242	Hydrogen (H+)/pH IVD, kit, ion-selective electrode (ISE)	Устөрөгч (H+)/pH IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of hydrogen ions, or pH in a clinical specimen, using an ion-selective electrode (ISE) method.	B

9984	59243	Hydrogen (H+)/pH electrode IVD	Устөрөгч (H+)/pH электрод IVD	An electrochemical sensor, also referred to as a calomel electrode, intended to be used to selectively measure electrical potential across a permeable membrane to determine the pH, or the concentration of hydrogen (H+) ions in a clinical specimen.	B
9985	59244	Hydrogen (H+)/pH IVD, calibrator	Устөрөгч (H+)/pH IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of hydrogen ions, or pH in a clinical specimen.	B
9986	59245	Hydrogen (H+)/pH IVD, control	Устөрөгч (H+)/pH IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of hydrogen ions, or pH in a clinical specimen.	B
9987	59246	Hydrogen (H+)/pH IVD, reagent	Устөрөгч (H+)/pH IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of hydrogen ions, or pH in a clinical specimen.	B
9988	59247	Magnesium (Mg2+) electrode IVD	Магнийн (Mg2+) электрод IVD	An electrochemical sensor intended to be used to selectively measure electrical potential against a reference electrode to determine the concentration of magnesium (Mg2+) ions in a clinical specimen.	B
9989	59248	Potassium (K+) electrode IVD	Калийн (K+) электрод IVD	An electrochemical sensor intended to be used to selectively measure electrical potential against a reference electrode to determine the concentration of potassium (K+) ions in a clinical specimen.	B
9990	59249	Sodium (Na+) electrode IVD	Натрийн (Na+) электрод IVD	An electrochemical sensor intended to be used to selectively measure electrical potential against a reference electrode to determine the concentration of sodium (Na+) ions in a clinical specimen.	B
9991	59250	Biotinidase IVD, kit, enzyme fluorescence	Биотинидазын IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme biotinidase in a clinical specimen, using an enzyme fluorescence method.	B
9992	59372	Total galactose IVD, kit, enzyme fluorescence	Нийт галактозын IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total galactose (galactose and galactose-1-phosphate) in a clinical specimen, using an enzyme fluorescent method.	B

9993	59373	Galactose IVD, kit, enzyme fluorescence	Галактоз IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of galactose in a clinical specimen, using an enzyme fluorescence method.	B
9994	59374	Total galactose IVD, calibrator	Нийт галактозын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total galactose (galactose and galactose-1-phosphate) in a clinical specimen.	B
9995	59375	Total galactose IVD, control	Нийт галактозын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total galactose (galactose and galactose-1-phosphate) in a clinical specimen.	B
9996	59376	Total galactose IVD, kit, spectrophotometry	Нийт галактозын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total galactose (galactose and galactose-1-phosphate) in a clinical specimen, using a spectrophotometry method.	B
9997	59377	Total galactose IVD, reagent	Нийт галактозын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total galactose (galactose and galactose-1-phosphate) in a clinical specimen.	B
9998	59379	Mannose binding lectin (MBL) IVD, kit, enzyme immunoassay (EIA)	Манноз холбогч лектин (MBL) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mannose binding lectin (MBL), also referred to as mannan binding lectin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
9999	59380	Mannose binding lectin (MBL) IVD, calibrator	Манноз холбогч лектин (MBL) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of mannose binding lectin (MBL), also referred to as mannan binding lectin in a clinical specimen.	B
10000	59381	Mannose binding lectin (MBL) IVD, control	Маннозыг холбогч лектин (MBL) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of mannose binding lectin (MBL), also referred to as mannan binding lectin in a clinical specimen.	B

10001	59382	Mannose binding lectin (MBL) IVD, reagent	Манноз холбогч лектин (MBL) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of mannose binding lectin (MBL), also referred to as mannan binding lectin in a clinical specimen.	B
10002	59744	SSA/Ro antibody (Sjogren's antibody) IVD, kit, chemiluminescent immunoassay	SSA/Ro эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSA or anti-Ro antibodies (Sjogren's antibodies) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10003	59745	Centromere antibody IVD, kit, chemiluminescent immunoassay	Центромер эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anticentromere antibodies in a clinical specimen, using a chemiluminescent immunoassay method.	B
10004	59746	Smith antibody (anti-Sm) IVD, kit, chemiluminescent immunoassay	Смитийн эсрэгбие (anti-Sm) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Smith (anti-Sm) antibodies in a clinical specimen, using a chemiluminescent immunoassay method.	B
10005	59747	Scleroderma-70 antibody (anti-Scl-70) IVD, kit, chemiluminescent immunoassay	Склеродерма-70 эсрэгбие (эсрэг Scl-70) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to scleroderma-70 (anti-Scl-70) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10006	59748	Multiple extractable nuclear antigen antibody (anti-ENA) screening IVD, kit, chemiluminescent immunoassay	Олон задлах боломжтой цөмийн эсрэгтөрөгчийн эсрэгбие (анти-ENA) скрининг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antibodies to extractable nuclear antigens (anti-ENA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10007	59857	U1-RNP antibody IVD, kit, chemiluminescent immunoassay	U1-RNP эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to U1-RNP antigen (anti-U1-RNP) in a clinical specimen, using a chemiluminescent immunoassay method.	B

10008	59888	Sm/RNP antibody IVD, kit, chemiluminescent immunoassay	Sm/RNP эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to Sm/RNP antigen complex (anti-Sm/RNP) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10009	60037	Chloride (Cl-) IVD, kit, spectrophotometry	Хлорид (Cl-) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chloride (Cl-) in a clinical specimen, using a spectrophotometry method.	B
10010	60192	Reverse transcriptase (RT) IVD, kit, enzyme immunoassay (EIA)	Урвуу транскриптаза (RT) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of reverse transcriptase enzyme as an indicator of retroviral activity in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10011	60193	Reverse transcriptase (RT) IVD, calibrator	Урвуу транскриптаза (RT) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative measurement of reverse transcriptase enzyme as an indicator of retroviral activity in a clinical specimen.	B
10012	60194	Reverse transcriptase (RT) IVD, control	Урвуу транскриптаза (RT) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative measurement of reverse transcriptase enzyme as an indicator of retroviral activity in a clinical specimen.	B
10013	60195	Reverse transcriptase (RT) IVD, reagent	Урвуу транскриптаза (RT) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative measurement of reverse transcriptase enzyme as an indicator of retroviral activity in a clinical specimen.	B
10014	60271	Galactose-1-phosphate uridyl transferase IVD, kit, enzyme fluorescence	Галактоз-1-фосфат уридил трансфераза IVD, иж бүрдэл, флюресцент фермент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of galactose-1-phosphate uridyl transferase (G1PUT), also known as galactose transferase (GALT) enzyme, in a clinical specimen, using an enzyme fluorescence method.	B
10015	60312	Free oxygen radical IVD, kit, free radical assay	Чөлөөт хүчилтөрөгчийн радикал IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free oxygen radicals to determine the oxidative status of a clinical specimen, using a free radical assay.	B

10016	60313	Free oxygen radical IVD, calibrator	Чөлөөт хүчилтөрөгчийн радикал IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of free oxygen radicals in a clinical specimen.	B
10017	60314	Free oxygen radical IVD, control	Чөлөөт хүчилтөрөгчийн радикал IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of free oxygen radicals in a clinical specimen.	B
10018	60315	Free oxygen radical IVD, reagent	Чөлөөт хүчилтөрөгчийн радикал IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of free oxygen radicals in a clinical specimen.	B
10019	60316	Antioxidant capacity IVD, calibrator	Антиоксидант хүчин чадал IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used to determine the antioxidative capacity of a clinical specimen to neutralize free radicals.	B
10020	60317	Antioxidant capacity IVD, control	Антиоксидант хүчин чадал IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to determine the antioxidative capacity of a clinical specimen to neutralize free radicals.	B
10021	60318	Antioxidant capacity IVD, kit, free radical assay	Антиоксидант хүчин чадал IVD, иж бүрдэл, чөлөөт радикалын шинжилгээ	A collection of reagents and other associated materials intended to be used to determine the antioxidative capacity of a clinical specimen to neutralize free radicals, using a free radical assay.	B
10022	60319	Antioxidant capacity IVD, reagent	Антиоксидант хүчин чадал IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to determine the antioxidative capacity of a clinical specimen to neutralize free radicals.	B
10023	60348	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, fluorescent immunoassay	Харшил үүсгэгчийн өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, иж бүрдэл, флюресцент иммунологийн шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B

10024	60380	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, kit, fluorescent immunoassay	Харшлын өвөрмөц/нийт иммуноглобулин Е (IgE) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) and total immunoglobulin E (IgE total) antibodies in a clinical specimen, using a fluorescent immunoassay method.	B
10025	60440	Newborn metabolic screen/congenital disorder IVD, calibrator	Нярайн бодисын солилцооны дэлгэц / төрөлхийн эмгэг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used in screening a clinical specimen for one or more congenital or metabolic disorders of the newborn. The test typically utilizes whole blood neonate specimens dried on filter paper, and the range of analytes detected may include neonatal thyroxine (neonatal T4), neonatal thyroid stimulating hormone (neonatal TSH), 17-hydroxyprogesterone, immunoreactive trypsinogen, various enzymes and/or amino acids, as indicators of congenital hypothyroidism, adrenal hyperplasia, cystic fibrosis, or other metabolic disorders.	B
10026	60441	Newborn metabolic screen/congenital disorder IVD, control	Нярайн бодисын солилцооны дэлгэц / төрөлхийн эмгэг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used in screening a clinical specimen for one or more congenital or metabolic disorders of the newborn. The test typically utilizes whole blood neonate specimens dried on filter paper, and the range of analytes detected may include neonatal thyroxine (neonatal T4), neonatal thyroid stimulating hormone (neonatal TSH), 17-hydroxyprogesterone, immunoreactive trypsinogen, various enzymes and/or amino acids, as indicators of congenital hypothyroidism, adrenal hyperplasia, cystic fibrosis, or other metabolic disorders.	B

10027	60442	Newborn metabolic screen/congenital disorder IVD, reagent	Нярайн бодисын солилцооны дэлгэц / төрөлхийн эмгэг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used in screening a clinical specimen for one or more congenital or metabolic disorders of the newborn. The test typically utilizes whole blood neonate specimens dried on filter paper, and the range of analytes detected may include neonatal thyroxine (neonatal T4), neonatal thyroid stimulating hormone (neonatal TSH), 17-hydroxyprogesterone, immunoreactive trypsinogen, various enzymes and/or amino acids, as indicators of congenital hypothyroidism, adrenal hyperplasia, cystic fibrosis, or other metabolic disorders.	B
10028	60444	Newborn metabolic screen/congenital disorder IVD, kit, spectrophotometry	Нярайн бодисын солилцооны дэлгэц / төрөлхийн эмгэг IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of a clinical specimen for one or more congenital or metabolic disorders of the newborn, using a spectrophotometry method. It typically utilizes whole-blood neonate specimens dried on filter paper, and the analytes detected may include neonatal thyroxine (neonatal T4), neonatal thyroid stimulating hormone (neonatal TSH), 17-hydroxyprogesterone, immunoreactive trypsinogen, and various enzymes and/or amino acids, as indicators of congenital hypothyroidism, adrenal hyperplasia, cystic fibrosis, lysosomal storage disorders (LSDs), or other metabolic disorders.	B
10029	60452	Multiple immunosuppressant therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Олон төрлийн дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10030	60453	Multiple immunosuppressant therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Олон тооны дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus in a clinical specimen, using a fluorescent immunoassay method.	B
10031	60454	Multiple immunosuppressant therapeutic drug monitoring IVD, kit, liquid chromatography	Олон тооны дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus in a clinical specimen, using a liquid chromatography method.	B
10032	60455	Multiple immunosuppressant therapeutic drug monitoring IVD, calibrator	Олон тооны дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus, in a clinical specimen.	B
10033	60456	Multiple immunosuppressant therapeutic drug monitoring IVD, control	Олон тооны дархлаа дарангуйлах эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus, in a clinical specimen.	B
10034	60457	Multiple immunosuppressant therapeutic drug monitoring IVD, reagent	Олон тооны дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus, in a clinical specimen.	B

10035	60471	Microalbumin IVD, kit, rapid ICT, clinical	Микроальбумин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of microalbumin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to detect small amounts of albumin in the urine, moderately increased albuminuria or microalbuminuria, which indicate kidney disease. It is not intended to be used for self-testing.	B
10036	60484	Multiple vitamin IVD, kit, liquid chromatography	Олон тооны витамин IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen, using a liquid chromatography method.	B
10037	60496	Beta-2-glycoprotein I antibody IVD, kit, chemiluminescent immunoassay	Бета-2-гликопротейн I эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to beta-2-glycoprotein I in a clinical specimen, using a chemiluminescent immunoassay method.	B
10038	60532	Platelet factor 4-heparin complex antibody IVD, kit, chemiluminescent immunoassay	Тромбоцит хүчин зүйл 4-гепарины цогцолбор эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of antibodies to platelet factor 4-heparin complex in a clinical specimen, using a chemiluminescent immunoassay method.	B
10039	60533	Platelet factor 4-heparin complex antibody IVD, calibrator	Тромбоцит хүчин зүйл 4-гепарины цогцолбор эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of antibodies to platelet factor 4-heparin complex in a clinical specimen.	B
10040	60534	Platelet factor 4-heparin complex antibody IVD, control	Тромбоцит хүчин зүйл 4-гепарины цогцолбор эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of antibodies to platelet factor 4-heparin complex in a clinical specimen.	B
10041	60535	Platelet factor 4-heparin complex antibody IVD, kit, enzyme immunoassay	Тромбоцит хүчин зүйл 4-гепарины иж бүрдэл эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of antibodies to platelet factor 4-heparin complex in a clinical specimen, using an enzyme immunoassay method.	B

10042	60536	Platelet factor 4-heparin complex antibody IVD, reagent	Тромбоцит хүчин зүйл 4-гепарины цогцолбор эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of antibodies to platelet factor 4-heparin complex in a clinical specimen.	B
10043	60541	Phosphatidylserine/prothrombin complex antibody IVD, kit, enzyme immunoassay (EIA)	Фосфатидилсерин/протромбины нийлмэл эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple es of antibodies to phosphatidylserine/prothrombin complex (PS/PT) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10044	60545	Para-aminobenzoic acid IVD, kit, radioimmunoassay	Пара-аминобензойн хүчил IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of para-aminobenzoic acid in a clinical specimen, using a radioimmunoassay method.	B
10045	60546	Para-aminobenzoic acid IVD, kit, enzyme immunoassay (EIA)	Пара-аминобензойн хүчил IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of para-aminobenzoic acid in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10046	60547	Para-aminobenzoic acid IVD, calibrator	Пара-аминобензойн хүчил IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of para-aminobenzoic acid in a clinical specimen.	B
10047	60548	Para-aminobenzoic acid IVD, control	Пара-аминобензойн хүчил IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or detection measurement of para-aminobenzoic acid in a clinical specimen.	B
10048	60549	Para-aminobenzoic acid IVD, reagent	Пара-аминобензойн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of para-aminobenzoic acid in a clinical specimen.	B
10049	60550	Para-aminohippuric acid IVD, kit, enzyme immunoassay (EIA)	Пара-аминогиппурын хүчил IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of para-aminohippuric acid in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10050	60551	Para-aminohippuric acid IVD, calibrator	Пара-аминохиппурын хүчил IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of para-aminohippuric acid in a clinical specimen.	B
10051	60552	Para-aminohippuric acid IVD, control	Пара-аминохиппурын хүчил IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of para-aminohippuric acid in a clinical specimen.	B
10052	60553	Para-aminohippuric acid IVD, reagent	Пара-аминохиппурын хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of para-aminohippuric acid in a clinical specimen.	B
10053	60554	Sialylated carbohydrate antigen KL-6 IVD, kit, enzyme immunoassay (EIA)	Сиалилжуулсан нүүрсустөрөгчийн эсрэгтөрөгч KL-6 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sialylated carbohydrate antigen KL-6 in a clinical specimen, using an enzyme immunoassay method.	B
10054	60555	Sialylated carbohydrate antigen KL-6 IVD, calibrator	Сиалилжуулсан нүүрсустөрөгчийн эсрэгтөрөгч KL-6 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sialylated carbohydrate antigen KL-6 in a clinical specimen.	B
10055	60556	Sialylated carbohydrate antigen KL-6 IVD, control	Сиалилжуулсан нүүрсустөрөгчийн эсрэгтөрөгч KL-6 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sialylated carbohydrate antigen KL-6 in a clinical specimen.	B
10056	60557	Sialylated carbohydrate antigen KL-6 IVD, reagent	Сиалилжуулсан нүүрсусны эсрэгтөрөгч KL-6 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sialylated carbohydrate antigen KL-6 in a clinical specimen.	B
10057	60558	Deoxythymidine kinase IVD, kit, enzyme immunoassay (EIA)	Дезокситимидин киназа IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of deoxythymidine kinase in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10058	60559	Deoxythymidine kinase IVD, calibrator	Дезокситимидин киназа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of deoxythymidine kinase in a clinical specimen.	B
10059	60560	Deoxythymidine kinase IVD, control	Дезокситимидин киназа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of deoxythymidine kinase in a clinical specimen.	B
10060	60561	Deoxythymidine kinase IVD, reagent	Дезокситимидин киназа IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of deoxythymidine kinase in a clinical specimen.	B
10061	60562	Matrix metalloproteinase-9 (MMP-9) IVD, kit, enzyme immunoassay (EIA)	Матриц металлопротейназа-9 (MMP-9) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen, using a enzyme immunoassay (EIA) method.	B
10062	60563	Matrix metalloproteinase-9 (MMP-9) IVD, kit, chemiluminescent immunoassay	Матриц металлопротейназа-9 (MMP-9) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10063	60564	Matrix metalloproteinase-3 (MMP-3) IVD, kit, chemiluminescent immunoassay	Матриц металлопротейназа-3 (MMP-3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10064	60565	Matrix metalloproteinase-3 (MMP-3) IVD, kit, enzyme immunoassay (EIA)	Матриц металлопротейназа-3 (MMP-3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen, using a enzyme immunoassay (EIA) method.	B

10065	60566	Matrix metalloproteinase-3 (MMP-3) IVD, kit, enzyme immunohistochemistry	Матриц металлопротейназа-3 (MMP-3) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen, using an enzyme immunohistochemistry method.	B
10066	60567	Matrix metalloproteinase-3 (MMP-3) IVD, calibrator	Матриц металлопротейназа-3 (MMP-3) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen.	B
10067	60568	Matrix metalloproteinase-3 (MMP-3) IVD, control	Матриц металлопротейназа-3 (MMP-3) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen.	B
10068	60569	Matrix metalloproteinase-3 (MMP-3) IVD, reagent	Матриц металлопротейназа-3 (MMP-3) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen.	B
10069	60570	Matrix metalloproteinase-3 (MMP-3) IVD, antibody	Матриц металлопротейназа-3 (MMP-3) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of matrix metalloproteinase-3 (MMP-3) in a clinical specimen.	B
10070	60571	Nuclear matrix protein 22 IVD, kit, enzyme immunoassay (EIA)	Цөмийн матриц ууураг 22 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nuclear matrix protein 22 (NMP22) [also known as nuclear mitotic apparatus protein 1] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of urological conditions (e.g., bladder cancer, prostate cancer).	B

10071	60572	Nuclear matrix protein 22 IVD, kit, rapid ICT, clinical	Цөмийн матрицын уураг 22 IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of nuclear matrix protein 22 (NMP22) [also known as nuclear mitotic apparatus protein 1] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses typically to aid in the diagnosis of urological conditions (e.g., bladder cancer, prostate cancer). It is not intended to be used for self-testing.	B
10072	60573	Nuclear matrix protein 22 IVD, calibrator	Цөмийн матриц уураг 22 IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of nuclear matrix protein 22 in a clinical specimen.	B
10073	60574	Nuclear matrix protein 22 IVD, control	Цөмийн матриц уураг 22 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of nuclear matrix protein 22 in a clinical specimen.	B
10074	60575	Nuclear matrix protein 22 IVD, reagent	Цөмийн матриц уураг 22 IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of nuclear matrix protein 22 in a clinical specimen.	B
10075	60576	Histamine antibody IVD, kit, enzyme immunoassay (EIA)	Гистамин эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to histamine in a clinical specimen, using a enzyme immunoassay (EIA) method.	B
10076	60577	Histamine antibody IVD, reagent	Гистамин эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to histamine in a clinical specimen.	B

10077	60581	Chloral hydrate therapeutic drug monitoring IVD, kit, liquid chromatography	Хлорын гидрат эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chloral hydrate in a clinical specimen, using a liquid chromatography method.	B
10078	60582	Chloral hydrate therapeutic drug monitoring IVD, kit, fluorescent immunoassay	Хлорын гидрат эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chloral hydrate in a clinical specimen, using a fluorescent immunoassay method.	B
10079	60583	Chloral hydrate therapeutic drug monitoring IVD, calibrator	Хлорал гидрат эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chloral hydrate in a clinical specimen.	B
10080	60584	Chloral hydrate therapeutic drug monitoring IVD, control	Хлорал гидрат эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chloral hydrate in a clinical specimen.	B
10081	60585	Chloral hydrate therapeutic drug monitoring IVD, reagent	Хлорал гидрат эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug chloral hydrate in a clinical specimen.	B
10082	60586	Polyamine IVD, kit, enzyme immunoassay (EIA)	Полиамин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of polyamine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10083	60587	Polyamine IVD, kit, liquid chromatography	Полиамин IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of polyamine in a clinical specimen, using a liquid chromatography method.	B
10084	60588	Polyamine IVD, calibrator	Полиамин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of polyamine in a clinical specimen.	B

10085	60589	Polyamine IVD, control	Полиамин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of polyamine in a clinical specimen.	B
10086	60590	Polyamine IVD, reagent	Полиамин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of polyamine in a clinical specimen.	B
10087	60602	Thyroid stimulating hormone receptor (TSHR) antibody IVD, kit, fluorescent immunoassay	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen, using a fluorescent immunoassay method. It is used in the diagnosis of autoimmune thyroid disorders such as hyperthyroidism in Graves' disease.	B
10088	60603	Chromogranin A IVD, kit, fluorescent immunoassay	Хромогранин A IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen, using a fluorescent immunoassay method.	B
10089	60606	HVA/VMA/5HIAA IVD, kit, liquid chromatography	HVA/VMA/5HIAA IVD, иж бүрдэл, шингэний хроматограф	A collection of reagents and other associated materials to be used for the quantitative measurement of homovanillic acid (HVA), vanillylmandelic acid (VMA) and 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen, using a liquid chromatography method.	B
10090	60610	HVA/VMA/5HIAA IVD, calibrator	HVA/VMA/5HIAA IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of homovanillic acid (HVA), vanillylmandelic acid (VMA) and 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B
10091	60611	HVA/VMA/5HIAA IVD, control	HVA/VMA/5HIAA IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of homovanillic acid (HVA), vanillylmandelic acid (VMA) and 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B
10092	60612	HVA/VMA/5HIAA IVD, reagent	HVA/VMA/5HIAA IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qquantitative measurement of homovanillic acid (HVA), vanillylmandelic acid (VMA) and 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen.	B

10093	60613	Multiple biogenic amine neurotransmitter IVD, calibrator	Олон биоген амин нейротрансмиттер IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen.	B
10094	60617	Multiple biogenic amine neurotransmitter IVD, control	Олон биоген амин нейротрансмиттер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen.	B
10095	60639	Multiple acute kidney injury (AKI) marker IVD, kit, fluorescent immunoassay	Бөөрний цочмог гэмтэл (AKI) маркер IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with acute kidney injury (AKI) in a clinical specimen, using a fluorescent immunoassay method. The range of analytes detected may include (but is not limited to) insulin-like growth factor-binding protein 7 (IGFBP-7), neutrophil gelatinase-associated lipocalin (NGAL), tissue-inhibitor of metalloproteinase-2 (TIMP-2), cystatin C, kidney injury molecule-1 (Kim-1) and/or L-type fatty acid–binding protein (L-FABP).	B
10096	60640	Multiple acute kidney injury (AKI) marker IVD, control	Бөөрний цочмог гэмтэл (AKI) маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with acute kidney injury (AKI) in a clinical specimen. The range of analytes detected may include (but is not limited to) insulin-like growth factor-binding protein 7 (IGFBP-7), neutrophil gelatinase-associated lipocalin (NGAL), tissue-inhibitor of metalloproteinase-2 (TIMP-2), cystatin C, kidney injury molecule-1 (Kim-1) and/or L-type fatty acid–binding protein (L-FABP).	B

10097	60645	C-terminal pro-arginine vasopressin (CT-proAVP)/Copeptin IVD, kit, chemiluminescent immunoassay	С-терминал про-аргинин вазопрессин (CT-proAVP)/Копептин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-terminal pro-arginine vasopressin (CT-proAVP), also referred to as copeptin, in a clinical specimen using a chemiluminescent immunoassay method.	B
10098	60646	C-terminal pro-arginine vasopressin (CT-proAVP)/Copeptin IVD, calibrator	С-терминал про-аргинин вазопрессин (CT-proAVP)/Копептин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be for the qualitative and/or quantitative detection of C-terminal pro-arginine vasopressin (CT-proAVP), also referred to as copeptin, in a clinical specimen.	B
10099	60647	C-terminal pro-arginine vasopressin (CT-proAVP)/Copeptin IVD, control	С-терминал про-аргинин вазопрессин (CT-proAVP)/Копептин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of C-terminal pro-arginine vasopressin (CT-proAVP), also referred to as copeptin, in a clinical specimen.	B
10100	60648	C-terminal pro-arginine vasopressin (CT-proAVP)/Copeptin IVD, reagent	С-терминал про-аргинин вазопрессин (CT-proAVP)/Копептин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of C-terminal pro-arginine vasopressin (CT-proAVP), also referred to as copeptin, in a clinical specimen.	B
10101	60651	Multiple acute kidney injury (AKI) marker IVD, calibrator	Бөөрний цочмог гэмтэл (AKI) маркер IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with acute kidney injury (AKI) in a clinical specimen. The range of analytes detected may include (but is not limited to) insulin-like growth factor-binding protein 7 (IGFBP-7), neutrophil gelatinase-associated lipocalin (NGAL), tissue-inhibitor of metalloproteinase-2 (TIMP-2), cystatin C, kidney injury molecule-1 (Kim-1) and/or L-type fatty acid–binding protein (L-FABP).	B

10102	60652	Multiple acute kidney injury (AKI) marker IVD, reagent	Бөөрний цочмог гэмтэл (AKI) маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple biochemical markers associated with acute kidney injury (AKI) in a clinical specimen. The range of analytes detected may include (but is not limited to) insulin-like growth factor-binding protein 7 (IGFBP-7), neutrophil gelatinase-associated lipocalin (NGAL), tissue-inhibitor of metalloproteinase-2 (TIMP-2), cystatin C, kidney injury molecule-1 (Kim-1) and/or L-type fatty acid–binding protein (L-FABP).	B
10103	60663	Ethyl glucuronide (EtG) IVD, kit, enzyme immunoassay (EIA)	Этил глюкуронид (EtG) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethyl glucuronide (EtG), a metabolite of ethanol alcohol (ETOH), in a clinical specimen using an enzyme immunoassay (EIA) method.	B
10104	60666	Ethyl glucuronide (EtG) IVD, calibrator	Этил глюкуронид (EtG) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ethyl glucuronide (EtG), a metabolite of ethanol alcohol (ETOH), in a clinical specimen.	B
10105	60667	Ethyl glucuronide (EtG) IVD, control	Этил глюкуронид (EtG) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ethyl glucuronide (EtG), a metabolite of ethanol alcohol (ETOH), in a clinical specimen.	B
10106	60668	Ethyl glucuronide (EtG) IVD, kit, mass spectrometry	Этил глюкуронид (EtG) IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ethyl glucuronide (EtG), a metabolite of ethanol alcohol (ETOH), in a clinical specimen, using a mass spectrometry method.	B
10107	60669	Ethyl glucuronide (EtG) IVD, reagent	Этил глюкуронид (EtG) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of ethyl glucuronide (EtG), a metabolite of ethanol alcohol (ETOH), in a clinical specimen.	B

10108	60686	Direct thrombin inhibitor therapeutic drug monitoring IVD, kit, chromogenic	Шууд тромбин дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the quantitative measurement and/or therapeutic monitoring of a direct thrombin inhibitor oral anticoagulant (e.g., dabigatran, argatroban, hirudin) in a clinical sample, by determining its ability to inhibit the activity of activated coagulation factor IIa, also referred to as thrombin, using a chromogenic method.	B
10109	60687	Direct thrombin inhibitor therapeutic drug monitoring IVD, calibrator	Шууд тромбин дарангуйлагч эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and/or therapeutic monitoring of a direct thrombin inhibitor oral anticoagulant (e.g., dabigatran, argatroban, hirudin) in a clinical specimen, by determining its ability to inhibit the activity of activated coagulation factor IIa, also referred to as thrombin.	B
10110	60688	Direct thrombin inhibitor therapeutic drug monitoring IVD, control	Шууд тромбин дарангуйлагч эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and/or therapeutic monitoring of a direct thrombin inhibitor oral anticoagulant (e.g., dabigatran, argatroban, hirudin) in a clinical specimen, by determining its ability to inhibit the activity of activated coagulation factor IIa, also referred to as thrombin.	B
10111	60689	Direct thrombin inhibitor therapeutic drug monitoring IVD, kit, clotting	Шууд тромбин дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, цусны бүлэгнэлт	A collection of reagents and other associated materials intended to be used for the quantitative measurement and/or therapeutic monitoring of a direct thrombin inhibitor oral anticoagulant (e.g., dabigatran, argatroban, hirudin) in a clinical specimen, by determining its ability to inhibit the activity of activated coagulation factor IIa, also referred to as thrombin, using a clotting method.	B
10112	60690	Direct thrombin inhibitor therapeutic drug monitoring IVD, reagent	Шууд тромбин дарангуйлагч эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and/or therapeutic monitoring of a direct thrombin inhibitor oral anticoagulant (e.g., dabigatran, argatroban, hirudin) in a clinical specimen, by determining its ability to inhibit the activity of activated coagulation factor IIa, also referred to as thrombin.	B

10113	60768	Carbon dioxide (CO2) IVD, kit, spectrophotometry	Нүүрстөрөгчийн давхар исэл (CO2) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carbon dioxide (CO2) in a clinical specimen, using a spectrophotometry method.	B
10114	60771	Carbon dioxide (CO2) IVD, calibrator	Нүүрстөрөгчийн давхар исэл (CO2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of bicarbonate (HCO3-) ions [as a measure of carbon dioxide (CO2) concentration] in a clinical specimen.	B
10115	60772	Carbon dioxide (CO2) IVD, control	Нүүрстөрөгчийн давхар исэл (CO2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of bicarbonate (HCO3-) ions [as a measure of carbon dioxide (CO2) concentration] in a clinical specimen.	B
10116	60773	Carbon dioxide (CO2) IVD, kit, ion-selective electrode (ISE)	Нүүрстөрөгчийн давхар исэл (CO2) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of bicarbonate (HCO3-) ions, [as a measure of carbon dioxide (CO2) concentration] in a clinical specimen, using an ion-selective electrode (ISE) method.	B
10117	60774	Carbon dioxide (CO2) IVD, reagent	Нүүрстөрөгчийн давхар исэл (CO2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of bicarbonate (HCO3-) ions [as a measure of carbon dioxide (CO2) concentration] in a clinical specimen.	B
10118	60775	Calprotectin IVD, kit, rapid ICT, clinical	Кальпротектин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of calprotectin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of inflammatory bowel disease or other causes of intestinal inflammation. It is not intended to be used for self-testing.	B
10119	60779	Vitamin B12 IVD, kit, chemiluminescent immunoassay	B12 витамин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen, using a chemiluminescent immunoassay.	B

10120	60780	Troponin I IVD, kit, chemiluminescent immunoassay	Тропонин I IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen, using a chemiluminescent immunoassay method.	B
10121	60806	Perhexiline therapeutic drug monitoring IVD, reagent	Пергексилин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug perhexiline in a clinical specimen.	B
10122	60807	Perhexiline therapeutic drug monitoring IVD, control	Пергексилин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug perhexiline in a clinical specimen.	B
10123	60808	Perhexiline therapeutic drug monitoring IVD, calibrator	Пергексилин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug perhexiline in a clinical specimen.	B
10124	60828	Heparin-binding protein IVD, kit, enzyme immunoassay (EIA)	Гепарин холбогч уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10125	60829	Heparin-binding protein IVD, calibrator	Гепарин холбогч уураг IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen.	B
10126	60830	Heparin-binding protein IVD, control	Гепарин холбох уураг IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen.	B
10127	60831	Heparin-binding protein IVD, reagent	Гепарин холбогч уураг IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen.	B

10128	60845	Gentamicin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Гентамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen, using a nephelometry/turbidimetry method.	B
10129	60904	Topiramate therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Топирамат эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug topiramate in a clinical specimen, using a nephelometry/turbidimetry method.	B
10130	60905	Lamotrigine therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Ламотриджин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lamotrigine in a clinical specimen, using a nephelometry/turbimetry method.	B
10131	60922	Multiple form 25-hydroxy vitamin D IVD, kit, chemiluminescent immunoassay	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen, using a chemiluminescent immunoassay.	B
10132	60947	Tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) IVD, control	Матриц металлопротейназа-1 (TIMP-1) IVD-ийн эдийн дарангуйлагч, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tissue inhibitor of matrix metalloproteinase-1 (TIMP-1), in a clinical specimen.	B
10133	60948	Tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) IVD, calibrator	Матриц металлопротейназа-1 (TIMP-1) IVD-ийн эдийн дарангуйлагч, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) in a clinical specimen.	B
10134	60949	Tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) IVD, reagent	Матриц металлопротейназа-1 (TIMP-1) IVD-ийн эдийн дарангуйлагч, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tissue inhibitor of matrix metalloproteinase-1 (TIMP-1), in a clinical specimen.	B

10135	60950	Tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) IVD, kit, chemiluminescent immunoassay	Матриц металлопротейназа-1 (TIMP-1)-ийн эдийн дарангуйлагч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tissue inhibitor of matrix metalloproteinase 1 (TIMP-1) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10136	60955	Multiple form 25-hydroxy vitamin D IVD, kit, rapid ICT, clinical	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10137	60975	Cancer antigen 15-3 (CA15-3) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen using a chemiluminescent immunoassay method.	B
10138	60976	Cancer antigen 19-9 (CA19-9) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 19-9 (CA19-9) in a clinical specimen, using a chemiluminescent immunoassay method. CA19-9 is typically used as a marker commonly associated with gastrointestinal, pancreatic, bile duct and gallbladder cancer.	B
10139	60977	Carbamazepine therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Карбамазепин эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen, using a chemiluminescent immunoassay method.	B
10140	60978	Digitoxin therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Дигитоксин эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen, using a chemiluminescent immunoassay method.	B

10141	60979	Estradiol (oestradiol) (E2) IVD, kit, chemiluminescent immunoassay	Эстрадиол (эстрадиол) (E2) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10142	60980	C-erbB2/Her2/neu oncoprotein IVD, kit, chemiluminescent immunoassay	C-erbB2/Her2/neu онкопротейн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of c-erbB2 oncoprotein, also known as Her2 or neu oncoprotein, in a clinical specimen using a chemiluminescent immunoassay method.	B
10143	60981	Hyaluronic acid (HA) IVD, kit, chemiluminescent immunoassay	Гиалуроны хүчил (HA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of hyaluronic acid (HA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10144	60982	Folate (vitamin B9) IVD, kit, chemiluminescent immunoassay	Фолат (витамин B9) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10145	60983	Phenobarbital therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Фенобарбитал эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen, using a chemiluminescent immunoassay method.	B
10146	60984	Phenobarbital therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Фенобарбитал эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenobarbital in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10147	60985	Phenytoin therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Фенитоины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., dilantin) in a clinical specimen, using a chemiluminescent immunoassay method.	B

10148	60986	Procollagen type III N-terminal propeptide (PIIINP) IVD, kit, chemiluminescent immunoassay	III төрлийн проколлаген N-терминал пропептид (PIIINP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type III N-terminal propeptide (PIIINP) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10149	60987	Procollagen type III N-terminal propeptide (PIIINP) IVD, reagent	III төрлийн проколлаген N-терминал пропептид (PIIINP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of procollagen type III N-terminal propeptide (PIIINP) in a clinical specimen.	B
10150	60988	Procollagen type III N-terminal propeptide (PIIINP) IVD, control	III төрлийн проколлаген N-терминал пропептид (PIIINP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of procollagen type III N-terminal propeptide (PIIINP) in a clinical specimen.	B
10151	60989	Procollagen type III N-terminal propeptide (PIIINP) IVD, calibrator	III төрлийн проколлаген N-терминал пропептид (PIIINP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of procollagen type III N-terminal propeptide (PIIINP) in a clinical specimen.	B
10152	60992	Theophylline therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Теофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen, using a chemiluminescent immunoassay method.	B
10153	60993	Tricyclic antidepressant IVD, kit, enzyme immunoassay (EIA)	Трициклик антидепрессант IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tricyclic antidepressant drugs in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10154	60994	Multiple liver fibrosis marker IVD, kit, chemiluminescent immunoassay	Олон элэгний фиброзын маркер IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with liver fibrosis in a clinical specimen, using a chemiluminescent immunoassay method. The range of analytes detected may include, but is not limited to, hyaluronic acid (HA), procollagen type III N-terminal propeptide (PIIINP), tissue inhibitor of matrix metalloproteinase 1 (TIMP-1).	B
10155	60995	Multiple liver fibrosis marker IVD, reagent	Олон элэгний фиброзын маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple biochemical markers associated with liver fibrosis in a clinical specimen. The range of analytes detected may include, but is not limited to, hyaluronic acid (HA), procollagen type III N-terminal propeptide (PIIINP), tissue inhibitor of matrix metalloproteinase 1 (TIMP-1).	B
10156	60996	Multiple liver fibrosis marker IVD, control	Олон элэгний фиброзын маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with liver fibrosis in a clinical specimen. The range of analytes detected may include, but is not limited to, hyaluronic acid (HA), procollagen type III N-terminal propeptide (PIIINP), tissue inhibitor of matrix metalloproteinase 1 (TIMP-1).	B
10157	60997	Multiple liver fibrosis marker IVD, calibrator	Олон элэгний фиброзын маркер IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with liver fibrosis in a clinical specimen. The range of analytes detected may include, but is not limited to, hyaluronic acid (HA), procollagen type III N-terminal propeptide (PIIINP), tissue inhibitor of matrix metalloproteinase 1 (TIMP-1).	B

10158	60998	Multiple anaemia-related analyte IVD, control	Олон тооны цус багадалттай холбоотой аналитик IVD, хяналт	A material which is used to verify the performance of one or multiple assays intended to be used for the qualitative and/or quantitative detection of multiple anaemia-related analytes in a clinical specimen, and which together create an anaemia profile. Analytes detected may include (but are not limited to) iron, ferritin, folate (vitamin B9), prealbumin, transferrin and vitamin B12.	B
10159	60999	Multiple anaemia-related analyte IVD, calibrator	Олон тооны цус багадалттай холбоотой аналитик IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of multiple anaemia-related analytes, and which together create an anaemia profile. Analytes detected may include (but are not limited to) iron, ferritin, folate (vitamin B9), prealbumin, transferrin and vitamin B12.	B
10160	61001	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A or cyclosporine in a clinical specimen, using a chemiluminescent immunoassay method.	B
10161	61009	Galectin-3 IVD, kit, chemiluminescent immunoassay	Галектин-3 IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of galectin-3 protein in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to identify early myocardial fibrosis and heart failure.	B
10162	61010	Glycated haemoglobin (HbA1c) IVD, kit, chemiluminescent immunoassay	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen using a chemiluminescent immunoassay method.	B
10163	61011	Quinidine therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Хинидин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug quinidine in a clinical specimen, using a nephelometry/turbidimetry method.	B

10164	61012	Amikacin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Амикацин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen, using a nephelometry/turbidimetry method.	B
10165	61013	Tobramycin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Тобрамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen, using a nephelometry/turbidimetry method.	B
10166	61014	Vancomycin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Ванкомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen, using a nephelometry/turbidimetry method.	B
10167	61015	Valproic acid therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Вальпро хүчил эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen, using a nephelometry/turbidimetry method.	B
10168	61016	Homocysteine IVD, kit, chemiluminescent immunoassay	Гомоцистеины IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen, using a chemiluminescent immunoassay method.	B
10169	61017	Gentamicin therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Гентамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug gentamicin in a clinical specimen, using a chemiluminescent immunoassay method.	B
10170	61024	Rapamycin (sirolimus) therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Рапамицин (сиролимус) эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug rapamycin (sirolimus) in a clinical specimen, using a chemiluminescent immunoassay method.	B

10171	61025	Tacrolimus therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Такролимус эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug tacrolimus in a clinical specimen, using a chemiluminescent immunoassay method.	B
10172	61034	Vancomycin therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Ванкомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen, using a chemiluminescent immunoassay method.	B
10173	61035	Vancomycin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Ванкомицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug vancomycin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10174	61036	Valproic acid therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Вальпро хүчил эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug valproic acid in a clinical specimen, using a chemiluminescent immunoassay method.	B
10175	61041	Tobramycin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Тобрамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10176	61042	Tobramycin therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Тобрамицины эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug tobramycin in a clinical specimen, using a chemiluminescent immunoassay method.	B

10177	61072	Sperm concentration indicator IVD, kit, rapid colorimetric, self-testing	Спермийн концентрацийн үзүүлэлт IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative determination of sperm concentration in a semen specimen within a short period of time relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment, as an indicator of male fertility.	B
10178	61074	Sperm concentration indicator IVD, calibrator	Спермийн концентрацийн үзүүлэлт IVD, калибратор	A material or substance that is used to determine known points of referenced for an assay intended to be used to indicate the concentration of sperm in a semen specimen.	B
10179	61075	Sperm concentration indicator IVD, control	Спермийн концентрацийн үзүүлэлт IVD, хяналт	A material that is used to verify the performance of an assay intended to be used to indicate the concentration of sperm in a semen specimen.	B
10180	61076	Sperm concentration indicator IVD, reagent	Спермийн концентрацийн үзүүлэлт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is intended to be used to indicate the concentration of sperm in a semen specimen.	B
10181	61077	Total testosterone IVD, kit, chemiluminescent immunoassay	Нийт тестостероны IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total testosterone in a clinical specimen, using a chemiluminescent immunoassay method.	B
10182	61078	Ferritin IVD, kit, chemiluminescent immunoassay	Ферритин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of ferritin in a clinical specimen, using a chemiluminescent immunoassay method.	B
10183	61080	Cyclic citrullinated peptide antibody (anti-CCP) IVD, kit, chemiluminescent immunoassay	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to cyclic citrullinated peptide (anti-CCP) in a clinical specimen, using a chemiluminescent immunoassay method.	B

10184	61081	Soluble vascular endothelial growth factor receptor 1 (sVEGFR-1) IVD, kit, chemiluminescent immunoassay	Уусдаг судасны эндотелийн өсөлтийн хүчин зүйлийн рецептор 1 (sVEGFR-1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble vascular endothelial growth factor receptor 1 (sVEGFR-1), also known as soluble fms-like tyrosine kinase 1 (sFlt-1), in a clinical specimen using a chemiluminescent immunoassay method.	B
10185	61082	Soluble vascular endothelial growth factor receptor 1 (sVEGFR-1) IVD, reagent	Уусдаг судасны эндотелийн өсөлтийн хүчин зүйлийн рецептор 1 (sVEGFR-1) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of soluble vascular endothelial growth factor receptor 1 (sVEGFR-1), also known as soluble fms-like tyrosine kinase 1 (sFlt-1), in a clinical specimen.	B
10186	61083	Soluble vascular endothelial growth factor receptor 1 (sVEGFR-1) IVD, calibrator	Уусдаг судасны эндотелийн өсөлтийн хүчин зүйлийн рецептор 1 (sVEGFR-1) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of soluble vascular endothelial growth factor receptor 1 (sVEGFR-1), also known as soluble fms-like tyrosine kinase 1 (sFlt-1), in a clinical specimen.	B
10187	61084	Soluble vascular endothelial growth factor receptor 1 (sVEGFR-1) IVD, control	Уусдаг судасны эндотелийн өсөлтийн хүчин зүйлийн рецептор 1 (sVEGFR-1) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of soluble vascular endothelial growth factor receptor 1 (sVEGFR-1), also known as soluble fms-like tyrosine kinase 1 (sFlt-1), in a clinical specimen.	B
10188	61092	Progastrin-releasing peptide (ProGRP) IVD, kit, fluorescent immunoassay	Прогастрин ялгаруулдаг пептид (ProGRP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progastrin-releasing peptide (ProGRP) in a clinical specimen, using a fluorescent immunoassay method.	B
10189	61117	Corticosteroid-binding globulin (CBG) IVD, kit, enzyme immunoassay (EIA)	Кортикостероид холбогч глобулин (CBG) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials to be used for the quantitative measurement of corticosteroid-binding globulin (CBG), also known as transcortin, in a clinical specimen using an enzyme immunoassay (EIA) method.	B

10190	61172	Granulocyte-colony stimulating factor (G-CSF) IVD, kit, enzyme immunoassay (EIA)	Гранулоцитын колони өдөөгч хүчин зүйл (G-CSF) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of granulocyte-colony stimulating factor (G-CSF) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10191	61173	Granulocyte-colony stimulating factor (G-CSF) IVD, reagent	Гранулоцитын колони өдөөгч хүчин зүйл (G-CSF) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of granulocyte-colony stimulating factor (G-CSF) in a clinical specimen.	B
10192	61174	Granulocyte-colony stimulating factor (G-CSF) IVD, control	Гранулоцит-колони өдөөгч хүчин зүйл (G-CSF) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of granulocyte-colony stimulating factor (G-CSF) in a clinical specimen.	B
10193	61175	Granulocyte-colony stimulating factor (G-CSF) IVD, calibrator	Гранулоцитын колони өдөөгч хүчин зүйл (G-CSF) IVD, калибратор	A material which is used to establish known reference points for an assay intended to be used for qualitative and/or quantitative detection of granulocyte-colony stimulating factor (G-CSF) in a clinical specimen.	B
10194	61185	Soluble vascular endothelial growth factor receptor 1 (sVEGFR-1) IVD, kit, fluorescent immunoassay	Уусдаг судасны эндотелийн өсөлтийн хүчин зүйлийн рецептор 1 (sVEGFR-1) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble vascular endothelial growth factor receptor 1 (sVEGFR-1), also known as soluble fms-like tyrosine kinase 1 (sFlt-1), in a clinical specimen using a fluorescent immunoassay method.	B
10195	61187	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, kit, nucleic acid technique (NAT)	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) мРНХ-ийн илэрхийлэл IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen using a nucleic acid technique (NAT).	B

10196	61188	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, reagent	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) mRNA илэрхийлэл IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen.	B
10197	61189	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, control	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) mRNA илэрхийлэл IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen.	B
10198	61190	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, probe	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) mRNA илэрхийлэл IVD, зонд	A defined piece of single-stranded nucleic acid which is used to identify specific complementary-sequence nucleic acid molecules in an assay intended to be used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen.	B
10199	61191	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, primer	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) mRNA илэрхийлэл IVD, праймер	A defined piece of single-stranded nucleic acid which binds to and initiates replication of a target nucleic acid template in an assay intended to be used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen.	B
10200	61192	Prostate cancer gene 3/prostate specific antigen (PCA3/PSA) mRNA expression IVD, calibrator	Түрүү булчирхайн хорт хавдрын ген 3/түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PCA3/PSA) mRNA илэрхийлэл IVD, калибратор	A material which is used to establish known points of reference for an assay that is intended to be used for the qualitative and/or quantitative detection of mRNA expression of the prostate cancer gene 3 (PCA3) and the gene coding for the prostate specific antigen associated with prostate cancer, in a clinical specimen.	B

10201	61221	SSB/La antibody (Sjogren's antibody) IVD, kit, chemiluminescent immunoassay	SSB/La эсрэгбие (Sjogren-ийн эсрэгбие) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-SSB or anti-La antibodies (Sjogren's antibodies) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10202	61224	Ro52 antibody (anti-Ro52)/TRIM21 antibody IVD, kit, chemiluminescent immunoassay	Ro52 эсрэгбие (anti-Ro52)/TRIM21 эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-Ro52 antibodies, also known as TRIM21 antibodies, in a clinical specimen using a chemiluminescent immunoassay method.	B
10203	61249	Multiple thyroid marker IVD, control	Олон бамбай булчирхайн маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple thyroid markers associated with thyroid disease in a clinical specimen. Analytes detected may include, but are not limited to free triiodothyronine (FT3), free thyroxine (FT4), thyroid stimulating hormone (TSH) and/or thyroid peroxidase (TPO).	B
10204	61252	Multiple thyroid marker IVD, kit, enzyme immunoassay (EIA)	Олон бамбай булчирхайн маркер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple thyroid markers associated with thyroid disease in a clinical specimen using an enzyme immunoassay (EIA) method. Analytes detected may include, but are not limited to, free triiodothyronine (FT3), free thyroxine (FT4), thyroid stimulating hormone (TSH) and/or thyroid peroxidase (TPO).	B
10205	61253	Multiple thyroid marker IVD, calibrator	Олон бамбай булчирхайн маркер IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple thyroid markers associated with thyroid disease in a clinical specimen. Analytes detected may include, but are not limited to free triiodothyronine (FT3), free thyroxine (FT4), thyroid stimulating hormone (TSH) and/or thyroid peroxidase (TPO).	B

10206	61254	Multiple thyroid marker IVD, reagent	Олон бамбай булчирхайн маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple thyroid markers associated with thyroid disease in a clinical specimen. Analytes detected may include, but are not limited to free triiodothyronine (FT3), free thyroxine (FT4), thyroid stimulating hormone (TSH) and/or thyroid peroxidase (TPO).	B
10207	61259	RNA polymerase III antibody (anti-Pol III) IVD, kit, enzyme immunoassay (EIA)	РНХ полимераз III эсрэгбие (анти-Пол III) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-RNA polymerase III antibodies (anti-Pol III) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10208	61260	RNA polymerase III (anti-Pol III) antibody IVD, calibrator	РНХ полимераз III (анти-Пол III) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to RNA polymerase III (anti-Pol III) in a clinical specimen.	B
10209	61261	RNA polymerase III (anti-Pol III) antibody IVD, control	РНХ полимераз III (анти-Пол III) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to RNA polymerase III (anti-Pol III) in a clinical specimen.	B
10210	61262	RNA polymerase III (anti-Pol III) antibody IVD, reagent	РНХ полимераз III (анти-Пол III) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to RNA polymerase III (anti-Pol III) in a clinical specimen.	B
10211	61263	Glycoprotein-210 (gp210) antibody IVD, kit, enzyme immunoassay (EIA)	Гликопротейн-210 (gp210) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-glycoprotein-210 antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10212	61264	Multiple antinuclear antibody (ANA) screening IVD, kit, chemiluminescent immunoassay	Олон тооны антинуклеар эсрэгбие (ANA) скрининг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple types of antinuclear antibodies (ANA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10213	61265	Ribosomal phosphoprotein antibody IVD, kit, chemiluminescent immunoassay	Рибосомын фосфопротеины эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ribosomal phosphoprotein in a clinical specimen, using a chemiluminescent immunoassay method.	B
10214	61266	Double stranded DNA antibody (anti-dsDNA) IVD, kit, chemiluminescent immunoassay	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10215	61267	Dense fine speckles 70 protein antibody (anti-DFS70) IVD, kit, chemiluminescent immunoassay	Өтгөн нарийн толботой 70 уургийн эсрэгбие (DFS70-ийн эсрэг) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to dense fine speckles 70 protein (anti-DSF70) in a clinical specimen, using a chemiluminescent immunoassay.	B
10216	61268	Dense fine speckles 70 protein antibody (anti-DFS70) IVD, control	Өтгөн нарийн толботой 70 уургийн эсрэгбие (DFS70-ийн эсрэг) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to dense fine speckles 70 protein (anti-DFS70) in a clinical specimen.	B
10217	61269	Dense fine speckles 70 protein antibody (anti-DFS70) IVD, calibrator	Өтгөн нарийн толботой 70 уургийн эсрэгбие (DFS70-ийн эсрэг) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to dense fine speckles 70 protein (anti-DFS70) in a clinical specimen.	B
10218	61270	Dense fine speckles 70 protein antibody (anti-DFS70) IVD, reagent	Өтгөн нарийн толботой 70 уургийн эсрэгбие (DFS70 эсрэг) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to dense fine speckles 70 protein (anti-DFS70) in a clinical specimen.	B

10219	61273	Methotrexate therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Метотрексат эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug methotrexate in a clinical specimen, using a chemiluminescent immunoassay method.	B
10220	61274	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, nephelometry/turbidimetry	Харшлын өвөрмөц иммуноглобулин Е (IgE) эсрэгбие IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B
10221	61290	Uromodulin/Tamm-Horsfall protein (THP) IVD, kit, enzyme immunoassay (EIA)	Уромодулин/Тамм-Хорсфаллын уураг (THP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of uromodulin, also known as Tamm-Horsfall protein (THP), in a clinical specimen using an enzyme immunoassay (EIA) method.	B
10222	61291	Uromodulin/Tamm-Horsfall protein (THP) IVD, calibrator	Uromodulin/Tamm-Horsfall уураг (THP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection uromodulin, also known as Tamm-Horsfall protein (THP) in a clinical specimen.	B
10223	61292	Uromodulin/Tamm-Horsfall protein (THP) IVD, control	Uromodulin/Tamm-Horsfall уураг (THP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of uromodulin, also known as Tamm-Horsfall protein (THP) in a clinical specimen.	B
10224	61293	Uromodulin/Tamm-Horsfall protein (THP) IVD, reagent	Uromodulin/Tamm-Horsfall уураг (THP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of uromodulin, also known as Tamm-Horsfall protein (THP) in a clinical specimen.	B
10225	61360	Human kallikrein 2 (hK2) IVD, kit, fluorescent immunoassay	Хүний калликреин 2 (hK2) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human kallikrein 2 (hK2) in a clinical specimen, using a fluorescent immunoassay method.	B

10226	61361	Human kallikrein 2 (hK2) IVD, calibrator	Хүний калликреин 2 (hK2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human kallikrein 2 (hK2) in a clinical specimen.	B
10227	61362	Human kallikrein 2 (hK2) IVD, control	Хүний калликреин 2 (hK2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human kallikrein 2 (hK2) in a clinical specimen.	B
10228	61363	Human kallikrein 2 (hK2) IVD, reagent	Хүний калликреин 2 (hK2) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human kallikrein 2 (hK2) in a clinical specimen.	B
10229	61390	Myoglobin IVD, kit, fluorescent immunoassay	Миоглобин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of myoglobin in a clinical specimen, using a fluorescent immunoassay method.	B
10230	61414	Pepsinogen I IVD, kit, chemiluminescent immunoassay	Пепсиноген I IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pepsinogen I in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of gastric conditions (e.g., gastritis, peptic ulcer and/or gastric cancer).	B
10231	61415	Pepsinogen II IVD, kit, chemiluminescent immunoassay	Пепсиноген II IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pepsinogen II in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of gastric conditions (e.g., gastritis, peptic ulcer and/or gastric cancer).	B
10232	61416	Alpha-hydroxybutyrate dehydrogenase IVD, kit, spectrophotometry	Альфа-гидроксибутиратдегидрогеназа IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-hydroxybutrate dehydrogenase in a clinical specimen, using a spectrophotometry method.	B

10233	61417	Lithium therapeutic drug monitoring IVD, kit, spectrophotometry	Литийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lithium in a clinical specimen, using a spectrophotometry method.	B
10234	61418	Squamous cell carcinoma antigen IVD, kit, chemiluminescent immunoassay	Хавтгай эсийн хорт хавдрын эсрэгтөрөгч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of squamous cell carcinoma antigen in a clinical specimen, using a chemiluminescent immunoassay method.	B
10235	61443	Bacterial vaginosis screening IVD, kit, rapid colorimetric, clinical	Бактерийн вагинозын скрининг IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi)-quantitative screening of vaginal clinical specimens to detect white blood cell enzymes and/or products of white cell metabolism, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses as an indicator of bacterial vaginosis. It is not intended to be used for self-testing.	B
10236	61469	17-Hydroxyprogesterone IVD, kit, fluorescent immunoassay	17-гидроксипрогестерон IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen, using a fluorescent immunoassay method.	B
10237	61476	Carbon isotope breath test kit IVD	Нүүрстөрөгчийн изотопын амьсгалын шинжилгээний иж бүрдэл IVD	A collection of devices intended to be used for the breath analysis of a carbon isotope (e.g., carbon-13, carbon-14) to investigate suspected gastrointestinal disorders [e.g., gastric emptying disorder (gastroparesis), H. pylori infection]. It consists of an ingestible carbon isotope-labelled substrate and breath specimen containers or collection card. The test relies on the metabolism of the substrate and expiration of carbon isotopes in CO2. It can be administered by a healthcare professional in a clinical setting or alternatively by the patient at home, for subsequent analysis in a clinical laboratory or at the point-of-care. This is a single-use device.	B

10238	61512	Platelet factor 4-heparin complex total antibody IVD, kit, rapid agglutination, clinical	Тромбоцит хүчин зүйл 4-гепарины цогцолборнийт эсрэгбие IVD, иж бүрдэл, хурдан наалдуулах, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total antibodies to platelet factor 4-heparin complex in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid agglutination method. This is a rapid test commonly used in a laboratory or in point-of-care analyses to aid in the investigation/diagnosis of heparin induced thrombocytopenia (HIT). It is not intended to be used for self-testing	B
10239	61515	Breath ketone IVD, kit, rapid colorimetric, clinical	Амьсгалын кетон IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of ketones in breath within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to screen at-risk patients (e.g., diabetics) for signs of ketoacidosis. It is not intended to be used for self-testing.	B
10240	61534	Procalcitonin (PCT) IVD, kit, enzyme immunoassay (EIA)	Прокальцитонин (PCT) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procalcitonin (PCT) in a clinical specimen, using an enzyme immunoassay (EIA) method. Procalcitonin is typically used as a marker of bacterial sepsis or severe bacterial infection.	B
10241	61540	Myxovirus resistance protein 1 (MxA) IVD, kit, enzyme immunoassay (EIA)	Миксовирусын эсэргүүцлийн уураг 1 (MxA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of myxovirus resistance protein 1 (MxA) in a clinical specimen, using an enzyme immunoassay (EIA) method. Myxovirus resistance protein 1 (MxA) is typically used as a marker for viral infection, and may be useful as an indicator of interferon (IFN) type 1 bioactivity in the treatment of chronic viral hepatitis and multiple sclerosis.	B
10242	61568	Macrophage inhibitory cytokine 1/growth-differentiation factor 15 (MIC-1/GDF15) IVD, kit, enzyme immunoassay (EIA)	Макрофаг дарангуйлагч цитокин 1/өсөлтийг ялгах хүчин зүйл 15 (MIC-1/GDF15) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of macrophage inhibitory cytokine 1 (MIC-1), also known as growth-differentiation factor 15 (GDF15), in a clinical specimen, using an enzyme immunoassay (EIA) method. Increased expression of MIC-1/GDF15 has been associated with cancer progression, chronic inflammatory disease, and cardiovascular disease.	B

10243	61571	Afamin IVD, kit, enzyme immunoassay (EIA)	Афамин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of afamin, also known as alpha-albumin (previously known as alpha-1-T glycoprotein), in a clinical specimen, using an enzyme immunoassay (EIA) method. Afamin has been associated with metabolic syndrome, insulin resistance and ovarian cancer.	B
10244	61589	Des-gamma-carboxyprothrombin (DCP) IVD, kit, chemiluminescent immunoassay	Дес-гамма-карбоксипротромбин (DCP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of des-gamma-carboxyprothrombin (DCP) [protein induced by vitamin K absence-II (PIVKA-II)] in a clinical specimen, using a chemiluminescent immunoassay method. This assay is typically used as an aid for the diagnosis of hepatocellular carcinoma (HCC), monitoring of high-risk patients (e.g., hepatitis virus infections, chronic liver disease, cirrhosis) for the development of HCC, and in the management/treatment of HCC.	B
10245	61597	Glutamate IVD, control	Глутамат IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative detection of glutamate in a clinical specimen.	B
10246	61598	Glutamate IVD, calibrator	Глутамат IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative detection of glutamate in a clinical specimen.	B
10247	61602	Alpha defensin IVD, kit, rapid ICT, clinical	Альфа дефенсин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of alpha defensin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to detect indirect markers of infection and/or inflammation. It is not intended to be used for self-testing.	B
10248	61693	Phosphatidylethanol (PEth) IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Фосфатидилетанол (PEth) IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of phosphatidylethanol (PEth) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. It is used for the analysis of ethanol (alcohol) consumption.	B

10249	61716	Troponin I IVD, kit, magnetic immunoassay	Тропонин I IVD, иж бүрдэл, соронзон дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin I in a clinical specimen, using a magnetic immunoassay method.	B
10250	61719	Saliva pH IVD, kit, rapid colorimetric, clinical	Шүлсний pH IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of salivary pH within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. Saliva pH is an indicator of oral health and a prolonged acidic environment is associated with erosion of tooth enamel, dental caries, or eventually periodontal disease. It is not intended to be used for self-testing.	B
10251	61753	Methylmalonic acid (MMA) IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Метилмалоны хүчил (MMA) IVD, иж бүрдэл, шингэн хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of methylmalonic acid (MMA) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. Measurement of MMA is sometimes useful in the investigation of vitamin B12 deficiency.	B
10252	61762	Procollagen type I N-terminal propeptide (PINP) IVD, kit, radioimmunoassay	Проколлаген төрлийн I N-терминал пропептид (PINP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type I N-terminal propeptide (PINP) in a clinical specimen, using a radioimmunoassay method. PINP is an indicator of osteoblastic activity and used in the management of postmenopausal osteoporosis.	B
10253	61763	Collagen type I cross-linked C-telopeptide IVD, kit, radioimmunoassay	Коллаген төрлийн I хөндлөн холбоот С-телопептидийн IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of collagen type I cross-linked C-telopeptide in a clinical specimen, using a radioimmunoassay method. Collagen type I cross-linked C-telopeptide is a biomarker for bone turnover and elevated levels are associated with conditions of increased bone lysis (e.g., multiple myeloma, osteolytic metastases, and rheumatoid arthritis).	B

10254	61764	Procollagen type III N-terminal propeptide (PIIINP) IVD, kit, radioimmunoassay	III төрлийн проколлаген N-терминал пропептид (PIIINP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type III N-terminal propeptide (PIIINP) in a clinical specimen, using a radioimmunoassay method. PIIINP is a non-specific disease marker and increased levels are observed in conditions where accumulation and/or degradation of connective tissue occurs, reflecting the involvement and altered metabolism of type III collagen.	B
10255	61787	Creatine kinase skeletal muscle isoenzyme (CKMM) IVD, kit, fluorescent immunoassay	Креатин киназын араг ясны булчингийн изоэнзим (CKMM) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase skeletal muscle isoenzyme (CKMM) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to assess the extent of muscle damage in and to screen for muscular dystrophy.	B
10256	61819	Benzodiazepine group therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Бензодиазепины бүлгийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple benzodiazepine drugs in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10257	61820	Tricyclic antidepressant therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Трициклик антидепрессант эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple tricyclic antidepressant drugs in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10258	61827	Inducible nitric oxide synthase (iNOS) IVD, kit, chemiluminescent immunoassay	Өдөөгддөг азотын ислийн синтаза (iNOS) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inducible nitric oxide synthase (iNOS) in a clinical specimen, using a chemiluminescent immunoassay method. The test is used as an aid in predicting the onset of sepsis, severe sepsis or septic shock.	B
10259	61857	Benzodiazepine group therapeutic drug monitoring IVD, calibrator	Бензодиазепин бүлгийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple benzodiazepine drugs in a clinical specimen.	B

10260	61858	Benzodiazepine group therapeutic drug monitoring IVD, control	Бензодиазепин бүлгийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple benzodiazepine drugs in a clinical specimen.	B
10261	61859	Benzodiazepine group therapeutic drug monitoring IVD, reagent	Бензодиазепин бүлгийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of multiple benzodiazepine drugs in a clinical specimen.	B
10262	61860	Tricyclic antidepressant therapeutic drug monitoring IVD, calibrator	Трициклик антидепрессант эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple tricyclic antidepressant drugs in a clinical specimen.	B
10263	61861	Tricyclic antidepressant therapeutic drug monitoring IVD, control	Трициклик антидепрессант эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple tricyclic antidepressant drugs in a clinical specimen.	B
10264	61862	Tricyclic antidepressant therapeutic drug monitoring IVD, reagent	Трициклик антидепрессант эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of multiple tricyclic antidepressant drugs in a clinical specimen.	B
10265	61882	Methotrexate therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Метотрексат эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug methotrexate in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10266	61883	Primidone therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Примидоны эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug primidone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10267	61886	Cyclosporin A/cyclosporine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Циклоспорин А/циклоспорины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug cyclosporin A, or cyclosporine, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10268	61887	Amikacin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Амикацины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug amikacin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10269	61888	Salicylate IVD, kit, enzyme immunoassay (EIA)	Салицилат IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10270	61889	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, enzyme immunoassay (EIA)	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10271	61890	Methaqualone IVD, kit, enzyme immunoassay (EIA)	Метаквалон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10272	61891	6-Acetyl morphine IVD, kit, enzyme immunoassay (EIA)	6-Ацетил морфины IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 6-acetyl morphine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10273	61892	Salicylate IVD, kit, spectrophotometry	Салицилат IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of salicylate in a clinical specimen, using a spectrophotometry method.	B

10274	61893	Carbamazepine therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Карбамазепин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug carbamazepine in a clinical specimen, using a nephelometry/turbidimetry method.	B
10275	61894	Lidocaine therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Лидокаины эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug lidocaine in a clinical specimen, using a nephelometry/turbidimetry method.	B
10276	61895	N-acetyl procainamide (NAPA) IVD, kit, nephelometry/turbidimetry	N-ацетил прокаинамид (NAPA) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative detection of N-acetyl procainamide (NAPA) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10277	61896	Procainamide therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Прокаинамид эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug procainamide in a clinical specimen, using a nephelometry/turbidimetry method.	B
10278	61897	Phenytoin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Фенитоины эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug phenytoin (e.g., Dilantin) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10279	61898	Theophylline therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Теофиллин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the anti-asthma drug theophylline in a clinical specimen, using a nephelometry/turbidimetry method.	B
10280	61899	Prostatic acid phosphatase (PAP) IVD, kit, spectrophotometry	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen, using a spectrophotometry method.	B
10281	61900	Total protein IVD, kit, spectrophotometry	Нийт уургийн IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total protein in a clinical specimen, using a spectrophotometry method.	B

10282	61903	Digitoxin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Дигитоксин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug digitoxin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10283	61924	Aspartyl/asparaginyl beta-hydroxylase IVD, kit, enzyme immunoassay (EIA)	Аспартил/аспарагинил бета-гидроксилаза IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of aspartyl/asparaginyl beta-hydroxylase in a clinical specimen, using an enzyme immunoassay (EIA) method. Overexpression of aspartyl/asparaginyl beta-hydroxylase is associated with the development and growth of cancer cells.	B
10284	61926	Mycophenolate therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Микофенолатын эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (e.g., CellCept) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10285	61955	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, chemiluminescent immunoassay	Харшлын өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B
10286	61966	Allergen-specific immunoglobulin G (IgG) antibody IVD, kit, chemiluminescent immunoassay	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to screen for allergies associated with certain conditions (e.g., food intolerance).	B

10287	61972	Cotinine IVD, kit, chemiluminescent immunoassay	Котинин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cotinine (nicotine metabolite) in a clinical specimen, using a chemiluminescent immunoassay method. It is used to aid in the differentiation between smokers and non-smokers, or in the investigation of the link between smoking and associated disorders (e.g., cancer, coronary heart disease, stroke).	B
10288	61973	Free estriol (oestriol) IVD, kit, chemiluminescent immunoassay	Үнэгүй эстриол (эстриол) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free estriol (oestriol) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically measured in maternal blood or urine as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
10289	61974	Gastrin IVD, kit, chemiluminescent immunoassay	Гастрин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of gastrin in a clinical specimen, using a chemiluminescent immunoassay method. It is used to aid in the investigation and treatment of disorders associated with abnormal gastrin production [e.g., recurrent peptic ulcers, gastrin-producing tumours (gastrinomas) and Zollinger-Ellison syndrome (ZES)].	B
10290	61979	Multiple anticonvulsant therapeutic drug monitoring IVD, kit, liquid chromatography	Олон удаагийн таталтын эсрэг эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple anticonvulsant drugs, also known as antiepileptic drugs which may include carbamazepine, lamotrigine, phenytoin, and primidone, in a clinical specimen, using a liquid chromatography method.	B
10291	61980	Multiple anticonvulsant therapeutic drug monitoring IVD, calibrator	Олон удаагийн таталтын эсрэг эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple anticonvulsant drugs, also known as antiepileptic drugs which may include carbamazepine, lamotrigine, phenytoin, and primidone, in a clinical specimen.	B

10292	61981	Multiple anticonvulsant therapeutic drug monitoring IVD, control	Олон удаагийн таталтын эсрэг эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple anticonvulsant drugs, also known as antiepileptic drugs which may include carbamazepine, lamotrigine, phenytoin, and primidone, in a clinical specimen.	B
10293	61982	Multiple anticonvulsant therapeutic drug monitoring IVD, reagent	Олон удаагийн таталтын эсрэг эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple anticonvulsant drugs, also known as antiepileptic drugs which may include carbamazepine, lamotrigine, phenytoin, and primidone, in a clinical specimen.	B
10294	61985	Immunoglobulin A sub (IgA sub) IVD, kit, precipitation/immunodiffusion	Иммуноглобулин А дэд ангилал (IgA дэд ангилал) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A sub es (IgA sub es) in a clinical specimen, using a precipitation/immunodiffusion method.	B
10295	61986	Ceruloplasmin IVD, kit, precipitation/immunodiffusion	Церулоплазмины IVD, иж бүрдэл, хур тунадас / дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ceruloplasmin in a clinical specimen, using a precipitation/immunodiffusion method. Ceruloplasmin is a copper carrying protein which is a marker for Wilson’s disease.	B
10296	61987	Complement component C5 IVD, kit, precipitation/immunodiffusion	Нэмэлт бүрэлдэхүүн хэсэг C5 IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C5 in a clinical specimen, using a precipitation/immunodiffusion method. It is useful in the investigation of conditions associated with C5 deficiency such as lupus erythematosus and recurrent Neiserria infections.	B
10297	61988	C-reactive protein (CRP) IVD, kit, precipitation/immunodiffusion	С-реактив уураг (CRP) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using a precipitation/immunodiffusion method. CRP is a marker associated with bacterial infection and inflammatory conditions.	B

10298	61993	Collagen pyridium crosslink IVD, kit, chemiluminescent immunoassay	Коллаген пиридиумын хөндлөн холбоос IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the pyridium crosslinks of collagen, deoxypyridinoline (DPD) and/or pyridinoline (PYD), in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a specific marker of bone resorption and osteoclastic activity to help in the diagnosis of bone disease (e.g., postmenopausal osteoporosis, bone metastasis, and Paget's disease) or in monitoring collagen resorption changes in patients receiving antiresorptive therapy.	B
10299	61994	Lipopolysaccharide binding protein (LBP) IVD, kit, chemiluminescent immunoassay	Липополисахарид холбогч уураг (LBP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipopolysaccharide binding protein (LBP) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis and treatment of disorders associated with exposure to bacterial endotoxin (e.g., sepsis and post-traumatic/postsurgical infection).	B
10300	61995	Lipopolysaccharide binding protein (LBP) IVD, reagent	Липополисахарид холбогч уураг (LBP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lipopolysaccharide binding protein (LBP) in a clinical specimen.	B
10301	61996	Lipopolysaccharide binding protein (LBP) IVD, calibrator	Липополисахарид холбогч уураг (LBP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lipopolysaccharide binding protein (LBP) in a clinical specimen.	B
10302	61997	Lipopolysaccharide binding protein (LBP) IVD, control	Липополисахарид холбогч уураг (LBP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lipopolysaccharide binding protein (LBP) in a clinical specimen.	B

10303	61998	Mycophenolate therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Микофенолат эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (e.g., Cellcept) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10304	61999	Pregnancy-associated plasma protein A (PAPP-A) IVD, kit, chemiluminescent immunoassay	Жирэмслэлттэй холбоотой плазмын уураг A (PAPP-A) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnancy associated plasma protein A (PAPP-A) in a clinical specimen, using a chemiluminescent immunoassay method. It is used in foetal screening of Down syndrome and other chromosomal abnormalities during pregnancy.	B
10305	62005	Eosinophil cationic protein (ECP) IVD, kit, chemiluminescent immunoassay	Эозинофил катион уураг (ECP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of eosinophil cationic protein (ECP) in a clinical specimen, using a chemiluminescent immunoassay method. ECP is typically used to monitor active inflammatory diseases marked by activated eosinophils (e.g., bronchial asthma, atopic dermatitis, parasitic and bacterial infections, or autoimmune diseases).	B
10306	62006	Total immunoglobulin M (IgM total) IVD, kit, precipitation/immunodiffusion	Нийт иммуноглобулин M (нийт IgM) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen, using a precipitation/immunodiffusion method.	B
10307	62007	Total immunoglobulin A (IgA total) IVD, kit, precipitation/immunodiffusion	Нийт иммуноглобулин A (нийт IgA) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen using a precipitation/immunodiffusion method.	B
10308	62008	Total immunoglobulin G (IgG total) IVD, kit, precipitation/immunodiffusion	Нийт иммуноглобулин G (нийт IgG) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen, using a precipitation/immunodiffusion method.	B

10309	62009	Total complement activity (CH50) IVD, kit, precipitation/immunodiffusion	Нийт нэмэлт идэвхжил (CH50) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of total complement activity (CH50) in a clinical specimen using a precipitation/immunodiffusion method. It is useful in the investigation of recurrent bacterial infections, symptoms of inflammatory disease, and monitoring of chronic autoimmune conditions [e.g., systemic lupus erythematosus (SLE)].	B
10310	62012	Haptoglobin IVD, kit, precipitation/immunodiffusion	Хаптоглобин IVD, иж бүрдэл, хур тунадас / дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of haptoglobin in a clinical specimen, using a precipitation/immunodiffusion method. Decreased levels of haptoglobulin are associated with haemolytic anaemia.	B
10311	62013	Complement factor B IVD, kit precipitation/immunodiffusion	Комплемент хүчин зүйл B IVD, иж бүрдэл хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of complement factor B of the alternative pathway in a clinical specimen, using a precipitation/immunodiffusion method. Elevated levels of complement factor B are associated with infection and trauma.	B
10312	62014	Complement factor B IVD, calibrator	Комлемент B фактор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative measurement of complement factor B of the alternative pathway in a clinical specimen.	B
10313	62015	Complement factor B IVD, control	Комлемент хүчин зүйл B IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative measurement of complement factor B of the alternative pathway in a clinical specimen.	B
10314	62016	Complement factor B IVD, reagent	Комлемент фактор B IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative measurement of complement factor B of the alternative pathway in a clinical specimen.	B

10315	62017	Multiple immunosuppressant therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон төрлийн дархлаа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple immunosuppressant drugs which may include cyclosporin A (or cyclosporine), tacrolimus, sirolimus and/or everolimus in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10316	62018	Multiple form 25-hydroxy Vitamin D IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. It is used in the investigation of conditions associated with vitamin D deficiency and for the assessment of vitamin D status during supplementation therapy.	B
10317	62026	Immunoglobulin G sub (IgG sub) IVD, kit, precipitation/immunodiffusion	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, иж бүрдэл, хур тунадас/дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen, using a precipitation/immunodiffusion method.	B
10318	62030	Complement component C1 inhibitor IVD, kit, precipitation/immunodiffusion	Нэмэлт бүрэлдэхүүн хэсэг C1 дарангуйлагч IVD, иж бүрдэл, хур тунадас / дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen, using a precipitation/immunodiffusion method. It is used to assess C1 inhibitor activity which is associated with hereditary angioneurotic oedma.	B
10319	62032	Propoxyphene IVD, kit, chemiluminescent immunoassay	Пропоксифен IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of propoxyphene in a clinical specimen, using a chemiluminescent immunoassay method.	B
10320	62034	Methaqualone IVD, kit, chemiluminescent immunoassay	Метаквалон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methaqualone in a clinical specimen, using a chemiluminescent immunoassay method.	B

10321	62049	Ethanol (ETOH) IVD, kit, rapid colorimetric, clinical	Этанол (ETOH) IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ethyl alcohol (ETOH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to assess for alcohol intoxication and in the management of alcoholism. It is not intended to be used for self-testing.	B
10322	62050	Coenzyme Q10 (CoQ10) IVD, kit, liquid chromatography	Коэнзим Q10 (CoQ10) IVD, иж бүрдэл, шингэний хроматограф	A collection of reagents and other associated materials intended to be used for the quantitative detection of coenzyme Q10 (CoQ10), also known as ubiquinone, in a clinical specimen, using a liquid chromatography method. CoQ10 is an antioxidant which protects the cell from oxidative stress caused by reactive oxygen species (ROS) or free radicals, and deficiency is associated with cardiomyopathies, high blood pressure and other degenerative conditions.	B
10323	62065	Coenzyme Q10 (CoQ10) IVD, calibrator	Коэнзим Q10 (CoQ10) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative detection of coenzyme Q10 (CoQ10), also known as ubiquinone, in a clinical specimen.	B
10324	62066	Coenzyme Q10 (CoQ10) IVD, control	Коэнзим Q10 (CoQ10) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative detection of coenzyme Q10 (CoQ10), also known as ubiquinone, in a clinical specimen.	B
10325	62067	Coenzyme Q10 (CoQ10) IVD, reagent	Коэнзим Q10 (CoQ10) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative detection of coenzyme Q10 (CoQ10), also known as ubiquinone, in a clinical specimen.	B
10326	62120	Holotranscobalamin (holoTC) IVD, kit, chemiluminescent immunoassay	Холотранскобаламин (holoTC) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of holotranscobalamin (holoTC), also known as active-B12, in a clinical specimen, using a chemiluminescent immunoassay. It is used to aid in the diagnosis and treatment of vitamin B12 deficiency.	B

10327	62121	Holotranscobalamin (holoTC) IVD, reagent	Холотранскобаламин (holoTC) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of holotranscobalamin (holoTC), also known as active-B12, in a clinical specimen.	B
10328	62122	Holotranscobalamin (holoTC) IVD, control	Холотранскобаламин (holoTC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of holotranscobalamin (holoTC), also known as active-B12, in a clinical specimen.	B
10329	62123	Holotranscobalamin (holoTC) IVD, calibrator	Холотранскобаламин (holoTC) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of holotranscobalamin (holoTC), also known as active-B12, in a clinical specimen.	B
10330	62124	Free estriol (oestriol) IVD, kit, fluorescent immunoassay	Үнэгүй эстриол (эстриол) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free estriol (oestriol) in a clinical specimen, using a fluorescent immunoassay method. It is typically measured in maternal blood or urine as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
10331	62129	Ketamine/ketamine metabolite IVD, kit, enzyme immunoassay (EIA)	Кетамин/кетамин метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative detection of ketamine and/or ketamine metabolites in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10332	62130	Ketamine/ketamine metabolite IVD, reagent	Кетамин/кетамин метаболит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative detection of ketamine and/or ketamine metabolites in a clinical specimen.	B
10333	62131	Ketamine/ketamine metabolite IVD, calibrator	Кетамин/кетамин метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative detection of ketamine and/or ketamine metabolites in a clinical specimen.	B
10334	62132	Ketamine/ketamine metabolite IVD, control	Кетамин/кетамин метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative detection of ketamine and/or ketamine metabolites in a clinical specimen.	B

10335	62191	TNF-alpha inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	TNF-альфа дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a tumour necrosis factor alpha (TNF-alpha) inhibitor (also known as anti-drug antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to anti-TNF-alpha therapy (e.g., infliximab, adalimumab, golimumab and etanercept) in the treatment of autoimmune conditions such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
10336	62192	TNF-alpha inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, adalimumab, golimumab and etanercept) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor blood levels of anti-TNF-alpha therapeutics in the treatment of autoimmune conditions such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
10337	62193	TNF-alpha IVD, kit, enzyme immunoassay (EIA)	TNF-альфа IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha (TNF-alpha) in a clinical specimen, using an enzyme immunoassay (EIA) method. TNF-alpha is associated with autoimmune and inflammatory disorders such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
10338	62213	Thromboxane IVD, kit, enzyme immunoassay (EIA)	Тромбоксан IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thromboxane in a clinical specimen, using an enzyme immunoassay (EIA) method. Thromboxane is typically used as a marker of platelet activity, which may be affected by a variety of conditions and treatments (e.g., aspirin intake).	B

10339	62214	Alpha-1-antitrypsin (protease inhibitor) IVD, kit, precipitation/immunodiffusion	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, иж бүрдэл, хур тунадас / дархлаажуулалт	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen, using a precipitation/immunodiffusion method. Alpha-1-antitrypsin deficiency is typically associated with liver cirrhosis and pulmonary emphysema.	B
10340	62226	Oxidized low density lipoprotein-B2-glycoprotein I (OxLDL-B2GPI) complex antibody IVD, kit, enzyme immunoassay (EIA)	Исэлдсэн бага нягтралтай липопротейн-B2-гликопротейн I (OxLDL-B2GPI) нийлмэл эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to oxidized low density lipoprotein-B2-glycoprotein I (OxLDL-B2GPI) complex in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid in the diagnosis of antiphospholipid syndrome (APS) and as a marker for atherothrombotic risk in patients with systemic lupus erythematosus (SLE) and other autoimmune disorders.	B
10341	62261	Acetylcholine receptor antibody IVD, kit, radioimmunoassay	Ацетилхолин рецепторын эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to acetylcholine receptor in a clinical specimen, using a radioimmunoassay method. It is typically used in the differential diagnosis of myasthenia gravis (MG).	B
10342	62263	Free cortisol IVD, kit, chemiluminescent immunoassay	Үнэгүй кортизолын IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free cortisol in a clinical specimen, using a chemiluminescent immunoassay method. It is used as an aid in the diagnosis and treatment of adrenal disorders.	B
10343	62281	Total cortisol IVD, kit, enzyme immunoassay (EIA)	Нийт кортизолын IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total cortisol in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis and treatment of adrenal disorders.	B
10344	62293	Desmoglein 1 (DSG1)/desmoglein 3 (DSG3) antibody IVD, kit, enzyme immunoassay (EIA)	Desmoglein 1 (DSG1)/desmoglein 3 (DSG3) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to desmoglein 1 (DSG1) and desmoglein 3 (DSG3) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the autoimmune pemphigus skin diseases pemphigus foliaceus and pemphigus vulgaris.	B

10345	62294	Bullous pemphigoid antigen 2 (BPAG2) antibody IVD, kit, enzyme immunoassay (EIA)	Буллез пемфигоид антиген 2 (BPAG2) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to bullous pemphigoid antigen 2 (BPAG2), also known as BP180, in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the autoimmune skin disease bullous pemphigoid.	B
10346	62295	Bullous pemphigoid antigen 1 (BPAG1) antibody IVD, kit, enzyme immunoassay (EIA)	Буллез пемфигоид антиген 1 (BPAG1) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to bullous pemphigoid antigen 1 (BPAG1), also known as BP230, in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the autoimmune skin disease bullous pemphigoid.	B
10347	62297	Desmoglein 1 (DSG1) antibody IVD, kit, enzyme immunoassay (EIA)	Desmoglein 1 (DSG1) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to desmoglein 1 (DSG1) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the autoimmune skin disease pemphigus foliaceus.	B
10348	62298	Desmoglein 3 (DSG3) antibody IVD, kit, enzyme immunoassay (EIA)	Desmoglein 3 (DSG3) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to desmoglein 3 (DSG3) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the autoimmune skin disease pemphigus vulgaris.	B
10349	62299	Phospholipase A2 receptor (PLA2R) antibody IVD, kit, enzyme immunoassay (EIA)	Фосфолипаза А2 рецептор (PLA2R) эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the phospholipase A2 receptor (PLA2R) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of the kidney disease known as primary membranous glomerulonephritis.	B
10350	62306	Oxycodone IVD, kit, enzyme immunoassay (EIA)	Оксикодон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oxycodone in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10351	62307	Tramadol IVD, kit, enzyme immunoassay (EIA)	Трамадол IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tramadol in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10352	62308	Tramadol IVD, calibrator	Трамадол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tramadol in a clinical specimen.	B
10353	62309	Tramadol IVD, control	Трамадол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tramadol in a clinical specimen.	B
10354	62318	N-methyl-D-aspartate (NMDA) receptor antibody IVD, kit, fluorescent immunoassay	N-метил-D-аспартат (NMDA) рецепторын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to N-methyl-D-aspartate (NMDA) receptor (a glutamate receptor) in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of the autoimmune condition NMDA encephalitis, which causes neurologic and psychiatric symptoms.	B
10355	62324	Propoxyphene/propoxyphene metabolite IVD, kit, rapid ICT, clinical	Пропоксифен/пропоксифен метаболит IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of propoxyphene/propoxyphene metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10356	62325	Inhibin A IVD, kit, fluorescent immunoassay	Inhibin A IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative detection of inhibin A in a clinical specimen, using a fluorescent immunoassay method. Inhibin A detection is useful in studies of human reproductive physiology (e.g., as an endocrine marker for monitoring ovarian function).	B
10357	62337	Phospholipase A2 receptor (PLA2R) antibody IVD, kit, fluorescent immunoassay	Фосфолипаза А2 рецептор (PLA2R) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative detection of antibodies to the phospholipase A2 receptor (PLA2R) in a clinical specimen, using a fluorescent immunoassay method. It is used as an aid in the diagnosis of the kidney disease known as primary membranous glomerulonephritis.	B

10358	62344	Aldosterone IVD, kit, chemiluminescent immunoassay	Альдостероны IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of aldosterone in a clinical specimen, using a chemiluminescent immunoassay method. It is used in the diagnosis and monitoring of aldosteronism (disorders of aldosterone secretion by the adrenal gland).	B
10359	62359	Renin IVD, kit, chemiluminescent immunoassay	Ренин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen, using a chemiluminescent immunoassay method. It is used to aid in the diagnosis of certain forms of hypertension.	B
10360	62367	Thyroglobulin antibody IVD, kit, agglutination	Тироглобулины эсрэгбие IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroglobulin in a clinical specimen, using an agglutination method. It is used in the diagnosis and monitoring of autoimmune thyroid diseases, such as autoimmune thyroiditis (Hashimoto’s disease).	B
10361	62368	Thyroid peroxidase antibody (anti-TPO/microsomal antibody) IVD, kit, agglutination	Бамбай булчирхайн пероксидазын эсрэгбие (anti-TPO/микросомын эсрэгбие) IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid peroxidase [anti-TPO, also known as anti-microsomal antibody] in a clinical specimen, using an agglutination method. It is used in the diagnosis of autoimmune thyroid diseases, such as autoimmune thyroiditis (Hashimoto’s disease) and Graves’ disease.	B
10362	62369	1,25-Dihydroxy vitamin D3 IVD, kit, chemiluminescent immunoassay	1,25-дигидрокси витамин D3 IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,25-dihydroxy vitamin D3 in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used in the investigation of vitamin D deficiency and abnormal bone metabolism.	B
10363	62373	Fibrillarin antibody IVD, kit, fluorescent immunoassay	Фибриллярын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to fibrillarin in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of systemic sclerosis.	B

10364	62374	Mi-2 antibody IVD, kit, fluorescent immunoassay	Ми-2 эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the nuclear antigen Mi-2 in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of the autoimmune condition idiopathic myositis.	B
10365	62376	Glycated albumin IVD, kit, spectrophotometry	Гликатлагдсан альбумин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated albumin in a clinical specimen, using a spectrophotometry method. Glycated albumin is typically used as a marker for glycaemic control and for monitoring, staging and follow up e.g., during pregnancy, in anaemic patients and in diabetic nephropathy.	B
10366	62408	1,3-Beta-D-glucan IVD, kit, spectrophotometry	1,3-Бета-D-глюкан IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 1,3-beta-D-glucan in a clinical specimen, using a spectrophotometry method. Its is used to aid in the diagnosis of opportunistic fungal infections in immunocompromised (e.g., HIV/AIDS, cancer, transplant) patients.	B
10367	62435	Neonatal thyroid stimulating hormone (neonatal TSH) IVD, kit, rapid ICT, clinical	Нярайн бамбай булчирхайг өдөөдөг даавар (нярайн TSH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of neonatal thyroid stimulating hormone (neonatal TSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of congenital hypothyroidism in newborns. It is not intended to be used for self-testing.	B
10368	62443	Multiple anticonvulsant therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон удаагийн таталтын эсрэг эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple anticonvulsant drugs, also known as antiepileptic drugs which may include carbamazepine, lamotrigine, phenytoin, and primidone, in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B

10369	62473	Mutated citrullinated vimentin (MCV) antibody IVD, kit, enzyme immunoassay (EIA)	Мутацид орсон цитрулинжуулсан виментин (MCV) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to mutated citrullinated vimentin (MCV) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used in the diagnosis of rheumatoid arthritis.	B
10370	62515	Multiple antidepressant therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон тооны антидепрессант эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of antidepressant drugs from multiple es [e.g., tricyclic antidepressants, selective serotonin reuptake inhibitors (SSRIs), tetracyclic antidepressants (TeCAs) and serotonin-norepinephrine reuptake inhibitors (SNRIs)] in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10371	62537	Glucose monitoring system IVD, home-use	Глюкозын хяналтын систем IVD, гэрийн хэрэглээ	A collection of devices including a portable, battery-powered, semi-automated or automated instrument (self-testing meter), reagents, test strips and/or other associated materials and accessories (e.g., control solutions, lancets) intended to be used for the quantitative measurement of glucose in a whole blood clinical specimen; it is designed to be used for self-testing by a layperson in the home, and some types may in addition be used at the point-of-care. Measured glucose values are used to manage blood glucose levels, primarily by persons with diabetes mellitus.	B
10372	62538	Glucose monitoring system IVD, point-of-care	Глюкозын хяналтын систем IVD, тусламж үйлчилгээний цэг	A collection of devices including a portable, electrically-powered instrument (meter), reagents, test strips and/or other associated materials and accessories (e.g., control solutions, lancets) intended to be used exclusively at the point-of-care by medical professionals for the quantitative measurement of glucose singularly in a whole blood clinical specimen. Measured glucose values are used to manage blood glucose levels, primarily by persons with diabetes mellitus.	B

10373	62553	Pancreatic stone protein (PSP) IVD, kit, fluorescent immunoassay	Нойр булчирхайн чулуун уураг (PSP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic stone protein (PSP) also known as lithostathine-1-alpha or reg-1-alpha, in a clinical specimen, using a fluorescent immunoassay method. It is used to help assess a patient’s risk of developing sepsis.	B
10374	62579	Immunoreactive trypsinogen IVD, kit, fluorescent immunoassay	Дархлаа идэвхгүй трипсиноген IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of immunoreactive trypsinogen in a clinical specimen, using a fluorescent immunoassay method. It is used in neonatal screening for cystic fibrosis (CF).	B
10375	62598	Multiple acute kidney injury (AKI) marker IVD, kit, chemiluminescent immunoassay	Бөөрний олон цочмог гэмтэл (AKI) маркер IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with acute kidney injury (AKI) in a clinical specimen, using a chemiluminescent immunoassay method. The range of analytes detected may include (but is not limited to) insulin-like growth factor-binding protein 7 (IGFBP-7), neutrophil gelatinase-associated lipocalin (NGAL), tissue-inhibitor of metalloproteinase-2 (TIMP-2), cystatin C, kidney injury molecule-1 (Kim-1) and/or L-type fatty acid–binding protein (L-FABP).	B
10376	62607	Liver-kidney microsome 1 antibody (anti-LKM1) IVD, kit, chemiluminescent immunoassay	Элэг-бөөрний микросом 1-ийн эсрэгбие (анти-LKM1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to liver-kidney microsome 1 protein (anti-LKM1) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune hepatitis type 2.	B
10377	62608	Mitochondrial antibody M2 (anti-Mi2) IVD, kit, chemiluminescent immunoassay	Митохондрийн эсрэгбие M2 (anti-Mi2) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple antibodies to mitochondria M2 (anti-Mi2) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of primary biliary cirrhosis.	B

10378	62610	Kappa/lambda light chain immunoglobulin IVD, kit, rapid ICT, clinical	Kappa/lambda хөнгөн гинжин гинжин иммуноглобулин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of kappa and/or lambda light chain immunoglobulins in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as an aid in the diagnosis and/or monitoring of multiple myeloma. It is not intended to be used for self-testing.	B
10379	62631	Omecamtiv mecarbil therapeutic drug monitoring IVD, calibrator	Omecamtiv mecarbil эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug omecamtiv mecarbil in a clinical specimen.	B
10380	62632	Omecamtiv mecarbil therapeutic drug monitoring IVD, control	Omecamtiv mecarbil эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug omecamtiv mecarbil in a clinical specimen.	B
10381	62633	Omecamtiv mecarbil therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Omecamtiv mecarbil эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug omecamtiv mecarbil in a clinical specimen, using a nephelometry/turbidimetry method.	B
10382	62675	Calprotectin IVD, kit, chemiluminescent immunoassay	Калпротектин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen, using a chemiluminescent immunoassay method. This test is commonly used to aid in the diagnosis of inflammatory bowel disease or other causes of intestinal inflammation.	B

10383	62686	Intact fibroblast growth factor 23 (iFGF23) IVD, kit, chemiluminescent immunoassay	Фибробласт өсөлтийн хүчин зүйл 23 (iFGF23) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of intact fibroblast growth factor 23 (iFGF23) in a clinical specimen, using a chemiluminescent immunoassay method. FGF23 is a regulator of phosphate and vitamin D in plasma and is associated with hypophosphotemic and hyperphosphotemic diseases and conditions associated with vitamin D metabolism.	B
10384	62716	Heparin-binding protein IVD, kit, nephelometry/turbidimetry	Гепарин холбогч уураг IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used to assess the risk of developing severe sepsis with circulatory failure.	B
10385	62767	Alpha-1-antitrypsin (protease inhibitor) IVD, antibody	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen.	B
10386	62768	ETS-related gene (ERG) protein IVD, antibody	ETS-тэй холбоотой ген (ERG) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative detection of ETS-related gene (ERG) protein in a clinical specimen.	B
10387	62777	Double stranded DNA antibody (anti-dsDNA) IVD, kit, radioimmunoassay	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen, using a radioimmunoassay method. It is typically used to aid in the diagnosis of the autoimmune condition systemic lupus erythematosus (SLE).	B
10388	62793	Beta-dystroglycan IVD, antibody	Бета-дистрогликан IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of beta-dystroglycan in a clinical specimen.	B

10389	62794	B-cell specific octamer binding protein-1 (BOB-1) IVD, antibody	B-эсийн өвөрмөц октамер холбох уураг-1 (BOB-1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of B-cell specific octamer binding protein-1 (BOB-1), also known as OBF-1 and OCA-B, in a clinical specimen.	B
10390	62795	Interleukin-3 receptor (IL-3r) IVD, antibody	Интерлейкин-3 рецептор (IL-3r) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of interleukin-3 receptor (IL-3r), also known as CD123, in a clinical specimen.	B
10391	62796	CD163 cell marker IVD, antibody	CD163 эсийн маркер IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of CD163 cell marker in a clinical specimen.	B
10392	62797	Anoctamin-1 (ANO1) IVD, antibody	Аноктамин-1 (ANO1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of anoctamin-1 (ANO1), also known as DOG1, in a clinical specimen.	B
10393	62798	Utrophin IVD, antibody	Утрофин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of utrophin in a clinical specimen.	B
10394	62799	Emerin IVD, antibody	Эмерин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of emerin in a clinical specimen.	B
10395	62800	Enhancer of zeste homolog 2 (EZH2) IVD, antibody	Зесте гомолог 2 (EZH2) IVD, эсрэгбиемийг сайжруулагч	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of enhancer of zeste homolog 2 (EZH2), a histone-lysine N-methyltransferase enzyme, in a clinical specimen.	B
10396	62801	Folate receptor alpha (FRa) IVD, antibody	Фолийн хүчил рецептор альфа (FRa) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of folate receptor alpha (FRa), in a clinical specimen.	B

10397	62802	Geminin IVD, antibody	Geminin IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of geminin, in a clinical specimen.	B
10398	62803	Dysferlin IVD, antibody	Дисферлин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of dysferlin, in a clinical specimen.	B
10399	62808	Dystrophin IVD, antibody	Дистрофин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of dystrophin in a clinical specimen.	B
10400	62809	Haptoglobin IVD, antibody	Хаптоглобин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection haptoglobin in a clinical specimen.	B
10401	62810	Retinol-binding protein IVD, antibody	Ретинол холбогч уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of retinol-binding protein in a clinical specimen.	B
10402	62811	Napsin A IVD, antibody	Napsin A IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of napsin A in a clinical specimen.	B
10403	62812	Oct-3/4 IVD, antibody	10-3/4 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Oct-3/4 protein (encoded by the Pou5f1 locus) in a clinical specimen.	B
10404	62821	Polo-like kinase-1 (PLK1) IVD, antibody	Поло төст киназа-1 (PLK1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of polo-like kinase-1 (PLK1), also known as serine/threonine-protein kinase 13 (STPK13), in a clinical specimen.	B
10405	62829	Gelsolin IVD, antibody	Гельсолин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the actin-binding protein gelsolin in a clinical specimen.	B

10406	62839	Postmeiotic segregation increased 2 (PMS2) IVD, antibody	Postmeiotic тусгаарлалт 2 (PMS2) IVD, эсрэгбие нэмэгдсэн	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of postmeiotic segregation increased 2 (PMS2), a DNA mismatch repair protein, in a clinical specimen.	B
10407	62841	Carbonic anhydrase IVD, antibody	Нүүрстөрөгчийн ангидраза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of carbonic anhydrase in a clinical specimen.	B
10408	62842	Oct-2 IVD, antibody	10-р сарын 2 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Oct-2 protein (encoded by the Pou2f2 locus) in a clinical specimen.	B
10409	62843	Delta-catenin IVD, antibody	Delta-catenin IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of delta-catenin in a clinical specimen.	B
10410	62859	P21 protein IVD, antibody	P21 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p21 protein, also known as cyclin-dependent kinase inhibitor 1A or p21(WAF1/CIP1), in a clinical specimen.	B
10411	62860	CD207 cell marker IVD, antibody	CD207 эсийн маркер IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of CD207, also known as langerin, in a clinical specimen.	B
10412	62871	B-type natriuretic protein/N-terminal pro b-type natriuretic peptide IVD, kit, magnetic immunoassay, rapid	төрлийн натриуретик уураг/N-терминал pro b төрлийн натриуретик пептид IVD, иж бүрдэл, соронзон дархлааны шинжилгээ, хурдан	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a magnetic immunoassay method. This test is commonly used in the laboratory or in point-of-care analyses as an aid in the diagnosis of heart failure.	B

10413	62894	Maspin IVD, antibody	Маспин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of maspin, also known as serpin B5, in a clinical specimen.	B
10414	62932	Multiple antidepressant therapeutic drug monitoring IVD, calibrator	Олон тооны антидепрессант эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of antidepressant drugs from multiple es [e.g., tricyclic antidepressants, selective serotonin reuptake inhibitors (SSRIs), tetracyclic antidepressants (TeCAs) and serotonin-norepinephrine reuptake inhibitors (SNRIs)] in a clinical specimen.	B
10415	62933	Multiple antidepressant therapeutic drug monitoring IVD, control	Олон тооны антидепрессант эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of antidepressant drugs from multiple es [e.g., tricyclic antidepressants, selective serotonin reuptake inhibitors (SSRIs), tetracyclic antidepressants (TeCAs) and serotonin-norepinephrine reuptake inhibitors (SNRIs)] in a clinical specimen.	B
10416	62935	Multiple antidepressant therapeutic drug monitoring IVD, reagent	Олон тооны антидепрессант эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used for the quantitative measurement and therapeutic monitoring of antidepressant drugs from multiple es [e.g., tricyclic antidepressants, selective serotonin reuptake inhibitors (SSRIs), tetracyclic antidepressants (TeCAs) and serotonin-norepinephrine reuptake inhibitors (SNRIs)] in a clinical specimen.	B
10417	62954	Her2/neu/erbB2 gene mutation IVD, probe	Her2/neu/erbB2 генийн мутаци IVD, зонд	A defined piece of single-stranded nucleic acid which is used to identify specific complementary-sequence nucleic acid molecules in an assay intended to be used to evaluate a clinical specimen to diagnose, monitor or predict genetic mutations (e.g., duplication) of the her2/neu/erbB2 [v-erb-B2 avian erythroblastic leukaemia viral oncogene homolog 2] gene, associated with solid malignant neoplasms (e.g., breast cancer, ovarian cancer, stomach cancer, carcinoma of the salivary glands).	B

10418	62960	Pethidine IVD, kit, enzyme immunoassay (EIA)	Петидин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pethidine, also known as meperidine (e.g., Demerol), in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10419	62961	Pethidine IVD, calibrator	Петидин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of pethidine, also known as meperidine (e.g., Demerol), in a clinical specimen.	B
10420	62962	Pethidine IVD, control	Петидин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of pethidine, also known as meperidine (e.g., Demerol), in a clinical specimen.	B
10421	62973	Alpha-1-acid glycoprotein (orosomucoid) IVD, antibody	Альфа-1-хүчил гликопротейн (оросомукоид) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-1-acid glycoprotein (orosomucoid) in a clinical specimen.	B
10422	62974	C-reactive protein (CRP) IVD, antibody	С-реактив уураг (CRP) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen.	B
10423	62975	Alpha-1-microglobulin IVD, antibody	Альфа-1-микроглобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-1-microglobulin in a clinical specimen.	B
10424	62976	Apolipoprotein A-I (Apo A1) IVD, antibody	Аполипопротейн AI (Apo A1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of apolipoprotein A-I (Apo A1) in a clinical specimen.	B
10425	62977	Tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) IVD, antibody	Матриц металлопротейназа-1 (TIMP-1) IVD-ийн эдийн дарангуйлагч, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of tissue inhibitor of matrix metalloproteinase-1 (TIMP-1) in a clinical specimen.	B
10426	63015	Carisoprodol IVD, kit, enzyme immunoassay (EIA)	Carisoprodol IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of carisoprodol in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10427	63016	Carisoprodol IVD, control	Карисопродол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of carisoprodol in a clinical specimen.	B
10428	63017	Carisoprodol IVD, calibrator	Carisoprodol IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of carisoprodol in a clinical specimen.	B
10429	63018	Fentanyl IVD, kit, enzyme immunoassay (EIA)	Фентанил IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fentanyl in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10430	63022	Tapentadol IVD, kit, enzyme immunoassay (EIA)	Тапентадол IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tapentadol in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10431	63023	Tapentadol IVD, control	Тапентадол IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tapentadol in a clinical specimen.	B
10432	63024	Tapentadol IVD, calibrator	Тапентадол IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tapentadol in a clinical specimen.	B
10433	63025	Zolpidem IVD, kit, enzyme immunoassay (EIA)	Zolpidem IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of zolpidem in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10434	63026	Zolpidem IVD, control	Золпидем IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of zolpidem in a clinical specimen.	B
10435	63027	Zolpidem IVD, calibrator	Золпидем IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of zolpidem in a clinical specimen.	B
10436	63029	Alpha-2-macroglobulin IVD, antibody	Альфа-2-макроглобулин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha-2-macroglobulin in a clinical specimen.	B

10437	63039	Multiple clinical chemistry protein IVD, antibody	Олон эмнэлзүйн химийн уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry proteins in a clinical specimen.	B
10438	63062	C-X-C motif chemokine ligand 13 (CXCL13) IVD, kit, rapid ICT, clinical	CXC motif chemokine ligand 13 (CXCL13) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-X-C motif chemokine ligand 13 (CXCL13), a chemokine also known as B lymphocyte chemoattractant (BLC), in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as a non-specific aid in the diagnosis of various conditions [e.g., Lyme neuroborreliosis, central nervous system (CNS) lymphoma, neurosyphilis]. It is not intended to be used for self-testing.	B
10439	63068	3-Hydroxy-3-methylglutaryl-coenzyme A reductase (HMGCR) antibody IVD, kit, chemiluminescent immunoassay	3-Гидрокси-3-метилглутарил-коэнзим А редуктаза (HMGCR) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to 3-hydroxy-3-methylglutaryl-coenzyme A reductase (HMGCR) in a clinical specimen, using a chemiluminescent immunoassay method. It is used to aid the diagnosis of immune-mediated necrotizing myopathy (IMNM).	B
10440	63071	Free thyroxine (FT4) IVD, kit, fluorescent immunoassay	Үнэгүй тироксин (FT4) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free thyroxine (FT4) in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of hypothyroidism or hyperthyroidism.	B
10441	63072	Total thyroxine (TT4) IVD, kit, fluorescent immunoassay	Нийт тироксин (TT4) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total thyroxine (TT4) in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of hypothyroidism or hyperthyroidism.	B
10442	63073	Lead IVD, kit, electrometry	Хар тугалга IVD, иж бүрдэл, цахилгаан хэмжигч	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lead (Pb) in a clinical specimen, using an electrometry method.	B

10443	63082	Total triiodothyronine (TT3) IVD, kit, fluorescent immunoassay	Нийт триодотиронин (TT3) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total triiodothyronine (TT3) in a clinical specimen, using a fluorescent immunoassay method. This test is used to aid in the diagnosis of various thyroid disorders (e.g., hyperthyroidism, thyrotoxicosis).	B
10444	63084	Apolipoprotein B (Apo B) IVD, antibody	Аполипопротейн B (Апо B) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of apolipoprotein B (Apo B) in a clinical specimen.	B
10445	63092	Pepsin IVD, kit, rapid ICT, clinical	Пепсин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of pepsin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10446	63104	3-Hydroxy-3-methylglutaryl-coenzyme A reductase (HMGCR) antibody IVD, kit, enzyme immunoassay (EIA)	3-Гидрокси-3-метилглутарил-коэнзим А редуктаза (HMGCR) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to 3-hydroxy-3-methylglutaryl-coenzyme A reductase (HMGCR) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid the diagnosis of immune-mediated necrotizing myopathy (IMNM).	B
10447	63145	Sperm concentration indicator IVD, kit, rapid ICT, self-testing	Спермийн концентрацийн индикатор IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used to indicate the concentration of sperm in a semen specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment, as an indicator of male fertility.	B

10448	63151	Glycated haemoglobin (HbA1c) IVD, kit, spectrophotometry	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen, using a spectrophotometry method.	B
10449	63167	Ferritin IVD, kit, rapid ICT, self-testing	Ферритин IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ferritin in a blood specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to indicate ferritin/iron status.	B
10450	63169	Parathyroid hormone (PTH) IVD, antibody	Бамбай булчирхайн даавар (PTH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen.	B
10451	63175	Thyroid stimulating hormone (TSH) IVD, kit, rapid ICT, self-testing	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of thyroid stimulating hormone (TSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment, as an indicator of TSH levels.	B
10452	63226	Proprotein convertase subtilisin/kexin type 9 (PCSK9) IVD, kit, enzyme immunoassay (EIA)	Пропротейн конвертаза субтилизин/кексины төрөл 9 (PCSK9) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of proprotein convertase subtilisin/kexin type 9 (PCSK9) in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is commonly used to screen patients at risk of developing cardiovascular diseases and/or cholesterol metabolic disorders (e.g., hypercholesterolemia).	B

10453	63234	C-reactive protein (CRP) IVD, kit, rapid agglutination, clinical	С-реактив ууpаг (CRP) IVD, иж бүрдэл, хурдан наалдуулах, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-reactive protein (CRP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid agglutination method. CRP is a marker associated with bacterial infection and inflammatory conditions. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10454	63235	Deoxyribonucleoprotein antibody (anti-DNP) IVD, kit, raid agglutination, clinical	Дезоксирибонуклеопротеины эсрэгбие (anti-DNP) IVD, иж бүрдэл, рейд агглютинаци, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to deoxyribonucleoprotein (anti-DNP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid agglutination method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to aid in the diagnosis of the autoimmune condition systemic lupus erythematosus (SLE). It is not intended to be used for self-testing.	B
10455	63253	TNF-alpha inhibitor therapeutic drug monitoring IVD, kit, rapid ICT, clinical	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, etanercept) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to monitor the response to anti-TNF-alpha therapy (e.g., infliximab, etanercept) in the treatment of autoimmune conditions [e.g., Crohn's disease]. It is not intended to be used for self-testing.	B
10456	63254	Procollagen type I N-terminal propeptide (PINP) IVD, control	Проколлаген төрлийн I N-терминал пропептид (PINP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of procollagen type I N-terminal propeptide (PINP) in a clinical specimen.	B

10457	63327	Thromboxane IVD, kit, nephelometry/turbidimetry	Тромбоксан IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thromboxane in a clinical specimen, using a nephelometry/turbidimetry method. Thromboxane is typically used as a marker of platelet activity, which may be affected by a variety of conditions and treatments (e.g., aspirin intake).	B
10458	63333	Urea IVD, kit, spectrophotometry	Мочевин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of urea or urea nitrogen [also known as blood urea nitrogen (BUN)] in a clinical specimen, using a spectrophotometry method. It is typically used as an indicator of kidney function and/or to differentiate between prerenal and postrenal azotemia.	B
10459	63335	Pentraxin 3 (PTX3) IVD, kit, enzyme immunoassay (EIA)	Pentraxin 3 (PTX3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pentraxin 3 (PTX3) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid in the diagnosis of autoimmune conditions e.g., rheumatoid arthritis, systemic scleroderma, and/or systemic inflammatory response syndrome (SIRS).	B
10460	63338	Oxytocinase IVD, kit, rapid colorimetric, clinical	Окситоциназа IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of oxytocinase (also known as cysteine aminopeptidase or leucine arylamidase) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of jaundice, liver cirrhosis, carcinoma, or to indicate pregnancy. It is not intended to be used for self-testing.	B
10461	63339	Ethanol (ETOH) IVD, calibrator/control	Этанол (ETOH) IVD, калибратор/хяналт	A material(s) which is used to both establish known reference points and to verify the performance of an assay intended to be used for the qualitative and/or qualitative detection of ethyl alcohol (ETOH) in a clinical specimen.	B

10462	63351	Glutathione reductase IVD, kit, spectrophotometry	Глутатион редуктаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glutathione reductase in a clinical specimen, using a spectrophotometry method. It is typically used to aid in the diagnosis of hepatic and malignant disease or assessment of nutrition (riboflavin status).	B
10463	63352	Glutathione reductase IVD, control	Глутатион редуктаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of glutathione reductase in a clinical specimen.	B
10464	63353	Glutathione reductase IVD, calibrator	Глутатион редуктаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of glutathione reductase in a clinical specimen.	B
10465	63354	Glutathione peroxidase IVD, kit, spectrophotometry	Глутатион пероксидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glutathione peroxidase in a clinical specimen, using a spectrophotometry method. It is typically used to assess selenium status.	B
10466	63355	Glutathione peroxidase IVD, control	Глутатион пероксидазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of glutathione peroxidase in a clinical specimen.	B
10467	63356	Glutathione peroxidase IVD, calibrator	Глутатион пероксидазын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of glutathione peroxidase in a clinical specimen.	B
10468	63357	Potassium (K+) IVD, kit, spectrophotometry	Кали (K+) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of potassium (K+) in a clinical specimen, using a spectrophotometry method. It is typically used to monitor electrolyte balance in the diagnosis of conditions characterized by low (hypokalaemia) or high (hyperkalaemia) blood potassium levels.	B
10469	63410	Total/conjugated (direct) bilirubin IVD, kit, spectrophotometry	Нийт/коньюгат (шууд) билирубин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total and conjugated (direct) bilirubin in a clinical specimen, using a spectrophotometry method.	B

10470	63421	Pyrrolidonyl arylamidase (PYR) activity IVD, kit, rapid colorimetric, clinical	Пирролидонил ариламидазын (PYR) идэвхжил IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of pyrrolidonyl arylamidase (PYR) activity in a clinical specimen and/or culture isolate within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test used in the laboratory or in point-of-care analyses typically to differentiate Group A streptococci and enterococci from Group D streptococci. It is not intended to be used for self-testing.	B
10471	63470	Soluble mesothelin-related peptide (SMRP) IVD, calibrator	Уусдаг мезотелинтэй холбоотой пептид (SMRP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of soluble mesothelin-related peptide (SMRP) in a clinical specimen.	B
10472	63473	Soluble mesothelin-related peptide (SMRP) IVD, kit, chemiluminescent immunoassay	Уусдаг мезотелинтэй холбоотой пептид (SMRP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble mesothelin-related peptide (SMRP) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a prognostic marker to monitor the progression or recurrence of mesothelioma.	B
10473	63503	Total immunoglobulin E (IgE total) IVD, kit, nephelometry/turbidimetry	Нийт иммуноглобулин Е (нийт IgE) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10474	63536	Allergen-specific/total immunoglobulin E (IgE) antibody IVD, kit, chemiluminescent immunoassay	Харшлын өвөрмөц/нийт иммуноглобулин Е (IgE) эсрэгбие IVD, иж бүрдэл, химилюминесцент иммуно шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergens and total immunoglobulin E (IgE total) antibodies in a clinical specimen, using a chemiluminescent immunoassay method.	B

10475	63557	Alpha-fetoprotein/insulin-like growth factor binding protein 1 IVD, kit, rapid ICT, clinical	Альфа-фетопротейн/инсулин төст өсөлтийн хүчин зүйлийг холбогч уураг 1 IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of alpha-fetoprotein (AFP) and insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the detection of foetal membrane rupture in pregnancy. It is not intended to be used for self-testing.	B
10476	63577	17-Hydroxyprogesterone IVD, kit, enzyme immunoassay (EIA)	17-Гидроксипрогестерон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 17-hydroxyprogesterone in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of congenital adrenal hyperplasia (CAH).	B
10477	63578	Aldosterone IVD, kit, enzyme immunoassay (EIA)	Альдостероны IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of aldosterone in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used in the diagnosis and monitoring of aldosteronism (disorders of aldosterone secretion by the adrenal gland).	B
10478	63579	Dehydroepiandrosterone sulfate (DHEAS) IVD, kit, enzyme immunoassay (EIA)	Дегидроэпиандростерон сульфат (DHEAS) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of adrenal hyperplasia and hirsutism.	B
10479	63580	Hepcidin IVD, kit, enzyme immunoassay (EIA)	Hepcidin IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of hepcidin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of conditions associated with the regulation of iron homeostasis (e.g., hemochromatosis, anaemia, chronic kidney disease, liver cirrhosis).	B

10480	63593	Zonulin IVD, kit, enzyme immunoassay (EIA)	Zonulin IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of zonulin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of autoimmune conditions such as Coeliac disease and type 1 diabetes.	B
10481	63595	Alpha-fetoprotein/insulin-like growth factor binding protein 1 IVD, control	Альфа-фетопротейн/инсулин төст өсөлтийн хүчин зүйлийг холбох уураг 1 IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein (AFP) and insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen.	B
10482	63610	Proteinase 3 IVD, kit, enzyme immunoassay (EIA)	Протеиназа 3 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of proteinase 3 (PR3) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10483	63611	Cathepsin IVD, kit, enzyme immunoassay (EIA)	Катепсин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a cathepsin protein (e.g., cathepsin D, G, K) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10484	63631	Renin IVD, kit, enzyme immunoassay (EIA)	Ренин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of renin (direct, active, or immunoreactive) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid in the diagnosis of certain forms of hypertension.	B
10485	63699	MLH1 protein IVD, antibody	MLH1 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of MLH1, a DNA mismatch repair protein, in a clinical specimen.	B
10486	63700	Glycoprotein 100 (gp100) IVD, antibody	Гликопротейн 100 (gp100) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of glycoprotein 100 (gp100), a melanoma-specific protein, in a clinical specimen.	B

10487	63701	Immunoglobulin M sub (IgM sub) IVD, antibody	Иммуноглобулин М дэд ангилал (IgM дэд ангилал) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin M sub es (IgM sub es) in a clinical specimen.	B
10488	63702	Immunoglobulin G sub (IgG sub) IVD, antibody	Иммуноглобулин G дэд ангилал (IgG дэд ангилал) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin G sub es (IgG sub es) in a clinical specimen.	B
10489	63703	Immunoglobulin D sub (IgD sub) IVD, antibody	Иммуноглобулин D дэд ангилал (IgD дэд ангилал) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin D sub es (IgD sub es) in a clinical specimen.	B
10490	63704	Immunoglobulin A sub (IgA sub) IVD, antibody	Иммуноглобулин A дэд ангилал (IgA дэд ангилал) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin A sub es (IgA sub es) in a clinical specimen.	B
10491	63713	D-dimer IVD, kit, nephelometry/turbidimetry	D-dimer IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of D-dimer protein in a clinical specimen, using a nephelometry/turbidimetry method. It is used as an aid in the diagnosis of conditions such as deep vein thrombosis (DVT), pulmonary embolism (PE), or disseminated intravascular coagulation (DIC).	B
10492	63734	Oct-4 IVD, antibody	10-р сарын 4 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Oct-4 protein in a clinical specimen.	B
10493	63737	Perforin IVD, antibody	Перфорин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of perforin in a clinical specimen.	B

10494	63739	Uroplakin IVD, antibody	Уроплакин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a uroplakin protein in a clinical specimen.	B
10495	63740	INI1 protein IVD, antibody	INI1 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of INI1 protein in a clinical specimen.	B
10496	63741	Friend leukaemia integration 1 transcription factor (FLI-1) IVD, antibody	Найзын лейкемийн интеграци 1 транскрипцийн хүчин зүйл (FLI-1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Friend leukaemia integration 1 transcription factor (FLI-1) in a clinical specimen.	B
10497	63743	PU.1 transcription factor IVD, antibody	PU.1 транскрипцийн хүчин зүйл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the transcription factor PU.1 in a clinical specimen.	B
10498	63744	Annexin A1 IVD, antibody	Анексин A1 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of annexin A1, also known as lipocortin I, in a clinical specimen.	B
10499	63749	Complement component C4d IVD, antibody	Нэмэлт бүрэлдэхүүн хэсэг C4d IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of complement cascade component C4d in a clinical specimen.	B
10500	63750	Glucose transporter (GLUT) protein IVD, antibody	Глюкоз тээвэрлэгч (GLUT) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a glucose transporter (GLUT) protein [e.g., GLUT1, GLUT3] in a clinical specimen.	B
10501	63752	Glypican-3 IVD, antibody	Глипикан-3 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of glypican-3 in a clinical specimen.	B
10502	63753	Interferon IVD, kit, chemiluminescent immunoassay	Интерферон IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen, using a chemiluminescent immunoassay method.	B

10503	63754	Total estrogen (oestrogen) IVD, kit, enzyme immunoassay (EIA)	Нийт эстроген (эстроген) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total estrogen (oestrogen) hormones [estradiol, estriol, and estrone] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of sex steroid metabolism-related conditions (e.g., premature or delayed puberty), or assessment of fracture risk and monitoring of hormone replacement therapy in postmenopausal women.	B
10504	63755	Dihydrotestosterone IVD, kit, enzyme immunoassay (EIA)	Дихидротестостерон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dihydrotestosterone (DHT) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of conditions such as Klinefelter syndrome, idiopathic hirsutism, and polycystic ovaries.	B
10505	63756	C-peptide IVD, kit, enzyme immunoassay (EIA)	С-пептид IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-peptide in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used in the evaluation of insulin levels as an aid in the diagnosis of hypoglycaemia and insulinoma.	B
10506	63757	C-reactive protein (CRP) IVD, kit, enzyme immunoassay (EIA)	С-реактив уураг (CRP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using an enzyme immunoassay (EIA) method. CRP is a marker associated with bacterial infection and inflammatory conditions.	B
10507	63758	Pregnenolone IVD, kit, enzyme immunoassay (EIA)	Прегненолон IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnenolone in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the diagnosis of adrenal hyperplasia and hirsutism.	B

10508	63759	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, kit, enzyme immunoassay (EIA)	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10509	63760	Androstanediol glucuronide (3a-diol G) IVD, kit, chemiluminescent immunoassay	Андростандиол глюкуронид (3a-диол G) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of androstanediol glucuronide (3a-diol G), also known as 5a-androstane-3a-17b-diol-glucuronide, in a clinical specimen, using a chemiluminescent immunoassay method. 3a-diol G is typically associated with conditions such as idiopathic hirsutism and polycystic ovarian syndrome.	B
10510	63761	Estrone (oestrone) IVD, kit, chemiluminescent immunoassay	Эстрон (эстрон) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of estrone (oestrone) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10511	63762	Free testosterone IVD, kit, chemiluminescent immunoassay	Үнэгүй тестостероны IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free testosterone in a clinical specimen, using a chemiluminescent immunoassay method.	B
10512	63774	Zinc transporter (ZnT) antibody IVD, kit, enzyme immunoassay (EIA)	Цайр зөөвөрлөгч (ZnT) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a zinc transporter (ZnT) protein, belonging to the solute carrier 30 (SLC30) family, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10513	63775	Aquaporin antibody IVD, kit, enzyme immunoassay (EIA)	Аквапорины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to an aquaporin protein, a water-specific channel of cell membranes, in a clinical specimen, using an enzyme immunoassay (EIA) method. Aquaporins are associated with conditions such as nephrogenic diabetes insipidus and neuromyelitis optica (Devic's syndrome).	B

10514	63776	Voltage-gated calcium channel (VGCC) antibody IVD, kit, radioimmunoassay	Хүчдэлд холбогдсон кальцийн суваг (VGCC) эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a voltage-gated calcium channel (VGCC) in a clinical specimen, using a radioimmunoassay method. VGCCs auto-antibodies are associated with conditions such as Lambert-Eaton myasthenic syndrome (LEMS) and paraneoplastic cerebellar degeneration.	B
10515	63777	Voltage-gated potassium channel (VGKC) antibody IVD, kit, radioimmunoassay	Хүчдэлд холбогдсон калийн суваг (VGKC) эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a voltage-gated potassium channel (VGKC) in a clinical specimen, using a radioimmunoassay method. VGKCs auto-antibodies are associated with channelopathies and related neurological disorders such as neuromyotonia (NMT), cramp-fasciculation syndrome (CFS), Morvan syndrome, epilepsy, and limbic encephalitis (LE).	B
10516	63778	Thyroid stimulating hormone receptor (TSHR) antibody IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used in the diagnosis of autoimmune thyroid disorders such as hyperthyroidism in Graves' disease.	B
10517	63779	Free estriol (oestriol) IVD, kit, enzyme immunoassay (EIA)	Чөлөөт эстриол (эстриол) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free estriol (oestriol) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically measured in maternal blood, urine or saliva as a marker of foetal health, gestational age, or fetoplacental distress typically in pregnancies complicated by diabetes, hypertension, or prolonged gestation.	B
10518	63782	Claudin protein IVD, antibody	Клаудины уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a claudin protein in a clinical specimen.	B

10519	63793	Lewis y antigen IVD, antibody	Lewis y антиген IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Lewis y antigen, a carbohydrate antigenic determinant, in a clinical specimen.	B
10520	63794	Paired box protein (PAX) IVD, antibody	Хосолсон хайрцаг уураг (PAX) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a paired box protein (PAX) [e.g., PAX2, PAX8], a homeobox transcription factor, in a clinical specimen.	B
10521	63795	PNL2 antigen IVD, antibody	PNL2 эсрэгтөрөгч IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of melanocytic antigen PNL2 in a clinical specimen.	B
10522	63821	Multiple antimicrobial therapeutic drug monitoring IVD, kit, liquid chromatography	Олон тооны нянгийн эсрэг эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple antimicrobial therapeutic drugs (e.g., itraconazole, posaconazole, and voriconazole) in a clinical specimen, using a liquid chromatography method.	B
10523	63822	Multiple-therapy therapeutic drug monitoring IVD, kit, liquid chromatography	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antidepressant, anticonvulsant, cardiovascular) in a clinical specimen, using a liquid chromatography method.	B
10524	63823	Multiple biogenic amine neurotransmitter IVD, kit, liquid chromatography	Олон биоген амин нейротрансмиттер IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen, using a liquid chromatography method. It is typically used as an aid in the diagnosis of catecholamine-secreting tumours (e.g., pheochromocytoma).	B

10525	63824	Multiple biogenic amine neurotransmitter IVD, reagent	Олон биоген амин нейротрансмиттер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen.	B
10526	63831	Tropomyosin receptor kinase (TRK) protein IVD, antibody	Тропомиозин рецептор киназа (TRK) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a tropomyosin receptor kinase (TRK) protein [TRKA, TRKB, TRKC] and/or multiple tropomyosin receptor kinase (TRK) proteins, sometimes referred to as panTRK, in a clinical specimen.	B
10527	63832	Multiple-type clinical chemistry analyte profile IVD, reagent	Олон төрлийн эмнэлзүйн химийн аналитын профиль IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay intended to be used for the qualitative and/or quantitative detection of multiple types of clinical chemistry analytes (e.g., combination of electrolytes, hormones, and proteins) in a clinical specimen, which contribute to or create a full general biochemistry profile.	B
10528	63833	Citrullinated vimentin (Sa) antibody IVD, kit, enzyme immunoassay (EIA)	Цитрулинжуулсан виментин (Sa) эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to citrullinated vimentin (Sa) [anti-Sa antibodies] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used in the diagnosis of rheumatoid arthritis.	B
10529	63846	Oligodendrocyte transcription factor IVD, antibody	Олигодендроцит транскрипцийн хүчин зүйл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of an oligodendrocyte transcription factor protein (e.g., OLIG2) in a clinical specimen.	B
10530	63847	Forkhead box protein (FOX) IVD, antibody	Салаа хайрцагны уураг (FOX) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a forkhead box protein (FOX) [e.g., FOXA1, FOXP1], in a clinical specimen.	B

10531	63848	Arginase IVD, antibody	Аргиназа IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of an arginase protein in a clinical specimen.	B
10532	63849	Free cortisol/cortisone IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Үнэгүй кортизол/кортизон IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of both free cortisol and free cortisone in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. It is typically used to aid the diagnosis of Cushing's syndrome and Addison's disease.	B
10533	63850	Free cortisol/cortisone IVD, reagent	Үнэгүй кортизол/кортизон IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of both free cortisol and free cortisone in a clinical specimen.	B
10534	63851	Free cortisol/cortisone IVD, calibrator	Үнэгүй кортизол/кортизон IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of both free cortisol and free cortisone in a clinical specimen.	B
10535	63852	Free cortisol/cortisone IVD, control	Үнэгүй кортизол/кортизон IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of both free cortisol and free cortisone in a clinical specimen.	B
10536	63889	SOXE protein IVD, antibody	SOXE уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a SOX protein belonging to the SOXE group (SOX8, SOX9, SOX10) in a clinical specimen.	B
10537	63890	SOXB1 protein IVD, antibody	SOXB1 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a SOX protein belonging to the SOXB1 group (SOX1, SOX2, SOX3) in a clinical specimen.	B
10538	63891	SOXC protein IVD, antibody	SOXC уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a SOX protein belonging to the SOXC group (SOX4, SOX11, SOX12) in a clinical specimen.	B

10539	63892	Multiple biogenic amine neurotransmitter IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон тооны биоген амин нейротрансмиттер IVD, иж бүрдэл, шингэн хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. It is typically used as an aid in the diagnosis of catecholamine-secreting tumours (e.g., pheochromocytoma).	B
10540	63894	T-bet protein IVD, antibody	T-bet уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of T-bet, also known as T-box transcription factor TBX21, in a clinical specimen.	B
10541	63895	Histone protein IVD, antibody	Гистон уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a histone protein (e.g., phosphohistone H3, tri-methyl-histone H3) in a clinical specimen.	B
10542	63896	Human germinal center-associated lymphoma (HGAL) protein IVD, antibody	Хүний үр хөврөлийн төвтэй холбоотой лимфома (HGAL) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of human germinal center-associated lymphoma (HGAL) protein in a clinical specimen.	B
10543	63897	Smoothelin IVD, antibody	Smoothelin IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of smoothelin, a smooth muscle cell cytoskeleton protein, in a clinical specimen.	B
10544	63898	LIM-domain-only (LMO) protein IVD, antibody	Зөвхөн LIM-домэйн (LMO) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a LIM-domain-only (LMO) protein [e.g., LMO2] in a clinical specimen.	B

10545	63899	Transcription factor E3 (TFE3) IVD, antibody	Транскрипцийн хүчин зүйл E3 (TFE3) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of transcription factor E3 (TFE3) protein in a clinical specimen.	B
10546	63900	Sal-like protein 4 (SALL4) IVD, antibody	Сал төст уураг 4 (SALL4) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Sal-like protein 4 (SALL4) transcription factor in a clinical specimen.	B
10547	63903	Stathmin IVD, antibody	Статмин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a stathmin protein in a clinical specimen.	B
10548	63904	Perilipin protein IVD, antibody	Перилипин уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a perilipin protein, also known as lipid storage droplet protein [e.g., adipophilin (PLIN2)], in a clinical specimen.	B
10549	63905	Parvalbumin IVD, antibody	Парвалбумин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of parvalbumin protein in a clinical specimen.	B
10550	63906	c-MYC proto-oncogene protein IVD, antibody	c-MYC прото-онкоген уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of c-MYC proto-oncogene protein, also referred to as MYC, in a clinical specimen.	B
10551	63907	Transducin-like enhancer protein IVD, antibody	Трансдукинтэй төстэй сайжруулагч уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a transducin-like enhancer (TLE) protein [e.g., TLE1] in a clinical specimen.	B
10552	63908	Aldehyde dehydrogenase (ALDH) IVD, antibody	Альдегиддегидрогеназа (ALDH) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of an aldehyde dehydrogenase (ALDH) protein [e.g., ALDH1A1] in a clinical specimen.	B

10553	63909	Caveolin IVD, antibody	Кавеолин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a caveolin protein (e.g., CAV1) in a clinical specimen.	B
10554	63910	Steroidogenic acute regulatory protein (STAR) IVD, antibody	Стероидоген цочмог зохицуулалтын уураг (STAR) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of steroidogenic acute regulatory protein (STAR) in a clinical specimen.	B
10555	63914	Dense fine speckles 70 protein antibody (anti-DFS70) IVD, kit, enzyme immunoassay (EIA)	Өтгөн нарийн толботой 70 уургийн эсрэгбие (DFS70-ийн эсрэг) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to dense fine speckles 70 protein (anti-DSF70) in a clinical specimen, using an enzyme immunoassay (EIA).	B
10556	63915	Envoplakin antibody IVD, kit, enzyme immunoassay (EIA)	Энвоплакины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to envoplakin, a cytoskeletal linker protein, in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid the diagnosis of the autoimmune disease paraneoplastic pemphigus (PNP).	B
10557	63918	GATA protein transcription factor IVD, antibody	GATA уургийн транскрипцийн хүчин зүйл IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a GATA protein transcription factor (e.g., GATA1, GATA3) in a clinical specimen.	B
10558	63919	Insulin gene enhancer protein ISL-1 IVD, antibody	Инсулины генийг сайжруулагч уураг ISL-1 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of insulin gene enhancer protein ISL-1, also known as Islet-1, in a clinical specimen.	B
10559	63920	Lymphoid enhancer factor 1 (LEF1) IVD, antibody	Лимфоид сайжруулагч хүчин зүйл 1 (LEF1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of lymphoid enhancer factor 1 (LEF1), also known as lymphoid enhancer-binding factor 1, in a clinical specimen.	B

10560	63921	Nanog protein IVD, antibody	Нано уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of nanog protein, a homeobox transcription factor, in a clinical specimen.	B
10561	63922	T-cell leukaemia/lymphoma protein 1 (TCL1) IVD, antibody	Т эсийн лейкеми/лимфомын уураг 1 (TCL1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of T-cell leukaemia/lymphoma protein 1 (TCL1) in a clinical specimen.	B
10562	63926	Glutamine synthetase IVD, antibody	Глутамин синтетаза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of glutamine synthetase in a clinical specimen.	B
10563	63928	Cathepsin IVD, antibody	Катепсин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a cathepsin protein (e.g., cathepsin D, G, K) in a clinical specimen.	B
10564	63929	HVA/VMA/5HIAA IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	HVA/VMA/5HIAA IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials to be used for the quantitative measurement of homovanillic acid (HVA), vanillylmandelic acid (VMA), and 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method. It is typically used to aid in the diagnosis of neuroblastoma.	B
10565	63936	Paired-like homeobox 2B (PHOX2B) IVD, antibody	Хостой төстэй homeobox 2B (PHOX2B) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of paired-like homeobox 2B (PHOX2B) in a clinical specimen.	B
10566	63937	Cytosolic 5'-nucleotidase 1A (cN1A) antibody IVD, kit, enzyme immunoassay (EIA)	Цитозолын 5'-нуклеотидаз 1А (cN1A) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to cytosolic 5'-nucleotidase 1A (cN1A, or NT5C1A) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used in the diagnosis of inclusion body myositis.	B

10567	63940	Dipeptidyl aminopeptidase-like protein 6 (DPP6) antibody IVD, kit, fluorescent immunoassay	Дипептидил аминопептидаза төст уураг 6 (DPP6) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the dipeptidyl aminopeptidase-like protein 6 (DPP6, or DPPX) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune encephalitis.	B
10568	63941	Thrombospondin type-1 domain-containing protein 7A (THSD7A) antibody IVD, kit, fluorescent immunoassay	Тромбоспондины төрөл-1 домэйн агуулсан уураг 7A (THSD7A) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thrombospondin type-1 domain-containing protein 7A (THSD7A) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune primary membranous glomerulonephritis, a kidney disease.	B
10569	63948	IgLON protein antibody IVD, kit, fluorescent immunoassay	IgLON уургийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a IgLON protein (e.g., IgLON5) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune encephalitis and (rapidly) progressive dementia.	B
10570	63954	Signal transducer and activator of transcription (STAT) protein IVD, antibody	Сигнал хувиргагч ба транскрипцийн идэвхжүүлэгч (STAT) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a signal transducer and activator of transcription (STAT) protein [e.g., STAT6] in a clinical specimen.	B
10571	63955	NKX protein IVD, antibody	NKX уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a NKX protein (e.g., NKX3.1, NKX2.2), a homeobox transcription factor, in a clinical specimen.	B
10572	63956	High mobility group box 1 (HMBG1) protein IVD, kit, enzyme immunoassay (EIA)	Өндөр хөдөлгөөнт бүлгийн хайрцаг 1 (HMBG1) уураг IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of high mobility group box 1 (HMBG1) protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10573	63957	Multiple breast tissue/tumour marker IVD, antibody	Хөхний олон эд / хавдрын маркер IVD, эсрэгбие	Multiple immunoglobulins (antibody cocktail) capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple proteins or tumour markers associated with breast tissue and/or breast carcinoma [e.g., gross cystic disease fluid protein-15 (GCDFP-15), mammaglobin] in a clinical specimen.	B
10574	63959	Multiple myocardium antibody IVD, kit, fluorescent immunoassay	Олон миокардийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies specific to heart muscle tissue (cardiac muscle) in a clinical specimen, using a fluorescent immunoassay method. It is typically used as an aid in the diagnosis of autoimmune disorders that affect the heart such as myasthenia gravis (MG).	B
10575	63960	Morphine/morphine metabolite IVD, kit, enzyme immunoassay (EIA)	Морфин/морфины метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of morphine and/or morphine metabolites in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10576	63981	Alpha-fetoprotein (AFP) IVD, kit, rapid ICT, clinical	Альфа-фетопротейн (AFP) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of alpha-fetoprotein (AFP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of hepatocellular carcinoma or foetal open neural tube defects. It is not intended to be used for self-testing.	B
10577	63984	Heat shock protein IVD, antibody	Дулааны цочролын уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and or quantitative detection of a heat shock protein in a clinical specimen.	B
10578	63985	Cbp/p300-interacting transactivator 1 (CITED1) protein IVD, antibody	Cbp/p300-харилцаж буй трансактиватор 1 (CITED1) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of Cbp/p300-interacting transactivator 1 (CITED1) protein, in a clinical specimen.	B

10579	63986	Insulin-like growth factor II mRNA binding protein 3 (IMP3) IVD, antibody	Инсулин шиг өсөлтийн хүчин зүйл II мРНХ холбогч уураг 3 (IMP3) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor II mRNA binding protein 3 (IMP3) in a clinical specimen.	B
10580	63987	Transgelin IVD, antibody	Трансгелин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of transgelin in a clinical specimen.	B
10581	63988	Special AT-rich sequence-binding protein 2 (SATB2) IVD, antibody	Тусгай AT-аар баялаг дараалал холбогч уураг 2 (SATB2) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of special AT-rich sequence-binding protein 2 (SATB2) in a clinical specimen.	B
10582	63990	Nestin IVD, antibody	Нестин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the intermediate filament protein nestin, also known as neuroectodermal stem cell marker, in a clinical specimen.	B
10583	64017	Myelin oligodendrocyte glycoprotein (MOG) antibody IVD, kit, fluorescent immunoassay	Миелин олигодендроцит гликопротейн (MOG) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to myelin oligodendrocyte glycoprotein (MOG) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of demyelinating diseases of the central nervous system.	B
10584	64019	Excision repair cross-complementing (ERCC) protein IVD, antibody	Excision засварын хөндлөн нэмэлт (ERCC) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of an excision repair cross-complementing (ERCC) protein [e.g., DNA excision repair protein ERCC1] in a clinical specimen.	B

10585	64039	Matrix metalloproteinase-8 (MMP-8) IVD, kit, rapid ICT, clinical	Матриц металлопротейназа-8 (MMP-8) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of matrix metalloproteinase-8 (MMP-8), also known as neutrophil collagenase, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis and risk assessment of periodontitis. It is not intended to be used for self-testing.	B
10586	64040	Killer cell immunoglobulin-like receptor (KIR) IVD, antibody	Алуурчин эсийн иммуноглобулин төст рецептор (KIR) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of a killer cell immunoglobulin-like receptor (KIR) [e.g., KIR2DL1 (CD158a), KIR2DL4, KIR3DL2, KIR3DP1] in a clinical specimen.	B
10587	64054	Insulin-like growth factor binding protein 1 (IGFBP-1) IVD, kit, rapid ICT, clinical	Инсулинтэй төстэй өсөлтийн хүчин зүйлийг холбогч уураг 1 (IGFBP-1) IVD, иж бүрдэл, түргэн мэдээллийн технологийн холбоо, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of insulin-like growth factor binding protein 1 (IGFBP-1) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the detection of foetal membrane rupture in pregnancy and/or to help predict the risk of preterm or imminent delivery. It is not intended to be used for self-testing.	B
10588	64060	Interleukin-22 (IL-22) IVD, kit, chemiluminescent immunoassay	Интерлейкин-22 (IL-22) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-22 (IL-22) in a clinical specimen, using a chemiluminescent immunoassay method.	B
10589	64061	Interleukin-22 (IL-22) IVD, reagent	Интерлейкин-22 (ИЛ-22) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of interleukin-22 (IL-22) in a clinical specimen.	B

10590	64062	Interleukin-22 (IL-22) IVD, control	Интерлейкин-22 (ИЛ-22) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of interleukin-22 (IL-22) in a clinical specimen.	B
10591	64063	Interleukin-22 (IL-22) IVD, calibrator	Интерлейкин-22 (ИЛ-22) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of interleukin-22 (IL-22) in a clinical specimen.	B
10592	64076	Aquaporin antibody IVD, kit, fluorescent immunoassay	Aquaporin эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to an aquaporin protein, a water-specific channel of cell membranes, in a clinical specimen, using a fluorescent immunoassay method. Aquaporins are associated with conditions such as nephrogenic diabetes insipidus and neuromyelitis optica (Devic's syndrome).	B
10593	64090	Intestinal epithelium faecal DNA fragment length IVD, kit, nucleic acid technique (NAT)	Гэдэсний хучуур эдийн ялгадас ДНХ-ийн фрагментийн урт IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used to evaluate a clinical stool (faeces) specimen to diagnose, monitor or predict colorectal cancer based on the length of non-specific DNA fragments, using a nucleic acid technique (NAT). Long DNA fragments (typically longer than 150-200 bp) exfoliated from the intestinal epithelial cells have been associated with the early detection of colorectal cancer tumours.	B
10594	64101	Thyroglobulin neutralizing antibody IVD, reagent	Тироглобулиныг саармагжуулах эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of neutralizing antibodies to thyroglobulin in a clinical specimen, using thyroglobulin antigens of known specificity.	B
10595	64102	Alpha-glucosidase IVD, kit, spectrophotometry	Альфа-глюкозидазын IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-glucosidase in a clinical specimen, using a spectrophotometry method. It is typically used to aid in the diagnosis and management of male infertility.	B
10596	64104	Plazomicin therapeutic drug monitoring IVD, control	Плазомицин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug plazomicin in a clinical specimen.	B

10597	64105	Plazomicin therapeutic drug monitoring IVD, calibrator	Плазомицин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug plazomicin in a clinical specimen.	B
10598	64106	Plazomicin therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	Плазомицин эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug plazomicin in a clinical specimen, using a nephelometry/turbidimetry method.	B
10599	64123	Biotin (vitamin H) IVD, kit, enzyme immunoassay (EIA)	Биотин (витамин H) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of biotin (vitamin H) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10600	64124	Diamine oxidase (DAO) IVD, kit, enzyme immunoassay (EIA)	Диамин оксидаза (DAO) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of diamine oxidase (DAO) in a clinical specimen, using an enzyme immunoassay (EIA) method. DAO is typically used as a marker in the differential diagnosis of histamine intolerance and associated symptoms (e.g., gastrointestinal disorders, migraine headaches).	B
10601	64130	Eosinophil-derived neurotoxin (EDN) IVD, kit, enzyme immunoassay (EIA)	Эозинофилээс гаралтай нейротоксин (EDN) IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of eosinophil-derived neurotoxin (EDN), also known as RNASE2 or eosinophil protein X (EPX), in a clinical specimen, using an enzyme immunoassay (EIA) method. EDN is typically used as a biomarker for the differentiation of food allergy or intolerance, chronic gastrointestinal inflammation, diagnosis and monitoring of asthma, and testing for intestinal parasites.	B
10602	64153	Fentanyl IVD, kit, rapid ICT, clinical	Фентанил IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of fentanyl in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10603	64154	6-Acetyl morphine IVD, kit, rapid ICT, clinical	6-Ацетил морфин IVD, иж бүрдэл, түргэн МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of 6-acetyl morphine in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10604	64155	Cotinine IVD, kit, rapid ICT, clinical	Котинин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cotinine (nicotine metabolite) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the differentiation of smokers and non-smokers, or in the investigation of the link between smoking and associated disorders (e.g., cancer, coronary heart disease, stroke). It is not intended to be used for self-testing.	B
10605	64156	Lysergic acid diethylamide (LSD)/LSD metabolite IVD, kit, rapid ICT, clinical	Лизергик хүчлийн диэтиламид (LSD)/LSD метаболит IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of lysergic acid diethylamide (LSD) and/or LSD metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10606	64157	Diazepam IVD, kit, rapid ICT, clinical	Диазепам IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the benzodiazepine drug diazepam (e.g., Valium) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10607	64159	Multiple alcohol IVD, kit, rapid ICT, clinical	Олон төрлийн согтууруулах ундаа IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple types of alcohol (e.g., ethanol, methanol, allyl alcohol) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to assess for alcohol intoxication. It is not intended to be used for self-testing.	B
10608	64160	Acetaminophen IVD, kit, rapid ICT, clinical	Ацетаминофен IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of acetaminophen (e.g., Tylenol) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10609	64161	Tramadol IVD, kit, rapid ICT, clinical	Трамадол IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of tramadol in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10610	64177	Multiple ganglioside antibody IVD, kit, enzyme immunoassay (EIA)	Олон ganglioside эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to multiple gangliosides (e.g., GM1, GM2, GM3, GD1a, GD1b, GT1b and GQ1b) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neurological disorders such as Guillain-Barré syndrome (GBS), chronic inflammatory demyelinating polyneuropathy (CIDP) and multifocal motor neuropathy (MMN).	B

10611	64178	Double stranded DNA antibody (anti-dsDNA) IVD, kit, agglutination	Давхар хэлхээтэй ДНХ-ийн эсрэгбие (anti-dsDNA) IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen, using an agglutination method. It is typically used to aid In the diagnosis of systemic lupus erythematosus (SLE).	B
10612	64195	Cancer antigen 72-4 (CA72-4) IVD, kit, enzyme immunoassay (EIA)	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen, using an enzyme immunoassay (EIA) method. CA72-4 is typically used as a marker commonly associated with gastrointestinal and ovarian cancer.	B
10613	64212	Sarcosine IVD, kit, rapid colorimetric, self-testing	Саркозин IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of sarcosine, also known as N-methylglycine, within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. It is normally available [non-prescription] over-the-counter (OTC) for self-testing by a layperson in the home or similar environment, as a screening tool for potential malignancy of primary prostate tumours.	B
10614	64215	Complement component C3a IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсэг C3a IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade component C3a in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10615	64221	Cytokeratin IVD, kit, enzyme immunoassay (EIA)	Cytokeratin IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple cytokeratin subtype(s) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10616	64228	Multiple-therapy therapeutic drug monitoring IVD, liquid chromatography/mass spectrometry (LC/MS)	Олон төрлийн эмчилгээний эмчилгээний эмийн хяналт IVD, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple drugs used for different types of therapies (e.g., antidepressant, anticonvulsant, cardiovascular) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method,.	B

10617	64241	Pancreatitis-associated protein (PAP) IVD, kit, fluorescent immunoassay	Нойр булчирхайн үрэвсэлтэй холбоотой уураг (PAP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatitis-associated protein (PAP) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the screening of newborns for cystic fibrosis (CF).	B
10618	64267	Complement component C2 IVD, kit, nephelometry/turbidimetry	Нэмэлт бүрэлдэхүүн хэсэг C2 IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement component C2 in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used to aid in the characterization of low complement component C2 activity in immunological disorders and/or the diagnosis of complement component C2 deficiency, which may be associated with systemic lupus erythematosus (SLE), glomerulonephritis and vasculitis.	B
10619	64280	Multiple neurological disease-associated antibody IVD, kit, fluorescent immunoassay	Олон мэдрэлийн өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with neurological disease, using a fluorescent immunoassay method. This test detects autoimmune antibodies directed at specific antigens (e.g., Hu, Yo, Ri, CDR2, Zic4, Aquaporin 4, myelin, NMDA receptor, AMPA receptor, DPP6, CASPR, LGI1, amphiphysin, PNMA2) to aid in the diagnosis of neurological diseases, in particular paraneoplastic neurological syndromes [e.g., paraneoplastic cerebellar degeneration (PCD), autoimmune limbic encephalitis].	B
10620	64318	Procollagen type I N-terminal propeptide (PINP) IVD, kit, chemiluminescent immunoassay	Проколлаген төрлийн I N-терминал пропептид (PINP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of procollagen type I N-terminal propeptide (PINP) in a clinical specimen, using a chemiluminescent immunoassay method. PINP is an indicator of osteoblastic activity and used in the management of postmenopausal osteoporosis.	B
10621	64319	Procollagen type I N-terminal propeptide (PINP) IVD, calibrator	Проколлаген төрлийн I N-терминал пропептид (PINP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of procollagen type I N-terminal propeptide (PINP) in a clinical specimen.	B

10622	64329	Multiple antifungal therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Мөөгөнцрийн эсрэг олон төрлийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple antifungal/antimycotic drugs (e.g., fluconazole, 5-flucytosine, itraconazole, voriconazole and ketoconazole) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10623	64330	Multiple antifungal therapeutic drug monitoring IVD, reagent	Мөөгөнцрийн эсрэг олон төрлийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of multiple antifungal/antimycotic drugs (e.g., fluconazole, 5-flucytosine, itraconazole, voriconazole and ketoconazole) in a clinical specimen.	B
10624	64331	Multiple antifungal therapeutic drug monitoring IVD, control	Мөөгөнцрийн эсрэг олон төрлийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple antifungal/antimycotic drugs (e.g., fluconazole, 5-flucytosine, itraconazole, voriconazole and ketoconazole) in a clinical specimen.	B
10625	64332	Multiple antifungal therapeutic drug monitoring IVD, calibrator	Мөөгөнцрийн эсрэг олон төрлийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple antifungal/antimycotic drugs (e.g., fluconazole, 5-flucytosine, itraconazole, voriconazole and ketoconazole) in a clinical specimen.	B
10626	64333	Multiple antipsychotic therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон тооны антипсихотик эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple antipsychotic drugs, also known as neuroleptic drugs which may include amisulpride, chlorprothixene, melperone and ziprazidone, in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10627	64334	Multiple antipsychotic therapeutic drug monitoring IVD, kit, liquid chromatography	Олон тооны антипсихотик эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple antipsychotic drugs, also known as neuroleptic drugs which may include amisulpride, chlorprothixene, melperone and ziprazidone, in a clinical specimen, using a liquid chromatography method.	B

10628	64335	Anti-Mullerian hormone (AMH) IVD, kit, chemiluminescent immunoassay	Мюллерийн эсрэг даавар (AMH) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of anti-Mullerian hormone (AMH) in a clinical specimen, using a chemiluminescent immunoassay method. AMH is typically used as a marker for ovarian reserve.	B
10629	64375	Glutathione IVD, kit, liquid chromatography	Глутатион IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glutathione, in the reduced form (GSH) or oxidase form (GSSG), in a clinical specimen using a liquid chromatography method.	B
10630	64405	Proto-oncogene tyrosine-protein kinase ROS (ROS1) IVD, antibody	Прото-онкоген тирозин-уураг киназа ROS (ROS1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of proto-oncogene tyrosine-protein kinase ROS (ROS1) in a clinical specimen.	B
10631	64465	Mycophenolate therapeutic drug monitoring IVD, kit, liquid chromatography	Микофенолатын эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant drug mycophenolate (e.g., Cellcept) in a clinical specimen, using a liquid chromatography method.	B
10632	64494	Alpha defensin IVD, kit, enzyme immunoassay (EIA)	Альфа дефензин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha defensin in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is typically used to detect indirect markers of infection (e.g., osteoarticular infection) and/or inflammation.	B
10633	64518	Lacosamide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Лакосамидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lacosamide (e.g., Vimpat) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10634	64519	Lacosamide therapeutic drug monitoring IVD, calibrator	Лакосамидын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lacosamide (e.g., Vimpat) in a clinical specimen.	B

10635	64520	Lacosamide therapeutic drug monitoring IVD, control	Лакосамидын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lacosamide (e.g., Vimpat) in a clinical specimen.	B
10636	64521	Efavirenz therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Эфавиренз эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug efavirenz (e.g., Sustiva) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10637	64522	Efavirenz therapeutic drug monitoring IVD, calibrator	Эфавиренз эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug efavirenz (e.g., Sustiva) in a clinical specimen.	B
10638	64523	Efavirenz therapeutic drug monitoring IVD, control	Эфавиренз эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug efavirenz (e.g., Sustiva) in a clinical specimen.	B
10639	64524	Linezolid therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Линезолидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug linezolid in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10640	64525	Linezolid therapeutic drug monitoring IVD, calibrator	Линезолидын эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug linezolid in a clinical specimen.	B
10641	64526	Linezolid therapeutic drug monitoring IVD, control	Линезолидын эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug linezolid in a clinical specimen.	B
10642	64529	Methylphenidate metabolite IVD, kit, enzyme immunoassay (EIA)	Метилфенидат метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of methylphenidate metabolite in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10643	64530	Methylphenidate metabolite IVD, calibrator	Метилфенидат метаболит IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of methylphenidate metabolite in a clinical specimen.	B
10644	64531	Methylphenidate metabolite IVD, control	Метилфенидат метаболит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of methylphenidate metabolite in a clinical specimen.	B
10645	64532	Prolactin IVD, kit, rapid ICT, clinical	Prolactin IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of prolactin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of various pathological conditions (e.g., hypothalamic-pituitary disorders, renal disease, hypothyroidism). It is not intended to be used for self-testing.	B
10646	64533	Free triiodothyronine (FT3) IVD, kit, rapid ICT, clinical	Үнэгүй трииодотиронин (FT3) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of free triiodothyronine (FT3) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of various thyroid disorders (e.g., hyperthyroidism, thyrotoxicosis). It is not intended to be used for self-testing.	B
10647	64534	Cancer antigen 125 (CA125) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 125 (CA125) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 125 (CA125), a marker commonly associated with ovarian cancer, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10648	64535	Cancer antigen 15-3 (CA15-3) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 15-3 (CA15-3) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 15-3 (CA15-3), a marker commonly associated with breast cancer, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10649	64536	Cancer antigen 19-9 (CA19-9) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 19-9 (CA19-9) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 19-9 (CA19-9) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. CA19-9 is a marker commonly associated with gastrointestinal, pancreatic, bile duct and gallbladder cancers. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10650	64537	Free testosterone IVD, kit, rapid ICT, clinical	Үнэгүй тестостероны IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of free testosterone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10651	64538	Free thyroxine (FT4) IVD, kit, rapid ICT, clinical	Үнэгүй тироксин (FT4) IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of free thyroxine (FT4) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of hypothyroidism or hyperthyroidism. It is not intended to be used for self-testing.	B

10652	64602	Multiple amino acid IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон амин хүчлийн IVD, иж бүрдэл, шингэн хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple amino acids in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10653	64622	Anti-CD20 inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Anti-CD20 дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to a CD20 inhibitor (e.g., ocrelizumab, rituximab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to anti-CD20 inhibitor therapy in the treatment of multiple sclerosis (MS) with rituximab, or in the treatment of B-cell non-Hodgkin's lymphoma, chromic lymphocytic leukaemia, or rheumatoid arthritis with ocrelizumab.	B
10654	64623	Ustekinumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Ustekinumab эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody ustekinumab in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10655	64624	CD20 inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	CD20 дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of a CD20 inhibitor (e.g., ocrelizumab, rituximab) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10656	64625	Integrin inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Интегрин дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of an integrin therapeutic antibody (e.g., natalizumab, vedolizumab) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10657	64626	Ustekinumab antibody IVD, kit, enzyme immunoassay (EIA)	Ustekinumab эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the therapeutic antibody ustekinumab in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10658	64628	Anti-integrin inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Интегрин дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to an integrin inhibitor in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to integrin inhibitor therapy (e.g., natalizumab, vedolizumab) in the treatment of autoimmune conditions e.g., multiple sclerosis (MS), Crohn's disease and ulcerative colitis.	B
10659	64629	Lamotrigine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Ламотрижин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug lamotrigine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10660	64630	Levetiracetam therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Леветирацетам эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug levetiracetam (e.g., Keppra) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10661	64643	Enhancer of zeste homolog 2 (EZH2) gene mutation IVD, kit, nucleic acid technique (NAT)	Зесте гомолог 2 (EZH2) генийн мутацийг сайжруулагч IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used to diagnose, monitor or predict the enhancer of zeste homolog 2 (EZH2) gene mutation status of a tumour tissue specimen, using a nucleic acid technique (NAT). This test is intended to be used to monitor the response of follicular lymphoma patients to cancer therapy with an EZH2 inhibitor (e.g., tazemetostat).	B

10662	64675	Trypsinogen-2 IVD, kit, rapid ICT, clinical	Трипсиноген-2 IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of trypsinogen-2 in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of acute pancreatitis. It is not intended to be used for self-testing.	B
10663	64682	Lipoprotein Lp(a) IVD, kit, enzyme immunoassay (EIA)	Липопротейн Lp(a) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of lipoprotein A, also known as Lp(a) lipid, in a clinical specimen using an enzyme immunoassay (EIA) method. Lp(a) levels are typically used in the diagnosis and treatment of lipid disorders (such as diabetes mellitus), atherosclerosis, and various liver and renal diseases.	B
10664	64766	Multiple vitamin IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон тооны витамин IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple vitamins in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10665	64771	Intrinsic factor/parietal cell antibody IVD, kit, chemiluminescent immunoassay	Дотоод хүчин зүйл/париетал эсийн эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to intrinsic factor and/or parietal cells in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of conditions associated with deficiencies in intrinsic factor and/or parietal cell function/production such as autoimmune gastric disorders (e.g., pernicious anaemia, chronic atrophic gastritis), funicular myelosis, and various autoimmune endocrinopathies.	B
10666	64892	Thyroid blocking immunoglobulin (TBI) IVD, kit, bioassay	Бамбай булчирхайг хориглох иммуноглобулин (TBI) IVD, иж бүрдэл, био шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thyroid blocking immunoglobulin (TBI), also known as thyroid-blocking antibody, in a clinical specimen using a bioassay.	B

10667	64944	Topiramate therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Топирамат эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug topiramate in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10668	64945	Topiramate therapeutic drug monitoring IVD, calibrator	Топирамат эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug topiramate in a clinical specimen.	B
10669	64946	Topiramate therapeutic drug monitoring IVD, control	Топирамат эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug topiramate in a clinical specimen.	B
10670	64957	p40 protein IVD, antibody	p40 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of p40 protein in a clinical specimen.	B
10671	64982	Zonisamide therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Зонисамидын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug zonisamide in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10672	65000	Oxcarbazepine therapeutic drug monitoring IVD, control	Окскарбазепин эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug oxcarbazepine in a clinical specimen.	B
10673	65002	Oxcarbazepine therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Окскарбазепин эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug oxcarbazepine in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10674	65003	Oxcarbazepine therapeutic drug monitoring IVD, calibrator	Окскарбазепин эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug oxcarbazepine in a clinical specimen.	B
10675	65004	LIN28 protein IVD, antibody	LIN28 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of LIN28 protein in a clinical specimen.	B
10676	65019	Multiple antipsychotic therapeutic drug monitoring IVD, calibrator	Олон тооны антипсихотик эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple antipsychotic drugs, also known as neuroleptic drugs which may include amisulpride, chlorprothixene, melperone and ziprazidone, in a clinical specimen.	B
10677	65020	Multiple antipsychotic therapeutic drug monitoring IVD, control	Олон тооны антипсихотик эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple antipsychotic drugs, also known as neuroleptic drugs which may include amisulpride, chlorprothixene, melperone and ziprazidone, in a clinical specimen.	B
10678	65021	Multiple antipsychotic therapeutic drug monitoring IVD, reagent	Олон тооны антипсихотик эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay intended to be used for the quantitative measurement and therapeutic monitoring of multiple antipsychotic drugs, also known as neuroleptic drugs which may include amisulpride, chlorprothixene, melperone and ziprazidone, in a clinical specimen.	B
10679	65022	Glutathione IVD, calibrator	Глутатион IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of glutathione, in the reduced form (GSH) or oxidase form (GSSG), in a clinical specimen.	B
10680	65023	Glutathione IVD, control	Глутатион IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of glutathione, in the reduced form (GSH) or oxidase form (GSSG), in a clinical specimen.	B

10681	65024	Glutathione IVD, reagent	Глутатион IVD, урвалж	A substance or reactant which is intended to be used together with other IVDs to perform a specific function in an assay used for the qualitative and/or quantitative detection of glutathione, in the reduced form (GSH) or oxidase form (GSSG), in a clinical specimen.	B
10682	65050	Multiple insulin synthesis pathway analyte IVD, control	Олон инсулины синтезийн зам аналитын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple analytes of the insulin synthesis pathway (i.e., proinsulin, insulin, and C-peptide) in a clinical specimen.	B
10683	65110	Soluble urokinase plasminogen activator receptor (suPAR) IVD, kit, nephelometry/turbidimetry	Уусдаг урокиназа плазминоген идэвхжүүлэгч рецептор (suPAR) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble urokinase plasminogen activator receptor (suPAR) in a clinical specimen, using a nephelometry/turbidimetry method. suPAR is a non-specific marker of immune activation and inflammation, and it is typically measured to monitor disease progression.	B
10684	65111	Soluble urokinase plasminogen activator receptor (suPAR) IVD, calibrator	Уусдаг урокиназа плазминоген идэвхжүүлэгч рецептор (suPAR) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of soluble urokinase plasminogen activator receptor (suPAR) in a clinical specimen.	B
10685	65112	Soluble urokinase plasminogen activator receptor (suPAR) IVD, control	Уусдаг урокиназа плазминоген идэвхжүүлэгч рецептор (suPAR) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of soluble urokinase plasminogen activator receptor (suPAR) in a clinical specimen.	B
10686	65123	Trophoblast antigen 2 (TROP2) IVD, antibody	Trophoblast antigen 2 (TROP2) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the protein trophoblast antigen 2 (TROP2) in a clinical specimen.	B

10687	65153	Multiple solid tumour differentiation marker IVD, kit, fluorescent immunoassay	Олон тооны хатуу хавдрын ялгах маркер IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple proteins/markers associated with more than one specific tissue or solid tumour (e.g., prostate, lung, liver, stomach) in a clinical specimen, using a fluorescent immunoassay method. It is typically used in cancer-screening assays to help diagnostic differentiation between solid tumour types through detection of various types of proteins/markers [e.g., epithelial cell adhesion molecule (EpCAM), pan-cytokeratin (pan-CK), prostate-specific membrane antigen (PSMA), alpha-methylacyl-CoA racemase (AMACR)].	B
10688	65171	TNF-alpha inhibitor antibody IVD, kit, rapid ICT, clinical	TNF-альфа дарангуйлагч эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to a tumour necrosis factor alpha (TNF-alpha) inhibitor (also known as anti-drug antibodies) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to monitor the response to anti-TNF-alpha therapy (e.g., infliximab, etanercept) in the treatment of autoimmune conditions [e.g., Crohn's disease]. It is not intended to be used for self-testing.	B
10689	65193	Cancer antigen 72-4 (CA 72-4) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 72-4 (CA 72-4) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen, using a chemiluminescent immunoassay method. CA72-4 is typically used as a marker commonly associated with gastrointestinal and ovarian cancers.	B
10690	65238	DNA-bound lactoferrin antibody IVD, kit, fluorescent immunoassay	ДНХ-тэй холбогдсон лактоферрины эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to DNA-bound lactoferrin in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of ulcerative colitis (UC) and primary sclerosing cholangitis (PSC).	B

10691	65241	Multiple female fertility marker IVD, kit, rapid ICT, clinical	Олон эмэгтэйн үржил шимийг тодорхойлох IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of a combination of different types of female fertility markers [e.g., estrone-3-glucuronide (E1-3G), pregnanediol-3-glucuronide (PdG), luteinizing hormone (LH) and follicle stimulating hormone (FSH)] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10692	65245	Free (unbound) prostate specific antigen (fPSA) IVD, kit, rapid ICT, clinical	Чөлөөт (холбогдоогүй) түрүү булчирхайн өвөрмөц эсрэгтөрөгч (fPSA) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of free (unbound) prostate specific antigen (fPSA) in any of the isoforms [i.e., benign PSA (BPSA), inactive/intact PSA, and/or the PSA precursor, proPSA] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to screen for prostate cancer. It is not intended to be used for self-testing.	B
10693	65246	Multiple myasthenia gravis-associated antibody IVD, kit, fluorescent immunoassay	Олон миастения гравистай холбоотой эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with myasthenia gravis (MG) in a clinical specimen, using a fluorescent immunoassay method. The assayed antibodies include autoimmune antibodies directed at adult acetylcholine receptor, foetal acetylcholine receptor, and/or muscle-specific kinase receptor (MuSK).	B
10694	65249	Peripherin IVD, antibody	Периферин IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of peripherin protein in a clinical specimen.	B

10695	65250	Preferentially expressed antigen in melanoma (PRAME) IVD, antibody	Меланома (PRAME) IVD, эсрэгбие дэх давуугаар илэрхийлэгддэг эсрэгтөрөгч	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of preferentially expressed antigen in melanoma (PRAME) protein in a clinical specimen.	B
10696	65251	Somatostatin receptor subtype 2A (SSTR2A) IVD, antibody	Соматостатин рецепторын дэд төрөл 2A (SSTR2A) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of somatostatin receptor subtype 2A (SSTR2A) protein in a clinical specimen.	B
10697	65252	Alpha thalassemia/mental retardation syndrome X-linked (ATRX) IVD, antibody	Альфа талассеми/сэтгэцийн хомсдолын хам шинж X-холбоотой (ATRX) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of alpha thalassemia/mental retardation syndrome X-linked (ATRX) protein in a clinical specimen.	B
10698	65253	Tyrosine hydroxylase IVD, antibody	Тирозин гидроксилаза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of tyrosine hydroxylase in a clinical specimen.	B
10699	65254	SMAD4 protein IVD, antibody	SMAD4 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of SMAD4 protein in a clinical specimen.	B
10700	65255	BRCA1 associated protein-1 (BAP-1) IVD, antibody	BRCA1-тэй холбоотой уураг-1 (BAP-1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of BRCA1 associated protein-1 (BAP-1) in a clinical specimen.	B
10701	65268	Alpha-L-fucosidase IVD, kit, spectrophotometry	Alpha-L-fucosidase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-L-fucosidase activity in a clinical specimen, using a spectrophotometry method. It is typically used to aid in the diagnosis of hepatocellular carcinoma (HCC).	B

10702	65270	Multiple glycoprotein hormone beta-subunit IVD, kit, rapid ICT, clinical	Олон гликопротеины гормоны бета-дэд нэгж IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of beta-subunits from multiple human glycoprotein hormones including human chorionic gonadotropin (HCG), follicle stimulating hormone (FSH), luteinizing hormone (LH) and/or thyroid stimulating hormone (TSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10703	65274	Thyroid stimulating hormone (TSH) IVD, kit, rapid ICT, clinical	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of thyroid stimulating hormone (TSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10704	65279	Prostate secretory protein 94 (PSP94) IVD, kit, enzyme immunoassay (EIA)	Түрүү булчирхайн шүүрлийн уураг 94 (PSP94) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostate secretory protein 94 (PSP94) in a clinical specimen, using an enzyme immunoassay (EIA) method. Low or diminished levels of PSP94 are typically associated with highly advanced metastatic prostate cancer.	B
10705	65294	Transferrin/transferrin isoform IVD, kit, rapid ICT, clinical	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10706	65295	Anti-Mullerian hormone (AMH) IVD, kit, rapid ICT, clinical	Анти-Мюллерийн даавар (AMH) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of anti-Mullerian hormone (AMH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to determine the ovarian reserve. It is not intended to be used for self-testing.	B
10707	65296	Total cortisol IVD, kit, rapid ICT, clinical	Нийт кортизолын IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total cortisol in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis and treatment of adrenal disorders. It is not intended to be used for self-testing.	B
10708	65297	Serum amyloid A IVD, kit, rapid ICT, clinical	Сийвэнгийн амилоид А IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the apolipoprotein serum amyloid A in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of inflammatory disease. It is not intended to be used for self-testing.	B
10709	65298	Gabapentin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Габапентины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug gabapentin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10710	65321	Succinate dehydrogenase B (SDHB) IVD, antibody	Сукцинатдегидрогеназа B (SDHB) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of succinate dehydrogenase B (SDHB) in a clinical specimen.	B

10711	65322	Glycated haemoglobin (HbA1c) IVD, kit, rapid ICT, clinical	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for the monitoring of average glucose levels and glycaemic control. It is not intended to be used for self-testing.	B
10712	65323	Cystatin C IVD, kit, rapid ICT, clinical	Cystatin C IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cystatin C protein in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for the assessment of kidney function. It is not intended to be used for self-testing.	B
10713	65324	C-peptide IVD, kit, rapid ICT, clinical	С-пептидийн IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-peptide in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for the evaluation of insulin levels and as an aid in the diagnosis of hypoglycaemia and insulinoma. It is not intended to be used for self-testing.	B
10714	65335	S100-beta (S100-B) protein IVD, kit, chemiluminescent immunoassay	S100-бета (S100-B) уураг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of S100-beta (S100-B) protein in a clinical specimen, using a chemiluminescent immunoassay method. This test is typically used as an aid in the diagnosis and monitoring of malignant melanoma.	B

10715	65340	Melatonin IVD, kit, enzyme immunoassay (EIA)	Мелатонин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of melatonin in a clinical specimen, using an enzyme immunoassay (EIA) method. Melatonin is a hormone, which is typically associated with circadian rhythm sleep disorders (CRSD).	B
10716	65356	Multiple traumatic brain injury marker IVD, control	Олон тооны гэмтлийн тархины гэмтэл маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with traumatic brain injury in a clinical specimen. The biochemical markers commonly include glial fibrillary acidic protein (GFAP) and ubiquitin carboxyl-terminal hydrolase L1 (UCH-L1).	B
10717	65371	S100 calcium-binding protein A12 (S100A12) IVD, kit, enzyme immunoassay (EIA)	S100 кальци холбогч уураг A12 (S100A12) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of S100 calcium-binding protein A12 (S100A12), also known as calgranulin C, in a clinical specimen using an enzyme immunoassay (EIA) method. The protein has been described as a marker associated with diverse diseases of an inflammatory, degenerative, or malignant nature, and has been used to distinguish inflammatory bowel disease (IBD) from irritable bowel syndrome (IBS).	B
10718	65372	Thymidine phosphorylase IVD, antibody	Тимидин фосфорилаза IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and or qualitative detection of thymidine phosphorylase in a clinical specimen.	B
10719	65379	Gamma-aminobutyric acid (GABA) antibody IVD, kit, fluorescent immunoassay	Гамма-аминобутирийн хүчил (GABA) эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the neurotransmitter gamma-aminobutyric acid (GABA) in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of limbic encephalitis.	B
10720	65380	F-actin antibody IVD, kit, fluorescent immunoassay	F-актины эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to F-actin in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune hepatitis type I.	B

10721	65383	AMPA receptor antibody IVD, kit, fluorescent immunoassay	AMPA рецепторын эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to alpha-amino-3-hydroxy-5-methyl-4-isoxazolepropionic acid (AMPA) receptors (e.g., AMPA1, AMPA2) in a clinical specimen, using a fluorescent immunoassay method. It is used to aid in the diagnosis of autoimmune limbic encephalitis.	B
10722	65384	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, nephelometry/turbidimetry	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen, using a nephelometry/turbidimetry method. NGAL is typically used an early marker of acute kidney injury in critically ill, multiple-trauma patients.	B
10723	65385	Buprenorphine IVD, kit, rapid ICT, clinical	Бупренорфин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of buprenorphine in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10724	65390	Free oxygen radical IVD, kit, spectrophotometry	Чөлөөт хүчилтөрөгчийн радикал IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free oxygen radicals to determine the oxidative status of a clinical specimen, using a spectrophotometry method.	B
10725	65391	Antioxidant capacity IVD, kit, spectrophotometry	Антиоксидант хүчин чадал IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the determination of the antioxidative capacity of a clinical specimen to neutralize free radicals, using a spectrophotometry method.	B

10726	65469	Multiple autoimmune disease-associated antibody screening IVD, kit, fluorescent immunoassay	Олон аутоиммун өвчинтэй холбоотой эсрэгбиеийн скрининг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple different non-disease-specific antibodies [e.g., antinuclear antibodies (ANA), antimitochondrial antibodies (AMA), and antibodies to smooth muscle (anti-SMA)] associated with autoimmune disease in a clinical specimen, using a fluorescent immunoassay method. This test is used as an aid in the diagnosis/screening of autoimmune disease [e.g., rheumatoid arthritis, primary biliary cholangitis, autoimmune hepatitis, systemic lupus erythematosus (SLE)]; it is not intended to detect tissue- or disease-specific auto-antibodies.	B
10727	65489	Corticosterone IVD, kit, enzyme immunoassay (EIA)	Кортикостероны IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of corticosterone in a clinical specimen, using an enzyme immunoassay (EIA) method. Corticosterone is a glucocorticoid associated with emotional stress, long-term memory, and sleep-wake patterns.	B
10728	65493	Transforming growth factor beta protein IVD, kit, enzyme immunoassay (EIA)	Өсөлтийн хүчин зүйлийн бета уургийн хувиргах IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transforming growth factor beta (TGF-beta) protein in a clinical specimen, using an enzyme immunoassay (EIA) method. TGF-beta-1 and TGF-beta-2 are cytokines involved in various biological processes and are associated with developmental, neurological, and immune system disorders.	B
10729	65504	Prostaglandin D2 synthase IVD, kit, nephelometry/turbidimetry	Простагландин D2 синтаза IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostaglandin D2 synthase [also referred to as beta-trace protein (BTP) or prostaglandin-H2 D-isomerase] in a clinical specimen, using a nephelometry/turbidimetry method. It may be used to monitor renal function and/or as an aid in the diagnosis of cerebrospinal fluid (CSF) leakage.	B

10730	65543	Cancer marker/gene/chemosensitivity profile kit IVD	Хорт хавдрын маркер/ген/химийн мэдрэмтгий байдлын багц IVD	A collection of reagents and other associated materials intended for multi-parameter profiling of a blood specimen by performing: 1) qualitative and/or quantitative detection of multiple cancer-associated antigens; 2) genomic/gene expression analysis of multiple cancer-related genes; and 3) a chemosensitivity assay to evaluate the response of malignant tumour cells or tumour-derived cells [e.g., circulating in the bloodstream] to cytotoxic anti-cancer (chemotherapy) agents. It is used to help select anti-cancer treatment options for patients with solid and/or hollow organ malignancies.	B
10731	65573	Complement component C1 inhibitor IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсэг C1 дарангуйлагч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of complement cascade component C1 inhibitor in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to assess C1 inhibitor activity which is associated with hereditary angioneurotic oedma.	B
10732	65574	Matrix metalloproteinase-9 (MMP-9) IVD, kit, rapid ICT, clinical	Матриц металлопротейназа-9 (MMP-9) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of matrix metalloproteinase-9 (MMP-9) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of dry eye syndrome. It is not intended to be used for self-testing.	B
10733	65602	Melatonin sulfate IVD, kit, enzyme immunoassay (EIA)	Мелатонин сульфат IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of melatonin sulfate in a clinical specimen, using an enzyme immunoassay (EIA) method. Melatonin sulfate is a metabolite of the hormone melatonin, which is typically associated with circadian rhythm sleep disorders (CRSD).	B

10734	65642	Lactoferrin anti-neutrophil cytoplasmic antibody IVD, kit, enzyme immunoassay (EIA)	Лактоферрины эсрэг нейтрофилын цитоплазмын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to lactoferrin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of inflammatory disorders such as rheumatoid vasculitis, ulcerative colitis (UC) and primary sclerosing cholangitis (PSC).	B
10735	65643	5-Hydroxyindoleacetic acid (5HIAA) IVD, kit, enzyme immunoassay (EIA)	5-Гидроксиндол цууны хүчил (5HIAA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of 5-hydroxyindoleacetic acid (5HIAA) in a clinical specimen, using an enzyme immunoassay (EIA) method. 5HIAA is a serotonin metabolite associated with carcinoid tumours (e.g., of the enterochromaffin cells of the midgut).	B
10736	65664	Total prostate specific antigen (tPSA) IVD, kit, rapid ICT, self-testing	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	B
10737	65672	C-reactive protein (CRP) IVD, kit, rapid ICT, self-testing	С-реактив уураг (CRP) IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-reactive protein (CRP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. CRP is a marker associated with bacterial infection and inflammatory conditions. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	B

10738	65685	Multiple melanoma marker IVD, kit, enzyme immunohistochemistry	Олон меланома маркер IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple markers associated with melanoma in a clinical specimen, using an enzyme immunohistochemistry method. Markers intended to be detected may include activating molecule in BECN1-regulated autophagy 1 (AMBRA1) and loricrin proteins; this test is used as an aid in the diagnosis of melanoma tumours and the risk of metastatic disease progression.	B
10739	65690	Serum amyloid A IVD, kit, chemiluminescent immunoassay	Сийвэнгийн амилоид А IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the apolipoprotein serum amyloid A in a clinical specimen, using a chemiluminescent immunoassay method. This test is used to aid in the diagnosis of inflammatory disease.	B
10740	65691	Multiple neurological disease-associated antibody IVD, kit, enzyme immunoassay (EIA)	Мэдрэлийн олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with neurological disease, using an enzyme immunoassay (EIA) method. This test detects autoimmune antibodies directed at specific antigens [e.g., Hu, Yo, Ri, CDR2, Zic4, Aquaporin 4, myelin, NMDA receptor, AMPA receptor, DPP6, CASPR, LGI1, amphiphysin, PNMA2, CV2/CRMP5, recoverin, SOX1, titin, glutamic acid decarboxylase (GAD65 isoform), Tr(DNER)] to aid in the diagnosis of neurological diseases, in particular paraneoplastic neurological syndromes [e.g., paraneoplastic cerebellar degeneration (PCD), autoimmune limbic encephalitis].	B
10741	65695	C-reactive protein (CRP) IVD, kit, chemiluminescent immunoassay	С-реактив уураг (CRP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-reactive protein (CRP) in a clinical specimen, using a chemiluminescent immunoassay method. CRP is a marker associated with bacterial infection and inflammatory conditions.	B

10742	65700	Multiple neurological disease-associated antibody IVD, control	Мэдрэлийн олон өвчинтэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with neurological disease in a clinical specimen. The assayed antibodies include autoimmune antibodies directed at specific antigens such as Hu, Yo, Ri, CDR2, Zic4, Aquaporin 4, myelin [e.g., myelin-associated glycoprotein (MAG), myelin oligodendrocyte glycoprotein (MOG)], NMDA receptor, AMPA receptor, DPP6, CASPR, LGI1, amphiphysin, PNMA2, CV2/CRMP5, recoverin, SOX1, titin, glutamic acid decarboxylase (GAD65 isoform), and/or Tr(DNER).	B
10743	65711	Muscle-specific kinase receptor (MuSK) antibody IVD, kit, radioimmunoassay	Булчингийн өвөрмөц киназын рецептор (MuSK) эсрэгбие IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to muscle-specific kinase receptor (MuSK) in a clinical specimen, using a radioimmunoassay method. It is typically used as an aid in the diagnosis of the autoimmune disorder myasthenia gravis (MG).	B
10744	65714	Multiple gastrointestinal disease-associated antibody IVD, kit, enzyme immunoassay (EIA)	Ходоод гэдэсний замын олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with gastrointestinal disease in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed antibodies typically include autoantibodies directed at gliadin, tissue transglutaminase (tTG), intrinsic factor and/or parietal cells, and/or antibodies directed at mannan from Saccharomyces cerevisiae; this test is used as an aid in the diagnosis/screening of Coeliac disease, Coeliac disease-related dermatitis herpetiformis, Crohn´s disease, and autoimmune gastritis.	B

10745	65728	Multiple progressive systemic sclerosis-associated antibody IVD, kit, enzyme immunoassay (EIA)	Олон дэвшилтэт системийн склерозтой холбоотой эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with progressive systemic sclerosis in a clinical specimen, using an enzyme immunoassay (EIA) method. The assayed autoimmune antibodies may be directed at scleroderma-70 (Scl-70), polymyositis-scleroderma (PM-Scl), centromere proteins (e.g., CENPA, CENPB), RNA Polymerase III subunits, fibrillarin, nucleolar transcription factor 1 (NOR-90), Th/To, Ku, platelet-derived growth factor receptor (PDGFR), and/or Ro52 (TRIM21).	B
10746	65729	Multiple progressive systemic sclerosis-associated antibody IVD, control	Олон дэвшилтэт системийн склерозтой холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with progressive systemic sclerosis in a clinical specimen. The assayed autoimmune antibodies may be directed at scleroderma-70 (Scl-70), polymyositis-scleroderma (PM-Scl), centromere proteins (e.g., CENPA, CENPB), RNA Polymerase III subunits, fibrillarin, nucleolar transcription factor 1 (NOR-90), Th/To, Ku, platelet-derived growth factor receptor (PDGFR), and/or Ro52 (TRIM21).	B
10747	65730	Tissue polypeptide antigen IVD, kit, chemiluminescent immunoassay	Эдийн полипептидийн эсрэгтөрөгч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tissue polypeptide antigen (TPA) in a clinical specimen, using a chemiluminescent immunoassay method. This test is used in the monitoring of cancer therapy, typically for treatment of carcinomas of the lung, breast, gastrointestinal tract, and/or urinary bladder.	B
10748	65742	Gliadin antibody IVD, kit, rapid ICT, self-testing	Глиадин эсрэгбие IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of anti-gliadin antibodies in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment as an aid in the diagnosis of Coeliac disease.	B

10749	65746	Total cholesterol lipid IVD, kit, rapid colorimetric, self-testing	Нийт холестерины липидийн IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative measurement of total cholesterol lipid in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	B
10750	65756	Microalbumin IVD, kit, rapid ICT, self-testing	Микроальбумин IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of microalbumin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to detect small amounts of albumin in the urine, moderately increased albuminuria or microalbuminuria, which indicate kidney disease.	B
10751	65757	Uncarboxylated matrix Gla protein (ucMGP) IVD, kit, chemiluminescent immunoassay	Карбоксилгүй матриц Гла уураг (ucMGP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of uncarboxylated matrix Gla-protein (ucMGP) in a clinical specimen, using a chemiluminescent immunoassay method. This test is typically used to assess arterial walls for status of vitamin K, which if deficient leads to high levels of the inactive ucMGP accumulating at sites of arterial calcification causing arterial stiffness.	B
10752	65769	Collagen antibody IVD, kit, enzyme immunoassay (EIA)	Коллагены эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to collagen in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used as an aid in the diagnosis of collagen-associated autoimmune disorders [e.g., rheumatoid arthritis, scleroderma, systemic lupus erythematosus (SLE), epidermolysis bullosa acquisita].	B
10753	65785	Phospholipase A2 receptor (PLA2R) antibody IVD, calibrator	Фосфолипаза А2 рецептор (PLA2R) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to phospholipase A2 receptor (PLA2R) in a clinical specimen.	B

10754	65786	Phospholipase A2 receptor (PLA2R) antibody IVD, control	Фосфолипаза А2 рецептор (PLA2R) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to phospholipase A2 receptor (PLA2R) in a clinical specimen.	B
10755	65794	Collagen antibody IVD, calibrator	Коллагены эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to collagen in a clinical specimen.	B
10756	65795	Collagen antibody IVD, control	Коллаген эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to collagen in a clinical specimen.	B
10757	65810	Multiple traumatic brain injury marker IVD, kit, chemiluminescent immunoassay	Олон тооны гэмтлийн тархины гэмтлийн маркер IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with traumatic brain injury in a clinical specimen, using a chemiluminescent immunoassay method. This test is used to detect glial fibrillary acidic protein (GFAP) and ubiquitin carboxyl-terminal hydrolase L1 (UCH-L1) as an aid to determine the need for a neuroimaging radiological scan following head injury.	B
10758	65813	Transferrin/transferrin isoform IVD, kit, electrophoresis	Трансферрин/трансферрин изоформ IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of transferrin or a transferrin isoform(s) [e.g., beta-2-transferrin, carbohydrate deficient transferrin] in a clinical specimen, using an electrophoresis method.	B
10759	65817	Myelin oligodendrocyte glycoprotein (MOG) antibody IVD, control	Миелин олигодендроцит гликопротейн (MOG) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to myelin oligodendrocyte glycoprotein (MOG) in a clinical specimen.	B
10760	65818	Desmoglein 1 (DSG1) antibody IVD, control	Desmoglein 1 (DSG1) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to desmoglein 1 (DSG1) in a clinical specimen.	B

10761	65820	Parathyroid gland antibody IVD, kit, fluorescent immunoassay	Бамбай булчирхайн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the parathyroid gland in a clinical specimen, using a fluorescent immunoassay method. This test is used as an aid in the diagnosis of various autoimmune diseases (e.g., idiopathic hypoparathyroidism, type I autoimmune polyendocrinopathy).	B
10762	65821	Pituitary gland antibody IVD, kit, fluorescent immunoassay	Гипофиз булчирхайн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the pituitary gland in a clinical specimen, using a fluorescent immunoassay method. This test is used as an aid in the diagnosis of various autoimmune diseases [e.g., pituitary insufficiency (hypopituitarism), idiopathic diabetes insipidus].	B
10763	65836	Tissue transglutaminase antibody IVD, kit, rapid ICT, self-testing	Эдийн трансглютаминазын эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to tissue transglutaminase (anti-tTG) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to aid in the screening of Coeliac disease (intolerance to gluten).	B
10764	65840	Follicle stimulating hormone (FSH) IVD, kit, rapid ICT, clinical	Фолликул өдөөгч даавар (FSH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of follicle stimulating hormone (FSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as an aid in the diagnosis of conditions related to reproductive health (e.g., menopause, infertility). It is not intended to be used for self-testing.	B

10765	65841	Follicle stimulating hormone (FSH) IVD, kit, rapid ICT, self-testing	Фолликул өдөөгч даавар (FSH) IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of follicle stimulating hormone (FSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment as an aid in the diagnosis of conditions related to reproductive health (e.g., menopause, infertility).	B
10766	65861	Activin A IVD, kit, enzyme immunoassay (EIA)	Активин А IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the hormone activin A in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of some types of cancer (e.g., colorectal and breast cancer).	B
10767	65862	Pregnancy-associated plasma protein-A2 (PAPP-A2) IVD, kit, enzyme immunoassay (EIA)	Жирэмслэлттэй холбоотой сийвэнгийн уураг-А2 (PAPP-A2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pregnancy-associated plasma protein A2 (PAPP-A2) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of pre-eclampsia.	B
10768	65869	Alpha-1-antitrypsin (protease inhibitor) IVD, kit, electrophoresis	Альфа-1-антитрипсин (протеазын дарангуйлагч) IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-1-antitrypsin (protease inhibitor) in a clinical specimen, using an electrophoresis method. Alpha-1-antitrypsin deficiency is typically associated with liver cirrhosis and pulmonary emphysema.	B
10769	65878	Ovarian tissue antibody IVD, control	Өндгөвчний эдийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the ovary (e.g., theca cells) in a clinical specimen.	B

10770	65891	Glycated haemoglobin (HbA1c) IVD, kit, electrophoresis	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen, using an electrophoresis method. It is typically used to aid in the diagnosis of diabetes mellitus and/or monitoring of average glucose levels and glycaemic control in diabetic patients.	B
10771	65897	Histamine IVD, kit, enzyme immunoassay (EIA)	Гистамин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of histamine in a clinical specimen, using an enzyme immunoassay (EIA) method. Histamine is associated with mast cell activation and is typically used to aid in the assessment of an anaphylactic or allergic reaction.	B
10772	65898	Kynurenine IVD, kit, enzyme immunoassay (EIA)	Kynurenine IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of kynurenine (tryptophan metabolite) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid the diagnosis of conditions associated with kynurenine pathway disorders.	B
10773	65899	Glutamate IVD, kit, enzyme immunoassay (EIA)	Глутамат IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glutamate in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis and management of neurological and psychological disorders.	B
10774	65901	Tryptophan/tryptophan metabolite IVD, kit, enzyme immunoassay (EIA)	Триптофан/триптофан метаболит IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tryptophan and/or tryptophan metabolites (i.e., kynurenine) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to assess tryptophan intake and monitor dietary treatment.	B
10775	65902	Tau protein IVD, kit, chemiluminescent immunoassay	Тау уураг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid the diagnosis of neurodegenerative disorders such as Alzheimer's disease.	B

10776	65903	Adrenaline (epinephrine) IVD, kit, enzyme immunoassay (EIA)	Адреналин (эпинефрин) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the catecholamine adrenaline (epinephrine) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B
10777	65905	Noradrenaline (norepinephrine) IVD, kit, enzyme immunoassay (EIA)	Норадреналин (норепинефрин) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the catecholamine noradrenaline (norepinephrine) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B
10778	65906	Dopamine IVD, kit, enzyme immunoassay (EIA)	Допамин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the catecholamine dopamine in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B
10779	65907	Metanephrine IVD, kit, enzyme immunoassay (EIA)	Метанефрин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of metanephrine in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B

10780	65908	Normetanephrine IVD, kit, enzyme immunoassay (EIA)	Норметанефрин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the catecholamine metabolite normetanephrine in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B
10781	65913	Myeloperoxidase (MPO) IVD, kit, chemiluminescent immunoassay	Миелопероксидаза (MPO) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of myeloperoxidase (MPO) in a clinical specimen, using a chemiluminescent immunoassay method. MPO is used as a marker of cardiovascular disease (e.g., atherosclerosis, coronary artery disease, heart failure).	B
10782	65916	Bactericidal/permeability-increasing protein anti-neutrophil cytoplasmic antibody IVD, kit, enzyme immunoassay (EIA)	Бактерицид/нэвчилтийг нэмэгдүүлэх ураг, нейтрофилын эсрэг цитоплазмын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to bactericidal/permeability-increasing protein (BPI) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the differentiation of ANCA-associated vasculitis from other types of vasculitis.	B
10783	65917	Cathepsin antibody IVD, kit, enzyme immunoassay (EIA)	Катепсины эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a cathepsin protein (e.g., cathepsin D, G, K) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10784	65918	Alpha-fodrin antibody IVD, enzyme immunoassay (EIA)	Альфа-фодрины эсрэгбие IVD, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to alpha-fodrin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the differential diagnosis of autoimmune disorders (e.g., rheumatoid arthritis, Sjogren's syndrome).	B

10785	65919	Annexin A5 antibody IVD, kit, enzyme immunoassay (EIA)	Annexin A5 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to annexin A5 in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of antiphospholipid syndrome (APS), also known as Hughes syndrome.	B
10786	65925	Multiple gastrointestinal disease-associated antibody IVD, kit, immunoblot	Ходоод гэдэсний замын олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with gastrointestinal disease in a clinical specimen, using an immunoblot method. This test detects autoantibodies (e.g., directed at gliadin, tissue transglutaminase (tTG), intrinsic factor and/or parietal cells, endomysium, goblet cells) and/or antibodies directed at extrinsic markers (e.g., mannan from Saccharomyces cerevisiae) to aid in the diagnosis/screening of conditions such as Coeliac disease, Coeliac disease-related dermatitis herpetiformis, Crohn´s disease, ulcerative colitis, and autoimmune gastritis.	B
10787	65929	C-X-C motif chemokine ligand 13 (CXCL13) IVD, control	CXC motif chemokine ligand 13 (CXCL13) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of C-X-C motif chemokine ligand 13 (CXCL13), a chemokine also known as B lymphocyte chemoattractant (BLC), in a clinical specimen.	B
10788	65930	C-X-C motif chemokine ligand 13 (CXCL13) IVD, kit, enzyme immunoassay (EIA)	CXC мотив химокин лиганд 13 (CXCL13) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-X-C motif chemokine ligand 13 (CXCL13), a chemokine also known as B lymphocyte chemoattractant (BLC), in a clinical specimen, using an enzyme immunoassay (EIA) method. The test is used as a non-specific aid in the diagnosis of various conditions [e.g., Lyme neuroborreliosis, central nervous system (CNS) lymphoma, neurosyphilis].	B

10789	65934	Lysozyme (muramidase) anti-neutrophil cytoplasmic antibody IVD, kit, enzyme immunoassay (EIA)	Лизоцим (мурамидаза) нейтрофилын эсрэг цитоплазмын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-neutrophil cytoplasmic antibodies (ANCA) to the bacteriolytic enzyme lysozyme (muramidase) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the differentiation of ANCA-associated vasculitis from other types of vasculitis.	B
10790	65936	Multiple catecholamine IVD, kit, enzyme immunoassay (EIA)	Олон тооны катехоламин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple catecholamines (e.g., norepinephrine, epinephrine) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of catecholamine-secreting tumours (e.g., paraganglioma, pheochromocytoma).	B
10791	65943	Testicle antibody IVD, control	Төмсөгний эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the testis (e.g., directed at Leydig cells) in a clinical specimen.	B
10792	65944	Multiple diabetes mellitus-associated antibody IVD, kit, fluorescent immunoassay	Чихрийн шижинтэй холбоотой олон төрлийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening for multiple antibodies associated with diabetes mellitus in a clinical specimen, using a fluorescent immunoassay method. These antibodies may include autoimmune antibodies directed at insulin, islet cells and/or glutamic acid decarboxylase (anti-GAD).	B
10793	65945	IgLON protein antibody IVD, control	IgLON уургийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to a IgLON protein (e.g., IgLON5) in a clinical specimen.	B
10794	65947	Luteinizing hormone (LH) IVD, kit, rapid ICT, self-testing	Luteinizing hormone (LH) IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of luteinizing hormone (LH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment as an ovulation signal to optimise the chances of natural conception.	B

10795	65948	Glucose IVD, kit, rapid spectrophotometry, clinical	Глюкозын IVD, иж бүрдэл, түргэн спектрофотометр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of glucose in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid spectrophotometry method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to aid in the diagnosis of diabetes mellitus and/or monitoring of average glucose levels in diabetic patients. It is not intended to be used for self-testing.	B
10796	65949	Glucose IVD, kit, rapid spectrophotometry, self-testing	Глюкозын IVD, иж бүрдэл, хурдан спектрофотометр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of glucose in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid spectrophotometry method. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to aid in the diagnosis of diabetes mellitus and/or monitoring of average glucose levels in diabetic patients.	B
10797	65950	Multiple biogenic amine neurotransmitter IVD, kit, enzyme immunoassay (EIA)	Олон биоген амин нейротрансмиттер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biogenic amine neurotransmitters [e.g., catecholamines (dopamine, norepinephrine, epinephrine), histamine, serotonin] and/or multiple biogenic amine neurotransmitter intermediate metabolites (e.g., metanephrine, normetanephrine, 3-methoxytyramine) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the diagnosis of catecholamine-secreting tumours (e.g., pheochromocytoma).	B
10798	65960	Zinc transporter (ZnT) antibody IVD, control	Цайр тээвэрлэгч (ZnT) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to a zinc transporter (ZnT) protein, belonging to the solute carrier 30 (SLC30) family, in a clinical specimen.	B
10799	65961	Desmoglein 3 (DSG3) antibody IVD, control	Desmoglein 3 (DSG3) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to desmoglein 3 (DSG3) in a clinical specimen.	B

10800	65974	Multiple anti-neutrophil cytoplasmic antibody/glomerular basement membrane antibody IVD, kit, fluorescent immunoassay	Олон тооны нейтрофилын эсрэг цитоплазмын эсрэгбие/бөөрөнхий суурь мембраны эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple types of anti-neutrophil cytoplasmic antibodies (ANCA) and antibodies to glomerular basement membrane (anti-GBM), also known as Goodpasture antibodies, in a clinical specimen using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of autoimmune conditions such as Wegener's granulomatosis, Churg-Strauss syndrome, microscopic polyangiitis (MPA) and ulcerative colitis.	B
10801	65976	Multiple gastrointestinal disease-associated antibody IVD, kit, fluorescent immunoassay	Ходоод гэдэсний замын олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with gastrointestinal disease in a clinical specimen, using a fluorescent immunoassay method. This test detects autoantibodies (e.g., to gliadin, tissue transglutaminase (tTG), intrinsic factor and/or parietal cells, endomysium, goblet cells) and may in addition detect antibodies to extrinsic markers (e.g., mannan from Saccharomyces cerevisiae) to aid in the diagnosis/screening of conditions such as Coeliac disease, Coeliac disease-related dermatitis herpetiformis, Crohn´s disease, ulcerative colitis, and autoimmune gastritis.	B
10802	65977	Multiple liver disease-associated antibody IVD, kit, fluorescent immunoassay	Элэгний олон өвчинтэй холбоотой эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with liver disease in a clinical specimen, using a fluorescent immunoassay method. The assayed antibodies may include autoimmune antibodies directed at liver-kidney microsome 1 protein (anti-LKM1), smooth muscle (anti-SMA), F-Actin, soluble liver antigen/liver pancreas (SLA/LP), Sp-100 protein, glycoprotein-210 (gp210), lamin B receptor (LBR) and also liver cytosol specific antibody type 1 (anti-LC1) and/or antimitochondrial antibodies (AMA).	B

10803	65980	Vascular endothelial cell antibody IVD, kit, fluorescent immunoassay	Судасны эндотелийн эсийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to vascular endothelial cells, commonly known as anti-endothelial cell antibodies (AECAs), in a clinical specimen using a fluorescent immunoassay method. It is typically used to aid in the diagnosis of primary vasculitis and other connective tissue and inflammatory diseases.	B
10804	65991	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, rapid ICT, clinical	Харшил үүсгэгчийн өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses typically to screen for allergies associated with certain conditions (e.g., food intolerance). It is not intended to be used for self-testing.	B
10805	65992	Allergen-specific immunoglobulin E (IgE) antibody IVD, kit, rapid ICT, self-testing	Харшил үүсгэгчийн өвөрмөц иммуноглобулин E (IgE) эсрэгбие IVD, иж бүрдэл, шуурхай ICT, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin E (IgE) antibodies to one or multiple allergen(s) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment, typically to screen for allergies associated with certain conditions (e.g., food intolerance).	B
10806	66019	Glutamic acid decarboxylase antibody (anti-GAD) IVD, kit, chemiluminescent immunoassay	Глутамины хүчлийн декарбоксилазын эсрэгбие (anti-GAD) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to glutamic acid decarboxylase (anti-GAD) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a predictive marker for the progression of autoimmune diabetes and the eventual onset of insulin-dependent diabetes mellitus.	B

10807	66026	Lipoprotein-associated phospholipase A2 (Lp-PLA2) IVD, kit, chemiluminescent immunoassay	Липопротейнтэй холбоотой фосфолипаза А2 (Lp-PLA2) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lipoprotein-associated phospholipase A2 (Lp-PLA2) in a clinical specimen, using a chemiluminescent immunoassay method. It is used to aid in the monitoring and diagnosis of inflammation, coronary heart disease and/or ischemic stroke associated with atherosclerosis.	B
10808	66027	Albumin IVD, kit, chemiluminescent immunoassay	Альбумин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of albumin in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	B
10809	66035	Tyrosine phosphatase-related islet antigen 2 antibody (anti-IA2) IVD, kit, chemiluminescent immunoassay	Тирозин фосфатазтай холбоотой арлын эсрэгтөрөгч 2-ын эсрэгбие (анти-IA2) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to tyrosine phosphatase-related islet antigen 2 (anti-IA2) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a predictive marker for the development of type 1 diabetes.	B
10810	66054	Total/conjugated (direct) bilirubin IVD, calibrator	Нийт/коньюгат (шууд) билирубин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total and conjugated (direct) bilirubin in a clinical specimen.	B
10811	66061	Cancer antigen 50 (CA50) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 50 (CA50) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a prognostic marker to monitor the progression of malignant tumours and assess the response to treatment.	B

10812	66062	Cancer antigen 242 (CA242) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 242 (CA242) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a prognostic marker to monitor the progression of malignant tumours and measure the response to treatment.	B
10813	66063	Histone antibody IVD, kit, chemiluminescent immunoassay	Гистоны эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple histone proteins in a clinical specimen, using a chemiluminescent immunoassay method.	B
10814	66064	Multiple gastrointestinal disease-associated antibody IVD, control	Ходоод гэдэсний замын олон өвчинтэй холбоотой эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple antibodies associated with gastrointestinal disease in a clinical specimen. The assayed antibodies typically include autoantibodies (e.g., to gliadin, tissue transglutaminase (tTG), intrinsic factor and/or parietal cells, endomysium, goblet cells, CUZD1) and may in addition include antibodies to extrinsic markers (e.g., mannan from Saccharomyces cerevisiae).	B
10815	66066	Laminin IVD, kit, chemiluminescent immunoassay	Ламинин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of laminin in a clinical specimen, using a chemiluminescent immunoassay method.	B
10816	66069	Collagen type IV IVD, kit, chemiluminescent immunoassay	IV төрлийн коллагены IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of collagen type IV in a clinical specimen, using a chemiluminescent immunoassay method.	B
10817	66073	Phospholipase A2 receptor (PLA2R) antibody IVD, kit, chemiluminescent immunoassay	Фосфолипаза А2 рецептор (PLA2R) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the phospholipase A2 receptor (PLA2R) in a clinical specimen, using a chemiluminescent immunoassay method. It is used as an aid in the diagnosis of the kidney disease known as primary membranous glomerulonephritis.	B

10818	66083	Total complement activity (CH50) IVD, kit, spectrophotometry	Нийт нэмэлт идэвхжил (CH50) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total complement activity (CH50) in a clinical specimen, using a spectrophotometry method. It is used in the investigation of recurrent bacterial infections and symptoms of inflammatory disease, and monitoring of chronic autoimmune conditions [e.g., systemic lupus erythematosus (SLE)].	B
10819	66100	Cytosolic 5'-nucleotidase 1A (cN1A) antibody IVD, control	Цитозолын 5'-нуклеотидаз 1A (cN1A) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to cytosolic 5'-nucleotidase 1A (cN1A, or NT5C1A) in a clinical specimen.	B
10820	66101	Citrullinated alpha-enolase peptide 1 antibody IVD, control	Цитрулинжуулсан альфа-энолаза пептид 1 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to citrullinated alpha-enolase peptide 1 in a clinical specimen.	B
10821	66102	Citrullinated alpha-enolase peptide 1 antibody IVD, kit, enzyme immunoassay (EIA)	Цитрулинжуулсан альфа-энолаза пептид 1 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to citrullinated alpha-enolase peptide 1 in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of rheumatoid arthritis.	B
10822	66104	Aripiprazole therapeutic drug monitoring IVD, reagent	Арипипразолын эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug aripiprazole in a clinical specimen.	B
10823	66105	Risperidone therapeutic drug monitoring IVD, reagent	Рисперидоны эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug risperidone in a clinical specimen.	B
10824	66106	Quetiapine therapeutic drug monitoring IVD, reagent	Кетиапины эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug quetiapine in a clinical specimen.	B

10825	66107	Olanzapine therapeutic drug monitoring IVD, reagent	Оланзапин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the central nervous system drug olanzapine in a clinical specimen.	B
10826	66109	Busulfan therapeutic drug monitoring IVD, control	Busulfan эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug busulfan in a clinical specimen.	B
10827	66110	Busulfan therapeutic drug monitoring IVD, reagent	Бусулфан эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug busulfan in a clinical specimen.	B
10828	66111	Busulfan therapeutic drug monitoring IVD, calibrator	Busulfan эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug busulfan in a clinical specimen.	B
10829	66112	Imatinib therapeutic drug monitoring IVD, calibrator	Иматиниб эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug imatinib in a clinical specimen.	B
10830	66113	Imatinib therapeutic drug monitoring IVD, control	Иматиниб эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug imatinib in a clinical specimen.	B
10831	66114	Imatinib therapeutic drug monitoring IVD, reagent	Иматиниб эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the antineoplastic drug imatinib in a clinical specimen.	B
10832	66116	Trypsinogen-2 IVD, kit, control	Трипсиноген-2 IVD, иж бүрдэл, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of trypsinogen-2 in a clinical specimen.	B

10833	66119	Insulin IVD, kit, rapid ICT, clinical	Инсулин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of insulin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10834	66120	Total triiodothyronine (TT3) IVD, kit, rapid ICT, clinical	Нийт триодотиронин (TT3) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total triiodothyronine (TT3) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of various thyroid disorders (e.g., hyperthyroidism, thyrotoxicosis). It is not intended to be used for self-testing.	B
10835	66121	Total thyroxine (TT4) IVD, kit, rapid ICT, clinical	Нийт тироксин (TT4) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total thyroxine (TT4) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of hypothyroidism or hyperthyroidism. It is not intended to be used for self-testing.	B
10836	66124	Ferritin IVD, kit, rapid ICT, clinical	Ферритин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ferritin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to indicate ferritin/iron status. It is not intended to be used for self-testing.	B

10837	66128	Everolimus therapeutic drug monitoring IVD, calibrator	Everolimus-ийн эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant and antineoplastic drug everolimus in a clinical specimen.	B
10838	66129	Everolimus therapeutic drug monitoring IVD, control	Everolimus-ийн эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant and antineoplastic drug everolimus in a clinical specimen.	B
10839	66130	Everolimus therapeutic drug monitoring IVD, kit, chemiluminescent immunoassay	Everolimus-ийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the immunosuppressant and antineoplastic drug everolimus in a clinical specimen, using a chemiluminescent immunoassay method.	B
10840	66131	Everolimus therapeutic drug monitoring IVD, reagent	Everolimus-ийн эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the quantitative measurement and therapeutic monitoring of the immunosuppressant and antineoplastic drug everolimus in a clinical specimen.	B
10841	66138	Multiple endocrine tissue antibody IVD, kit, fluorescent immunoassay	Олон дотоод шүүрлийн эд эсийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to multiple endocrine tissue types (e.g., thyroid gland, pancreas, adrenal gland, ovary, testis, stomach) in a clinical specimen, using a fluorescent immunoassay method. This test is typically used to aid in the diagnosis of autoimmune polyendocrinopathies and Addison's disease.	B
10842	66139	Testicle antibody IVD, kit, fluorescent immunoassay	Төмсөгний эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the testis (e.g., directed at Leydig cells) in a clinical specimen, using a fluorescent immunoassay method. This test is typically used to aid the diagnosis of gonad insufficiency (hypogonadism) and autoimmune polyendocrinopathy.	B

10843	66140	Parotid gland antibody IVD, kit, fluorescent immunoassay	Паротид булчирхайн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the parotid gland in a clinical specimen, using a fluorescent immunoassay method. This test is used to aid in the diagnosis of Sjogren's syndrome.	B
10844	66141	Muscle-specific kinase receptor (MuSK) antibody IVD, kit, enzyme immunoassay (EIA)	Булчингийн өвөрмөц киназын рецептор (MuSK) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to muscle-specific kinase receptor (MuSK) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the diagnosis of the autoimmune disorder myasthenia gravis (MG).	B
10845	66148	Islet cell antibody IVD, kit, chemiluminescent immunoassay	Арлын эсийн эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to one or multiple islet cell antigens in a clinical specimen, using a chemiluminescent immunoassay method. This test is typically used to aid the differential diagnosis of autoimmune type 1 diabetes and other forms of diabetes.	B
10846	66149	Proinsulin IVD, kit, chemiluminescent immunoassay	Проинсулин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of proinsulin in a clinical specimen, using a chemiluminescent immunoassay method.	B
10847	66150	Cholylglycine bile acid IVD, kit, chemiluminescent immunoassay	Cholylglycine цөсний хүчил IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the bile acid cholylglycine, also referred to as glycocholic acid, in a clinical specimen, using a chemiluminescent immunoassay method. Cholylglycine is used as a marker to aid the diagnosis of acute and chronic hepatitis, and liver cirrhosis.	B
10848	66157	Fatty acid binding protein (FABP) IVD, kit, chemiluminescent immunoassay	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of fatty acid binding protein (FABP) in a clinical specimen, using a chemiluminescent immunoassay method. FABP is used as a marker of various metabolic, cardiac and other conditions [e.g., obesity, diabetes mellitus, hypertension, atherosclerosis, coronary heart disease, acute myocardial infarction, acute kidney injury (AKI)].	B

10849	66158	Fibroblast growth factor receptor (FGFR) IVD, antibody	Фибробласт өсөлтийн хүчин зүйлийн рецептор (FGFR) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of fibroblast growth factor receptor (FGFR) in a clinical specimen.	B
10850	66160	Lipoprotein-associated phospholipase A2 (Lp-PLA2) IVD, control	Липопротейнтэй холбоотой фосфолипаза A2 (Lp-PLA2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lipoprotein-associated phospholipase A2 (Lp-PLA2) in a clinical specimen.	B
10851	66163	Thyroid stimulating hormone receptor (TSHR) antibody IVD, kit, bioassay	Бамбай булчирхайн өдөөгч дааврын рецептор (TSHR) эсрэгбие IVD, иж бүрдэл, био шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to thyroid stimulating hormone receptor (TSHR), also known as thyrotropin receptor, in a clinical specimen, using a bioassay method. It is used in the diagnosis of autoimmune thyroid disorders such as hyperthyroidism in Graves' disease.	B
10852	66165	Osteocalcin IVD, kit, enzyme immunoassay (EIA)	Остеокальцин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of osteocalcin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget's disease).	B
10853	66168	Complement complex SC5b-9 IVD, kit, enzyme immunoassay (EIA)	Нэмэлт цогцолбор SC5b-9 IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement complex SC5b-9 in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10854	66176	C-X-C motif chemokine ligand 13 (CXCL13) IVD, calibrator	CXC мотив химокин лиганд 13 (CXCL13) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of C-X-C motif chemokine ligand 13 (CXCL13), a chemokine also known as B lymphocyte chemoattractant (BLC), in a clinical specimen.	B

10855	66177	C-X-C motif chemokine ligand 13 (CXCL13) IVD, reagent	CXC мотив химокин лиганд 13 (CXCL13) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay intended to be used for the qualitative and/or quantitative detection of C-X-C motif chemokine ligand 13 (CXCL13), a chemokine also known as B lymphocyte chemoattractant (BLC), in a clinical specimen.	B
10856	66191	TNF-alpha inhibitor therapeutic drug monitoring IVD, kit, nephelometry/turbidimetry	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, adalimumab, golimumab and etanercept) in a clinical specimen, using a nephelometry/turbidimetry method. The assay is typically used to monitor blood levels of anti-TNF-alpha therapeutics in the treatment of autoimmune conditions such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
10857	66192	TNF-alpha inhibitor therapeutic drug monitoring IVD, calibrator	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement and therapeutic drug monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, adalimumab, golimumab and etanercept) in a clinical specimen.	B
10858	66193	TNF-alpha inhibitor therapeutic drug monitoring IVD, control	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement and therapeutic monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, adalimumab, golimumab and etanercept) in a clinical specimen.	B
10859	66205	Human kallikrein 2 (hK2) IVD, kit, enzyme immunoassay (EIA)	Хүний калликреин 2 (hK2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human kallikrein 2 (hK2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10860	66217	Anti-Mullerian hormone (AMH) IVD, kit, rapid ICT, self-testing	Мюллерийн эсрэг даавар (AMH) IVD, иж бүрдэл, хурдан МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of anti-Mullerian hormone (AMH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to determine the ovarian reserve.	B
10861	66221	Chromogranin A IVD, kit, radioimmunoassay	Хромогранин А IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen, using a radioimmunoassay method. It is typically used to aid in the diagnosis of neuroendocrine tumours (e.g., paraganglioma, pheochromocytoma) and/or in the management of patients with neuroblastoma or related tumours.	B
10862	66222	Big endothelin-1 (bET-1) IVD, kit, enzyme immunoassay (EIA)	Том эндотелин-1 (bET-1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of big endothelin-1 (bET-1), the precursor to endothelin-1 (ET-1), in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the prognosis of patients with congestive heart failure.	B
10863	66223	Dickkopf-related protein 1 (DKK-1) IVD, kit, enzyme immunoassay (EIA)	Диккопфтой холбоотой уураг 1 (DKK-1) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dickkopf-related protein 1 (DKK-1), an inhibitor of the WNT signalling pathway, in a clinical specimen using an enzyme immunoassay (EIA) method. It is used to aid in the diagnosis of conditions associated with bone metabolism (e.g., rheumatoid arthritis, ankylosing spondylitis and glucocorticoid induced osteoporosis).	B
10864	66229	C-type natriuretic protein/N-terminal pro c-type natriuretic peptide IVD, kit, enzyme immunoassay (EIA)	С төрлийн натриуретик уураг/N-терминал про с төрлийн натриуретик пептид IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-type natriuretic protein (CNP) and/or N-terminal pro c-type natriuretic peptide (NT-proCNP) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to assess renal function, skeletal development, vascular disease, or for the prognosis of angina patients.	B

10865	66231	Pancreatic polypeptide IVD, kit, radioimmunoassay	Нойр булчирхайн полипептид IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic polypeptide in a clinical specimen, using a radioimmunoassay method. Pancreatic polypeptide is associated with tumours in the pancreas and gastrointestinal tract.	B
10866	66251	Calprotectin IVD, kit, rapid ICT, self-testing	Calprotectin IVD, иж бүрдэл, шуурхай ICT, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of calprotectin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to aid in the diagnosis of inflammatory bowel disease or other causes of intestinal inflammation.	B
10867	66257	Mavacamten therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Mavacamten эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the cardiovascular drug mavacamten in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
10868	66276	Proenkephalin (PENK) IVD, kit, chemiluminescent immunoassay	Проенкефалин (PENK) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of proenkephalin (PENK), also known as proenkephalin-A, in a clinical specimen, using a chemiluminescent immunoassay method. Proenkephalin is typically used as a marker associated with kidney function.	B
10869	66281	Nicotine/nicotine metabolite IVD, kit, rapid colorimetric, clinical	Никотин/никотины метаболит IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of nicotine and/or nicotine metabolites (e.g., cotinine) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the differentiation of smokers and non-smokers, or in the investigation of the link between smoking and associated disorders (e.g., cancer, coronary heart disease, stroke). It is not intended to be used for self-testing.	B

10870	66299	Intact fibroblast growth factor 23 (iFGF23) IVD, kit, enzyme immunoassay (EIA)	Фибробласт өсөлтийн хүчин зүйл 23 (iFGF23) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of intact fibroblast growth factor 23 (iFGF23) in a clinical specimen, using an enzyme immunoassay (EIA) method. FGF23 is a regulator of phosphate and vitamin D in plasma and is associated with hypophosphotemic and hyperphosphotemic diseases and conditions associated with vitamin D metabolism.	B
10871	66300	C-terminal fibroblast growth factor 23 (cFGF23) IVD, kit, enzyme immunoassay (EIA)	С-терминал фибробласт өсөлтийн хүчин зүйл 23 (cFGF23) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-terminal fibroblast growth factor 23 (cFGF23) in a clinical specimen, using an enzyme immunoassay (EIA) method. FGF23 is a regulator of phosphate and vitamin D in plasma and is associated with hypophosphotemic and hyperphosphotemic diseases and conditions associated with vitamin D metabolism.	B
10872	66308	Suppression of tumorigenicity 2 (ST2) IVD, kit, fluorescent immunoassay	Хавдар үүсгэх чадварыг дарах 2 (ST2) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the soluble suppression of tumorigenicity 2 (ST2) protein in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid in the management and prognosis of patients with chronic heart failure.	B
10873	66312	Pyruvate kinase M2 (PKM2) IVD, kit, rapid ICT, clinical	Пируват киназа М2 (PKM2) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of some types of cancer (e.g., colorectal, breast, lung). It is not intended to be used for self-testing.	B

10874	66317	Soluble urokinase plasminogen activator receptor (suPAR) IVD, kit, enzyme immunoassay (EIA)	Уусдаг урокиназа плазминоген идэвхжүүлэгч рецептор (suPAR) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of soluble urokinase plasminogen activator receptor (suPAR) in a clinical specimen, using an enzyme immunoassay (EIA) method. suPAR is a non-specific marker of immune activation and inflammation, and it is typically measured to monitor disease progression.	B
10875	66324	Pyruvate kinase M2 (PKM2) IVD, kit, enzyme immunoassay (EIA)	Пируват киназа М2 (PKM2) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pyruvate kinase M2 (PKM2) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis and/or management of some types of cancer (e.g., colorectal, breast, lung).	B
10876	66344	Total estrogen (oestrogen) IVD, reagent	Нийт эстроген (эстроген) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total estrogen (oestrogen) hormones [estradiol, estriol, and estrone] in a clinical specimen.	B
10877	66345	Apolipoprotein E (Apo E) IVD, kit, chemiluminescent immunoassay	Аполипопротейн Е (Apo E) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of apolipoprotein E (Apo E) lipid in a clinical specimen, using a chemiluminescent immunoassay method.	B
10878	66360	Total immunoglobulin A (IgA total) IVD, kit, chemiluminescent immunoassay	Нийт иммуноглобулин А (нийт IgA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin A (IgA total) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to help assess the function of immunity, and as an aid in the diagnosis of immunological diseases.	B
10879	66361	Total immunoglobulin M (IgM total) IVD, kit, chemiluminescent immunoassay	Нийт иммуноглобулин М (нийт IgM) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total immunoglobulin M (IgM total) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to help assess the function of immunity, and as an aid in the diagnosis of immunological diseases.	B

10880	66366	Suppression of tumorigenicity 2 (ST2) IVD, control	Хавдар үүсгэх чадварыг дарах 2 (ST2) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of soluble suppression of tumorigenicity 2 (ST2) protein in a clinical specimen.	B
10881	66367	Suppression of tumorigenicity 2 (ST2) IVD, calibrator	Хавдар үүсгэх чадварыг дарах 2 (ST2) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of soluble suppression of tumorigenicity 2 (ST2) protein in a clinical specimen.	B
10882	66368	Concizumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Концизумабын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody concizumab in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10883	66393	Vitamin B12 IVD, kit, rapid ICT, clinical	Витамин B12 IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10884	66395	Calprotectin IVD, kit, nephelometry/turbidimetry	Калпротектин IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of calprotectin protein in a clinical specimen, using a nephelometry/turbidimetry method. This test is commonly used to aid in the diagnosis of inflammatory bowel disease or other causes of intestinal inflammation.	B
10885	66397	Pancreatic elastase (PE) IVD, kit, nephelometry/turbidimetry	Нойр булчирхайн эластаза (PE) IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used to aid in the diagnosis of conditions associated with pancreatic insufficiency (e.g., chronic pancreatitis).	B

10886	66414	Vitamin A IVD, kit, rapid ICT, clinical	Витамин A IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of vitamin A in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10887	66418	Oxcarbazepine therapeutic drug monitoring IVD, reagent	Окскарбазепин эмчилгээний эмийн хяналт IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay intended to be used for the quantitative measurement and therapeutic monitoring of the central nervous system drug oxcarbazepine in a clinical specimen.	B
10888	66440	Estradiol (oestradiol) (E2) IVD, kit, rapid ICT, clinical	Эстрадиол (эстрадиол) (E2) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the estrogen (oestrogen) hormone estradiol (oestradiol) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10889	66448	Heparin-binding protein IVD, kit, chemiluminescent immunoassay	Гепарин холбогч ууураг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to assess the risk of developing severe sepsis with circulatory failure.	B

10890	66449	Fatty acid binding protein (FABP) IVD, kit, rapid ICT, clinical	Өөх тосны хүчлийг холбогч уураг (FABP) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of fatty acid binding protein (FABP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as a marker of various metabolic, cardiac and other conditions [e.g., obesity, diabetes mellitus, hypertension, atherosclerosis, coronary heart disease, acute myocardial infarction, acute kidney injury (AKI)]. It is not intended to be used for self-testing.	B
10891	66451	Angiotensin I IVD, kit, chemiluminescent immunoassay	Ангиотензин I IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of angiotensin I in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to determine plasma renin activity (PRA) to aid in the diagnosis of diseases associated with increased or reduced PRA.	B
10892	66452	Angiotensin II IVD, kit, chemiluminescent immunoassay	Ангиотензин II IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of angiotensin II in a clinical specimen, using a chemiluminescent immunoassay method.	B
10893	66453	Human growth hormone (HGH) IVD, kit, rapid ICT, clinical	Хүний өсөлтийн даавар (HGH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of human growth hormone (HGH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10894	66454	Insulin-like growth factor I (IGF1) IVD, kit, rapid ICT, clinical	Инсулин төст өсөлтийн хүчин зүйл I (IGF1) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of insulin-like growth factor I (IGF1), also referred to as somatomedin C, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10895	66455	Interleukin-6 (IL-6) IVD, kit, rapid ICT, clinical	Интерлейкин-6 (IL-6) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of interleukin-6 (IL-6) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10896	66456	Progesterone IVD, kit, rapid ICT, clinical	Прогестерон IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of progesterone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10897	66457	Cancer antigen 72-4 (CA72-4) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 72-4 (CA72-4) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 72-4 (CA72-4) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as a marker commonly associated with gastrointestinal and ovarian cancer. It is not intended to be used for self-testing.	B

10898	66458	Dehydroepiandrosterone sulfate (DHEAS) IVD, kit, rapid ICT, clinical	Дегидроэпиандростерон сульфат (DHEAS) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of dehydroepiandrosterone sulfate (DHEAS) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of adrenal hyperplasia and hirsutism. It is not intended to be used for self-testing.	B
10899	66459	Folate (vitamin B9) IVD, kit, rapid ICT, clinical	Фолат (витамин B9) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of folate (vitamin B9) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10900	66461	Parathyroid hormone (PTH) IVD, kit, rapid ICT, clinical	Бамбай булчирхайн даавар (PTH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10901	66462	Multiple gastrointestinal disease marker IVD, kit, rapid ICT, clinical	Ходоод гэдэсний замын олон өвчний маркер IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple markers (e.g., antibodies, proenzymes, hormones) associated with gastrointestinal disease (e.g., peptic ulcer disease, inflammatory bowel disease) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This test is used in the laboratory or in point-of-care analyses for the rapid detection of markers which may include pepsinogen, gastrin, calprotectin, and/or faecal occult blood. It is not intended to be used for self-testing.	B

10902	66468	Multiple traumatic brain injury marker IVD, kit, rapid non-ICT electrochemical immunoassay, clinical	Олон тооны гэмтлийн тархины гэмтлийн маркер IVD, иж бүрдэл, МХХТ-ийн бус цахилгаан химийн дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple biochemical markers associated with traumatic brain injury in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid electrochemical immunoassay method [excludes immunochromatographic tests (ICT)]. This test is commonly used in the laboratory or in point-of-care analyses to detect glial fibrillary acidic protein (GFAP) and ubiquitin carboxyl-terminal hydrolase L1 (UCH-L1) as an aid to determine the need for a neuroimaging scan following head injury. It is not intended to be used for self-testing.	B
10903	66471	Total prostate specific antigen (tPSA) IVD, kit, rapid microfluidic immunoassay, clinical	Нийт түрүү булчирхайн өвөрмөц эсрэгтөрөгч (tPSA) IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total prostate specific antigen (tPSA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10904	66486	Rheumatoid factor IVD, kit, rapid ICT, clinical	Ревматоид хүчин зүйл IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of rheumatoid factor immunoglobulins in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10905	66487	Cyclic citrullinated peptide antibody (anti-CCP) IVD, kit, rapid ICT, clinical	Цикл цитрулинжуулсан пептидийн эсрэгбие (анти-CCP) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to cyclic citrullinated peptide (anti-CCP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10906	66488	Neutrophil gelatinase-associated lipocalin (NGAL) IVD, kit, rapid ICT, clinical	Нейтрофил желатиназатай холбоотой липокалин (NGAL) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of neutrophil gelatinase-associated lipocalin (NGAL) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10907	66489	Beta-2-microglobulin IVD, kit, rapid ICT, clinical	Бета-2-микроглобулин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of beta-2-microglobulin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10908	66490	Ovarian tissue antibody IVD, kit, fluorescent immunoassay	Өндгөвчний эд эсийн эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the ovary (theca cells) in a clinical specimen, using a fluorescent immunoassay method. This test detects autoimmune antibodies directed at ovarian antigens to aid in the diagnosis of autoimmune fertility disorders.	B
10909	66499	Total immunoglobulin E (IgE total) IVD, kit, rapid ICT, clinical	Нийт иммуноглобулин Е (IgE нийт) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10910	66500	Suppression of tumorigenicity 2 (ST2) IVD, kit, rapid ICT, clinical	Хавдар үүсгэх чадварыг дарангуйлах 2 (ST2) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the soluble suppression of tumorigenicity 2 (ST2) protein in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the management and prognosis of patients with chronic heart failure. It is not intended to be used for self-testing.	B
10911	66501	Troponin T IVD, kit, chemiluminescent immunoassay	Troponin T IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of troponin T in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a marker to assist in the diagnosis of acute myocardial infarction.	B
10912	66508	BNP/NT-proBNP IVD, kit, rapid non-ICT magnetic immunoassay, clinical	BNP/NT-proBNP IVD, иж бүрдэл, МХХТ-ийн бус соронзон дархлааны шинжилгээ, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of B-type natriuretic protein (BNP) and/or N-terminal pro b-type natriuretic peptide (NT-proBNP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid magnetic immunoassay method [excludes immunochromatographic tests (ICT)]. This is a rapid test commonly used in the laboratory or in point-of-care analyses as an aid in the diagnosis of heart failure. It is not intended to be used for self-testing.	B
10913	66510	Gamma-aminobutyric acid (GABA) antibody IVD, control	Гамма-аминобутирийн хүчил (GABA) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the neurotransmitter gamma-aminobutyric acid (GABA) in a clinical specimen.	B

10914	66514	TNF-alpha IVD, kit, chemiluminescent immunoassay	TNF-альфа IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tumour necrosis factor-alpha (TNF-alpha) in a clinical specimen, using a chemiluminescent immunoassay method. TNF-alpha is associated with autoimmune and inflammatory disorders such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
10915	66516	Interleukin 1 receptor-like 1 (IL1RL1) protein IVD, kit, chemiluminescent immunoassay	Интерлейкин 1 рецептортой төстэй 1 (IL1RL1) уураг IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin 1 receptor-like 1 (IL1RL1), also known as growth stimulation expressed gene 2 (ST2), in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used for the early diagnosis of myocardial infarction and to determine the prognosis of patients with heart failure.	B
10916	66517	Zinc transporter (ZnT) antibody IVD, kit, chemiluminescent immunoassay	Цайр зөөвөрлөгч (ZnT) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a zinc transporter (ZnT) protein, belonging to the solute carrier 30 (SLC30) family, in a clinical specimen, using a chemiluminescent immunoassay method.	B
10917	66518	Zinc transporter (ZnT) antibody IVD, reagent	Цайр тээвэрлэгч (ZnT) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to a zinc transporter (ZnT) protein, belonging to the solute carrier 30 (SLC30) family, in a clinical specimen.	B
10918	66519	Aspartate aminotransferase (AST) IVD, kit, rapid colorimetric, clinical	Аспартат аминотрансфераза (AST) IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of aspartate aminotransferase (AST) [as total AST, or isoenzymes] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10919	66520	Alanine aminotransferase (ALT) IVD, kit, rapid colorimetric, clinical	Аланин аминотрансфераза (ALT) IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of alanine aminotransferase (ALT) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10920	66521	Uric acid IVD, kit, rapid colorimetric, clinical	Шээсний хүчил IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of uric acid in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10921	66522	High density lipoprotein (HDL) cholesterol IVD, kit, rapid colorimetric, clinical	Өндөр нягтралтай липопротейн (HDL) холестерины IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of high density lipoprotein (HDL) cholesterol lipid in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to aid in the diagnosis and/or management of cardiovascular and/or liver disease (e.g., hepatitis, cirrhosis). It is not intended to be used for self-testing.	B
10922	66523	Triglyceride IVD, kit, rapid colorimetric, clinical	Триглицеридын IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of triglycerides in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10923	66524	Total cholesterol lipid IVD, kit, rapid colorimetric, clinical	Нийт холестерины липидийн IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total cholesterol lipid in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10924	66525	Golgi membrane protein 1 (GOLM1) IVD, kit, chemiluminescent immunoassay	Голги мембраны уураг 1 (GOLM1) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of golgi membrane protein 1 (GOLM1), also known as golgi protein 73 (GP73) or golgi phosphoprotein 2 (GOLPH2), in a clinical specimen using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of liver fibrosis and cirrhosis.	B
10925	66526	Golgi membrane protein 1 (GOLM1) IVD, reagent	Голги мембраны уураг 1 (GOLM1) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of golgi membrane protein 1 (GOLM1), also known as golgi protein 73 (GP73) or golgi phosphoprotein 2 (GOLPH2), in a clinical specimen.	B
10926	66539	Glycated haemoglobin (HbA1c) IVD, kit, rapid microfluidic immunoassay, clinical	Гликатжуулсан гемоглобин (HbA1c) IVD, иж бүрдэл, хурдан бичил шингэний дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of glycated haemoglobin (HbA1c), also known as glycosylated haemoglobin, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses for the monitoring of average glucose levels and glycaemic control. It is not intended to be used for self-testing.	B
10927	66540	T-cell receptor beta constant 1 IVD, antibody	Т эсийн рецептор бета тогтмол 1 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of T-cell receptor beta constant 1, encoded by the TRBC1 gene, in a clinical specimen.	B

10928	66550	Vitamin D binding protein (DBP) IVD, kit, enzyme immunoassay (EIA)	Витамин D холбогч уураг (DBP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin D binding protein (DBP), also known as group-specific component globulin (gc-globulin), in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10929	66551	Haptoglobin IVD, kit, rapid ICT, clinical	Хаптоглобин IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of haptoglobin in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses typically to aid the diagnosis of tumour or haemolytic anaemia. It is not intended to be used for self-testing.	B
10930	66556	Cannabinoid antibody IVD, kit, enzyme immunoassay (EIA)	Каннабиноид эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to cannabinoids in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to identify cannabinoid abuse, or overdose in the case of therapeutic use.	B
10931	66557	Creatinine (non-urinary) IVD, kit, rapid colorimetric, clinical	Креатинин (шээсний бус) IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of creatinine within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for urine testing, or for self-testing.	B
10932	66565	Multiple squamous cell carcinoma-associated marker IVD, antibody	Олон хавтгай хучуур эдийн хорт хавдартай холбоотой маркер IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple markers associated with squamous cell carcinoma of the lung [e.g., desmoglein 3 (DSG3) and cytokeratin 5 (CK5)], in a clinical specimen.	B

10933	66568	Urea IVD, kit, rapid colorimetric, clinical	Мочевин IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of urea in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10934	66569	Multiple clinical chemistry enzyme IVD, kit, rapid colorimetric, clinical	Олон эмнэлзүйн химийн фермент IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple clinical chemistry enzymes in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP). This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10935	66570	Ketamine/ketamine metabolite IVD, kit, rapid ICT, clinical	Кетамин/кетамин метаболит IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ketamine and/or ketamine metabolites in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10936	66572	Indoleamine 2,3-dioxygenase 1 (IDO1) IVD, antibody	Индоламин 2,3-диоксигеназа 1 (IDO1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of indoleamine 2,3-dioxygenase 1 (IDO1) in a clinical specimen.	B
10937	66573	Insulin-like growth factor 1 receptor (IGF1R) IVD, antibody	Инсулин шиг өсөлтийн хүчин зүйл 1 рецептор (IGF1R) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of insulin-like growth factor 1 receptor (IGF1R) in a clinical specimen.	B

10938	66577	Cystatin C IVD, kit, rapid ICT, self-testing	Cystatin C IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cystatin C protein in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing for the assessment of kidney function by a layperson in the home or similar environment.	B
10939	66578	Interferon IVD, antibody	Интерферон IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple types of interferon in a clinical specimen.	B
10940	66579	Desmoglein 3 (DSG3) IVD, antibody	Desmoglein 3 (DSG3) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of desmoglein 3 (DSG3) in a clinical specimen.	B
10941	66587	Multiple kidney function marker IVD, kit, rapid colorimetric, clinical	Олон бөөрний үйл ажиллагааны маркер IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple biochemical markers associated with kidney function in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. Analytes detected may include microalbumin, urea, and creatinine. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10942	66588	Multiple kidney function marker IVD, kit, multiple rapid technologies, clinical	Бөөрний олон үйл ажиллагааны маркер IVD, иж бүрдэл, олон хурдацтай технологи, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple biochemical markers associated with kidney function in a clinical specimen within a short period, relative to standard laboratory testing procedures, using multiple rapid technologies on a single analyser (e.g., rapid colorimetric and rapid immunochromatographic test (ICT) [lateral flow test] methods). Analytes detected may include microalbumin, urea, and creatinine. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10943	66590	Apolipoprotein J (Apo J) IVD, antibody	Аполипопротейн J (Apo J) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of apolipoprotein J (Apo J), also referred to as clusterin, in a clinical specimen.	B
10944	66592	Multiple colorectal cancer risk-associated protein marker IVD, kit, enzyme immunoassay (EIA)	Олон бүдүүн гэдэсний хорт хавдрын эрсдэлтэй холбоотой уургийн маркер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple protein markers associated with colorectal cancer [e.g., pyruvate kinase M2, issue inhibitor of matrix metalloproteinase 1 (TIMP-1)] in a clinical specimen, using an enzyme immunoassay (EIA). It is typically used together with dedicated interpretive software to determine an individual's risk of developing colorectal cancer.	B
10945	66593	Beta defensin IVD, kit, enzyme immunoassay (EIA)	Бета дефензин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of beta defensin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10946	66595	Dipeptidyl peptidase 3 IVD, kit, rapid microfluidic immunoassay, clinical	Дипептидил пептидаз 3 IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of dipeptidyl peptidase 3 in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the prognosis of patients with sepsis or septic shock. It is not intended to be used for self-testing.	B
10947	66596	Adrenomedullin (ADM) IVD, kit, rapid microfluidic immunoassay, clinical	Адреномедуллин (ADM) IVD, иж бүрдэл, хурдан бичил шингэний дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of adrenomedullin (ADM) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of conditions such as septic shock, acute heart failure, and cardiogenic shock. It is not intended to be used for self-testing.	B

10948	66601	Multiple solid tumour differentiation marker IVD, antibody	Олон тооны хатуу хавдрын ялгах маркер IVD, эсрэгбие	Multiple immunoglobulins (antibody cocktail) capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple proteins/markers associated with more than one specific tissue or solid tumour (e.g., lung, breast, ovarian, kidney, gastrointestinal, colon) in a clinical specimen. It is typically used in cancer-screening assays to help diagnostic differentiation between solid tumour types through detection of various types of proteins/markers (e.g., homeobox protein CDX-2, cytokeratin 7, GATA3, uroplakin).	B
10949	66603	Symmetric dimethylarginine (SDMA) IVD, kit, enzyme immunoassay (EIA)	Тэгш хэмтэй диметиларгинин (SDMA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of symmetric dimethylarginine (SDMA) in a clinical specimen, using an enzyme immunoassay (EIA) method. SDMA is typically used as a marker for kidney function.	B
10950	66606	Vitamin B3 (niacin) IVD, kit, nephelometry/turbidimetry	Витамин B3 (ниацин) IVD, иж бүрдэл, нефелометр / турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B3 (niacin) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10951	66607	Vitamin B5 (pantothenic acid) IVD, kit, nephelometry/turbidimetry	Витамин B5 (пантотений хүчил) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Vitamin B5 (pantothenic acid) in a clinical specimen, using a nephelometry/turbidimetry method.	B
10952	66608	Vitamin B12 IVD, kit, nephelometry/turbidimetry	B12 витамин IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen, using a nephelometry/turbidimetry method.	B

10953	66610	Multiple oral cancer marker IVD, kit, rapid ICT, clinical	Олон амны хөндийн хорт хавдрын маркер IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple markers associated with oral cancer (e.g., p16 antigen and EGFR), also known as mouth cancer, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10954	66612	Achaete-scute homolog 1 (ASH1) IVD, antibody	Achaete-scute homolog 1 (ASH1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of achaete-scute homolog 1 (ASH1), also known as ASCL1 or A basic helix-loop-helix protein 46 (bHLHa46), in a clinical specimen.	B
10955	66613	Iba1 protein IVD, antibody	Iba1 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of ionizing calcium-binding adaptor molecule 1 (Iba1) protein (a protein expressed in activated macroglia), in a clinical specimen.	B
10956	66614	Asymmetric dimethylarginine (ADMA) IVD, kit, enzyme immunoassay (EIA)	Тэгш бус диметиларгинин (ADMA) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of asymmetric dimethylarginine (ADMA) in a clinical specimen, using an enzyme immunoassay (EIA) method. Elevated ADMA is a risk factor for conditions associated with endothelial dysfunction and cardiovascular disease such as diabetes mellitus, arteriosclerosis, chronic heart failure and chronic renal failure.	B
10957	66615	Amphetamine/methamphetamine group antibody IVD, kit, enzyme immunoassay (EIA)	Амфетамин/метамфетамины бүлгийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to multiple drugs belonging to the amphetamine and/or methamphetamine group(s) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

10958	66621	Cancer antigen 62 (CA62) IVD, kit, chemiluminescent immunoassay	Хорт хавдрын эсрэгтөрөгч 62 (CA62) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of cancer antigen 62 (CA62) in a clinical specimen, using a chemiluminescent immunoassay method. CA62 is a tumour marker associated with epithelial cancer.	B
10959	66634	Nuclear receptor ROR-gamma IVD, antibody	Цөмийн рецептор ROR-гамма IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of nuclear receptor ROR-gamma, also known as retinoid-related orphan receptor-gamma or RAR-related orphan receptor C (a member of the nuclear receptor family), in a clinical specimen.	B
10960	66635	Tripartite motif containing protein 29 (TRIM29) IVD, antibody	29 (TRIM29) IVD уураг агуулсан гурвалсан мотив, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of tripartite motif containing protein 29 (TRIM29), also known as ataxia telangiectasia group D-associated protein (ATDC), in a clinical specimen.	B
10961	66638	Tissue prostate specific antigen (PSA) IVD, antibody	Эдийн түрүү булчирхайн өвөрмөц эсрэгтөрөгч (PSA) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of prostate specific antigen in a tissue specimen.	B
10962	66648	Multiple bladder tissue/tumour marker IVD, antibody	Давсагны олон эд/хавдрын маркер IVD, эсрэгбие	Multiple immunoglobulins (antibody cocktail) capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple protein markers associated with bladder tissue and/or bladder cancer [e.g., p53, CD44, cytokeratin 20 (CK20)] in a clinical specimen.	B
10963	66683	NUTM1 protein IVD, antibody	NUTM1 уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of NUTM1 protein, also known as nuclear protein in testis, in a clinical specimen.	B

10964	66684	Pituitary-specific positive transcription factor 1 (PIT-1) IVD, antibody	Гипофизын өвөрмөц эерэг транскрипцийн хүчин зүйл 1 (PIT-1) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of pituitary-specific positive transcription factor 1 (PIT-1), also known as growth hormone factor 1 (GHF-1), in a clinical specimen.	B
10965	66714	Gluten immunogenic peptide (GIP) IVD, kit, rapid ICT, clinical	Цавуулаг иммуноген пептид (GIP) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of gluten immunogenic peptides (GIP) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the screening of coeliac disease (intolerance to gluten). It is not intended to be used for self-testing.	B
10966	66716	Gluten immunogenic peptide (GIP) IVD, kit, enzyme immunoassay (EIA)	Цавуулаг иммуноген пептид (GIP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of gluten immunogenic peptides (GIP) in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is intended to be used as an aid in the diagnosis of coeliac disease (intolerance to gluten).	B
10967	66747	Total cortisol IVD, kit, rapid microfluidic immunoassay, clinical	Нийт кортизолын IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total cortisol in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of endocrine disorders. It is not intended to be used for self-testing.	B
10968	66748	Total testosterone IVD, kit, rapid microfluidic immunoassay, clinical	Нийт тестостероны IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total testosterone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10969	66752	Multiple imminent labour-associated marker IVD, kit, rapid ICT, clinical	Удахгүй болох хөдөлмөртэй холбоотой олон тооны маркер IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple markers associated with imminent labour in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. Examples of detectable markers include insulin-like growth factor binding protein 1 (IGFBP-1) and interleukin-6 (IL-6). This is a rapid test used in the laboratory or in point-of-care analyses to assess the risk of imminent birth in cases of threatened preterm labour (PTL). It is not intended to be used for self-testing.	B
10970	66765	Mitragynine IVD, kit, rapid ICT, clinical	Mitragynine IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of mitragynine (also known as kratom) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10971	66772	Tyrosine phosphatase-related islet antigen 2 antibody (anti-IA2) IVD, kit, radioimmunoassay	Тирозин фосфатазтай холбоотой арлын эсрэгтөрөгч 2 эсрэгбие (анти-IA2) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to tyrosine phosphatase-related islet antigen 2 (anti-IA2) in a clinical specimen, using a radioimmunoassay method. It is typically used as a predictive marker for the development of type 1 diabetes.	B
10972	66778	Multiple form 25-hydroxy vitamin D IVD, kit, rapid microfluidic immunoassay, clinical	Олон хэлбэрийн 25-гидрокси витамин D IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple forms of 25-hydroxy vitamin D in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10973	66779	Thyroid stimulating hormone (TSH) IVD, kit, rapid microfluidic immunoassay, clinical	Бамбай булчирхайн өдөөгч даавар (TSH) IVD, иж бүрдэл, хурдан бичил шингэний дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of thyroid stimulating hormone (TSH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10974	66780	Procalcitonin (PCT) IVD, kit, rapid microfluidic immunoassay, clinical	Прокальцитонин (PCT) IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of procalcitonin (PCT) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
10975	66781	Free thyroxine (FT4) IVD, kit, rapid microfluidic immunoassay, clinical	Үнэгүй тироксин (FT4) IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of free thyroxine (FT4) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of hypothyroidism or hyperthyroidism. It is not intended to be used for self-testing.	B
10976	66782	Multiple thyroid marker IVD, kit, rapid microfluidic immunoassay, clinical	Олон бамбай булчирхайн маркер IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple thyroid markers associated with thyroid disease in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. Analytes detected may include, but are not limited to, free triiodothyronine (FT3), free thyroxine (FT4), thyroid stimulating hormone (TSH) and/or thyroid peroxidase (TPO). This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10977	66795	Multiple trace element IVD, kit, mass spectrometry	Олон микроэлементийн IVD, иж бүрдэл, масс спектрометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry trace elements [e.g., zinc (Zn), copper (Cu), selenium (Se), chromium (Cr), cobalt (Co), iodine (I), manganese (Mn), molybdenum (Mo)] in a clinical specimen, using a mass spectrometry method.	B
10978	66808	T-box transcription factor 19 (TBX19) protein IVD, antibody	T-box transscription factor 19 (TBX19) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of t-box transcription factor 19 (TBX19), also known at Tpit, in a clinical specimen.	B
10979	66809	Ciprofloxacin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Ципрофлоксацины эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ciprofloxacin in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10980	66810	Ceftazidime therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Цефтазидимийн эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug ceftazidime in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
10981	66841	Human chorionic gonadotropin beta-subunit IVD, antibody	Хүний chorionic gonadotropin бета дэд нэгж IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen.	B
10982	66842	Human chorionic gonadotropin beta-subunit IVD, calibrator	Хүний chorionic gonadotropin бета-дэд нэгж IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen.	B
10983	66843	Human chorionic gonadotropin beta-subunit IVD, control	Хүний chorionic gonadotropin бета дэд нэгж IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen.	B

10984	66844	Human chorionic gonadotropin beta-subunit IVD, kit, chemiluminescent immunoassay	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy.	B
10985	66845	Human chorionic gonadotropin beta-subunit IVD, kit, enzyme immunoassay (EIA)	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy.	B
10986	66846	Human chorionic gonadotropin beta-subunit IVD, kit, enzyme immunohistochemistry	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen, using an enzyme immunohistochemistry method. It is typically used for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy.	B
10987	66847	Human chorionic gonadotropin beta-subunit IVD, kit, fluorescent immunoassay	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen, using a fluorescent immunoassay method. It is typically used for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy.	B

10988	66848	Human chorionic gonadotropin beta-subunit IVD, kit, radioimmunoassay	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen, using a radioimmunoassay method. It is typically used for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy.	B
10989	66849	Human chorionic gonadotropin beta-subunit IVD, kit, rapid agglutination, clinical	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, хурдан наалдуулах, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an agglutination method. This is a rapid test commonly used in the laboratory or in point-of-care analyses for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy. It is not intended to be used for self-testing.	B
10990	66850	Human chorionic gonadotropin beta-subunit IVD, kit, rapid ICT, clinical	Хүний chorionic gonadotropin бета дэд нэгж IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses for early detection of pregnancy, as a predictive indicator of adverse pregnancy outcomes (e.g., miscarriage), or as an indicator of trisomy 21 (Down syndrome) during pregnancy. It is not intended to be used for self-testing.	B
10991	66851	Human chorionic gonadotropin beta-subunit IVD, reagent	Хүний chorionic gonadotropin бета дэд нэгж IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of the beta subunit on the intact HCG hormone and/or free beta subunit (beta-HCG) in a clinical specimen.	B

10992	66852	Total human chorionic gonadotropin IVD, kit, rapid ICT, self-testing	Хүний нийт chorionic gonadotropin IVD, иж бүрдэл, шуурхай МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total human chorionic gonadotropin (HCG), which includes a combination of intact HCG, nicked HCG, alpha-HCG subunits, and beta-HCG subunits, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to detect pregnancy.	B
10993	66853	Oncostatin M IVD, kit, enzyme immunoassay (EIA)	Онкостатин М IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of oncostatin M (OSM) in a clinical specimen, using an enzyme immunoassay (EIA) method. Increased levels of OSM have been associated with failure of tumour necrosis factor alpha (TNF-alpha) inhibitors to treat inflammatory bowel disease (IBD).	B
10994	66854	Multiple monoclonal immunoglobulin isotype IVD, kit, mass spectrometric immunoassay	Олон моноклональ иммуноглобулины изотип IVD, иж бүрдэл, масс спектрометрийн дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple monoclonal immunoglobulin isotypes including IgA, IgG, IgM, and may also include kappa and lambda light chains, in a clinical specimen, using a mass spectrometric immunoassay method. It is typically used to aid in the diagnosis and monitoring of monoclonal gammopathies such as multiple myeloma, Waldenström's disease, and macroglobulinaemia.	B
10995	66855	Adrenocorticotropic hormone (ACTH) IVD, kit, rapid ICT, clinical	Адренокортикотроп даавар (ACTH) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the adrenocorticotropic hormone (ACTH) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B

10996	66857	Heparin-binding protein IVD, kit, rapid ICT, clinical	Гепарин-холбогч уураг IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of heparin binding protein [also known as cationic antimicrobial protein 37 (CAP37) or azurocidin] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses typically to assess the risk of developing severe sepsis with circulatory failure. It is not intended to be used for self-testing.	B
10997	66866	Allergen-specific immunoglobulin G (IgG)/IgM antibody IVD, kit, rapid ICT, clinical	Харшлын өвөрмөц иммуноглобулин G (IgG)/IgM эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies to one or multiple specific allergen(s) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses which might be used to screen for allergies associated with certain conditions [e.g., hypersensitivity pneumonitis (HP)]. It is not intended to be used for self-testing.	B
10998	66871	Multiple traumatic brain injury marker IVD, kit, fluorescent immunoassay	Олон тооны гэмтлийн тархины гэмтлийн маркер IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple biochemical markers associated with traumatic brain injury in a clinical specimen, using a fluorescent immunoassay method. This test is used to detect glial fibrillary acidic protein (GFAP) and ubiquitin carboxyl-terminal hydrolase L1 (UCH-L1) as an aid to determine the need for a neuroimaging radiological scan following head injury.	B

10999	66873	Total testosterone IVD, kit, rapid ICT, clinical	Нийт тестостероны IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total testosterone in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11000	66874	Allergen-specific immunoglobulin G (IgG) antibody IVD, kit, immunoblot	Харшлын өвөрмөц иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to one or multiple specific allergen(s) in a clinical specimen, using an immunoblot method. This test is typically used to screen for allergies associated with certain conditions [e.g., hypersensitivity pneumonitis (HP)].	B
11001	66884	Multiple monoclonal immunoglobulin isotype IVD, control	Олон моноклональ иммуноглобулины изотип IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of multiple monoclonal immunoglobulin isotypes including IgA, IgG, IgM, and may also include kappa and lambda light chains, in a clinical specimen.	B
11002	66886	Piperacillin therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Пиперациллиний эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the antimicrobial drug piperacillin, a member of a group of drugs known as penicillin, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11003	66889	Multiple cardiac marker IVD, kit, rapid microfluidic immunoassay, clinical	Зүрхний олон маркер IVD, иж бүрдэл, хурдан микрофлюидик дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple combinations of cardiac markers [e.g., B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I, troponin T] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11004	66896	Total immunoglobulin E (IgE total) IVD, kit, rapid ICT, self-testing	Нийт иммуноглобулин Е (нийт IgE) IVD, иж бүрдэл, шуурхай МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total immunoglobulin E (IgE total) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	B
11005	66920	Parathyroid hormone (PTH) IVD, kit, rapid microfluidic immunoassay, clinical	Бамбай булчирхайн даавар (PTH) IVD, иж бүрдэл, хурдан микрофлюидийн дархлааны шинжилгээ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of parathyroid hormone (PTH) [intact, whole, or truncated fragments] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using a rapid microfluidic immunoassay method. This is a rapid test used in the laboratory or in point-of-care analyses typically to aid in the diagnosis of disorders of calcium metabolism. It is not intended to be used for self-testing.	B

11006	66924	Tau protein IVD, kit, fluorescent immunoassay	Тау уураг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of microtubule-associated tau protein [total tau (t-tau) or phosphorylated tau (p-tau)] in a clinical specimen, using a fluorescent immunoassay method. It is typically used to aid the diagnosis of neurodegenerative disorders such as Alzheimer's disease.	B
11007	66953	Alpha-2-macroglobulin IVD, kit, enzyme immunoassay (EIA)	Альфа-2-макроглобулин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-2-macroglobulin in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of proteinuria as an indicator of kidney damage or disease.	B
11008	66955	Chymotrypsin IVD, kit, enzyme immunoassay (EIA)	Химотрипсин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chymotrypsin in a clinical specimen, using an enzyme immunoassay ((EIA) method. It is typically used to aid in the diagnosis of conditions associated with pancreatic insufficiency (e.g., chronic pancreatitis).	B
11009	66983	Complement component C1q IVD, kit, nephelometry/turbidimetry	Нэмэлт бүрэлдэхүүн хэсэг C1q IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade component C1q in a clinical specimen, using a nephelometry/turbidimetry method. It is typically used for the characterization and/or diagnosis of complement cascade component C1q deficiency, which may be associated with systemic lupus erythematosus (SLE) and glomerulonephritis.	B
11010	66987	Vitamin B12 IVD, kit, enzyme immunoassay (EIA)	B12 витамин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vitamin B12, also known as cobalamin, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11011	66989	Adrenomedullin (ADM) IVD, kit, chemiluminescent immunoassay	Адреномедуллин (ADM) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of adrenomedullin (ADM) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a marker of endothelial function and/or to aid in the diagnosis and treatment of patients with sepsis or septic shock, acute heart failure, and cardiogenic shock.	B
11012	67006	Folate (vitamin B9) IVD, kit, enzyme immunoassay (EIA)	Фолат (витамин B9) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of folate (vitamin B9) in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11013	67010	Dehydroepiandrosterone (DHEA) IVD, kit, chemiluminescent immunoassay	Дегидроэпиандростерон (DHEA) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dehydroepiandrosterone (DHEA) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a marker of adrenal androgen production and may be used to aid in the diagnosis of conditions associated with hypoadrenalism and/or adrenal hyperplasia and tumours (adrenal adenoma or carcinoma).	B
11014	67037	Cancer antigen 50 (CA50) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 50 (CA50) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 50 (CA50) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses, typically as a prognostic marker to monitor the progression of malignant tumours and assess the response to treatment. It is not intended to be used for self-testing.	B

11015	67038	Cancer antigen 242 (CA242) IVD, kit, rapid ICT, clinical	Хорт хавдрын эсрэгтөрөгч 242 (CA242) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of cancer antigen 242 (CA242) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses, typically as a prognostic marker to monitor the progression of malignant tumours and assess the response to treatment. It is not intended to be used for self-testing.	B
11016	67039	Alpha-L-fucosidase IVD, calibrator	Alpha-L-fucosidase IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of alpha-L-fucosidase in a clinical specimen.	B
11017	67040	Alpha-L-fucosidase IVD, control	Альфа-L-фукосидаз IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-L-fucosidase in a clinical specimen.	B
11018	67042	Alpha-fetoprotein-L3 fraction (AFP-L3) IVD, kit, chemiluminescent immunoassay	Альфа-фетопротеин-L3 фракц (AFP-L3) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-fetoprotein-L3 fraction (AFP-L3) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of hepatocellular carcinoma (HCC).	B
11019	67043	Galectin-3 IVD, kit, rapid ICT, clinical	Галектин-3 IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of galectin-3 protein in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses typically to detect early myocardial fibrosis and heart failure. It is not intended to be used for self-testing.	B

11020	67057	Human epididymis protein 4 (HE4) IVD, kit, rapid ICT, clinical	Хүний эпидидимисийн уураг 4 (HE4) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of human epididymis protein 4 (HE4) ovarian cancer marker in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11021	67074	Multiple thyroid hormone uptake (T-uptake) IVD, kit, enzyme immunoassay (EIA)	Бамбай булчирхайн олон дааврын шингээлт (Т-хэрэглэх) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the unbound/free portion of multiple proteins associated with thyroid hormone uptake [e.g., thyroxine binding globulin (TBG), transthyretin, albumin], in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the assessment of thyroid hormone binding capacity for the diagnosis of thyroid disorders associated with hypothyroidism or hyperthyroidism.	B
11022	67075	Annexin A10 IVD, antibody	Annexin A10 IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of annexin A10 in a clinical specimen.	B
11023	67076	Cone-rod homeobox (CRX) protein IVD, antibody	Cone-rod homeobox (CRX) уураг IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of cone-rod homeobox (CRX) protein in a clinical specimen.	B
11024	67077	Secretagogin (SCGN) IVD, antibody	Секретагогин (SCGN) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of secretagogin (SCGN) in a clinical specimen.	B
11025	67088	Pancreatic secretory trypsin inhibitor IVD, antibody	Нойр булчирхайн шүүрлийн трипсин дарангуйлагч IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of pancreatic secretory trypsin inhibitor, also known as serine protease inhibitor Kazal-type 1 (SPINK1), in a clinical specimen.	B

11026	67094	T-box transcription factor T (TBXT) IVD, antibody	T-box транскрипцийн хүчин зүйл T (TBXT) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of t-box transcription factor T (TBXT), also known as brachyury protein, in a clinical specimen.	B
11027	67095	Interleukin-10 (IL-10) IVD, kit, chemiluminescent immunoassay	Интерлейкин-10 (IL-10) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of interleukin-10 (IL-10) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of immune and/or inflammatory response disorders.	B
11028	67114	High mobility group protein HMGI-C IVD, antibody	Өндөр хөдөлгөөнт бүлгийн уураг HMGI-C IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of high mobility group protein HMGI-C, also known as high mobility group AT-hook protein 2 (HMGA2), in a clinical specimen.	B
11029	67118	Proenkephalin (PENK) IVD, kit, rapid ICT, clinical	Proenkephalin (PENK) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of proenkephalin (PENK), also known as proenkephalin-A, in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. Proenkephalin is typically used as a marker associated with kidney function. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11030	67128	Proenkephalin (PENK) IVD, control	Проенкефалин (ПЕНК) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of proenkephalin (PENK), also known as proenkephalin-A, in a clinical specimen.	B
11031	67138	Lactate dehydrogenase 1 (LDH-1) isoenzyme IVD, reagent	Лактатдегидрогеназа 1 (LDH-1) изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lactate dehydrogenase 1 (LDH-1) isoenzyme in a clinical specimen.	B

11032	67152	Complement factor H IVD, antibody	Комплемент хүчин зүйл H IVD, эсрэгбие	One or multiple immunoglobulins with the capability of binding to specific antigenic determinants intended to be used for the qualitative and/or quantitative detection of complement factor H in a clinical specimen.	B
11033	67162	Multiple antinuclear antibody (ANA) screening IVD, kit, rapid ICT, clinical	Олон тооны антинуклеар эсрэгбие (ANA) скрининг IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple types of antinuclear antibodies (ANA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11034	67163	Double stranded DNA (anti-dsDNA) antibody IVD, kit, rapid ICT, clinical	Давхар хэлхээтэй ДНХ (anti-dsDNA) эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to double stranded DNA (anti-dsDNA) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	B
11035	67165	Leucine aminopeptidase (LAP) IVD, reagent	Лейцин аминопептидаза (LAP) IVD, урвалж	A reagent which is intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of leucine aminopeptidase (LAP) in a clinical specimen.	B
11036	67174	C-X-C motif chemokine ligand 10 (CXCL10) IVD, kit, enzyme immunoassay (EIA)	CXC motif химокин лиганд 10 (CXCL10) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of C-X-C motif chemokine ligand 10 (CXCL10), also known as interferon gamma-induced protein-10 (IP-10), in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is typically used as an aid in the diagnosis of Mycobacterium tuberculosis infection.	B
11037	67176	Proenkephalin (PENK) IVD, calibrator	Проенкефалин (PENK) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of proenkephalin (PENK), also known as proenkephalin-A, in a clinical specimen.	B

11038	67180	C-X-C motif chemokine ligand 10 (CXCL10) IVD, kit, rapid ICT, clinical	CXC motif chemokine ligand 10 (CXCL10) IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of C-X-C motif chemokine ligand 10 (CXCL10), also known as interferon gamma-induced protein (IP10), in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses as an aid in the diagnosis of Mycobacterium tuberculosis infection. It is not intended to be used for self-testing.	B
11039	67181	Gastric cancer-associated microRNA IVD, kit, nucleic acid technique (NAT)	Ходоодны хорт хавдартай холбоотой микроРНХ IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple microRNA (miRNA) markers associated with gastric cancer in a clinical specimen, using a nucleic acid technique (NAT). It is typically used to identify patients who are at a greater risk of developing gastric cancer.	B
11040	67187	Lipoprotein-associated phospholipase A2 (Lp-PLA2) IVD, reagent	Липопротейнтэй холбоотой фосфолипаза А2 (Lp-PLA2) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lipoprotein-associated phospholipase A2 (Lp-PLA2) in a clinical specimen.	B
11041	67190	Alpha-L-fucosidase IVD, reagent	Альфа-L-фукосидаз IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of alpha-L-fucosidase in a clinical specimen.	B
11042	67207	Glycylproline dipeptidyl aminopeptidase (GPDA) IVD, reagent	Глицилпролин дипептидил аминопептидаза (GPDA) IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of glycylproline dipeptidyl aminopeptidase (GPDA) in a clinical specimen.	B
11043	67238	Interleukin-1 alpha (IL-1a) IVD, antibody	Интерлейкин-1 альфа (IL-1a) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of interleukin-1 alpha (IL-1a) in a clinical specimen.	B

11044	67239	Interleukin-1 beta (IL-1b) IVD, antibody	Интерлейкин-1 бета (IL-1b) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of interleukin-1 beta (IL-1b) in a clinical specimen.	B
11045	67240	Interleukin-6 (IL-6) IVD, antibody	Интерлейкин-6 (IL-6) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of interleukin-6 (IL-6) in a clinical specimen.	B
11046	67266	Immunoglobulin E sub (IgE sub) IVD, antibody	Иммуноглобулин E дэд ангилал (IgE дэд ангилал) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of one or multiple immunoglobulin E sub es (IgE sub es) in a clinical specimen.	B
11047	67291	TNF-alpha inhibitor therapeutic drug monitoring IVD, kit, fluorescent immunoassay	TNF-альфа дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a tumour necrosis factor-alpha (TNF-alpha) inhibitor (e.g., infliximab, adalimumab, golimumab and etanercept) in a clinical specimen, using a fluorescent immunoassay method. The assay is typically used to monitor blood levels of anti-TNF-alpha therapeutics in the treatment of autoimmune conditions such as Crohn's disease, ulcerative colitis and rheumatoid arthritis.	B
11048	67299	Vasoactive intestinal peptide (VIP) IVD, enzyme immunoassay (EIA)	Гэдэсний васоактив пептид (VIP) IVD, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of vasoactive intestinal peptide (VIP), also referred to as vasoactive intestinal polypeptide, in a clinical specimen using an enzyme immunoassay (EIA) method.	B
11049	67301	Complement component C3d IVD, kit, enzyme immunoassay (EIA)	Нэмэлт бүрэлдэхүүн хэсэг C3d IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of complement cascade component C3d in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11050	67302	Follistatin IVD, kit, enzyme immunoassay (EIA)	Фоллистатин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of follistatin, also known as activin-binding protein, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11051	67304	Homocysteine IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Гомоцистеины IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of homocysteine in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
11052	67305	Abatacept therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Абатацепт эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and/or therapeutic monitoring of the t-cell co-stimulation inhibitor abatacept in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to monitor blood levels of abatacept in the treatment of rheumatoid arthritis.	B
11053	67308	Multiple antibacterial therapeutic drug monitoring IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Олон төрлийн бактерийн эсрэг эмчилгээний эмийн хяналт IVD, иж бүрдэл, шингэний хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of multiple antibacterial/antibiotic drugs (e.g., ampicillin, cefazolin, flucloxacillin, piperacillin and tazobactam) in a clinical specimen, using a liquid chromatography/mass spectrometry (LC/MS) method.	B
11054	67313	Multiple amino acid IVD, kit, liquid chromatography	Олон амин хүчлийн IVD, иж бүрдэл, шингэн хроматографи	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple amino acids in a clinical specimen, using a liquid chromatography method. It is typically used to aid in the monitoring of amino acid plasma levels during dietary therapy.	B
11055	67319	Multiple chronic kidney disease (CKD) marker IVD, kit, chemiluminescent immunoassay	Бөөрний олон архаг өвчний (CKD) маркер IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple non-genetic markers associated with chronic kidney disease (CKD), [e.g., tumour necrosis factor receptor-1 (TNFR-1), tumour necrosis factor receptor-2 (TNFR-2), kidney injury molecule-1 (KIM-1), blood urea nitrogen (BUN), haemoglobin A1c (HbA1c), albumin and creatinine ration (UACR)] in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to determine the risk of kidney function decline in patients with chronic illness e.g., type 2 diabetes and/or CKD. It is not intended to be used for routine kidney function testing.	B

11056	67329	Multiple inflammatory marker IVD, control	Олон тооны үрэвслийн маркер IVD, хяналт	A material which is used to verify the performance of one or multiple assays intended to be used for the qualitative and/or quantitative detection of multiple markers associated with inflammation in a clinical specimen. Markers detected may include (but are not limited to) C-reactive protein (CRP), procalcitonin (PCT), interleukin-6 (IL-6), and serum amyloid A.	B
11057	67350	Canakinumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Канакинумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the interleukin-1 beta (IL-1β) inhibitor canakinumab in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to monitor blood levels of canakinumab in the treatment of inflammatory diseases.	B
11058	67351	Complement C5 inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Complement C5 дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of a complement C5 inhibitor (e.g., eculizumab, ravulizumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to monitor the blood levels of a complement C5 inhibitor in the treatment of autoimmune disease or blood disorders.	B
11059	67352	IL-23 inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	IL-23 дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of an interleukin-23 (IL-23) inhibitor (e.g., guselkumab, risankizumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the blood levels of an anti-IL-23 therapeutic in the treatment of inflammatory disease.	B
11060	67353	IL-17A inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	IL-17A дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of an interleukin-17A (IL-17A) inhibitor (e.g., secukinumab, ixekizumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the blood levels of an anti-IL-17A therapeutic in the treatment of inflammatory disease.	B

11061	67354	Tocilizumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Тоцилизумабын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the interleukin-6 (IL-6) inhibitor tocilizumab in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11062	67355	Multiple non-specific cancer marker IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Өвөрмөц бус хорт хавдрын олон маркер IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эс ангилах/урсгалын цитометр (FACS/Flow)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple cancer markers [e.g., Apo10 (an epitope of DNaseX), transketolase-like protein 1 (TKTL1)] not dedicated to a particular type of tumour, in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	B
11063	67358	Thymidine kinase IVD, kit, chemiluminescent immunoassay	Тимидин киназа IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of thymidine kinase in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a prognostic marker to monitor the progression of haematological malignancies [e.g., non-Hodgkin lymphoma, chronic lymphocytic leukaemia (CLL)] and assess the response to treatment.	B
11064	67359	Anti-canakinumab antibody IVD, kit, enzyme immunoassay (EIA)	Канакинумабын эсрэг эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the interleukin-1 beta (IL-1β) inhibitor canakinumab (also known as anti-drug antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to canakinumab in the treatment of inflammatory diseases.	B
11065	67360	Anti-tocilizumab antibody IVD, kit, enzyme immunoassay (EIA)	Anti-tocilizumab эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the interleukin-6 (IL-6) inhibitor tocilizumab (also known as anti-drug antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to tocilizumab (anti-IL-6) in the treatment of inflammatory diseases.	B

11066	67361	Anti-IL-23 inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Anti-IL-23 дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to an interleukin-23 (IL-23) inhibitor, (also known as anti-drug antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to an anti-IL-23 therapeutic (e.g., guselkumab, risankizumab) in the treatment of inflammatory disease.	B
11067	67362	Anti-IL-17A inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Anti-IL-17A дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to an interleukin-17A (IL-17A) inhibitor, (also known as anti-drug antibodies) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to an anti-IL-17A therapeutic (e.g., secukinumab, ixekizumab) in the treatment of inflammatory disease.	B
11068	67363	Anti-complement C5 inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Комплементийн эсрэг C5 дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a complement C5 inhibitor (e.g., eculizumab, ravulizumab), also known as anti-drug antibodies, in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to a complement C5 inhibitor in the treatment of autoimmune disease or blood disorders.	B
11069	67364	Nucleosomal antibody IVD, kit, chemiluminescent immunoassay	Нуклеосомын эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the nucleosome in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis and monitoring of systemic lupus erythematosus (SLE) or lupus nephritis.	B
11070	67367	Programmed death-ligand 1 (PD-L1) inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Програмчлагдсан үхлийн лиганд 1 (PD-L1) дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a programmed death-ligand 1 (PD-L1) inhibitor (e.g., atezolizumab, avelumab, durvalumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor blood levels of a programmed death-ligand 1 (PD-L1) inhibitor in the treatment of cancer.	B

11071	67368	Anti-programmed death-ligand 1 (PD-L1) inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Программчлагдсан үхлийн лиганд 1 (PD-L1) дарангуйлагч эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to a programmed death-ligand 1 (PD-L1) inhibitor (e.g., atezolizumab, avelumab, durvalumab), [also known as anti-drug antibodies] in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to a PD-L1 inhibitor in the treatment of cancer.	B
11072	67369	Leptin IVD, kit, chemiluminescent immunoassay	Лептин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of leptin in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of leptin resistance in obese patients.	B
11073	67373	Daratumumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Даратумумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody daratumumab, a CD38 inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11074	67374	Denosumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Деносумабын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody denosumab, a RANK ligand (RANKL) inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11075	67375	Ipilimumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Ипилимумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody ipilimumab, a CTLA-4 inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11076	67376	Anti-daratumumab antibody IVD, kit, enzyme immunoassay (EIA)	Анти-даратумумаб эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to the CD38 inhibitor daratumumab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to daratumumab in the treatment of multiple myeloma.	B

11077	67377	Anti-denosumab antibody IVD, kit, enzyme immunoassay (EIA)	Анти-деносумаб эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to the RANK ligand (RANKL) inhibitor denosumab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to denosumab in the treatment of conditions associated with bone loss (e.g., osteoporosis, bone metastases, bone loss associated with cancer/cancer therapy).	B
11078	67378	Polymyositis-scleroderma antibody (anti-PM-Scl) IVD, kit, chemiluminescent immunoassay	Полимиозит-склеродермийн эсрэгбие (anti-PM-Scl) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to polymyositis-scleroderma (anti-PM-Scl) in a clinical specimen, using a chemiluminescent immunoassay method.	B
11079	67379	Multiple melanoma marker IVD, antibody	Олон меланома маркер IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple markers associated with melanoma [e.g., tyrosinase, Melan-A/MART-1 peptide and/or glycoprotein 100 (gp100)] in a clinical specimen.	B
11080	67380	KBA.62 antigen IVD, antibody	KBA.62 эсрэгтөрөгч IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of the antigen associated with the antibody KBA.62 in a clinical specimen. The target antigen is an uncharacterized melanoma-associated antigen.	B
11081	67382	Evolocumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Эволокумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody evolocumab, a PCSK9 inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11082	67383	Programmed cell death protein 1 (PD-1) inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Програмчлагдсан эсийн үхлийн уураг 1 (PD-1) дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a programmed cell death protein 1 (PD-1) inhibitor (e.g., nivolumab, pembrolizumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor blood levels of a programmed cell death protein 1 (PD-1) inhibitor in the treatment of cancer.	B
11083	67384	Anti-evolocumab antibody IVD, kit, enzyme immunoassay (EIA)	Эсрэг эволокумаб эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to the PCSK9 inhibitor evolocumab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to evolocumab in the treatment high LDL cholesterol.	B
11084	67385	Anti-ipilimumab antibody IVD, kit, enzyme immunoassay (EIA)	Anti-ipilimumab эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to the CTLA-4 inhibitor ipilimumab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to ipilimumab in the treatment of cancer.	B
11085	67386	Anti-programmed cell death protein 1 (PD-1) inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Эсрэг програмчлагдсан эсийн үхлийн уураг 1 (PD-1) дарангуйлагч эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to a programmed cell death protein 1 (PD-1) inhibitor (e.g., nivolumab, pembrolizumab), in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to a PD-L1 inhibitor in the treatment of cancer.	B
11086	67387	Pancreatic elastase (PE) IVD, kit, chemiluminescent immunoassay	Нойр булчирхайн эластаза (PE) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of pancreatic elastase (PE) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of conditions associated with pancreatic insufficiency (e.g., chronic pancreatitis).	B

11087	67388	Progranulin IVD, kit, chemiluminescent immunoassay	Програнулин IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of progranulin in a clinical specimen, using a chemiluminescent immunoassay method. It is typically associated with Alzheimer's disease and frontotemporal lobar degeneration with ubiquitin-positive inclusions (FTLD-U), a type of dementia associated with mutation in the GRN gene encoding progranulin.	B
11088	67396	Dickkopf-related protein 3 (DKK-3) IVD, kit, enzyme immunoassay (EIA)	Диккопфтой холбоотой уураг 3 (DKK-3) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of dickkopf-related protein 3 (DKK-3) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is used to aid in the diagnosis of acute and/or progressive chronic kidney disease (CKD).	B
11089	67402	Neuronal transglutaminase antibody IVD, kit, enzyme immunoassay (EIA)	Мэдрэлийн трансглутаминазын эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to neuronal transglutaminase, also known as transglutaminase 6 (TG6), in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the diagnosis of neurological disorders (e.g., ataxia, neuropathies, cerebral palsy, stiff-person syndrome).	B
11090	67403	Multiple metastatic breast cancer-associated marker IVD, antibody	Олон тооны үсэрхийлсэн хөхний хорт хавдартай холбоотой маркер IVD, эсрэгбие	Multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of multiple markers associated with metastatic breast cancer [e.g., RAN GTPase, matrix metalloproteinase-2 (MMP-2)] in a clinical specimen.	B
11091	67404	Anti-omalizimab antibody IVD, kit, enzyme immunoassay (EIA)	Anti-omalizimab эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to the immunoglobulin E (IgE) inhibitor omalizimab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to omalizimab in the treatment of asthma and chronic idiopathic urticaria.	B

11092	67405	Anti-palivizumab antibody IVD, kit, enzyme immunoassay (EIA)	Паливизумабын эсрэгбиеийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to palivizumab in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to palizivumab in the treatment of respiratory syncytial virus (RSV).	B
11093	67406	Anti-ramucirumab antibody IVD, kit, enzyme immunoassay (EIA)	Рамуцирумабын эсрэг эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to ramucirumab, a vascular endothelial growth factor receptor 2 (VEGFR-2) inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to ramucirumab during chemotherapy treatment of cancer.	B
11094	67408	Omalizumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Омализумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody omalizumab, an immunoglobulin E (IgE) inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11095	67409	Ramucirumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Рамуцирумабын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody ramucirumab, a vascular endothelial growth factor receptor 2 (VEGFR-2) inhibitor, in a clinical specimen, using an enzyme immunoassay.	B
11096	67410	Palivizumab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Паливизумаб эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody palivizumab in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11097	67416	Collagen type II C-telopeptide IVD, kit, enzyme immunoassay (EIA)	II төрлийн коллаген С-телопептидийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of collagen type II C-telopeptide and/or metabolites [e.g., beta-isomerized C-terminal telopeptide of type I collagen (beta-CTx)] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to aid in the determination of cartilage degradation, to assess disease (e.g., rheumatoid arthritis, osteoarthritis) progression and/or prognosis.	B
11098	67422	VEGF inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	VEGF дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of an anti-vascular endothelial growth factor (VEGF) therapy [e.g., aflibercept, bevacizumab, ranibizumab] in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to monitor therapeutic levels in the treatment of cancer and macular/retinal conditions [e.g., macular oedema, age-related macular degeneration (ADM)].	B
11099	67423	Anti-VEGF inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Anti-VEGF дарангуйлагч эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to a vascular endothelial growth factor (VEGF) inhibitor in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to anti-VEGF therapy (e.g., aflibercept, bevacizumab, ranibizumab) in the treatment of cancer and macular/retinal conditions [e.g., macular oedema, age-related macular degeneration (ADM)].	B
11100	67424	Anti-cetuximab antibody IVD, kit, enzyme immunoassay (EIA)	Анти-цетуксимаб эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to cetuximab, an epidermal growth factor receptor (EGFR) inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to cetuximab in the treatment of malignant conditions e.g., colorectal cancer, head and neck cancer.	B

11101	67425	Cetuximab therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Кетуксимабын эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic monitoring of the therapeutic antibody cetuximab, an epidermal growth factor receptor (EGFR) inhibitor, in a clinical specimen, using an enzyme immunoassay (EIA) method.	B
11102	67442	Anti-abatacept antibody IVD, kit, enzyme immunoassay (EIA)	Абатацепт эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	An electronic device intended to be used onboard an antimicrobial susceptibility analyser to determine the concentration and/or mass of microorganisms from a clinical specimen and/or culture isolate, for antimicrobial susceptibility profiling. The sensor is stimulated via an applied voltage to reach a resonant frequency which changes as each microorganism flows through the sensor, whereby concentration and mass parameters are calculated. This is a reusable device.	B
11103	67445	Human epidermal growth factor receptor 2 (HER2) inhibitor therapeutic drug monitoring IVD, kit, enzyme immunoassay (EIA)	Хүний эпидермисийн өсөлтийн хүчин зүйлийн рецептор 2 (HER2) дарангуйлагч эмчилгээний эмийн хяналт IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement and therapeutic drug monitoring of a human epidermal growth factor receptor 2 (HER2) protein inhibitor (e.g., pertuzumab, trastuzumab) in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor blood levels of HER2 inhibitor therapeutics in the treatment of breast cancer.	B
11104	67446	Anti-human epidermal growth factor receptor 2 (HER2) inhibitor antibody IVD, kit, enzyme immunoassay (EIA)	Хүний эпидермисийн өсөлтийн хүчин зүйлийн рецептор 2 (HER2) дарангуйлагч эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to a human epidermal growth factor receptor 2 (HER2) protein inhibitor in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to HER2 inhibitor therapy (e.g., pertuzumab, trastuzumab) in the treatment of breast cancer.	B
11105	67447	ADAMTS13 activity IVD, calibrator	ADAMTS13 үйл ажиллагаа IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) activity in a clinical specimen.	B

11106	67448	ADAMTS13 activity IVD, control	ADAMTS13 үйл ажиллагаа IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) activity in a clinical specimen.	B
11107	67449	ADAMTS13 activity IVD, kit, enzyme fluorescence	ADAMTS13 үйл ажиллагаа IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) activity in a clinical specimen, using an enzyme fluorescence method. ADAMTS13 may also be known as von Willebrand factor-cleaving protease. It is typically used to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)].	B
11108	67450	ADAMTS13 activity IVD, kit, enzyme immunoassay (EIA)	ADAMTS13 үйл ажиллагаа IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) activity, in a clinical specimen, using an enzyme immunoassay (EIA) method. ADAMTS13 may also be known as von Willebrand factor-cleaving protease. It is typically used to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)].	B
11109	67451	ADAMTS13 activity IVD, kit, rapid ICT, clinical	ADAMTS13 үйл ажиллагаа IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) [von Willebrand factor-cleaving protease] activity in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)]. It is not intended to be used for self-testing.	B

11110	67452	ADAMTS13 activity/antigen IVD, calibrator	ADAMTS13 идэвхжил/эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen and ADAMTS13 activity, in a clinical specimen.	B
11111	67453	ADAMTS13 activity/antigen IVD, control	ADAMTS13 идэвхжил/эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen and ADAMTS13 activity, in a clinical specimen.	B
11112	67454	ADAMTS13 activity/antigen IVD, kit, enzyme immunoassay (EIA)	ADAMTS13 идэвхжил/эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen and ADAMTS13 activity in a clinical specimen, using an enzyme immunoassay (EIA) method. ADAMTS13 may also be known as von Willebrand factor-cleaving protease. It is typically used to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)].	B
11113	67455	ADAMTS13 antibody IVD, calibrator	ADAMTS13 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) in a clinical specimen.	B
11114	67456	ADAMTS13 antibody IVD, control	ADAMTS13 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) in a clinical specimen.	B

11115	67457	ADAMTS13 antibody IVD, kit, enzyme immunoassay (EIA)	ADAMTS13 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13), in a clinical specimen, using an enzyme immunoassay (EIA) method. ADAMTS13 may also be known as von Willebrand factor-cleaving protease. It is typically used to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)].	B
11116	67458	ADAMTS13 antigen IVD, calibrator	ADAMTS13 антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen in a clinical specimen	B
11117	67459	ADAMTS13 antigen IVD, control	ADAMTS13 антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen in a clinical specimen.	B
11118	67460	ADAMTS13 antigen IVD, kit, enzyme immunoassay (EIA)	ADAMTS13 антиген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of ADAMTS13 (a disintegrin and metalloproteinase with thrombospondin motifs 13) antigen, in a clinical specimen, using an enzyme immunoassay (EIA) method. ADAMTS13 may also be known as von Willebrand factor-cleaving protease. It is typically used to aid in the diagnosis, differentiation and/or management of thrombotic microangiopathies (TMA) [e.g., thrombotic thrombocytopenic purpura (TTP)].	B
11119	67467	Anti-filgrastim antibody IVD, kit, enzyme immunoassay (EIA)	Филграстим эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of anti-drug antibodies to filgrastim in a clinical specimen, using an enzyme immunoassay (EIA) method. The assay is typically used to monitor the immune response to filgrastim therapy in the treatment and/or prevention of chemotherapy-induced neutropenia (CIN).	B

11120	67471	Chromogranin A IVD, kit, chemiluminescent immunoassay	Хромогранин А IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chromogranin A in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used to aid in the diagnosis of neuroendocrine tumours.	B
11121	67500	Total immunoglobulin G (IgG total) IVD, kit, rapid ICT, clinical	Нийт иммуноглобулин G (IgG нийт) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total immunoglobulin G (IgG total) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses to aid in the diagnosis of IgG deficiency. It is not intended to be used for self-testing.	B
11122	67521	Multiple drugs of abuse IVD, kit, chemiluminescent immunoassay	IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээг бууруугаар хэрэглэдэг олон эм	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen, using a chemiluminescent immunoassay method.	B
11123	67522	Multiple drugs of abuse IVD, kit, enzyme immunoassay (EIA)	Зохисгүй хэрэглээний олон эмүүд IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple drugs of abuse in a clinical specimen, using an enzyme immunoassay (EIA) method.	B

11124	67523	Newborn metabolic screen/congenital disorder IVD, kit, fluorescent immunoassay	Нярайн бодисын солилцооны дэлгэц / төрөлхийн эмгэг IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of a clinical specimen for one or more congenital or metabolic disorders of the newborn, using a fluorescent immunoassay method. It typically utilizes whole-blood neonate specimens dried on filter paper, and the analytes detected may include neonatal thyroxine (neonatal T4), neonatal thyroid stimulating hormone (neonatal TSH), 17-hydroxyprogesterone, immunoreactive trypsinogen, and various enzymes and/or amino acids, as indicators of congenital hypothyroidism, adrenal hyperplasia, cystic fibrosis, lysosomal storage disorders (LSDs), or other metabolic disorders.	B
11125	67530	Leucine aminopeptidase (LAP) IVD, calibrator	Лейцин аминопептидаза (LAP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of leucine aminopeptidase (LAP) in a clinical specimen.	B
11126	67531	Leucine aminopeptidase (LAP) IVD, control	Лейцин аминопептидаза (LAP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of leucine aminopeptidase (LAP) in a clinical specimen.	B
11127	10749	Airway suction catheter	Амьсгалын замын сорох катетер	A flexible tube designed to be inserted through the mouth, artificial airway, tracheostomy tube, and/or nostrils, for periodic aspiration of liquids and/or semi-solids from a patient's airway (e.g., pharynx, trachea, bronchi, nasal cavity) as part of a suction system; it is not intended to inflate the lungs. It is typically made of polymer with a smooth and rounded distal-tip, often including end and side holes and a finger-controlled valve to regulate suction. This is a single-use device.	IIb
11128	10759	Umbilical catheter	Хүйн катетер	A very thin flexible tube designed for umbilical blood vessel access in neonates, typically for the infusion of fluids. It is used mainly in arterial catheterization procedures, but venous catheterization is also possible. It will typically have a double or triple lumen to enable additional concurrent functions such as vital sign monitoring and blood sampling (e.g., for blood gas analysis). This is a single-use device.	IIb

11129	10980	Cardiac catheterization laboratory computer	Зүрхний катетержуулалтын лабораторийн компьютер	A dedicated computer designed to calculate, store, and analyse haemodynamic parameters, and other cardiac-related measurements, based on data from catheterization laboratory monitoring/recording. Such data can be pressure measurements that are converted into useful parameters, e.g., cardiac output, pressure gradients, valve areas, shunt flows, vascular resistance, diastolic filling period or systolic ejection period. The computer may store these values chronologically, along with other physiologic events that occur during the procedure. This group of devices may reflect old technology; its functions may be performed using off-the-shelf computer ware and dedicated software.	IIb
11130	11112	Cystoscope	Цистоскоп	A device used for observation, diagnosis, and treatment of the bladder through urethra (the upper urinary tract). The insertion portion may be of flexible or rigid kind. It may be of a fiberscope with image fibreoptic bundle or a videoscope with a CCD chip in the distal end, depending on its image transmitting system.	IIb
11131	11226	Peritoneal dialysis system	Хэвлийн диализийн систем	An assembly of devices consisting of functional units [e.g., a mains electricity (AC-powered) pump, solution mixer, monitor] intended to perform peritoneal dialysis, a treatment that removes fluid and metabolic wastes from the blood by infusing dialysate into the peritoneal cavity through a catheter and a disposable tubing system, and then removing the dialysate. Diffusion of metabolic wastes from the blood to the dialysate occurs within the abdominal cavity through the pores and intercellular channels of the peritoneum. The device may automatically control the flow of dialysate into and out of the abdominal cavity.	IIb
11132	11307	Biliary T drain	Цесний замын Т гадагшлуулах	A sterile, T-shaped, tubular device designed to establish a channel for the removal of fluid from a body cavity or anatomical region (usually the biliary tract). It is typically used in conjunction with, or as a component of, a closed drainage system using a low negative pressure through the drain lumen. It is typically made of silicone and has perforations along its distal end; it does not include any fluid collection bags/containers. It comes in various shapes and sizes. This is a single-use device.	IIb

11133	11490	Electrosurgical system generator	Цахилгаан мэс заслын системийн генератор	An electrically-powered component of a electrosurgical system intended to generate radio-frequency (RF) electrical current for subsequent cutting and coagulation of soft tissues during an endoscopic or open surgical procedure; it is not dedicated to focal ablation of specific tissues (i.e., not a radio-frequency ablation system generator). It includes controls, may include an integrated surgical plume (smoke) suction unit, and is intended to be connected via a cable to an electrosurgical handpiece and electrode (neither of these are included); it is not intended for inert gas-enhanced electrosurgery.	IIb
11134	11500	Electrosurgical return electrode, single-use, sterile	Цахилгаан мэс заслын буцах электрод, нэг удаагийн, ариутгасан	A sterile dispersive conductor intended to be fastened to a patient and connected to an electrosurgical/radio-frequency ablation system generator, to allow return of electrical current from the patient to the generator during an electrosurgical procedure. It has a large surface area and is fastened to the patient's body typically where the greatest surface area can be covered in closest proximity to the surgical site. It will typically be designed with permanently attached cables. This is a single-use device.	IIb
11135	11614	Evoked-potential graphic recording system	Өдөөгдсөн боломжит график бичлэгийн систем	An assembly of devices designed for recording a localized electrical potential from the brain or spinal cord in response to stimulation (i.e., visual, auditory, and/or somatosensory) of the sensory organs, or of some point along the ascending pathway from the sensory organs, or within the central nervous system. It typically includes a sensory stimulator/stimulation system and a graphic recorder. The characteristics of the recorded potential vary with recording location, stimulus modality and level, and level of consciousness or anaesthesia. The resultant waveform may be used to assess the function and integrity of the brain and its sensory pathways.	IIb
11136	11910	Bone graft, natural	Ясны залгаас, байгалийн	Bone transplanted from a donor-site to a recipient site to provide osteogenesis or mechanical support during reconstructive or augmentation surgery. The bone may be sourced from a site on the recipient, or may be from another patient following processing. This is a single-use device.	IIb

11137	11912	Skin graft	Арьс шилжүүлэн суулгах	A patch of skin that is surgically removed from one area of the body and transplanted to another area typically to treat extensive wounds or burns, to treat areas of prior infection with extensive skin loss, for specific surgeries that may require skin transplantation for healing to occur, or for cosmetic reconstructive surgeries.	IIb
11138	12061	Hyperbaric chamber, stationary	Гипербарик камер, суурин	A mains electricity (AC-powered) hard-shelled vessel (e.g., metal, acrylic) in which a patient is placed to receive hyperbaric oxygen therapy (HBOT), the medical use of oxygen (O2) at a higher than atmospheric pressure. The device increases environmental O2 pressure above normal to promote movement of O2 into a patient's tissues. It typically includes an airlock(s) for patient/object entry, view ports, air valves, and a control panel. It is used to treat disorders that typically include decompression sickness, carbon monoxide poisoning, air/gas embolism, necrotizing tissue infections, and various injuries/wounds; it can also be used to study effects of pressure and decompression.	IIb
11139	12292	Laryngectomy tube	Ларингектомийн хоолой	A hollow device intended to maintain tracheostoma patency immediately after laryngectomy to provide an airway for the patient and to prevent tracheostomal stenosis (narrowing) in the months following the procedure. It is a soft plastic or silicone curved/contoured tube, similar to a tracheostomy tube, and may have an inner cannula and be fenestrated to allow simultaneous use with a tracheoesophageal speech valve. It is held in place with a strap or band around the neck and is typically regularly removed and reinserted by the patient. This is a reusable device.	IIb
11140	12678	Ventilation monitor	Амьсгалын монитор	A mains electricity (AC-powered) device that continuously monitors the breathing circuit for various ventilation parameters (e.g., breathing frequency, pressure, flow or lung volume) during the breathing cycle. It may also include indicators for frequency and I:E ratio, and will give an alarm in the event of ventilation failure.	IIb

11141	12719	Ultrasonic nebulizing system	Хэт авианы мананцар үүсгэгч систем	An assembly of devices designed to generate aerosolized medication/fluids (finely dispersed airborne droplets) for inhalation by a patient with a respiratory disorder [e.g., chronic obstructive pulmonary disease (COPD), cystic fibrosis (CF)]. It typically consists of a mains electricity (AC-powered) electronic oscillator, an ultrasound transducer (piezoelectric crystal), a coupling basin, a nebulizer chamber and a fan. A high frequency (e.g., 1-2 MHz) electrical current is applied to the crystal within the oscillator circuit converting it to vibrations which produce sound waves. The coupler (water or saline) transmits the sound waves to the medicated solution in the nebulizing chamber.	IIb
11142	12873	Stationary oxygen concentrator	Хөдөлгөөнгүй хүчилтөрөгч өтгөрүүлэгч	A stationary mains electricity (AC-powered) device designed to concentrate oxygen (O2) from ambient air and deliver the concentrated O2, typically through an attached nasal cannula, to a patient requiring oxygen therapy. It processes the air through an internal filtration system, e.g., a molecular sieve (zeolite granules or membranes), having a large total surface area to separate nitrogen (N2) from the air. It typically consists of an air compressor, filters, dual chambers, a reservoir and controls. The O2 concentration is variable depending on the flow rate utilized. It is typically wheeled but is designed to be placed in one location, e.g., an institution or a home setting.	IIb
11143	13217	Bedside syringe pump	Орны дэргэдэх тариурын насос	A mains electricity (AC-powered) non-ambulatory device designed to precisely drive the plunger of a syringe down its barrel to infuse a solution when it must be administered with a high degree of volume accuracy and rate consistency. Because of the lower flow settings and flow resolution (e.g., 0.1 ml/hr), it is especially appropriate for neonatal, infant, and critical care applications in which small volumes of concentrated drugs are to be delivered over an extended period. It can also be used to administer epidural analgesia. It will typically have internal batteries to allow operation for a short period of time when no line power is available (e.g., during transport or a power outage).	IIb

11144	13220	Cardiac output unit infusion/withdrawal pump	Зүрхний гаралтын нэгж дусаах/татах насос	A device that is a dedicated pump designed to be used together with a cardiac output unit using thermal dilution. It will accurately inject the appropriate drugs/dyes into the bloodstream and withdraw blood samples for use in determining the cardiac output.	IIb
11145	13589	Peritoneovenous shunt	Гэдэсний судасны шунт	A sterile, surgically implanted, subcutaneous plastic tube used to continuously drain ascites fluid from the peritoneal cavity to the jugular vein. This is a single-use device.	IIb
11146	13740	Ethylene oxide sterilizer	Этилен ислийн ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from medical devices and related products using ethylene oxide (ETO) gas with low humidity content as the sterilizing agent; it is typically used for products sensitive to high temperature and humidity. It typically includes a treatment chamber with shelves where the devices to be sterilized are placed, usually after cleaning of gross debris and packed in gas permeable wraps; a means to introduce the gas into the chamber; and controls to chose one of the sterilization cycles. The device is available in a variety of shapes and sizes, including stand-alone (bulk) and tabletop units.	IIb
11147	13899	Suture, collagen	Оёдлын утас, коллаген	A sterile thread made from collagen that is used to join the edges of a wound or incision by stitching. The device is absorbed by the tissues so that removal of the suture is not necessary. It comes in a variety of lengths and may be supplied with a needle. This is a single-use device.	IIb
11148	13900	Cotton suture	Даавуун оёдлын утас	A multiple-strand (multifilament), natural, non-bioabsorbable thread made from cotton fibres intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It provides temporary wound support until the wound sufficiently heals to withstand normal stress, and is either removed or left to be permanently encapsulated in the tissues. This is a single-use device.	IIb

11149	13902	Linen suture	Маалинган оёдлын утас	A multiple-strand (multifilament), natural, non-bioabsorbable thread made from long textile (usually flax) fibres intended to join (approximate) the edges of a soft-tissue wound or incision (especially gastrointestinal) by stitching, or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread is frequently coloured for easy identification during surgery and provides temporary wound support until the wound sufficiently heals to withstand normal stress, after which it is gradually encapsulated by fibrous connective tissue. This is a single-use device.	IIb
11150	13904	Metallic suture, multifilament	Металл оёдлын утас, олон утастай	A multiple-strand (multifilament), non-bioabsorbable wire made of metal (e.g., surgical steel, titanium) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching (e.g., for abdominal wound closure, intestinal anastomosis, hernia repair), or transosseous (through bone) stitching (e.g., sternal closure); it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It is used primarily in orthopaedic, neurosurgical, and thoracic applications and provides temporary wound support until the wound sufficiently heals to withstand normal stress; it may be retained for permanent support. This is a single-use device.	IIb
11151	13905	Suture, nylon	Оёдлын утас, нейлон	A sterile thread made from nylon that is used to join the edges of a wound or incision by stitching. It comes in a variety of lengths and may be supplied with a needle. This is a single-use device.	IIb
11152	13906	Polyester suture, non-bioabsorbable, multifilament	Полиэфир оёдлын утас, био шингэдэггүй, олон утастай	A multiple-strand (multifilament), synthetic thread made from a non-bioabsorbable polyester intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb

11153	13907	Polyolefin/fluoropolymer suture, multifilament	Полиолефин/фторполимер оёдлын утас, олон утастай	A multiple-strand (multifilament), synthetic, non-bioabsorbable thread made of a polyolefin (e.g., polypropylene, polyethylene) or fluoropolymer (e.g., polytetrafluoroethylene, polyvinylidene fluoride) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb
11154	13908	Polyglycolic acid suture	Полигликолийн хүчлийн оёдлын утас	A sterile, typically multiple-strand (multifilament), synthetic, bioabsorbable thread made from a polymerization of polyglycolic acid (PGA) that is intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues. It may include an attached needle intended to be disposed of after single use; it may be coated with a material such as polycaprolactone or uncoated. The thread provides temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis. This is a single-use device.	IIb
11155	13909	Polyolefin/fluoropolymer suture, monofilament	Полиолефин/фторполимер оёдлын утас, монофиламент	A single-strand (monofilament), synthetic, non-bioabsorbable thread made of a polyolefin (e.g., polypropylene, polyethylene) or fluoropolymer (e.g., polytetrafluoroethylene, polyvinylidene fluoride) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb

11156	13910	Silk suture	Торгон оёдлын утас	A natural, non-bioabsorbable thread made from raw silk spun by silkworms (typically coated with beeswax or silicone) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It provides temporary wound support until the wound sufficiently heals to withstand normal stress. Although classified as a "non-bioabsorbable" material, it may be digested by proteolysis after an extended period of time. This is a single-use device.	IIb
11157	14085	Endotracheal tube, single-use	Эндотрахеаль хоолой, нэг удаагийн хэрэглээ	A hollow cylinder inserted orally or nasally into the trachea to provide an unobstructed airway to convey gases and vapours to and from the lungs during anaesthesia, resuscitation, and other situations where the patient is not properly ventilated. The device may: 1) be packaged with a connector that will attach to a breathing circuit or manual resuscitator; 2) have a distal inflatable cuff to seal against the tracheal wall; 3) be armoured and/or radiopaque; and 4) have a built-in pilot balloon for cuff pressure monitoring. It is typically made of plastic or rubber and is available in various diameters and lengths for adult and paediatric patients. This is a single-use device.	IIb
11158	14191	Tube, drainage	Гуурс, бохир гадагшуулах	A, hollow device made of plastic or metal that is used as a conduit to remove fluids or purulent material from a cavity, wound, or infected area. This is a single-use device.	IIb
11159	14202	Gastrointestinal tube	Ходоод гэдэсний гуурс	A hollow device made of flexible plastic, with a single or double lumen, that is positioned in the stomach, duodenum, or jejunum for the purpose of suction or to provide enteral nutrition. This is a single-use device.	IIb

11160	14224	Nephrostomy tube	Нефростомины гуурс	A sterile, hollow device designed to create a channel from the external body surface (through to skin) to the kidney to allow urine to drain when there is an obstruction that is blocking the natural flow of urine out of the body (e.g., a kidney stone). It is inserted into the kidney during a minimally-invasive intervention (e.g., during x-ray with local anaesthetic given at the site of entry or general anaesthetic if necessary) and the proximal end is connected to a drainage bag. This is a single-use device.	IIb
11161	14337	PEEP valve, reusable	PEEP хавхлага, дахин ашиглах боломжтой	A non-sterile device used in a respiratory or anaesthesia breathing circuit or system to maintain a selected level of positive end expiratory pressure (PEEP) in a patient's airway during ventilation. The device is typically constructed of plastic and metal materials, and has a valve(s) actuated with a spring(s) to provide the airway resistance, and an adjustable knob or dial (usually graduated) to adjust the resistance level typically between 5 to 20 cmH2O. It is used with ventilators, stand-alone breathing systems for oxygen delivery, pulmonary resuscitators, or anaesthetic breathing systems often having an expiratory valve function. This is a reusable device.	IIb
11162	14359	Ventilator IMV controller	Агааржуулагчийн IMV хянагч	An unit that, added to a ventilator otherwise incapable of providing intermittent mandatory ventilation (IMV) or synchronized intermittent mandatory ventilation (SIMV) functions, permits the ventilator to provide this kind of breathing mode to the patient during his/her attempts at spontaneous breathing.	IIb
11163	14361	Neonatal intensive-care ventilator	Нярайн эрчимт эмчилгээний амьсгалын аппарат	A mains electricity (AC-powered) automatic cycling device intended for short-term and long-term ventilatory support for a neonatal/paediatric patient, especially those preterm and critically ill with respiratory failure in a critical care setting. It is typically a time-cycled, pressure-control device that includes a small bore flexible tube breathing system. It may be capable of high frequency oscillatory ventilation in addition to conventional ventilation, and includes positive end-expiratory pressure (PEEP) and continuous positive airway pressure (CPAP) controls.	IIb

11164	14386	Vitrectomy system generator	Витректомийн системийн генератор	A mains electricity (AC-powered) ophthalmic device that generates the energy (e.g., ultrasonic, piezoelectric, pneumatic) in a vitrectomy system. The energy is delivered through a handpiece, which converts it into a mechanical oscillating-cutting action to remove (nibble away) vitreous humour (the jelly-like substance that fills the centre of the eye) during ophthalmic surgery. It will typically be activated by the surgeon using a foot control and may provide or support the irrigation/suction systems needed to supply replacement fluid and remove debris. It is typically used to treat diabetic vitreous haemorrhage, retinal detachment, epiretinal membrane, and macular hole.	IIb
11165	14435	Deionization water purification system	Ионгүйжүүлэх ус цэвэршүүлэх систем	An assembly of mains electricity (AC-powered) devices that includes ion exchange columns designed to remove unwanted chemical contaminants from water. This system purifies water principally by removing negative and positive ions of minerals (e.g., sodium, calcium, iron, copper) using filtration through a combination of anionic and cationic resins (also known as demineralization); it facilitates the production of "soft" water.	IIb
11166	14437	Reverse-osmosis water purification system	Урвуу осмос ус цэвэршүүлэх систем	An assembly of devices designed to remove unwanted contaminants (bacteria, viruses, chemicals, dissolved substances) from water using osmotic pressure applied to one side of a selective membrane. The system removes ions, large molecules (e.g. proteins, glucose, urea, salts) and other particles from solution by forcing water at high pressure through a membrane containing pores just big enough (e.g., 0.0005 microns) to permit passage of small molecules and water, whilst the contaminants are flushed to waste.	IIb
11167	14438	Ultraviolet water purification system	Хэт ягаан туяаны ус цэвэршүүлэх систем	An assembly of germicidal ultraviolet (UV) lamps with supplemental components designed to remove unwanted biological contaminants from water. This mains electricity (AC-powered) system purifies water by producing short-wave radiation lethal to bacteria, viruses, and other microorganisms.	IIb

11168	15033	Defibrillator electrode, external, reusable	Дефибриллятор электрод, гадаад, дахин ашиглах боломжтой	An electrical conductor used as a pair to transmit a controlled electrical shock from an external defibrillator to a patient in order to restore a regular heartbeat, typically when the patient is in cardiac fibrillation. It usually consists of a cable set that terminates with hand-operated paddles that are held by the operator to the chest (the intact torso) of the patient so that the discharge passes across the region of the heart. This device is typically available as a set of two paddles with a combined cable/connector, or it may be designed as a single paddle with cable/connector, in which case two will be connected to the defibrillator. This is a reusable device.	IIb
11169	15200	Intracardiac oximeter	Зүрхний дотоод оксиметр	A mains electricity (AC-powered) photoelectric device designed to transmit radiation at a known wavelength(s) through blood to measure the concentration of oxygen, or dye, within the heart based on the amount of reflected or scattered radiation. It is typically used in conjunction with a fibreoptic oximeter catheter (e.g., a Swan-Ganz catheter) that is introduced via a vein in the groin or neck to measure mixed venous oxygen saturation (SvO2) or evaluate intracardiac shunts.	IIb
11170	15783	Stationary electric high-frequency ventilator	Суурин цахилгаан өндөр давтамжийн агааржуулалт	A mains electricity (AC-powered) automatic cycling machine intended to assist or control alveolar ventilation using a frequency that is considerably higher than the physiological breathing rate and a tidal volume less than or equal to the anatomic dead space. The device will typically function independently or may be used in conjunction with an intensive care ventilator to superimpose its high frequency percussive ventilation on top of a normal ventilation frequency. It is typically used in critical care situations on patients with respiratory disease requiring ventilatory assistance, typically through an artificial airway [e.g., endotracheal (ET) tube or tracheostomy].	IIb
11171	15794	Scleral buckling device, bioabsorbable	Биологийн шингээх чадвартай, склера нугалах төхөөрөмж	A bioabsorbable device intended to be implanted on the sclera to compress the eye (scleral buckling) for the surgical treatment of retinal detachment.	IIb

11172	15795	Radioisotope cardiac output unit	Радиоизотопын зүрхний гаралтын нэгж	A unit that measures the blood flow from the heart using the indicator dilution technique, in which a radioisotope is injected upstream of the heart and monitored on the downstream side. The measured results are reproduced by this device.	IIb
11173	15873	Suture, iodized	Оёдлын утас, иоджуулсан	A sterile thread that has been treated with the antimicrobial agent iodine, and is used to join the edges of a wound or incision by stitching. It comes in a variety of lengths and may be supplied with a needle. This is a single-use device.	IIb
11174	15939	Dental automated x-ray film processor	Шүдний автомат рентген кино процессор	A mains electricity (AC-powered) automated dental x-ray film processor designed to be used in the dental practise for the rapid processing of films. This x-ray film processing system will automatically develop, fix, wash, and dry dental x-ray film. It is typically of floor or desktop design.	IIb
11175	15963	X-ray image intensifier	Рентген зураг эрчимжүүлэгч	A device that converts an x-ray image into a light image, then to an electronic image and finally back to a light-based image of diminished size and increased brightness. It consists of a large evacuated glass envelope with four basic parts: 1) an input phosphor/fluorescent screen; 2) a photocathode; 3) an electrostatic focusing lens; and 4) an accelerating anode and output phosphor/fluorescent screen. This group of devices includes single, dual and triple field intensifier designs. It is primarily used in fluoroscopic, angiographic, cine-fluorographic x-ray, and digital x-ray applications as it outputs an image small enough to be coupled to cine, television or spot-film cameras.	IIb
11176	15971	Metallic suture, monofilament	Металл оёдлын утас, монофиламент	A single-strand (monofilament), non-bioabsorbable wire made of metal (e.g., surgical steel, titanium) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching (e.g., for abdominal wound closure, intestinal anastomosis, hernia repair), or transosseous (through bone) stitching (e.g., sternal closure); it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It is used primarily in orthopaedic, neurosurgical, and thoracic applications and provides temporary wound support until the wound sufficiently heals to withstand normal stress; it may be retained for permanent support. This is a single-use device.	IIb

11177	15972	Suture, silver	Оёдлын утас, мөнгө	A sterile wire made from silver (Ag) that is used to join the edges of a wound or incision by stitching. It comes in a variety of lengths and may be supplied with a needle. This is a single-use device.	IIb
11178	15974	Cerebrospinal fluid reservoir	Тархи нугасны шингэний нөөц	A sterile, closed system designed to access the cerebral ventricles to drain and collect cerebrospinal fluid to reduce intracranial pressure (ICP). This is a single-use device.	IIb
11179	16038	Implantable pulse generator mesh bag, non-bioabsorbable	Суулгах импульс үүсгэгч торон уут, био шингэдэггүй	An implantable woven/knitted or porous bag made from a non-bioabsorbable synthetic polymer(s) intended to envelop an implantable pulse generator (IPG) (e.g., cardiac pacemaker/defibrillator) to stabilize the implant in the subcutaneous pocket in which it is implanted; it does not contain an antimicrobial agent.	IIb
11180	16047	Facial mandibular prosthesis	Нүүрний доод эрүүний протез	A sterile implantable device intended to be used in the functional reconstruction of non-joint mandibular (lower jaw) deficits. It is made of metal and/or polymeric materials.	IIb
11181	16048	Mesh, surgical	Торон, мэс заслын	A device that is used to cover and/or support soft or hard tissue following injury or degenerative disease. The device may be made from metal or a polymer material. It may also be used as a short-term implant when made from a biodegradable material, e.g., polyglycolic acid.	IIb
11182	16077	Orthopaedic bone bolt	Ортопедийн ясны боолт	A short rod or shaft designed to be inserted through a long bone in order to secure the bone for traction or for a similar process/apparatus. The device is fastened with a nut/washer, and is typically made of metal or a polymer. It is typically used in the proximal tibia or distal femur. This is a single-use device.	IIb
11183	16082	Bone cap	Ясны таг	A sterile implantable device intended to be used to cover the severed end of a long bone (e.g., the humerus or tibia) to control bone overgrowth in juvenile amputees. It is typically mushroom-shaped and made of either silicone elastomer or ultrahigh molecular weight polyethylene (PE).	IIb

11184	16101	Bone screw, non-biodegradable	Ясны шураг, биологийн задралд ордоггүй	A device used for internal fracture fixation that holds plates or nails to bone, fastens soft tissue to bone or provides interfragmentary stabilization for bone. This device is used in orthopaedic and maxillofacial surgery. There are a number of kinds available: cortical, cancellous, maleolar, scaphoid, partially threaded and fully threaded. A lag screw can be any of these used in a particular way to obtain compression across bone fragments. The device is made of a material that cannot be chemically degraded or absorbed via natural body processes [e.g., implant grade metal, stainless steel, titanium (including its alloys) or chrome-cobalt].	IIb
11185	16103	Bone staple	Ясны үндсэн бүтээгдэхүүн	A length of wire, typically curved or U-shaped, implanted into fractured bone to achieve fixation and repair. The device may also be used to attach/secure structures (e.g., ligaments/tendons) to bone, or to reduce/cease bone growth in skeletal deformities (e.g., by being implanted across epiphysial cartilage). This device is not adjustable after it has been applied and is usually made of metal alloy material.	IIb
11186	16131	Cranial resinous compound	Гавлын ясны давирхайн нэгдэл	A substance used to reconstitute cranial bone after neurosurgery (i.e., cranioplasty). It typically consists of a self-curing resin [e.g., polymethylmethacrylate (PMMA)] or a two part resinous material made of several compositions. It may be conformed as an inert implant in an appropriate shape (e.g., a plate) needed to repair the defect of the skull, either using an intraoperatively cured solid composition, or a preoperatively fabricated, porous, custom-made, implant. After application, this device cannot be reused.	IIb
11187	16177	Dye-dilution cardiac output unit	Будаг шингэлэх зүрхний гаралтын нэгж	A unit that measures the blood flow from the heart using the indicator dilution technique, in which a dye is injected upstream of the heart and monitored on the downstream side by a balloon-tipped (flow-directed) catheter. The measured results are reproduced by this device.	IIb

11188	16231	Electrocardiograph, professional, multichannel	Электрокардиограф, мэргэжлийн, олон суваг	A device intended to be used by a healthcare professional in a clinical setting to acquire and process the electrical activity of the heart for digital display in the form of a graph, to assist a physician in assessing electrical cardiac physiology [electrocardiography (ECG)]. It is designed for recording the electrical signal from two or more configurations of electrodes (ECG-leads) at a time (multichannel) and may be intended for resting ECG and/or stress/exercise ECG. It will either include an integrated display or be designed to transmit ECG data to an off-the-shelf device for display; ECG electrodes may be included. Data interpretation and/or telemetry features might also be included.	IIb
11189	16244	Hydrocephalic shunt	Гидроцефалик шунт	An implantable tube, typically containing a valve, that is used to divert excessive cerebrospinal fluid (CSF) in the skull (hydrocephalus) to either the peritoneal cavity (ventriculoperitoneal shunt) or the right atrium (ventriculoatrial shunt), where it can be absorbed back into the body. The hydrocephalic valve typically opens at a pre-set pressure.	IIb
11190	16405	Apheresis system	Аферезийн систем	An assembly of electrically-powered devices designed for the extracorporeal separation and removal of a constituent of whole blood (e.g., plasma, platelets, leukocytes) and pathogens, and the return of the remaining constituents to the patient. It typically includes pumps to circulate the blood and uses methods such as membrane filtration, centrifugation, adsorption, or a combination of these to separate the constituent from the blood. The system may be used therapeutically (e.g., to remove immune complexes or low density lipoproteins) or for the harvesting of blood constituents (e.g., for HLA-matched platelets or fresh frozen plasma).	IIb

11191	16431	Intrapartum pressure monitoring catheter	Төрсний доторх даралтыг хянах катетер	A flexible tube with a pressure sensor, transducer, and/or thermistor located at its distal tip, used for intrapartum transcervical measurement of the intrauterine and amniotic pressures. It is attached at its proximal end via a signal cable to an external monitor that displays the pressure/temperature values, and is used to monitor the intensity, duration, and frequency of uterine contractions during labour. It may also be used for fluid infusion and sampling of amniotic fluid. It is typically made of plastic [e.g., polyethylene, polytetrafluoroethylene (PTFE) commonly known as Teflon, polyurethane] and/or silicone, and may include a catheter introducer/sheath. This is a single-use device.	IIb
11192	16433	Peritoneal catheter	Хэвлийн хөндийн катетер	A flexible sterile tube designed for percutaneous insertion into the peritoneal space [cavity surrounded by a double layer sac that lines the abdominal walls and covers most of the viscera contained therein (peritoneum)]. It is typically used to drain ascites and abdominal abscesses, or it may be used as a distal catheter in a hydrocephalic shunt system. This is a single-use device.	IIb
11193	16584	Polyester suture, bioabsorbable, monofilament, non-antimicrobial	Полиэфир оёдлын утас, био шингээх чадвартай, нэг утастай, нянгийн эсрэг үйлчилгээтэй	A single-strand (monofilament), synthetic, bioabsorbable thread made from a polyester (e.g., polydioxanone, poliglecaprone, polycaprolactone, polyglyconate, polyhydroxybutyrate) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues. The thread provides extended temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb

11194	16604	X-ray system tube	Рентген системийн хоолой	A replaceable component of a medical or dental diagnostic, or therapeutic x-ray system consisting of a tube (a glass envelope enclosing a filament, anode, cathode under vacuum, and an interface for an electrical connection) designed to convert an input of electrical energy into an output of x-ray energy. It is the x-ray system component that provides a supply of electrons which are free to move, a means of getting the electrons to travel at high-speed, and providing a force which will cause them to suddenly change direction which results in x-ray production. Included are designs referred to as cold-cathode gas discharge tubes, fixed anode tubes, rotating anode tubes, quick change tubes.	IIb
11195	16752	Blood washing/centrifugation bag	Цус угаах/центрифугийн уут	A flexible container intended to be used to facilitate blood processing via blood washing and/or centrifugation (e.g., cryoprecipitation) to achieve separation of blood components [e.g., red blood cells (RBCs), platelets, plasma], typically to generate a blood product from autologous or donor blood for procedural (e.g., surgical haemostasis) or transfusion applications [e.g., fibrinogen rich cryoprecipitate]. It is additionally intended to be used as a blood storage bag, and is made of flexible durable materials that withstand centrifugation and freezing/thawing. This is a single-use device.	IIb
11196	16763	Intracranial pressure monitor	Гавлын дотоод даралтыг хянах	An electrically-powered device intended for intermittent or continuous measurement and display of intracranial pressure (ICP). It is used in conjunction with an invasive intracranial device (e.g., intracerebral sensor catheter) that transmits electrical signals via connected cables or pressure signals via tubing (e.g., via the air pouch method), or either telemetrically. It may include an alarm designed to alert clinical staff to an elevated ICP and may also produce a strip-chart recording or display of the ICP waveform that enables interpretation of long-term ICP trends.	IIb
11197	16771	Staple	Үдээсний машин	A device for stapling.	IIb

11198	16855	Laboratory incubator carbon dioxide analyser	Лабораторийн инкубатор нүүрстөрөгчийн давхар ислийн анализатор	A mains electricity (AC-powered) automatic or semi-automatic instrument used to determine the concentration of carbon dioxide (CO2) present in a laboratory incubator in order to monitor the environment in which microorganism samples are cultured.	IIb
11199	16941	General/multiple surgical noble gas laser system	Ерөнхий/олон мэс заслын эрхэм хийн лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite noble gas (e.g., argon) ions to emit a high-power laser beam intended for general surgery and/or multiple specialized surgery applications (non-dedicated), which typically includes treatment of vascular diseases including the removal of vascular tumours. It typically includes a light source, delivery/positioning device(s), and controls/foot-switch. It typically emits energy at wavelengths of 488 and/or 514 nm (blue-green) and is usually operated in continuous-wave mode.	IIb
11200	16943	Surgical Nd:YAG laser system	Мэс заслын Nd:YAG лазер систем	A mains electricity (AC-powered) Light Amplification by Stimulated Emission of Radiation (LASER) device assembly in which input energy is used to excite a rod of yttrium-aluminium-garnet (YAG) crystal doped with neodymium (Nd) as the active medium to emit a beam of intense, coherent, monochromatic electromagnetic (EM) radiation to cut, excise/vaporize, and coagulate deep tissues for general surgery and/or multiple specialized surgical applications (non-dedicated), especially endoscopic surgeries. It includes a light source, delivery/positioning device(s), and controls/foot-switch usually operated in continuous-wave/long-pulsed mode for energy penetration and large volume tissue absorption.	IIb
11201	16945	Ophthalmic argon laser system	Нүдний аргон лазерын систем	A mains electricity (AC-powered) Light Amplification by Stimulated Emission of Radiation (LASER) device assembly in which input energy is used to excite argon (Ar) gas (active medium) to emit a beam of intense, coherent, monochromatic electromagnetic (EM) radiation to coagulate abnormal vascular tissue in the retina and for other photocoagulation procedures in the eye. It typically includes a light source and controls/foot-switch, and is typically coupled to a biomicroscope slit lamp or to an indirect ophthalmoscope by a flexible fibreoptic cable.	IIb

11202	16947	Ophthalmic solid-state laser system, photodisruption	Нүдний хатуу төлөвт лазерын систем, фото тасалдал	A mains electricity (AC-powered) device assembly in which input energy is used to excite a glass/crystal rod to emit a high-power laser beam intended to cause a photodisruptive effect in the eye by forming a plasma and generating mechanical shock waves (microexplosions) that destroy tissue when highly focused (e.g., for cataract extraction, posterior capsulotomy). It typically includes a light source and controls/foot-switch and has a built-in slit lamp biomicroscope, or is coupled to a slit lamp or indirect ophthalmoscope by fixed mirrors. It does not include femtosecond pulsing, frequency doubling, or fundus imaging technology.	IIb
11203	16953	Inhalational analgesia unit	Амьсгалын замын өвдөлт намдаах хэсэг	A device primarily designed to administer analgesic gases to the patient, or produce analgesic vapours for inhalation. The unit will typically include a demand valve; some may be connected to a vaporizer calibrated for the administration of analgesic concentrations of inhalational anaesthetic agents. Typically used: 1) during labour to help the patient retain her consciousness while pain sensations are subdued; or 2) in dentistry.	IIb
11204	16973	Orthovoltage therapeutic x-ray system	Orthovoltage эмчилгээний рентген систем	An assembly of devices that comprise a therapeutic x-ray system that is designed to deliver x-ray beams with voltages within the range of 200 to 500 kV. These beams are more penetrating than superficial x-rays generated by grenz rays or a low-voltage therapeutic x-ray system. Approximately 50 percent of the x-ray beams generated by this unit reach 10 cm. This kind of system is primarily used for the administration of palliative rather than curative treatments.	IIb

11205	17003	Lacrimal tube	Лакримал хоолой	An implantable short tube intended to provide a bypass route for tear drainage from the corner of the eye into the nasal cavity, or a paranasal sinus, as treatment for pathologies of the tear drainage system in association with functional or obstructive epiphora; it may also be intended to facilitate saline solution irrigation to a paranasal sinus (e.g., ethmoid sinus) to manage chronic rhinosinusitis. Also referred to as a lacrimal stent (e.g., Lester Jones type), it is implanted after surgery to dilate or maintain a surgically-created passage [e.g., dacryocystostomy/dacryocystorhinostomy (DCR)], and is made of glass or synthetic polymer materials (e.g., silicone).	IIb
11206	17140	Cryogenic analgesia unit	Криоген өвдөлт намдаах нэгж	A device designed to provide analgesia (the alleviation of pain) by applying extremely low temperatures (freezing) to body tissues. The device consists of a cryostat and cooling probe, and sometimes a peripheral nerve-block stimulator (nerve stimulator). This device will incorporate some method of protecting the tissue it is being applied to against permanent damage (e.g., freeze-thaw cycles). Cryogenic analgesia results in reversible, though prolonged (weeks/months), peripheral nerve-block and is used for postoperative and chronic intractable pain relief.	IIb
11207	17202	Appetite-suppression gastric balloon	Хоолны дуршил дарах ходоодны бөмбөлөг	An implantable device intended to be swallowed or endoscopically inserted into the stomach where it is inflated to reduce stomach volume and facilitate weight loss in overweight/obese patients by restricting the quantity of food consumed through an increased sense of satiety (fullness). It is designed to be inflated/filled with an inert material (e.g., saline, air, nitrogen) in situ, where it remains until it is endoscopically removed or deflates and passes through the bowels. Disposable devices dedicated to introduction/inflation may be included with the balloon.	IIb

11208	17206	Cardiopulmonary bypass system heating/cooling unit	Зүрхний уушигны эргэлтийн систем халаах/хөргөх төхөөрөмж	A mains electricity (AC-powered) component of a cardiopulmonary bypass system designed to heat or cool a patient's body by extracorporeal heat exchange with the patient's perfused blood during a cardiopulmonary bypass procedure. It consists of a system to heat or cool a thermal transfer fluid, pumps to provide circulation of the fluid to a heat exchanger, and monitoring and alarm systems. It may be known as a hypothermia/hyperthermia unit because of its ability to regulate body temperature either way.	IIb
11209	17218	Pleuroperitoneal shunts	Плевроперитонеаль шунт	A sterile plastic tube that is surgically implanted in the pleural or peritoneal cavity for drainage. This is a single-use device.	IIb
11210	17415	Cytotoxic material spill kit	Цитотоксик бодис асгарахаас хамгаалах хэрэгсэл	A set of devices used to clean up spillage of cytotoxic material. It provides equipment and material for an appropriate method for removing the spillage, and includes the proper container for the disposal of the spillage. This is a single-use device.	IIb
11211	17434	Peritoneal dialysis system irradiation unit	Хэвлийн диализийн системийн цацрагийн нэгж	A mains electricity (AC-powered) device designed to emit ultraviolet radiation in order to keep the field and devices sterile while the appropriate connections between the components of a peritoneal dialysis transfer tubing set are implemented.	IIb
11212	17437	In vitro ionizing-radiation blood irradiator	In vitro ионжуулагч-цацрагт цусны цацраг туяа	An electrically-powered device designed for the in vitro irradiation of blood and/or blood components with ionizing radiation [e.g., gamma, x-ray, ultraviolet C (UVC)], typically for the prevention of transfusion-associated graft-versus-host diseases and pathogen transmission, and/or for cancer treatment; some types may be additionally used to irradiate other specimen types (e.g., tissues, organs). It operates off-line (i.e. blood is not returned to the patient in a closed circuit) and typically includes a shielded, double encapsulated, long half-life radiation source (e.g., Cesium 137), blood/blood product containers, safety interlocks, a timing mechanism, and a means of retrieving samples.	IIb

11213	17481	Ophthalmic dye laser system	Нүдний будгийн лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite a liquid organic compounds (i.e., dye) used as the active medium to emit a high-power laser beam, intended to coagulate abnormal vascular tissue in the retina, and for other photocoagulation procedures in the eye. It typically includes a light source and controls/foot-switch, and is typically coupled to a biomicroscope slit lamp or to an indirect ophthalmoscope by a flexible fibreoptic cable. During emission the dye has to be optically excited by another light source (e.g., another laser or flash lamp). It does not include femtosecond pulsing or fundus imaging technology.	IIb
11214	17487	Mercury spill kit	Мөнгөн ус асгарах хэрэгсэл	A set of devices used to clean up a mercury (Hg) spillage that occurs as a result of either a thermometer breakage or some other accident. This device can consist of several kinds of spill kits for cleaning up a Hg spill: 1) a kit using an aspirator which sucks up the Hg and would normally be used for small spills; or 2) a kit that uses a magnetic powder which is spread over the Hg spillage and then picked up with a telescopic magnetic pick-up tool. In both cases a proper container in which the recovered Hg is placed will be supplied as part of the kit. This is a reusable device.	IIb
11215	17558	Angioplasty system	Ангиопластик систем	An assembly of devices designed for use in percutaneous transluminal coronary angioplasty (PTCA) to perform either a balloon, laser, laser thermal, or other angiographic procedure for the removal of an atheroma and/or the elimination of an area of narrowing in a blood vessel.	IIb
11216	17596	Phacoemulsification system generator	Факоэмульсжуулах системийн генератор	A mains electricity (AC-powered) ophthalmic device that generates the energy (e.g., ultrasonic, piezoelectric) in a cataract extraction system. The energy is delivered through a handpiece tip, which is introduced through an incision made in the lens capsule, to perform phacoemulsification (a procedure for the liquefying and removal of the opaque lens nucleus in cataract surgery). This device will typically be activated by the surgeon using a foot control and provide or support the irrigation/suction systems needed for the removal of debris.	IIb

11217	17634	Bedside infusion pump, multichannel	Орны дэргэдэх дусаах насос, олон суваг	An electrically-powered, non-ambulatory (bedside) device designed to facilitate the simultaneous, accurate, and consistent administration of multiple drugs/solutions (multichannel) from a standard infusion bag or bottle, via intravenous, subcutaneous, arterial, epidural, and intracavital routes, using a dedicated infusion set. It is not dedicated to a specific treatment type and is used to supply higher pressures than those provided by gravity infusion sets or infusion controllers (e.g., typical flow range of 1 to 999 ml/hour).	IIb
11218	17649	Gastric band	Ходоодны тууз	An implantable device in the form of a small belt or strip intended to be surgically (open surgery or laparoscopically) placed around the proximal part of the stomach to create a small pouch with a narrowed outlet (stoma) that divides the stomach into two portions. Commonly known as a lap-band, it is used for weight loss in overweight/obese patients by attempting to restrict the quantity of food consumed by increasing the sense of satiety (fullness). The device typically has an inflatable band used to control the amount of constriction on the stomach; this is adjusted by percutaneous injection of, e.g., saline, into a subcutaneous access port connected by a tube to the device.	IIb
11219	17667	Telemetric pulse oximeter	Телеметрийн импульсийн оксиметр	A portable, photoelectric device intended for the transcutaneous monitoring of haemoglobin oxygen saturation (SpO2) through the radio transmission/reception of SpO2 values. The signals, typically produced by light-emitting diodes (LEDs) and a receiving detector in a probe, or directly built-in, are used to make the measurements using the principle of spectrophotometry. The oximeter displays the SpO2 values and may calculate/display other parameters, e.g., pulse rate, electrocardiogram (ECG) which are radio transmitted to a monitoring site to obviate the need for cabling, promoting the patient's freedom of movement.	IIb

11220	17672	Biliary stent	Цөсний стент	A sterile non-biodegradable tubular device implanted in an obstructed biliary duct (e.g., common bile duct) to maintain its patency. It may be inserted and advanced to the site of implantation with a balloon catheter which will cause the device to expand upon balloon inflation, or it may be delivered by a dedicated instrument where it self-expands upon release. It is typically made of high-grade stainless steel, cobalt-chromium alloy, nickel-titanium alloy (Nitinol), or a polymer. It is available in a variety of lengths, and may be a continuous tube or a mesh structure in a tubular form. Some types may be used in peripheral arteries.	IIb
11221	17687	Multichannel electrocardiograph, signal-averaging	Олон сувгийн электрокардиограф, дохионы дундаж үзүүлэлт	An instrument designed to measure electrical potentials on the body surface to generate a record of the electrical currents associated with heart muscle activity [i.e., an electrocardiogram (ECG)] for the assessment of cardiac physiology. It records electrical signals from two or more multiple electrode sets (leads) simultaneously to simplify and facilitate interpretation of the record by enabling the comparison of multiple-lead recording of the same heartbeat. It is noninterpretive and reduces signal noise level by performing an average of multiple cycles of the signal; it may be used to detect late potentials for the identification of patients prone to ventricular tachycardia.	IIb
11222	17702	Ophthalmic excimer laser system	Нүдний эксимер лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite an excimer gas to emit a high-power laser beam intended for corneal ablation (i.e., photorefractive keratectomy) and other ophthalmologic procedures (e.g., surgical creation of a communication between the lacrimal sac and the nasal cavity). It includes a light source and controls/foot-switch, and is typically coupled to a biomicroscope slit lamp or to an indirect ophthalmoscope by a flexible fibreoptic cable. It does not include femtosecond pulsing or fundus imaging technology.	IIb
11223	17706	Radioactive material spill kit	Цацраг идэвхт бодис асгарахаас хамгаалах хэрэгсэл	A set of devices containing protective clothing, decontaminants and other items for handling radioactive spills in the laboratory. This is a single-use device.	IIb

11224	17713	Laser beam imaging media	Лазер туяа дүрслэх хэрэгсэл	A device typically in the form of a screen or plate with appropriate frequency response to permit safe visualization of laser beams in the visible spectrum for beam alignment and/or checking purposes. It may consist of a phosphorous screen that emits light in the visible spectrum when a laser beam in the near infrared or visible spectrum impinges on the screen; or hand-held cards and clip on or tabletop mounted units (some for visualization of ultraviolet beams); or image plates that produce a real-time image of infrared laser beams using thermal-sensitive phosphorous plates and an ultraviolet (UV) light lamp; or glasses that convert UV or infrared light into visible light.	IIb
11225	17774	General/multiple surgical solid-state/carbon dioxide laser system	Ерөнхий/олон мэс заслын хатуу төлөвт/нүүрстөрөгчийн давхар ислийн лазерын систем	A mains electricity (AC-powered) device assembly designed to produce two distinct high-power laser beams, one solid-state [e.g., neodymium-doped yttrium-aluminium-garnet (Nd:YAG)] mediated and the other carbon dixoide (CO2) mediated, intended for bloodless incisions during general surgery and/or multiple specialized surgical applications (non-dedicated). It is intended to provide both the cutting capabilities of gas mediated lasing, and the haemostatic abilities of solid-state mediated lasing. It includes a light source, delivery/positioning device(s), and controls/foot-switch. It does not include frequency doubling technology.	IIb
11226	17828	Tissue marking ink	Эдийн тэмдэглэгээний бэх	A sterile liquid substance intended to be injected into tissue to identify lesions; it is also used externally on the skin to mark incision sites. After application, this device cannot be reused.	IIb

11227	17861	Cardiac catheterization mobile medical facility	Зүрхний катетержуулалтын явуулын эмнэлгийн байгууламж	A vehicle, e.g., a van, trailer, or other mobile enclosure, that is equipped with a diagnostic cardiovascular radiographic/fluoroscopic x-ray system, the related instrumentation, and shielding. It is typically driven or towed between various geographical locations and used as a freestanding cardiac catheterization/x-ray imaging mobile unit for invasive diagnostic or therapeutic procedures for heart and circulatory conditions. It will include special mounting and stabilization components for the installed systems, e.g., film processors, telemedicine systems, picture archiving and communication system (PACS), cameras, or injector systems. Power sources to ensure its function are included.	IIb
11228	17877	Negative-pressure ventilator	Сөрөг даралтын агааржуулагч	An automatic cycling machine used to assist or control alveolar respiration that exerts a negative pressure on the external surface of the chest wall, expanding the chest and moving air into the lungs. The two versions of the device are: 1) a rigid container enclosing all of a patient's body below the neck (i.e., an iron lung); or 2) a wearable shell (a cuirass) where only the thoracoabdominal region is enclosed. In both variants, the pressure inside the container is reduced relative to the atmospheric pressure at the patient's mouth and/or nose.	IIb
11229	17882	Physiologic-monitoring defibrillation system	Физиологийн хяналтын дефибрилляцийн систем	An assembly of electrically-powered devices designed to defibrillate the heart that incorporates additional therapeutic and/or monitoring features intended to resuscitate and/or monitor a cardiac patient. It typically includes devices that enable manual and/or automated external defibrillation (a defibrillator) and one or more of the following: electrocardiogram (ECG) monitoring (electrocardiograph), noninvasive cardiac pacing (temporary pacemaker), cardioversion (CV), pulse oximetry (oximeter), invasive and/or noninvasive blood pressure monitoring, and end-tidal carbon dioxide (EtCO2) monitoring (i.e., a CO2 monitor). It may have data recording/printing capabilities.	IIb

11230	17898	Cardiac electrophysiology analysis system	Зүрхний электрофизиологийн шинжилгээний систем	An assembly of devices designed to perform several diagnostic tests and therapeutic treatments of the heart in patients with arrhythmic or conduction disorders. It typically consists of a computerized workstation including a monitor, a printer or graphic recorder, a data recorder (e.g., optical or magnetic disk), and plug-in modules for signal amplification and/or conditioning. Signals are taken from external electrodes on the chest as well as from intracardiac electrodes and from blood pressure transducers. Device uses include analysis of the atrioventricular conduction system, defibrillator function, and the induction/termination of ventricular tachycardia.	IIb
11231	17904	Computed radiography digital imaging scanner	Тооцоолсон радиографийн дижитал дүрслэлийн сканнер	A device/device assembly designed to be used with an analogue x-ray system to capture radiographic images and then generate digital x-ray images from them as part of a two-step process (computed radiography) for image viewing, storage, or hard-copy printing; it is not dedicated to dental use. It consists of an image reader/scanner and may also include an exposure unit with imaging receptor (e.g., a cassette containing a plate), or additional supportive hardware (e.g., a printer). The image is acquired on a photostimulable substance (e.g., a phosphor screen mounted on a cassette plate) and converted into an electrical analogue signal in a laser scanner.	IIb
11232	17907	Warming/high-flow infusion pump	Дулаарах/өндөр урсгалтай дусаах насос	A mains electricity (AC-powered) device designed to warm and rapidly infuse blood and other solutions (e.g., crystalloid and colloid) into a patient during high-blood-loss surgical procedures; it is also used for burn and trauma cases. Maximum flow rates may exceed 1 L/min.	IIb
11233	17922	Uterine contraction monitor, external	Умайн агшилтын хяналт, гадаад	A mains electricity (AC-powered) device designed to monitor the progress of labour (preterm uterine contractions). It is intended to continuously measure and display the duration, frequency, and relative pressure of uterine contractions with a transducer strapped to the maternal abdomen. This device will typically have an alarm function and will not monitor foetal parameters.	IIb

11234	17942	Cerebral oximeter	Тархины оксиметр	A mains electricity (AC-powered) photoelectric device that noninvasively measures the brain tissue blood oxygen saturation and venous oxygen saturation in the brain. It is typically used as an adjunct monitor for the regional haemoglobin oxygen saturation of blood in the brain of a paediatric or adult patient. It uses a cerebral sensor(s) having a light source and photodiode detector that is/are placed on the scalp/head. Position-1 detector detects infrared light absorption of extracranial blood and position-2 detector detects infrared light absorption of cerebral blood. Cerebral oxygenation is calculated by subtracting the absorption measured at site 1 from that measured at site 2.	IIb
11235	17957	Bronchial stent	Гуурсан хоолойн стент	A sterile non-biodegradable tubular device implanted in an obstructed bronchus/bronchiole to maintain its patency. The device, depending upon the type applied, may be inserted with a balloon catheter which when inflated causes the device to expand, or can be delivered to the site where it self-expands. It is typically made of high-grade stainless steel, a polymer, or other material. It may be a continuous tube of a certain length or a mesh structure in a tube form.	IIb
11236	17983	Infectious waste spill kit	Халдвартай хог хаягдлын иж бүрдэл	A set of devices used to clean up spillage of infectious material. It provides equipment and material for an appropriate method for removing the spillage, and includes the proper container for the disposal of the spillage. This is a single-use device.	IIb
11237	18019	Magnetic resonance blood flowmeter	Соронзон резонансын цусны урсгал хэмжигч	A device that provides a quantitative method for determining the adequacy of blood flow in patients presenting symptoms of peripheral vascular disease. It senses magnetic resonance signals from the blood resulting from the application of a magnetic field and measures the blood flow volume through a cross-section of the limb at defined intervals. It can measure independently of vessel depth under overlying tissue, calcified arteries or outer clothing. Its uses may also include assessing the results of, e.g., angioplasty, atherectomy or bypass procedures.	IIb

11238	18027	Laparoscope laser coupler	Лапароскопийн лазер холбогч	A device used to connect a laser delivery system [e.g., the articulating arm of a carbon dioxide (CO2) laser] and a laparoscope; providing a coincidence between the aiming beam and the treatment beam at the target site. It typically consists of a lens housing including a set of lenses, a laparoscope adaptor, and a sleeve. It is attached to the laser delivery system at the proximal end and to the laparoscope at the distal end, and the sleeve is placed inside the working channel of the laparoscope to provide a path for the laser. The device is typically used for a procedure using a laser type which wavelength is not appropriate for fibreoptic cable transmission. This is a reusable device.	IIb
11239	18043	Carbon monoxide compressed air/gas monitor	Нүүрстөрөгчийн дутуу ислийн шахсан агаар/хийн хяналт	A mains electricity (AC-powered) instrument designed to continuously measure and display the concentration of carbon monoxide (CO) in breathing air from a compressed air/gas source. It typically consists of a CO sensor (e.g., oxide semiconductor) and an electronic unit that includes a display (e.g., LCD); it also typically includes audio and/or visual alarms activated at pre-set concentrations of CO (e.g., 10, 20 ppm). The device is used to monitor the compressed breathing air of workers and patients for CO contamination.	IIb
11240	18048	Hazardous aerosol chamber	Аюултай аэрозолийн камер	A device designed as an isolation treatment chamber for the administration of hazardous aerosols. It typically consists of a sealed rigid enclosure covering the patient's head and torso with an exhaust system to protect the surrounding environment by capturing the airborne contaminants. It is used for the control of contaminated air during the administration of hazardous medications (e.g., treatment of Pneumocystis jirovecii using pentaminide therapy) and/or for sputum induction. The exhaust system usually includes germicidal ultraviolet lights and filters [e.g., carbon and/or high-efficiency particulate air (HEPA)] permitting the release of cleaned air. This is a reusable device.	IIb

11241	18054	Stereotactic radiosurgery/radiation therapy linear accelerator system	Стереотактик радио мэс засал/цацраг эмчилгээний шугаман хурдасгуурын систем	A stationary assembly of computer-based devices designed to produce high-energy electrons to yield high-energy x-rays used to perform stereotactic radiosurgery (SRS) to treat brain, neck, or spinal cord tumours, and/or to perform stereotactic body radiation therapy (SBRT). It consists of a linear accelerator with a moveable/rotating gantry, collimators, patient table, and an operator's console. A metal head frame attached to the patient's skull may be used for precise radiation beam targeting using fiducial references; the system may include CBCT-based image-guided radiation therapy (IGRT), 3-D imaging, and record/verify functionalities to track target location during treatment.	IIb
11242	18074	Eyelid weight, implantable	Зовхины жин, суулгац хийх боломжтой	An ophthalmic device that is implanted subcutaneously within the upper eyelid to "lidload" the eyelid to restore upper eyelid muscle (musculus orbicularis oculi) function. This device is used for the treatment of lagophthalmos, a condition that frequently results from facial paralysis caused by Bell's palsy, trauma, a stroke, or as an indirect consequence of the surgical removal of certain types of tumour in close proximity to the facial nerve. This device uses gravity to gently close the upper eyelid when blinking or when the eyelid muscle is relaxed, and is made of a heavy material [e.g., gold (Au), platinum (Pt)].	IIb
11243	18100	Clinical pharmacy information system	Эмнэлзүйн эмийн сангийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of clinical pharmacy services and facilities. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	IIb

11244	18105	Chorionic villus sampling catheter	Chorionic villus дээж авах катетер	A sterile flexible tube designed for transcervical chorionic villus sampling (CVS) to obtain intrauterine specimens of the chorionic villi for genetic testing to detect chromosomal disorders in the foetus during the first trimester of pregnancy. The device usually includes a malleable, preshaped stylet, and is usually introduced under ultrasonographic guidance via the vagina/cervix. The suction for sampling is provided by an external syringe. This is a single-use device.	IIb
11245	18117	Emergency-care information system	Яаралтай тусламжийн мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities and their supportive ambulance and fire services, to support the administrative and clinical activities associated with the provision and utilization of emergency medical services (EMS) and facilities. The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	IIb
11246	18120	Hospital-administration information system	Эмнэлэг-захиргааны мэдээллийн систем	A computerized hospital information system (HIS) designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of hospital services and facilities (e.g., human resources, staffing, scheduling). The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	IIb
11247	18122	Risk-management information system	Эрсдэлийн удирдлагын мэдээллийн систем	A dedicated assembly of devices designed to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of risk-management services (including processes related to quality of care, maintaining a safe environment, and protecting financial assets). The system consists of dedicated combined hardware (e.g., computers, terminals, network components) and software (typically embedded).	IIb

11248	18135	Gastrointestinal anastomosis coupler, non-bioabsorbable	Ходоод гэдэсний анастомозын холбогч, био шингэдэггүй	An implantable device intended to be used to join and transect excess tissue of gastrointestinal structures through the coupling of two ring-shaped components that are inserted into the ends of the segments to be attached. This device is made of a substance or material that cannot be chemically degraded or absorbed via natural body processes.	IIb
11249	18145	Cardiac myoplasty electrical stimulation system	Зүрхний миопластик цахилгаан өдөөх систем	An assembly of battery-powered devices designed to apply electrical stimuli to skeletal muscle (e.g., latissimus dorsi musculus) that has been wrapped around the ventricles of the heart during myoplastic surgery to augment cardiac output. It consists of an implanted pulse generator that combines the characteristics of cardiac pacers and neuromuscular stimulators, with pacemaker electrodes attached to the myocardium and muscle electrodes to stimulate the wrapping muscle in synchrony with the heart muscle. It typically includes some pacing capabilities (e.g., to pace the heart when its rate drops below a programmed value); it is often used in patients with ischemic or dilated cardiomyopathy.	IIb
11250	18155	Drug-delivery iontophoresis system, reusable	Эмийн ионтофорезийн систем, дахин ашиглах боломжтой	An assembly of portable devices that may be used as an alternative to injections to transport ionic-solution medication through the movement of ions resulting from an applied electric field, to locally administer the medication transcutaneously. It typically consists of a battery-powered current generator that supplies a constant direct current [e.g., 0.5 to 4 milliampere (mA)], a delivery electrode which typically contains a small reservoir of buffering agent and the medication (e.g., a corticosteroid or anaesthetic), a return electrode, and connecting lead wires. This is a reusable device.	IIb

11251	18158	Contrast medium injector system, MRI, powered, multiphase	Тодосгогч бодисын инжекторын систем, MRI, хүчирхэг, олон фазын	A line- or battery-powered low or high-pressure contrast injector device that allows the operator to establish a baseline contrast medium injection flow rate, to program sequential changes in the baseline during an ongoing injection, and to determine the total volume of contrast medium to be injected. It is used during a magnetic resonance imaging (MRI) procedure. A contrast injection device used in the vicinity of an MRI is made entirely of non-ferromagnetically active materials to render them compatible with that environment. Some can be directly interfaced with a diagnostic imaging system or a physiological monitoring device in order to control the timing of contrast injections.	IIb
11252	18168	Medication cart management system	Эмийн тэрэгний удирдлагын систем	A mains electricity (AC-powered) assembly of devices located in the pharmacy department designed to use automation or robotics to dispense medication for filling medication carts or unit-dose cassettes. This system captures medication and administrative information and can be interfaced with both the hospital information system and the pharmacy information system.	IIb
11253	18415	Electromechanical lithotripsy system, extracorporeal	Цахилгаан механик литотрипсийн систем, экстракорпораль	An assembly of devices that non-invasively disintegrates stones (i.e., calculi) by sending focused shock waves from outside the body produced by an electromechanical generator. This generator contains a coil attached to a thin metallic membrane; a magnetic field is produced by an electric current conducted through the coil, and shock waves are generated when the metallic membrane is repelled by the magnetic field. The system also includes a treatment table, an imaging system, and an operator's console. This [extracorporeal shock wave lithotripsy (ESWL)] system is used to disintegrate stones located in the kidneys, urinary tract, gallbladder, or bile/pancreatic ducts.	IIb

11254	18416	Piezoelectric lithotripsy system	Пьезоэлектрик литотрипсийн систем	An assembly of devices that non-invasively disintegrates stones (i.e., calculi) by sending focused shock waves from outside the body produced by a piezoelectric generator. This generator contains an array of up to 4,000 ceramic elements arranged on a spherical dish; shock waves are generated at the focal point of the dish when a short, high-voltage pulse is simultaneously applied to each element. This system also includes a treatment table, an imaging system, and an operator's console. This [extracorporeal shock wave lithotripsy (ESWL)] system is used to disintegrate stones located in the kidneys, urinary tract, gallbladder, or bile/pancreatic ducts.	IIb
11255	18417	Spark-gap lithotripsy system	Очлуурын литотрипсийн систем	An assembly of devices that non-invasively disintegrates stones (i.e., calculi) by sending focused shock waves from outside the body produced by a spark-gap generator. The generator delivers shock waves when an electrical discharge between two electrodes submerged in water or in electrolytes causes explosive vaporization; the shock wave expands from the gap between the electrodes and is focused at the stone by an ellipsoidal reflector. This system also includes a treatment table, an imaging system, and an operator's console. This [extracorporeal shock wave lithotripsy (ESWL)] system is used to disintegrate stones located in the kidneys, urinary tract, gallbladder, or bile/pancreatic ducts.	IIb

11256	20395	Negative-pressure wound therapy system, electric, reusable	Сөрөг даралтын шархны эмчилгээний систем, цахилгаан, дахин ашиглах боломжтой	An assembly of devices designed to treat hard-to-heal open wounds (e.g., acute, traumatic, and chronic), burns, diabetic/pressure ulcers, flaps, and grafts with suction. It typically consists of a dressing (e.g., open-cell foam or medicated gauze), an airtight adhesive drape, an evacuation tube, a collection canister, and an electrically-powered vacuum pump. The pump applies continuous or intermittent negative pressure to the wound via the tube to the dressing which decompresses capillaries/lymphatic vessels, improves blood/interstitial fluid circulation, draws wound edges together, facilitates granulation tissue formation, and prepares the wound bed for closure. This is a reusable device.	IIb
11257	20653	Class-II biological safety cabinet	II зэрэглэлийн биологийн аюулгүй байдлын кабинет	A furniture-like device designed as a partial or total enclosure to provide a class II biosafety level (BSL) to the operator, the product, and the environment during the manipulation of microorganisms and other biological hazardous materials (usually up to category 3 pathogens). It typically utilizes laminar airflow (LAF), a high-efficiency particulate air (HEPA) filter, and/or carbon filter and hydrogen peroxide (H_2O_2) gas as some of the protective mechanisms. It is used for handling cell cultures and human pathogens (e.g., bacteria, viruses, parasites) and other biohazardous materials, extremely toxic agents (e.g., chemotherapy drugs), and also for tissue culture and tumour virus work.	IIb
11258	31038	Nasal cartilage support implant, non-bioabsorbable	Хамрын мөгөөрсийг дэмжих суулгац, био шингэдэггүй	A non-bioabsorbable device intended to be implanted beneath the skin of the nose (e.g., between the nasal mucosa and the cartilage) to augment or restore the cosmetic appearance and/or function of the nose, by providing structural support to the cartilage. It is a shaped device made of synthetic polymer materials (e.g., solid silicone rubber).	IIb
11259	31074	Stoma drainage catheter	Гэдэсний ус зайлуулах катетер	A sterile flexible tube that is inserted into a stoma (an artificial opening in the body, especially in the abdominal wall, made during a surgical procedure) to drain bodily waste from an internal stoma container; normally directly into the toilet. This is a single-use device.	IIb

11260	31306	Electronic oesophageal stethoscope, reusable	Улаан хоолойн электрон чагнуур, дахин ашиглах боломжтой	An electronic listening device designed to be inserted into a patient's oesophagus to listen to heart and breathe sounds, typically while the patient is under anaesthesia. Some types may also have a temperature sensor to monitor the patient's temperature. The device will typically contain integral electrical conductors, thermistors/temperature sensors for proximal connection to a patient monitoring device, and include a proximal connector for a standard earpiece. This is a reusable device.	IIb
11261	31315	Anaesthesia workstation yoke assembly	Мэдээ алдуулах ажлын станцын буулга угсралт	A device that is a module to an anaesthesia workstation and functions as a mounting system used to attach compressed gas cylinders to the anaesthesia system. The yoke assembly typically includes a filter, pressure regulator, pressure relief valve, and pressure indicator, or gas-specific pin-index connecting system.	IIb
11262	31321	Mobile/portable oxygen concentrator	Хөдөлгөөнт/зөөврийн хүчилтөрөгч өтгөрүүлэгч	A mobile/portable mains electricity (AC-powered) device designed to concentrate oxygen (O2) from ambient air and deliver the concentrated O2, typically through an attached nasal cannula, to a patient requiring oxygen therapy. It processes the air through an internal filtration system, e.g., a molecular sieve (zeolite granules or membranes), having a large total surface area to separate nitrogen (N2) from the air. It typically consists of an air compressor, filters, dual chambers, a reservoir and controls. The O2 concentration is variable depending on the flow rate utilized. It is used in a home, institution, or a vehicle and typically has internal batteries for transportable use.	IIb

11263	31328	Endobronchial tube	Endobronchial хоолой	A hollow cylinder that is designed for oral insertion via the trachea and into a lung to maintain airway patency and/or to deliver anaesthetic inhalation agents or other medical gases, and secure ventilation. It is typically made of plastic, rubber, or silicone and may be packaged with a connector that attaches to a breathing circuit and is available in two basic configurations: 1) a double lumen tube with independent cuffs at the distal end for ventilation of the left or right bronchi; or 2) a twin lumen tube with independent cuffs for selective lung ventilation during thoracic surgery or postoperative care when independent lung ventilation is indicated. This is a single-use device.	IIb
11264	31339	Carbon dioxide monitor	Нүүрстөрөгчийн давхар ислийн хяналт	A mains electricity (AC-powered) device intended to continuously measure the concentration of carbon dioxide (CO_2) in a gas mixture through a particular method (e.g., electrochemical, infrared absorption, gas chromatographic, mass spectrometric) to determine a patient's ventilatory, circulatory, or metabolic status. It is typically used to measure end-tidal carbon dioxide ($EtCO_2$) in expiratory gases during the administration of anaesthesia or during bedside monitoring. Commonly known as a capnograph or a capnometer, the sampling method can be "mainstream" and/or "sidestream".	IIb
11265	31658	Pulse oximeter probe, single-use	Пульс оксиметрийн датчик, нэг удаагийн	A photoelectric device designed to be applied externally to a body site (e.g., fingertip, ear lobe, bridge of nose, toe, or bridge of the foot) for the transcutaneous measurement of haemoglobin oxygen saturation (SpO_2) in arterial blood using signals produced by a light-emitting diode (LED) and received by a photodetector. The signals are subsequently transmitted to an oximeter/monitor (not included) which measures and displays the SpO_2. The is a single-use device.	IIb

11266	31659	Oximeter catheter, single-use	Оксиметрийн катетер, нэг удаагийн	A flexible tube containing a fibreoptic bundle designed to conduct light at a selected wavelength through blood to detect the reflected or scattered light for the estimation of blood oxygen concentration. It detects with a sensor at its distal end and is used in conjunction with an oximeter for oxygen concentration calculation. This device is also known as a Swan-Ganz catheter. This is a single-use device.	IIb
11267	31660	Contrast medium injection system actuator	Тодосгогч бодис шахах системийн идэвхжүүлэгч	An electronic device that is a component of a contrast medium injector system, and that controls the timing of a contrast medium injection by synchronizing it with one or more physiological parameter(s), such as those obtained in electrocardiographic or electroencephalographic signals.	IIb
11268	31681	Blood pressure monitor, noninvasive	Цусны даралт хэмжигч, инвазив бус	A mains electricity (AC-powered) device that measures, processes and displays blood pressure as measured externally on the outside of the body. It may produce visible and/or audible signals/alarms when adverse conditions are registered. The use of an external transducer can be a method used. The principles of operation are similar to that of an automatic electronic sphygmomanometer.	IIb
11269	31704	Cardiac pulse generator test magnet	Зүрхний импульсийн генераторын туршилтын соронз	A magnetized device used to test an inhibited or triggered type of pacemaker or defibrillator, and cause an inhibited or triggered generator to revert to asynchronous operation. The device is placed on the outside of the patient's thorax over the pacemaker/defibrillator for analysis of the implanted device's function. The magnet will activate the magnet sensitive relay in the pacemaker/defibrillator and will change the function of the implanted device. It is possible to evaluate the function of the implanted device via an electrocardiograph.	IIb
11270	31707	Heart valve prosthesis holder, reusable	Зүрхний хавхлагын протез эзэмшигч, дахин ашиглах боломжтой	A hand-held, non-powered, invasive surgical instrument designed to hold a cardiac (heart) valve prosthesis or a cardiac annuloplasty ring at, or in proximity to, its site of implantation during surgery. It includes an implant mounting/containing feature and a handle; implantable devices are not included. This is a reusable device.	IIb

11271	31711	Cardiopulmonary bypass system defoamer	Зүрхний уушигны системийн хөөс арилгагч	A sterile device that is used remove gas bubbles from the blood during cardiopulmonary bypass surgery and is used in conjunction with an oxygenator [the device used to add the necessary oxygen (O2) to the blood before being returned back to the patient]. This is a single-use device.	IIb
11272	31714	Cardiopulmonary bypass system gas control unit	Зүрхний уушигны эргэлтийн системийн хийн хяналтын нэгж	A device that is a module of a cardiopulmonary bypass system and that is used to control and measure the flow of gas supplied into the oxygenator. It is calibrated for a specific gas and has a high degree of accuracy at low flows. It may be a flowmeter.	IIb
11273	31733	Electrocardiography telemetric monitoring system	Электрокардиографийн телеметрийн хяналтын систем	An assembly of devices designed to continuously measure and wirelessly transmit electrocardiographic (ECG) signals from a patient to a receiving location (e.g., central station, bedside monitor) for viewing. It typically consists of a portable transmitter with antenna and attached sensors (e.g., leads and electrodes) that are connected to the patient, as well as a receiver typically incorporated into a central station or bedside monitor that receives, consolidates, and displays the information. The system is typically used for ambulatory patients who require continuous monitoring (e.g., patients in step-down care areas).	IIb
11274	31742	Cardiac mapping system workstation	Зүрхний зураглалын системийн ажлын станц	A mains electricity (AC-powered) device designed as a control unit to percutaneously navigate (orientate and steer) a cardiac mapping system catheter, or its associated guidewire, in the desired direction to the designated target site (e.g., coronary vasculature). It uses dedicated software and may employ various technologies (often magnetic fields); it is typically used in the electrophysiology (EP) laboratory.	IIb
11275	31931	Prosthesis, endolymphatic vessel	Протез, эндолимфийн судас	An implantable device designed to restore or replace part of the endolymphatic system's vessels. The device may include a valve to permit transmission of material in one direction.	IIb

11276	31994	Hydraulic male urinary incontinence treatment system	Эрэгтэй шээс ялгаруулах эмчилгээний гидравлик систем	An assembly of implantable devices intended to treat male urinary incontinence by applying pressure to partially/fully occlude the bladder neck and/or urethra, typically after radical prostatectomy or transurethral resection of the prostate. It typically consists of an inflatable pad-like device(s) (e.g., cushion, balloon) implanted around the bladder neck/urethra, port and tubing for the introduction/removal of fluid (e.g. saline) to/from the pad(s) intra- and/or postoperatively, and devices for the stabilization of the pad(s) in situ (e.g., sutures, mesh); devices for the introduction/removal of fluid via the port (e.g., needles) may also be included.	IIb
11277	31995	Vas deferens prosthesis	Судасны хөндийн протез	An implantable device made of synthetic materials intended to be used to repair damaged or occluded portions of the duct that conveys spermatozoa from the epididymis to the urethra.	IIb
11278	31998	Ureterovesical valve prosthesis	Шээсний судасны хавхлагын протез	A sterile implantable artificial substitute for the ureterovesical valve at the junction of the ureter and the bladder. The device serves to prevent the backflow of urine through the ureter causing hydronephrosis or other problems. It is usually made of a non-bioabsorbable polymer, e.g., silicone rubber or polytetrafluoroethylene (PTFE) commonly known as Teflon, and may be applied using a cannula.	IIb
11279	32070	Water jet catheter system, renal	Усны тийрэлтэт катетер систем, бөөрний	An assembly of devices intended to be used to dislodge stones from recesses of the renal pelvis by means of water injected under pressure through a catheter. This device is used in the surgical removal of kidney stones. This is a reusable device.	IIb
11280	32121	Arteriovenous shunt cannula	Артериовенийн шунт суваг	A blood access device, consisting of various semi-rigid or rigid tubes, that is surgically implanted into an adjacent artery and vein and connected externally creating a shunt for the continuous flow of blood through the device. This arteriovenous (AV) device is used to facilitate haemodialysis. The piece connecting the arterial and venous side of the shunt is removed when a patient is hooked up to a haemodialysis blood tubing set and is replaced after haemodialysis to re-establish the shunt. This is a single-use device.	IIb

11281	32133	Shunt holder	Шунт эзэмшигч	A device used to stabilize (hold) a blood access device that is used for haemodialysis or other purposes. This is a single-use device.	IIb
11282	32135	Shunt connector	Шунт холбогч	A plastic or metal device used to establish a connection with a compatible shunt (e.g., haemodialysis or cerebrospinal). This is a single-use device.	IIb
11283	32151	Peripheral vascular intervention infusion catheter	Захын судасны интервенцийн дусаах катетер	A flexible tube designed primarily to enable the delivery of diagnostic or therapeutic solutions into the peripheral vasculature during a cardiovascular procedure (e.g., delivery of an antithrombotic agent); some types may in addition be applied to coronary or pulmonary vasculature. It is percutaneously introduced and may include features such as side holes for infusion across a specific region, an expanding frame to disrupt clotted blood to improve diffusion, or a balloon to support infusion at a specific region. It is neither a peripherally-inserted central venous catheter, dedicated occluding catheter, nor superselective small vessel microcatheter. This is a single-use device.	IIb
11284	32375	Gauze, non-absorbable, medicated	Самбай, шингэдэггүй, эмтэй	A medicated, non-absorbable device composed of cotton or cellulose, with an x-ray detectable element, used inside the body or on surgical incisions to control bleeding, absorb fluid, or protect organs from abrasion, drying, or contamination. This is a single-use device.	IIb
11285	32461	CT contrast medium injection system, battery-powered	CT тодосгогч бодис шахах систем, батарейгаар ажилладаг	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for computed tomography (CT) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using CT scanning). It consists of battery-powered electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for CT studies, and is mobile (e.g., on a wheeled pedestal). The system may synchronize media delivery with the x-ray generator during CT scanning.	IIb

11286	32495	Angiography contrast medium injection system, line-powered	Ангиографийн тодосгогч бодисын тарилгын систем, шугамаар ажилладаг	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for angiographic procedures (e.g., examination of the coronary and renal arteries, and great vessels and vasculature of the heart, brain, abdominal organs, and extremities). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for angiographic studies. Some systems can synchronize media delivery with the electrocardiographic cycle and/or the x-ray generator.	IIb
11287	32516	Stimulator, evoked-response, somatosensory	Өдөөгч, өдөөгдсөн хариу үйлдэл, соматосенсор	A mains electricity (AC-powered) stimulator used to apply an electrical stimulus to a patient by means of skin electrodes for the purpose of measuring an evoked response.	IIb
11288	32517	Mobile extraoral dental x-ray system, analogue	Амны хөндийн хөдөлгөөнт шүдний рентген систем, аналог	A mobile (on wheels) diagnostic dental x-ray system designed to generate and control x-ray beams. It records the absorption pattern of x-ray beams used for general-purpose, routine, dental radiography examinations involving the diagnosis and treatment (e.g., surgical or interventional) of diseases of the teeth, jaw and oral cavity structures. The sensor is placed outside the mouth, the purpose being to visualize the entire mouth area showing teeth on both the upper and lower jaws. The image is from film or phosphor plate.	IIb
11289	32520	Electronic signal conditioner, physiological	Цахим дохионы агааржуулагч, физиологийн	An electronic device, e.g., an integrator or differentiator, used to modify physiological signals for recording and processing.	IIb

11290	32531	Radio-frequency ablation system probe, reusable	Радио давтамжийг арилгах системийн датчик, дахин ашиглах боломжтой	A hand-held surgical device designed to connect to a radio-frequency ablation system generator to deliver radio-frequency (RF) energy to a targeted operative site for soft-tissue coagulation/ablation (i.e., thermal ablation, therapeutic lesion, or denervation). It is intended to be used in percutaneous, laparoscopic, or intraoperative procedures to ablate tissue typically in the brain/nerves, kidney, liver, and/or in small or metastatic tumours. The device typically includes multiple electrodes that extend from its tip, once deployed, and which cover the site to be treated. This is a reusable device.	IIb
11291	32559	Gastro-urological snare, single-use	Ходоодны уурологийн урхи, нэг удаагийн хэрэглээ	A flexible device intended to be inserted through an endoscope to hold (snare), ligate, cauterize, and cut tissue (e.g., polyps, or other mucosal lesions) in the gastroenterological/urological (GU) tracts using high frequency current. It typically consists of a flexible and insulated insertion sheath, a snare loop attached to the distal end of the sheath, and an operating wire connected to both the loop and a handle which controls the operating wire. The proximal end of the operating wire is connected to a high frequency current power supply unit. This is a single-use device.	IIb
11292	32568	Neurological stereotactic surgery system	Мэдрэлийн стереотактик мэс заслын систем	An assembly of devices that typically consists of a rigid frame, positioning and alignment components, workstation, and a calibrated guide mechanism for precisely positioning probes, other instruments, or implantable devices during neurosurgery. The system may include computerized functions to store diagnostic images used for image-guided surgery.	IIb
11293	32608	Contraceptive cervical cap, single-use	Жирэмслэлтээс хамгаалах умайн хүзүүний малгай, нэг удаагийн хэрэглээ	A contraceptive device that is inserted into the cervix where it acts as a physical barrier to prevent semen from entering the uterus. It is typically a soft rubber cup with a round rim that is sized by a healthcare professional to fit snugly around the cervix. This is a single-use device.	IIb

11294	32626	Obstetrical data analyser, perinatal	Эх барихын мэдээллийн анализатор, перинаталь	A device used during labour to analyse electronic signal data obtained from foetal and maternal monitors. The device provides a clinical diagnosis of foetal status and recommendations for labour management and clinical interventions. The device may include signal analysis and display equipment, and electronic interfaces for other equipment.	IIb
11295	32640	Bare-metal duodenal stent	Нүцгэн металл арван хоёр гэдэсний стент	A sterile non-bioabsorbable tubular device intended to be implanted in the lumen of the duodenum for the palliative treatment of duodenal strictures caused by malignant neoplasms; it is typically used to help eliminate gastric outlet obstructions. It is typically a mesh structure made entirely of metal (e.g., high-grade stainless steel); it is typically expanded in situ (e.g., with a balloon catheter or self-expands) and disposable devices intended to assist implantation may be included.	IIb
11296	32660	Patient monitor, electroencephalographic, foetal	Өвчтөний хяналт, электроэнцефалографи, ураг	A mains electricity (AC-powered) device that detects, processes and displays the electrical signals produced by the foetal brain, presenting an electroencephalogram (EEG).	IIb
11297	32684	Endoscopic electrosurgical handpiece/electrode, bipolar, reusable	Дурангийн цахилгаан мэс заслын гар утас/электрод, хоёр туйлт, дахин ашиглах боломжтой	An electrosurgical device which consists of a handpiece with mechanical and/or electrical controls, and a bipolar electrode intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation/ablation during endoscopic (including laparoscopic, arthroscopic) surgery; it may in addition be intended for open surgery. It includes a long thin electrode connected to the handpiece, and may include a lumen for suction/irrigation; it is available in a variety of forms (e.g., forceps, rigid probe with controls). This is a reusable device.	IIb

11298	32729	Indirect binocular laser ophthalmoscope	Шууд бус дуран лазер офтальмоскоп	An electrically-powered, head-worn, ophthalmic device used for the stereoscopic examination and laser treatment of the eye, particularly the retina. It typically consists of a headband, a built-in light with aperture control for adjustment of the illumination field, convergence controls to synchronize the illumination and examination beams, a delivery mirror, filters to protect the surgeon against incidental laser-beam reflection, and a power-supply cable for the lighting, and a fibreoptic cable to convey the laser beam. This device is connected to an appropriate laser for delivery of laser energy.	IIb
11299	32836	Unicondylar knee interpositional spacer	Unicondylar өвдөгний завсрын зай	A sterile device designed to be implanted into the joint space above the medial or lateral tibial plateau to articulate with one femoral condyle where substantial amounts of articular cartilage have degenerated, typically due to osteoarthritis. Device geometry is designed to improve knee alignment and joint spacing. The device is made of metal [e.g., cobalt-chrome (Co-Cr)] and is implanted without cement; it is used as an alternative to joint replacement or when joint replacement is not warranted.	IIb
11300	32837	Prosthesis, ankle, internal, total	Протез, шагай, дотоод, нийт	An implantable artificial substitute for the main articulating surfaces of the ankle. The device may be made of metal, ceramic, carbon, polymer or a combination of these. It may be unconstrained, constrained or semi-constrained. The device may be used with or without bone cement.	IIb
11301	32841	Mobile-bearing total knee prosthesis	Өвдөгний хөдөлгөөнт протез	A sterile implantable artificial substitute for a knee joint typically designed to replace all the articulating surfaces of the damaged/degenerative (e.g., arthritic) joint [total knee arthroplasty (TKA)] or to replace a dysfunctional knee prosthesis (revision); it is designed with a mechanism for rotation to minimize wear/loosening problems and to allow greater range of motion for the joint than other types of knee prostheses. It typically includes femoral, tibial, and patellar components that articulate and with parts made of metal, ceramic, and/or polyethylene (PE); it may be implanted with or without bone cement and is often used for younger and/or active patients.	IIb

11302	32847	Orthopaedic bone nut	Ортопедийн ясны самар	A sterile profiled block made of metallic or non-metallic material that is threaded on its inside surface, and designed to securely fasten a bone fixation bolt, possibly with a washer. This is a single-use device.	IIb
11303	32854	Orthopaedic bone pin, non-bioabsorbable	Ортопедийн ясны зүү, био шингэдэггүй	A thin, implantable rod intended to be used for the stabilization of a bone fracture or bone grafts, or for an osteotomy or arthrodesis. It is typically drilled into bone and may be smooth or threaded, solid or cannulated, and/or semi-flexible. Also known as a K-Wire, it may in addition be intended to assist with the introduction of a surgical instrument and/or implant; it is not intended for implantation into the intramedullary canal (i.e., not a nail). It is made of a material that is not chemically degraded or absorbed by natural body processes (e.g., stainless steel). Some designs may have a break-off shank and/or be coated to improve long-term fixation. This is a single-use device.	IIb
11304	32859	Orthopaedic bone screw starter/notcher	Ортопедийн ясны шураг эхлүүлэгч / ховил	A hand-held surgical instrument used to create an indentation or enlarge a pre-drilled pilot hole in a bone that will enable the surgeon to begin threading a bone screw or place another form of anchoring device. This device, commonly known as a bone notcher, may function and be used in a variety of ways: 1) notch the bone such that the threads on a bone screw will bite into the bone; 2) simply hold the screw at the desired angle to the bone while the screw is driven into position; or 3) in the case of hard bone (e.g., on the glenoid) be inserted into a pilot hole where it is rotated to create a cavity within the soft bone for placement of, e.g., a suture anchor. This is a reusable device.	IIb
11305	32869	Prosthesis, tendon	Протез, шөрмөс	An implantable device used to replace or repair a missing or damaged tendon in order to restore natural function. The device is made from synthetic absorbable or non-absorbable materials.	IIb

11306	33073	Non-linear accelerator system	Шугаман бус хурдасгуурын систем	An assembly of devices designed to use a strong magnetic field to produce a non-linear acceleration path for particles accelerated in an alternating electric field and used therapeutically, primarily in the treatment of cancer. The path is often formed as a spiral or a circle. The output is used as a treatment beam on the patient, either directly or after passing a suitable target. The system typically includes signal analysis and display devices, patient and device supports, and software.	IIb
11307	33085	Perineo-gynaecological collagen-remodelling radio-frequency hyperthermia system applicator	Перинэ-эмэгтэйчүүдийн коллагеныг сэргээдэг радио давтамжийн гипертерми системийн түрхэгч	A hand-held, electrically-powered component of a collagen-remodelling radio-frequency hyperthermia system designed to deliver controlled, low-level, radio-frequency (RF) energy to treat perineo-gynaecological soft tissues disorders [e.g., stress urinary incontinence (SUI), postpartum vaginal laxity]. It is connected to a dedicated generator that supplies the RF energy. This is a single-use device.	IIb
11308	33109	Mobile intraoral dental x-ray system, digital	Амны хөндийн хөдөлгөөнт шүдний рентген систем, дижитал	A mobile (on wheels) diagnostic dental x-ray system designed to generate and control x-ray beams. It records the absorption pattern of x-ray beams used for general-purpose, routine, dental radiography examinations involving the diagnosis and treatment (e.g., surgical or interventional) of diseases of the teeth, jaw and oral cavity structures. The sensor is placed in the mouth, the purpose being to visualize a limited region in detail. The data is either from analogue-to-digital conversion techniques imaging or by digital imaging.	IIb
11309	33117	Radionuclide system generator	Радионуклидын системийн генератор	A device designed to allow the elution of a short lived radionuclide used in various diagnostic nuclear medicine imaging procedures. It is an enclosed column filled with a long half-life parent radionuclide that decays to a short half-life daughter nuclide which then can be separated by chemical means. The radioactive isotope eluted from the generator is either directly delivered to a patient by injection or inhalation or is otherwise used in the formulation of various radiopharmeucticals administered to patients in order to perform various nuclear medicine imaging studies. Commonly used radionuclide generators are Molybdenum-99 and Krypton (Kr).	IIb

11310	33136	Automatic-aperture-control diagnostic x-ray system collimator	Автомат диафрагмын удирдлагын оношлогооны рентген системийн коллиматор	A standard, diagnostic x-ray beam-limiting and shaping device that includes an automatically controlled motorized shutter mechanism. It is designed to adjust the shutters so that the x-ray beam shape matches the size of the film cassette in the holder and is attached to the beam exit port of a diagnostic x-ray system tube housing assembly. It typically includes a light-centring device that is used to project a light field onto the patient that is coincident with the x-ray beam in order to centre the tube over the film cassette. It is used to limit the effects of scattered radiation on image quality and to provide patient protection by eliminating exposure to non-target body areas.	IIb
11311	33168	Maxillofacial prosthesis	Эрүү нүүрний протез	A sterile implantable device designed to permanently restore or replace the maxilla (the superior jawbone) and/or adjacent facial bones. It is typically made of metal or synthetic material.	IIb
11312	33173	Metal-backed elbow ulna prosthesis	Металл тулгууртай тохойн ясны протез	A sterile implantable device designed to replace the proximal ulna as part of an elbow joint replacement. The device is typically comprised of metal-backed polyethylene (PE) and its stem is usually coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	IIb
11313	33174	Coated elbow humerus prosthesis	Бүрсэн тохойн шилбэний протез	A sterile implantable device designed to replace the distal humerus as part of an elbow joint replacement. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	IIb

11314	33175	Metallic femoral head prosthesis	Гуяны толгойн металл протез	An implantable artificial substitute for a diseased or injured femoral head that has an outer surface made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. It is designed to be attached to the trunnion of a prosthetic femoral stem/shaft or a head/stem adaptor, and to articulate with an acetabulum prosthesis as part of a total hip arthroplasty (THA), or articulate with the natural acetabulum directly or via a bipolar component as part of a partial hip arthroplasty (hemiarthroplasty). The device ranges in form from partially to fully spherical (ball-shaped) and is available in various sizes.	IIb
11315	33177	Sleeve femoral extension	Ханцуйны гуяны сунгалт	A sterile implantable device typically designed to be attached to the distal end of a revision femoral stem prosthesis to extend the length of the prosthetic femur to make-up for proximal bone loss during revision of a total hip prosthesis. The device is a hollow sleeve typically made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	IIb
11316	33178	Revision uncoated hip femur prosthesis	Хувилбаргүй гуяны гуяны протез	A sterile device designed to replace the entire femoral component of a total hip prosthesis implanted during replacement of the total hip prosthesis typically due to wear. The revision device is composed of two or more separate segments (e.g., femoral head, neck, stem, and extensions) designed to be joined (modular) and is not coated with materials intended to improve fixation and stability by promoting bone ingrowth. The device may be made of metal and/or ceramic materials. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation is intended to be performed with bone cement.	IIb
11317	33179	Acetabular prosthesis supporting device	Ацетабуляр протезийг дэмжих төхөөрөмж	A device in the form of a ring, sheet, mesh, or other configuration, used to support or restore an acetabular component, typically in revision procedures. The device may be of metal or polymer materials.	IIb

11318	33180	Hip prosthesis cement restrictor	Хип протезийн цемент хязгаарлагч	An implantable device designed to restrict the distal flow of bone cement in the cavity of an internal hip prosthesis femoral stem component or acetabular component. It is typically in the form of a mesh and made of synthetic polymer [e.g., polymethylmethacrylate (PMMA)].	IIb
11319	33181	Metal-on-polyethylene total hip prosthesis	Металл дээр полиэтилен гуяны нийт протез	A sterile implantable artificial substitute for a diseased (e.g., arthritic) or injured hip joint consisting of matching femoral (head/shaft) and acetabular components articulated at a metal-on-polyethylene or cross-linked polyethylene interface. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	IIb
11320	33187	Femur nail	Гуяны хумс	A rod made of metal or other material intended to be implanted into the intramedullary canal of the femur to immobilize the ends of a fractured bone in position to promote healing; it also be used to support the bone in the presence of a pathological condition, or for knee arthrodesis. It may be a locked or unlocked model and may include components to assist fixation of more proximal or distal conditions. This is a single-use device.	IIb
11321	33275	Intravascular oximeter	Судасны оксиметр	A mains electricity (AC-powered) instrument designed for the continuous in vivo measurement of venous blood oxygen saturation (SvO2) using a fibreoptic catheter that includes photoelectric sensors at its tip, and an external unit to process and display the results. It is used in diagnostic cardiac catheterization, cardiac surgery, and sometimes to evaluate oxygen saturation in newborns through an umbilical artery. Some of these instruments are coupled to dedicated pulmonary arterial catheters for continuous display of oxygen saturation.	IIb

11322	33309	Cardiopulmonary bypass system filter, arterial blood line	Зүрхний уушигны системийн шүүлтүүр, артерийн цусны шугам	A sterile, porous device intended to be used in the arterial line of an extracorporeal circuit, during a cardiopulmonary bypass procedure, to trap and remove potentially harmful gaseous emboli, aggregated blood constituents, and particulate matter (e.g., greater than 40 microns) to prevent them from flowing into the bloodstream and obstructing extracorporeal circulation. It is commonly referred to as a bubble trap and will typically be used for a specified length of time (e.g., 6 hours). This is a single-use device.	IIb
11323	33310	Polyethylene craniofacial tissue reconstructive material	Гавал нүүрний эдийг нөхөн сэргээх полиэтилен материал	A sterile implantable device intended to support, contour, and provide structure for the craniofacial anatomy (i.e., head and face including the chin, cheeks, nose, eye sockets and ears) during reconstructive and plastic surgery procedures. It is typically a high-density polyethylene (PE) material with an interconnecting pore structure that supports tissue ingrowth. The device is available in blocks, sheets, wedges and spheres that can be cut by the surgeon to meet the patient's specific needs.	IIb
11324	33314	Apex cardiograph transducer	Апех кардиографын хувиргагч	A device used to detect motion of the heart, e.g., acceleration, velocity or displacement, by changes in the mechanical or electrical properties of the device. The results will be displayed on the parent device. This is a reusable device.	IIb
11325	33315	Transducer, heart sound	Хөрвүүлэгч, зүрхний чимээ	A device that is designed to be placed on the patient's chest to pick up sound from the heart valves. This device may be used in conjunction with a phonocardiograph to record heart sounds.	IIb
11326	33317	Cardiopulmonary bypass system centrifugal pump drive unit	Зүрхний уушигны эргэлтийн системийн төвөөс зугтах насосны хөтөчийн нэгж	A mains electricity (AC-powered) device that powers and controls the speed of a disposable cardiovascular bypass system centrifugal pump, to which it is connected, for the circulation of blood through the extracorporeal circuit for gas exchange and reinfusion. This device drives the centrifugal rotor of the disposable centrifugal pump using magnetism.	IIb

11327	33369	Uncoated unicondylar knee femur prosthesis	Өвдөгний гуяны нэг кондиляр бүрхүүлгүй протез	A sterile implantable device designed to replace the bearing surface of one femoral condyle (femoral component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device articulates with a tibial component and an insert, and its implantation is intended to be performed with bone cement.	IIb
11328	33370	Total wrist radius prosthesis	Бугуйн радиусын нийт протез	An implantable device designed to replace the distal end of the radius as part of a total wrist replacement, typically to treat severe bone fracture or degenerative disease (e.g., arthritis). It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and consists of a stem and articulating surface, and may interface with a spacer. Fixation devices for implantation (e.g., screws) may be included with the prosthesis and implantation may be performed with or without bone cement.	IIb
11329	33371	Partial wrist prosthesis	Бугуйны хэсэгчилсэн протез	A sterile implantable artificial substitute for some of the carpal bones of the wrist joint designed to articulate with the natural radial bone. It typically includes carpal heads, plate, and stem components with parts made of metal, carbon, and/or polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement. Device indications include joint damage (e.g., fracture), degeneration (e.g., arthritis), deformation, and revision where other devices or treatment have failed.	IIb
11330	33519	Suture retention device	Оёдол барих төхөөрөмж	A device designed to be placed on the surface of the skin and intended to aid wound healing by distributing suture tension over a larger area in the patient. It is typically in the form of a retention bridge, a surgical button, or a suture bolster through which the sutures are passed. The distribution of suture tension will help prevent the suture from cutting the skin. This is a single-use device.	IIb

11331	33523	Scavenging anaesthesia face mask	Мэдээ алдуулах үйлчилгээтэй нүүрний маск	A flexible, form-shaped device designed to be placed over a patient's nose and/or mouth to direct anaesthetic/analgesic gases to the upper airway, while capturing any gas that leaks past the device's rim. It is typically designed with a soft rim that seals against the patient's face, and an outer casing, or some other mechanism, that directs the exhaled respiratory and waste gases into a gas scavenging device. It typically includes a 22 mm connector and is used in situations where it is difficult to achieve an airtight seal to a patient's face, or when an analgesic gas is administered (e.g., during birthing). It is typically stabilized with a headstrap. This is a reusable device.	IIb
11332	33539	Carpometacarpal interpositional spacer, non-bioabsorbable	Carpometacarpal interpositional spacer, бус био шингээх	A non-bioabsorbable device designed to be implanted into the first carpometacarpal (CMC) joint (i.e., between the trapezium and the first metacarpal bone) to treat pain, instability, and/or motion disabilities of the thumb caused by arthritis. It is typically spherical in shape and made of metal or ceramic.	IIb
11333	33581	Coated hip femur prosthesis, modular	Гуяны гуяны бүрээстэй протез, модуль	A sterile implantable principal component of a total hip prosthesis (femoral component) designed to replace the femoral head and neck; the device is composed of two or more separate pieces (e.g., head, neck, and stem) designed to be joined and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. The device may be made of metal and/or ceramic materials. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	IIb
11334	33582	Mobile-bearing total ankle prosthesis	Хөдөлгөөнт нийлмэл шагайны протез	A sterile implantable artificial substitute for an ankle joint designed to replace the main articulating surfaces of the damaged (e.g., fractured) and/or degenerative (e.g., arthritic) joint. It includes tibial and talar components typically with parts made of metal and polyethylene (PE); the PE bearing that articulates the two components is not attached or moulded to either of the components which is intended to facilitate greater joint range of motion. Fixation devices (e.g., screws) for implantation may be included and implantation may be performed with or without bone cement.	IIb

11335	33586	General-purpose multi-parameter bedside monitor	Орны дэргэдэх ерөнхий зориулалтын олон параметрт монитор	An electrically-powered device/device assembly designed for the continuous assessment of several vital physiologic parameters (e.g., ECG, blood pressure, heart rate, temperature, cardiac output, apnoea, and respiratory/anaesthetic gas concentrations) of one patient in intensive or general healthcare settings. It typically set-up by the patient bedside and often includes programmable alarms, portable radio transmitters, receivers, and antennas (telemetry systems) to allow monitoring during patient ambulation or transportation; it is not dedicated to neonatal use and is not intended to be worn on the body.	IIb
11336	33595	Anaesthesia kit, obstetric	Мэдээ алдуулах хэрэгсэл, эх барихын	A collection of devices and supplies used to deliver an analgesic or anaesthetic agent to function as a regional block for labour and delivery. It is used for pain management and typically consists of a procedural needle, syringe, catheter, and a filter. This is a single-use device.	IIb
11337	33596	Endoscopic electrosurgical handpiece/electrode, monopolar, reusable	Дурангийн цахилгаан мэс заслын гар утас/электрод, монополяр, дахин ашиглах боломжтой	An electrosurgical device which consists of a handpiece with mechanical and/or electrical controls, and a monopolar electrode, intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation/ablation during endoscopic (including laparoscopic, arthroscopic) surgery. It includes a long thin electrode connected to the handpiece, and may include a lumen for suction/irrigation; it is available in a variety of forms (e.g., forceps or snare with ring handles, rigid probe with controls) and requires a patient contact return electrode to complete the circuit. This is a reusable device.	IIb
11338	33598	Fallopian tube clip/band	Фаллопийн хоолойн клип / хамтлаг	An implantable device applied externally to the fallopian tube(s) to constrict the tube and prevent the passage of ova. It is typically used during tubal ligation procedures and functions as a contraceptive device.	IIb

11339	33602	Endoscopic electrosurgical diathermy system generator	Дурангийн цахилгаан мэс заслын диатермийн системийн генератор	A mains electricity-powered (AC-powered) component of an endoscopic electrosurgical diathermy system that generates a high frequency electrical current in selected radio-frequency (RF) bands between two electrodes to produce heat in tissues for cutting and coagulating during endoscopic surgery. It is typically connected to an endoscopic conducting unit (handpiece/electrode) via a cable, and the energy it produces may be regulated by the operator with a hand- or foot-switch.	IIb
11340	33643	Tympanostomy tube, semi-permeable membrane	Tympanostomy хоолой, хагас нэвчилттэй мембран	A small, hollow cylinder implanted for ventilation or drainage of the middle ear and for preventing fluids from entering the middle ear cavity. The device is inserted through the tympanic membrane to permit a free exchange of air between the outer and middle ear. The tube portion of the device is made of silicon elastomer or porous polyethylene (PE), and the membrane portion of the device is made of polytetrafluoroethylene (PTFE), commonly known as Teflon.	IIb
11341	33664	Cruciate-retaining total knee prosthesis	Өвдөгний загалмайг тогтоогч нийт өвдөгний протез	A sterile implantable artificial substitute for a knee joint typically designed to replace all the articulating surfaces of the damaged/degenerative (e.g., arthritic) joint [total knee arthroplasty (TKA)]; it is designed to be implanted with retention of the posterior cruciate ligament. It typically includes femoral, tibial, and patellar components that articulate and with parts made of metal, ceramic, and/or polyethylene (PE). The device may be implanted with or without bone cement and is typically used in cases where bone stock is good and supporting ligaments provide adequate stability.	IIb

11342	33665	Posterior-stabilized total knee prosthesis	Ар талд тогтворжсон нийт өвдөгний протез	A sterile implantable artificial substitute for a knee joint typically designed to replace all the articulating surfaces of the damaged/degenerative joint [total knee arthroplasty (TKA)] or for prosthesis revision; it is implanted when the posterior cruciate ligament is sacrificed and uses a “cam and post” mechanism to replace the stabilizing function of the ligament. It includes femoral, tibial, and patellar components that articulate and with parts made of metal, ceramic, and/or polyethylene (PE); it may be implanted with or without bone cement and is often used in cases where bone stock and mediolateral stability are good in the face of severe deformities or ligament degeneration.	IIb
11343	33666	Uncoated knee tibia/insert prosthesis	Өвдөгний шилбэний бүрхүүлгүй шилбэ/протез	A sterile implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision). It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth; it includes a polyethylene (PE) insert/platform for femoral articulation. Device implantation is intended to be performed with bone cement.	IIb
11344	33667	Trabeculated knee tibia/insert prosthesis	Өвдөгний шилбэний трабекуляци/протез хийх	A sterile implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision). It is made of metal (e.g., tantalum alloy) and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth; it also includes a polyethylene (PE) insert/platform for femoral articulation. Device implantation is typically intended to be performed without bone cement.	IIb

11345	33668	Coated knee tibia/insert prosthesis	Өвдөгний шилбэ/бүрсэн протез	A sterile implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision). It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is coated with a material (e.g., beads, hydroxyapatite, mesh) intended to improve fixation and stability by promoting bone ingrowth; it also includes a polyethylene (PE) insert/platform for femoral articulation. Device implantation may be performed with or without bone cement.	IIb
11346	33692	Rotating hinged total knee prosthesis	Эргэдэг нугастай өвдөгний нийт протез	A sterile implantable artificial substitute for a knee joint typically designed to replace all the articulating surfaces of the joint [total knee arthroplasty (TKA)] because of major loss of stabilizing structures or bone around the knee, often from tumour resection, or to replace a dysfunctional knee prosthesis (revision); it is designed with a mechanism for joint rotation and its major components are connected for stability typically about a transverse axis posterior of the rotational axis. It typically includes femoral, tibial, and patellar components that articulate and with parts made of metal, ceramic, and/or polyethylene (PE); it may be implanted with or without bone cement.	IIb
11347	33694	Metal-on-metal total hip prosthesis	Металл дээр хийсэн түнхний нийт протез	A sterile implantable artificial substitute for a diseased (e.g., arthritic) or injured hip joint consisting of matching femoral (head/shaft) and acetabular components articulated at a metal-on-metal interface. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	IIb
11348	33695	Bipolar femoral head outer component, hemiarthroplasty	Хоёр туйлт гуяны толгойн гадна талын бүрэлдэхүүн хэсэг, hemiarthroplasty	An implantable hemisphere-shaped device used as part of a partial hip replacement (femoral) and designed to interface with the acetabulum on its outer surface where it freely rotates, and interface with a femoral head prosthesis on its inner surface where it allows free rotation of the head. It is a one-piece device typically composed of an outer metal shell [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and an inner polyethylene (PE) liner.	IIb

11349	33696	Partial metatarsophalangeal joint prosthesis	Хэсэгчилсэн метатарсофалангеал үений протез	An implantable artificial substitute for the distal head of the metatarsal or the adjacent phalangeal base, intended to repair an articulating surface of the metatarsophalangeal (MTP) joint of the foot (toe). The device is made of metal or a metal/polymer combination, and may contain hyaluronic acid; implantation may be performed with or without bone cement. The device is intended to treat degenerative or traumatic arthritis, hallux valgus, hallus rigidus, and/or an unstable or painful MTP joint.	IIb
11350	33697	Proximal interphalangeal joint prosthesis, one-piece	Проксимал фаланга хоорондын хамтарсан протез, нэг хэсэг	A sterile implantable artificial substitute for the proximal interphalangeal (PIP) joint(s) of the hand (finger) which has been damaged by rheumatoid, degenerative, or traumatic arthritis. It consists of a single flexible across-the-joint component made from either a silicone elastomer or a combination of polypropylene and polyester materials. The flexible across-the-joint component may be covered with a silicone rubber sleeve.	IIb
11351	33700	Total metatarsophalangeal joint prosthesis, one-piece	Нийт шилбэний үений протез, нэг хэсэг	An implantable device designed to replace the metatarsophalangeal (MTP) joint(s) of the foot (toe). The device is made of a single piece of silicone elastomer. It is is intended to treat degenerative or traumatic arthritis, hallux valgus, hallus rigidus, and/or an unstable or painful MTP joint.	IIb
11352	33701	Elbow radius prosthesis	Тохойн радиусын протез	A sterile implantable device designed to replace the proximal radius typically as treatment for severe radial head fracture or degenerative disease (arthritis). The device includes a radial head or radial head with stem and is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] or metal and polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	IIb

11353	33702	Uncoated elbow humerus prosthesis	Бүрээсгүй тохойн шилбэний протез	A sterile implantable device designed to replace the distal humerus as part of an elbow joint replacement. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is intended to be performed with bone cement.	IIb
11354	33714	Body femoral extension	Биеийн гуяны сунгалт	A sterile implantable device typically designed to be attached to the distal end of a revision femoral stem prosthesis to extend the length of the prosthetic femur, and to enable the surgeon to determine how deep to go into the femoral canal during revision of a total hip prosthesis. The device is a solid/dense body typically made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	IIb
11355	33786	Metacarpophalangeal joint prosthesis, one-piece	Metacarpophalangeal хамтарсан протез, нэг хэсэг	An implantable artificial substitute for the metacarpophalangeal (MCP) joint(s) of the hand (finger) which has been damaged by rheumatoid, degenerative, or traumatic arthritis. It consists of a single flexible across-the-joint component (one-piece) made from either a silicone elastomer or a combination of polypropylene and polyester materials. The flexible across-the-joint component may be covered with a silicone rubber sleeve.	IIb
11356	33794	Tympanostomy tube	Тимпаностоми хоолой	A small, hollow cylinder intended to be implanted, by insertion through the tympanic membrane, for ventilation or drainage of the middle ear. Otherwise known as a myringotomy tube, grommet or an aural vent tube, it is made of materials such as polytetrafluoroethylene (PTFE), polyethylene (PE), silicon elastomer, or porous polyethylene. One type, known as the malleus clip tube, attaches to the malleus. Disposable devices associated with implantation may be included with the device, which may be used to implant bilateral tubes.	IIb

11357	33868	Patient isolation capsule	Өвчтөнийг тусгаарлах капсул	A portable, electrically-powered capsule/pod designed to provide environmental isolation of a patient to protect hospital personnel, the public, and other patients from exposure to air-borne infections [e.g., tuberculosis (TB)] or aerosol medications whilst the patient is being treated. It is a single-patient sealable chamber with glove ports and an electric air filtration mechanism, whereby the air in the chamber is filtered before it is returned to the normal external atmosphere. It may be designed to allow airflow adjustment to provide protection of the patient from harmful environmental agents. This is a reusable device.	IIb
11358	33888	Haemodialysis dialyser reprocessing system	Гемодиализийн диализийн дахин боловсруулах систем	An assembly of mains electricity (AC-powered) devices designed to clean and disinfect haemodialysis dialyzers after each use so that they can be reused, usually by the same patient. It typically performs a cycle that includes rinsing the dialyser with water/cleaning agent [e.g., hydrogen peroxide (H2O2)]; reverse ultrafiltration cleaning; disinfection or re-sterilization (e.g., with formaldehyde); labelling; and performance testing (e.g., volume, pressure). The complete cycle may be performed on one dialyser at a time or several at once (i.e., a single- or multiple-station system). The system may include computing capabilities or be attached to a personal computer for operation.	IIb
11359	33890	Penile tumescence ambulatory recorder	Бэлэг эрхтний хавдар амбулаторийн бичигч	An electrically-powered device intended for 24-hour recording of the tumescence (tendency to swell) of the penis. The patient is connected to and wears the device while he performs normal daily activities and is used to register the plethysmographic measurement or function of the penile erection, e.g., length, circumference, duration of the erection. The measurements are made by, e.g., a plethysmographic sleeve or a transducer placed on the penis and the data is recorded by this device and later used by the physician for the diagnosis of penile dysfunction, e.g., impotence.	IIb
11360	33938	Contact lens solution	Контакт линзний шийдэл	A fluid used for cleaning, disinfecting, storing and/or wetting reusable contact lenses.	IIb

11361	33946	Internal defibrillation electrode, paediatric	Дотоод дефибрилляцийн электрод, хүүхдийн	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator directly to the exposed heart muscle of a pre-pubescent patient in order to intentionally stop/start the heartbeat during cardiopulmonary surgery. It usually consists of a cable set with small-diameter, spoon-like electrodes (commonly known as internal defibrillator paddles or spoons) that are held by the operator directly to either side of the heart muscle so that the discharge passes directly through the heart. It is typically available as a set of two electrodes with insulated handles with a combined cable/connector. This is a reusable device.	IIb
11362	33963	Peripheral intravenous catheterization support kit	Захын судсаар катетержуулалтыг дэмжих хэрэгсэл	A collection of noninvasive devices intended to prepare and/or dress a peripheral vein intravenous (IV) access site. It typically includes devices such as a tourniquet, disinfected swabs, dressings, tape, gauze, and gloves; neither the IV access device nor pharmaceuticals are included. It may also include short tubing and/or syringe, however it is not intended to directly conduct fluids from an IV administration bag/bottle (i.e., not an IV administration set). This is a single-use device.	IIb
11363	34000	Scleral shell	Склераль бүрхүүл	A custom-made prosthesis (a flush-fitting shell) that is used as a cosmetic artificial eye to cover a deformed or disfigured/unsightly blind eye, or over an eviscerated globe. It is made to suit a specific patient/user and will have the cosmetic representation to match the user's contra lateral real eye. It will be worn while the user is in public and normal waking hours. This is reusable device.	IIb
11364	34003	Hip internal fixation system	Хип дотоод бэхэлгээний систем	An assembly of implantable devices designed to treat fractures of the hip. It typically includes a metal plate that is held in position with fasteners such as screws and nails, or bolts, nuts and washers. The assembly is typically intended to treat stable or unstable intertrochanteric, pertrochanteric, and/or base of neck hip fractures.	IIb

11365	34005	Nasal splint, internal	Хамрын чигжээс, дотоод	A device intended to minimize bleeding and oedema and to prevent adhesions between the septum and the nasal cavity. It is placed in the nasal cavity after surgery or trauma. The device is made of plastic, silicone, or absorbent material. This is a single-use device.	IIb
11366	34017	Sternal fixation device	Хөхөө засах төхөөрөмж	An implantable device intended to be used for primary or secondary closure/repair of the sternum, typically following sternotomy or fracture of the sternum, to stabilize the sternum and promote fusion. It may consist of a single or multiple component(s) (e.g., plates, pins, clips, cables, and/or locking screws) made of metal [e.g., titanium (Ti), stainless steel, nickel-titanium alloy (Nitinol)]. Dedicated implantation tools may be included.	IIb
11367	34030	Micro-condom	Бичил бэлгэвч	A small sheath composed of latex or synthetic material intended to cover the glans of the penis for contraceptive purposes only. It is designed to cover the glans penis or part thereof and may also cover the area in the immediate proximity (i.e., the corona and frenulum) but not the entire shaft of the penis. It is indicated only for the prevention of pregnancy and not for the prevention of sexually-transmitted diseases. This is a single-use device.	IIb
11368	34031	Orthopaedic cement restrictor	Ортопедийн цемент хязгаарлагч	A small plug inserted into the medullary canal of a bone during orthopaedic surgery to seal it in order to restrict the area where orthopaedic cement passes when injected. The device is typically made of an orthopaedic bone cement [e.g., polymethylmethacrylate (PMMA), ultrahigh molecular weight polyethylene (UHMWPE)] and absorbent polymers; it may incorporate a metal marker. This is a single-use device.	IIb
11369	34041	Tracheobronchial suction/insufflation catheter, single-lumen	Гуурсан хоолойн гуурсан хоолойн сорох/инсуфляцийн катетер, нэг люмен	A sterile flexible tube designed for periodic tracheal and pharyngeal mucus aspiration and inflation of the lungs with a flow of gas from its distal tip. It consists of a single-lumen tube for alternating suction and insufflation. This is a single-use device.	IIb

11370	34050	Vascular clip	Судасны клип	A sterile clasp, typically metallic (e.g., titanium), that is permanently implanted around a blood vessel to arrest the flow of blood. The blood vessel is typically ligated to control haemorrhage from injury and/or as part of a surgical procedure.	IIb
11371	34071	Implantable intrathecal infusion pump, nonprogrammable	Суулгах боломжтой интратекаль дусаах насос, програмчлах боломжгүй	A battery-powered nonprogrammable device designed to be implanted in a patient for the storing and subarachnoid administration of narcotics/drugs (e.g., morphine sulfate, baclofen) to manage intractable pain and muscle spasms of malignant or non-malignant origin. This implantable infusion pump (IIP) may enable delivery of a bolus of medication, typically patient-controlled with mechanical restrictions that limit the refill rate of the device, or it may provide a constant flow of medication at a factory-set rate. The device typically consists of a refillable drug reservoir, usually implanted under the skin of the lower abdomen, and a connected catheter placed into the spinal fluid space.	IIb
11372	34083	Biochemically-interactive dressing	Биохими-интерактив боолт	A sterile, wound-covering substance or material (e.g., ointment, collagen matrix) intended to actively promote the healing of a wound through the temporary modification of a local biochemical parameter(s) or process(es) [e.g., a change to wound pH, enzymatic activity, or protein binding activity]. The device may be used for various types of partial- and full-thickness wounds, draining wounds, sores/ulcers, skin lacerations/abrasions, burns, or surgical wounds. This is a single-use device.	IIb

11373	34090	Spring-loaded pneumoperitoneum needle, reprocessed	Пүршtэй пневмоперитонеум зүү, дахин боловсруулсан	A slender, sharply-pointed metal tube designed to introduce or remove gas from the peritoneal cavity as a therapeutic or surgical/radiological procedural method. It is often inserted into the peritoneal cavity for the purpose of insufflation (e.g., with carbon dioxide (CO2)] to establish pneumoperitoneum prior to abdominal endoscopy. It is equipped with a spring-loaded, round-tipped obturator that extends from the tube when the device does not encounter resistance. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIb
11374	34091	Seasonal affective disorder phototherapy unit	Улирлын чанартай нөлөөллийн эмгэгийн фото эмчилгээний хэсэг	An electrically-powered device intended to be used to treat patients with seasonal affective disorder (SAD) syndrome by mimicking normal daylight to improve the patient's mental condition, sleep or sleep inertia, and to reduce mood disorders. The light emitted by the device can be used for prescribed periods of exposure and/or for waking the user. It is typically intended for use in the home.	IIb
11375	34092	Anal sphincter prosthesis	Шулуун гэдсээр сфинктерийн протез	A sterile device that functions as an artificial substitute for an anal sphincter intended to treat severe faecal incontinence (loss of control of the bowel). It is typically a fluid-filled implantable device made of silicone elastomer and consisting of tubing-connected components, including an occlusive cuff that fits around the anal canal, a pressure-regulating balloon, and a control pump. The patient regulates bowel evacuation by manually pumping fluid from the cuff to the balloon. This device is typically used in patients who have failed, or are not candidates for, less invasive forms of restorative therapy.	IIb
11376	34106	Prosthesis, subtalar plug	Протез, доод талын залгуур	An implantable device used to replace damaged or lost bone in the talus. It may be of, e.g., polymer or carbon material.	IIb
11377	34108	Prosthesis, ankle, internal, talar component	Протез, шагай, дотоод, талийн бүрэлдэхүүн хэсэг	An implantable component of an ankle joint prosthesis that is affixed to the talus to replace or repair the articulating surface. The device may be made of metal, ceramic, carbon, polymer or a combination of these. The device may be designed to be used with or without bone cement.	IIb

11378	34125	Vitrectomy system handpiece	Витрэктомийн системийн гар утас	A holder for a detachable, micro-cutting tip that converts the energy (e.g., ultrasonic, piezoelectric) produced by a system generator into a mechanical oscillating-cutting action to remove (nibble away) vitreous humour (the jelly-like substance that fills the centre of the eye) during ophthalmic surgery. This device will typically be activated by the surgeon using a foot control and provide or support the irrigation/suction systems needed to supply replacement fluid and remove debris. The handpiece is typically designed in the form of a pen or pencil, and connected to the generator via a cable. This is a reusable device intended to be sterilized prior to use.	IIb
11379	34149	Pelvic-organ-supporting pessary	Аарцгийн эрхтнийг дэмжих пессари	A device made of rubber or soft plastics designed for insertion into the vagina to hold the uterus, bladder and/or rectum in place and help prevent prolapse (falling or sliding of the organ from its normal position into the pelvic cavity), either as a permanent or temporary treatment; it is not dedicated to bladder-only support. It is available in a variety of shapes (e.g., rings, stems) and sizes; it may be fitted for each woman individually. This is a reusable device after appropriate cleaning.	IIb
11380	34151	Basic male condom, synthetic polymer	Үндсэн эрэгтэй бэлгэвч, синтетик полимер	A sheath made from synthetic polymers (e.g., polyurethane, polyisoprene) intended to completely cover the penis during coitus to prevent sperm from gaining access to the female reproductive tract and/or prevent the transmission of sexually transmitted infections (STI). It may be textured, flavoured or contain lubricants. This is a single-use device.	IIb
11381	34162	Bipolar humeral head outer component	Хоёр туйлт humeral толгойн гаднах бүрэлдэхүүн хэсэг	An implantable, hemisphere-shaped component of a bipolar partial shoulder prosthesis designed to interface with the glenoid fossa on its outer surface where it freely rotates, and interface with a humeral head prosthesis on its inner surface where it allows free rotation of the head. It is typically composed of an outer metal shell and an inner polyethylene (PE) liner.	IIb
11382	34163	Prosthesis, spine disc	Протез, нурууны диск	An implantable device that replaces or restores the plate-like structure between two moving vertebrae. It may be made of metal, polymer, other artificial or biological materials, or be a combination of these.	IIb

11383	34180	Anchored bone-conduction hearing implant system	Ясны дамжуулагч сонсголын суулгацын систем	A sterile, battery-powered, electromechanical device assembly intended to compensate for impaired hearing by transmitting vibrations, from transduced sound waves, through the skull to the inner ear. It typically consists of a self-contained microphone, amplifier, and vibrator mounted on a titanium (Ti) post which is implanted into the skull, typically the mastoid bone, and protrudes through the skin. Sound waves are converted into electrical signals and sent to the vibrator, which transmits vibrations directly through bone to the inner ears for hearing. It is used to treat hearing impairment due to middle and/or outer ear obstructive pathologies or types of conductive hearing loss.	IIb
11384	34218	Preterm membrane rupture catheter	Дутуу мембран тасрах катетер	A flexible tube that is introduced into the uterus of a pregnant woman to induce preterm premature rupture of membranes (PPROM) surrounding the foetus before 37 weeks of pregnancy. It is typically introduced via the vagina and is made of plastic materials, e.g., polyethylene (PE), polytetrafluoroethylene (PTFE) commonly known as Teflon, polyurethane and silicone materials. This is a single-use device.	IIb
11385	34219	Prosthesis, rib	Протез, хавирга	An implantalbe device that replaces, or restores, all or part of a rib. It may be made of metal, polymer, other artificial or biological materials or be a combination of these.	IIb
11386	34311	X-ray system automatic exposure control	Рентген систем автомат өртөлтийн хяналт	An automatic exposure control is a software- or electronically controlled sub-system of a diagnostic x-ray system that automatically monitors the beam of x-rays transmitted through the part of the patient's body being examined, and terminates the exposure when a sufficient quantity of radiation has been received to produce a radiographic image of the required density.	IIb
11387	34410	Tympanic membrane prosthesis	Тимпани мембраны протез	A device intended for the repair or replacement of the membrana tympani of the middle ear typically implanted during ear/nose/throat (ENT) surgery. It is made of synthetic polymer material.	IIb

11388	34422	Haemoperfusion system absorption column	Гемоперфузийн системийн шингээлтийн багана	A sterile container that is a component of a haemoperfusion system used for the removal of toxins from a patient's blood, and that holds materials (e.g., activated carbon or resins) which absorb (adsorb) a specific toxin or range of toxins. This is a single-use device.	IIb
11389	34432	Anaesthesia workstation, closed-circuit	Мэдээ алдуулах ажлын станц, хаалттай хэлхээ	An assembly of electronic devices intended for inhalational anaesthesia and specially designed with a closed breathing circuit to recycle a patient's expired gases [unused anaesthesia gases and carbon dioxide (CO_2)], through a CO_2 absorber, to maximize gas utilization and minimize the ambient concentration of exhaled gas. It includes built-in alarms, analysers, control/monitoring systems, and typically has integrated circuitry/touchscreen displays. The system allows very small amounts of fresh gas to enter the circuit and small amounts of exhaled gas to escape the circuit to maintain a healthy gas balance for the patient.	IIb
11390	34606	Skin stapler/staple, bioabsorbable	Арьс үдэгч/үдээс, био шингээх чадвартай	A hand-held manual surgical instrument, preloaded with bioabsorbable skin staples, designed to apply the staples to approximate the free skin edges of an incision or wound. The staples (which may be clip-like) are made of material(s) that are gradually degraded and absorbed by the body (typically biodegradable polymer). This is a single-use device.	IIb
11391	34838	Tube/mask breathing circuit connector, single-use	Хоолой/маск амьсгалын хэлхээний холбогч, нэг удаагийн	A non-sterile device designed to connect a breathing circuit to a compatible endotracheal (ET) tube, an anaesthesia face mask, or other breathing circuit component. It can be used to connect breathing tubes from adult to paediatric sizes because it is designed with connections whose outer and inner dimensions are standardized by ISO to 22 mm and 15 mm. It is typically made of plastic materials and can have a straight or elbow-shaped design. Some designs may allow for partial rotation at the point of connection (a swivel) and may include a suction port. This is a single-use device.	IIb

11392	34840	Brachial plexus anaesthesia kit	Brachial plexus мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver a brachial plexus nerve block through one of several routes that could include supraclavicular, interscalene, infraclavicular, or axillary. It typically consists of a procedural needle, syringe, catheter, and a filter. Concomitant use of a peripheral nerve stimulator may be necessary. This is a single-use device.	IIb
11393	34841	Caudal anaesthesia kit	Caudal мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver an analgesic or anaesthetic agent to the caudal or sacral canal. It typically consists of a procedural needle, syringe, catheter, and a filter. This is a single-use device.	IIb
11394	34842	Epidural anaesthesia set, non-medicated	Эпидураль мэдээ алдуулалтын багц, эмийн бус	A collection of devices intended for the administration of an analgesic or anaesthetic agent (not included) to the epidural space for the management of pain. It includes a needle and/or a catheter with additional procedural devices (e.g., syringe, dressings, guidewire, introducer), and may be intended for single- or continuous-administration. It is not intended for intrathecal anaesthesia This is a single-use device.	IIb
11395	34843	Glossopharyngeal anaesthesia kit	Глоссофарингийн мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver an analgesic or anaesthetic agent to the tongue and the pharynx. It typically consists of a procedural needle, syringe, catheter, and a filter. This is a single-use device.	IIb
11396	34844	Pudendal anaesthesia kit	Pudendal мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver an analgesic or anaesthetic agent to the external genitalia of humans. It typically consists of a procedural needle, syringe, catheter, and a filter. It is typically used during labour, delivery, or both. This is a single-use device.	IIb
11397	34846	Anaesthesia unit	Мэдээ алдуулах тасаг	A stand-alone assembly of devices used to continuously or intermittently administer and monitor a mixture of gases [oxygen (O2), nitrous oxide (N2O), and anaesthetic agents] to provide a patient with an appropriate level of anaesthesia. It is typically mobile with mechanical gas-delivery devices (e.g., the flowmeters and vaporizers); but it may also be wall-mounted, often for use in induction rooms. It typically incorporates an electrically-powered anaesthesia ventilator and patient/gas monitoring devices. It is also known as an anaesthesia machine or an anaesthesia apparatus.	IIb

11398	34851	Anaesthesia ventilator	Мэдээгүйжүүлгийн амьсгалын аппаратр	A mains electricity (AC-powered) stand-alone, automatic cycling device used to assist and control alveolar ventilation during general anaesthesia, and is compatible with inhaled anaesthetic agents. It has fewer functions and is less complex to operate than an intensive care ventilator, but adequately meets the patient's ventilation needs for oxygen (O2) and carbon dioxide (CO2) exchange to maintain normal blood gas concentrations. The device provides a mechanical means to deliver the breathing gas to the patient in a controlled pattern, and is equipped with alarms to warn of changes in respiration or the onset of unsafe operating conditions.	IIb
11399	34860	Low-pressure suction system	Бага даралтын сорох систем	An assembly of devices used to evacuate fluid, tissue, gas, or other foreign materials, typically from the airway of a newborn infant, by means of mild suction (e.g., the level of suction regulation is limited). It generally consists of a suction pump powered by pressurized air or oxygen, tubing, plastic/glass collection container(s), a vacuum gauge, a vacuum control knob, an overflow trap, a moisture filter, and possibly a microbial filter. The pressurized gas enables the pump to create a vacuum in the suction tubing, which is inserted into the body for the removal of materials into the collection container. This system can be used in a wide variety of hospital or other healthcare settings.	IIb
11400	34862	Atmocautery	Атмокотерийн эмчилгээ	An instrument used to arrest bleeding by the direct application of superheated steam to blood vessels. It is typically used in nonmalignant uterine pathology.	IIb
11401	34900	Phacoemulsification system handpiece	Факоэмульсжуулах системийн гар утас	A holder for a dedicated detachable tip that together become a unit that delivers energy (e.g., ultrasonic, piezoelectric), provided from a system generator, to perform phacoemulsification (a procedure for the liquefying and removal of the opaque lens nucleus in cataract surgery). This device will be activated by the surgeon using a foot control and may provide or facilitate the irrigation/suction systems needed for the removal of debris. The handpiece typically designed in the form of a pen or pencil. This is a reusable device.	IIb

11402	34918	Catheter, haemostatic	Катетер, гемостатик	A flexible tube with an inflatable balloon that is inserted into various areas of the body to arrest the flow of blood. This is a single-use device.	IIb
11403	34921	Peritoneal dialysis catheter	Хэвлийн диализийн катетер	A tube used to infuse a solution (dialysate) into the peritoneal cavity allowing metabolic wastes/water to diffuse from the blood by using the peritoneum as the dialysing membrane. It is usually provided with Dacron cuffs promoting tissue growth to prevent fluid leaks/bacterial penetration and is usually percutaneously inserted for permanent use or acute conditions; it may require surgical implantation or be used for one-session dialysis. It is used in manual [continuous ambulatory peritoneal dialysis (CAPD)], automated (continuous cyclic peritoneal dialysis) therapies, intraperitoneal chemotherapy, or to eliminate fluid overload in congestive heart failure. This is a single-use device.	IIb
11404	34943	Internal defibrillation electrode, adult, reusable	Дотоод дефибрилляцийн электрод, насанд хүрэгчид, дахин ашиглах боломжтой	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator directly to the exposed heart muscle of a post-pubescent patient in order to intentionally stop/start the heartbeat during cardiopulmonary surgery. It usually consists of a cable set with spoon-like electrodes (commonly known as internal defibrillator paddles or spoons) that are held by the operator directly to either side of the heart muscle so that the discharge passes directly through the heart. It is typically available as a set of two electrodes with insulated handles with a combined cable/connector. This is a reusable device.	IIb
11405	34994	Haemodialysis system dialysate delivery unit	Гемодиализийн системийн диализат хүргэх нэгж	An electrically-powered integral unit of a haemodialysis system that prepares and delivers the haemodialysis dialysate solution to the haemodialysis dialyser where it is used in the treatment of the patient (one patient only). It monitors and controls such indicators as temperature, conductivity, flow rate, and pressure.	IIb

11406	34995	Haemodialysis system	Гемодиализын систем	An assembly of mains electricity (AC-powered) devices designed to perform haemodialysis, a treatment whereby extracorporeal blood is passed through a filter to allow for the removal of toxins and/or the replacement of electrolytes. The system functions with dialysate solution and a haemodialysis dialyser (haemodialyzer) for the transfer of substances by diffusion and convection. The system typically includes a pump and tubing to circulate blood through the haemodialysis dialyser, a solution mixer to prepare the dialysate, a monitor with system controls, and other dedicated components.	IIb
11407	35004	Haemodialysis dialyser, hollow-fibre	Гемодиализийн диализатор, хөндий утас	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities from the blood of a patient suffering from acute or chronic malfunction of the kidneys. The device typically consists of cylindrical containers with thousands of longitudinally arranged hollow-fiber capillary tubes; the tube walls function as semi-permeable membranes. Blood enters and exits through the lumen of the hollow fibres, while the dialysate flows through the containers on the outside of the fibres. The impurities and fluids in the blood are moved across the membranes to the dialysate under a pressure gradient (diffusion and ultrafiltration) for removal.	IIb
11408	35005	Parallel-plate haemodialysis dialyser, standard	Зэрэгцээ хавтан гемодиализийн диализ, стандарт	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities from the blood of a patient suffering from sudden failure or chronic malfunction of the kidneys. The device typically consists of sheets of semi-permeable membrane that are placed between support plates to form parallel layers; the blood and dialysate circulate in separate alternating compartments. The impurities and fluids in the blood are moved across the membranes to the dialysate under a pressure gradient (diffusion and ultrafiltration) for removal.	IIb

11409	35012	Endoscope washer/disinfector	Дуран угаагч/ариутгагч	A mains electricity (AC-powered) unit intended to be used for the washing and/or disinfecting of endoscopes, and their accessories, with water or an appropriate disinfectant solution. It has built-in features to circulate a solution through the lumen (flushing) of the endoscope; some types may also have built-in drying features.	IIb
11410	35044	Universal hand-controlled electrosurgical diathermy system conducting unit, single-use	Бүх нийтийн гар удирдлагатай цахилгаан мэс заслын диатерми систем дамжуулах төхөөрөмж, нэг удаагийн	A sterile electrical conductor comprised of an electrode handpiece with cables and an active electrode, intended to be used to cut and coagulate tissue at a surgical site. The electrode is typically non-detachable and provides an electrical connection between the output terminals of an electrosurgical diathermy generator and the patient. The energy emitted from the device is regulated by the operator with an integrated microswitch. The unit may have additional features to enable functions e.g., lavage of the electrode for cooling, clearing of the surgical site by irrigation/aspiration, and/or surgical plume (i.e., smoke) evacuation. This is a single-use device.	IIb
11411	35045	Flexible endoscopic electrosurgical forceps, reusable	Уян дурангийн цахилгаан мэс заслын хямсаа, дахин ашиглах боломжтой	A flexible device, covered with a sheath of electrical insulation, designed to perform through a compatible endoscope and to be connected to an electrosurgical diathermy or electrocautery generator to provide electrical current to: 1) obtain tissue samples for histopathological examination; 2) allow for coagulation so as to prevent bleeding; 3) destroy the residuum of the lesion being biopsied. It is typically constructed as a long insulated metal coil whose distal end is equipped with a pair of scissors-like cups or alligator jaws which are operated by a control handle at the proximal end of the instrument. This is a reusable device.	IIb

11412	35099	Cardiopulmonary bypass system, roller type	Зүрхний уушигны эргэлтийн систем, булны төрөл	An assembly of devices that provides mechanical circulatory support during open-heart surgery, bypassing the heart to facilitate surgery on the organ. The basic function of the machine is to oxygenate the body's venous supply of blood and then pump it back into the arterial circuit. It will typically provide intracardiac suction, filtration, and temperature control. This device typically consists of mains electricity (AC-powered) console with roller pumps, oxygenators, a heat exchanger, temperature regulators, a reservoir, filters, a defoamer, and a handcrank for manual emergency rotation of a blood pump. Some systems are manufactured as a single unit while others are made up of modules.	IIb
11413	35104	Haemoperfusion system	Гемоперфузийн систем	An assembly of devices that consists of an extracorporeal blood system and a container filled with adsorbent material that removes a wide range of substances, both toxic and normal, from blood flowing through it. The adsorbent materials are usually activated-carbon or resins which may be coated or immobilized to prevent fine particles entering the patient's blood. The system may include lines and filters specifically designed to connect to the extracorporeal blood system. It is typically used in the treatment of poisoning, drug overdose, hepatic coma, or metabolic disturbances. This is a single-use device.	IIb
11414	35121	Transport infant incubator	Нялхсын инкубатор тээвэрлэх	An electrically-powered unit designed to provide an enclosed controlled environment to maintain appropriate temperature, and in some cases humidity levels, mainly for premature infants and other newborns who cannot effectively regulate their body temperature; it is typically on wheels and is designed for transporting infants either outside or within the healthcare facility. It typically consists of a clear removable/openable plastic hood with a mattress and operates using mains electricity (AC-powered) when not in use for transportation; some types may be supplied with an equipment rack. During transport, it is connected to an ambulance electrical outlet or is battery-powered.	IIb

11415	35142	Aerosol face mask, rebreathing, single-use	Аэрозоль нүүрний маск, дахин амьсгалах, нэг удаагийн хэрэглээ	A flexible, form-shaped device that is placed over the nose and mouth to deliver aerosolized particles/gases to a patient's airway. It is typically used in conjunction with a nebulizer or medicine chamber spacer for the delivery of medication in either a healthcare or home setting. It is made of high-grade resins or other materials to produce a soft, flexible mask that will create an airtight seal against the patient's face. It may include a headstrap and is available in a range of sizes. This is a single-use device.	IIb
11416	35147	Musculoskeletal infrared phototherapy unit, non-wearable	Яс-булчингийн хэт улаан туяаны фото эмчилгээний аппарат, өмсдөггүй	A mains electricity (AC-powered) device intended to provide a source of infrared (IR) heat for localized treatment of musculoskeletal pain/injury (e.g., muscle pain, sports injury, rheumatism) and to improve blood circulation in the treated areas to facilitate healing. It may be available in a variety of forms however it is not intended to be worn on the body.	IIb
11417	35159	Linear accelerator system	Шугаман хурдасгуурын систем	An assembly of devices designed to produce high-energy electrons to yield high-energy x-rays used for therapeutic applications, primarily to treat cancer. It provides a uniform radiation field of uniform intensity and predictable energy level, in a beam with well defined dimensions. The principle of operation is linear acceleration of electrons by means of electromagnetic (EM) microwaves. The output is used as a treatment beam on the patient, either directly or after passing a suitable target. The system typically includes signal analysis and display devices, patient and device supports, and software.	IIb
11418	35176	Anaesthesia face mask, reusable	Мэдээ алдуулах нүүрний маск, дахин ашиглах боломжтой	A flexible, form-shaped device designed to be placed over a patient's nose and/or mouth to direct anaesthetic gases to the upper airway. It is made of conductive or non-conductive rubber, polyvinyl chloride (PVC), or other sterilizable materials that produce a soft, flexible cover to create an airtight seal against the patient's face. It typically includes a 22 mm connector (adult) or a 15 mm connector (paediatric), and is available in a range of sizes. It may be stabilized with a headstrap. This device is sometimes used in association with a manual resuscitator. This is a reusable device.	IIb

11419	35237	Pessary	Пессари	A circular device, e.g., a rubber ring, that is placed in the vagina, typically at an angle in front of the cervix and is used either to mechanically prevent conception or to support pelvic organs. This device is reusable, but should be checked and cleaned before reinsertion. As a prevention device it is recommended to be used together with a spermicide. This is a reusable device.	IIb
11420	35241	Fixation plate, fracture-healing, non-biodegradable	Бэхэлгээний хавтан, хугарал эдгээх, задрахгүй	An implantable sheet of solid material that is attached to bone fragments with screws to bridge the fracture gap and shield the fracture site from stress as the bone heals. The device is also used in bones that may suffer pathological fractures, to temporarily augment the bone following a lengthening procedure, and in maxillofacial surgery. It may also be used to help fuse a joint where arthrodesis is desired. The device is made of a material that is not chemically degraded or absorbed by natural body processes (e.g., implant grade metal, surgical steel, titanium (alloy), or carbon fibre).	IIb
11421	35249	Pressure monitor, intracranial	Даралт хэмжигч, гавлын дотоод	A device intended to be used for intermittent or continuous measurement of the internal pressure of the cranium. This can typically be after surgery where pressure build-up must be monitored, or for other cases where this is important.	IIb
11422	35258	Bile duct prosthesis	Цөсний сувгийн протез	An implantable artificial substitute for the tube-like structure that carries bile from the gallbladder to the duodenum (first part of small intestine).	IIb
11423	35259	Bladder-supporting prosthesis	Давсагийг дэмжих протез	An implantable artificial substitute for the normal anatomical support of the bladder (e.g., the vaginal wall) typically used in the treatment of bladder prolapse. The device is typically a mesh made of polymer material having a butterfly or V shape to conform to the anatomy.	IIb
11424	35260	Cervical cerclage	Умайн хүзүүний шархлаа	A ring or loop used during pregnancy to encircle an incompetent cervix (one that is abnormally liable to dilate causing premature expulsion of the foetus) to prevent a miscarriage.	IIb
11425	35263	Prosthesis, oesophageal	Протез, улаан хоолой	A tubular device inserted into the body to replace or restore the oesophagus to function.	IIb

11426	35268	Larynx prosthesis - obsolete	Хоолойн протез - хуучирсан	An implantable device used to replace or restore the function of the larynx, or to maintain the patency of the larynx passage. The device may be of stainless steel, a polymer or other material.	IIb
11427	35272	Prosthesis, muscle	Протез, булчин	An artificial substitute, partially or totally inserted into the body, for muscle tissue.	IIb
11428	35276	Tendon sheath regeneration implant	Шөрмөсний бүрээсийг нөхөн сэргээх суулгац	A device intended to be implanted to temporarily aid growth of a new tendon sheath for tendon reconstruction. It is made of synthetic polymer (e.g., a silicone elastomer or polyester-reinforced silicone elastomer) and/or metal materials.	IIb
11429	35278	Prosthesis, tracheobronchial	Протез, гуурсан хоолойн гуурсан хоолой	An artificial substitute, in full or part, for the tracheobronchial complex used to restore function.	IIb
11430	35280	Urethral sphincter prosthesis, non-powered	Шээсний сувгийн сфинктерийн протез, цахилгаангүй	An implantable assembly of non-electric devices intended to support or replace a natural urethral sphincter for the management of incontinence. It is a hydraulically-operated system typically consisting of a cuff to surround the urethra, a reservoir for the hydraulic liquid (e.g., saline with/without radiopacifier), and a manually driven pump.	IIb
11431	35294	Radiation therapy simulation system	Цацрагийн эмчилгээний симуляцийн систем	An assembly of diagnostic and radiation therapy devices comprising a radiation therapy simulation system intended for radiation therapy treatment planning applications. It is configured as a diagnostic x-ray system, e.g., fluoroscopic, planar, computed tomography (CT) with associated hardware and software. It is used to localize the field volume to be exposed during radiation therapy and to confirm the position and size of the therapeutic irradiation field produced by a specific set of treatment parameters that have been developed. A radiation therapy treatment planning system (RTTPS) will typically interface to receive the parameters being measured for further use in treatment calculations.	IIb

11432	35338	Arteriovenous/external shunt connector	Артериовенийн/гадаад шунт холбогч	A device designed to connect an arteriovenous (AV) or external shunt to the tubing of an extracorporeal blood circuit, typically part of a haemodialysis system, for withdrawal/infusion of blood. It is typically made of plastic or metal and Y-shaped, allowing alternate withdrawal and infusion of blood. The device is intended to perform haemodialysis using the single-needle/single-lumen needle technique. This is a single-use device.	IIb
11433	35353	Monitoring spirometer, electrical	Хяналтын спирометр, цахилгаан	A mains electricity (AC-powered) device designed to measure continuously a patient's tidal volume (volume of gas inhaled by the patient during each respiration cycle) or minute volume (the tidal volume multiplied by the rate of respiration for 1 minute) for the evaluation of the patient's ventilatory status. It may also be used to measure the tidal volume, minute volume, and respiration rate delivered to a patient via the expiratory ports of resuscitation devices, such as transport ventilators and resuscitators, to evaluate their performance. The device may incorporate high and low tidal volume alarms.	IIb
11434	35361	Stereotactic radiosurgical invasive head frame	Стереотактик радио мэс заслын инвазив толгойн хүрээ	A device intended to be affixed to a patient's skull to enable precise localization of an area within the brain targeted for radiosurgical procedures (e.g., radiation treatment of a brain tumour). It is typically an assembly that includes a head ring or a head frame that is attached to the patient's head with fixation screws partially-embedded into the skull, an arc mechanism for setting target coordinates, and localizer frames and adaptors for precision placement to the simulator and imaging system [e.g., computed tomography (CT), magnetic resonance imaging (MRI), linear accelerator]. This is a reusable device.	IIb

11435	35364	Dry-heat sterilizer	Хуурай дулаан ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from non-heat sensitive medical devices and related products using dry heat sterilization. It typically includes a treatment chamber with shelves where the devices to be sterilized are placed, usually after cleaning of gross debris; a heat source (e.g., electric heaters); and controls to regulate the time and/or temperature of the procedure. The heat may flow into the chamber either by natural convection or using forced air to accelerate and/or make more uniform the process (e.g., fans, high-speed hot air jets). The device is available in stand-alone (bulk) and tabletop units.	IIb
11436	35419	Gastrostomy tube	Гастростомийн хоолой	A thin, flexible, percutaneous, hollow tube which may include additional external components (e.g., external tubing, syringe) intended to be percutaneously inserted into the stomach to feed a patient with a physical disability that prevents oral feeding (e.g., a birth defect of the stomach), and/or provide drainage/decompression of the stomach when it is necessary to bypass an obstruction of the stomach outlet into the small intestine. Although noninvasive disposable enteral feeding components may be included, surgical instruments and pharmaceutical agents are not included. This is a single-use device.	IIb
11437	35440	Cardiopulmonary bypass system air bubble/fluid level detector	Зүрхний уушигны эргэлтийн системийн агаарын бөмбөлөг/шингэний түвшний мэдрэгч	A mains electricity (AC-powered) device designed to detect air bubbles in blood returned to the body from the extracorporeal circuit of a cardiopulmonary (heart-lung) bypass system, and to detect when blood falls below acceptable levels, typically in the venous drip chamber. The device typically consists of an electronic unit and ultrasonic sensors; it usually triggers alarms and activates automated mechanisms to turn off the blood flow when bubbles are detected or an abnormal fluid level occurs. It is typically an integral part of the cardiopulmonary bypass system.	IIb

11438	35453	Haemofiltration system	Гемофилтрацийн систем	An assembly of mains electricity (AC-powered) devices used to perform haemofiltration, a treatment whereby extracorporeal blood is slowly and continuously passed through a filter to allow for the removal of toxins and fluids, and/or the replacement of electrolytes. It typically consists of an extracorporeal blood pump circuit, tubing, catheters, solution mixer, and an operator's console with a monitor. The system functions with dialysate solution and a haemofilter for the transfer of substances by diffusion and convection (ultrafiltration).	IIb
11439	35455	Anaesthesia workstation gas manifold	Мэдээ алдуулах ажлын станцын хийн олон талт	A device that is typically a module and used to mount detachable anaesthesia vaporizers onto an anaesthesia workstation. The gas manifold may have an attachment to prevent the simultaneous operation of more than one vaporizer at a time, and a facility for mounting the emergency oxygen (O2) flush control. The gas manifold is also known as an anaesthesia system back bar.	IIb
11440	35509	Electrosurgical suction tip	Цахилгаан мэс заслын сорох үзүүр	A sterile device that is attached to a suction system via the distal end of a suction tube and used for the rapid removal of bulk matter (e.g., surgical tissue/blood/rinsing fluid debris) from the operative site and is specially designed for use on an electrosurgical instrument. This device is made of materials that will provide electrical insulation and withstand the levels of heat generated at the tip. This is a single-use device.	IIb
11441	35556	Electromyography telemetric monitoring system receiver	Электромиографийн телеметрийн хяналтын системийн хүлээн авагч	A mains electricity (AC-powered) component of an electromyography telemetric monitoring system designed to wirelessly receive, consolidate, and display electromyographic (EMG) signals from a transmitter connected to a patient, typically ambulatory, for viewing at a receiving location (e.g., central station, bedside monitor).	IIb

11442	35569	Neonatal multi-parameter bedside monitor	Нярайн олон параметрийн орны дэргэдэх монитор	A device/device assembly designed to continuously measure and display multiple vital physiological parameters of newborn and premature infants, especially those under critical care. It is typically capable of monitoring parameters such as electrocardiogram (ECG), respiration rate, heart rate, blood pressure, and body temperature; it may also assess haemoglobin oxygen saturation (SpO2) through transcutaneous sensors that measure both transcutaneous oxygen (tcPO2) and transcutaneous carbon dioxide (tcPCO2) saturation. The system typically includes sensors with appropriate size and design for infant use.	IIb
11443	35615	Surgical staple loading unit, non-cutting	Мэс заслын үдээс ачаалах хэсэг, огтлохгүй	A unit containing non-bioabsorbable surgical staples (implantable and typically U-shaped lengths of wire made of implant grade metal) designed to be used with a surgical stapler (not included) to mechanically fasten internal tissues together (e.g., the subcuticular closure of skin or the approximation of the ends of bowel) to facilitate healing typically in abdominal, thoracic, gynaecologic, orthopaedic, or plastic and reconstructive surgery. The unit is designed to deploy the staples in multiples (e.g., as a row of staples) and is often referred to as a single-use loading unit (SULU) or reload.	IIb
11444	35622	Flexible polypectomy snare, single-use	Уян хатан полипэктомийн урхи, нэг удаагийн хэрэглээ	A flexible device intended to be inserted through an endoscope to ligate, cauterize, and cut polyps, or other mucosal lesions in the gastrointestinal (GI) tract, using high frequency current. It typically consists of a flexible insulated insertion sheath, a snare loop attached to the distal end of the sheath, and an operating wire connected to both the loop and a handle which controls the operating wire. The proximal end of the operating wire is connected to a high frequency power supply unit. This is a single-use device.	IIb

11445	35623	Rigid polypectomy snare, reusable	Хатуу полипектоми урхи, дахин ашиглах боломжтой	A rigid device intended to be inserted through an endoscope to ligate, cauterize, and cut polyps, or other mucosal lesions in the gastrointestinal (GI) tract, using high frequency current. It typically consists of a rigid insulated insertion sheath, a snare loop attached to the distal end of the sheath, and an operating wire connected to both the loop and a handle which controls the operating wire. The proximal end of the operating wire is connected to a high frequency power supply unit. This is a reusable device.	IIb
11446	35624	Flexible polypectomy snare, reusable	Уян хатан полипэктомийн урхи, дахин ашиглах боломжтой	A flexible device intended to be inserted through an endoscope to ligate, cauterize, and cut polyps, or other mucosal lesions in the gastrointestinal (GI) tract, using high frequency current. It typically consists of a flexible insulated insertion sheath, a snare loop attached to the distal end of the sheath, and an operating wire connected to both the loop and a handle which controls the operating wire. The proximal end of the operating wire is connected to a high frequency power supply unit. This is a reusable device.	IIb
11447	35628	Flexible endoscope washer	Уян дурангийн угаагч	A mains electricity (AC-powered) washing machine designed for the decontamination and disinfecting of reusable flexible endoscopes. It includes a processor to circulate a liquid disinfectant through the lumen of the endoscope and wash the working end of the endoscope whilst protecting the proximal end from intrusion of the washing solutions. Some types may also have built-in drying features.	IIb
11448	35640	Minivascular clip	Жижиг судасны клип	A sterile clasp, typically metallic, implanted around a small blood vessel (excluding intracranial vessels) to occlude blood flow.	IIb
11449	35642	Internal orthopaedic fixation system, plate/screw, non-bioabsorbable	Дотор ортопедийн бэхэлгээний систем, хавтан/шураг, био шингэдэггүй	An assembly of implantable devices designed for the stabilization of fractured/surgically-cut bones of the limbs (long bones), their appendages (hands, feet), pelvis, craniomaxillofacial bones, and/or for limb-joint fusion. It typically consists of a set of bone fixation plates, screws, wires, and pins made of materials that cannot be chemically degraded or absorbed via natural body processes (e.g., implant grade metal, surgical steel, titanium alloy, or carbon fibre). It may also include instruments for the attachment of the implants such as screwdrivers or drills.	IIb

11450	35645	Ureteral stent	Шээсний сувгийн стент	A sterile expandable tubular device implanted in an obstructed ureter to maintain its patency. The device, depending upon the type applied, may be inserted with a balloon catheter which when inflated causes the device to expand, or can be delivered to the site where it self-expands. It is typically made of high-grade stainless steel, a polymer, or other material. It may be a continuous tube of a certain length or a scaffold structure in a tube form.	IIb
11451	35646	Vaginal stent, expandable	Үтрээний стент, тэлэх боломжтой	A sterile non-bioabsorbable expandable device designed for long-term placement in the vagina to provide support and/or to prevent shrinking. It is especially used in the treatment of vaginal agenesis involving surgical intervention (e.g., to hold a skin graft postoperatively) or without surgical intervention, for the prevention of vaginal contracture or stenosis after radiotherapy, or for vaginal dilation following transgender vaginoplasty. It is available in many different configurations, sizes, and materials (e.g., an inflatable tubular silicone-elastomer envelope with valves and internal drains) and may be inserted and expanded with a balloon catheter or dilator.	IIb
11452	35649	Ligation clip, metallic	Холбогч хавчаар, металл	A metallic, non-bioabsorbable clasp designed to be implanted around a blood vessel, lymphatic vessel, other tubular anatomy or a tissue bundle, for permanent occlusion. It may be used for ligation in open and endoscopic (e.g., laparoscopic) surgeries; a dedicated, disposable clip applier may be included.	IIb
11453	35650	Prosthesis, nerve sheath	Протез, мэдрэлийн бүрхүүл	An implantable device used to replace or restore a nerve sheath to function.	IIb
11454	35652	Extramuscular diaphragm/phrenic nerve electrical stimulation system	Булчингаас гадуурх диафрагм/френик мэдрэлийн цахилгаан өдөөх систем	An assembly of battery-powered devices designed to provide ventilatory support to a patient with diaphragm dysfunction of neuromuscular origin through electrical stimulation of the phrenic nerve, to contract the diaphragm rhythmically and cause the patient to draw breath in a manner similar to natural breathing. It typically consists of an implanted receiver with electrodes that are placed around the patient's phrenic nerve, and an external transmitter for transmitting the stimulating pulses across the patient's skin to the implanted receiver.	IIb

11455	35654	Abdominal wall prosthesis	Хэвлийн хананы протез	A sterile implantable device intended to substitute for part of the abdominal wall. It is made of synthetic polymer materials such as polytetrafluoroethylene (PTFE) or expanded polytetrafluoroethylene (ePTFE), and is used to close large abdominal wall defects that result from, e.g., trauma, tumour resection, or complications of previous surgery.	IIb
11456	35660	Eye muscle sleeve	Нүдний булчингийн ханцуй	An implantable device made from synthetic materials that is used to encase or isolate an ocular muscle.	IIb
11457	35661	Acetabulum prosthesis	Ацетабулум протез	A sterile implantable principal component of a total hip prosthesis (acetabular component) designed to replace or repair the acetabulum. The component is of a one-piece construction and is made of a combination of metal, ceramic, and/or polyethylene (PE), or all-metal or ceramic material; it may include fixation devices (e.g., screws) for attachment to the body.	IIb
11458	35662	Prosthesis, ankle, internal, tibial component	Протез, шагай, дотоод, шилбэний бүрэлдэхүүн хэсэг	An implantable component of an ankle joint prosthesis that is affixed to the distal tibia to replace or repair the articulating surface. The device may be made of metal, ceramic, carbon, polymer or a combination of these. The device may be designed to be used with or without bone cement.	IIb
11459	35664	Prosthesis, elbow, internal, humeral-component	Протез, тохой, дотоод, humeral-бүрэлдэхүүн	An implantable device designed replace part or all of the distal humerus articulating surface of the elbow joint. It is typically made of metal, polymer, carbon materials or a combination of these and may be of a constrained or unconstrained type (with or without bone cement) and may or may not be an element of a total elbow joint replacement. It is typically used in patients suffering from osteoarthritis, rheumatoid arthritis (RA), or recent trauma (e.g., fracture) which cannot be reconstructed.	IIb
11460	35666	Hip prosthesis, internal, femoral component	Хип протез, дотоод, гуяны бүрэлдэхүүн хэсэг	An implantable component of a total hip joint prosthesis that is used to replace the femoral head and, in some designs, the femoral neck. The component may have a trunnion at the proximal end or a head (ball). The device may be of metal, carbon and/or ceramic material and may consist of a number of parts. In addition there may be devices, e.g., screws, that augment the fixation to the body. The design of the component may be constrained or unconstrained. It may also be used with or without bone cement.	IIb

11461	35667	Knee prosthesis, internal, total	Өвдөгний протез, дотоод, нийт	An implantable artificial substitute for a total knee replacement (TKR) that replaces all of the articulating surfaces of the damaged/degenerative knee joint. This device may be constrained, semi-constrained or unconstrained. It may be linked as in a hinge or consist of separate parts designed to articulate together. It may be made of, e.g., metal, carbon, ceramic or polymer and parts may be composite of some or all materials. The device may be designed to be used with or without a bone cement.	IIb
11462	35668	Knee prosthesis, internal, femoral component	Өвдөгний протез, дотоод, гуяны бүрэлдэхүүн хэсэг	An implantable device used to repair or replace the femoral joint of the knee. It is designed to articulate with tibial and, if required, patellar prosthetic components of the knee joint. It may be made from metal, ceramic or polymer, and may be fixed with a bone cement. The design may include a stem and fixation mechanism.	IIb
11463	35669	Knee prosthesis, internal, tibial component	Өвдөгний протез, дотоод, шилбэний бүрэлдэхүүн хэсэг	An implantable device used to repair or replace the tibial plateau of the knee joint. It is designed to articulate with an insert and the prosthetic femoral component. It may be made from, e.g., metal, ceramic or polymer, and may be fixed with a bone cement. The design will typically include a metal tray with or without a stem and possibly fixation screws.	IIb
11464	35674	Ossicular prosthesis, total	Ясны ясны протез, нийт	A sterile device intended to be implanted for the total functional reconstruction of the ossicular chain (malleus, incus, and stapes bones) to facilitate the conduction of sound waves from the tympanic membrane to the inner ear. It is designed to treat conductive hearing loss from traumatic or surgical injury, otosclerosis, congenital fixation of the stapes, or chronic middle ear disease. The device is typically in the form of a tube made of polymers.	IIb

11465	35677	Orbital rim prosthesis	Тойргийн ирмэгийн протез	A sterile implantable ocular device used to reconstruct the floor of the bony cavity that contains the eyeball and its associated muscles, vessels, and nerves, (i.e., the orbital floor and/or rim of the eye socket), and is intended to house an artificial eye. It may be constructed of one of a variety of materials, or a combination, including stainless steel, titanium (Ti), titanium alloy, or flexible mesh alloplastics. It is an aspherical orbital volume replacement prosthesis that will typically have a spongy outer surface (e.g., reinforced with surgical mesh) designed to encourage tissue attachment.	IIb
11466	35678	Zygoma prosthesis	Зигома протез	A sterile implantable device designed to replace or restore the zygoma (cheekbone). It is usually made of a metal or polymer material.	IIb
11467	35679	Knee prosthesis, internal, patellar component	Өвдөгний протез, дотоод, пателлярын бүрэлдэхүүн хэсэг	An implantable artificial substitute for the natural patella (kneecap). It is designed to articulate with a prosthetic distal femoral component and may be used with bone cement. The device may be of, e.g., metal, ceramic or carbon construction.	IIb
11468	35681	Nipple prosthesis, implantable	Хөхний толгойн протез, суулгах боломжтой	An implantable artificial replacement for a female breast nipple. Although the device has an "external" face it is considered an implant as it is embedded in, and attached to, tissue.	IIb
11469	35685	Orthopaedic bone wire	Ортопедийн ясны утас	A wire intended for the fixation of bone fractures that may be implanted or used short-term (e.g., to hold a plate in the correct position during an intervention). It may be used: 1) as a cerclage wire to aid bone fixation; 2) in a loop or figure-of-eight configuration to reattach, e.g., the tip of the elbow (olecranon), tibial tubercle, or greater trochanter; 3) to augment bone screw/plate fixation; or 4) as a Kirschner wire or K-Wire to stiffen (arthrodese) a toe or finger. It is made of metal [e.g., stainless steel, cobalt-chrome (Co-Cr)], and may be malleable or rigid; some types include a nut designed to be attached to the wire to prevent wire migration. This is a single-use device.	IIb

11470	35690	Ossicular prosthesis, partial	Ясны ясны протез, хэсэгчилсэн	A sterile device intended to be implanted for the functional reconstruction of segments of the ossicular chain (malleus, incus, and/or stapes bones) to facilitate the conduction of sound waves from the tympanic membrane to the inner ear. It is designed to treat conductive hearing loss from traumatic or surgical injury, otosclerosis, congenital fixation of the stapes, or chronic middle ear disease. The device is typically in the form of a tube made of metal [e.g., stainless steel, titanium (Ti)], polymers, or a combination of these materials.	IIb
11471	35712	Ultrasonic lithotripsy system	Хэт авианы литотрипсийн систем	An assembly of devices designed to use ultrasonic (US) shock waves for the intracorporeal fragmentation of stones (calculi) found in the kidney, ureter, and bladder. This system can have a variety of configurations and will typically employ endoscopic devices together with a dedicated US transducer and probe (e.g., a sonotrode) during its application. The debris may be forcefully removed (e.g., through irrigation/suction) or passed out by natural means at a later date.	IIb
11472	35717	Prosthesis, ligament	Протез, шөрмөс	An implantable device intended to replace or repair a missing or damaged ligamentous structure in order to restore natural function. Made from synthetic absorbable or non-absorbable materials.	IIb
11473	35727	Prosthesis, wrist, internal, radial-ulnar component	Протез, бугуй, дотоод, радиаль-ulnar бүрэлдэхүүн хэсэг	An implantable device designed to replace the bearing surfaces of the distal radius and ulna articulation with the carpal complex of the wrist. It is typically made of metal, polymer, carbon materials or a combination of these and may be designed to be used with or without bone cement. It is typically used in patients suffering from osteoarthritis, rheumatoid arthritis (RA), or recent trauma (e.g., fracture) which cannot be reconstructed.	IIb
11474	35777	Electroencephalographic spectrum analyser	Электроэнцефалографийн спектр анализатор	A mains electricity (AC-powered) electronic instrument used to display the frequency content or power spectral density of the electroencephalograph (EEG) signal. The device may also be referred to as a wave analyser.	IIb

11475	35814	Parallel-plate haemodialysis dialyser, high-permeability	Зэрэгцээ хавтантай гемодиализийн диализатор, өндөр нэвчилттэй	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities from the blood of a patient suffering from sudden failure or chronic malfunction of the kidneys. The device typically consists of sheets of semi-permeable membrane that are placed between support plates to form parallel layers; the blood and dialysate circulate in separate alternating compartments. The impurities and fluids in the blood are moved across the membranes to the dialysate under a pressure gradient (diffusion and ultrafiltration) for removal. Membranes of greater surface area and permeability than standard parallel plate dialysers permit higher removal rates.	IIb
11476	35822	External pacemaker, transcutaneous pacing	Гадны зүрхний аппарат, арьсаар дамжих зүрхний аппарат	An external pulse generator (EPG) designed to generate electrical cardiac pacing impulses to stimulate the entire heart simultaneously (in contrast to single- or dual-chambered invasive pacing) to resuscitate the patient, restore normal cardiac rhythm, and/or temporarily pace the heart during invasive procedures that may induce cardiac arrhythmias or asystole (cardiac standstill). The electrical impulses from the device are usually applied to the surface of the chest through cutaneous leads/electrodes (transcutaneous cardiac stimulation).	IIb
11477	35849	Haemodialysis concentrate	Гемодиализын баяжмал	A product intended to be mixed with water to prepare a solution with an electrolyte composition similar to that of blood (i.e., a dialysate) for the exchange of solutes with blood through a semi-permeable membrane in the dialyser of a haemodialysis system. It is intended to remove metabolic waste from the blood to help maintain physiological blood electrolyte and pH levels. The product typically includes glucose and salts of the following constituents: sodium, potassium, magnesium, calcium, chloride, and anions of weak acids [e.g., bicarbonate (HCO_3), acetate, citrate]. It is supplied as a solution or a dry powder. After application, this device cannot be reused.	IIb

11478	35872	Airway temperature monitoring system	Амьсгалын замын температурын хяналтын систем	An assembly of devices typically used bedside to continuously measure the temperature at a specific point along a ventilation airway (e.g., inspiratory limb, Y-piece). It typically includes a temperature sensor, a transducer, a cable, and an electronic unit with a display and alarms (audible and/or visual). The system provides real-time information on the temperature of the gases supplied to patients under assisted ventilation, particularly when a heated humidifier is incorporated into the inspiratory line of a patient's breathing circuit.	IIb
11479	35896	Peritoneal dialysis dialysate	Хэвлийн диализийн диализат	A solution used in peritoneal dialysis treatment and which is prepared for the exchange of solutes across the peritoneum of the patient (in this case, used as a semi-permeable membrane). The exchange is limited to solutes with a molecular size below the cut-off threshold of the peritoneum, which differs from patient to patient. The solution is typically supplied in a plastic bag [e.g., polyvinyl chloride (PVC)] with connectors. This is a single-use device.	IIb
11480	35905	Laryngotracheal anaesthesia kit	Ларинготрахеал мэдээ алдуулалтын иж бүрдэл	A collection of sterile devices designed to deliver an analgesic or anaesthetic agent to the structures between the root of the tongue and the proximal end of the trachea. It typically consists of a procedural needle, syringe, catheter, and a filter. This is a single-use device.	IIb
11481	35911	Infusion/injection port, implantable	Судсаар хийх/тарих порт, суулгах боломжтой	A sterile metallic and/or non-metallic device intended to be implanted subcutaneously in a patient for the short- or long-term delivery of fluids or medications to the vascular system or other anatomical region. The device consists of a housing with a self-sealing septum and a catheter connection mechanism. The device may be implanted in various anatomical locations. This is a single-use device.	IIb

11482	35932	Patient-controlled analgesia infusion pump	Өвчтөний хяналттай өвдөлт намдаах шахуурга	A battery-powered infusion device designed to deliver intermittent bolus doses of opioid medications [e.g., Fentanyl, Demerol (meperidine), Morphine, or Hydromorphone] upon patient demand (i.e., when activated by the patient when he/she requires pain relief), or in a slow, continuous mode for regional anaesthesia. A patient-controlled analgesia (PCA) infusion pump is used to infuse drugs into an operative site, or subcutaneously for postoperative pain management. It is used for hospital/home-use and can be worn by the patient for ambulation. It will incorporate safety mechanisms to prevent the patient overdosing; some types will employ computerized ambulatory drug delivery (CADD) software.	IIb
11483	35938	Laser, argon	Лазер, аргон	A mains electricity (AC-powered) gas laser used in surgical procedures using argon gas as the substrate. It can be used in several clinical specialities (e.g., neurology, dermatology, otology or ophthalmology).	IIb
11484	35939	Surgical/dermatological carbon dioxide laser system	Мэс заслын/арьсны нүүрстөрөгчийн давхар ислийн лазер систем	A mains electricity (AC-powered) Light Amplification by Stimulated Emission of Radiation (LASER) device assembly in which input energy is used to excite carbon dioxide (active medium) to emit a beam of intense, coherent, monochromatic electromagnetic (EM) radiation. The device is mainly used to create surgical incisions, to excise or vaporize deeper tissues (e.g., to debulk tumours), and to coagulate small vessels. It can be used for macroscopic/microscopic surgery and for endoscopic and laparoscopic procedures; it can also be used in dermatology to treat vascular, infectious, or inflammatory conditions, as well as tumours of the skin.	IIb
11485	35940	Laser, Nd:YAG	Лазер, Nd:YAG	A mains electricity (AC-powered) device designed to produce and emit light (electromagnetic radiation) through a process called stimulated emission using a crystal comprising neodymium (Nd) and yttrium-aluminium-garnet (YAG) as the substrate and which is used in a surgical procedure. It operates at 1064 to 1318 nm and is widely used in laparoscopic and endoscopic procedures but is also used in other clinical fields (e.g., ophthalmology, dentistry, thoracic surgery, and for hair removal).	IIb

11486	35945	Drug-eluting contraceptive implant	Мансууруулах бодис агуулсан жирэмслэлтээс хамгаалах суулгац	A small vessel (e.g., a hollow rubber rod) that is filled with a contraceptive drug (e.g., a contraceptive hormone like levonorgestrel) and is intended to be implanted, typically under the skin of the upper arm, where it gradually releases the contraceptive drug into the body.	IIb
11487	35953	Diagnostic imaging telemedicine system	Оношлогооны дүрслэлийн телемедицины систем	An assembly of devices designed to electronically transmit digitized radiology images, e.g., magnetic resonance imaging (MRI), x-ray, nuclear medicine, ultrasound, endosocopy or CT, and consultative text to one or more remote sites (teleradiology). The information is typically transmitted through, e.g., public service transmission channels, phone lines or microwave relays. It is primarily distinguished from a picture archiving and communication system (PACS) by its storage capacity and intended use. PACS is a large storage system and file controller storing and retrieving thousands of images, whilst a teleradiology system typically has a storage capacity of fewer than 1,000 images.	IIb
11488	35966	Prosthesis, radial head	Протез, радиаль толгой	An implantable artificial substitute for the proximal radius (the elbow radial head). The device may be designed to be used with or without bone cement. The material may be metal, ceramic, carbon, polymer or a combination of these.	IIb
11489	35972	Automatic external defibrillator	Автомат гадаад дефибриллятор	An external pulse generator (EPG) designed as an automatic external defibrillator (AED) with a cardiac rhythm recognition system for use by minimally-trained persons to automatically deliver an electrical shock(s) to defibrillate a patient's heart (restore normal rhythm) or slow a rapid heart rate. It includes a pair of skin-adhesive electrodes to monitor the electrocardiogram (ECG) and to deliver the electrical shock(s) to treat ventricular fibrillation or pulseless ventricular tachycardia. It also includes internal rechargeable batteries (must be charged when not in use) that provide the energy to produce the electrical shock(s). It is fully portable for operation in most locations.	IIb

11490	35974	Cardiac electrophysiology stimulation system	Зүрхний электрофизиологийн өдөөх систем	An assembly of devices programmed to deliver precisely timed electrical impulses to the heart, during spontaneous and paced rhythms, for diagnostic cardiac stimulation. It typically includes electrodes/leads applied to the heart and an external pulse generator (EPG). It may be used in asynchronous or synchronous mode, to deliver stimuli of variable strength, and for pacing in a wide range of cycle lengths (typically from 150 to 1500 ms). It is used for performing physiologic cardiac tests such as to determine the function of various components of the atrioventricular conduction, factors required for induction and termination of tachycardia, and to assess sinus node function.	IIb
11491	35981	Rigid endoscope washer	Хатуу дурангийн угаагч	A mains electricity (AC-powered) washing machine designed for the decontamination and disinfecting of reusable rigid endoscopes. It has built-in features to circulate the liquid disinfectant through the lumen of the rigid endoscope. Some types may also have built-in drying features.	IIb
11492	35983	Ambulatory insulin infusion pump, electronic	Амбулаторийн инсулин дусаах насос, электрон	A portable, battery-powered, electronic device designed to provide continuous or intermittent subcutaneous delivery of insulin to a patient with diabetes mellitus. It may be badge-like, designed to adhere to skin or clothing (e.g., with a pressure-sensitive adhesive), or worn in a case attached to the belt or carried in a pocket. It includes a reservoir (e.g., a cartridge similar to a syringe), a pumping mechanism, and an infusion-rate controller. The pump infuses microvolume pulses and/or bolus doses of insulin subcutaneously, typically into the abdomen, through a needle or catheter (not included).	IIb
11493	35984	Laser, excimer	Лазер, эксимер	A mains electricity (AC-powered) gas laser used in surgical procedures with excited dimers (EXCIted diMER) as the active substrate. The most commonly used substrates are noble gas halides (e.g., argon fluoride or xenon chloride). It can be used for (e.g., general surgery or ophthalmology).	IIb
11494	35987	Allograft	Аллогрефт	A body tissue or an organ transplanted between individuals of the same species, but of different genotypes. An allograft may have undergone processing prior to implantation, and may or may not be sterile. For tissue- or procedural-specific grafts see the appropriate generic device group.	IIb

11495	35997	Compartmental pressure monitor	Тасалгааны даралт хэмжигч	A device designed for the intermittent or continuous measurement of intra-compartmental (intramuscular) pressures especially to aid in the diagnosis and monitoring of compartmental syndrome, a condition of increased intra-compartmental pressures arising from swelling within muscle compartments and tendon sheaths due to trauma.	IIb
11496	36025	Conventional infant incubator	Уламжлалт нярайн инкубатор	A mains electricity (AC-powered) unit designed to provide an enclosed controlled environment to maintain appropriate temperature and humidity levels mainly for premature infants and other newborns who cannot effectively regulate their body temperature. It typically consists of a clear removable plastic hood with a mattress. It typically includes a means to warm the infant such as providing heated air (either by natural flow or forced) or through a warm water mattress; temperature controls that work automatically either by measuring the air temperature or through a temperature sensor attached to the infant skin; and humidity controls. The device is intended to remain in a hospital ward.	IIb
11497	36029	Tracheal stent	Гуурсан хоолойн стент	A sterile non-biodegradable tubular device implanted in an obstructed trachea to maintain its patency. The device, depending upon the type applied, may be inserted with a balloon catheter which when inflated causes the device to expand, or can be delivered to the site where it self-expands. It is typically made of high-grade stainless steel, a polymer, or other material. It may be a continuous tube of a certain length or a mesh structure in a tube form.	IIb
11498	36034	Cold therapy pack chilling unit	Хүйтэн эмчилгээний багц хөргөх төхөөрөмж	A mains electricity (AC-powered) device used to chill the contents of a reusable cold therapy pack or hot/cold therapy pack to temperatures appropriate to apply cold therapy to the human body. This device, also known as a hydrocollator, typically consists of a stainless steel container, shelves, trays, or drawers that facilitate the chilling and handling of the many cold therapy packs, and chilling elements (e.g., integral coils) that create temperatures of around minus 17° Celsius. It is typically used in accident and emergency (A&E) rooms, rehabilitation facilities and for physiotherapy treatments.	IIb

11499	36040	Catheter-tip transducer, flow	Катетер үзүүрийн хувиргагч, урсгал	A device that is incorporated into the distal end of a catheter (not included) to measure flow (typically when placed into the bloodstream). It typically consists of a flow measuring mechanism and a means to convert the detected flow into electronic signals or possibly ultrasonic signals which are transmitted via a cable or wireless to an external parent device (e.g., a manometer) that processes the signals and displays the results as flow values. This is a single-use device.	IIb
11500	36046	External pacemaker, transoesophageal pacing	Гадны зүрхний аппарат, улаан хоолойн зүрхний аппарат	A device designed to generate electrical cardiac pacing impulses from an external pulse generator (EPG), located outside the body, and transmit them to the heart via its leads that are placed in the oesophagus. The device is used for temporary stimulation of the heart.	IIb
11501	36064	Laser-resistant endotracheal tube	Лазерт тэсвэртэй дотоод гуурсан хоолой	A hollow cylinder that is inserted into the trachea used to secure airway patency and/or for anaesthesia administration, and which is not damaged or easily set on fire if inadvertently irradiated by a laser beam during surgery around the head, throat, or neck. This device would typically be employed when laser surgery is being applied to the patient's head/neck area. This is a single-use device.	IIb
11502	36083	Laparoscopic dissection spatula	Дурангийн задралын хусуур	A rigid laparoscopic device designed for the blunt dissection of broadly implanted adhesions during a therapeutic laparoscopy. This is a reusable device.	IIb
11503	36099	Eye drain	Нүдний урсац	A sterile artificial aqueous drainage device designed to be implanted in the eye to relieve elevated intraocular pressure (IOP) due to glaucoma.	IIb
11504	36150	General/multiple surgical frequency-doubled solid-state laser system	Ерөнхий/олон мэс заслын давтамжийг давхарласан хатуу төлөвт лазерын систем	A mains electricity (AC-powered) device assembly in which input energy (e.g., flashlamp, diode laser) is used to excite a glass/crystal rod to emit a high-power laser beam, in which the frequency is doubled, intended to precisely cut, excise/vaporize, and coagulate tissues for general surgery, and/or multiple specialized surgical applications (non-dedicated). It includes a light source, delivery/positioning device(s), and controls/foot-switch and may be operated in continuous-wave or pulsed modes.	IIb

11505	36170	General/multiple surgical solid-state laser system	Ерөнхий/олон мэс заслын хатуу төлөвт лазерын систем	A mains electricity (AC-powered) device assembly in which input energy (e.g., flashlamp, diode laser) is used to excite a doped glass/crystal medium to emit a high-power laser beam intended for general surgery and/or multiple specialized surgical applications (non-dedicated), which may include treatment of vascular diseases. It vaporizes/ablates soft tissue with moderate haemostasis, little charring, and a thin zone of necrosis. It includes a light source, delivery/positioning device(s), and controls/foot-switch and emits a midinfrared wavelength. It does not include frequency doubling technology.	IIb
11506	36194	Apheresis system filter, whole blood	Аферезийн системийн шүүлтүүр, бүхэл бүтэн цус	A sterile device designed to separate plasma from the cellular components of whole blood during manual/automated apheresis (the separation, collection, and reinfusion of blood) for donation of blood products or apheresis therapy. It typically contains a microporous membrane (usually with pores 0.2 to 0.6 micrometers) or a hollow-fibre column; it may also be intended to filter microorganisms and/or particles. This is a single-use device.	IIb
11507	36211	Urethral stent, long-term	Шээсний сувгийн стент, урт хугацааны	A sterile non-biodegradable tubular device intended to be implanted in the urethra for more than 30 days (to years) to ensure its patency and an unimpeded flow of urine from the bladder. It may be inserted with a balloon catheter which when inflated causes the device to expand, or it may self-expand after insertion. It is typically made of high-strength metal alloy (e.g., stainless steel) or polymer, and may be meshed to facilitate it becoming embedded in the surrounding tissue. It is typically used to relieve urethral obstructions from bulbar urethral strictures, benign prostatic hyperplasia (BPH), and/or detrusor external sphincter dyssynergia (DESD).	IIb

11508	36227	Oesophageal stent	Улаан хоолойн стент	A sterile non-biodegradable tubular device designed to be implanted into the oesophagus to maintain luminal patency in strictures (e.g., from intrinsic/extrinsic malignant tumours) or to reduce acute bleeding from oesophageal varices. It may be inserted and expanded with a balloon catheter or inserted with a delivery device, under fluoroscopic/endoscopic control or by blind introduction, and self-expand. The stent is typically made of high-grade stainless steel, Nitinol, or a polymer and may be a continuous tube of a certain length or a mesh structure in a tube form. Disposable instruments, delivery device, and other materials associated with implantation may be included.	IIb
11509	36281	Female condom	Эмэгтэй бэлгэвч	A sheath with rings on either end that is inserted into the vagina and worn during coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections between sexual partners. This is a single-use device.	IIb
11510	36281	Female condom	Эмэгтэй бэлгэвч	A sheath with rings on either end that is inserted into the vagina and worn during coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections between sexual partners. This is a single-use device.	IIb
11511	36289	Transport electric ventilator	Зөөврийн цахилгаан амьсгалын аппарат	An electrically-powered device designed to provide automated, alveolar ventilatory support for patients during interhospital or intrahospital transport, and in emergency situations. It is typically a compact, lightweight, rugged device with internal batteries to power it during patient transport. It typically provides mandatory breaths at pre-set intervals (control mode), not allowing the patient to breathe spontaneously; operation in assist/control and/or synchronized intermittent mandatory ventilation (SIMV) modes is available in some types. It usually includes an airway pressure monitor and low and high pressure alarms; it may be used in ambulances, and in field hospitals.	IIb

11512	36291	Intracorneal ring	Эвэрлэгийн дотоод цагираг	An implantable, open-ended circular band designed to flatten the anterior corneal curvature, without disturbing the visual axis, to correct mild and moderate myopia. The device is inserted into the cornea via an intrastromal channel created with a diamond knife or laser. It is typically made of plastic, and has outer and inner diameters of about 8 and 6.8 mm, respectively.	IIb
11513	36302	Laparoscopic mechanical-distention system	Дурангийн механик суналтын систем	An assembly of mechanical devices intended to be used to create a space in the abdominal cavity for laparoscopic procedures by externally lifting the abdominal wall. This isobaric method of lifting the abdominal wall includes the insertion of a retractor, sling, subcutaneous wires or needles and an external lifting mechanism consisting of, e.g., a manual traction device, a support arm clamped to the operating table, or a winch and framework. This device requires no, or minimal, gas insufflation. This is a reusable device.	IIb
11514	36306	Nasal oxygen cannula, carbon-dioxide-sampling	Хамрын хүчилтөрөгчийн суваг, нүүрстөрөгчийн давхар ислийн дээж авах	A semi-rigid tube with nasal prongs designed to be inserted into the nostrils of a patient, and held in place with a headstrap, to simultaneously deliver oxygen (O2) and allow sampling of exhaled gas for carbon dioxide (CO2) monitoring through separate prongs. It is available in one-, two-, or four-prong configurations. This is a single-use device.	IIb
11515	36316	Enflurane anaesthesia vaporizer	Энфлуран мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent enflurane (Ethrane) and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb

11516	36319	Infant apnoea monitor	Нярайн апноэ монитор	A mains electricity (AC-powered) device that is used to register the respiratory rate of an infant and which gives an alarm signal (e.g., audible/visual) when the pre-set limits are exceeded caused by an extended interruption or cessation (apnoea) of the infants breathing pattern; a condition known as sudden infant death syndrome (SIDS). This will alert the infant's parent(s), child-minder or hospital staff when such life-threatening episodes occur. This device is usually connected to some form of movement sensing device, e.g., small pads placed directly under the infant or belts with sensors around the chest. It can be designed for use in the hospital/institution, or for home-use.	IIb
11517	36340	Intra-aortic balloon pump	Аортын доторх баллон насос	An electrically-powered device intended to inflate/deflate the balloon of an intra-aortic balloon catheter (not included) to assist cardiac function. The device monitors the patient’s electrocardiogram (ECG) and blood pressure to inflate/deflate the balloon in synchrony with the cardiac cycle, so that the balloon inflates after a cardiac contraction to increase perfusion of the coronary arteries and deflates before the next contraction to avoid obstructing aortic outflow. The device typically includes a main unit which incorporates a helium cylinder for balloon inflation/deflation, a screen, and controls.	IIb
11518	36365	Electrocardiography monitoring system receiver	Электрокардиографийн хяналтын системийн хүлээн авагч	An electrically-powered component of an electrocardiograpy telemetric monitoring system designed to wirelessly receive, consolidate, and display electrocardiographic (ECG) signals [sometimes with an additional parameter such as haemoglobin oxygen saturation (SpO2)] from a transmitter connected to a patient, typically ambulatory, for viewing at a receiving location (e.g., central station, bedside monitor).	IIb

11519	36379	Centrifugal circulatory assist pump, electric	Цусны эргэлтийн туслах насос, цахилгаан	A mains electricity (AC-powered), specially constructed, centrifugal pump that is used to maintain blood circulation in heart failure. It is used to provide circulatory assistance (support of the blood circulation when the heart fails) to the patient due to his/her dependence upon artificial assistance in order to maintain the body's heart function. This dependence will be due to the lack of the heart's ability to function normally. The pump may be used during open heart surgery and postoperatively for a short period to assist the heart in regaining function.	IIb
11520	36437	Haemodialysis system air/foam detector	Гемодиализийн системийн агаар/хөөс мэдрэгч	A mains electricity (AC-powered) device designed to identify air bubbles and/or foam in blood returned to the body [usually through an arteriovenous fistula (AVF)] by the extracorporeal blood circuit of a haemodialysis system. It may detect the air bubbles/foam using either ultrasonic sensors (i.e., detecting changes in acoustic density), or less frequently using photoelectric sensors (e.g., a photocell). If bubbles/foam are detected, the device usually triggers alarms and activates automated mechanisms to stop the infusion.	IIb
11521	36499	Teletherapy radionuclide contour detection system	Телетерапийн радионуклидын контур илрүүлэх систем	An assembly of therapeutic devices that can be software or mechanically controlled designed to map the profile of body parts to be irradiated by a teletherapy radionuclide system. It can be a manual system, or can be based upon laser positioning, or can use, e.g., computed tomography (CT) cross-sectional slices. The information from this system is often entered into a radiation therapy treatment planning software for use in treatment planning activities.	IIb
11522	36505	Radiation therapy beam block transporter	Цацрагийн эмчилгээний цацраг блок тээвэрлэгч	An assembly of dedicated devices that comprise a beam block transport system intended for lifting and transporting the heavy alloy beam blocks (e.g., sheets or blocks of special metal) used during radiotherapy treatment as collimators. The transport may be from a store in or adjacent to the treatment room, with transfer of the blocks to the block holder on the treatment machine. The blocks are most typically used with either a therapeutic accelerator system or a cobalt teletherapy system.	IIb

11523	36531	Aiming laser	Зорилтот лазер	A mains electricity (AC-powered) device assembly in which input energy is used to excite noble gas ions (e.g., helium/neon) to emit an easily visible, non-therapeutic low-level laser beam, intended to assist with aiming nonvisible therapeutic laser beam (e.g., carbon dioxide laser beam) during biostimulation and low-level therapies. Its principal emission wavelength is 633 nm (red), but it can also operate at other visible and infrared wavelengths; it may be operated in continuous and pulsed modes.	IIb
11524	36532	Ophthalmic noble gas laser system	Нүдний язгуурт хийн лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite noble gas (e.g., argon, krypton) ions to emit a high-power laser beam intended to coagulate abnormal vascular tissue in the retina and for other photocoagulation procedures in the eye. It typically includes a light source and controls/foot-switch, and is typically coupled to a biomicroscope slit lamp or to an indirect ophthalmoscope by a flexible fibreoptic cable.	IIb
11525	36550	Patient monitoring system module, blood pressure, invasive	Өвчтөний хяналтын системийн модуль, цусны даралт, инвазив	A small unit dedicated to the measurement of invasive blood pressure (from one or more sites) obtained through a pressure transducer introduced directly into a blood vessel via a catheter. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device or a connected module rack. The parent device operates as a mainframe computer displaying the blood pressure parameter/information measured and provided by this module.	IIb

11526	36551	Patient monitoring system module, blood pressure, noninvasive	Өвчтөний хяналтын системийн модуль, цусны даралт, инвазив бус	A small unit dedicated to the measurement of noninvasive blood pressure (indirect method) obtained through a standard sphygmomanometer cuff placed on the arm or leg. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device or a connected module rack. The parent device operates as a mainframe computer displaying the blood pressure parameter/information measured and provided by this module.	IIb
11527	36552	Patient monitoring system module, carbon dioxide	Өвчтөний хяналтын системийн модуль, нүүрстөрөгчийн давхар исэл	A small unit dedicated to the measurement of carbon dioxide (CO2) content of expired gas obtained through a sampling tube connected to a main respiratory channel (mainstream) or a side-channel (sidestream) of a breathing circuit. It is designed to operate as part of a patient monitoring system enhancing the function of this (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device or in a connected module rack. The parent device operates as a mainframe computer displaying the CO2 parameter/information measured and provided by this module.	IIb
11528	36553	Patient monitoring system module, multifunction	Өвчтөний хяналтын системийн модуль, олон үйлдэлт	A small unit dedicated to the measurement and displays of several physiological parameters, e.g., electrical activity of the heart, respiratory rate, temperature, blood pressure, pulse, and oximetry. The signals are obtained through connected cables/leads/probes. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device which then operates as a mainframe computer displaying the various parameters/information measured and provided by this module.	IIb

11529	36554	Patient monitoring system module, pulse oximetry	Өвчтөний хяналтын системийн модуль, импульсийн оксиметри	A small unit dedicated to the transcutaneous measurement of haemoglobin oxygen saturation (SpO2) in blood using light detection methods (spectrophotometry) after light is emitted from a light-emitting diode (LED) situated in the connected probe. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device or a connected module rack. The parent device operates as a mainframe computer displaying the pulse oximetry parameters provided by this module.	IIb
11530	36562	Patient monitoring system module, temperature	Өвчтөний хяналтын системийн модуль, температур	A small unit dedicated to the measurement and display of the patient's body temperature at one or more body sites. Signals are typically obtained through connected temperature probes, e.g., skin, rectal. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device or a connected module rack. The parent device operates as a mainframe computer displaying the body temperature information measured and provided by this module.	IIb
11531	36564	Electrical frequency meter	Цахилгаан давтамж хэмжигч	An instrument intended to be used for the measurement of periodical electrical fluctuations.	IIb
11532	36700	CPAP unit	CPAP нэгж	A device designed for the delivery of a continuous positive airway pressure (CPAP) that gives a constant flow of oxygen/air to the patient at a preselected pressure, thereby imposing a small overpressure within the lungs that assists the gas exchange. This function is typically found in advanced ventilators, but in the case of this GMDN code, it is a separate device that can be used in a number of treatment settings, typically in the intensive care unit (ICU).	IIb

11533	36729	Infant incubator control unit	Нярайн инкубаторын хяналтын хэсэг	An electronic unit that is used to monitor and regulate the important temperature and environmental features of an infant incubator. It will be connected to the mains electricity (AC-powered) when the incubator is stationary, but will be powered by a battery pack if the incubator is in transport. This device is usually interchangeable with other incubators of the same type.	IIb
11534	36742	Open infant incubator	Нээлттэй нярайн инкубатор	A mains electricity (AC-powered) unit that functions similar to a standard infant incubator but is open, having low side walls and no top enclosure, giving instant access to the infant. Such infants are not premature but suffer from disorders where intensive care is required. This device is equipped with overhead heating lamp(s), oxygen therapy flowmeter, gas mixer, suction system, facilities for infusion pumps, and other equipment. The main difference between this device and a closed infant incubator is the inability of this device to regulate the oxygen environment surrounding the occupant.	IIb
11535	36827	Electrocardiographic long-term ambulatory recording analyser	Электрокардиографийн урт хугацааны амбулаторийн бичлэгийн анализатор	An electronic device intended to be used for the analysis of long-term (often 24-hours) heart activity data, which has previously been registered by an electrocardiographic long-term ambulatory recorder (Holter), to which the patient was connected and carried upon his or her person.	IIb
11536	36879	Ventilator anaesthetic agent control unit	Агааржуулагчийн мэдээ алдуулагч бодисын хяналтын хэсэг	An unit used together with a ventilator for the intended purpose of conserving the consumption of the anaesthetic agent being fed through the machine and given to the patient. This can be required because of the large volumes of gas which pass through the ventilator, and the control unit will feed the required amount of gas through the attached anaesthetic vaporizer.	IIb
11537	36890	Isoflurane anaesthesia vaporizer	Изофлуран мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent isoflurane and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb

11538	36891	Halothane anaesthesia vaporizer	Галотан мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent halothane (also known as fluorothane) and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb
11539	36892	Ether anaesthesia vaporizer	Эфирийн мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent ether and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator, but some types may be used as stand-alone devices.	IIb
11540	36897	Infant incubator warming hood	Нялхсын инкубаторыг халаах юүдэн	A heating element positioned above an incubator's chamber designed to provide warmth for the chamber's environment. It may be used instead of or as a supplement to the incubator's internal heating system, and may be built onto or be an integral part of the incubator hood.	IIb
11541	36912	MRI system cryostatic compressor	MRI системийн криостатик компрессор	A component of a magnetic resonance imaging (MRI) system used for diagnostic imaging or spectroscopy and that is designed to maintain pressure in the magnet cooling subassembly of the system in order to reduce the loss of helium (He) through evaporation.	IIb
11542	36920	Hyperthermia system catheter, rectal-cooling, reusable	Гипертерми системийн катетер, шулуун гэдсээр хөргөх, дахин ашиглах боломжтой	A thin rod used as part of a hyperthermia system's cooling unit to cool tissues adjacent to the prostate gland as it receives hyperthermia treatment. The device is introduced into the body through the rectum, and temperature-regulated water is typically circulated through the device as the cooling medium. This is a reusable device intended to be sterilized prior to use.	IIb
11543	36921	Microwave hyperthermia system catheter, prostatic-ablation, reusable	Бичил долгионы гипертерми системийн катетер, түрүү булчирхайг арилгах, дахин ашиглах боломжтой	A thin rod intended to be used as part of a hyperthermia system to treat disorders of the prostate [e.g., cancer, benign prostatic hyperplasia (BPH), prostatitis] through the local application of heat from microwaves. The device is inserted through the urethra to access the prostate for the destruction of prostatic tissue through energy transmission. Cooling of the tissues surrounding the prostate with a another specialized catheter may be necessary during treatment. This is a reusable device intended to be sterilized prior to use.	IIb

11544	36963	Rigid ultrasound laparoscope	Хатуу хэт авианы лапароскоп	An endoscope with a rigid inserted portion, combined with an ultrasound probe, intended for the visual examination, treatment, and ultrasonic imaging of the abdominal/retroperitoneal cavity and its organs. It is inserted through an incision made in the abdominal wall (routinely just below the umbilicus) during laparoscopy. Anatomical images are transmitted to the user by the device through relayed lens optics, a fibreoptic bundle, or a video system and the ultrasound probe. The probe may be built-in or inserted through a dedicated channel so that its distal tip is positioned adjacent to the targeted organ. This is a reusable device.	IIb
11545	36979	Desflurane anaesthesia vaporizer	Десфлуран мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent desflurane and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb
11546	36980	Sevoflurane anaesthesia vaporizer	Севофлуран мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent sevoflurane and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb
11547	36984	Methoxyflurane anaesthesia vaporizer	Метоксифлуран мэдээ алдуулалтын ууршуулагч	A device used to vaporize the anaesthetic agent methoxyflurane and deliver a controlled amount of the agent to a patient being prepared for surgery. The device is usually mounted to an anaesthesia system or ventilator.	IIb
11548	37061	Patient monitoring system module, multiple-gas	Өвчтөний хяналтын системийн модуль, олон хийтэй	A small unit dedicated to the measurement of various gas concentrations, e.g., anaesthetic agents, oxygen (O2), carbon dioxide (CO2), in inspired and expired air obtained through a sampling tube connected to a main respiratory channel (mainstream) or a side-channel (sidestream) of a breathing circuit. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot and the parent device then operates as a mainframe computer displaying the parameters measured and provided by this module.	IIb

11549	37123	Hyperthermia system temperature mapping unit	Гипертерми системийн температурын зураглалын нэгж	A component of a hyperthermia system used to monitor the position of multiple temperature probes in order to assess the body temperature at various sites with respect to the treatment area. It is typically used to provide computer-controlled feedback used to automatically adjust the energy output of the hyperthermia system in order to allow tissue heating to proceed according to the treatment plan, to assess the adequacy of the heating effect in real time, and to alarm or automatically terminate treatments if inappropriate temperature rises are detected.	IIb
11550	37178	Transcutaneous blood gas monitor sensor	Цусны хийн хяналтын мэдрэгч	A device intended to be used with a transcutaneous blood gas monitor to measure a patient's blood partial pressure of oxygen (pO2), blood partial pressure of carbon dioxide (pCO2), and/or blood oxygen saturation transcutaneously (through the skin). Gases diffuse through the skin and into this sensor at the skin surface, where it transmits electrical signals to the parent device for analysis. This is a reusable device.	IIb
11551	37218	Haemodialysis system blood volume monitor	Гемодиализын системийн цусны хэмжээг хянах	A mains electricity (AC-powered) device designed to non-invasively monitor the relative variations of the blood volume during a haemodialysis treatment. The blood is lead through a chamber in this device where measurements are taken and calculations of haematocrit (volume percent of erythrocytes), haemoglobin oxygen saturation (SpO2), and percent change in blood volume are made and displayed. In addition the monitor may estimate and display the urea reduction ration (URR) on relative changes in urea nitrogen concentration in the spent dialysate.	IIb
11552	37222	Contraceptive spermicide	Жирэмслэлтээс хамгаалах спермицид	A chemical substance (e.g., nonoxynol-9) intended to be introduced with an applicator or the finger into the vagina before sexual intercourse, to destroy sperm (spermatozoa) to prevent pregnancy. It is typically in the form of a cream, gel, film, or foam which dissolves/remains in the vagina. After application, this device cannot be reused.	IIb

11553	37238	Extracorporeal blood gas/pH monitor	Бие махбодоос гадуурх цусны хий/pH-ийн хяналт	A mains electricity (AC-powered) device designed for the continuous measurement and display of blood gas and related parameters when blood is circulated outside of the body in a closed system. It is typically used with an appropriate sensor or sensor cassette inserted into external tubing to measure parameters such as partial pressure of oxygen (pO2), partial pressure of carbon dioxide (pCO2), pH, temperature, haemoglobin (Hb), and hematocrit (Hct). It is typically used with a cardiopulmonary bypass system, or bedside for a patient with respiratory failure (e.g., obstructive lung disease, severe asthma) or severe pulmonary hypertension after cardiac surgery.	IIb
11554	37266	Nitric oxide delivery unit, system-based	Азотын исэл дамжуулах нэгж, системд суурилсан	A mains electricity (AC-powered) device, which may include internal rechargeable batteries, intended for the delivery of precise amounts of nitric oxide (NO), also known as nitrogen monoxide, to the respiratory tract of neonate, paediatric, and adult patients to treat severe respiratory disorders [e.g., primary pulmonary hypertension (PPH), acute respiratory distress syndrome (ARDS)]. It consists of a portable main unit that enables the delivery and monitoring of NO to gases that are to be breathed by the patient via a ventilator or other respiratory device/system. It typically includes accessory items (e.g., tubing, filters) and possibly a trolley (cart) for mobility.	IIb
11555	37283	Scleral expansion implant	Склераль тэлэлтийн имплант	A sterile device designed for implantation in the sclera to produce expansion by altering the position of the underlying ciliary muscle. It typically consists of several plastic [e.g., polymethylmethacrylate (PMMA)] segments (e.g., four) implanted in surgically-created scleral tunnels. The prosthesis is intended to be used to help reduce the effects of presbyopia (i.e., the inability to focus on near objects due to age), ocular hypertension, and/or primary open angle glaucoma.	IIb

11556	37323	Patient monitoring system module, electroencephalographic	Өвчтөний хяналтын системийн модуль, цахилгаан тархины	A small unit dedicated to detect and record the electrical activity of the brain in the form of an electroencephalogram (EEG). The electrical activity of the brain is detected via electrodes affixed to the patient's forehead or scalp. It is designed to operate as part of a patient monitoring system enhancing the function of this system (the parent device). The module automatically plugs into the parent device when the user places it into a standardized slot in the parent device which operates as a mainframe computer displaying the signals measured and provided by this module. It may also register auditory evoked potentials (AEP) signals.	IIb
11557	37331	Medical equipment inventory management/maintenance software	Эмнэлгийн тоног төхөөрөмжийн бараа материалын менежмент/засвар үйлчилгээний програм хангамж	An application software program intended to be used to manage data pertaining to the use, maintenance and servicing of medical devices and equipment, namely relating to one or more of the following: device electronic registration, inventory management, device identifiers, maintenance and servicing, spare parts ordering, equipment assessment, renewal planning or authority auditing, onboarding, firmware updating, and device diagnostic data submission to the manufacturer. It may be referred to as a medical equipment management system (MEMS) and is typically used by a clinical engineering department.	IIb
11558	37604	Diagnostic x-ray system generator, stationary	Оношлогооны рентген системийн генератор, суурин	A generator which is an integral component of a stationary diagnostic x-ray system, e.g., a system intended to be operated at a fixed location within a facility or mobile imaging van. It is used to regulate incoming voltage and current to provide an x-ray tube with the power needed to produce an x-ray beam of the desired voltage (kV) and current (mA). It typically comprises a control assembly (console) and high voltage transformer assembly, or it is of a mono-tank generator design and includes transformer, constant potential, inverter and capacitor discharge generator designs.	IIb

11559	37605	Diagnostic x-ray system generator, mobile	Оношлогооны рентген системийн генератор, хөдөлгөөнт	An x-ray generator with special size, weight, and power requirements that makes it suitable for use in a mobile x-ray system, e.g., a system designed to be pushed or driven to various locations within a facility. It is used to regulate incoming voltage and current in order to provide an x-ray tube with the power needed to produce an x-ray beam of the desired voltage (kV) and current (mA). It includes transformer, inverter, and capacitor discharge generator designs. It typically comprises a control assembly (console) and high voltage transformer assembly or is of a mono-tank generator design. This generator is an integral component of a mobile diagnostic x-ray system.	IIb
11560	37606	Diagnostic x-ray system generator, portable	Оношлогооны рентген системийн генератор, зөөврийн	An x-ray generator with special size, weight, and power requirements that makes it suitable for use in a portable x-ray system, e.g., a system intended to be easily disassembled and reassembled at various locations. It is used to regulate incoming voltage and current in order to provide an x-ray tube with the power needed to produce an x-ray beam of the desired voltage (kV) and current (mA). This group of devices includes transformer and inverter generator designs. Portable x-ray generators typically comprise a control assembly (console) and high voltage transformer assembly or are of a mono-tank generator design.	IIb
11561	37607	Diagnostic x-ray system generator, hand-held	Оношлогооны рентген системийн генератор, гар	An x-ray generator with special size, weight, and power requirements that makes it suitable for use in a hand-held x-ray system, e.g., a system that is held during operation. It is used to regulate incoming voltage and current in order to provide an x-ray tube with the power needed to produce an x-ray beam of the desired voltage (kV) and current (mA). It includes transformer and inverter generator designs. A hand-held x-ray system generators typically comprises a control assembly (console) and high voltage transformer assembly, but can also be a mono-tank generator design.	IIb

11562	37608	Therapeutic x-ray system generator	Эмчилгээний рентген системийн генератор	An x-ray generator is incorporated as an integral part of a therapeutic x-ray system. It is used to regulate incoming voltage and current in order to provide an x-ray tube with the power needed to produce an x-ray beam of the desired voltage (kV) and current (mA). It typically comprises a control assembly, i.e., console, and a high voltage transformer assembly, and will also includes mono-tank configurations. This group of devices includes a transformer, constant potential and inverter generator designs.	IIb
11563	37612	Mobile angiographic x-ray system, digital	Хөдөлгөөнт ангиографийн рентген систем, дижитал	A mobile (within an imaging facility) diagnostic digital fluoroscopic x-ray system specifically designed to optimize the capability of users to visually and quantitatively evaluate the anatomy and function of blood vessels of the heart, brain and other organs, as well as the lymphatic system. It uses digital techniques for real-time image capture, display and manipulation and typically includes spot-film capabilities in addition to the fluoroscopic features. It is commonly used in conjunction with an injected x-ray contrast medium during either imaging or x-ray guided surgical or interventional procedures. Images can be viewed in both real-time and delayed formats.	IIb
11564	37614	Mobile angiographic x-ray system, analogue	Хөдөлгөөнт ангиографийн рентген систем, аналог	A mobile (within an imaging facility) diagnostic fluoroscopic x-ray system specifically designed to optimize the capability of users to visually and quantitatively evaluate the anatomy and function of blood vessels of the heart, brain and other organs, as well as the lymphatic system. It uses analogue or analogue-to-digital techniques for real-time image capture, display and manipulation and typically includes spot-film capabilities in addition to the fluoroscopic features. It is commonly used in conjunction with an injected x-ray contrast medium during either imaging or x-ray guided surgical or interventional procedures. Images can be viewed in both real-time and delayed format.	IIb

11565	37615	Mobile uro-gynaecological fluoroscopic x-ray system, digital	Хөдөлгөөнт эмэгтэйчүүдийн флюроскопийн рентген систем, дижитал	A mobile (within an imaging facility) diagnostic x-ray system with real-time fluoroscopic capabilities specifically designed for use in urological and/or gynaecological surgical and interventional procedures requiring real-time visualization of the pelvic area. It uses digital techniques for real-time image capture, display and manipulation and includes spot-film capabilities as well as fluoroscopic features. It is commonly used during either imaging or x-ray guided surgical or interventional procedures. The images can be viewed in both real-time and delayed formats and may include various levels of imaging processing and analysis capabilities.	IIb
11566	37616	Stationary angiographic x-ray system, analogue	Суурин ангиографийн рентген систем, аналог	A stationary diagnostic fluoroscopic x-ray system specifically designed to optimize the capability of users to visually and quantitatively evaluate the anatomy and function of blood vessels of the heart, brain and other organs, as well as the lymphatic system. It uses analogue or analogue-to-digital techniques for real-time image capture, display and manipulation and typically includes spot-film capabilities in addition to the fluoroscopic features. It is commonly used in conjunction with an injected x-ray contrast medium during either imaging or x-ray guided surgical or interventional procedures. Images can be viewed in both real-time and delayed formats.	IIb
11567	37617	Intraoral general-purpose dental x-ray system, digital	Амны хөндийн ерөнхий зориулалтын шүдний рентген систем, дижитал	A digital intraoral diagnostic dental x-ray system designed to generate and control x-ray beams. It uses digital techniques to record the absorption pattern of x-ray beams used for general-purpose/routine dental radiography examinations involving the diagnosis, and treatment, e.g., surgical or interventional, of diseases of the teeth, jaw and oral cavity structures. It has the x-ray source (the x-ray tube) located within the patient's mouth during imaging procedures. This generic device group includes stationary, mobile and portable systems and consist of basic modular configurations that can be upgraded by the addition of hardware or software components.	IIb

11568	37618	Full-body CT system	Бүтэн биеийн CT систем	An assembly of diagnostic x-ray computed tomography (CT) devices with a gantry large enough to allow imaging of any part of the body. It includes designs with single or multiple fixed annular arrays of x-ray tubes and opposing detectors or those with x-ray tube(s) and opposing detector assemblies that rotate rapidly around a central axis point within the gantry imaging area. It can produce two and/or three-dimensional (3-D) cross-sectional (tomographic) images, including spiral CT or other special imaging applications at multiple specified angles in relation to body position. It may use a variety of digital techniques for information capture, image reconstruction, and display.	IIb
11569	37619	Limited-view-field CT system	Хязгаарлагдмал харах талбарын CT систем	An assembly of diagnostic x-ray computed tomography (CT) devices having a gantry whose design limits its use to head and neck and/or extremity imaging applications. Included are single or multiple fixed annular arrays of x-ray tubes and opposing detectors or x-ray tube(s) and opposing detector assemblies that rotate rapidly around a central axis point within the gantry imaging area. It can produce two and/or three-dimensional (3-D) cross-sectional (tomographic) images, including spiral CT or other imaging applications at multiple specified angles in relation to body position. It may use a variety of digital techniques for information capture, image reconstruction, and display.	IIb
11570	37621	Stationary general-purpose fluoroscopic x-ray system, analogue	Суурин ерөнхий зориулалтын флюроскопийн рентген систем, аналог	An assembly of devices that comprise a stationary general-purpose diagnostic fluoroscopic x-ray system that uses real-time analogue or analogue-to-digital techniques for image capture, display and manipulation used in a variety of general-purpose applications requiring real-time fluoroscopic imaging. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested/injected x-ray contrast medium. Images can be viewed in both real-time and delayed format.	IIb

11571	37622	Mobile general-purpose fluoroscopic x-ray system, analogue	Хөдөлгөөнт ерөнхий зориулалтын флюроскопийн рентген систем, аналог	A mobile (within an imaging facility) general-purpose diagnostic fluoroscopic x-ray system that uses a C-arm and real-time analogue or analogue-to-digital techniques for image capture, display and manipulation and is designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging capabilities. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested or injected x-ray contrast medium.	IIb
11572	37623	Stationary angiographic x-ray system, digital	Суурин ангиографийн рентген систем, дижитал	A stationary diagnostic fluoroscopic x-ray system specifically designed to optimize the capability of users to visually and quantitatively evaluate the anatomy and function of blood vessels of the heart, brain and other organs, as well as the lymphatic system. It uses digital techniques for real-time image capture, display and manipulation and typically includes spot-film capabilities in addition to the fluoroscopic features. It is commonly used in conjunction with an injected x-ray contrast medium during either imaging or x-ray guided surgical or interventional procedures. Images can be viewed in both real-time and delayed formats.	IIb
11573	37624	Mobile uro-gynaecological fluoroscopic x-ray system, analogue	Хөдөлгөөнт эмэгтэйчүүдийн флюроскопийн рентген систем, аналог	A mobile (within an imaging facility) diagnostic x-ray system with real-time fluoroscopic capabilities specifically designed for use in urological and/or gynaecological surgical and interventional procedures requiring real-time visualization of the pelvic area. It uses analogue or analogue-to-digital techniques for real-time image capture, display and manipulation and includes spot-film capabilities as well as fluoroscopic features. It is commonly used during either imaging or x-ray guided surgical or interventional procedures. The images can be viewed in both real-time and delayed formats and may include various levels of imaging processing and analysis capabilities.	IIb

11574	37626	Mobile basic diagnostic x-ray system, analogue	Хөдөлгөөнт үндсэн оношлогооны рентген систем, аналог	An assembly of devices that comprise an analogue general-purpose mobile diagnostic x-ray system used in a variety of routine x-ray imaging applications. It is typically an x-ray film based system using analogue or analogue-to-digital techniques for image capture and display. The mobile design allows it to operate on-line or by battery and to be driven or pushed by an operator to various locations within a building. It is commonly used for bedside imaging and for interventional and intraoperative imaging. It consists of basic modular configurations that can be upgraded. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb
11575	37630	Stationary mammographic x-ray system, analogue	Хөдөлгөөнгүй маммографийн рентген систем, аналог	An assembly of devices specifically designed to provide a fixed installation (in an imaging facility, or transportation van) x-ray system to compress and image the breast. It is primarily used to optimize the capability of users to visually evaluate x-ray film images representing the anatomy and function of blood and lymphatic vessels within the human breast. It uses analogue or analogue-to-digital conversion techniques for image capture and display. It is used for breast cancer screening and in conjunction with the placement of biopsy markers and stereotactic biopsy and lesion localization equipment requiring x-ray guidance.	IIb
11576	37631	Portable general-purpose fluoroscopic x-ray system, analogue	Зөөврийн ерөнхий зориулалтын флюроскопийн рентген систем, аналог	An assembly of devices that comprise a portable (moved from one location to another, and easily reassembled) general-purpose diagnostic fluoroscopic x-ray system that uses real-time analogue or analogue-to-digital techniques for image capture, display and manipulation used in a variety of general-purpose applications requiring real-time fluoroscopic imaging. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested/injected x-ray contrast medium.	IIb

11577	37632	Portable mammographic x-ray system, analogue	Зөөврийн маммографийн рентген систем, аналог	An assembly of devices specifically designed to provide a portable (intended to be disassembled, moved from location to location, and easily reassembled for use) x-ray system used to compress and image the breast. It is primarily used to optimize the capability of users to visually evaluate x-ray film images representing the anatomy and function of blood and lymphatic vessels within the human breast. It uses analogue or analogue-to-digital conversion techniques for image capture and display. It is used for breast cancer screening and in conjunction with the placement of biopsy markers, stereotactic biopsy and lesion localization equipment requiring x-ray guidance.	IIb
11578	37633	Stationary uro-gynaecological fluoroscopic x-ray system, digital	Суурин uro-gynecological fluoroscopic рентген систем, дижитал	A stationary diagnostic x-ray system with real-time fluoroscopic capabilities specifically designed for use in urological and/or gynaecological surgical and interventional procedures requiring real-time visualization of the pelvic area. It uses digital techniques for real-time image capture, display and manipulation and include spot-film capabilities as well as fluoroscopic features. It is commonly used for imaging and x-ray guided surgical or interventional procedures. The images can be viewed in both real-time and delayed formats and may include various levels of imaging processing and analysis capabilities.	IIb
11579	37634	Stationary uro-gynaecological fluoroscopic x-ray system, analogue	Суурин эмэгтэйчүүдийн флюроскопийн рентген систем, аналог	A stationary diagnostic x-ray system with real-time fluoroscopic capabilities specifically designed for use in urological and/or gynaecological surgical and interventional procedures requiring real-time visualization of the pelvic area. It uses analogue or analogue-to-digital techniques for real-time image capture, display and manipulation and includes spot-film capabilities as well as fluoroscopic features. It is commonly used for imaging and x-ray guided surgical or interventional procedures. The images can be viewed in both real-time and delayed formats and may include various levels of imaging processing and analysis capabilities.	IIb

11580	37635	Intraoral general-purpose dental x-ray system, analogue	Амны хөндийн ерөнхий зориулалтын шүдний рентген систем, аналог	An analogue intraoral diagnostic dental x-ray system designed to generate and control x-ray beams. It uses analogue or analogue-to-digital conversion techniques to record the absorption pattern of x-ray beams used for general-purpose, routine, dental radiography examinations involving the diagnosis, and treatment, e.g., surgical or interventional, of diseases of the teeth, jaw and oral cavity structures. It has the x-ray source (x-ray tube) located within the patient's mouth during imaging procedures. This generic device group includes stationary, mobile and portable designs and consists of basic modular configurations that can be upgraded by the addition of hardware or software components.	IIb
11581	37636	Extraoral general-purpose dental x-ray system, analogue	Амны хөндийн ерөнхий зориулалтын шүдний рентген систем, аналог	An analogue extraoral diagnostic dental x-ray system designed to generate and control x-ray beams. It uses analogue, or analogue-to-digital conversion techniques to record the absorption pattern of x-ray beams used for general-purpose, routine, dental radiography examinations involving the diagnosis, and treatment, e.g., surgical or interventional, of diseases of the teeth, jaw and oral cavity structures. It has the x-ray source (x-ray tube) located outside the patient's mouth during imaging procedures. This generic device group includes stationary, mobile and portable systems, and consists of basic modular configurations that can be upgraded.	IIb
11582	37637	Panoramic dental x-ray system, analogue	Панорамик шүдний рентген систем, аналог	A diagnostic analogue dental x-ray system with an extraoral x-ray sensor and source designed to generate and control x-ray beams to produce panoramic (wide field of view) images of the teeth, jaw and oral cavity structures. This generic device group includes stationary, mobile, and portable systems and consists of basic modular configurations that can be upgraded by the addition of hardware or software components.	IIb

11583	37638	Specimen x-ray system, analogue	Сорьцын рентген систем, аналог	An assembly of devices that use analogue or analogue-to-digital conversion techniques for image capture and display specifically designed for imaging tissue samples or amputated body parts. This system generates and controls x-ray beams and records their absorption patterns onto various viewing and archive media, e.g., film, paper, photo-stimulated phosphor plates or in a digital or video format in order to optimize the capability of users to visually evaluate images made from tissue samples. A specimen x-ray system is not intended to be used to image living subjects. This generic device group includes stationary, mobile and portable devices.	IIb
11584	37639	Specimen x-ray system, digital	Сорьцын рентген систем, дижитал	An assembly of devices that use digital techniques for image capture and display specifically designed for imaging tissue samples or amputated body parts. This system generates and controls x-ray beams and records their absorption patterns onto various viewing and archive media, e.g., film, paper, photo-stimulated phosphor plates, or in a digital or video format in order to optimize the capability of users to visually evaluate images made from tissue samples (specimens). A specimen x-ray system is not intended to be used image living subjects. This generic device group includes stationary, mobile and portable devices.	IIb
11585	37640	Panoramic dental x-ray system, digital	Панорамик шүдний рентген систем, дижитал	A diagnostic digital dental x-ray system with an extraoral x-ray sensor and source designed to generate and control x-ray beams to produce panoramic (wide field of view) x-ray images of the teeth, jaw and oral cavity structures. This generic device group includes stationary, mobile, and portable systems and consists of basic modular configurations that can be upgraded by the addition of hardware, software or other components.	IIb

11586	37642	Portable basic diagnostic x-ray system, analogue	Зөөврийн үндсэн оношлогооны рентген систем, аналог	An assembly of devices that comprise a general-purpose portable analogue diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It is typically an x-ray film based system that uses analogue or analogue-to-digital techniques for image capture and display. The portable design allows it to operate on either mains or battery power and to be easily disassembled, moved from location to another, and reassembled for use. It consists of modular configurations that can be upgraded by the addition of hardware/software components. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb
11587	37643	Portable basic diagnostic x-ray system, digital	Зөөврийн суурь оношлогооны рентген систем, дижитал	An assembly of devices that comprise a general-purpose portable diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It uses digital techniques for image capture, display and manipulation. The portable design allows it to operate on either mains or battery power and to be easily disassembled, moved from location to another, and easily reassembled for use. It consists of modular configurations that can be upgraded by the addition of hardware/software components. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb
11588	37644	Stationary basic diagnostic x-ray system, analogue	Суурин оношилгооны рентген систем, аналог	An assembly of devices that comprise a general-purpose stationary diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It is typically an x-ray film based system that use analogue or analogue-to-digital techniques for image capture and display. The stationary design requires it to be installed and used in a fixed location within a building or in a transportation van (mobile imaging facility). This system consists of modular configurations that can be upgraded by the addition of hardware/software components or accessories. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb

11589	37645	Stationary basic diagnostic x-ray system, digital	Суурин суурь оношлогооны рентген систем, дижитал	An assembly of devices that comprise general-purpose stationary diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It uses digital techniques for image capture, display and manipulation. The stationary design requires it to be installed and used in a fixed location within a building or in a transportation van (a mobile imaging van). This system consists of modular configurations that can be upgraded by the addition of hardware/software components. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb
11590	37646	Mobile general-purpose fluoroscopic x-ray system, digital	Хөдөлгөөнт ерөнхий зориулалтын флюроскопийн рентген систем, дижитал	A mobile (within an imaging facility) general-purpose diagnostic fluoroscopic x-ray system that uses a C-arm and digital techniques for image capture, display and manipulation and is designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging capabilities. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested or injected x-ray contrast medium. Images can be both real-time and delayed formats.	IIb
11591	37647	Mobile basic diagnostic x-ray system, digital	Хөдөлгөөнт үндсэн оношлогооны рентген систем, дижитал	An assembly of devices that comprise a digital general-purpose mobile diagnostic x-ray system used in a variety of routine planar x-ray imaging applications. It uses digital techniques for image capture, display and manipulation and the mobile design allows it to operate on mains or battery power and to be driven or pushed by an operator to various locations within a building or facility. It is commonly used for bedside imaging and for interventional and intraoperative imaging. It consists of basic modular configurations that can be upgraded. This group of devices does not cover systems with fluoroscopic or tomographic capabilities.	IIb

11592	37648	Linear tomography x-ray system	Шугаман томографийн рентген систем	An assembly of devices used to produce 2-dimensional cross-sectional (tomographic) images on x-ray film at a fixed angle and depth in relation to the body position by coordinating linear x-ray tube and recording plate or film motion that is synchronous and typically parallel but in opposite directions during the exposure sequence. This causes the shadow of the selected plane to remain stationary on the moving film while the shadows of other planes have a relative displacement on the film and are either obliterated or blurred. This group of devices reflects old technology; now superseded by computed tomography (CT) systems.	IIb
11593	37649	Portable general-purpose fluoroscopic x-ray system, digital	Зөөврийн ерөнхий зориулалтын флюроскопийн рентген систем, дижитал	A portable (moveable from one location to another, and easily reassembled) general-purpose diagnostic fluoroscopic x-ray system that uses real-time digital techniques for image capture, display and manipulation and is specifically designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested or injected x-ray contrast medium.	IIb
11594	37667	Extraoral general-purpose dental x-ray system, digital	Амны хөндийн ерөнхий зориулалтын шүдний рентген систем, дижитал	A digital extraoral diagnostic dental x-ray system designed to generate and control x-ray beams. It uses digital techniques to record the absorption pattern of x-ray beams used for dental radiography examinations involving the diagnosis, and treatment, e.g., surgical or interventional, of diseases of the teeth, jaw and oral cavity structures. It has the x-ray source (the x-ray tube) located outside the patient's mouth during imaging procedures. This generic device group includes stationary, mobile and portable systems, and consists of basic modular configurations that can be upgraded.	IIb

11595	37668	Panoramic/tomographic dental x-ray system, analogue	Панорамик/томографий н шүдний рентген систем, аналог	A diagnostic dental x-ray system with an extraoral x-ray sensor and source designed to generate and control x-ray beams used in advanced dental imaging applications involving the teeth, jaw, oral cavity, sinus, and/or other maxillofacial structures. It uses analogue, or analogue-to-digital techniques for image capture and display and may include various image processing and analysis capabilities. This system is designed with the capability to produce two or more kinds of special purpose dental x-ray examinations: linear scanning, panoramic, cephalometric, linear tomography, spiral tomography, scanograms, zonograms. This generic device group includes stationary, mobile, and portable systems.	IIb
11596	37669	Panoramic/tomographic dental x-ray system, digital	Панорамик/томографий н шүдний рентген систем, дижитал	A diagnostic digital dental x-ray system with an extraoral x-ray sensor and source designed to generate and control x-ray beams used in advanced dental imaging applications involving the teeth, jaw, oral cavity, sinus, and/or other maxillofacial structures. It uses digital techniques for image capture, manipulation and display and may include various image processing and analysis capabilities. This system is designed with the capability to produce two or more special purpose dental x-ray examinations: linear scanning, panoramic, cephalometric, linear tomography, spiral tomography, scanograms, zonograms. This generic device group includes stationary, mobile, and portable systems.	IIb
11597	37671	Mobile mammographic x-ray system, analogue	Хөдөлгөөнт маммографийн рентген систем, аналог	An assembly of devices specifically designed to provide a mobile (driven or pushed by an operator to various locations within an imaging facility) x-ray system used to compress and image the breast. It is primarily used to optimize the capability of users to visually evaluate x-ray film images representing the anatomy and function of blood and lymphatic vessels within the human breast. It uses analogue or analogue-to-digital conversion techniques for image capture and display and is used for breast cancer screening and in conjunction with the placement of biopsy markers, stereotactic biopsy and lesion localization equipment requiring x-ray guidance.	IIb

11598	37672	Stationary mammographic x-ray system, digital	Хөдөлгөөнгүй маммографийн рентген систем, дижитал	A stationary assembly of devices designed to generate x-ray images of the breast using digital techniques for image capture and display. It is designed specifically to compress the breast during imaging and is intended to visually evaluate the anatomy and function of blood and lymphatic vessels within the breast. Often referred to as a digital mammography system (DMS) it is typically used for breast cancer screening or during biopsy procedures (e.g., placement of biopsy markers, stereotactic biopsy). It is designed to capture two-dimensional (2-D) x-ray images, however may include software intended to process multiple images to create a three-dimensional (3-D) image/model (tomosynthesis).	IIb
11599	37673	Mobile mammographic x-ray system, digital	Хөдөлгөөнт маммографийн рентген систем, дижитал	An assembly of devices designed to provide a mobile (driven or pushed by an operator to various locations within an imaging facility) x-ray system used to compress and image the breast. A digital mammography system (DMS) is used to record the absorption pattern of x-ray beams passed through the breast onto various image archive media, e.g., film, paper, digital/video formats. It is used to optimize the capability of users to visually evaluate the anatomy and function of blood and lymphatic vessels within the breast and uses digital techniques for image capture and display. A DMS is used for breast cancer screening and for the placement of, e.g., biopsy markers or stereotactic biopsy.	IIb
11600	37674	Portable mammographic x-ray system, digital	Зөөврийн маммографийн рентген систем, дижитал	An assembly of devices specifically designed to provide a portable (intended to be disassembled, moved from location to location, and easily reassembled for use) x-ray system used to compress and image the breast. A digital mammography system (DMS) is used to record the absorption pattern of x-ray beams passed through the breast onto various image archive media, e.g., film, paper, digital/video formats. It is used to optimize the capability of users to visually evaluate the anatomy and function of blood and lymphatic vessels within the breast. A DMS is used for breast cancer screening and for the placement of, e.g., biopsy markers or stereotactic biopsy.	IIb

11601	37675	Abdominal public health screening x-ray system	Хэвлийн хөндийн эрүүл мэндийн үзлэгийн рентген систем	An assembly of medical devices designed to be used only for radiographic screening of the stomach and/or other portions of the gastrointestinal (GI) tract of large numbers of individuals within a short time frame. It typically has a simple configuration used generate, control x-ray beams and record the absorption patterns of x-rays passing through the targeted area. It is also referred to as a mass screening system, intended to optimize the capability of users to visually evaluate images of the GI tract using various viewing/archive media, e.g., film, paper or photo-stimulated phosphor plates. It is often used in a mobile imaging environment and moved between different locations in a van.	IIb
11602	37679	Stationary general-purpose fluoroscopic x-ray system, digital	Суурин ерөнхий зориулалтын флюроскопийн рентген систем, дижитал	A stationary general-purpose diagnostic fluoroscopic x-ray system that uses real-time digital techniques for image capture, display and manipulation and is specifically designed to be used in a variety of general-purpose applications requiring real-time fluoroscopic imaging. It includes spot-film capabilities in addition to the fluoroscopic features and is intended to optimize the capability of users to visually and quantitatively evaluate the anatomy and physiological function of various targeted body areas in real-time. It is frequently used in conjunction with an ingested or injected x-ray contrast medium. Images can be viewed in both real-time and delayed format.	IIb
11603	37680	Pneumoencephalographic x-ray system	Пневмоэнцефалографийн рентген систем	An assembly of devices specifically designed to be used in studies involving x-ray visualization of the ventricles and subarachnoid (intrathecal) space of the brain, made possible by injecting sterile gas or air via a lumbar puncture. This group of devices represents old technology that has been largely replaced by x-ray computerized tomography.	IIb

11604	37710	Anaesthesia workstation, general-purpose	Мэдээ алдуулах ажлын станц, ерөнхий зориулалттай	An assembly of electronic devices used for general inhalation anaesthesia (i.e., the delivery of oxygen (O2), nitrous oxide (N2O), other medical gases, and anaesthetic agents) and possibly total intravenous anaesthesia and local anaesthesia. Its main components are high, intermediate, and low pressure gas delivery systems, a breathing circuit (typically with a ventilator), and an anaesthetic gas scavenging system (AGSS). It has built-in alarms, analysers, control/monitoring systems, and typically has integrated circuitry/touchscreen displays for target controlled anaesthesia (TCA) for any type of patient (e.g., neonate, adult).	IIb
11605	37796	Foetal/maternal prenatal monitor	Ургийн/эхийн пренатал хяналт	An electrically-powered device designed for continuous monitoring of foetal heart activity and maternal uterine contractions during the prenatal (commonly perinatal) period; it may monitor additional maternal parameters [e.g., electrocardiogram (ECG), noninvasive blood pressure (NIBP), pulse oximetry (SpO2)]. Also known as a cardiotocograph, uterine contractions are acquired using a tocodynamometer (pressure transducer) strapped onto the mother's abdomen, while foetal heart rate is typically measured with a dedicated ultrasound transducer. The results may be displayed via print-out or electronically; telemetry features may also be included.	IIb
11606	37806	Manual external defibrillator	Гарын ажиллагаатай гадаад дефибриллятор	An external pulse generator (EPG) designed to deliver electrical shocks to defibrillate the heart (restore normal rhythm) in a procedure initiated by a healthcare professional operator who monitors an electrocardiogram (ECG) to determine when to treat life-threatening arrhythmias (ventricular fibrillation and pulseless ventricular tachycardia) in sudden cardiac arrest (SCA) patients. The device typically includes external electrodes (e.g., skin-adhesive or hand-held paddle-type) or internal electrodes (e.g., near open heart), and may have a synchronizing capability; it also includes internal rechargeable batteries that must be charged when not in use. It is widely used in medical facilities.	IIb

11607	37921	Intracavitary-circulation hyperthermia system	Цусны доторх цусны эргэлтийн гипертерми систем	An assembly of electrically-powered devices designed to continuously lavage body cavities (e.g., pleural cavity, peritoneal cavity, bladder lumen) with warmed fluids/chemotherapeutic agents to raise the local temperature and/or enhance the effect of drugs, typically in the treatment of malignancy. It typically includes a water heater/cooler, fluid pump, controls, inputs for monitoring temperature, a circuit with heat exchanger, fluid reservoir, and tubing connectors. Introduction/drainage catheters are connected to the system and placed in the body cavity.	IIb
11608	37948	Aqueous flare/cell measuring system	Усны бамбар/эсийн хэмжилтийн систем	An assembly of devices designed to measure aqueous flare (i.e., protein concentration) and the number of cells in the aqueous humour. It typically consists of light sources (e.g., lasers), a slit-lamp microscope, photo-multipliers, and dedicated software. The system measures the light scattered from the protein and cells in the aqueous humour using a photo-multiplier and analyse the results typically using a personal computer; it is mainly used to assess anterior chamber inflammation.	IIb
11609	37967	Fluoroscopic x-ray system operation software	Флюроскопийн рентген системийн үйл ажиллагааны программ хангамж	A mainframe or personal computer (PC) based operating system software (or firmware) specific to the central processing unit (CPU) incorporated into a general-purpose fluoroscopic x-ray system configuration. This includes the software or firmware based programs and routines supplied by the computer manufacturer that drive a specific computer in the performance of its tasks and assists the operators, applications programmers and programs with various supporting functions. A proprietary name and a "version number" are commonly used identify different operating system versions.	IIb

11610	37975	Microscope slide box	Микроскопын слайд хайрцаг	A small, portable box intended to be used to safely store a number of stained microscope slides for their organization and protection during storage and transportation. It will typically have the capacity to store, e.g., 12 to 100 slides, and is available in a variety of box designs, e.g., it may have a hinged or a loose lid which may be transparent. The slides are stored upright lying on one side. Some types may facilitate stacking, one upon another, with interlocking recesses to keep them together. This device can be made of plastic, wood, and metal materials and will typically include labels to show content.	IIb
11611	37977	Hand-held urinal, female	Гар шээсний суваг, эмэгтэй	A portable, hand-held container/set, typically made of plastic, intended to be directly urinated into by a female (typically bed-bound) patient for excretory purposes. The opening for urination will typically be elongated and have slightly raised edges that fit to the female genital anatomy. The device may have a drain with a stopper in it to facilitate emptying; it is not intended to be worn by the patient. This is a reusable device.	IIb
11612	37997	Nylon suture, non-bioabsorbable, multifilament	Nylon оёдол, био шингэдэггүй, олон утастай	A multiple-strand (multifilament), synthetic, non-bioabsorbable thread made of nylon (a polyamide polymer) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb

11613	38000	Nylon suture, non-bioabsorbable, monofilament	Нейлон оёдлын утас, био шингэдэггүй, монофиламент	A single-strand (monofilament), synthetic, non-bioabsorbable thread made of nylon (a polyamide polymer) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently heals. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	IIb
11614	38001	Radiation therapy treatment record/verify system operation software	Цацрагийн эмчилгээний эмчилгээний бүртгэл/системийн үйл ажиллагааны программыг баталгаажуулах	Mainframe or personal computer (PC) based operating system software (or firmware) that is specific to the central processing unit (CPU) incorporated into a radiation therapy treatment record/verify system configuration. This includes the software or firmware based programs and routines supplied by the computer manufacturer that drive a specific computer in the performance of its tasks and assists the operators, applications programmers and programs with various supporting functions. A proprietary name and a "version number" are commonly used to identify different operating system versions.	IIb
11615	38002	Radiation therapy treatment record/verify system application software	Цацрагийн эмчилгээний эмчилгээний бүртгэл/системийн хэрэглээний программ хангамжийг баталгаажуулах	An individual software program or group of programs, routines or algorithms that add specific computer assisted display, processing and/or analysis capabilities to a radiation therapy treatment record/verify system configuration. A basic set of applications programs and routines are included with such computer-controlled therapy systems and they can be upgraded to correct programming errors or to add new system capabilities. Some must be combined with specific hardware or firmware accessories or configurations in order to function as intended. Applications program packages are typically identified by a proprietary name and "version" or "upgrade" number.	IIb

11616	38024	Bone absorptiometric radionuclide system application software	Ясны шингээлтийн радионуклидын системийн хэрэглээний программ хангамж	An individual software program or group of programs, routines or algorithms that add specific computer assisted display, processing and/or analysis capabilities to a bone absorptiometric radionuclide system configuration. A basic set of applications programs and routines are included with such computer-controlled imaging systems and they can be upgraded to correct programming errors or to add new system capabilities. Some applications software programs or program packages must be combined with specific hardware or firmware configurations in order to function as intended. Applications program packages are typically identified by a proprietary name and "version" or "upgrade" number.	IIb
11617	38025	Bone absorptiometric radionuclide system operation software	Ясны шингээлтийн радионуклидын системийн үйл ажиллагааны программ хангамж	Mainframe or personal computer (PC) based operating system software (or firmware) that is specific to the central processing unit (CPU) incorporated into diagnostic bone absorptiometry radionuclide system configurations. This includes the software or firmware based programs and routines supplied by the computer manufacturer that drive a specific computer in the performance of its tasks and assists the operators, applications programmers and programs with various supporting functions. A proprietary name and a "version number" are commonly used identify different operating system versions.	IIb
11618	38071	Polymer orthopaedic cement restrictor, bioabsorbable	Полимер ортопед цемент хязгаарлагч, био шингээх чадвартай	A sterile, implantable device that is chemically degraded and absorbed via natural body processes designed to be inserted into the medullary canal of a bone (e.g., femur, tibia, or humerus) during orthopaedic surgery to prevent cement progression in the diaphysis and therefore facilitate cement pressurization during the introduction of an implant. It is made of bioabsorbable synthetic polymer materials and is available in a variety of designs, e.g., straight or tapered, hollow with a fenestrated surface, and it may have a toothed surface to prevent its migration from the desired location. It may incorporate a metal orientation marker for radiographs and is not intended for spinal indication.	IIb

11619	38121	Chest-oscillation airway secretion-clearing system hose	Цээжний хэлбэлзэлтэй амьсгалын замын шүүрлийг цэвэрлэх системтэй хоолой	A thick-walled tubing that is a component of a high frequency chest wall oscillation airway secretion-clearing system and intended to connect the system's rapid air-pulse generator to the high frequency chest wall oscillation (HFCWO) vest. It includes airtight connectors at either end and its thick walls are designed to minimize the loss of pressure pulses to the vest. This is a reusable device.	IIb
11620	38138	Automatic-aperture-control accelerator system collimator	Автомат диафрагмын удирдлагын хурдасгуурын системийн коллиматор	A motorized, radiation beam-limiting device that is a component of a therapeutic accelerator system and composed of highly-attenuating materials or alloys [e.g., lead (Pb), tungsten (W)] with jaw or leaf positioning functions that are computer-controlled. Mounted at the beam exit port, it is used to adjust the shape of the radiation beam to the body area targeted for treatment. It provides patient protection by limiting or eliminating radiation delivery to non-target body areas during treatment. A light localizer is typically included in the design of the device to indicate the location of the radiation beam and assist in the positioning of patients for treatment.	IIb
11621	38139	Automatic-aperture-control teletherapy radionuclide system collimator	Автомат диафрагмын удирдлагатай телетерапийн радионуклидын системийн коллиматор	A motorized, radiation beam-limiting device that is a component of a teletherapy radionuclide system and composed of highly-attenuating materials or alloys [e.g., lead (Pb), tungsten (W)] with jaw or leaf positioning functions that are computer-controlled. It is mounted below the diverging channel of the teletherapy system source head and is used to customize the size and shape of the radiation beam that reaches the patient during treatment so that the beam conforms to the requirement of a specific treatment plan. A jaw-type collimator provides a rectangular or circular beam shape; adjustable multi-leaf types allow for the creation of irregular beam shapes.	IIb

11622	38152	Tibia nail	Шилний хумс	A rod made of metal or other material intended to be implanted into the intramedullary canal of the tibia to immobilize the ends of a fractured bone in position to promote healing. The device may also be used to support the bone in the presence of a pathological condition, or for knee arthrodesis. The device may be a locked or unlocked model and possess components to assist fixation of more proximal or distal conditions. This is a single-use device.	IIb
11623	38153	Humerus nail	Humerus хадаас	A rod made of metal or other material intended to be implanted into the intramedullary canal of the humerus to immobilize the ends of a fractured bone in position to promote healing. The device may also be used to support the bone in the presence of a pathological condition. The device may be a locked or unlocked model and possess components to assist fixation of more proximal or distal conditions. This is a single-use device.	IIb
11624	38310	Radionuclide neutron activation system	Радионуклид нейтрон идэвхжүүлэх систем	An assembly of devices that produce neutron activation products in the body by means of a low-flux high-energy neutron beam. It quantitatively measures the resulting radiation from specific short half-life activation products to produce diagnostic information in the form of calculated parameters. It may use, e.g., an electron tube with a Hydrogen-3 (H-3 or tritium) target to produce a low-flux high-energy neutron beam that activates carbon in anatomical regions of interest. It can be upgraded with components, sub-systems, and accessories. It typically includes, radionuclide source, multiple photon detectors, signal analysis equipment, monitors, displays, patient table, computer and software.	IIb

11625	38334	Radiation solid-state semiconductor system	Цацрагийн хатуу төлөвт хагас дамжуулагч систем	A radiation spectroscopy instrument designed to detect neutron, beta, and alpha particles by the production of electron-hole pairs along the path of the charged particle in a semiconductor that acts like a solid ionization chamber. It typically consists of a semiconductor diode, using an ohmic contact (a non rectifying electrode), a detection circuit to measure the resulting current, Dewar flask, liquid nitrogen (LN2), sample chamber, electronics, computer for data processing, and read out systems. The semiconductor acts like a solid ionization chamber but because the detector medium is solid the detector volume can be much smaller than an ionization chamber.	IIb
11626	38564	Jejunostomy tube	Жежуностомийн хоолой	A sterile, thin, flexible, hollow tube percutaneously inserted into the jejunum, typically through puncture of the abdominal wall and stomach after distention of the gut by endoscopic methods. It is used to feed a patient who has a physical disability that prevents oral feeding (e.g., a birth defect of the mouth, oesophagus, or stomach, or a neuromuscular condition that affects chewing and swallowing), and/or to provide drainage/decompression for the stomach when it is necessary to bypass a longstanding obstruction of the stomach outlet into the small intestine. This is a single-use device.	IIb
11627	38565	Gastrostomy button	Гастростомийн товчлуур	A sterile, short, hollow tube that is inserted into the stomach percutaneously to permit long-term enteral feeding. The tube does not permit reflux and its external end is flush with abdominal skin. This is a single-use device.	IIb
11628	38671	Steam sterilizer	Уурын ариутгагч	A mains electricity (AC-powered) device designed for total elimination and/or inactivation of microorganisms from medical devices and related products using pressurized steam (i.e., moist heat) as the sterilizing agent; it is used for products non-sensitive to high temperature, water, or steam. It typically includes a treatment chamber with shelves for device placement, and controls; it may be intended to sterilize wrapped and/or unwrapped devices. The device is available in a variety of shapes and sizes, including stand-alone (bulk) and tabletop units.	IIb

11629	38723	Robotic surgical navigation system	Робот мэс заслын навигацийн систем	An assembly of electromechanical devices designed to be used during computer assisted surgery (CAS) as a functional extension of the surgeon for precise procedural movement and placement (navigation) during the procedure (e.g., placement of a pedicle screw in spinal surgery). It typically consists of an operator's console and a video camera used to track the robotic instrumentation. The input to the computer is usually by means of an existing CT or MRI scan that is used as a template. The system tracks the instrumentation by reading the location points giving a three-dimensional (3-D) picture of the instrument's position/angulation. It can also be used as a training aid.	IIb
11630	38777	Endodontic paper point	Эндодонт цаасны цэг	A non-medicated absorbent point used in endodontic procedures that has been sterilized once in a manner approved by the manufacturer. This is a single-use device.	IIb
11631	38792	Tracheostomy tube, non-reinforced, non-customized, reusable	Трахеостомийн хоолой, хүчитгээгүй, захиалгаар хийгдээгүй, дахин ашиглах боломжтой	A hollow cylinder designed to be inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway; it is not custom-made for a specific patient and is not reinforced with a wire. It is typically constructed of metal [stainless steel, silver (Ag) and/or silver plated brass] or plastic and may include an inner cannula. It is available in cuffed, uncuffed, and/or fenestrated versions, and in a variety of shapes and sizes. It is secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a reusable device.	IIb
11632	38799	Polymer orthopaedic cement restrictor, non-bioabsorbable	Полимер ортопед цемент хязгаарлагч, био шингэдэггүй	A non-bioabsorbable, implantable device designed to be inserted into the medullary canal of a bone (e.g., femur, tibia, or humerus) during orthopaedic surgery to prevent cement progression in the diaphysis and therefore facilitate cement pressurization during the introduction of an implant. It is typically made of polyetheretherketone (PEEK) or ultrahigh molecular weight polyethylene (UHMWPE) and is available in a variety of designs (e.g., straight or tapered, hollow with a fenestrated surface), and it may have a toothed surface to prevent its migration from the desired location. It may incorporate a metal orientation marker for radiographs and it is not intended for spinal application.	IIb

11633	40519	Ethylene oxide aerating chamber	Этилен ислийн агааржуулалтын камер	A mains electricity (AC-powered) chamber specially designed for shortening the time required to remove residual ethylene oxide (ETO) from wrapped devices that have undergone ETO-sterilization. The chamber is equipped with a ventilation system and designed to circulate and exchange the air. It may include a heater to warm the circulating air.	IIb
11634	40551	Spermicidal condom	Спермицидийн бэлгэвч	A sheath worn to completely cover the penis as a closely fitting membrane, with a lubricant that contains a spermicidal agent (e.g., nonoxynol-9), designed to prevent sperm from gaining access to the female reproductive tract during coitus. The spermicide is intended to provide added protection, in addition to the physical barrier provided by the sheath, by preventing sperm motility. This device is also intended to prevent microorganisms that cause sexually transmitted diseases from being transmitted between sexual partners. This is a single-use device.	IIb
11635	40582	Ventilator application software	Агааржуулагчийн хэрэглээний программ хангамж	An individual software application program or group of programs, routines or algorithms that add specific computer assisted display, processing and/or analysis capabilities to a ventilator. A basic set of applications programs and routines are included with the ventilator and can be upgraded to correct programming errors or to add new system capabilities. Applications program packages are typically identified by a proprietary name and "version" or "upgrade" number.	IIb
11636	40630	Nuclear medicine phantom, test object	Цөмийн анагаах ухааны фантом, туршилтын объект	A device that includes a wide variety of two or three-dimensional (3-D) phantoms used in both calibration protocols and in subjective and quantitative evaluations of the performance of diagnostic nuclear medicine (NM) detector systems, e.g., gamma cameras, single photon emission computed tomography (SPECT), positron emission tomography (PET) or associated image display system and software programs. It consists of either fixed or variable configurations or patterns of absorbing or attenuating materials and radioactive source holders. The design can incorporate radioactive sealed sources or refillable radioactive source wells to which radioactivity can be added.	IIb

11637	40737	Hyperthermia system gantry	Гипертерми системийн гантри	An integral component of a therapeutic hyperthermia system that typically consists of a stationary stand or frame stabilized by side supports that acts as the primary support and housing for the non-ionizing radiation generating components or assemblies, e.g., ultrasound or radio-frequency (RF), motors and related electronics of a therapeutic hyperthermia configuration. Some hyperthermia gantry designs can incorporate a motorized table for patient support and positioning during treatment. Depending on the design, it can include a variety of other components, e.g., motors, mounts or motion controls.	IIb
11638	40776	Ultrasonic lithotripsy system transducer, reusable	Хэт авианы литотрипсийн системийн хувиргагч, дахин ашиглах боломжтой	A catheter-enclosed device used as a component of an ultrasonic lithotripsy system to transform electrical energy into ultrasonic energy to deliver localized lithotripsy treatments (the breaking up of a stone or calculus). It is introduced into the body through vascular access, surgically, or endoscopically. This ultrasound transducer is composed of either a single transducer element or an array of transducer elements [i.e., piezoelectric or active element(s), or crystal(s) and associated damping, backing, and matching layer materials]. This is a reusable device.	IIb
11639	40781	Ultrasonic hyperthermia system	Хэт авианы гипертерми систем	An assembly of devices designed to produce and control the delivery of high heat (i.e., temperatures greater than 43° Celsius) to the body using ultrasonic energy for the intracorporeal or extracorporeal treatment of malignant or benign tumours, or other disease conditions. It is typically computer-controlled and is capable of producing whole-body or localized heating within tissues or organs. Energy delivered to the patient is from either an externally-mounted transducer or a transducer-containing catheter or probe used topically or inserted endoscopically or surgically. Unlike an ultrasound diathermy system, an ultrasound hyperthermia system is not used in physiotherapy applications.	IIb

11640	40782	Tumour-therapy radio-frequency hyperthermia system	Хавдрын эмчилгээ - радио давтамжийн гипертерми систем	A mains electricity (AC-powered) device assembly designed for controlled heating (i.e., temperatures around 43° Celsius) of the body using radio-frequency (RF) energy, for the treatment of malignant or benign tumours, or other disease conditions; it is not intended for direct tissue ablation. It includes an RF generator, controls, software and an RF applicator. It is intended for both whole-body and localized heating of tissues/organs through either externally-mounted components or from catheter- or probe-type applicators inserted topically, endoscopically, or surgically.	IIb
11641	40783	Microwave hyperthermia system	Бичил долгионы гипертерми систем	A mains electricity (AC-powered) device assembly designed for controlled heating (i.e., temperatures above 43° Celsius) of the body using microwaves, for the treatment of malignant or benign tumours or other disease conditions [e.g., benign prostatic hyperplasia (BPH), prostatitis]. It includes a microwave generator, controls, software (e.g., treatment planning software) and a microwave applicator. It is intended for both whole-body and localized heating of tissues/organs through either externally-mounted components or from catheter- or probe-type applicators inserted topically, endoscopically, or surgically.	IIb
11642	40784	Extravascular-circulation hyperthermia system	Судасны гаднах цусны эргэлтийн гипертерми систем	An assembly of devices designed to produce and control heated fluids circulated within a vessel applied to the body (e.g., vest, mattress, jacket, band, pad, body wrap, catheter, probe) for systemic or localized heating to treat malignant tumours, benign growths, or other disease-related conditions. It is typically a computer-controlled configuration used for curative or palliative treatment by causing the temperature of the whole body, localized areas, or targeted organs to rise to temperatures greater than 43° Celsius. It is typically used in an oncology department.	IIb

11643	40785	Multi-modality hyperthermia system	Олон төрлийн гипертерми систем	A mains electricity (AC-powered) device assembly designed for controlled heating (i.e., temperatures above 43° Celsius) of the body using multiple energy sources, for the treatment of malignant or benign tumours, or other disease conditions. It includes a patient-end applicator, software, and a multi-modality generator(s)/control unit. It is intended to achieve whole-body and localized heating of tissues using two or more energy sources [e.g., ultrasound, radio-frequency (RF), microwave, circulating heated fluid] through either externally-mounted components, or from catheter- or probe-type applicators inserted endoscopically or surgically.	IIb
11644	40791	Microwave hyperthermia system applicator, extracorporeal	Бичил долгионы гипертерми системийн түрхэгч, экстракорпораль	A component of a microwave hyperthermia system designed to direct and deliver microwave energy used to produce a systemic or local heating effect. It is typically mounted on a floor, wall, or ceiling suspension that allows the operator to position the microwave source from a point outside the patient's body. The applicator assembly includes cables and connectors that interface with the energy-generating unit of the hyperthermia system during treatments. This is a reusable device.	IIb
11645	40792	Microwave hyperthermia system applicator, intracorporeal	Бичил долгионы гипертерми системийн түрхэгч, биеийн доторх	A component of a microwave hyperthermia system designed to be placed inside the body to deliver microwave energy to produce a systemic or local heating effect. It is also referred to as an interstitial applicator or probe and is typically a catheter-enclosed conductor of microwave energy that is introduced into the body either manually or endoscopically. It typically includes a thermometry component that monitors the temperature of the device during operation. This is a single-use device.	IIb
11646	40793	Tumour-therapy radio-frequency hyperthermia system applicator, extracorporeal	Хавдрын эмчилгээний радио давтамжийн гипертерми системийн түрхэгч, экстракорпорал	A component of a radio-frequency (RF) hyperthermia system designed to direct and deliver radio-frequency energy to produce a systemic or local heating effect for the treatment of malignant or benign tumours, or other disease conditions. It is typically mounted on a floor, wall, or ceiling suspension that allows the operator to position the RF energy from a point outside the patient's body. This is a reusable device.	IIb

11647	40794	Tumour-therapy radio-frequency hyperthermia system applicator, intracorporeal	Хавдрын эмчилгээний радио давтамжийн гипертерми системийн түрхэгч, бие доторх	A component of a radio-frequency (RF) hyperthermia system designed to be placed in the body to deliver radio-frequency (RF) energy to produce a systemic or local heating effect for the treatment of malignant or benign tumours, or other disease conditions. It is also referred to as an interstitial applicator or probe and is typically a catheter-enclosed conductor of RF energy that is introduced into the body either manually or endoscopically. It typically includes a thermometry component that monitors the temperature of the probe during operation. This is a single-use device.	IIb
11648	40795	Extravascular-circulation hyperthermia system applicator, extracorporeal	Судасны гаднах цусны эргэлтийн гипертерми системийн түрхэгч, экстракорпораль	A vessel applied to the outside of the body (e.g., in the form of a jacket, vest, body wrap, cushion, blanket, or mattress) that incorporates tubing through which heated fluids are circulated for systemic or localized heating to treat malignant tumours, benign growths, or other disease-related conditions. The applicator typically includes a thermometry component that monitors the temperature of the applicator during operation. The applicator includes tubing, cables, and connectors that interface with the hyperthermia system's control unit during treatments. It is typically used in an oncology department. This is a reusable device.	IIb
11649	40796	Extravascular-circulation hyperthermia system applicator, intracorporeal	Судасны гаднах цусны эргэлтийн гипертерми системийн түрхэгч, биеийн доторх	A component of a hyperthermia system that typically consists of catheter-enclosed tubing which is introduced into the body either manually or endoscopically. Heated fluid is circulated through the applicator's tubing for localized heating to treat malignant tumours, benign growths, or other disease-related conditions. The applicator (also called an interstitial applicator or probe) typically includes a thermometry component that monitors the temperature of the applicator during operation; it also includes tubing, cables, and connectors that interface with the hyperthermia system's control unit during treatments. It is typically used in an oncology department. This is a single-use device.	IIb

11650	40797	Hyperthermia system temperature probe	Гипертерми системийн температурын мэдрэгч	A device intended to be used exclusively to monitor tissue or body temperature during hyperthermia treatments. Depending on the kind of hyperthermia system it is used with [e.g., ultrasound, radio-frequency (RF) or microwave] it is shielded in a specific way so that its operation is not affected by the energy from the hyperthermia applicator(s) used during treatment. This is a reusable device.	IIb
11651	40814	Hyperthermia mobile medical facility	Гипертерми хөдөлгөөнт эмнэлгийн байгууламж	A vehicle, e.g., a van, trailer, or other kind of mobile enclosure, that is equipped with at least one hyperthermia system, the related instrumentation, and shielding. It is typically driven or towed between various geographical locations and used as a freestanding hyperthermia treatment mobile unit. It will include special mounting and stabilization components for the installed mobile hyperthermia systems and other devices, e.g., telemedicine systems, or cameras. Power sources and other equipment necessary to ensure adequate functioning of the system(s), are included.	IIb
11652	40931	Laser-generating gas	Лазер үүсгэгч хий	A gaseous mixture intended to be used as a lasing medium (to produce a laser beam) typically for use in dermatological or general and plastic surgery procedures.	IIb
11653	40992	Hyperthermia system operator console	Гипертерми системийн операторын консол	A component of a hyperthermia system that functions as the primary control panel for a specific kind of ultrasound, microwave or combination hyperthermia system. It can include hardware and software that allows for image and/or information display, processing, analysis, and data archiving functions. It may be interfaced into a picture archiving and communication system (PACS), a local area network (LAN), a radiology information system (RIS), or a hospital information system (HIS). It differs from the workstation by only containing the primary controls for the direct operation of the hyperthermia system.	IIb

11654	41049	Nephrology information system application software	Нефрологийн мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of nephrology services. It is used by renal professionals to track disease progression, manage co-morbidities, and prepare patients for renal therapies such as haemodialysis, peritoneal dialysis, and transplant. It is typically installed into a dedicated information system for nephrology or existing mainframe or decentralized computers/networks.	IIb
11655	41062	External defibrillation electrode, adult, reusable	Гадны дефибрилляцийн электрод, насанд хүрэгчид, дахин ашиглах боломжтой	An electrical conductor intended to be used in pairs to transmit a controlled electrical shock from an external defibrillator to a post-pubescent patient in order to defibrillate the heart (restore a normal rhythm) or slow a rapid heart rate. It usually consists of a cable set that terminates with electrodes (paddles) that are hand-held by the operator to the chest (the intact torso) or back of the patient so that the discharge passes across the region of the heart. Typically available as a set of two electrodes with a combined cable/connector, or as a single electrode with cable/connector, in which case two will be connected to the external pulse generator (EPG). This is a reusable device.	IIb
11656	41148	Portable pneumatic ventilator	Зөөврийн пневматик амьсгалын аппарат	A pneumatically-powered device designed to be easily moved/mounted to provide ventilation support for patients who do not require complex critical care ventilation. It operates with a drive gas from any suitable source (e.g., oxygen concentrator, gas cylinder) and typically uses positive pressure to deliver the gas, at adjustable breathing rates and tidal volumes, through an endotracheal (ET) tube, tracheostomy cannula, or mask. It may include an electronic control system and alarms, sometimes with additional features (e.g., humidification). It is typically used in the home, in an extended care facility, by emergency medical services (EMS), and/or in disaster or field situations.	IIb

11657	41176	Laser application software	Лазер хэрэглээний программ хангамж	An individual software program or group of programs, routines or algorithms intended to add specific computer assisted display, processing and/or analysis capabilities to a laser for storing, processing, and managing electronic information/data used during a treatment with a laser. It is typically installed in a laser and/or interfaced with an ordinary computer (e.g., tabletop, laptop) which displays the data.	IIb
11658	41477	Patient-controlled analgesia electric infusion pump administration set	Өвчтөний хяналттай өвдөлт намдаах цахилгаан дусаах шахуургын удирдлагын багц	A collection of sterile devices that typically consists of a reservoir (e.g., a syringe or plastic pouch), plastic tubing, a check valve, and Luer connectors, designed for the controlled intravenous (IV) administration of opioid pain medication using an electrically-powered, patient-controlled analgesia (PCA) infusion pump. This is a single-use device.	IIb
11659	41609	Heat-exchanging intravenous administration set	Дулаан солилцох судсаар тарих багц	A collection of noninvasive devices designed to directly warm and conduct fluids from an intravenous (IV) administration bag/bottle to a peripheral venous cannula (not included) during gravitational or pump administration to a patient's venous system. It typically includes tubing, connectors, chambers, and clamps; the bag/bottle may be included. It does not include devices intended to be used invasively. This is a single-use device.	IIb
11660	42238	Sleep disorder interpretive software	Унтах эмгэгийг тайлбарлах програм хангамж	An interpretive software program intended to collect and analyse patient physiological data during sleep and publish reports to assist a healthcare professional in the diagnosis of sleep disorders (e.g., insomnia, snoring, sleep apnoea) or to help evaluate treatment (e.g., positive airway pressure). It may be used as part of a complete polysomnography study using a wide range of data (e.g., electrocardiogram (ECG), electroencephalogram (EEG), haemoglobin oxygen saturation (SpO2), chest wall motion, airflow, eye movement), or as part of a home-based study using a more limited data set [e.g., photoplethysmography (PPG) and motion tracking].	IIb

11661	42252	Manual-aperture-control diagnostic x-ray system collimator, motorized	Гарын авлагын диафрагмыг хянах оношлогооны рентген системийн коллиматор, мотортой	A standard, diagnostic x-ray beam-limiting and shaping device with a motorized shutter/length adjustment mechanism that requires the operator to manually adjust the collimator shutters or length of the cone prior to an exposure in order to match the size and shape of the x-ray beam to the size of the x-ray cassette in use. Most motorized collimator assemblies include a light-centring device. An X-ray collimator is used to limit the effects of scattered radiation on image quality and to provide patient protection by eliminating exposure to non-target body areas.	IIb
11662	42253	Manual-aperture-control diagnostic x-ray system collimator, non-motorized	Гарын авлагын диафрагмыг хянах оношлогооны рентген системийн коллиматор, моторгүй	A standard, non-motorized, diagnostic x-ray beam-limiting device whose aperture size/length/shutter assembly must be manually adjusted in order to match the size of the x-ray beam to the size of the x-ray cassette in use. It includes designs with manual controls that operate one or more shutter pairs and also designs that require the addition or removal of attachments or extensions that allow the operator to alter the size and shape of the exit beam from a cone or cylinder. An x-ray collimator is used to limit the effects of scattered radiation on image quality and to provide patient protection by eliminating exposure to non-target body areas.	IIb
11663	42254	Fixed-aperture diagnostic x-ray system collimator	Тогтмол диафрагмын оношлогооны рентген системийн коллиматор	A standard, non-motorized, diagnostic x-ray beam-limiting device that has a fixed size opening. It attaches by means of a slot or base plate to a diagnostic x-ray system tube housing and is used to limit the effects of scattered radiation on image quality and to provide patient protection by eliminating exposure to non-target body areas. An aperture diaphragm consists of a sheet of lead with a hole in the middle. The size and shape of the hole determine the size and shape of the x-ray beam exiting from the x-ray system. Cones and cylinders used for beam collimation are made of lead and attach by means of a base plate to an x-ray tube housing assembly.	IIb

11664	42256	Single-hole nuclear medicine system collimator, straight-bore	Нэг цооногтой цөмийн анагаах ухааны системийн коллиматор, шулуун цооног	An individual hollow-bore cylinder made of a dense material, e.g., lead (Pb), tungsten (W) or titanium (Ti), used to ensure that only gamma ray activity directly in front of the collimator channel reaches the scintillation crystal of the imaging or detector system. This group of devices includes collimators designed to image low, medium or high-energy photons. It can be an integrated component of a hand-held probe, a detector array, or other kind of detector or imaging system, and includes interchangeable designs. It has attachment mechanisms enabling it to be safely transported, removed from, or attached to the detector head of a detector or imaging system.	IIb
11665	42257	Single-hole nuclear medicine system collimator, pinhole	Нэг нүхтэй цөмийн анагаах ухааны системийн коллиматор, зүү	A conical shaped housing of lead or equivalent material with a single small opening of a fixed diameter at the tapered end of the cone. It projects an inverted image of photon distribution onto the system's crystal detector ensuring that only gamma ray activity directly in front of the collimator channel reaches the scintillation crystal of the imaging or detector system. The shape of its base is intended to conform to the crystal shape of the nuclear medicine imaging system. Typically interchangeable, it is designed with attachment mechanisms that enable it to be safely transported, removed from, or attached to the detector head of the system.	IIb
11666	42258	Multi-hole nuclear medicine system collimator, low-energy	Олон нүхтэй цөмийн анагаах ухааны системийн коллиматор, бага энергитэй	A device designed specifically for use in diagnostic nuclear medicine imaging applications operating with an energy range of less than 500 kilo-electronvolt (keV). It consists of an array of small openings drilled or cast into a flat sheet or plate of lead or lead-equivalent materials. Its size and shape is intended to conform to the crystal shape of a nuclear medicine imaging system to ensure that only gamma ray activity directly in front of the individual collimator channels reaches the scintillation. It has attachment mechanisms that enable it to be safely transported, removed from, and attached to the detector head of the system.	IIb

11667	42259	Multi-hole nuclear medicine system collimator, high-energy	Олон нүхтэй цөмийн анагаах ухааны системийн коллиматор, өндөр энергитэй	A device designed specifically for use in gamma camera or single photon emission computed tomography (SPECT) based planar positron imaging applications operating with an energy range above 500 kilo-electronvolt (keV). It consists of an array of small openings drilled or cast into a flat sheet or plate of lead or lead-equivalent materials. Its size and shape is intended to conform to the crystal shape of a nuclear medicine imaging system to ensure that only gamma ray activity directly in front of the collimator channels in the array reaches the scintillation. It has attachment mechanisms that enable it to be safely transported, removed from, and attached to the detector head of the system.	IIb
11668	42261	Manual-aperture-control therapeutic x-ray system collimator, motorized	Гарын авлагын диафрагмыг хянах эмчилгээний рентген системийн коллиматор, мотортой	A motorized, x-ray beam-limiting and shaping device that is a component of a therapeutic x-ray system and that is adjusted manually. It is attached to the x-ray tube housing assembly and adjusts the size and shape of the x-ray beam to match the size and shape of a predefined target area or the shape of a x-ray cassette used for quality assurance purposes. It is used in radiation therapy applications to limit the effects of scattered radiation and to protect the patient by limiting or eliminating exposure to non-target body areas during treatment. This device is specifically designed for use with an x-ray simulation or therapeutic x-ray system.	IIb
11669	42262	Manual-aperture-control therapeutic x-ray system collimator, non-motorized	Гарын авлагын диафрагмыг хянах эмчилгээний рентген системийн коллиматор, моторгүй	A non-motorized, x-ray beam-limiting and shaping device that is a component of a therapeutic x-ray system and that is adjusted manually. It is attached to the x-ray tube housing assembly and adjusts the size and shape of the x-ray beam to match the size and shape of a predefined target area or the shape of a x-ray cassette used for quality assurance purposes. It is used in radiation therapy applications to limit the effects of scattered radiation and to provide patient protection by limiting or eliminating exposure to non-target body areas during treatment. This device is specifically designed for use with an x-ray simulation or therapeutic x-ray system.	IIb

11670	42263	Fixed-aperture therapeutic x-ray system collimator	Тогтмол диафрагм бүхий эмчилгээний рентген системийн коллиматор	A non-automated, x-ray beam-limiting device that is a component of a therapeutic x-ray system and whose opening size/length/shutter assembly is fixed. It is used in radiation therapy applications to limit the effects of scattered radiation and to protect the patient by limiting or eliminating exposure to non-target body areas during treatment. This device is specifically designed for use with an x-ray simulation or therapeutic x-ray system.	IIb
11671	42265	Manual-aperture-control accelerator system collimator, non-motorized	Гарын апертурын удирдлагын хурдасгуурын системийн коллиматор, моторгүй	A non-motorized, radiation beam-limiting device that is a component of a therapeutic accelerator system, and composed of highly-attenuating materials or alloys [e.g., lead (Pb), tungsten (W)] which requires manual adjustment of the jaw or leaf positions. Mounted at the beam exit port, it is used to adjust the shape of the radiation beam to the body area targeted for treatment. It provides patient protection by limiting or eliminating radiation delivery to non-target body areas during treatment. A light localizer is typically included in the design of the device to indicate the location of the radiation beam and assist in the positioning of patients for treatment.	IIb
11672	42266	Manual-aperture-control accelerator system collimator, motorized	Гарын апертурын удирдлагын хурдасгуурын системийн коллиматор, моторт	A radiation beam-limiting device that is a component of a therapeutic accelerator system and composed of highly-attenuating materials or alloys [e.g., lead (Pb), tungsten (W)] with motorized jaw or leaf positioning capabilities that are manually adjusted. The device is mounted at the beam exit port of the accelerator housing and is used to vary the size and shape of the radiation beam that reaches the patient. It provides patient protection by limiting or eliminating radiation delivery to non-target body areas. A light localizer is typically included in the design of the device to indicate the location of the radiation beam and assist in the positioning of patients for treatment.	IIb

11673	42267	Steered-aperture-control accelerator system collimator	Удирдаг диафрагмыг удирдах хурдасгуурын системийн коллиматор	A radiation beam-limiting device that is a component of an accelerator system and composed of highly-attenuating materials [e.g., lead (Pb), tungsten (W)] with computer-controlled motorized jaw or leaf adjusting capabilities. It is used to adjust the shape of the radiation beam to the body area targeted for treatment. It provides patient protection by limiting or eliminating radiation delivery to non-target body areas and is primarily used in conformational radiation therapy that include software interfaces allowing the operator to position and shape the collimator leaves based on two or three-dimensional (3-D) clinical data or a scanned film image. A light localizer is typically included.	IIb
11674	42270	Manual-aperture-control teletherapy radionuclide system collimator, non-motorized	Гарын апертурын удирдлагатай теле эмчилгээ радионуклидын системийн коллиматор, моторгүй	A beam-limiting device made from highly attenuating materials designed specifically for use with a teletherapy radionuclide system. This type of collimator has a non-motorized jaw or leaf positioning that is manually adjusted and is used to customize the size and shape of the radiation beam that reaches the patient. It protects the patient by limiting or eliminating radiation delivery to non-target body areas. A light localizer is typically included in the collimator design.	IIb
11675	42271	Manual-aperture-control teletherapy radionuclide system collimator, motorized	Гарын авлагын диафрагмыг хянах телетерапийн радионуклидын системийн коллиматор, моторт	A beam-limiting device made from highly attenuating materials designed specifically for use with a teletherapy radionuclide system. This type of collimator has a motorized jaw or leaf positioning that is manually adjusted and is used to customize the size and shape of the radiation beam that reaches the patient. It protects a patient by limiting or eliminating radiation delivery to non-target body areas. A light localizer is typically included in this collimator design.	IIb

11676	42272	Steered-aperture-control teletherapy radionuclide system collimator	Удирдаг диафрагмын удирдлагатай телетерапийн радионуклидын системийн коллиматор	A motorized, radiation beam-limiting device that is a component of a teletherapy radionuclide system and composed of highly-attenuating materials or alloys [e.g., lead (Pb), tungsten (W)] with jaw or leaf positioning that is computer-controlled/adjusted. It is used to customize the size and shape of the radiation beam that reaches the patient. It includes interfaces to accept data files used to determine the position and shape of the collimator jaws or leaves and protects the patient by limiting or eliminating radiation delivery to non-target body areas. A light localizer is typically included in the collimator design.	IIb
11677	42273	Satellite teletherapy radionuclide system collimator	Хиймэл дагуулын радионуклидын системийн коллиматор	A satellite collimator is an accessory to the primary collimator assembly used with a teletherapy radionuclide system. Also known as a penumbra trimmer, it is designed to attach to the end of the primary collimator nearest the patient and is used to sharpen the edge of the radiation beam being delivered to the patient. It works by reducing the contamination of the gamma ray beam with electrons that are liberated as photons and interact with the collimator materials.	IIb
11678	42275	Stereotactic radiosurgical system collimator	Стереотактик радио мэс заслын системийн коллиматор	A beam-shaping device that is a component of a radionuclide source based stereotactic radiosurgery system (commonly known as a gamma knife or radiation knife) and that is designed specifically to block/shape/direct/focus multiple beams of radiation from independently configured sources of the system so that the beams converge allowing the delivery of a precise beam of therapeutic radiation to a target area while minimizing exposure to non-target areas. It is primarily designed for radiation therapy treatments to the head, and is typically helmet-shaped.	IIb
11679	42276	Radionuclide neutron activation system collimator	Радионуклидын нейтрон идэвхжүүлэх системийн коллиматор	A sheet or block of a neutron absorbing material, e.g., cadmium (Cd) that is mounted on a specially modified outlet aperture of a fission reactor used in radiation therapy treatments requiring the delivery of thermal neutrons to a target area. It is used to shape and define the boundary of an exit beam to limit the effects of scattered radiation and to provide patient protection by limiting or eliminating exposure to non-target body areas.	IIb

11680	42284	Stationary specimen x-ray system, analogue	Хөдөлгөөнгүй сорьцын рентген систем, аналог	A stationary specimen x-ray system designed for permanent fixture in one location to generate and control x-ray beams and to record the absorption patterns of x-rays passing through tissue samples or amputated body parts. The image is from film or phosphor plate.	IIb
11681	42297	Stationary intraoral dental x-ray system, digital	Амны хөндийн шүдний суурин рентген систем, дижитал	A diagnostic dental x-ray system designed for permanent fixture in one location to generate and control x-ray beams. It records the absorption pattern of x-ray beams used for general-purpose, routine, dental radiography examinations involving the diagnosis and treatment (e.g., surgical or interventional) of diseases of the teeth, jaw and oral cavity structures. The sensor is placed in the mouth, the purpose being to visualize a limited region in detail. The data is either from analogue-to-digital conversion techniques imaging or by digital imaging.	IIb
11682	42330	Anaesthesia workstation ventilator	Мэдээ алдуулах ажлын станцын агааржуулалт	An electronic module of an anaesthesia workstation used to assist or control alveolar ventilation during general anaesthesia. This device is compatible with inhaled anaesthetic agents. The device adequately meets the patient's need for oxygen (O2) and carbon dioxide (CO2) exchange to maintain normal blood gas concentrations while it delivers correct amounts of anaesthetic agents. The device provides a mechanical means to deliver the breathing gas to the patient in a controlled pattern, is equipped with alarms to warn of changes in a patient's respiration or the onset of unsafe operating conditions and is typically suitable for use on a wide range of patients (neonates to adult).	IIb
11683	42400	Mediastinal drainage catheter, antimicrobial	Дунд хэсгийн ус зайлуулах катетер, нянгийн эсрэг үйлчилгээтэй	A tube designed to establish a channel for the removal of fluid or purulent material from the mediastinum (the central compartment of the thoracic cavity), and that is coated with an antimicrobial agent to help prevent infection. It is typically used in conjunction with, or as a component of, a drainage system that uses a low negative pressure through the drain lumen. It is typically made of silicone, available in various designs, shapes, and sizes, and may include disposable devices dedicated to catheter introduction; it does not include any fluid collection bags/containers. This is a single-use device.	IIb

11684	42405	Diaphragm pessary	Диафрагмын пессари	A circular device made of soft rubber or plastic material that is placed in the vagina prior to intercourse to mechanically prevent conception. A spermicidal agent is typically placed within the device to add efficacy. This is a reusable device that should be checked and cleaned before reinsertion.	IIb
11685	42411	Neonatal/adult intensive-care ventilator	Нярайн/насанд хүрэгчдийн эрчимт эмчилгээний амьсгалын аппарат	A mains electricity (AC-powered) automatic cycling device intended to provide long-term alveolar ventilation support for the full age-range of patients, from neonatal, paediatric to adult, in a critical care setting. It typically uses positive pressure to deliver gas at normal breathing rates and tidal volumes through an endotracheal (ET) tube or tracheostomy, and consists of a breathing circuit, a control system, monitors, and alarms. The inhalation limb includes sites where inspired gas may be heated/humidified, and the exhalation limb includes an exhaust valve to release gas to the ambient air. It can be operated in several modes (e.g., assist/control, synchronized, patient triggered).	IIb
11686	42419	Oesophageal-obturating/tracheal airway, reusable	Улаан хоолой бөглөрөх/гуурсан хоолойн амьсгалын зам, дахин ашиглах боломжтой	A two-lumen, semiflexible, tube inserted blindly through the mouth into the oesophagus or trachea to maintain airway patency while obturating the oesophagus, typically during emergencies to facilitate breathing/resuscitation. The lumen has a blocked distal end and perforations at the pharyngeal level. The tracheal lumen is open at both ends. A large oropharyngeal balloon seals mouth and nose; a distal cuff seals either the oesophagus or the trachea. Ventilation starts via the oesophageal tube, if the tube is in the oesophagus air enters the pharynx via the perforations; when the tube is in the trachea the ventilation is performed directly through the tracheal tube. This is a reusable device.	IIb
11687	42454	Hyperthermia system catheter, rectal-cooling, single-use	Гипертерми системийн катетер, шулуун гэдсээр хөргөх, нэг удаагийн хэрэглээ	A thin rod used as part of a hyperthermia system's cooling unit to cool tissues adjacent to the prostate gland as it receives hyperthermia treatment. The device is introduced into the body through the rectum, and temperature-regulated water is typically circulated through the device as the cooling medium. This is a single-use device.	IIb

11688	42455	Microwave hyperthermia system catheter, prostatic-ablation, single-use	Бичил долгионы гипертерми системийн катетер, түрүү булчирхайг арилгах, нэг удаагийн хэрэглээ	A thin sterile rod intended to be used as part of a hyperthermia system to treat disorders of the prostate [e.g., cancer, benign prostatic hyperplasia (BPH), prostatitis] through the local application of heat from microwaves. The device is inserted through the urethra to access the prostate for the destruction of prostatic tissue through energy transmission. Cooling of the tissues surrounding the prostate with a another specialized catheter may be necessary during treatment. This is a single-use device.	IIb
11689	42525	Cornea prosthesis	Эвэрлэгийн протез	An implantable artificial substitute for a natural cornea used to improve/restore the vision of an adult patient with corneal opacity. Also known as a keratoprosthesis, this is usually a two-component device made of, e.g., poly 2-hydroxyethylmethacrylate (PHEMA), one component being a small fine threaded flange that is attached to the anterior of the eye and the other being the lens, which is a solid cylinder of this material, threaded at the distal end and convex at the proximal end. This lens is threaded into the flange proving the user with a window through which he or she can see. This device may be used when other interventions are not possible.	IIb
11690	42526	Eye valve	Нүдний хавхлаг	A sterile device designed to regulate the flow of fluid between the anterior chamber and the space around the conjunctiva of the eye by allowing flow when the pressure in the chamber is above a pre-set value (e.g., 8 to 10 mmHg). It is typically a very small (e.g., slit) valve implanted in the eye as a component of an eye stent, and typically used in patients with advanced glaucoma when, despite the use of medication, laser treatments, or a previous glaucoma filtration procedure (trabeculectomy), the addition of a drainage tube and valve (aqueous shunt) is recommended.	IIb
11691	42527	Eyeball prosthesis, standard	Нүдний алимны протез, стандарт	An artificial substitute for the eyeball, resembling the anterior portion of the eye, that is not made to individual specifications. It is usually constructed of glass or plastic and is intended to be inserted into a patient/user's eye socket anterior to an orbital implant, or the eviscerated eyeball, for cosmetic purposes. This device is not intended to be implanted.	IIb

11692	42545	Scleral buckling device, non-bioabsorbable	Биологийн шингэдэггүй склера бөхийх төхөөрөмж	A non-bioabsorbable device intended to be implanted for intrascleral and episcleral buckling for the surgical treatment of retinal detachment. It is typically a moulded solid silicone or silicone sponge device available in a variety of shapes and sizes that is used to compress the retina long-term (up to months) to support its reattachment following the operative treatment of severe retinal detachment. This device, also known as a scleral buckling component, will occupy the intraocular space to provide compression against the retina so that it can reattach. It is typically removed after a period of time depending upon the clinical findings.	IIb
11693	42552	Universal hand-controlled electrosurgical diathermy system conducting unit, reusable	Бүх нийтийн гар удирдлагатай цахилгаан мэс заслын диатерми систем дамжуулагч төхөөрөмж, дахин ашиглах боломжтой	An electrical conductor comprised of an electrode handpiece with cables and an active electrode, typically detachable, intended to provide an electrical connection between the output terminals of an electrosurgical diathermy generator and a patient. The energy emitted from the device is used to cut and coagulate tissue at a surgical site on the patient. The operator regulates the energy for the diathermy function with an integrated microswitch. This is a non-dedicated device intended to be used in multiple clinical specialties. This is a reusable device.	IIb
11694	42630	Hydrogel dental regeneration membrane	Гидрогелийн шүдний нөхөн төлжилтийн мембран	A sterile bioabsorbable material intended to be used to aid in dental and maxillofacial bone regeneration (e.g., after periodontal disease, or after tooth loss or trauma) by acting as a barrier to prevent the down-growth of soft tissue (connective tissue and epithelial cells) into the underlying bone during the healing period. It is comprised of synthetic liquid compounds that are mixed to react and form a gel (typically includes syringes and mixing tip); it is applied between soft tissue and bone during guided bone regeneration (GBR), periodontal flap surgery, and guided tissue regeneration (GTR) surgical procedures. This is a single-use device.	IIb

11695	42665	Polymer-metal pancreatic stent	Нойр булчирхайн полимер металл стент	A sterile non-bioabsorbable tubular device intended to be implanted in an obstructed pancreatic duct (e.g., due to stricture/malignancy) to maintain luminal patency; it is also intended to treat a wide variety of conditions in pancreatic endoscopy (e.g., drain pseudocyst, treat fistula or duct disruption). It is a mesh structure made of metal which is covered/lined with a synthetic polymer material (e.g., silicone) that prevents lateral flow and tissue ingrowth and facilitates removability. It is typically expandable in situ (e.g., self-expands) and disposable devices intended to assist implantation may be included.	IIb
11696	42839	Capsular tension ring	Капсул чангалах цагираг	A sterile, open-ended, non-optical circular band intended to be used to enhance the mechanical stability of a subluxated crystalline lens capsule in the presence of weak or absent supporting zonules. The device, commonly known as a capsular tension ring (CTR) or an endocapsular ring, is permanently implanted in the crystalline lens capsular bag during intraocular lens (IOL) surgery (e.g., cataract extraction) where it produces tension to distend the bag. It is typically made of plastic material [e.g., polymethylmethacrylate (PMMA)]. Disposable devices associated with implantation (e.g., inserter) may be included.	IIb
11697	42927	Vas deferens clip/band	Vas deferens клип/хамтлаг	An implantable device, typically a minuscule plastic clamp, that snaps onto the vas deferens tube to block permanently the flow of sperm to function as a contraception. The device is used as an alternative to vasectomy for male sterilization.	IIb
11698	43229	Atherectomy laser system beam guide-catheter, peripheral	Атерэктоми лазерын системийн цацрагийн чиглүүлэгч-катетер, захын	A sterile, flexible tube intended to be connected to an atherectomy laser system to invasively direct and deliver laser energy into the peripheral vasculature for the intraluminal photoablation or debulking of lesion material (blockages or total occlusions), to re-establish blood flow within the vessel. It typically consists of fibreoptic materials with a laser-firing distal end and may be designed for over-the-wire (OTW) or rapid exchange insertion. This is a single-use device.	IIb

11699	43252	Perineo-gynaecological collagen-remodelling radio-frequency hyperthermia system generator	Перинэ-эмэгтэйчүүдийн коллагеныг сэргээдэг радио давтамжийн гипертерми системийн генератор	A mains electricity (AC-powered) component of a collagen-remodelling radio-frequency hyperthermia system designed to generate controlled, low-level, radio-frequency (RF) energy, to treat perineo-gynaecological soft tissues disorders [e.g., stress urinary incontinence (SUI), postpartum vaginal laxity]. The procedure denatures and remodels collagen to shrink and stabilize tissues. It typically includes microprocessors, a control panel, and monitoring functions and is used in conjunction with a hand-held applicator (not included).	IIb
11700	43566	Polymer-metal biliary stent, non-bioabsorbable	Био шингэдэггүй полимер металл цөсний стент	A non-bioabsorbable tubular device intended to be implanted in an obstructed biliary duct (e.g., common bile duct) to maintain luminal patency. It is a mesh structure made of metal which is covered/lined with a synthetic polymer material (e.g., silicone) that prevents lateral flow and tissue ingrowth and facilitates removability. It is typically expanded in situ (e.g., with a balloon catheter or self-expands) and disposable devices intended to assist implantation may be included.	IIb
11701	43589	Bare-metal tracheal/bronchial stent	Нүцгэн гуурсан хоолой/гуурсан хоолойн стент	A non-bioabsorbable tubular device intended to be implanted into an obstructed or stenosed trachea and/or bronchus/bronchiole to maintain luminal patency. It may be a straight or branched mesh structure, or continuous tube, and is made of metal [e.g., high-grade stainless steel, nickel-titanium alloy (Nitinol)]. It is typically expandable in situ (e.g., with a balloon catheter or is self-expandable); disposable devices intended to assist implantation may be included with the stent.	IIb
11702	43630	Polymer-metal tracheal/bronchial stent	Полимер металл гуурсан хоолой/гуурсан хоолойн стент	A non-bioabsorbable tubular device intended to be implanted into an obstructed or stenosed trachea and/or bronchus/bronchiole to maintain luminal patency. It is made of both metallic and synthetic polymer materials (e.g., metal mesh with a polymeric cover/lining, or polymeric tubular body with metallic support structures), and may have a straight or branched configuration. It may be expandable in situ (e.g., with a balloon catheter or self-expands) and disposable devices intended to assist implantation may be included.	IIb

11703	43691	Bare-metal biliary stent	Нүцгэн металл цөсний стент	A non-bioabsorbable tubular device intended to be implanted in an obstructed biliary duct (e.g., common bile duct) to maintain luminal patency; it is not intended for vascular implantation. It may be a mesh structure or a continuous tube and is made entirely of metal [e.g., high-grade stainless steel, cobalt-chrome (Co-Cr), nickel-titanium alloy (Nitinol)]. It may be expandable in situ (e.g., with a balloon catheter or self-expands) and disposable devices intended to assist implantation may be included.	IIb
11704	43697	Ophthalmic cryosurgical system control unit	Нүдний крио мэс заслын системийн хяналтын нэгж	A mains electricity-powered (AC-powered) component of an electronic ophthalmic cryosurgical system designed for the electronic control of the cryogen contained in a connected cylinder through to a connected dedicated cryogen-cooled hand-held applicator (probe). This device will typically include a user control panel that displays user information such as “ready to use”, “elapsed time”, “gas pressure status” and “applicator tip freezing indicator”. It may provide a microprocessor automated user set-up, perform electronically controlled repetitive freeze and defrost cycles.	IIb
11705	43764	Polymeric biliary stent, non-bioabsorbable	Цөсний полимер стент, био шингэдэггүй	A sterile non-bioabsorbable tubular device intended to be implanted in an obstructed biliary duct (e.g., common bile duct) to maintain luminal patency. It is made entirely of a synthetic polymer(s) [e.g., polytetrafluoroethylene (PTFE), polyethylene (PE), silicone] and may have various designs (e.g., continuous tube with or without drainage side holes, covered or non-covered mesh structure). Disposable devices intended to assist implantation may be included.	IIb
11706	43926	Slit lamp/laser system control interface	Хагархай чийдэн/лазер системийн хяналтын интерфейс	An electrically-powered device assembly intended to be connected between a slit lamp and an ophthalmic laser system to facilitate adjustment of laser treatment settings (e.g., laser intensity, spot size and number, pattern parameters, laser beam positioning) during eye laser treatment. It consists of a laser delivery compartment designed to be attached to the slit lamp, a laser power control unit, a touchscreen, and a remote control (e.g., touchpad, 3-D mouse) which duplicates the functions of the laser system remote control.	IIb

11707	44033	Blood donor set, single-pack	Цусны донорын багц, нэг багц	An assembly of sterile devices intended to be used to collect whole blood from a donor. It includes a container (a single flexible bag) with anticoagulation solution, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the blood is tested, stored, and infused from the container when needed. This is a single-use device.	IIb
11708	44034	Blood donor set, double-pack	Цусны донорын багц, давхар багц	An assembly of sterile devices intended to be used to collect whole blood from a donor and separate the red blood cells and plasma. It includes two containers (flexible bags) – one with anticoagulation solution and/or preservatives for red blood cells, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the red blood cells and plasma are separated, via centrifugation, into separate containers and subsequently tested, stored, and infused from the containers when needed. This is a single-use device.	IIb
11709	44037	Blood donor set, triple-pack	Цусны донорын багц, гурвалсан багц	An assembly of sterile devices intended to be used to collect whole blood from a donor and separate the red blood cells and plasma. It includes three containers (flexible bags) – one or more with anticoagulation solution and/or preservatives for red blood cells, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the red blood cells and plasma are separated, via centrifugation, into separate containers and subsequently tested, stored, and infused from the containers when needed. This is a single-use device.	IIb
11710	44080	Anaesthesia information system application software	Мэдээ алдуулах мэдээллийн системийн хэрэглээний программ хангамж	An application software program, intended for use as or in an information system to centrally manage (electronically receive, store, assist in analysis of, display, distribute) data associated with anaesthesia-related clinical activities.	IIb

11711	44104	Obstetrics information system application software	Эх барихын мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of obstetrical services and facilities. It is typically supplied for installation into a dedicated obstetrics information system or existing mainframe or decentralized computers/networks and is used in a labour ward/maternity unit and allows the electronic entry of a patient's details of labour for viewing at different locations.	IIb
11712	44122	Administrative risk-management information system application software	Захиргааны эрсдэлийн удирдлагын мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative activities associated with the provision and utilization of risk-management services (including processes related to quality of care, maintaining a safe environment, and protecting financial assets). It is typically supplied for installation into a dedicated information system for risk management, or existing mainframe or decentralized computers/networks.	IIb
11713	44138	Ultrasonic lithotripsy system transducer, single-use	Хэт авианы литотрипсийн системийн хувиргагч, нэг удаагийн хэрэглээ	A catheter-enclosed device used as a component of an ultrasonic lithotripsy system to transform electrical energy into ultrasonic energy to deliver localized lithotripsy treatments (the breaking up of a stone or calculus). It is introduced into the body through vascular access, surgically, or endoscopically. This ultrasound transducer is composed of either a single transducer element or an array of transducer elements [i.e., piezoelectric or active element(s), or crystal(s) and associated damping, backing, and matching layer materials]. This is a single-use device.	IIb

11714	44146	Orbital sphere implant wrap, biological	Орбитын бөмбөрцөг суулгацын боолт, биологийн	An implantable ocular device used as an external cover (a wrap) for an orbital implant used in enucleation surgery, and to protect the surrounding orbital tissue from the surface of the implant. It is typically made of processed animal materials (e.g., bovine pericardium) cross-linked with glutaraldehyde ($C_5H_8O_2$) and polytetrafluoroethylene (PTFE), commonly known as Teflon. It will typically be a supple, preformed material that can be trimmed and conformed to the desired shape and size, and will allow for natural tissue ingrowth.	IIb
11715	44267	Temporary hip prosthesis, non-customized	Түр зуурын түнхний протез, захиалгат бус	A prefabricated, implantable device that includes a pharmaceutical antibiotic agent (e.g., gentamicin) intended to be used as a temporary substitute for a hip prosthesis to: 1) provide a means for limited mobility/weight-bearing; and 2) release the antibiotic agent to the periprosthetic space to treat infection as part of a revision orthopaedic surgery. Also known as a spacer, it typically includes femoral head and stem components, and is made of metallic and/or polymer materials. Following infection treatment and device explantation, a definitive prosthesis is implanted.	IIb
11716	44348	Non-neurovascular embolization implant, non-bioabsorbable	Мэдрэлийн судасны эмболизацийн бус суулгац, био шингэдэггүй	A sterile, non-bioabsorbable, preformed device intended to be implanted in a non-neurovascular blood vessel, permanently or long-term, to control internal haemorrhage due to an aneurysm, or to stop blood flow to an aneurysm, certain types of tumours (e.g., nephroma, hepatoma, uterine fibroids), and/or an arteriovenous malformation (AVM). This device is not intended to be used in intracranial arteries or for other neurovascular applications.	IIb

11717	44420	Ocular peg/screw system	Нүдний бэхэлгээ/шураг систем	An assembly of devices used together with certain types of ocular rim prostheses for patients who wish to gain improved prosthetic eye motility by coupling the ocular implant to the prosthetic eye. This device will typically consist of screws made of, e.g., titanium (Ti)/stainless steel, or pegs made of, e.g., polyethylene (PE), and small magnets; included may be the tools (e.g., a screwdriver, a holding clamp, and drill bits) necessary for insertion of the screws/magnets. The magnets are embedded into the posterior of the prosthetic eye and powerful enough to provide a coupling force between the implant and the prosthesis.	IIb
11718	44477	Orbital sphere implant wrap, non-biological	Орбитын бөмбөрцөг суулгацын боолт, биологийн бус	An implantable ocular device designed as an external cover (a wrap) for an orbital implant used in enucleation surgery, and to protect the surrounding orbital tissue from the surface of the implant. It is typically made of materials available in sheet form [e.g., polylactide (PLA), hydroxyapatite] that can be cut to the desired shape and size. It may be made malleable by submersion in hot water, after which it can be formed to any three-dimensional (3-D) anatomical orientation. It will typically contain pores that allow for natural vascular tissue ingrowth.	IIb
11719	44478	Drug-delivery iontophoresis system, single-use	Эмийн ионтофорезийн систем, нэг удаагийн хэрэглээ	An assembly of portable devices that may be used as an alternative to injections to transport ionic-solution medication through the movement of ions resulting from an applied electric field, to locally administer the medication transcutaneously. It typically consists of a disposable, battery-powered, current generator that supplies a constant direct current [e.g., 0.5 to 4 milliampere (mA)], a delivery electrode which typically contains a small reservoir of buffering agent and the medication (e.g., a corticosteroid or anaesthetic), a return electrode, and connecting lead wires. This is a single-use device.	IIb

11720	44602	Haemoconcentrator	Гемоконцентратор	A sterile filter intended to be used in the process of haemoconcentration (the concentration of blood elements by water and electrolyte removal) typically during treatment for fluid overload or during cardiac surgery involving extracorporeal circulation. It is typically an ultrafiltration filter contained within a closed cylindrical housing with connectors to an extracorporeal blood circuit and separate connectors for the removal of excess plasma water together with small plasma solutes (e.g., smaller than 50,000 Daltons); the haemoconcentrate is returned to the patient. This is a single-use device.	IIb
11721	44680	Electrosurgical handpiece, reusable	Цахилгаан мэс заслын гар, дахин ашиглах боломжтой	A hand-held component of an electrosurgical system intended to provide an electrical connection between the system generator and a detachable electrode at its distal end, enabling the surgeon controlled manipulation of the electrode during surgery; the electrode is not included. The device is typically in the form of a pen with permanently attached cables for connection to the generator; it is not intended for use during inert gas-enhanced electrosurgery. This is a reusable device.	IIb
11722	44681	Electrosurgical handpiece, single-use	Цахилгаан мэс заслын гар, нэг удаагийн	A hand-held component of an electrosurgical system intended to provide an electrical connection between the system generator and a detachable electrode at its distal end, enabling the surgeon controlled manipulation of the electrode during surgery; the electrode is not included. The device is typically in the form of a pen with permanently attached cables for connection to a generator; it is not intended for use during inert gas-enhanced electrosurgery. This is a single-use device.	IIb

11723	44780	Cardiac resuscitator, line-powered	Зүрхний сэхээн амьдруулах аппарат, шугамаар ажилладаг	A mains electricity (AC-powered), external device designed for the application of rhythmic compression to the chest in the region of the heart to provide blood flow during treatment of cardiac arrest [cardiopulmonary resuscitation (CPR)]. The device may consist of a solid base with an attached band that straps across the patient's chest to produce the compressions, or have other configurations. The device is typically used as an adjunct to or substitute for manual external cardiac compression, to prevent fatigue and to provide better consistency in the applied force and rate of compression.	IIb
11724	44786	Dental reinforcing fibre	Шүдний бэхжилтийн утас	A device used in general restorative dentistry and orthodontic treatment typically as reinforcement of dental polymer-based materials, used for the construction of dental prostheses, i.e., splints, posts, crowns, and bridges. This device is typically made of polyethylene (PE) fibres supplied in strands, braid, or ribbon in a variety of sizes. It may also be used for the stabilization of avulsed teeth maintaining diastema closures or split-tooth syndrome. The ultrahigh molecular weight PE fibres increase the strength of composite materials, and provide improved safety by assisting in the retention of pieces in the event that a dental prosthesis is broken. This is a single-use device.	IIb
11725	44788	Spinal implant trial	Нурууны суулгацын туршилт	A copy of a final spinal prosthesis, graft, or other implantable spinal device (e.g., may include intervertebral disc prosthesis, spinal cage, spinal hook) used to validate the proper size of the permanent implant required by the patient, to determine its appropriate position, and/or to verify that the implant site has been cut to the proper dimensions. It can be made of metal or plastic. This is a reusable device.	IIb

11726	44832	Multi-modality skin contouring system	Олон төрлийн арьс засах систем	An assembly of devices that uses a combination of energies to temporarily minimize the manifestation of cellulite and loose or wrinkled skin. It typically consists of an applicator attached to an energy-producing generator and possibly other components. The applicator is applied to the body and may emit radio-frequency [typically in the bands of 1 megahertz (MHz)], infrared light, and/or other forms of energy, to heat skin/subdermal tissues for the production of a smooth-skin appearance. Vacuum may also be included.	IIb
11727	44879	Dental implant suprastructure, permanent, preformed	Шүдний суулгацын дээд бүтэц, байнгын, урьдчилан бэлтгэсэн	A prefabricated device intended to provide a permanent intermediate fixture level between a dental implant and the final prosthesis/restoration (e.g., bridge, single tooth, overdenture). It includes one or more structural component(s) [e.g., abutment, ball, bar, bar overlay, coping, ring], and may be made of various materials [e.g., titanium (Ti), plastic, gold alloy]. It includes devices glued to prostheses and/or devices that can be replaced during cleaning cycles. An abutment screw(s) may be included, however the suprastructure does not represent the screw(s) in isolation. It may also be referred to as an abutment assembly or mesostructure.	IIb
11728	45019	Submucosal injection needle	Салст доорхи тарилгын зүү	A sterile, sharp bevel-edged, hollow tubular metal instrument intended to be used in conjunction with a syringe to administer substances (e.g., fluids, gels) into the submucosal layer of tissue (connective tissue layer beneath the mucosa), typically of anatomical structures with lumens. This is a single-use device.	IIb
11729	45048	Radio-frequency skin contouring system applicator tip	Радио давтамжийн арьсны өнгөний систем түрхэгч үзүүр	A removable endpiece that is attached to a radio-frequency (RF) skin contouring system applicator (handpiece), used to regulate the delivery of RF energy to the patient during treatment. As a procedural safety measure, the device may permit the transfer of energy only when a correct surface contact is established. It may also be used to cool the skin and monitor its temperature to protect the epidermis during treatment. This is a single-use device.	IIb

11730	45062	Tendon/ligament bone anchor, non-bioabsorbable	Шөрмөс/шөрмөсний ясны зангуу, био шингэдэггүй	A non-bioabsorbable device designed to be implanted into bone for the attachment of tendons/ligaments/soft tissues either directly or via a suture attached to the device; typically used in arthroscopic or open surgical procedures. This device is available in various designs and sizes and is made of a material that cannot be chemically degraded or absorbed via natural body processes [e.g., titanium (Ti)].	IIb
11731	45137	Lubricated male condom, Hevea-latex	Тосолсон эрэгтэй бэлгэвч, Hevea-латекс	A Hevea-latex rubber sheath worn to cover the penis during coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections (STI) between sexual partners. The device is provided with a compatible lubricant to minimize friction during coitus. This is a single-use device.	IIb
11732	45138	Basic male condom, Hevea-latex	Үндсэн эрэгтэй бэлгэвч, Hevea-латекс	A Hevea natural rubber latex (NRL) sheath intended to completely cover the penis during coitus to prevent sperm from gaining access to the female reproductive tract and/or prevent the transmission of sexually transmitted infections (STI). It may be textured, flavoured or contain lubricants. This is a single-use device.	IIb
11733	45139	Lubricated male condom, non-latex	Тосолгоотой эрэгтэй бэлгэвч, латексгүй	A sheath made from non-latex materials (e.g., synthetic polymers) worn to cover the penis during coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections (STI) between sexual partners. The device is provided with a compatible lubricant to minimize friction during coitus. This is a single-use device.	IIb
11734	45187	Skin-port tissue expander	Арьсны боомт эдийг тэлэгч	An expandable device intended for implantation to temporarily enlarge tissue, typically the dimensions of a skin flap where there is insufficient tissue coverage to accommodate the volume of an implantable device (e.g., a breast implant), or for the revision of a scar or cutaneous defect. The device typically consists of an expansion envelope (e.g., silicone elastomer) with fill tube and an inflation valve, and is expanded percutaneously with air or fluid through a subcutaneous port accessed by a healthcare professional. This is a single-use device.	IIb

11735	45188	Mechanical atherectomy system catheter, coronary/peripheral	Механик атерэктомийн системийн катетер, титэм/захын	A sterile, flexible tube (catheter) intended to be percutaneously introduced for the intraluminal mechanical disruption of atheroma plaque from the walls of both coronary and peripheral arteries (or vein grafts). It has a power-driven cutting or abrasive head for slicing/grinding the atheroma into fragments small enough to be aspirated or absorbed. This is a single-use device.	IIb
11736	45213	Radio-frequency skin contouring system applicator, bipolar	Радио давтамжийн арьсны өнгөний систем түрхэгч, хоёр туйлт	A bipolar handpiece that is part of a skin contouring system that uses radio-frequency (RF) energy to provide a capacitively coupled electrical connection for the transfer of radiated energy through a patient's skin in deep heat-mediated skin modification. The current passes between the two tips of this device during treatment, and not through the patient to a return electrode. This device is connected to a generator and is applied by the practitioner or staff directly to the area to be treated. This is a reusable device.	IIb
11737	45214	Radio-frequency skin contouring system applicator, monopolar	Радио давтамжийн арьсны өнгөний систем түрхэгч, монополяр	A monopolar handpiece that is part of a skin contouring system that uses radio-frequency (RF) energy to provide a capacitively coupled electrical connection for the transfer of radiated energy through a patient's skin in deep heat-mediated skin modification. The current passes from this device to an indifferent return electrode placed on the patient. This device is connected to a generator and is applied by the practitioner or staff directly to the area to be treated. This is a reusable device.	IIb
11738	45216	Multi-modality skin contouring system generator	Олон төрлийн арьс өнгөлөгч системийн генератор	A device that is part of a skin contouring system that generates a combination of energies (e.g., infrared light, radio-frequency) to temporarily minimize the manifestation of cellulite, loose or wrinkled skin. The energy generated by this device is conducted through a dedicated applicator that is moved across a patient's skin by a practitioner or staff for treatment.	IIb

11739	45218	Radio-frequency skin contouring system generator	Радио давтамжийн арьсны өнгөний системийн генератор	A device that is part of a skin contouring system that generates radio-frequency (RF) energy [typically in the bands below 10 megahertz (MHz)] to generate heat deep within body tissues to contour both the skin and underlying tissues through a process of skin regrowth and tightening and local fat cell alteration/destruction. The energy generated by this device is conducted through dedicated applicators that are moved across a patient's skin by professional personnel for treatment.	IIb
11740	45219	Radio-frequency skin contouring system	Радио давтамжийн арьсны хэлбэр засах систем	An assembly of devices that uses radio-frequency (RF) electromagnetic (EM) energy [typically in the bands below 10 megahertz (MHz)] to generate heat deep within subcutaneous tissues to temporarily minimize the manifestation of cellulite and loose or wrinkled skin through a process of skin regrowth and tightening and local fat cell alteration/destruction. It typically consists of monopolar and/or bipolar applicators attached to an energy-producing generator, typically with a cooling module. The tissues are warmed to produce the desired therapeutic effect; simultaneous cryogen cooling of the epidermis may be employed. This device is not used for the treatment of malignancies.	IIb
11741	45220	Multi-modality skin surface treatment system	Арьсны гадаргуугийн олон төрлийн эмчилгээний систем	An electrically-powered assembly of devices intended to use multiple therapeutic modalities [e.g., intense pulsed light (IPL), laser, radio-frequency (RF) energy, microcurrent electrotherapy, electronic muscle stimulation (EMS), microdermabrasion, hydradermabrasion, oxygen skin application] in combination and/or in isolation for ablative and non-ablative treatment of the skin surface (e.g., removal of pigment/vascular lesions, scarring, acne, psoriasis, wrinkles, tattoos, hair, and skin resurfacing and rejuvenation). The system includes energy/therapy sources (e.g., lasers, lamps, generator) and dedicated applicators (handpieces) intended to apply the different therapies to the skin.	IIb

11742	45223	Multi-modality skin surface treatment system generator	Олон төрлийн арьсны гадаргууг цэвэрлэх системийн генератор	A mains electricity (AC-powered) mobile (on wheels) device that combines technologies and may include an intense pulsed light (IPL) or IPL with radio-frequency (RF) generator, fluorescent light generator, pulsed ultraviolet B (UVB) light generator, Er:YAG lasers, Er:Glass lasers, long-pulsed Nd:YAG lasers, and Q-switched Nd:YAG lasers, as part of a multi-modality skin surface treatment system intended to be used for ablative and non-ablative treatment of the skin surface (e.g., removal of pigment/vascular lesions, scarring, acne, psoriasis, wrinkles, tattoos, hair, and skin resurfacing and rejuvenation). Dedicated applicators are used to apply the different energies to the skin.	IIb
11743	45279	Ultrasound hyperthermia system transducer, intracorporeal, single-use	Хэт авианы гипертерми системийн хувиргагч, бие доторх, нэг удаагийн хэрэглээ	An intracorporeal ultrasound (US) transducer assembly that is a component of an ultrasound hyperthermia system. It includes a variety of catheter-enclosed transducer designs intended to be introduced into the body either through vascular access, surgically, or endoscopically in order to deliver localized US-induced hyperthermia treatment. It is composed of a single transducer element or an array of transducer elements, i.e., piezoelectric or active element(s), or crystal(s) and associated damping, backing, and matching layer materials. This is a single-use device.	IIb
11744	45396	Water jet knife system	Усны тийрэлтэт хутганы систем	An assembly of devices designed to surgically cut/dissect soft body tissues using a stream of high pressure water, leaving hard/elastic structures (e.g., bone, ligaments) intact. It includes a mains electricity (AC-powered) generator to create the hydraulic pressure, tubing, and a handpiece to direct and apply the cutting stream of water; this is typically sterile saline. It may also assist in the irrigation of the surgical site to help improve site visibility. The system is commonly used to remove burned/damaged skin, tumours, and varicose veins; it may be used endoscopically.	IIb

11745	45481	Periodontal root surface regeneration material	Шүдний шүдний үндэс гадаргууг нөхөн сэргээх материал	A bioabsorbable material intended to be used alone or in combination with bone graft materials for the regeneration of tooth support that has been lost due to periodontal disease or trauma. It is applied during periodontal flap surgery to the scaled and preconditioned root surface and forms an insoluble matrix that creates a suitable root surface for selective periodontal cell migration and cell attachment, which re-establishes the lost tooth support. It is typically presented in the form of a gel, or as a solution and enamel matrix material that is mixed into a gel prior to application. This is a single-use device.	IIb
11746	45688	Red-light phototherapy unit, professional	Улаан гэрэл зургийн эмчилгээний тасаг, мэргэжлийн	An electrically-powered device designed to emit red light for phototherapy primarily to accelerate healing of cutaneous/mucosal wounds, treat mild skin disorders (e.g., mild acne), intraoral or nasal conditions, and/or treat musculoskeletal symptoms (e.g., pain, spasm, stiffness) through modification of cellular metabolism and/or improvement of blood circulation. It is a non-wearable device which may be in the form of a hand-held, freestanding or mounted unit, and is intended to be used by a healthcare professional in a clinical setting.	IIb
11747	45738	General cryosurgical system, cryogen gas, electronic	Ерөнхий крио мэс заслын систем, криоген хий, электрон	An assembly of electrically-powered devices designed to apply cold from a gaseous or liquid refrigerant (cryogen) [e.g., liquid nitrogen (LN2), nitrous oxide (N2O), carbon dioxide (CO2)] to malignant or abnormal benign tissue for destruction and removal. The system includes an electronic control unit with LCD display to control the flow of cryogen from an attached cylinder, which might monitor skin temperature, and cryogen-cooled probes. It is intended for e.g., oncological, dermatological, oral, gynaecological, urological, proctological, or general surgical applications, however it is not dedicated to ophthalmic or cardiac surgery.	IIb

11748	45815	Haemodialysis citrate anticoagulation solution	Гемодиализийн цитрат антикоагуляцийн уусмал	A citric acid (citrate) formulation introduced into the extracorporeal circuit of a dialysis system to inhibit the coagulation of blood, typically during continuous renal replacement therapy (CRRT) - physiological dialysis performed over a 24-hour period or longer. Citrate inhibits coagulation by binding with calcium and rendering calcium unavailable to the clotting cascade. When blood from the extracorporeal circuit is returned to the patient it mixes with central venous blood which contains calcium that has been continuously administered to the patient, and the anticoagulant effect is neutralized. It is typically supplied in a polyvinyl chloride (PVC) bag. This is a single-use device.	IIb
11749	45870	Multi-purpose soft contact lens solution	Олон зориулалттай зөөлөн контакт линзний шийдэл	A sterile aqueous formulation containing appropriate agents typically for cleaning, rinsing, protein removal, disinfecting, storing, and possibly wetting reusable soft contact lenses. The solution may be specific to a type of procedure (e.g., manual, heated, or ultrasonic). After application, this device cannot be reused.	IIb
11750	45919	Tracheal trocar blade	Гуурсан хоолойн трокар ир	A hand-held manual surgical instrument with a sharp pyramidal or conical point designed to puncture the trachea during tracheotomy. It is typically assembled and used with a compatible tube (not included), e.g., a tube identical to that of a tracheostomy tube, filling its lumen, thereby allowing the introduction of this assembly. Following puncture, the trocar is withdrawn providing a stoma through which the patient can breathe. This is a reusable device.	IIb
11751	46024	Implantable intrathecal infusion pump, programmable	Суулгах боломжтой интратекаль дусаах насос, програмчлах боломжтой	A battery-powered programmable device designed to be implanted in a patient for the storing and subarachnoid (intrathecal) administration of narcotics/drugs (e.g., morphine sulfate, baclofen) to manage intractable pain and muscle spasms of malignant or non-malignant origin. This implantable infusion pump (IIP) delivers drug doses from its implanted refillable reservoir which is controlled by drug concentration and/or by radio-frequency (RF) signals from an external programming device. The drug reservoir, usually implanted under the skin of the lower abdomen, is typically connected to a catheter placed into the spinal fluid space.	IIb

11752	46100	Haemodialysis blood tubing set, reprocessed	Гемодиализын цусны гуурсан хоолойн багц, дахин боловсруулсан	A collection of tubing segments and associated devices (e.g., connectors, clamps) intended to be used to transfer blood between a patient's vascular access device and a haemodialyser during haemodialysis; it is sometimes referred to as haemodialysis blood lines. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	IIb
11753	46139	Bone nail end-cap	Ясны хумсны төгсгөлийн таг	A small, rounded plug, cover or threaded screw designed to seal the proximal end of an orthopaedic nail implanted to treat a damaged bone (e.g., a fracture), to prevent healing tissue from growing into the hollow nail and to facilitate nail extraction. It is typically made of metal [e.g., high-grade stainless steel, titanium (Ti)], and is available in a variety of sizes. It may also be used to securely lock the most proximal oblique locking screw or help extend the length of a nail when necessary. This is a single-use device.	IIb
11754	46220	Implantable-device lubricant	Суулгацын тосолгооны материал	A friction-reducing substance (e.g., mineral oil) that is primarily used on implantable devices prior to implantation to lubricate surfaces for the promotion of effective function. It is typically used on the pacing leads of implantable pacemakers/defibrillators to lubricate the lead terminal pin to ease its insertion into the header connector (connection socket) of a pulse generator where it is locked into place (some leads have seal rings on the terminal pin which create friction). It is typically supplied in a small disposable tube. This is a single-use device.	IIb
11755	46225	Implantable electrical stimulation lead suture sleeve	Суулгах цахилгаан өдөөлттэй хар тугалганы оёдлын ханцуй	A small device with a hollow centre that functions as a channel for an implantable electrical stimulation lead (e.g., pacing lead, defibrillation lead, neurostimulation lead) intended to be positioned at the point where the surgeon will suture the lead to the patient's tissue to prevent it from moving after the implantation procedure is completed. It is typically made of a silicone rubber material and is implanted with the electrical stimulator, pacemaker or defibrillator system.	IIb

11756	46263	Whole-blood-recovery autotransfusion system, manual	Бүхэл бүтэн цусыг сэргээх автомат сэлбэх систем, гарын авлага	An assembly of manual devices intended to be used to collect, filter, and reinfuse intraoperative and/or postoperative autologous blood shed during and/or after surgery. It is a closed-circuit system that typically includes a manual aspiration (suction) pump, a collection container, reinfusion bag, safety clamps, non-return valves, blood screening filters, and a transfusion set; a drain(s) and/or trocar(s) may also be included in the system. It may facilitate connection to the wall outlet of a vacuum system for aspiration. This is a single-use device.	IIb
11757	46265	Cardiac mapping system	Зүрхний зураглалын систем	An assembly of devices designed to measure, process, and store electronic data for the interpretation of cardiac physiological parameters received from the output of connected measuring devices (e.g., body surface or intracardiac electrocardiograph (ECG) sensors, transducers, and catheters). The measurements can be compared to pre-established diagnostic criteria for parameters such as cardiac blood flow, electrical conduction, or heart chamber geometry. It typically consists of dedicated workstation, hardware and software that display real-time, three-dimensional (3-D) cardiac maps (e.g., electrical propagation, electrical potential, and cardiac chamber geometry maps), and a catheter.	IIb
11758	46294	Blood collection/fat content reduction device	Цус цуглуулах/өөх тосны агууламжийг бууруулах төхөөрөмж	A device that is connected to the pericardial suction line of a cardiopulmonary bypass system to collect and reduce the fat content of the patient's autologous blood, primarily to: 1) reduce the risk of fat emboli entering the central nervous system (CNS) causing stroke or other cognitive impairment postoperatively upon blood reinfusion; 2) allow the flexibility to choose between discarding or reinfusing the blood depending on the patient's blood loss and need for transfusion; and 3) avoid the use of donor blood. It typically consists of a dual-chambered fat separation container, tubing, connectors, and safety clamps. This is a single-use device.	IIb

11759	46303	Drug-delivery iontophoresis system generator	Эмийн ионтофорезийн системийн генератор	A battery-powered, portable device that may be used as an alternative to injections to transport ionic-solution medication through the movement of ions resulting from an applied electric field, to locally administer the medication transcutaneously. It supplies a constant direct current (e.g., 0.5 to 4 milliampere (mA) through a delivery electrode attached to the skin surface, and to which is typically attached a small reservoir containing a buffering agent and the medication (e.g., a corticosteroid or anaesthetic). A buffering agent return electrode completes the circuit. The reusable device typically includes setting controls and a display.	IIb
11760	46346	Paediatric blood donor set	Хүүхдийн цусны донорын багц	A sterile assembly consisting of multiple collection containers (typically five connected flexible bags) of smaller volume than those used in adult sets, intended to be used for the storage of adult donor blood which is decanted from a normal adult size pack into this device in order to create smaller paediatric volume packs for infusion. The individual paediatric packs are then separated and sealed for later infusion. This is a single-use device.	IIb
11761	46347	Blood donor set, quad-pack	Цусны донорын багц, дөрвөлжин багц	An assembly of sterile devices intended to be used to collect whole blood from a donor and separate the red blood cells, plasma, and platelets. It includes four containers (flexible bags) – one or more with anticoagulation solution and/or preservatives for red blood cells, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the red blood cells, plasma, and platelets are separated, via centrifugation, into separate containers and subsequently tested, stored, and infused from the containers when needed. This is a single-use device.	IIb
11762	46416	Urological surgical procedure kit, medicated, single-use	Урологийн мэс заслын эмчилгээний иж бүрдэл, эмийн, нэг удаагийн хэрэглээ	A collection of various sterile urological surgical instruments, dressings, pharmaceuticals, and the necessary materials intended to be used to perform a urological surgical procedure; is not dedicated to a specific type of urological surgical procedure. This is a single-use device.	IIb

11763	46417	Urological surgical procedure kit, non-medicated, reusable	Урологийн мэс заслын эмчилгээний хэрэгсэл, эмийн бус, дахин ашиглах боломжтой	A collection of various urological surgical instruments and the necessary materials intended to be used to perform a urological surgical procedure. The kit is not dedicated to a specific type of urological surgical procedure and does not contain any pharmaceuticals. This is a reusable device.	IIb
11764	46424	Pneumothorax dressing	Пневмоторакс боолт	A sterile covering applied to a chest wound that has penetrated the pleura (serous membrane covering the lungs and lining the pleural cavity) in order to temporarily treat and prevent pneumothorax (collapsed lung). The device may be self-adhesive and have a one-way valve that enables internal pressure release while preventing air entry. It is typically used by first responders [emergency medical services (EMS)] in the management of penetrating chest trauma (e.g., bullet or stab wounds). This is a single-use device.	IIb
11765	46536	Orthodontic anchoring screw	Ортодонт бэхэлгээний шураг	A small, metallic, implantable rod with a spiral thread and slotted/formed head that is inserted into the bone of the jaw to serve as a temporary anchor for an orthodontic device (e.g., a spring or plate). It is available in various sizes and lengths, and may have a self-drilling/self-tapping thread for easy insertion and removal after desired alignment of the teeth. It is used in a variety of orthodontic treatment situations, especially when normal anatomy has been compromised (e.g., due to periodontal disease or agenesis, displacement of teeth in the same direction, asymmetrical anatomy). This is a single-use device.	IIb
11766	46542	Elastomeric infusion pump system	Эластомер дусаах насосны систем	An assembly of devices that provides continuous and/or intermittent percutaneous infusion of a prescribed medicated solution to a patient through forces from elastic material. It typically consists of an elastomeric chamber (various sizes predetermine the flow and volume) that is filled with the solution using a dedicated filling device and/or syringe to create a pressure, tubing, particulate/air-eliminating filter, a flow restrictor, and a connector at the distal end for connection to the patient's access device. It may be used for general infusion, antibiotic delivery, chemotherapy, or pain management in either a healthcare facility or in the home. This is a single-use device.	IIb

11767	46569	Reinforced endotracheal tube, single-use	Хүчитгэсэн дотоод хоолой, нэг удаагийн хэрэглээ	An armoured hollow cylinder inserted orally or nasally into the trachea to provide an unobstructed airway to convey gases and vapours to and from the lungs during anaesthesia, resuscitation, and other situations where the patient is not properly ventilated. It is wire reinforced to prevent kinking during patient movement and may: 1) be packaged with a connector that will attach to a breathing circuit or manual resuscitator; 2) have a distal inflatable cuff to seal against the tracheal wall; 3) have a built-in pilot balloon. It is typically made of plastic or rubber and is available in various diameters and lengths for adult and paediatric patients. This is a single-use device.	IIb
11768	46591	MRI contrast medium injection system, line-powered	MRI тодосгогч бодисын тарилгын систем, шугамаар ажилладаг	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for magnetic resonance imaging (MRI) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using MRI). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for MRI studies. The system may directly interface with the MRI system or a monitoring device to control timing of contrast injections; it is made entirely of non-ferromagnetically active materials for MRI compatiblity.	IIb
11769	46592	MRI contrast medium injection system, battery-powered	MRI тодосгогч бодис тарилгын систем, батарейгаар ажилладаг	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for magnetic resonance imaging (MRI) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using MRI). It consists of battery-powered electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for MRI studies, and is mobile. It may interface with the MRI system or a monitoring device to control timing of contrast injections; it is made entirely of non-ferromagnetically active materials for MRI compatiblity.	IIb

11770	46593	MRI contrast medium injection system, line-powered, single-phase	MRI тодосгогч бодисын тарилгын систем, шугамаар ажилладаг, нэг фазын	A mains electricity (AC-powered) low or high-powered contrast injector device that allows the operator to determine the total volume of contrast medium to be injected and to set a fixed contrast medium flow rate for a given injection. It is used during a magnetic resonance imaging (MRI) procedure. A contrast injection device used in the vicinity of an MRI is made entirely of non-ferromagnetically active materials to render them compatible with that environment.	IIb
11771	46594	MRI contrast medium injection system, battery-powered, single-phase	MRI тодосгогч бодис тарилгын систем, батерейгаар ажилладаг, нэг фазын	A battery-powered low or high-powered contrast injector device that allows the operator to determine the total volume of contrast medium to be injected and to set a fixed contrast medium flow rate for a given injection. It is used during a magnetic resonance imaging (MRI) procedure. A contrast injection device used in the vicinity of an MRI is made entirely of non-ferromagnetically active materials to render them compatible with that environment.	IIb
11772	46609	Foetal pulse oximeter	Ургийн импульсийн оксиметр	A mains electricity (AC-powered) photoelectric device designed for the monitoring of intrapartum foetal oxygen saturation (FSpO2) in the presence of a non-reassuring foetal heart rate (FHR) pattern during labour. It typically consists of an electronic monitor for data analysis and display which is connected to a light-transmitting cable, and a specialized sensor that is inserted transcervically into the mother's uterus, after membrane rupture, and positioned on the foetal face (e.g., the cheek or the temple).	IIb
11773	46615	Tissue saturation oximeter	Эд эсийн ханалтын оксиметр	A mains electricity (AC-powered) photoelectric device that noninvasively calculates the percent oxygen saturation of haemoglobin in a volume of tissue (StO2) to assess the amount of oxygen delivered to that tissue, typically during circulatory or perfusion examinations of skeletal muscle or when there is a suspicion of compromised circulation. The device typically includes a monitor for data analysis and display, a light-transmitting cable, and a tissue-surface sensor.	IIb

11774	46620	Cerebral oximeter sensor, single-use	Тархины оксиметрийн мэдрэгч, нэг удаагийн хэрэглээ	A photoelectric device designed to be applied externally to the scalp/head of a patient for transcutaneous measurement [e.g., using near-infrared spectroscopy (NIRS)] of brain tissue blood oxygen saturation and/or venous oxygen saturation in the brain. It connects to a cerebral oximeter via a fibreoptic cable and typically consists of a single/dual adhesive sensing strip. This is a single-use device.	IIb
11775	46629	Temperature-monitoring indwelling urethral drainage catheter	Температурыг хянах зориулалттай шээсний сувгийн ус зайлуулах катетер	A sterile, flexible tube with an inflatable balloon on its distal tip for retention in the urinary bladder, after its insertion through the urethra, where it functions as a long-term indwelling device for continuous urinary drainage and simultaneous monitoring of core body temperature through its integral temperature sensor, typically during or after surgery or in the presence of obstruction or paralysis. It may have a bent tip (coude) for negotiation of the prostatic curve and is typically made of silicone. It is inserted by trained staff and commonly known as a Foley catheter. This is a single-use device.	IIb
11776	46638	Craniofacial bone screw, non-bioabsorbable	Гавлын нүүрний ясны шураг, био шингэдэггүй	A small, threaded rod with a slotted and/or polygonal (e.g., hexagonal) head intended to be implanted in craniofacial bone (including the maxilla and/or mandible) for fracture fixation by direct interfragmentary stabilization of bone or by screwing plates in place; it may also be intended for transplanted bone fixation. It may be self-drilling/self-tapping and is made of a material that is not chemically degraded or absorbed via natural body processes [e.g., implant grade metal such as titanium (Ti)]. Its uses include repair of orbital fractures and fractures around the cranial sinuses, paediatric reconstructive surgery, craniotomy flap fixation, bone augmentation procedures.	IIb

11777	46790	Indirect binocular ophthalmoscope	Шууд бус дуран офтальмоскоп	An electrically-powered, head-worn, ophthalmic instrument designed to be held arm’s length from the patient to examine the interior of the eye and related structures [e.g., fundus (retina), cornea, aqueous, lens, vitreous] using the examiner’s two eyes simultaneously (stereoscopic vision). It is intended to provide a wide field of view and produce an inverted (reversed) image of approximately 2 to 5 times magnification. It typically consists of a main light to illuminate the interior of the eyeball, lenses, filters and an illuminator beam to eliminate reflexes; it can be mounted on a headband or spectacle frames.	IIb
11778	46812	Blood storage solution, anticoagulation	Цус хадгалах уусмал, антикоагуляци	A blood preservation fluid used during the collection and storage of blood and blood components in a healthcare and/or a blood bank facility (typically in a laboratory associated with the collection of blood or during apheresis procedures that result in the collection of blood), to prevent blood clotting. It is supplied in a container (e.g., a polypropylene bag) and is not for direct intravenous infusion. This is single-use device.	IIb
11779	46823	PEEP valve, single-use	PEEP хавхлага, нэг удаагийн	A non-sterile device used in a respiratory or anaesthesia breathing circuit or system to maintain a selected level of positive end expiratory pressure (PEEP) in a patient's airway during ventilation. The device is typically constructed of plastic and metal materials, and has a valve(s) actuated with a spring(s) to provide the airway resistance, and an adjustable knob or dial (usually graduated) to adjust the resistance level typically between 5 to 20 cmH2O. It is used with ventilators, stand-alone breathing systems for oxygen delivery, pulmonary resuscitators, or anaesthetic breathing systems often having an expiratory valve function. This is a single-use device.	IIb

11780	46902	Orbital sphere implant	Орбитын бөмбөрцөг суулгац	An implantable ocular device designed to permanently fill the orbital cavity following enucleation, evisceration, or after the removal of another ocular implant (used as a secondary implant), to replace the volume and possibly, given the surgical method, to impart motion to the eventual ocular prosthesis (the artificial eyeball). It is typically aspherical and may have porous surfaces to facilitate colonization by fibrovascular tissue to offer the advantages of reduced risk of infection or implant extrusion. It is available in various sizes and is typically made of polymethylmethacrylate (PMMA), poly 2-hydroxyethylmethacrylate (PHEMA), or silicone.	IIb
11781	46903	Intracorneal ring segment	Эвэрлэгийн дотоод цагирагийн сегмент	An implantable arc designed to flatten the anterior corneal curvature, without disturbing the visual axis, to correct certain corneal-related visual disorders. It is typically a plastic arc, of about 150 degrees and provided in pairs, inserted into the cornea via an intrastromal channel created with a diamond knife or laser, and that can be implanted away from the radial incision to minimize complications. It is typically available in sizes from 0.25 to 0.35 mm. The device is intended to correct mild and moderate myopia and to treat patients with irregular astigmatism as a result of keratoconus, especially those who can no longer benefit from contact lenses or spectacles.	IIb
11782	46923	Haematological concentrate system preparation kit, platelet concentration	Гематологийн баяжмалын системийг бэлтгэх иж бүрдэл, ялтасын концентраци	A collection of devices designed to prepare platelet-rich plasma (PRP) or platelet-rich fibrin matrix (PRFM) from an autologous blood specimen for application to soft-tissue wounds and injured bone to accelerate healing and/or achieve haemostasis. It includes single- or double- (concentric) barrel syringe(s) with connecting tubes and caps. Blood is collected by venous puncture and processed in a centrifuge, increasing the concentration of platelets within the plasma or fibrin matrix; this may be done at the point-of-care. This is a single-use device.	IIb

11783	46934	Transcutaneous blood gas monitoring system	Цусны хийн хяналтын систем	An assembly of mains electricity (AC-powered) devices designed for the continuous and transcutaneous measurement of a patient's blood gas parameters, typically blood partial pressure of oxygen (pO2), blood partial pressure of carbon dioxide (pCO2), haemoglobin oxygen saturation (SpO2), and/or venous blood oxygenation through the jugular vein (SjvO2); often with pulse rate. It consists primarily of a probe for gas detection (e.g., via transcutaneous gas diffusion, or using light spectroscopy) placed on the patient’s skin, and an oximetry monitor for the measurement, analysis, and display of data; patient adhesives and connecting cables may be included.	IIb
11784	46971	Contraceptive cervical cap, reusable	Жирэмслэлтээс хамгаалах умайн хүзүүний таг, дахин ашиглах боломжтой	A contraceptive device that is inserted into the cervix where it acts as a physical barrier to prevent semen from entering the uterus. It is typically a soft rubber cup with a round rim that is sized by a healthcare professional to fit snugly around the cervix. This is a reusable device.	IIb
11785	46979	Double-lumen haemodialysis catheter, nonimplantable	Суулгацгүй давхар люмен гемодиализийн катетер	A flexible, double-lumen tube intended to be used for short-term (< 30 days) central venous (jugular, subclavian vein) and/or femoral vein access, primarily during haemodialysis, to conduct blood from a patient and returning it after extracorporeal circulation; it may also be used during haemoperfusion and/or apheresis. It is intended for coaxial flow of blood and may be radiopaque; devices dedicated to catheter introduction/function (e.g., introducer needle) may be included. This is a single-use device.	IIb

11786	46997	Therapeutic plasma exchange system	Эмчилгээний плазмын солилцооны систем	An assembly of software-controlled devices designed to purify blood through the extracorporeal removal of disease-mediating plasma and return of a plasma substitute during therapeutic plasma exchange (TPE). It includes pumps to circulate blood and uses methods such as filtration, centrifugation, adsorption, or a combination, to separate plasma from blood. The separated plasma is replaced by a solution of the same osmotic pressure, which is returned to the patient with the original blood cellular elements. The assembly is typically used to remove antibodies, immune complexes, inflammatory mediators, or poisons, and may replace plasma deficiencies; it may also perform plasmapheresis.	IIb
11787	46998	Therapeutic plasma/red blood cell exchange tubing set	Эмчилгээний сийвэн/улаан эсийн солилцооны гуурсан хоолойн багц	A disposable collection of devices intended to be used in a therapeutic plasma exchange (TPE) or red blood cell exchange system. It typically consists of tubing, solution lines, connection ports, a filter membrane and collection containers (bags) to channel blood from the patient through the extracorporeal circuit to remove a disease-mediating blood component. The blood is returned to the patient with any substitution products. This is a single-use device.	IIb
11788	47033	Pneumatic orthopaedic extracorporeal shock wave therapy system applicator	Пневматик ортопед экстракорпораль шок долгионы эмчилгээний систем түрхэгч	A hand-held device designed to apply pneumatic energy, from an orthopaedic extracorporeal shock wave therapy (OEST) system or a system control unit, to the site of a musculoskeletal disorder (usually pain) for the production of shock waves for treatment. It typically includes a flexible conduit that plugs into the control unit, and has a head portion that is moved over the surface of the body area to be treated. It is available in various sizes to treat different musculoskeletal disorders. This is a reusable device.	IIb

11789	47043	Intravascular occluding solution kit	Судсанд бөглөрөх уусмалын иж бүрдэл	A collection of sterile devices intended as an alternative to vascular clamping to interrupt local blood flow through transient intraluminal obstruction during surgery, suturing of blood vessels, or interventional vascular procedures. It includes a liquid polymer (e.g., poloxamer) that is injected into a vein/artery, and devices to contain/administer the solution (e.g., pouch, syringe, injection cannula or catheter). The solution typically has reverse thermal characteristics (i.e., liquid at room temperature and gelled at body temperature) enabling the formation of an in vivo plug that occludes the vessel; it eventually dissolves or is purposely dissolved. This is a single-use device.	IIb
11790	47066	Gastric band repair kit	Ходоодны тууз засах иж бүрдэл	A collection of sterile devices designed to repair an inflatable gastric band that deflates due to a leakage around the original connector or in the original tubing. It typically includes implantable replacement parts e.g., silicone tubing, stainless steel connectors, a priming needle and an end plug. It may be used during the repositioning or relocating of the access port. This is a single-use device.	IIb
11791	47069	Proton therapy system	Протон эмчилгээний систем	An assembly of devices/sub-systems designed to produce and deliver a transverse- and longitudinal-dose proton beam to treat localized tumours and other conditions susceptible to treatment by radiation. It typically consists of components for beam production, transport and delivery; patient positioning; system and component control; and software. It will typically be configured to a particular site’s requirements.	IIb
11792	47071	Hollow-fibre haemodialysis dialyser, reusable	Хоосон шилэн гемодиализийн диализатор, дахин ашиглах боломжтой	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities/fluid from the blood of a patient. It typically consists of cylindrical containers with thousands of longitudinally arranged hollow-fibre capillary tubes (e.g., polymer, modified cellulose) through which the blood flows. The tube walls function as a semi-permeable membrane, permitting passage of larger molecules from the blood to the dialysate on the outside of the tubes for removal. This is a single-patient, reusable device after high-level disinfection.	IIb

11793	47072	Hollow-fibre haemodialysis dialyser, single-use	Хөндий эслэг гемодиализийн диализатор, нэг удаагийн хэрэглээ	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities/fluid from the blood of a patient. It typically consists of cylindrical containers with thousands of longitudinally arranged hollow-fibre capillary tubes (e.g., polymer, modified cellulose) through which the blood flows. The tube walls function as a semi-permeable membrane, permitting passage of larger molecules from the blood to the dialysate on the outside of the tubes for removal. This is a single-use device.	IIb
11794	47073	Hollow-fibre haemodialysis dialyser, low flux, reusable	Хөндий шилэн гемодиализийн диализ, бага урсгалтай, дахин ашиглах боломжтой	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities/fluid from the blood of a patient. It typically consists of cylindrical containers with thousands of longitudinally arranged hollow-fibre capillary tubes (e.g., polymer, modified cellulose) through which the blood flows. The tube walls function as a semi-permeable membrane that typically has an in vitro ultrafiltration coefficient (Kuf) of less than 12 ml/hr/mmHg, permitting passage of smaller molecules from the blood to the dialysate on the outside of the tubes for removal. This is a single-patient, reusable device after high-level disinfection.	IIb
11795	47074	Hollow-fibre haemodialysis dialyser, low flux, single-use	Хөндий шилэн гемодиализийн диализ, бага урсгалтай, нэг удаагийн	A filter that functions as an artificial kidney and typically used in a haemodialysis system to remove impurities/fluid from the blood of a patient. It typically consists of cylindrical containers with thousands of longitudinally arranged hollow-fibre capillary tubes (e.g., polymer, modified cellulose) through which the blood flows. The tube walls function as a semi-permeable membrane that typically has an in vitro ultrafiltration coefficient (Kuf) of less than 12 ml/hr/mmHg, permitting passage of smaller molecules from the blood to the dialysate on the outside of the tubes for removal. This is a single-use device.	IIb

11796	47083	Portable electric ventilator	Зөөврийн цахилгаан агааржуулалт	A portable, electrically-powered device intended to provide long-term alveolar support for patients who do not require complex critical care ventilation. It typically uses positive pressure to deliver gas to the lungs at normal breathing rates and tidal volumes through invasive ventilation (i.e., with an artificial airway); it may also be used non-invasively (e.g., with a mask). It includes a control system and alarms, and may include a built-in humidifier. Several methods of cycling and ventilation modes may be used. It may be line and/or internal/external battery-powered for use in the home or a healthcare facility (including ambulatory).	IIb
11797	47084	Peritoneal dialysis catheter, acute	Хэвлийн диализийн катетер, цочмог	A tube used to infuse a solution (dialysate) into the peritoneal cavity, allowing metabolic wastes/fluid to diffuse from the blood to the dialysate using the peritoneum as the dialysing membrane. It is usually percutaneously inserted for one-session dialysis in an acute setting. This is a single-use device.	IIb
11798	47085	Peritoneal dialysis catheter, acute/chronic	Хэвлийн диализийн катетер, цочмог/архаг	A tube used to infuse a solution (dialysate) into the peritoneal cavity, allowing metabolic wastes/fluid to diffuse from the blood to the dialysate using the peritoneum as the dialysing membrane, and capable of being utilized for acute and chronic peritoneal dialysis. It may be surgically or endoscopically implanted, percutaneously, for long-term use; or percutaneously inserted for one-session dialysis. This is a single-use device.	IIb
11799	47086	Peritoneal dialysis catheter, chronic	Хэвлийн диализийн катетер, архаг	A tube used to infuse a solution (dialysate) into the peritoneal cavity, allowing metabolic wastes/fluid to diffuse from the blood to the dialysate using the peritoneum as the dialysing membrane. It is usually surgically or endoscopically implanted, percutaneously, for long-term use; it may be provided with Dacron cuffs to promote tissue ingrowth for the prevention of fluid leaks and bacterial penetration. It may be used in manual continuous ambulatory peritoneal dialysis (CAPD), automated continuous cyclic peritoneal dialysis, intraperitoneal chemotherapy, or to eliminate fluid overload in congestive heart failure. This is a single-use device.	IIb

11800	47110	Intravascular anastomosis occluder	Судсан доторх анастомозын бөглөрөл	A device designed to temporarily occlude the flow of blood in the lumen of a blood vessel at a vascular anastomosis, primarily to control bleeding and enable operative field visualization during coronary or peripheral vascular bypass grafting and vessel repair surgery. It is typically designed as a flexible shaft with dilated/bulbous ends that is entirely inserted into the vessel lumen via a small incision at the surgical site to arrest blood flow at the anastomosis; it will typically have an external tab or tether used for its removal. It is typically made of silicone elastomer and polyester radiopaque materials and is available in a range of diameters. This is a single-use device.	IIb
11801	47115	Umbilical cord blood collection set	Хүйн цус цуглуулах багц	A group of devices intended to be used to collect, process, and store umbilical cord blood and/or umbilical cord blood components (e.g., buffy coat). It typically includes tubing, hollow needles for insertion into the umbilical cord (a double venipuncture of the cord) to collect the blood, and several containers (flexible bags usually containing an anticoagulant) intended for transitional (room temperature) or long-term (frozen) blood storage. The cord blood is usually intended to be frozen and stored, typically to preserve stem cells, for subsequent reinfusion into patients, generally in cases of leukaemia. This is a single-use device.	IIb
11802	47152	Therapeutic positive pressure breathing ventilator	Эмчилгээний эерэг даралтат амьсгалын аппарат	A mains electricity (AC-powered) device used for therapeutic rehabilitation of patients with chronic respiratory diseases, and for the distribution of aerosolized pharmacological agents to the patient's airways and lungs. It may be used in intermittent positive pressure breathing (IPPB) ventilation and temporary positive expiratory pressure (TPEP) modes providing aerosol therapy, respiratory exercises, and spray therapy. It is used in healthcare facilities or in the home typically for patients affected by abnormal production of secretions, asthma, chronic obstructive pulmonary disease (COPD), and other pulmonary disorders.	IIb

11803	47161	Endoscopic electrosurgical cystoenterostomy catheter	Дурангийн цахилгаан мэс заслын цистоэнтеростоми катетер	A sterile, semi-rigid, electrosurgical catheter intended to cannulate through the wall of the stomach or duodenum to treat a pancreatic pseudocyst. It consists of a handle, intended to be connected to an electrosurgical generator, and a long thin shaft with an integrated electrode(s), which is introduced through the working channel of an endoscope. It is intended to puncture the lesion using high frequency electrosurgical current; a guidewire is then advanced to facilitate the introduction of a stent or drainage set for pseudocyst removal. This is a single-use device.	IIb
11804	47199	Perineo-gynaecological collagen-remodelling radio-frequency hyperthermia system	Перинео-эмэгтэйчүүдийн коллагены өөрчлөлтийн радио давтамжийн гипертерми систем	An assembly of mains electricity (AC-powered) devices designed to generate and deliver controlled, low-level, radio-frequency (RF) energy to treat perineo-gynaecological soft tissues disorders [e.g., stress urinary incontinence (SUI), postpartum vaginal laxity]. The procedure denatures and remodels collagen to shrink and stabilize tissues. The assembly typically includes a radio-frequency probe and generator.	IIb
11805	47203	Wound-nonadherent dressing, permeable, antimicrobial	Шарх наалддаггүй боолт, нэвчилттэй, нянгийн эсрэг үйлчилгээтэй	A wound covering typically in the form of a porous material (e.g., a fine mesh) impregnated/coated with a substance (e.g., petrolatum, silicone) or made of a material that prevents adherence to the wound bed, thereby decreasing the potential for trauma to the wound and surrounding skin, and that contains an antimicrobial agent (e.g., silver (Ag), honey). Its pores permit the drainage of exudates from, and application of medication to, the wound. This device may be used with other wound-care products to help heal chronic/infected and postoperative wounds, burns, skin grafts, cuts, or abrasions; it is not a dedicated burn dressing. This is a single-use device.	IIb
11806	47206	Cardiac pulse generator software	Зүрхний импульс үүсгэгч програм хангамж	An application or operating data program (i.e., primarily operating system software that may include some application program functionality) designed for use in or with an implantable cardioverter-defibrillator (ICD) and an implantable cardiac pacemaker so that the defibrillator and pacemaker function according to their intended purpose. This software program may be permanently installed or exchanged as an upgrade.	IIb

11807	47229	Proton therapy system beam-delivery system	Протон эмчилгээний систем туяа хүргэх систем	An integral component of a proton therapy system (PTS) composed of several elements (e.g., a collimator and scattering mechanisms) that permit shaping or scanning of the proton beam, typically using techniques such as double scattering, single scattering, uniform scattering, and pencil beam scattering. It may also include an ionization chamber for dose monitoring and x-ray tubes for the alignment process. This beam delivery system (BDS) is the final portion of a PTS beam management system (BMS) which terminates in the patient treatment room.	IIb
11808	47234	Proton therapy system chair	Протон эмчилгээний системийн сандал	A component of a proton therapy system (PTS) which constitutes a powered/programmable chair with electronic and/or software controls designed to support a seated patient in a dedicated eye treatment room. It enables immobilization of the patient's head for proton beam eye treatment and is typically attached to a robotic patient positioner to enable precise alignment for treatment. This device is a PTS beam management system (BMS) and patient positioning system (PPS) component.	IIb
11809	47244	General-purpose intensive-care ventilator	Эрчимт эмчилгээний ерөнхий зориулалтын амьсгалын аппарат	A mains electricity (AC-powered) automatic cycling device intended to provide long-term alveolar ventilation support for a patient, excluding neonates or small infants, in various clinical uses. It typically uses positive pressure to deliver gas at normal breathing rates and tidal volumes through an endotracheal (ET) tube or tracheostomy, and consists of a breathing circuit, a control system, monitors, and alarms. The inhalation limb includes sites where inspired gas may be heated/humidified, and the exhalation limb includes an exhaust valve to release gas to the ambient air. It can be operated in several modes (e.g., assist/control, synchronized, patient triggered).	IIb

11810	47257	Bone matrix implant, human-derived	Хүний гаралтай ясны матриц суулгац	A sterile implantable device made primarily of human demineralized bone matrix (DBM) (acid extraction of allogeneic bone resulting in loss of most of the mineralized component but retention of proteins) intended to fill bony voids or gaps caused by trauma or surgery, including use in the maxillofacial and/or mandibular bone. The device is bioabsorbable, osteoconductive, and has demonstrated at least potential osteoinductivity for the stimulation of new bone growth. The DBM may be combined with various carrier compounds (e.g., gelatin, hydrogel, starch) or other materials. It is available in the form of powder, crushed granules, putty, chips, or a gel that can be injected through a syringe.	IIb
11811	47260	Contrast medium injection system hand controller kit	Тодосгогч бодисын тарилгын системийн гар хянагчийн иж бүрдэл	A collection of non-powered devices designed to be used and interact with a contrast medium injection system for the administration of a contrast medium or saline solution to a patient undergoing a diagnostic imaging procedure. It consists of a high pressure line, a high pressure stopcock, and a hand-held manual controller used to stop and start the contrast medium injection system instantaneously. It is typically made of plastic materials and may have one control for dispensing the contrast medium and a second for dispensing the saline. This is a single-use device.	IIb
11812	47306	Apheresis system column, selective leukocyte adsorption	Аферезийн системийн багана, сонгомол лейкоцитын шингээлт	A sterile cylinder containing an adsorptive carrier (e.g., cellulose acetate beads) for the adsorption of select leukocytes (e.g., granulocytes and monocytes/macropahges and mostly excluding lymphocytes, or the reverse) during apheresis. It is placed in an extracorporeal, closed-circuit apheresis system where blood is pumped from the patient, through the cylinder, and then back to the patient devoid of select leukocytes. It is typically used to treat a leukocyte-mediated condition [e.g., chronic inflammatory diseases such as inflammatory bowel disease (IBD) or rheumatoid arthritis (RA)] or to harvest select leukocytes. This is a single-use device.	IIb

11813	47335	Apheresis system column, pathogenic material adsorption, single-use	Аферезийн системийн багана, эмгэг төрүүлэгч материалыг шингээх, нэг удаагийн хэрэглээ	A cylinder intended to be used for the extracorporeal removal of specific pathogenic substances (e.g., endotoxins, lipids) from blood using adsorption techniques (e.g., immunoadsorption, chemical adsorption), to treat a specific disorder(s) [e.g., lipid metabolic diseases, humoral immunity diseases, sepsis]. It is a prefilled column containing specific adsorption agents/ligands (e.g., staphylococcal A protein, anti-apolipoprotein B antibodies, anti IgG antibodies, dextran sulfate, oligosaccharides) bound to an inert matrix, intended to allow perfusion of whole blood or pre-separated plasma before it is returned to the patient. This is a single-use device.	IIb
11814	47410	Anterior-chamber intraocular lens, phakic	Урд камерын нүдний дотоод линз, факик	An optical device, generally referred to as an intraocular lens (IOL), intended to be implanted permanently in the region of the eye posterior of the cornea and anterior of the iris (anterior chamber) to provide refractive correction of vision without removal of the natural lens (crystalline lens). The device is typically made of a synthetic polymer; disposable devices associated with implantation (e.g., IOL injector) may be included with the lens.	IIb
11815	47413	Posterior-chamber intraocular lens, phakic	Арын камерын нүдний дотоод линз, факик	An optical device, generally referred to as an intraocular lens (IOL), intended to be implanted permanently in the posterior chamber of the eye (ring-like space filled with aqueous humor between the iris, the crystalline lens, and the ciliary body) to provide refractive correction of vision, typically in the treatment of myopia or hyperopia, without removal of the natural lens (crystalline lens). The device is typically made of a synthetic polymer; it is also referred to as an implantable contact lens (ICL). Disposable devices associated with implantation (e.g., IOL injector) may be included with the lens.	IIb

11816	47424	Vitrectomy system handpiece tip	Витректомийн системийн гарны үзүүр	A sterile, micro-cutting device that is attached to a vitrectomy system handpiece for insertion into the eye, in order to remove (nibble away) the vitreous humour (the jelly-like substance that fills the centre of the eye) during ophthalmic surgery. The handpiece converts an energy (e.g., ultrasonic, piezoelectric) produced by a system generator into a mechanical oscillating-cutting action applied by this knife-like device. This is a single-use device.	IIb
11817	47434	Neurosurgical ultrasound navigation system	Мэдрэлийн мэс заслын хэт авиан навигацийн систем	An assembly of devices comprising an ultrasound (US) imaging system with component devices used for intraoperative imaging of the brain for precise navigation during brain surgery (e.g., resection of malignant brain tumours, treatment of vascular malformations). Included are software packages to support specific imaging applications to determine, simulate, and display the operative site. It is used to generate US pulses, direct them to the target area, detect the echoes, and process the resulting information to produce and display (static or dynamic) two or three-dimensional (3-D) images, potentially together with imported magnetic resonance imaging (MRI), or computed tomography (CT) images.	IIb
11818	47467	Cardiac contractility modulation system programmer	Зүрхний агшилтын модуляцын системийн программист	A portable, battery-powered device used by healthcare personnel to telemetrically receive diagnostic data from and modify the cardiac contractility signal parameters of an implanted pulse generator of a cardiac contractility modulation (CCM) system.	IIb
11819	47468	Cardiac contractility modulation system pulse generator	Зүрхний агшилтын модуляцын системийн импульсийн генератор	A hermetically-sealed, battery-powered device implanted beneath the skin to produce electrical signals delivered to the heart via implantable cardiac pacing leads during the ventricular absolute refractory period (ARP) to enhance the strength of the heart [cardiac contractility modulation (CCM)], typically as treatment for heart failure. The device is programmed by and transmits cardiac diagnostic data to an external programmer telemetrically.	IIb

11820	47490	Coronary optical coherence tomography system	Титэм судасны оптик когерент томографийн систем	An assembly of optical and computer-based devices that use a broad-bandwidth light beam for optical coherence tomography (OCT) to provide high-resolution images (e.g., 5 to 40 microns) of the coronary intravasculature. It typically consists of a main operator's console which includes a computer for image storage, keyboard/mouse controls, and a visual display unit (VDU); audio recording facilities; and a printer. The system includes an optical-imaging catheter which is connected to the console for transmission of the images from the intravascular site. The system may be used during interventional cardiology, radiology, or diagnostic angiography.	IIb
11821	47500	Stromal vascular fraction recovery unit, multi-modality	Стромын судасны фракцыг сэргээх нэгж, олон төрлийн	A portable mains electricity (AC-powered) device designed to obtain a stromal vascular fraction (SVF) [stem and regenerative cells from the adipose tissue of a patient] using multiple procedural modalities immediately following tissue harvesting. It is a programmable device consisting of a centrifuge, pumping mechanisms, valves, agitator mechanism, and/or vacuum pump that functions in combination with a proteolytic enzyme and a disposable set to digest adipose tissue and subsequently wash and concentrate its stem and regenerative cells. The SVF is typically used in surgical (e.g., general, plastic and reconstructive, orthopaedic) or disease treatment (e.g., cardiovascular) applications.	IIb
11822	47501	Stromal vascular fraction recovery set	Стромын судасны фракцыг сэргээх багц	A collection of disposable devices intended to be used to obtain a stromal vascular fraction (SVF) [stem and regenerative cells from the adipose tissue of a patient] immediately following tissue harvesting. It typically consists of a plastic collection container, centrifuge processing and concentration chambers, waste bags, and tubing that functions in combination with a proteolytic enzyme and an electromechanical unit to digest adipose tissue and subsequently wash and concentrate its stem and regenerative cells. The SVF is typically used in surgical (e.g., plastic and reconstructive, orthopaedic) or disease treatment (e.g., cardiovascular) applications. This is a single-use device.	IIb

11823	47515	Cerebrospinal fluid shunt connector	Тархи нугасны шингэний шунт холбогч	An implantable device intended to create a fluid path connection between components of a cerebrospinal fluid (CSF) shunt assembly (e.g., lumbar and/or peritoneal catheters of a ventriculoperitoneal or lumboperitoneal shunt), designed to remove excess cerebrospinal fluid from around the central nervous system especially in the treatment of hydrocephalus. It is typically made of plastic or metal and is available in various designs (L-, Y- or cross-shaped, straight).	IIb
11824	47572	Apheresis system tubing set	Аферезийн системийн хоолойн багц	A collection of sterile, flexible, plastic tube segments and associated items (e.g., connectors, line clamp, drip chamber) intended to be used in an apheresis system to channel blood from the patient to an appropriate apheresis column before being returned to the patient. It creates a closed-circuit for the extracorporeal removal of a constituent of whole blood (e.g., leukocytes, plasma). The channeling of apheresis solutions for the priming, regeneration, preservation of columns before or after an apheresis procedure may also be through the tubing set. This is a single-use device.	IIb
11825	47613	Endobronchial valve	Endobronchial хавхлага	A sterile, non-surgical implantable device designed to be placed in a bronchial lumen to control bronchial airflow and improve health status, typically in a patient with emphysema and/or to reduce bronchial air leaks. It consists of a one-way valve that includes an expanding frame (e.g., Nitinol) with features to prevent migration after implantation, and a plastic membrane. It is intended to limit airflow distal to the valve while allowing mucus and air movement proximally. This results in the valve redirecting air to healthy portions of the lungs and/or venting lung segments to achieve pneumoreduction. The valve may remain permanently implanted or removed when medical indicated.	IIb

11826	47614	Endobronchial valve delivery catheter	Endobronchial хавхлагыг хүргэх катетер	A sterile, long, thin, flexible tube designed to deliver and place a non-surgical implantable endobronchial valve, via the working channel of a bronchoscope, into the bronchial lumen of a lung segment. It typically includes a loader; a tool that is used to compress the endobronchial valve and inserts the valve into the catheter. The catheter may be used to deliver multiple size endobronchial valves in a single-patient procedure. This is a single-use device.	IIb
11827	47618	Conduction blood/fluid warmer set	Дамжуулах цус/шингэн халаагуурын багц	A collection of devices used in conjunction with a conduction blood/fluid warmer to heat banked blood, blood products, and intravenous (IV) fluids to a temperature appropriate for infusion into a patient. It consists of a pouch(es) or a flexible cassette through which blood/fluid flows from the infusion bag to the patient while being heated in-line by the warmer; clamps and a bubble trap may be included. The set is typically used in the operating room (OR) or in accident and emergency (A&E) situations when rapid infusion of several units of blood/fluid is necessary. This is a single-use device.	IIb
11828	47619	Convection blood/fluid warmer set	Конвекц цус/шингэний халаагуур	A collection of devices used in conjunction with a convection blood/fluid warmer to heat banked blood, blood products, and intravenous (IV) fluids to a temperature appropriate for infusion into a patient. It may consist of coiled tubing, or other design, through which blood/fluid flows from the infusion bag to the patient while being heated in-line by the warmer; clamps and a bubble trap may be included. The set is typically used in the operating room (OR) or in accident and emergency (A&E) situations when rapid infusion of several units of blood/fluid is necessary. This is a single-use device.	IIb

11829	47620	Convection blood/fluid warmer	Конвекцийн цус/шингэний халаагуур	An electrically-powered device designed for in-line heating of banked blood, blood products, intravenous (IV) solutions, and irrigation fluids, typically from about 4ºC to near body temperature (i.e., 35 to 37ºC) before infusion, through the convection of heat. The device usually includes an aqueous heat exchanger (e.g., water bath) for the convection of heat to the infusion blood/fluid via a disposable set (e.g., coiled tubing); it also includes temperature controls and/or alarms. The warmer is used to minimize adverse thermal reactions in the patient. It is typically mounted on an IV pole under the infusion bag; it does not infuse blood/fluid.	IIb
11830	47621	Convection blood/fluid warmer, high-flow	Конвекцийн цус/шингэний халаагуур, өндөр урсгалтай	An electrically-powered device designed for in-line heating of rapidly-infused (may exceed 1 L/min) banked blood, blood products, and intravenous (IV) solutions (crystalloid and colloid), typically from about 4ºC to near body temperature (i.e., 35 to 37ºC), during high-blood-loss surgical procedures and for burn and trauma cases. The device usually includes an aqueous heat exchanger (e.g., water bath) for the convection of heat to the infusion blood/fluid via a disposable set (e.g., coiled tubing); it also includes temperature controls and/or alarms. It is typically mounted on an IV pole under the infusion bag; it does not infuse blood/fluid.	IIb
11831	47635	Implantable craniofacial bone distractor	Суулгах боломжтой гавлын нүүрний ясыг сарниулагч	An implantable or partially-implantable device intended to temporarily distract (force apart) the two bone surfaces of the mandible (the lower jawbone) or maxilla (the upper jawbone) during craniomaxillofacial (CMF) distraction. It functions as a single-patient bone lengthening/augmentation device for the correction of congenital deficiencies or post-traumatic defects when gradual bone augmentation is required. It typically consists of a metal tube in which a right- and left-hand threaded rod rotates and to which are attached two craniofacial fixation plates that are surgically screwed to either side of the fracture. A small tip guard may be included to protect against inadvertent rotation.	IIb

11832	47657	Tracheostomy tube, reinforced, non-customized, single-use	Трахеостомийн хоолой, хүчитгэсэн, захиалгат бус, нэг удаагийн хэрэглээ	An armoured, hollow cylinder that is inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway, typically for a patient with unusual neck mass, however it is not custom-made for a specific patient. It is constructed of plastic with wire reinforcement to provide additional resistance to kinking and may include an inner cannula. It is available in cuffed, uncuffed versions, and in a variety of sizes. It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-use device.	IIb
11833	47717	Micro-condom, Hevea-latex	Бичил бэлгэвч, Hevea-латекс	A small, Hevea natural rubber latex (NRL) sheath intended to cover the glans of the penis for contraceptive purposes only. It is designed to cover the glans penis or part thereof and may also cover the area in the immediate proximity (i.e., the corona and frenulum) but not the entire shaft of the penis. It is indicated only for the prevention of pregnancy and not for the prevention of sexually transmitted infections (STI). This is a single-use device.	IIb
11834	47718	Micro-condom, synthetic polymer	Бичил бэлгэвч, синтетик полимер	A small sheath made from synthetic polymers intended to cover the glans of the penis for contraceptive purposes only. It is designed to cover the glans penis or part thereof and may also cover the area in the immediate proximity (i.e., the corona and frenulum) but not the entire shaft of the penis. It is indicated only for the prevention of pregnancy and not for the prevention of sexually transmitted infections (STI). This is a single-use device.	IIb
11835	47719	Medicated male condom, Hevea-latex	Эмийн зориулалттай эрэгтэй бэлгэвч, Hevea-латекс	A medicated, Hevea natural rubber latex (NRL) sheath intended to completely cover the penis during coitus, to prevent sperm from gaining access to the female reproductive tract and/or prevent the transmission of sexually transmitted infections (STI). It contains a pharmaceutical agent typically intended to enhance the prophylactic/contraceptive properties of the condom or improve sexual experience. The device may also be textured, flavoured, and/or contain lubricants. This is a single-use device.	IIb

11836	47720	Medicated male condom, synthetic polymer	Эмийн зориулалттай эрэгтэй бэлгэвч, синтетик полимер	A medicated sheath made from synthetic polymers (e.g., polyurethane, polyisoprene) intended to completely cover the penis during coitus, to prevent sperm from gaining access to the female reproductive tract and/or prevent the transmission of sexually transmitted infections (STI). It contains a pharmaceutical agent typically intended to enhance the prophylactic/contraceptive properties of the condom or improve sexual experience. The device may also be textured, flavoured, and/or contain lubricants. This is a single-use device.	IIb
11837	47721	Female condom, Hevea-latex	Эмэгтэй бэлгэвч, Hevea-латекс	A Hevea natural rubber latex (NRL) sheath typically with rings on either end intended to be inserted into the vagina before coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections (STI) between sexual partners. This is a single-use device.	IIb
11838	47722	Female condom, synthetic polymer	Эмэгтэй бэлгэвч, синтетик полимер	A sheath made of synthetic polymers (e.g., polyurethane or nitrile) with rings on either end that is inserted into the vagina before coitus to prevent sperm from gaining access to the female reproductive tract and/or to prevent the transmission of sexually transmitted infections (STI) between sexual partners. It typically includes a lubricant to minimize friction during coitus. This is a single-use device.	IIb
11839	47747	Blood donor set, quin-pack	Цусны донорын багц, quin-pack	An assembly of sterile devices intended to be used to collect whole blood from a donor and separate the red blood cells, plasma, and platelets. It includes five containers (flexible bags) – one or more with anticoagulation solution and/or preservatives for red blood cells, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the red blood cells, plasma, and platelets are separated, via centrifugation, into separate containers and subsequently tested, stored, and infused from the containers when needed. This is a single-use device.	IIb

11840	47760	Intravascular/intracavitary-circulation hyperthermia system	Судас доторх/судасны дотор-цусны эргэлтийн гипертерми систем	An assembly of devices designed to circulate warmed autologous blood or fluids through the vasculature and, alternatively, the cavity of a targeted anatomical area (e.g., peritoneal/pleural cavities, thorax, abdomen, limb) to treat cancer. Blood/fluids (may include drugs) are warmed and circulated by the system's extracorporeal circuit. It is typically computer-controlled and consists of pumps, heat exchanger, valves, detectors/sensors, clamps, monitors, alarms, disposable tubing/filtration set and oxygenator. It heats the blood/fluids to temperatures up to 43° C to enhance the effect of drugs [e.g., for intraperitoneal hyperthermic chemotherapy (IPHC)] and help destroy cancer cells.	IIb
11841	47761	Intravascular/intracavitary-circulation hyperthermia system set	Судас доторх/судасны дотор-цусны эргэлтийн гипертерми системийн багц	A collection of sterile devices used with an intravascular/intracavitary-circulation hyperthermia system for the circulation of blood/fluids, with or without added chemotherapeutic agents, between the patient and the system's extracorporeal circuit during cancer therapy. It typically consists of drains/catheters, tubing, connectors, manual clamps, and hard or soft reservoirs; some types may include in-line filters, an oxygenator, and temperature sensors. This is a single-use device.	IIb
11842	47769	Anaesthesia unit, mobile	Мэдээгүйжүүлгийн нэгж, хөдөлгөөнт	A stand-alone assembly of devices on wheels for mobility designed to continuously or intermittently administer a mixture of gases [e.g., oxygen (O2), ambient/medical air, nitrous oxide (N2O), anaesthetic agents] to provide a patient with an appropriate level of anaesthesia for a surgical procedure. Also known as an anaesthesia machine, it may include an oxygen concentrator or function with mounted medical gas cylinders, and typically has mechanical gas-delivery devices (e.g., flowmeters and vaporizers). It may incorporate a powered or manual anaesthesia ventilator, a patient breathing circuit, and gas monitoring devices; patient monitors are typically separately mounted (not integral).	IIb

11843	47792	Supersaturated oxygen therapy system	Хэт ханасан хүчилтөрөгчийн эмчилгээний систем	An assembly of devices designed to provide supersaturated oxygen (SSO2) therapy to targeted ischemic regions of a patient's coronary vasculature immediately following revasculization by means of percutaneous coronary intervention (PCI) with stenting. It is typically computer-controlled and consists of pumps, valves, detectors/sensors, clamps, patient/parameter monitors, alarms and an O2 gas source. The system controls a cartridge where a small amount of autologous blood is mixed with SSO2 solution (created by the system) producing oxygen-enriched hyperoxaemic blood which is infused via a dedicated catheter. It can have battery backup for short internal patient transport.	IIb
11844	47793	Supersaturated oxygen therapy system cartridge	Хэт ханасан хүчилтөрөгчийн эмчилгээний системийн хайрцаг	A sterile, sealed container (cartridge) that is placed into a supersaturated oxygen (SSO2) therapy system for the mixing of autologous blood with an SSO2 solution [typically created in the container with oxygen (O2) and saline], to produce oxygen-enriched hyperoxaemic blood that is delivered (infused) to the patient by means of a dedicated catheter that connects to this cartridge. It is typically made of plastic and silicone materials, has several chambers, and is connected to the system's O2 gas source. This is a single-use device.	IIb
11845	47797	Pleural/peritoneal drainage catheterization kit	Гялтангийн / хэвлийн хөндийн ус зайлуулах катетержуулалтын иж бүрдэл	A collection of sterile devices designed for catheterization of the pleural cavity and/or peritoneal cavity for drainage and/or aspiration of effusions, ascites, and/or air. It includes a pleural catheter and/or a peritoneal catheter typically with catheter introduction devices (e.g., needles, scalpel, tunneller). It also includes additional non-dedicated catheterization support devices (e.g., disposable scissors, gloves, dressings), drainage receptacle (e.g., collection bottle), and/or suction system regulator; it does not include any powered pumps or pharmaceuticals. This is a single-use device.	IIb

11846	47848	Open-surgery electrosurgical handpiece/electrode, bipolar, reusable	Нээлттэй мэс заслын цахилгаан мэс заслын гар утас/электрод, хоёр туйлт, дахин ашиглах боломжтой	A rigid combined electrosurgical handpiece and bipolar electrode, intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation during an open surgical procedure. It is available in a variety of forms (e.g., pen, pistol-shaped forceps, pincer-shaped forceps, scissors) and may also include irrigation, aspiration, lavage and/or surgical plume (smoke) evacuation features to support its primary electrosurgical function. This is a reusable device.	IIb
11847	47885	Blood donor set, many-pack	Цусны донорын багц, олон багц	An assembly of sterile devices intended to be used to collect whole blood from a donor and separate the red blood cells, plasma, and platelets. It includes six or more containers (flexible bags) – one or more with anticoagulation solution and/or preservatives for red blood cells, tubing, and an attached needle for venipuncture. It may include integrated features such as an in-line leukocyte filter, pre-donation blood sampling device, and/or needle stick prevention device. After collection, the red blood cells, plasma, and platelets are separated, via centrifugation, into separate containers and tested, stored, and infused from the containers when needed. This is a single-use device.	IIb
11848	47930	Temporary mandibular condyle prosthesis	Эрүүний кондилийн түр зуурын протез	A sterile implantable device intended for the temporary reconstruction of the mandibular condyle of the temporomandibular joint (TMJ) typically in a patient undergoing ablative surgery requiring the removal of the mandibular condyle. It is typically made of metal or synthetic material and includes the condyle head with an adjustable plate for attachment to the remaining natural mandible.	IIb
11849	47941	Arteriovenous fistula coupler	Артериовенийн фистул холбогч	An implantable device intended to create a therapeutic fistula between a peripheral artery and vein [an arteriovenous fistula (AVF) or side-to-side anastomosis]. It is typically made of nickel-titanium alloy (Nitinol) which self-expands into a preformed shape to hold the anastomosis in position. Dedicated disposable devices associated with implantation may be included.	IIb

11850	47969	Dental bone matrix implant, composite	Шүдний ясны матриц суулгац, нийлмэл	A sterile bioabsorbable device made of synthetic bone substitute materials (e.g., ceramics such as tricalcium phosphate or hydroxyapatite) combined with bone growth factors (e.g., bovine collagen) implanted into the body to provide osteoconductive bone-tissue scaffolds to replace maxillofacial and/or mandibular bone lost through trauma or dental surgery. It is used to fill bone cavities and defects to promote the ingrowth of endogenous bone for skeletal reconstruction and/or augmentation. It is typically provided as sterile cancellous blocks, chips, or granules of varying sizes, or mouldable materials.	IIb
11851	47971	Dental bone matrix implant, synthetic	Шүдний ясны матриц суулгац, синтетик	A sterile bioabsorbable device made of synthetic material implanted into the body to provide osteoconductive bone-tissue scaffolds to replace maxillofacial and/or mandibular bone lost through trauma or dental surgery. It is typically made of ceramics (e.g., tricalcium phosphate or hydroxyapatite), sometimes bioactive glasses or bioabsorbable polymers, and used to fill bone cavities and defects to promote the ingrowth of endogenous bone for skeletal reconstruction and/or augmentation. It is typically provided as sterile cancellous blocks, chips, or granules of varying sizes, or mouldable materials.	IIb
11852	47996	Orthodontic anchor plate	Ортодонт зангууны хавтан	A small metallic plate that is implanted intraorally to serve as a temporary anchor for an orthodontic device (e.g., a spring). It is available in various sizes and lengths and is anchored to the jawbone with dedicated bone screws. It is used in a variety of orthodontic treatment situations, especially when normal anatomy has been compromised (e.g., due to periodontal disease or agenesis, displacement of teeth in the same direction, asymmetrical anatomy). This is a single-use device.	IIb

11853	48004	Dental bone matrix implant, metallic	Шүдний ясны матриц суулгац, металл	A sterile non-bioabsorbable device made of metal and/or metal oxide [e.g., titanium (Ti)] implanted into the body to provide osteoconductive bone-tissue scaffolds to replace maxillofacial and/or mandibular bone lost through trauma or dental surgery. It is typically used to fill bone cavities and defects to promote the ingrowth of endogenous bone for skeletal reconstruction and/or augmentation. It is typically available as porous granules.	IIb
11854	48008	Tissue cryostorage straw vitrification set	Эд эсийн криосторжуулсан сүрэл шилжилтийн багц	A collection of sterile devices designed for use in the vitrification process and cryopreservation of human biological samples such as embryos, oocytes, sperm, and human tissue in liquid nitrogen (LN2) or in the volumes of vapour phase LN2 in a liquid nitrogen container. It typically consists of a tissue storage straw, a curved spatula or capillary tube (used for the capture of the specimen) which may be colour-coded, and an insertion device for positioning of the spatula or capillary tube with the specimen into the tissue collection straw. This is a single-use device.	IIb
11855	48067	Knee arthroplasty wedge	Өвдөгний үений мэс заслын шаантаг	An implantable device designed to augment the implantation of a knee femur or tibia prosthesis by serving as a space-filler adjacent to the prosthesis, typically to replace lost bone and increase bone contact area and aid stability. It is typically made of metal [e.g., cobalt-chrome (Co-Cr), cobalt-chrome-molybdenum (Co-Cr-Mo) or titanium (Ti)].	IIb
11856	48074	Multi-purpose soft/rigid contact lens solution	Олон зориулалттай зөөлөн/хатуу контакт линзний шийдэл	A sterile aqueous formulation containing appropriate agents typically for cleaning, rinsing, protein removal, disinfecting, storing, and possibly wetting soft contact lenses and rigid gas permeable (RGP)/hard contact lenses. The solution may be specific to a type of procedure (e.g., manual, heated, or ultrasonic). After application, this device cannot be reused.	IIb
11857	48075	Multi-purpose rigid contact lens solution	Олон зориулалттай хатуу контакт линзний шийдэл	A sterile aqueous formulation containing appropriate agents typically for cleaning, rinsing, protein removal, disinfecting, storing, and possibly wetting rigid gas permeable (RGP) and hard contact lenses. The solution may be specific to a type of procedure (e.g., manual, heated, or ultrasonic). After application, this device cannot be reused.	IIb

11858	48082	Contact lens wetting solution	Контакт линзийг чийгшүүлэх уусмал	An aqueous formulation intended to wet contact lenses. The device is dispensed as droplets typically directly on the eyes while the patient wears the contact lenses; it is available in single- or multiple-dose containers. After application, this device cannot be reused.	IIb
11859	48085	Dental impression material kit, single-use	Шүдний импрессийн материалын иж бүрдэл, нэг удаагийн	A collection of non-sterile devices designed to obtain a negative imprint of the teeth and/or upper palate (i.e., the roof of the mouth with the gums and teeth). It is subsequently used to make a mould for the manufacture of a custom-made dental prosthesis, orthodontic appliance, and/or oral appliance. The kit typically includes dental impression materials and a dental impression tray(s); reusable application devices are not included. Impression material is placed on the tray and the tray is then positioned in the mouth of the patient until the material becomes firm creating the mould. This is a single-use device.	IIb
11860	48099	Disposable home semi-automated external defibrillator	Нэг удаагийн гэрийн хагас автомат гадаад дефибриллятор	A single-use, portable, electronic device intended for use at home to automatically detect cardiac arrhythmias (ventricular fibrillation/pulseless ventricular tachycardia) in a sudden cardiac arrest (SCA) patient, after which it audibly/visually instructs an operator to enable it to activate defibrillation of the heart through application of electrical shocks to the chest surface. It is designed to be used by a layperson and consists of a disposable defibrillator [an external pulse generator (EPG)] and skin-adhesive electrodes for defibrillation of one SCA patient only; it is then returned to the distributor for disposal or replacement.	IIb
11861	48164	Cervical total intervertebral disc prosthesis, modular	Умайн хүзүүний нийт нугалам хоорондын протез, модульчлагдсан	An implantable three-component assembly of devices intended to replace a dysfunctional intervertebral disc in the cervical spine that is comprised of an upper and lower endplate for attachment to adjacent vertebrae, and a space-occupying core between the plates to allow small movements of the adjacent vertebrae. The endplates are typically made of metal, and the core ceramic or synthetic polymer materials.	IIb

11862	52529	Arthroscopic shaver/electrosurgical system generator	Үе мөчний сахлын машин/цахилгаан мэс заслын системийн генератор	A mains electricity (AC-powered) device designed to provide energy for a system designed to perform arthroscopic shaving (i.e., abrasion, resection, debridement of bone and soft tissue with a blade) and electrosurgical diathermy (i.e., the ablation and coagulation of soft tissue, as well as haemostasis of blood vessels, with an electrosurgical probe) during arthroscopic procedures on a joint. The unit typically consists of an operational display, operator controls, and software to help provide optimal parameters for the connected shaver handpiece(s) and electrosurgical probe(s). It may include an irrigation system.	IIb
11863	55843	Basket endosteal dental implant, one-piece	Сагс доторх шүдний имплант, нэг ширхэг	A sterile device made of alloplastic materials [e.g., titanium (Ti), stainless steel, ceramic] intended to be surgically implanted into alveolar and/or basal bone of the mandible or maxilla to provide support and a means of retention for a dental prosthesis (e.g., bridge, single-tooth, overdenture). It is a one-piece device composed of an anchorage portion (implant body) in the form of a single, double, and/or triple contiguous cylinder(s) that is implanted into bone, and a retention portion (implant abutment) that protrudes through gingival tissues to support the prosthesis.	IIb
11864	55844	Basket endosteal dental implant, two-piece	Сагс доторх шүдний имплант, хоёр ширхэг	A sterile device made of alloplastic materials [e.g., titanium (Ti), stainless steel, ceramic] intended to be surgically implanted into alveolar and/or basal bone of the mandible or maxilla to provide support and a means of retention for a dental prosthesis (e.g., bridge, single-tooth, overdenture). It is a two-piece device composed of an anchorage component (implant body) in the form of a single, double, and/or triple contiguous cylinder(s) that is implanted into bone, and a retention component (implant abutment), typically attached to the anchorage component after implantation, that protrudes through gingival tissues to support the prosthesis.	IIb

11865	55845	Blade endosteal dental implant, one-piece	Хутган доторх шүдний имплант, нэг хэсэг	A sterile device made of alloplastic materials [e.g., titanium (Ti), stainless steel, ceramic] intended to be surgically implanted into alveolar and/or basal bone of the mandible or maxilla to provide support and a means of retention for a dental prosthesis (e.g., bridge, single-tooth, overdenture). It is a one-piece device composed of an anchorage portion (implant body) in the form of a narrow, wedge-shaped structure that is implanted into bone (typically includes lateral vents for tissue ingrowth), and a retention portion (implant abutment) that protrudes through gingival tissues to support the prosthesis.	IIb
11866	55846	Blade endosteal dental implant, two-piece	Шүдний ирний дотоод суулгац, хоёр хэсэг	A sterile device made of alloplastic materials [e.g., titanium (Ti), stainless steel, ceramic] intended to be surgically implanted into alveolar and/or basal bone of the mandible or maxilla to provide support and a means of retention for a dental prosthesis (e.g., bridge, single-tooth, overdenture). It is a two-piece device composed of an anchorage component (implant body) in the form of a narrow, wedge-shaped structure that is implanted into bone (typically includes lateral vents for tissue ingrowth), and a retention component (implant abutment), typically attached to the anchorage component after implantation, that protrudes through gingival tissues to support the prosthesis.	IIb
11867	55851	Flexible bone nail	Уян хатан ясны хумс	A bendable metallic rod intended to be implanted into the intramedullary canal of a long bone for fracture fixation where flexibility of the implant is desired. It is available in various lengths and diameters for use on lower and upper extremity diaphyseal fractures and some metaphyseal fractures of paediatrics and small-statured/normal adults to provide temporary stabilization of the bone segments/fragments until bone consolidation has been achieved. It is intended to splint the cortices and maintain elastic energy to continually brace against rotational/angular forces of the muscles. This is a single-use device.	IIb

11868	56296	Open-surgery electrosurgical handpiece/electrode, bipolar, single-use	Нээлттэй мэс заслын цахилгаан мэс заслын гар утас/электрод, хоёр туйлт, нэг удаагийн	A sterile rigid combined electrosurgical handpiece and bipolar electrode, intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation during an open surgical procedure. It is available in a variety of forms (e.g., pen, pistol-shaped forceps, pincer-shaped forceps, scissors) and may also include irrigation, aspiration, lavage and/or surgical plume (smoke) evacuation features to support its primary electrosurgical function. This is a single-use device.	IIb
11869	56314	Dietary fat absorption inhibitor	Хоолны өөх тосыг шингээх дарангуйлагч	An orally-administered device intended to facilitate weight loss and treat obesity through the reduction of dietary fat absorption. It reduces the absorption and/or storage of fat/triglycerides by facilitating dietary fat excretion via the gut through formation of a large fat-fibre complex that is too large to be absorbed, or by affecting enzymatic mechanisms. It may include natural soluble fibre intended to create a sensation of fullness and reduce consumption. It is available in tablet, capsule, and powder sachet forms for use in the home or healthcare facility. This is a single-use device.	IIb
11870	56319	Dietary carbohydrate absorption inhibitor	Хоолны нүүрс ус шингээх дарангуйлагч	An orally-administered device intended to facilitate weight loss/control and treat obesity by reducing absorption of dietary carbohydrates (e.g., starch, sugar, complex carbohydrates). It is designed to interfere with the activity of carbohydrate digestive enzymes resulting in dietary carbohydrates remaining undigested and excreted by the gut without being absorbed. It typically includes plant materials as active ingredients. It is available in tablet, capsule, and powder sachet forms for use in the home or healthcare facility. This is a single-use device.	IIb

11871	56612	Dietary cholesterol absorption inhibitor	Хоолны холестерины шингээлтийг саатуулдаг	An orally-administered device intended to help manage blood cholesterol levels by reducing absorption of dietary cholesterol, and increasing cholesterol utilization. It is designed to be swallowed immediately after meals to bind bile acids and form a large bile acid-fibre complex that is too large to be absorbed and is excreted by the gut; decrease in bile acid causes the liver to produce more bile acids using free bloodstream cholesterol. It typically includes plant materials as active ingredients. It is available in tablet, capsule, and powder sachet forms for use in the home or healthcare facility. This is a single-use device.	IIb
11872	56632	Intraperitoneal-circulation hypothermia system	Хэвлийн доторх цусны эргэлтийн гипотерми систем	An assembly of devices designed to lower a patient's core body temperature to a desired target level by continuously lavaging the peritoneal cavity with circulated temperature-controlled fluid (e.g., saline solution) through a dedicated catheter placed in the peritoneal cavity. It maintains the set temperature and re-warms the patient as required. It typically consists of a powered unit that controls fluid temperature and circulation, a catheter for infusion/extraction of the fluid, a core temperature probe, and a lavage administration set (LAS). Treatable conditions include cardiac arrest, acute myocardial infarction, ischemic stroke, traumatic brain injury.	IIb
11873	56633	Intraperitoneal-circulation hypothermia system control unit	Хэвлийн доторх цусны эргэлтийн гипотерми системийн хяналтын нэгж	A mains electricity (AC-powered) device that pumps, controls, and monitors the temperature of a fluid (e.g., saline solution) used to lower and regulate the core body temperature of a patient. The circulated temperature-controlled fluid is pumped through a connected, dedicated catheter placed in the peritoneal cavity to cool the patient by continuously lavaging (infusing and extracting) the sterile fluid and maintaining the set temperature; it re-warms the patient as required. This device receives feedback during patient treatment for automated peritoneal lavage system (APLS) adjustments from an oesophageal temperature probe, an infusate temperature sensor, and a peritoneal pressure sensor.	IIb

11874	56634	Intraperitoneal-circulation hypothermia system administration kit	Хэвлийн доторх цусны эргэлтийн гипотерми системийн удирдлагын хэрэгсэл	A collection of sterile devices designed to be used in the function of an automated peritoneal lavage system (APLS). It typically includes tubing to connect the infusion/extraction pump mechanism of the control unit and the other components of the system [also known as the lavage administration set (LAS)], a peritoneal lavage catheter, a heat exchanger, a core body temperature probe (e.g., oesophageal), an infusate temperature sensor, a peritoneal pressure sensor, waste receptacle, and other appropriate devices for this treatment. This is a single-use device.	IIb
11875	56635	Intraperitoneal-circulation hypothermia system catheter	Хэвлийн доторх цусны эргэлтийн гипотерми системийн катетер	A sterile, flexible tube with perforations (holes) at the distal end that is inserted via a catheter access device into the peritoneal cavity to circulate a temperature-controlled fluid (e.g., saline solution) to lower and regulate the core body temperature of a patient. It is connected via the system's lavage administration set (LAS) to the infusion roller pump and an extraction pump of the system’s control unit to maintain fluid circulation and temperature regulation during the patient treatment. This is a single-use device.	IIb
11876	56642	Orthopaedic bone screw, non-bioabsorbable, non-sterile	Ортопедийн ясны шураг, био шингэдэггүй, ариутгагддаггүй	A small, non-sterile, threaded rod with a slotted head typically used for internal orthopaedic fracture fixation by being screwed into bone to hold plates or nails to bone or to provide direct interfragmentary stabilization of bone, or it may fasten soft tissue to bone; it is made of a material that cannot be chemically degraded or absorbed via natural body processes (includes implant grade metal such as surgical steel, titanium alloy, or carbon fibre). Screws available are: cortical, cancellous, malleolar, scaphoid, partially-threaded and fully-threaded, self-tapping, and cannulated. A "lag screw" can be any of these used to obtain compression. This device must be sterilized prior to use.	IIb

11877	56643	Femur nail, non-sterile	Гуяны хумс, ариутгагдаагүй	A non-sterile rod made of metal or other material which, when inserted into the intramedullary canal of the femur, acts to immobilize by holding the ends of a fractured bone in position to promote healing. The device may also be used to support the bone in the presence of a pathological condition, or for knee arthrodesis. The device may be a locked or unlocked model, and possess components to assist fixation of more proximal or distal conditions. This is a single-use device intended to be sterilized prior to use.	IIb
11878	56644	Humerus nail, non-sterile	Humerus хумс, ариутгагдаагүй	A non-sterile rod made of metal or other material which, when inserted into the intramedullary canal of the humerus, acts to immobilize by holding the ends of a fractured bone in position to promote healing. The device may also be used to support the bone in the presence of a pathological condition. The device may be a locked or unlocked model, and possess components to assist fixation of more proximal or distal conditions. This is a single-use device intended to be sterilized prior to use.	IIb
11879	56645	Tibia nail, non-sterile	Шилбэний хумс, ариутгагдаагүй	A non-sterile rod made of metal or other material which, when inserted into the intramedullary canal of the tibia, acts to immobilize by holding the ends of a fractured bone in position to promote healing. The device may also be used to support the bone in the presence of a pathological condition, or for knee arthrodesis. The device may be a locked or unlocked model, and possess components to assist fixation of more proximal or distal conditions. This is a single-use device intended to be sterilized prior to use.	IIb
11880	56710	Acetabulum prosthesis hole plug	Ацетабулум протезийн нүхний бөглөө	A sterile implantable device designed as a threaded or non-threaded plug intended to fill any hole of the shell component of a two-piece acetabulum prosthesis (shell and liner). It is made of metallic or polymer material, and is screwed or pushed into the hole after the implantation of the shell component.	IIb

11881	56711	Ligation clip, synthetic polymer, non-bioabsorbable	Холбогч хавчаар, синтетик полимер, био шингэдэггүй	A non-metallic, non-bioabsorbable clasp designed to be implanted around a blood vessel or a tissue bundle for permanent occlusion. It is typically made of plastic materials [e.g., polyoxymethylene (POM), commonly known as Delrin] and may be designed with a self-locking catch. It may be used for ligation in open and endoscopic (e.g., laparoscopic) surgeries, but is usually not intended for fallopian tube occlusion. Its non-metallic design makes it more compatible with radiological imaging than metallic clips. A dedicated, disposable clip applier may be included.	IIb
11882	57803	Penile extracorporeal shock wave therapy system	Бэлэг эрхтэнээс гадуурх цочролын долгионы эмчилгээний систем	A mobile assembly of devices designed to provide spark-gap-generated, low-intensity, extracorporeal shock wave therapy to treat erectile dysfunction (ED) [impotence] to rehabilitate penile erection and rigidity adequate for intercourse. It typically consists of a generator that supplies the high voltage energy and a hand-held shock wave applicator which is water-filled with submerged electrodes that produce spark-gap (electrohydraulic) energy, at selected impulse frequencies, transmitted in reflector-focused shock waves along the skin of the penile shaft and the penile crura. The system also includes operator controls and information displays; it is suitable for outpatient treatment.	IIb
11883	57808	Intracardiac circulatory assist axial-pump catheter control unit	Зүрхний доторх цусны эргэлтийг дэмжих тэнхлэгийн насосны катетерийн хяналтын хэсэг	A mains electricity (AC-powered) device designed to operate and monitor an intracardiac circulatory assist axial-pump catheter (e.g., a catheter with integrated micro motor and impeller) to provide circulatory assistance to the heart by pumping blood during heart failure. It typically consists of operator controls, a monitoring interface, a low-voltage connection to drive the impeller, a fluid purging pump, and provides backup power when line power is not available during transport. It is typically used emergently [e.g., post acute myocardial infarction (AMI)] or electively when haemodynamic support is necessary.	IIb

11884	57812	Radiology DICOM image processing application software	Radiology DICOM дүрс боловсруулах программ хангамж	A software application intended to facilitate management, distribution, and/or viewing of radiological digital imaging and communications in medicine (DICOM) image data; it is not intended for pathological image interpretation (i.e., not intended to detect and localize suspected abnormalities). It may be intended to facilitate image management (e.g., viewing, communication, printing, recording/disc burning) and/or image quality manipulation and quantification (e.g., non-interpretive graphical overlays).	IIb
11885	57813	CPAP/BPAP face mask, single-use	CPAP/BPAP нүүрний маск, нэг удаагийн хэрэглээ	A non-sterile, flexible, form-shaped device designed to be placed over a user's nose and mouth to interface with a continuous positive airway pressure (CPAP) or bi-level positive airway pressure (BPAP) unit to provide the respiratory tract with direct ambient air, or medical oxygen (O2) and air, at a higher pressure than ambient air for noninvasive positive pressure ventilation (NPPV). It is typically made of plastic/silicone materials that create an airtight seal around the nose and mouth. It is available in various designs and sizes and stabilized with a headstrap. This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	IIb
11886	57823	Surgical irrigation/aspiration handpiece control valve	Мэс заслын усалгаа/аспирацын гарны хяналтын хавхлага	A sterile device designed as a push-button valve that is inserted into the control valve seat of a reusable surgical irrigation/aspiration handpiece and when activated by the operator will interrupt the aspiration (suction) and activate the irrigation function (the fluid flow) of the handpiece/system. This provides a high level of hygiene as this device is removed after each application and discarded negating complicated and time-consuming cleaning procedures. This is a single-use device.	IIb

11887	57824	Resuscitator face mask, single-use	Нэг удаагийн сэхээн амьдруулах маск	A non-sterile, flexible, form-shaped device that is placed over a patient's nose and mouth to direct ambient air, or medical oxygen (O2) and air, from a resuscitator to the upper airway and lungs. It is typically made of non-conductive sterilizable materials (e.g., silicone) that will create a gastight seal against the face. It will typically include a 15 mm and/or 22 mm connector and is available in a range of sizes (baby to adult). It will be directly attached to the resuscitator and held in place on the patient's face by the operator. This device is intended for use with a breathing resuscitator but may be used for the delivery of anaesthesia gases. This is a single-use device.	IIb
11888	57888	Therapeutic oncological/gynaecological ultrasound system	Эмчилгээний онкологи/эмэгтэйчүүдийн хэт авианы систем	An assembly of electrically-powered devices designed to treat solid tumours of hard (bone) and/or soft tissue [e.g., liver, kidney, breast, prostate] and/or gynaecological disorders (e.g., uterine fibroid, adenomyosis) through noninvasive or non-surgically invasive localized application of high intensity focused ultrasound (HIFU) or high intensity therapeutic ultrasound (HITU) intended to gradually denature/ablate tissue lesions. It typically consists of a piezoelectric transducer (probe), a water supply/power control unit, operator console and monitoring systems, software, and sometimes a patient table. Optimal patient positioning is achieved using an ultrasound scanner or MRI system.	IIb
11889	57890	Dermatological dye laser system	Арьсны будагны лазер систем	A mains electricity (AC-powered) Light Amplification by Stimulated Emission of Radiation (LASER) device assembly in which input energy is used to excite organic compounds (i.e., dye) used as the active medium to emit a beam of intense, coherent, monochromatic electromagnetic (EM) radiation to incise, excise, ablate, and vaporize soft tissues for dermatological applications such vascular/skin lesion, acne and wrinkle removal or reduction. It typically includes a light source, flexible fibreoptic delivery/positioning device(s), and controls/foot-switch for pulsed mode operation. During emission the dye has to be optically excited by another light source (e.g., another laser or flash lamp).	IIb

11890	57944	Endoscopic electrosurgical handpiece/electrode, bipolar, single-use	Дурангийн цахилгаан мэс заслын гар утас/электрод, хоёр туйлт, нэг удаагийн	A sterile electrosurgical device which consists of a handpiece with mechanical and/or electrical controls, and a bipolar electrode intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation/ablation during endoscopic (including laparoscopic, arthroscopic) surgery, and may in addition be intended for open surgery; it is not intended for focal percutaneous ablation. It includes a long thin electrode connected to the handpiece, and may include a lumen for suction/irrigation; it is available in a variety of forms (e.g., forceps, rigid probe with controls). This is a single-use device.	IIb
11891	57962	Prostate electrolytic therapy system	Түрүү булчирхайн электролитийн эмчилгээний систем	A mobile assembly of mains electricity (AC-powered) devices designed to treat benign prostatic hyperplasia (BPH) and prostatitis through transurethral electrochemical treatment causing liquefaction necrosis to the diseased peri-urethral prostate. It typically consists of a power supply that provides a low output level (e.g., less than 30 volts) and an adjustable output current [e.g., 0 to 100 milliampere (mA)], operator's console, monitoring systems, alarms, software, and an electrolytic therapeutic catheter.	IIb
11892	57967	Medical equipment clinical data interfacing software	Эмнэлгийн тоног төхөөрөмжийн эмнэлзүйн өгөгдөлтэй харилцах програм хангамж	An application software designed for the transportation and processing of clinical data between patient-connected medical devices, or laboratory equipment, and external information systems used in clinical settings, for data collection and clinical information management. It typically transfers data (e.g., waveform, infusion data, in vitro diagnostic test results) to an electronic medical record (EMR) or an application for viewing and verification by a clinician. The data may be aggregated for supporting patient treatment summary calculations, ordering of infusion solutions/drugs, or report and worklist generation; it is not primarily intended to manage diagnostic/patient images.	IIb

11893	57989	Pressure-controlled intermittent coronary sinus occlusion system control unit	Даралтаар удирддаг завсрын титэм судасны синусын түгжрэлийн системийн хяналтын нэгж	A mains electricity (AC-powered) device that is a component of a pressure-controlled intermittent coronary sinus occlusion (PISCO) system and designed to intermittently inflate a dedicated balloon catheter inserted into the coronary sinus to intermittently increase the pressure in the coronary venous system and cause redistribution of coronary blood flow for therapeutic applications. It typically consists of a device with operator controls, display functions, and software, and inflates/deflates the catheter balloon with helium (He) gas/vacuum for periods up to 30 seconds during treatment. It typically has internal batteries for operation during transport or a power outage.	IIb
11894	57995	Femtosecond ophthalmic solid-state laser system	Фемтосекунд нүдний хатуу төлөвт лазерын систем	A mains electricity (AC-powered) device assembly in which input energy (e.g., flashlamp, diode laser) is used to excite a glass/crystal rod to emit a high-power laser beam intended for ocular resections and incisions (cataract incisions, arcuate corneal/scleral cuts/tunnels, anterior capsulotomy, phacofragmentations, corneal flaps, lamellar/perforating keratoplasty). The system includes a beam delivery device, imaging device, computer, software and controls; it cuts by micro-photodisruption of tissue created by focused ultra-short [femtosecond (FS)] pulses; it does not include fundus imaging technology and the therapeutic laser is not frequency-doubled.	IIb
11895	57997	Angiography contrast medium injection system, line-powered, mobile	Ангиографийн тодосгогч бодисын тарилгын систем, шугамаар ажилладаг, хөдөлгөөнт	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for angiographic procedures (e.g., examination of the coronary and renal arteries, and great vessels and vasculature of the heart, brain, abdominal organs, and extremities). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for angiographic studies, and is mobile (e.g., on a wheeled pedestal). Some types can synchronize media delivery with the electrocardiographic cycle and/or the x-ray generator.	IIb

11896	57998	Angiography contrast medium injection system, line-powered, stationary	Ангиографийн тодосгогч бодисын тарилгын систем, шугамаар ажилладаг, хөдөлгөөнгүй	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for angiographic procedures (e.g., examination of the coronary and renal arteries, and great vessels and vasculature of the heart, brain, abdominal organs, and extremities). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for angiographic studies, and is stationary (e.g., fixed to room rack). Some types can synchronize media delivery with the electrocardiographic cycle and/or the x-ray generator.	IIb
11897	57999	CT contrast medium injection system, line-powered, mobile	CT тодосгогч бодис тарилгын систем, шугамаар ажилладаг, хөдөлгөөнт	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for computed tomography (CT) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using CT scanning). It consists of mains electricity (AC-powered) electromechanical injectors (e.g., syringe piston drivers, tubing roller pumps) capable of delivering media with the pressure, flow range, and volume required for CT studies, and is mobile (e.g., on a wheeled pedestal). The system may synchronize media delivery with the x-ray generator during CT scanning.	IIb
11898	58000	CT contrast medium injection system, line-powered, stationary	CT тодосгогч бодис шахах систем, шугамаар ажилладаг, хөдөлгөөнгүй	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for computed tomography (CT) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using CT scanning). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for CT studies, and is stationary (e.g., fixed to a room rack). The system may synchronize media delivery with the x-ray generator during CT scanning.	IIb

11899	58001	MRI contrast medium injection system, line-powered, mobile	MRI тодосгогч бодисын тарилгын систем, шугамаар ажилладаг, хөдөлгөөнт	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for magnetic resonance imaging (MRI) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using MRI). It consists of mains electricity (AC-powered) electromechanical injectors (e.g., syringe piston drivers, tubing roller pumps) capable of delivering media with the pressure, flow range, and volume required for MRI studies, and is mobile. It may interface with the MRI system or a monitoring device to control timing of contrast injections; it is made entirely of non-ferromagnetically active materials for MRI compatiblity.	IIb
11900	58002	MRI contrast medium injection system, line-powered, stationary	MRI тодосгогч бодисын тарилгын систем, шугамаар ажилладаг, хөдөлгөөнгүй	An assembly of devices designed to inject contrast media through a small catheter and into the vascular system for magnetic resonance imaging (MRI) procedures (e.g., spine, head, gastrointestinal, or vascular diagnostic procedures using MRI). It consists of mains electricity (AC-powered) electromechanical injectors (electric motor connected to a jackscrew that moves a syringe piston) with syringes capable of delivering media with the pressure, flow range, and volume required for MRI studies, and is stationary. It may interface with the MRI system or monitoring device to control timing of contrast injections; it is made entirely of non-ferromagnetically active materials for MRI compatiblity.	IIb
11901	58004	Bare-metal ureteral stent	Нүцгэн металл шээсний сувгийн стент	A sterile non-bioabsorbable tubular device intended to be implanted in an obstructed ureter to maintain luminal patency allowing urine to drain from the renal pelvis to the bladder; it is often used to treat ureteric obstruction caused by external compression (e.g., from malignancy). It may be a mesh structure or a continuous tube and is made entirely of metal; it may be expandable in situ (e.g., self-expands) and deployment and/or removal devices are typically included (e.g., catheter, guidewire, suture). The device is typically intended for long-term, but not permanent, implantation.	IIb

11902	58005	Polymeric ureteral stent	Шээсний сувгийн полимер стент	A sterile non-bioabsorbable tubular device intended to be implanted in an obstructed ureter (e.g., from stone, stricture, compression, fibrosis, trauma) to maintain luminal patency allowing urine to drain from the renal pelvis to the bladder. It is made of a synthetic polymer(s) [e.g., polytetrafluoroethylene (PTFE), polyethylene (PE), silicone], sometimes with a hydrophilic coating (e.g., hydrogel), and may have various designs (e.g., continuous tube with or without drainage side holes, covered or non-covered mesh structure). Disposable devices intended to assist implantation may be included. The device is typically intended for long-term, but not permanent, implantation.	IIb
11903	58039	Endoscopic electrosurgical handpiece/electrode, monopolar, single-use	Дурангийн цахилгаан мэс заслын гар утас/электрод, монополяр, нэг удаагийн	An electrosurgical device consisting of a handpiece with mechanical and/or electrical controls, and a monopolar electrode, intended to deliver a current from a system generator directly to tissues for cutting/coagulation/ablation during endoscopic (including laparoscopic, arthroscopic) surgery. It includes a long thin electrode connected to the handpiece and requires a patient contact return electrode; it may include a suction/irrigation lumen and may feature a magnetic guidance sensor for electromagnetic tracking. It is available in a variety of forms (e.g., forceps or snare with ring handles, rigid probe) and may also be designed to mechanically cut tissues. This is a single-use device.	IIb
11904	58091	Apheresis kit	Аферезийн иж бүрдэл	A collection of sterile and disposable/consumable devices intended to be used to prepare for and perform (connect the patient) an apheresis treatment (e.g., immunoadsorption, plasmapheresis, plasma exchange) with an apheresis system. It typically consists of tubing, separation devices (e.g., adsorber, filter), and rinsing solutions for preparation of the extracorporeal circuit. This is a single-use device.	IIb
11905	58093	Haemodialysis treatment kit	Гемодиализ эмчилгээний иж бүрдэл	A collection of sterile and disposable/consumable devices intended to be used to prepare for and perform a haemodialysis treatment with a haemodialysis system. It typically consists of tubing, haemodialysis dialysers, dialysate concentrates, and rinsing solutions for preparation of the extracorporeal circuit. This is a single-use device.	IIb

11906	58099	Intranasal cooling system	Хамрын доторх хөргөлтийн систем	An assembly of portable devices designed for rapid cooling induction in patients where temperature reduction is clinically indicated (e.g., following a cerebral ischemic event, during cardiac arrest) to help minimize damage to the brain and heart. It typically consists of a transnasal catheter, a mains electricity (AC-powered) control unit, and a coolant. The catheter, with nasal cannulae, is placed in the nostrils and pressurized liquid coolant is delivered into the nasal cavity where it rapidly evaporates and removes heat from the surrounding tissue; the brain cools via direct conduction and the rest of the body cools via haematogenic convection.	IIb
11907	58101	Intranasal cooling system control unit	Хамрын доторх хөргөлтийн системийн хяналтын хэсэг	A portable mains electricity (AC-powered) device designed to regulate the flow of a pressurized coolant/medical gas [e.g., oxygen (O2) or medical air] mixture delivered to an intranasal cooling system catheter, and to monitor an intranasal cooling system's settings and status. It typically consists of operator controls, setting indicators, connections for the catheter and coolant/gas supply. It typically has internal batteries that allow the device to operate for short periods when no line power is available (e.g., when used in the field) and a direct current (DC) adaptor for powering/recharging it during transport.	IIb
11908	58109	Implantable cervical facet joint distractor	Суулгах боломжтой умайн хүзүүний үе мөчний анхаарлыг татдаг	A sterile wedge-shaped device intended to be inserted within a cervical facet joint (spinal joint), i.e., intra-facet, for joint distraction; the distraction is intended to facilitate nerve root decompression and stabilization of the spine in the treatment of various spinal conditions. It is typically fenestrated or barbed and may incorporate a screw to expand to shape and/or to provide fixation within the joint and cervical spine stabilization. It typically includes single-use instruments (e.g., chisels, rasps) for implantation.	IIb

11909	58130	Haemodialysis system, institutional	Гемодиализын систем, байгууллагын	An assembly of mains electricity (AC-powered) devices intended to be used to perform patient haemodialysis, a treatment whereby extracorporeal blood is passed through a filter to allow for the removal of toxins and/or the replacement of electrolytes, by trained professionals in a healthcare facility. The system functions with dialysate solution and a haemodialysis dialyser (haemodialyzer) for the transfer of substances by diffusion, osmosis and ultrafiltration. It typically includes a pump and tubing to circulate blood through the haemodialysis dialyser, a solution mixer to prepare the dialysate, a monitor with system controls, and other dedicated components.	IIb
11910	58131	Haemodialysis system, institutional/home-use	Гемодиализийн систем, байгууллага/гэрийн хэрэглээ	An assembly of mains electricity (AC-powered) devices designed to perform haemodialysis, a treatment whereby extracorporeal blood is passed through a filter to allow for the removal of toxins and/or the replacement of electrolytes; it can be used in healthcare facilities and in the home. The system functions with dialysate solution and a haemodialysis dialyser (haemodialyzer) for the transfer of substances by diffusion, osmosis and ultrafiltration. The system typically includes a pump and tubing to circulate blood through the haemodialyzer, a solution mixer to prepare the dialysate, a monitor with system controls, and other dedicated components.	IIb
11911	58214	Mechanical atherectomy/thrombectomy drive system	Механик атерэктоми/тромбэктоми хөтөч систем	A multi-purpose assembly of devices designed to power and control the mechanical mechanism of an atherectomy and/or thrombectomy catheter (not included) during an intravascular recanalization procedure. It typically consists of an electrically-powered control unit that supplies the drive motor with electricity to power the catheter and a handpiece with hand-switch that includes the drive motor (for catheter manipulation); a foot-switch may also be included. This is a reusable device.	IIb

11912	58235	Memory-alloy orthopaedic fixation plate	Санах ойн хайлшаар хийсэн ортопедийн бэхэлгээний хавтан	A non-sterile implantable device made of a shape memory alloy (SMA) [e.g., nickel-titanium alloy (Nitinol)] designed for the fixation of a bone fracture without the use of screws or wires or other holding devices. It typically consists of a cylindrical or conical plate with a pair or pairs of gripping arms to bridge and stabilize the fracture gap of a bone, e.g., long bones, rib and sternum, and shield the site from stress as the bone heals. Compression is achieved by the temperature-controlled properties of the SMA. It is available in a variety of sizes and is typically surgically removed after the healing process. It is a single-use device intended to be sterilized prior to use.	IIb
11913	58260	Radio-frequency identification expiratory valve	Радио давтамжийг тодорхойлох амьсгалын хавхлага	A non-sterile device intended to be used in a respiratory or anaesthesia breathing circuit to maintain a degree of positive pressure in a patient's airway at the end of expiration, that contains a radio-frequency identification (RFID) chip to enable its communication with a compatible parent device (e.g., ventilator, anaesthesia system) for automatic component-specific adjustments (e.g., of ventilator settings) and indications (e.g., wrong connections). Typically constructed of plastic/metal it has a mechanical valve that is actuated by a spring to provide expiratory airway resistance and an adjustable knob that is typically set between 0 and 20 cmH20 pressure. This is a single-use device.	IIb
11914	58267	Lung donor-organ preservation/evaluation system lung-interface set	Уушигны донор-эрхтэн хадгалах/үнэлгээний систем уушиг-интерфэйсийн багц	A collection of disposable devices intended to be used with a lung donor-organ preservation/evaluation system to house, supply oxygen to, and/or manage preservation solution for, the preserved lung(s). It typically consists of the following components: a lung chamber, breathing circuit tubing, a configuration of fluid delivery tubing, a fluid reservoir, oxygenator components, filter(s), sensors, and may also include surgical drapes. This is a single-use device.	IIb

11915	58296	Compartmental-pressure monitoring system, single-use	Тасалгааны даралтын хяналтын систем, нэг удаагийн	An assembly of devices designed to measure and display, periodically or continuously, the interstitial pressure in a closed fascial compartment of muscle. It typically consists of a battery-powered, hand-held, pressure-measuring instrument with a display and connected devices used to access the muscle compartment (e.g., a prefilled syringe, one-way valves, and a side ported noncoring needle and/or slit catheter). It is intended to assess chronic and/or acute compartmental syndrome, a condition of increased intra-compartmental pressures from swelling within muscle compartments and tendon sheaths due to trauma. This is a single-use device.	IIb
11916	58336	Rib/rib cage internal fixation/bracing system	Хавирга / хавирганы торны дотоод бэхэлгээ / бэхэлгээний систем	An assembly of non-sterile devices designed to be used to stabilize traumatic fractures, congenital deformities, and postsurgical deficits of the ribs and rib cage. The assembly typically consists of implantable grips and bars, with an assortment of reusable tools designed for cutting, bending, and crimping the implants. The grips are designed to clasp around a rib and can be used to approximate rib fractures, or they may have arms to hold bracing bars which are designed to bridge across deficits in the rib cage. This is a reusable device after implanted components have been replenished; it must be sterilized prior to each use.	IIb
11917	58340	Rib/rib cage internal fixation/bracing system bracing bar	Хавирга/хавирганы торны дотоод бэхэлгээ/бэхэлгээний системийн бэхэлгээний бар	A non-sterile implantable device intended to be used with rib grip/anchor implants either for internal fixation of a fracture or to bridge a deficit in the rib cage. It is typically a thin bar (approximately 20 cm long), with or without serrations, made of metal [e.g., titanium (Ti)]. It can be surgically removed when required or remain in situ. This device must be sterilized prior to use.	IIb

11918	58357	Gastrointestinal telemetric monitoring system	Ходоод гэдэсний замын телеметрийн хяналтын систем	An assembly of devices designed to continuously measure and transmit signals for one or more gastrointestinal parameters (i.e., pH, pressure, temperature) or events (e.g., gastrointestinal bleeding) from a patient to a receiving location for viewing. It consists of a battery-powered capsule swallowed by the patient, and a patient-worn or clinician-held unit designed to wirelessly receive data from the capsule to either transmit it (i.e., a transceiver) to a computing device or to display it (e.g., a receiver); various solutions/containers may also be included. It is intended to help diagnose gastric pH disorders and/or measure gastrointestinal transit times to evaluate motility disorders.	IIb
11919	58402	Autologous conditioned serum set	Автолог болзолт серумын багц	A collection of sterile devices intended to be used for the production of autologous conditioned serum (ACS) from a specimen of venous blood. It typically includes a syringe that contains surface-treated beads designed to induce blood cells to synthesize increased amounts of cytokines, growth factors, and related proteins; and a needle with tubing (e.g., butterfly cannula) attached to the syringe for venipuncture. This is a single-use device.	IIb
11920	58416	Activated-medium surgical warming blanket	Идэвхжүүлсэн-дунд зэргийн хагалгааны дулааралтын хөнжил	A non-sterile device intended to help prevent a patient from cooling prior to, during, and after a surgical intervention by serving as a heat-generating cover. It is a highly hygienic device made of plastic material and designed with integrated pockets that hold air-activated warming pads containing various media [e.g., active coal, clay, or salt and iron (Fe) powder] that chemically generate heat when the device is removed from its sealed packaging. This is a single-use device.	IIb

11921	58449	Platelet rich fibrin biochemical preparation/application kit, endoscopic	Тромбоцитоор баялаг фибрин биохимийн бэлдмэл/хэрэглээний иж бүрдэл, дурангийн	A collection of sterile devices designed to be used for the biochemical preparation and subsequent delivery of autologous platelet rich fibrin (PRF) to a site of intervention during an endoscopic surgical procedure (e.g., to achieve haemostasis, enhance tissue growth, repair wounds). It typically consists of a dedicated preparation unit (a cassette) with a collection of application devices including an endoscopic applicator, needle, and tubing. Patient blood is contained within the preparation unit which is placed in a production unit (processor) which controls the biochemical processes and centrifugation to produce the PRF. This is a single-use device.	IIb
11922	58450	Platelet rich fibrin biochemical preparation/application kit, open surgery	Тромбоцитоор баялаг фибрин биохимийн бэлдмэл/хэрэглээний иж бүрдэл, нээлттэй мэс засал	A collection of sterile devices designed to be used for the biochemical preparation and subsequent delivery of autologous platelet rich fibrin (PRF) to a site of intervention during open surgery (e.g., to achieve haemostasis, enhance tissue growth, repair wounds). It typically consists of a dedicated preparation unit (a cassette) with a collection of application devices including a spraypen applicator, needle, and tubing. Patient blood is contained within the preparation unit which is placed in a production unit (processor) which controls the biochemical processes and centrifugation to produce the PRF. This is a single-use device.	IIb
11923	58451	Fibrin sealant biochemical preparation/application kit, endoscopic	Фибрин чигжээс биохимийн бэлдмэл/хэрэглээний иж бүрдэл, дурангийн	A collection of sterile devices designed to be used for the biochemical preparation and subsequent delivery of autologous fibrin sealant to a site of intervention during an endoscopic surgical procedure (e.g., to achieve haemostasis, seal air leaks, adhere tissues). It typically consists of a dedicated preparation unit (a cassette) with a collection of application devices including an endoscopic applicator, needle, and tubing. Patient blood is contained within the preparation unit which is placed in a production unit (processor) which controls the biochemical processes and centrifugation to produce the fibrin sealant. This is a single-use device.	IIb

11924	58452	Fibrin sealant biochemical preparation/application kit, open surgery	Фибрин чигжээс биохимийн бэлдмэл/хэрэглээний иж бүрдэл, нээлттэй мэс засал	A collection of sterile devices designed to be used for the biochemical preparation and subsequent delivery of autologous fibrin sealant to a site of intervention during open surgery (e.g., to achieve haemostasis, seal air leaks, adhere tissues). It typically consists of a dedicated preparation unit (a cassette) with a collection of application devices including a spraypen applicator, needle, and tubing. Patient blood is contained within the preparation unit which is placed in a production unit (processor) which controls the biochemical processes and centrifugation to produce the fibrin sealant. This is a single-use device.	IIb
11925	58453	Methylene blue treated plasma filtration set	Метилен цэнхэрээр боловсруулсан плазмын шүүлтүүрийн багц	A collection of sterile devices intended to filter residual methylene blue (MB), MB by-products, and cellular debris, particularly leukocytes, from MB-treated plasma. It typically consists of filters, bags, tubing, and spikes/connectors. Plasma is treated with MB to inactivate viruses prior to therapeutic use. This is a single-use device.	IIb
11926	58454	Radio-frequency skin surface treatment system	Радио давтамжийн арьсны гадаргууг цэвэрлэх систем	An assembly of devices designed to apply radio-frequency (RF) energy to heat the skin surface for ablation, coagulation, and tightening of the skin’s outer later (stratum corneum) for aesthetic skin resurfacing. It primarily consists of a mains electricity (AC-powered) control unit to produce and regulate the RF energy, and a connected bipolar RF applicator (handpiece) to deliver the RF energy to the skin surface; the applicator may include vacuum to facilitate its coupling with the skin.	IIb
11927	58455	Radio-frequency skin surface treatment system applicator	Радио давтамжийн арьсны гадаргууг цэвэрлэх систем түрхэгч	A handpiece component of a radio-frequency skin surface treatment system designed to be used by a healthcare professional to deliver bipolar radio-frequency (RF) energy to the skin surface for skin resurfacing. It is typically designed to deliver RF energy to the skin in a non-homogenous fractional manner, via an array of multi-electrode pins, to leave minimal-impact areas of skin to facilitate healing. The applicator connects with the system’s control unit and may include vacuum to facilitate its coupling with the skin. This is a reusable device.	IIb

11928	58456	Radio-frequency skin surface treatment/fat liquefaction system control unit	Радио давтамжийн арьсны гадаргуугийн эмчилгээ/өөх шингэрүүлэх системийн хяналтын хэсэг	A mains electricity (AC-powered) device designed to supply radio-frequency (RF) energy to dedicated applicators (handpieces) for skin surface treatment and fat liquefaction procedures. It typically includes an RF generator, user interface/controls, and inputs for other system components. It typically provides continuous tissue temperature monitoring, and impedance and power monitoring with tissue overheating safety systems.	IIb
11929	58475	Sodium chloride dressing	Натрийн хлоридын боолт	A sterile material impregnated or saturated with sodium chloride (NaCl) or sodium chloride-based solutions (e.g., Ringer's) intended to be applied to a skin wound to facilitate wound cleansing and healing by absorbing exudates and infectious/necrotic materials from the wound through osmotic action. It is available in various forms (e.g., non-woven material square/rectangle, ribbon) for application to superficial or deep wounds. It is normally used in a healthcare facility or in homecare. This is a single-use device.	IIb
11930	58487	Ultrasound-guided intrauterine radio-frequency ablation system	Хэт авианы удирдамжаар умайн доторх радио давтамжийг арилгах систем	A multicomponent assembly of devices that uses electrical energy in the radio-frequency (RF) band designed to develop heat directly within soft-tissue cells for transcervical and intrauterine ablation of uterine fibroids, and uses ultrasound to target the RF delivery. It consists of a radio-frequency generator, a software-controlled ultrasound system, an intrauterine ultrasound transducer, a monopolar electrosurgical handpiece/electrode, and a return electrode(s). It also typically includes associated cables, and a foot-switch.	IIb

11931	58489	Ultrasound-guided intrauterine radio-frequency ablation system ultrasound control unit	Хэт авианы удирдамжтай intrauterine радио давтамжийг арилгах системийн хэт авианы хяналтын нэгж	A mains electricity (AC-powered) component of an ultrasound-guided intrauterine electrosurgical system designed to provide ultrasound imaging via a transvaginal and intrauterine ultrasound imaging transducer. The imaging is used to guide the radio-frequency (RF) ablation treatment. It typically consists of a laptop computer with an embedded ultrasound engine and installed graphical user interface software, which provides standard ultrasound controls and procedure-specific guidance for fibroid ablation planning, targeting, and procedural workflow.	IIb
11932	58492	Ultrasound-guided intrauterine radio-frequency ablation system intrauterine ultrasound transducer, single-use	Хэт авианы удирдлагатай умай доторх радио давтамжийг арилгах систем Умайн хэт авианы хувиргагч, нэг удаагийн	A component of an ultrasound-guided intrauterine radio-frequency (RF) ablation system designed to convert electric voltages into an ultrasound beam to produce intrauterine ultrasound images used to monitor/guide electrosurgical procedures. It is typically used as part of a dedicated handpiece and is inserted transcervically into the uterus where it is intended to be manually manoeuvred to steer/focus the ultrasound beam for visualization of uterine pathology (e.g., fibroids). This is a single-use device.	IIb
11933	58493	Ultrasound-guided intrauterine radio-frequency ablation system handpiece/electrode	Хэт авианы удирдамжтай умайд радио давтамжийг арилгах системийн гар утас/электрод	A hand-held component of an ultrasound-guided intrauterine electrosurgical system consisting of both a handpiece and a monopolar electrode designed to provide an electrical connection between the output terminals of a dedicated electrosurgical generator and the target tissue (uterine fibroids). The handpiece is also used to deploy an introducer and an intrauterine ultrasound transducer. The electrode typically has an array of needle electrodes at the distal end and the device is connected to the generator proximally. The handpiece has two slider mechanisms to enable accurate advancement of the components controlled by an attached spacer. This is a single-use device.	IIb

11934	58494	Electrosurgical return electrode, single-use	Цахилгаан мэс заслын буцах электрод, нэг удаагийн	A dispersive conductor intended to be fastened to a patient and connected to an electrosurgical/radio-frequency ablation system generator, to allow return of electrical current from the patient to the generator during an electrosurgical procedure. It has a large surface area and is fastened to the patient's body typically where the greatest surface area can be covered in closest proximity to the surgical site. It will typically be designed with permanently attached leads. This is a single-use device.	IIb
11935	58502	Pliable-polymer dental regeneration membrane, bioabsorbable, ligated	Шүдний нөхөн төлжих уян хатан полимер мембран, био шингэдэг, холбосон	A sterile bioabsorbable material intended to be used to aid in the regeneration of tooth support, lost due to periodontal disease or trauma, by acting as a barrier to prevent the down-growth of soft tissue (connective tissue and epithelial cells) into the underlying bone during the healing period. It is a pliable synthetic polymer material that is held in place between soft tissue and bone [e.g., with ligatures, sutures, or pins (may be attached/included)] and applied during periodontal flap surgery and other guided bone regeneration (GBR) and guided tissue regeneration (GTR) surgical procedures. A plasticizer to soften the membrane may be included. This is a single-use device.	IIb
11936	58503	Pliable-polymer dental regeneration membrane, bioabsorbable, tacked	Шүдний нөхөн сэргээх уян полимер мембран, био шингэдэг, наалттай	A sterile bioabsorbable material intended to be used to aid in the regeneration of tooth support, lost due to periodontal disease or trauma, by acting as a barrier to prevent the down-growth of soft tissue (connective tissue and epithelial cells) into the underlying bone during the healing period. It is a synthetic polymer material that is held in place with bioabsorbable tacks fixed into the jawbone; it is applied between soft tissue and bone during periodontal flap surgery and other guided bone regeneration (GBR) and guided tissue regeneration (GTR) surgical procedures. The tacks and a plasticizer used to temporarily soften the membrane may be included. This is a single-use device.	IIb

11937	58519	Video-camera epiretinal prosthesis system	Видео камерын эпиретиналь протезийн систем	An assembly of devices designed to provide visual function to a patient with vision loss due to outer retinal degeneration by capturing video images and relaying them via the central retina to the brain. It consists of an extra-orbital implant which includes a receiver and electronics, with an electrode array attached intra-orbitally to the retina; spectacles which contain a miniature video camera and a coil that sends power and stimulation commands to the implant; a radio-frequency (RF) coil for intraoperative testing; a body-worn visual processing unit which converts the video images into stimulation commands; and hardware and software used to test the implant and external equipment.	IIb
11938	58520	Video-camera epiretinal prosthesis system orbital implant	Видео камерын эпиретиналь протезийн систем тойрог замын суулгац	A sterile implantable component of a video-camera epiretinal prosthesis system designed to be implanted around and inside the eye for neural stimulation of the retina via an electrode array that is attached to the retina with a retinal tack. It consists of an electronics case, an implant coil, an epiretinal electrode array, and a scleral band, and is powered and receives stimulation commands from a visual processing unit which processes the image from the camera mounted on the spectacles and transforms it into electrical stimulation patterns. The power and commands are transmitted wirelessly to the implant from a coil on the spectacles.	IIb
11939	58521	Video-camera epiretinal prosthesis system camera spectacles	Видео камерын эпиретин протезийн системийн камерын нүдний шил	An electronic component of a video-camera epiretinal prosthesis system in the form of custom-made spectacles worn by the patient. The device houses a miniature video camera designed to capture video images which are relayed to the system visual processing unit, via a cable, for conversion into electrical stimulation patterns. This data is then sent via a cable to a receiving/transmitter coil mounted on the spectacles, which sends both data and power via telemetry to the epiretinal prosthesis orbital implant.	IIb

11940	58523	Video-camera epiretinal prosthesis system visual processing unit	Видео камерын эпиретин протезийн системийн харааны боловсруулалтын нэгж	A battery-powered, body-worn component of a video-camera epiretinal prosthesis system designed to convert video images captured by the system spectacles camera into electrical stimulation commands, which are relayed to the system implant via the spectacles. It is connected to the spectacles by a cable. It also typically collects data on the system function, which can be monitored by a clinician during treatment.	IIb
11941	58725	Mobile extracorporeal gas exchange system cartridge kit	Хөдөлгөөнт экстракорпораль хийн солилцооны системийн хайрцагны иж бүрдэл	A sterile component of a mobile extracorporeal gas exchange system intended to function as a gas exchanger and blood pump. It contains an integrated centrifugal pump that is powered by magnetic coupling to a motor in the system control unit. The pump circulates blood and a sweep gas so that they flow past a separating hollow-fibre membrane which allows diffusion of carbon dioxide from the blood to the sweep gas, and oxygen in the opposite direction. It typically includes a soda lime column, tubing sets for blood to and from the device, tubing for sweep gas, a vacuum canister, and assorted tools for changing and closure. This is a single-use device.	IIb
11942	58736	Self-expandable heart valve prosthesis collapsing tool base	Өөрөө тэлэх зүрхний хавхлагын протезийн эвдрэх багажны суурь	A plate-like device designed to function as a sturdy support (base) for a self-expanding cardiac valve prosthesis collapsing tool during the procedure where the tool is used to reduce the diameter of a self-expanding cardiac valve prosthesis to facilitate its implantation. It typically consists of a stainless steel plate-like base with holes and slots for attachment of the collapsing tool, and supports for alignment of the valve holder. This is a reusable device intended to be sterilized prior to use.	IIb

11943	58740	Dental/maxillofacial soft-tissue biomatrix implant, animal-derived	Шүд/эрүү нүүрний зөөлөн эдийн биоматрикс суулгац, амьтны гаралтай	A bioabsorbable animal-derived collagen (e.g., porcine) intended to be used to aid in the regeneration of oral soft tissue, lost due to periodontal disease or trauma, through promotion of new blood vessels and/or by providing a temporary scaffold for tissue ingrowth; it is indicated for various oral soft tissue augmentation procedures (e.g., alveolar ridge reconstruction, localized gingival augmentation, covering of recession defects and extraction sockets). It is a pliable material which may be fixed to soft tissues with sutures; it is applied to soft tissue during periodontal flap surgery and guided tissue regeneration (GTR) surgical procedures. This is a single-use device.	IIb
11944	58741	Microbe-binding hydrophobic dressing	Микробыг холбогч гидрофобик боолт	A sterile wound covering intended to remove microorganisms (bacteria, fungi) from a wound site through hydrophobic binding, and subsequent dressing removal/exchange. It is a fabric material (e.g., cellulose acetate, cotton) available in various forms, with a strongly hydrophobic surface (e.g., covered by a fatty acid ester). It is intended to be applied to a variety of clean, contaminated, colonized or infected wounds (e.g., trauma wounds, surgical wounds, diabetic ulcers, pressure ulcers, burns) to reduce the levels of microorganisms and promote wound healing. This is a single-use device.	IIb
11945	58743	Internal-external leg prosthesis osseointegration bar	Дотор-гадна хөлний протезийн osseointegration bar	A rod with a screw-like or press-fit design intended to be implanted into the residual bone of a lower limb (e.g., femur, tibia) after amputation to function as an anchoring fixture and stabilizing bar for the connection of an internal-external leg prosthesis. It is designed to project beyond the bone but not through the skin so that a protruding trans-stomal connector/abutment can be attached to its distal end to interface with the external prosthesis. It is typically composed of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and has a porous surface intended to improve fixation by promoting bone ingrowth (osseointegration).	IIb

11946	58786	Dermatological diode laser system	Арьс судлалын диод лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite a diode to emit a high-power therapeutic laser beam designed to perform dermatological procedures such as body hair removal (e.g., armpit, leg/arm, back, chest, bikini line, and face) and/or skin resurfacing (e.g., treatment of benign lesions, wrinkle reduction). It is intended to be used by a trained professional to emit pulsed light of a specific wavelength (e.g., around 808 nm or 1060 nm), delivered by a dedicated handpiece. It typically includes a control unit with dedicated software and user interface, delivery handpiece, and footswitch.	IIb
11947	58801	Foetal pleuro-amniotic catheter	Ургийн плевро-амнион катетер	A sterile, implantable, plastic tubular device designed to drain fluid from the foetal pleural cavity into the amniotic cavity to treat foetal pleural effusion that would otherwise prevent normal lung development. It is a short (e.g., 6 cm) straight catheter with a basket-like, self-expanding retainer at each end, which is inserted under ultrasound control via the maternal abdomen, and intended to be left in situ for the duration of the pregnancy. Disposable devices dedicated to catheter introduction (e.g., trocar blade, cannula, pusher, guidewire) may be included. This is a single-use device.	IIb
11948	58836	Irreversible electroporation system	Эргэшгүй электропорацийн систем	A mobile assembly of devices designed to apply a series of microsecond electrical pulses to tissue to produce irreversible cell membrane electroporation, a phenomenon that induces cell membrane pores to open resulting in loss of homeostasis and subsequent cell death. The system typically consists of both a mains electricity (AC-powered) computerized current generator with user interface and controls (e.g., foot-switch), and additional necessary components such as electrocardiogram (ECG) trigger monitor and sterile needle-like electrode probes. It is intended for the nonthermal surgical ablation of soft-tissues (e.g., tumours, endothelium).	IIb

11949	58845	Alternating electric field antimitotic cancer treatment system	Хувьсах цахилгаан талбайн антимитотик хорт хавдрын эмчилгээний систем	An assembly of portable devices designed to apply low-intensity, intermediate-frequency (100-300 kHz) alternating electric fields to treat certain forms of recurrent or newly-diagnosed cancer; typically glioblastoma multiforme (GBM) [malignant brain tumour]. Also known as tumour treatment fields (TTFields) or (TTF), the treatment is usually intended to be used as a home-use supplement to primary therapies (e.g., surgery, radiotherapy, and/or chemotherapy) and is intended to destroy rapidly dividing cells with little effect on normal cells. The system primarily consists of a battery-powered alternating-current generator, a disposable transducer array, a battery pack, and a battery charger.	IIb
11950	58846	Alternating electric field antimitotic cancer treatment system transducer array	Хувьсах цахилгаан талбайн антимитотик хорт хавдрын эмчилгээний системийн хувиргагч массив	A sterile, disposable, head-worn component of an alternating electric field cancer treatment system designed to convert intermediate-frequency (100-300 kHz) alternating electric current to low-intensity alternating electric fields to treat certain forms of recurrent or newly-diagnosed cancer; typically glioblastoma multiforme (GBM) [malignant brain tumour]. Otherwise known as insulated field inducing electrodes (INE), the device is connected to an alternating current generator and consists of an array of ceramic discs contained in a plastic membrane, and is intended to be worn continuously for a period of 3-4 days before disposal. This is single-use device.	IIb
11951	58847	Alternating electric field antimitotic cancer treatment system generator	Хувьсах цахилгаан талбайн антимитотик хорт хавдрын эмчилгээний системийн генератор	A portable, battery-powered component of an alternating electric field cancer treatment system designed to generate intermediate-frequency (100-300 kHz) alternating electric current to treat certain forms of recurrent or newly-diagnosed cancer; typically glioblastoma multiforme (GBM) [malignant brain tumour]. Also known as tumour treatment fields (TTFields) or (TTF), the treatment is usually intended to be used as a home-use supplement to primary therapies (e.g., surgery, radiotherapy, and/or chemotherapy). Designed to be carried by the patient it is powered by a rechargeable battery pack or via a mains power supply and is connected to a head-worn transducer array via a connection cable.	IIb

11952	58882	Prostatic retraction implant	Түрүү булчирхайг татах суулгац	A sterile implantable device intended to increase prostatic urethral patency, and thereby relieve lower urinary tract symptoms (LUTS) due to benign prostatic hypertrophy (BPH), by physically compressing the prostate gland by retraction. The implant is in the form of a two orthogonal tags (e.g., metal) held together by a suture (e.g., monofilament), and is introduced so that one tag is outside the prostatic capsule and the other is in the urethra, with the suture providing retraction. It is not intended to be explanted. The device is implanted using a dedicated, single-use, hand-held, pistol-like delivery device through the sheath of a rigid endoscope.	IIb
11953	58893	Renal denervation radio-frequency ablation catheter	Бөөрний мэдрэлийг арилгах радио давтамжийн катетер	A sterile, steerable, thin, flexible tube containing one or more monopolar electrodes intended to be introduced percutaneously into the renal artery to transmit precisely-focused, low-level, radio-frequency (RF) current, from a connected RF generator, to disrupt renal nerves for therapeutic denervation of the kidney; commonly known as renal denervation (RDN). The device has embedded metallic electrodes and may be available in a variety of forms (e.g., deflectable tip, balloon catheter). This is a single-use device.	IIb
11954	58908	Custom-made cranial bone prosthesis	Захиалгат гавлын ясны протез	An implantable device intended to repair a defect of the cranium or mandible that is designed and constructed with specific characteristics (e.g., size, shape, material) as prescribed by a healthcare provider for a specified patient. It is typically manufactured from a three-dimensional (3-D) model based on computed tomography (CT) images and made of plastic [e.g., ultrahigh molecular weight polyethylene (UHMWPE), polyetheretherketone (PEEK)] and/or metal [e.g., titanium (Ti)]. The device may be used to repair defects due to injury, surgical intervention for tumour removal, congenital anomaly, or disease, or for cosmetic/aesthetic purposes.	IIb

11955	58931	Non-antimicrobial wound irrigation solution, multiple solute	Нянгийн эсрэг бус шархны усалгааны уусмал, олон ууссан бодис	A solution of electrolytes sometimes with other compounds [not limited to sodium chloride (NaCl), therefore not a saline solution], intended to be used to irrigate and clean a superficial skin wound to support natural healing; it is not intended to provide antimicrobial activity. The device may be supplied in a plastic container with a spray nozzle and is intended to be used in the home or healthcare facility. After application, this device cannot be reused.	IIb
11956	58938	Dietary multiple-macronutrient absorption inhibitor	Хоолны олон макро шим тэжээлийн дарангуйлагч	An orally-administered device intended to facilitate weight loss and treat obesity by reducing absorption of multiple macronutrients (e.g., carbohydrates and fats, or carbohydrates, fats, and proteins). It is designed to interfere with the absorption of the nutrients by either interfering with the activity of digestive enzymes, or by creating a complex that is too large to be absorbed and which may increase viscosity and hydration of the gastrointestinal content; it may create the sensation of fullness. It is available in tablet, capsule, or powder sachet forms for use in the home or healthcare facility. This is a single-use device.	IIb
11957	59025	Ultrasound thrombolysis system control unit	Хэт авианы тромболизийн системийн хяналтын хэсэг	An electrically-powered device designed to generate high-frequency, low-energy ultrasound for intravascular administration to help disrupt clotted blood (i.e., a thrombus or thromboembolus). It is designed to be used with a dedicated infusion catheter for thrombolytic drug administration. The ultrasound is intended to prepare the clot by unwinding the fibrin strands, therefore enabling increased drug permeation through the clot to the vessel wall. It typically consists of a user interface, piezoelectric transducer, and one or more rechargeable battery for independent/mobile use. This is a reusable device.	IIb

11958	59026	Ultrasound thrombolysis system catheter, peripheral	Хэт авианы тромболизийн системийн катетер, захын	A flexible tube designed for the percutaneous intravascular administration of high-frequency, low-energy ultrasound and drugs [e.g., tissue plasminogen activator (tPA)] for the disruption of clotted blood (i.e., a thrombus or thromboembolus) in a peripheral artery. It typically consists of a side-hole drug infusion catheter with a multi-element ultrasound core wire. The ultrasound is intended to prepare the clot by unwinding the fibrin strands, therefore enabling increased drug permeation through the clot to the vessel wall. It is a component of a system that includes a control unit to deliver the ultrasound. This is a single-use device.	IIb
11959	59043	Dermatological extracorporeal shock wave therapy system	Арьс судлалын экстракорпораль шок долгионы эмчилгээний систем	An assembly of devices designed to provide spark-gap-generated extracorporeal shock wave therapy (ESWT) intended to treat acute and chronic conditions of the skin and subcutaneous soft tissues (e.g., arterial, venous, diabetic or pressure ulcers; burns; postoperative or traumatic wounds; cellulite). It typically consists of a generator that supplies the high voltage energy; and a hand-held, fluid-filled, shock wave applicator that produces spark-gap (electrohydraulic) energy delivered non-invasively to the area of the skin in contact with the applicator. Treatment parameters are intended to be input manually or from a pre-programmed radio-frequency identification (RFID) card.	IIb
11960	59081	Enteral tube tracking system transmitter stylet	Enteral гуурсан хоолойн хяналтын систем дамжуулагч стилет	A non-sterile, thin, flexible wire with an electromagnetic (EM) transmitter at the distal end that is a component of an enteral tube tracking system and intended to be used as a stylet for an enteral feeding tube with which it is supplied. It is designed to facilitate the placement of the enteral tube by providing a signal used to create a graphic display representing the path of the tube tip. During use it is typically connected to a visual display/control unit and is used with an electromagnetic transmission receiver placed on the epigastrium. This is a reusable device intended for single-patient use.	IIb

11961	59124	Wound therapy oxygenator, single-use	Шархыг эмчлэх хүчилтөрөгч, нэг удаагийн хэрэглээ	A wearable, battery-powered device designed to actively promote continuous diffusion of oxygen (CDO) in a wound to help heal various types of wounds (e.g., arterial, venous, diabetic or pressure ulcers; burns; postoperative or traumatic wounds). It is intended to concentrate oxygen (O2) from ambient air and pump it through an included sterile delivery tube intended to be secured to the wound bed, which is typically covered by an absorbent and occlusive dressing. It is intended to be used continuously over a prescribed period, being discarded and replaced along with the dressing as required. This is a single-use device.	IIb
11962	59223	Ultrasound thrombolysis system catheter, pulmonary	Хэт авианы тромболизийн системийн катетер, уушигны	A flexible tube designed for the percutaneous intravascular administration of high-frequency, low-energy ultrasound and drugs [e.g., tissue plasminogen activator (tPA)] for the disruption of clotted blood (i.e., a thrombus or thromboembolus) in the pulmonary arterial system. It typically consists of a side-hole drug infusion catheter with a multi-element ultrasound core wire. The ultrasound is intended to prepare the clot by unwinding the fibrin strands, therefore enabling increased drug permeation through the clot to the vessel wall. It is a component of a system that includes a control unit to deliver the ultrasound. This is a single-use device.	IIb
11963	59233	Stationary orthovoltage therapeutic x-ray system	Суурин ортовольтийн эмчилгээний рентген систем	An assembly of devices designed to produce low-energy x-rays used for therapeutic purposes, primarily in the treatment of skin cancer (e.g., basal cell or squamous cell carcinoma) or other skin conditions (e.g., psoriasis, keloid). The radiation source typically uses a tube voltage of between approximately 100 kV and 500 kV and will be used in conjunction with a variety of topical applicators. The main system is ceiling- or wall-mounted (fixed) in a radiotherapy suite or other clinical setting.	IIb

11964	59370	Remotely-controlled tissue expander	Алсын удирдлагатай эд эс тэлэгч	A device intended for implantation to develop tissue (skin) coverage by intermittent expansion, which can be remotely controlled by the patient or physician, prior to the placement of a permanent breast implant. Expansion is achieved by electronic release of gas [e.g., carbon dioxide (CO_2)] from a pressurized container within the device. It typically consists of an outer silicone shell, an inner gas barrier, a reservoir of gas with valve, and electronics. It is intended to remain in situ until desired expansion is achieved, when it is replaced with the breast implant. This is a single-use device.	IIb
11965	59683	Intraoperative/postoperative therapeutic x-ray system surface applicator	Хагалгааны дотор/хагалгааны дараах эмчилгээний рентген системийн гадаргуугийн түрхэгч	A non-sterile component of an intraoperative/postoperative therapeutic x-ray system designed to be attached to and cover the x-ray source for direct patient contact when the system is used for the treatment of certain clinical conditions (e.g., skin tumours). It has a flat distal end that is typically used to irradiate a body surface treatment site, e.g., skin that does not need surgical exposure. It is typically supplied in a range of sizes (diameters). This is a reusable device intended to be sterilized prior to use.	IIb
11966	59868	Open-surgery manual linear cutting stapler, reprocessed	Нээлттэй мэс заслын гарын авлагын шугаман зүсэх үдэгч, дахин боловсруулсан	A sterile, hand-held, manual surgical instrument intended to be used during open surgery (including abdominal, gynaecological, paediatric, or thoracic surgery) for the expeditious transection/resection of tissues and creation of anastomoses. It operates by a manual mechanism whereby it cuts the tissues (e.g., colon) and simultaneously applies single or multiple linear rows of surgical staples to the resulting ends, eliminating the need for temporary clamping. The staples and cutting blade may be housed in a single-use loading unit (SULU) which may be included. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIb

11967	59869	Endoscopic manual linear cutting stapler, reprocessed	Дурангийн гар аргаар шугаман зүсэх үдэгч, дахин боловсруулсан	A sterile, hand-held, manual surgical instrument intended to be used during endoscopic surgery, for the expeditious transection/resection of tissues and creation of anastomoses; it may also be used during open surgery. The device operates by a manual mechanism whereby it cuts the tissues (e.g., colon) and simultaneously applies single or multiple linear rows of surgical staples to the resulting ends. The staples and cutting blade may be housed in a single-use loading unit (SULU) which may be included. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIb
11968	59870	Open-surgery manual linear cutting stapler, single-use	Нээлттэй мэс заслын гарын авлагын шугаман зүсэх үдэгч, нэг удаагийн хэрэглээ	A sterile, hand-held, manual surgical instrument intended to be used during open surgery (including abdominal, gynaecological, paediatric, or thoracic surgery) for the expeditious transection/resection of tissues and creation of anastomoses. The device operates by a manual mechanism (e.g., lever, sliding knob) whereby it cuts the tissues (e.g., colon) and simultaneously applies single or multiple linear rows of surgical staples to the resulting ends, eliminating the need for temporary clamping. The staples and cutting blade may be housed in a single-use loading unit (SULU) which may be included. This is a single-use device.	IIb
11969	59871	Endoscopic manual linear cutting stapler, single-use	Дурангийн гар аргаар шугаман зүсэх үдэгч, нэг удаагийн хэрэглээ	A sterile, hand-held, manual surgical instrument intended to be used during endoscopic surgery for the expeditious transection/resection of tissues and creation of anastomoses; it may also be used during open surgery. The device operates by a manual mechanism (e.g., trigger mechanism) whereby it cuts the tissues (e.g., colon) and simultaneously applies single or multiple linear rows of surgical staples to the resulting ends, eliminating the need for temporary clamping. The staples and cutting blade may be housed in a single-use loading unit (SULU) which may be included. This is a single-use device.	IIb

11970	59872	Open-surgery manual linear stapler, reusable	Нээлттэй мэс заслын гарын авлагын шугаман үдэгч, дахин ашиглах боломжтой	A hand-held, manual surgical instrument intended to be used during open surgery (including abdominal, gynaecological, paediatric, or thoracic surgery) for the application of surgical staples to approximate internal soft tissues (e.g., two ends of bowel) or for fixation of a surgical mesh to tissue. The device operates by a manual mechanism (e.g., lever, sliding knob) whereby it applies single or multiple linear rows of surgical staples to a portion of tissue; it has no cutting function. The staples may be housed in a single-use loading unit (SULU) which may be included. This is a reusable device intended to be sterilized prior to use.	IIb
11971	59873	Open-surgery manual linear stapler, single-use	Нээлттэй мэс заслын гарын авлагын шугаман үдэгч, нэг удаагийн	A sterile, hand-held, manual surgical instrument intended to be used during open surgery (including abdominal, gynaecological, paediatric, or thoracic surgery) for the application of surgical staples to approximate internal soft tissues (e.g., two ends of bowel) or for fixation of a surgical mesh to tissue. The device operates by a manual mechanism (e.g., lever, sliding knob) whereby it applies single or multiple linear rows of surgical staples to a portion of tissue; it has no cutting function. The staples may be housed in a single-use loading unit (SULU) which may be included. This is a single-use device.	IIb
11972	59875	Intraluminal circular stapler, single-use	Доторх дугуй үдэгч, нэг удаагийн хэрэглээ	A sterile, hand-held, manual surgical instrument intended to be used during open or laparoscopic surgical procedures of the alimentary tract, to create anastomoses (e.g., end-to-end, end-to-side, or side-to-side) via intraluminal (within the lumen) resection. It is designed to connect two portions of lumen (e.g., colon) with a single or multiple circular rows of staples, and then cut out the tissue within the staple line to create a new channel. This device operates via a manual lever mechanism and may be available in a variety of sizes appropriate to a specific luminal diameter. This is a single-use device.	IIb

11973	59942	Stationary pneumatic high-frequency ventilator	Суурин пневматик өндөр давтамжийн агааржуулалт	A pneumatically-powered automatic cycling machine designed for static use and intended to assist or control alveolar ventilation using a frequency that is considerably higher than the physiological breathing rate and a tidal volume less than or equal to the anatomic dead space. The device will typically function independently or may be used in conjunction with an intensive care ventilator to superimpose its high frequency percussive ventilation on top of a normal ventilation frequency. It is typically used in critical care situations on patients with respiratory disease requiring ventilatory assistance, typically through an artificial airway [e.g., endotracheal (ET) tube or tracheostomy].	IIb
11974	59943	Portable pneumatic high-frequency ventilator	Зөөврийн пневматик өндөр давтамжийн агааржуулалт	A pneumatically-powered device designed to be easily moved/mounted and intended to provide long-term support or therapeutic alveolar ventilation for patients who do not require complex critical care ventilation. It typically uses positive pressure to deliver gas to the lungs using a frequency that is considerably higher than physiological breathing rates and a tidal volume less than or equal to the anatomic dead space (percussive ventilation), typically through an endotracheal (ET) tube, tracheostomy cannula, or mask. It typically includes a control system and alarms, sometimes with additional features (e.g., humidification).	IIb
11975	59944	Transport pneumatic high-frequency ventilator	Тээвэрлэлтийн хийн өндөр давтамжийн агааржуулалт	A pneumatically-powered automatic cycling machine intended to provide automated, alveolar ventilatory support for patients during interhospital or intrahospital transport, and in emergency situations. It is used to assist or control alveolar ventilation using a frequency that is considerably higher than the physiological breathing rate and a tidal volume less than or equal to the anatomic dead space (percussive ventilation). It is typically a compact, lightweight, rugged device powered either by institutional gas supply or on-board compressor systems, with manually-operated user interface. It is used in conjunction with an endotracheal (ET) tube, tracheostomy cannula, or mask.	IIb

11976	59945	Stationary pneumatic high-frequency ventilator respiration monitor	Суурин пневматик өндөр давтамжийн агааржуулалтын амьсгалын хяналт	A mains electricity (AC-powered) device intended to continuously measure and display respiratory variables associated with the operation of a stationary pneumatic high-frequency ventilator. Measurements include proximal airway pressure, high-frequency percussive rates, mean airway pressures and inspiratory and expiratory times. It is typically equipped with audible and/or visual alarms that are triggered when respiratory parameters drop below or exceed pre-set limits, and connectors for attachment to the ventilator. It may be used for neonatal, paediatric, and adult patients.	IIb
11977	59952	Bone strength measuring unit electronic module	Ясны бат бэхийг хэмжих нэгж электрон модуль	A non-sterile, battery-powered, electronic device intended to be used with a bone strength measuring unit to measure the torque required to mechanically twist the unit probe when inserted into bone at the intended location of an orthopaedic fixation device. It also typically stores the data for later connection to a computer for display. It is typically inserted into the sterilized, assembled unit during an orthopaedic operation [e.g., proximal femoral nail anti-rotation (PFNA) fracture fixation, dynamic hip screw]. The measurement is intended to identify patients with a higher risk of fixation failure. This is a reusable device.	IIb
11978	59959	Cerebrospinal fluid pressure regulation system control unit/pump	Тархи нугасны шингэний даралтыг зохицуулах системийн хяналтын нэгж/насос	A mains electricity (AC-powered) device, with a rechargeable battery, that is a component of a cerebrospinal fluid pressure regulation system designed to monitor/display cerebrospinal fluid (CSF) pressure, and to aspirate CSF at a rate regulated by CSF pressure, using a peristaltic pump. It is a software-controlled, electronic unit that is connected proximally to a disposable pressure sensor/tubing set and distally to a disposable collection set. It typically has a screen and controls to act as a user interface, and has alarms to signal when pressure measurements indicate possible complications (e.g., catheter occlusion, collapsed ventricle).	IIb

11979	59960	Cerebrospinal fluid pressure regulation system sensor/tubing set	Тархи нугасны шингэний даралтыг зохицуулах системийн мэдрэгч/гуурсан хоолойн багц	A sterile component of a cerebrospinal fluid pressure regulation system that consists of tubing and/or an integrated mechanical pressure sensor designed to monitor cerebrospinal fluid (CSF) pressure to regulate drainage rate. It is intended to be taped to the patient's skin at a specified level and connected proximally to a dedicated CSF access device (e.g., catheter, needle), and distally to a CSF drainage control unit/pump. This is a single-use device.	IIb
11980	60115	Magnetic cell separation magnet	Соронзон эсийг тусгаарлах соронз	A device featuring a permanent magnet designed to be used for the magnetic separation of specific cell types or subpopulations from heterogeneous human cell preparations. It typically functions in combination with a magnetizing reagent and buffered solution to separate the target cell population by retention in a magnetic field. This device is typically used in regenerative and in vitro fertilization (IVF)/assisted reproduction technique (ART) medicine, or during diagnostic testing of specific cell populations to support diagnosis of certain conditions. This is a reusable device.	IIb
11981	60328	Calibration gas cylinder regulator	Тохируулгын хийн цилиндр зохицуулагч	A reduction valve designed to be attached through a gastight connector (e.g., a pin-index or bull-nosed screw thread connection) to the valve stem of an calibration gas cylinder to lower high, variable gas pressure to a lower, constant working pressure, and may provide a pre-set flow rate of calibration gas for calibration of e.g., an anaesthesia monitor. It can be a single or a dual stage regulator, usually of a piston or diaphragm design. It will have a safety relief valve to avoid excessive pressure due to increased ambient temperatures, and it may have associated devices, usually a manometer or manometers, to display the available gas reserve of a gas cylinder and the working pressure.	IIb

11982	60340	Dental diode laser system	Шүдний диодын лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite a diode to emit a high-power therapeutic laser beam intended to cut, excise, vaporize, and coagulate oral tissues in various dental applications such as oral soft-tissue surgery, gingivectomy, to diminish inflammation, and for oral therapy and tooth whitening; it is not a dedicated tooth-bleaching acceleration unit. It includes a portable diode laser light source, flexible fibreoptic delivery cable, and controls/foot-switch; it may include a rechargeable battery.	IIb
11983	60367	Cervical spine immobilization system, single-use	Умайн хүзүүний нурууг хөдөлгөөнгүй болгох систем, нэг удаагийн хэрэглээ	An assembly of orthopaedic devices designed to immobilize the cervical spine (the bones in the neck) after an injury or surgery, to protect the bones from damaging movement during the healing processes. Commonly known as a Halo vest, it typically consists of a ring(s) around the head (the halo) which is attached to the skull with threaded bolts, a special padded vest/harness, four rods with locking mechanisms connecting the head ring to the vest, together with the appropriate instrumentation. This device may be made of ferrous or non-ferromagnetically active materials [to allow magnetic resonance imaging (MRI)], and is available in various sizes. This is a single-use device.	IIb
11984	60379	Basic male condom, animal-derived	Үндсэн эрэгтэй бэлгэвч, амьтны гаралтай	A sheath made from animal-derived materials (e.g., lambskin) intended to completely cover the penis during coitus to prevent sperm from gaining access to the female reproductive tract. It is indicated only for the prevention of pregnancy and not for the prevention of sexually transmitted infections (STI) and typically contains lubricants. This is a single-use device.	IIb
11985	60386	Intense pulsed light dry eye therapy unit	Хүчтэй импульсийн гэрлийн хуурай нүдний эмчилгээний хэсэг	A portable mains electricity (AC-powered) device intended to treat meibomian blepharitis (dry eye syndrome) by targeting the skin surrounding the meibomian glands (around the eyelid) with intense pulsed light (IPL). It consists of a generator connected to a light-emitting handpiece, and typically includes skin contact gel and light shielding safety glasses. It is intended to be operated by a healthcare professional in a clinical setting.	IIb

11986	60389	Atherectomy excimer laser system	Атерэктоми эксимер лазер систем	A mains electricity (AC-powered) device assembly in which input energy is used to excite an excimer gas to emit a high-power laser beam intended for the intraluminal photoablation or debulking of vascular lesion material (blockages, total occlusions), and sometimes to photoablate tissue attached to the leads of active implantable devices. It is intended to be used with an atherectomy catheter and typically consists of an electrical unit with a display, controls and/or foot-switch.	IIb
11987	60405	Coitus kit, Hevea-latex condom	Coitus иж бүрдэл, Hevea-латекс бэлгэвч	A collection of devices intended to be used during sexual intercourse to prevent pregnancy and/or transmission of sexually transmitted infections (STI), and to enhance the sexual experience. The kit includes a basic male condom made of Hevea natural rubber latex (NRL) and one or more accessories intended to improve coitus (e.g., separate lubricant, mechanical sexual stimulator). This is a single-use device.	IIb
11988	60406	Coitus kit, synthetic polymer condom	Coitus иж бүрдэл, синтетик полимер бэлгэвч	A collection of devices intended to be used during sexual intercourse to prevent pregnancy and/or transmission of sexually transmitted infections (STI), and to enhance the sexual experience. The kit includes a basic male condom made of synthetic polymer and one or more accessories intended to improve coitus (e.g., separate lubricant, mechanical sexual stimulator). This is a single-use device.	IIb
11989	60411	Arthrodesis nail, non-sterile	Артродезийн хадаас, ариутгагдаагүй	A non-sterile rod made of metal or other material (e.g., carbon fibre) designed to be inserted into the intramedullary canal of any long bone [e.g., femur, tibia, humerus (including fixation of the glenoid), talus, fibula, radius, ulna] to immobilize by holding the ends of a fractured or diseased bone together (i.e., in position) for the purpose of joint fusion or arthrodesis (an operation to permanently fix a joint in position). The device is used for traumatic repair or reconstructive procedures; it may include screws if locked into place. This is a single-use device intended to be sterilized prior to use.	IIb

11990	60412	Sexual lubricant	Бэлгийн тосолгооны материал	A substance (e.g., a gel or jelly) intended to be applied to the penis, vagina and/or anus for lubrication during sexual intercourse or to be used with a sexual vibrator. This substance contains no pharmaceutical ingredients. After application, this device cannot be reused.	IIb
11991	60420	Stoma support implant	Стома дэмжих суулгац	A sterile, non-bioabsorbable device intended to be implanted into the abdominal wall during a gastro-urological ostomy procedure to reduce the risk of parastomal hernia by supporting the abdominal wall surrounding the stoma. It is made of synthetic polymer material, typically in the form of a woven collar with a flange available in a variety of sizes. This is a single-use device.	IIb
11992	60472	Radio-frequency identification patient positioning/tracking system	Радио давтамжийн тусламжтайгаар өвчтөний байрлалыг тодорхойлох/хянах систем	An assembly of hardware/software devices intended to employ radio-frequency identification (RFID) techniques to aid in the correct identification and positioning of the patient during a diagnostic imaging, treatment planning or radiation therapy procedure. It typically consists of RFID tags worn by the patient or embedded/attached to treatment accessories, a RFID reader, optical markers and optical camera, monitor, and hand-held control unit; it may also use an infrared tracking camera and/or a video camera.	IIb
11993	60483	Anaesthetic gas absorption/desorption device	Мэдээ алдуулагч хий шингээх/десорбц хийх төхөөрөмж	A non-sterile device intended to, when integrated within the common line of a breathing circuit (open or partial rebreathing), absorb and desorb (i.e., recycle) exhaled volatile anaesthetic agents; it may also be used to facilitate monitoring (e.g., gas concentration and pressure, breathing activity) via connection to breathing system components. It is typically a housing containing an anaesthetic gas absorption/desorption filter, and may include sensors. This is a reusable device.	IIb

11994	60505	Vertebral bone filler, non-bioabsorbable	Нугаламын яс дүүргэгч, био шингэдэггүй	A sterile substance intended to be used to replace cortical/cancellous bone in a vertebral body to stabilize vertebral compression fractures (VCFs) caused by cancer, osteoporosis, or trauma. The device may be a sterile powder of a synthetic polymer [e.g., polymethylmethacrylate (PMMA)] that is mixed with its sterile diluent, or a non-PMMA-containing elastomer formed by mixing two precursors, prior to implantation typically during a balloon kyphoplasty or vertebroplasty procedure. This device does not contain an antibiotic agent. After application, this device cannot be reused.	IIb
11995	60515	Combination-material acetabulum prosthesis	Холимог материалтай ацетабулум протез	A sterile implantable principal component of a total hip prosthesis (acetabular component) designed to replace or repair the acetabulum. The component is of a one-piece construction and is made of a combination of metal, ceramic, and/or polyethylene (PE); it may include fixation devices (e.g., screws) for attachment to the body.	IIb
11996	60516	Metallic acetabulum prosthesis	Металл ацетабулум протез	A sterile implantable principal component of a total hip prosthesis (acetabular component) designed to replace or repair the acetabulum. The component is of a one-piece construction and is made entirely of metal [e.g., stainless steel, titanium (Ti)]. Devices designed to assist implantation/fixation (e.g., screws, surgical guides, trial prosthesis, anatomical models) may be included.	IIb
11997	60517	Ceramic acetabulum prosthesis	Керамик ацетабулум протез	A sterile implantable principal component of a total hip prosthesis (acetabular component) designed to replace or repair the acetabulum. The component is of a one-piece construction and is made entirely of ceramic material; it may include fixation devices (e.g., screws) for attachment to the body.	IIb

11998	60700	Urinary tract reconstructive material, microbe-derived	Микробоос гаралтай шээсний замын нөхөн сэргээх материал	A sterile, bioabsorbable material intended for submucosal injection in the urinary tract (urethra, urinary bladder, and/or distal ureter) to add volume by serving as a space-occupying supplement (bulking agent) to the intercellular matrix of connective tissue in the treatment of stress urinary incontinence (SUI) and/or vesicoureteral reflux (VUR); it does not include a local anaesthetic agent. It is in the form of a gel of biosynthesized dextranomer microspheres and hyaluronic acid (HA) derived from bacteria. The material is typically preloaded in a disposable syringe.	IIb
11999	60716	Haemodialysis blood tubing set, reusable	Гемодиализын цусны гуурсан хоолойн багц, дахин ашиглах боломжтой	A collection of tubing segments and associated devices (e.g., connectors, clamps) intended to be used to transfer blood between a patient's vascular access device and a haemodialyser during haemodialysis; it is sometimes referred to as haemodialysis blood lines. This is a single-patient device intended to be reused after appropriate cleaning/disinfection.	IIb
12000	60718	Hard-tissue ultrasonic surgical system handpiece tip	Хатуу эдийн хэт авианы мэс заслын системийн гарны үзүүр	A sterile removable endpiece intended to be attached to an ultrasonic surgical system handpiece to amplify and deliver ultrasonic energy to mechanically fragment and cut bone upon contact during an orthopaedic surgical procedure (e.g., spinal surgery); some types may in addition be intended for dental/craniomaxillofacial applications (e.g., reconstructive/plastic surgery) however none are dedicated exclusively to dental applications. It is available in a variety of sizes and forms (e.g., blade, rasp), and is not intended to be held directly; a channel for surgical waste aspiration and a covering sleeve for delivery of irrigation solution may be included. This is a single-use device.	IIb
12001	60835	Heart valve prosthesis holder safety clip	Зүрхний хавхлагын протез эзэмшигчийн хамгаалалтын хавчаар	A sterile device intended to be attached to a heart valve prosthesis holder during open surgical implantation of a self-expandable heart valve bioprosthesis, to position, secure, and prevent accidental release of the heart valve prosthesis holder’s holding mechanism (e.g., holding sheath). It is typically a plastic attachment with the appropriate size, shape and flexibility. This is a single-use device.	IIb

12002	60894	Implantable iris prosthesis	Суулгах боломжтой цахилдаг протез	A sterile optical device intended to be implanted into the posterior chamber of the eye for the reconstruction of partial or total iris defects (congenital, traumatic, or degenerative). It may be constructed from a single or multiple component(s) and implanted during cataract surgery, or secondarily into the pseudophakic eye. It is made of synthetic material [e.g., polymethylmethacrylate (PMMA), silicone] and is available in a variety of sizes and/or colours.	IIb
12003	60895	Implantable iris prosthesis/intraocular lens	Суулгах боломжтой цахилдаг протез/нүдний линз	A sterile optical device intended to be implanted into the posterior chamber of the eye that consists of an iris prosthesis and an intraocular lens for the correction of visual disturbances due to the partial or total absence of the iris (congenital, traumatic, or degenerative). It is made of polymethylmethacrylate (PMMA) and is available in a variety of sizes and colours.	IIb
12004	60933	Humeral body extension prosthesis	Хумерын биеийн өргөтгөлийн протез	A sterile implantable component of a reverse shoulder prosthesis that consists of a metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo)] piece intended to function as a spacer between a reverse shoulder body prosthesis and a reverse shoulder cup prosthesis.	IIb
12005	61002	Humeral head spacer	Хумерын толгойн зай	A sterile implantable component of a total shoulder prosthesis intended to be placed between a standard humeral body and a standard humeral head to serve as a spacer and to achieve the intended varus/valgus alignment. It is in the form of a thick disc with a central or eccentric hole, is made of metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo), or titanium (Ti)], and is used in a modular shoulder replacement system.	IIb
12006	61004	Shoulder reverse/standard adaptor prosthesis	Мөрний урвуу/стандарт адаптер протез	A sterile implantable component of a total shoulder prosthesis intended to be used in the revision surgery of a reverse shoulder prosthesis to avoid replacement of the humeral body/stem by enabling articulation between a reverse shoulder body and a standard humeral head [typically a cuff tear arthropathy (CTA) head]. It is a double male taper made of metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo), or titanium (Ti)] and is used in a modular shoulder replacement system.	IIb

12007	61112	Implantable peritoneal catheter holder	Суулгах боломжтой хэвлийн катетер эзэмшигч	A small, sterile, implantable device designed to secure a peritoneal or lumboperitoneal catheter in situ by suturing it to the abdominal fascia at the point of entry/exit. It is typically made of plastic materials with a gripping mechanism for the tube and holes for sutures.	IIb
12008	61140	Blood cell harvesting system	Цусны эсийг цуглуулах систем	An assembly of non-powered devices intended to be used to concentrate and collect nucleated cells, platelets, or bone marrow aspirate cells, from a volume of the patient's own blood/bone marrow (autologous), for human cell therapy. It typically includes flexible bags, tubing with slide clamps, and a filter to capture the target cells which are subsequently flushed using a harvest solution (not included) into a collection vessel. It is intended to be used at the point-of-care during a procedure, or in a laboratory. This is a single-use device.	IIb
12009	61141	Luer-formatted disinfection cap	Luer форматтай ариутгалын малгай	A small, noninvasive, closed-ended Luer attachment intended to be attached to a connector in an intravenous line (e.g., needleless valve, Luer access valve, male Luer connector) to disinfect the valve surface and/or maintain disinfection, and for protection. It is a synthetic polymer cap containing a foam material saturated with isopropyl alcohol (IPA) as the disinfectant; it may contain other components. The cap may be removed shortly after disinfection, or remain in place to maintain disinfection for a limited period. This device may be supplied with male Luer end caps (not containing disinfectant) for use on the disconnected IV tubing. This is a single-use device.	IIb

12010	61154	Flexible bone nail, non-sterile	Уян хатан ясны хадаас, ариутгагдаагүй	A non-sterile, bending rod made of metal designed for insertion into the intramedullary canal of a long bone for fracture fixation where flexibility of the implant is desired. It is available in various lengths and diameters for use on lower and upper extremity diaphyseal fractures, and some metaphyseal fractures of paediatrics and small-statured/normal adults, to provide temporary stabilization of the bone segments/fragments until bone consolidation has been achieved. It is intended to splint the cortices and maintain elastic energy to continually brace against rotational/angular forces of the muscles. This is a single-use device intended to be sterilized prior to use.	IIb
12011	61162	Ophthalmic laser system beam guide	Нүдний лазерын системийн цацрагийн хөтөч	A sterile, hand-held, probe-like device intended to be used in conjunction with an ophthalmic laser system during ophthalmic surgery to invasively direct and deliver laser energy to treat non-refractive conditions (e.g., to repair a retinal tear). It consists of a fibreoptic cable, a handpiece, and a distal invasive cannula/probe which may be available in a variety of configurations (e.g., bent or straight); it may be capable of further functionality (e.g., aspiration, illumination). This is a single-use device.	IIb
12012	61183	Gastrointestinal endoscopic clip cutter	Ходоод гэдэсний дурангийн клип таслагч	A sterile device intended to be used in combination with a generator to remove a gastrointestinal endoscopic clip. It consists of an insulated conducting wire with an exposed tip intended to be passed through the working channel of an endoscope. It is intended to conduct the direct current (DC) supplied by the generator, to a previously implanted clip, whereby cleavage of the clip occurs through resistive heating. This is a single-use device.	IIb
12013	61184	Gastrointestinal endoscopic clip cutter generator	Ходоод гэдэсний дурангийн клип таслагч генератор	A portable, mains electricity (AC-powered) device intended to be used in conjunction with a cutter for the endoscopic removal of a gastrointestinal endoscopic clip. It is an electronic unit with controls (e.g., foot-switch) intended to generate a direct current (DC) for resistive heating, and subsequent cleavage of a previously implanted clip.	IIb

12014	61197	Neonatal CPAP unit	Нярайн CPAP нэгж	A mains electricity (AC-powered) device, which may include rechargeable batteries, intended to assist noninvasive ventilation (i.e., without use of an artificial airway) of a neonatal/infant patient via an attached nasal cannula or mask, using continuous positive airway pressure (CPAP) during spontaneous respiration. It is an electronic unit with controls, and may be used with compressed medical gas cylinders [e.g., air, oxygen (O2)] or include an O2 concentrator compartment; additional features (e.g., adjustable flow rates and O2 concentration, humidification) may be provided. It is primarily intended for use in a healthcare facility, especially in intensive and critical care settings.	IIb
12015	61207	Gastrointestinal endoscopic clip, short-term	Ходоод гэдэсний дурангийн клип, богино хугацааны	A sterile clip intended to be placed short-term (<=30 days) within the gastrointestinal (GI) tract during an endoscopic procedure for endoscopic marking, haemostasis, tissue approximation, closure of luminal perforations, and/or for treating mucosal/submucosal defects. It is a metallic device with a clasping mechanism; a disposable applicator may be included. This is a single-use device.	IIb
12016	61208	Gastrointestinal endoscopic clip, long-term, non-bioabsorbable	Ходоод гэдэсний дурангийн хавчаар, удаан хугацаанд үйлчилдэг, био шингэдэггүй	A non-bioabsorbable clip intended to be implanted long-term (>30 days) within the gastrointestinal (GI) tract during an endoscopic procedure for endoscopic marking, haemostasis, tissue approximation, closure of luminal perforations, treating mucosal/submucosal defects, and/or as part of bariatric procedures. It is a metallic device with a clasping mechanism; a disposable applicator may be included.	IIb
12017	61210	Posterior-chamber intraocular lens, pseudophakic, extended-focus	Арын камерын нүдний дотоод линз, псевдофакик, өргөтгөсөн фокус	A sterile optical device intended to be implanted into the posterior chamber of the eye to replace the natural lens (crystalline lens), typically because it has been clouded by a cataract. It consists of an intraocular lens (IOL) containing a small aperture inlay device designed to provide extended depth of focus for near vision, achieved through the pinhole effect. The components are typically made of synthetic polymer; disposable devices associated with implantation (e.g., IOL injector) may be included with the lens.	IIb

12018	61216	Cosmetic micro-needling electronic handpiece, professional	Гоо сайхны бичил зүүтэй электрон гар, мэргэжлийн	A hand-held, electrically-powered device intended to be used in combination with a micro-needle cartridge (which contains micro-needles) to create high-density minute skin punctures to stimulate tissue regeneration and improve the appearance of the skin as part of collagen induction therapy (CIT). It includes controls to allow for treatment adjustments (e.g., puncture depth, frequency); a disposable micro-needle cartridge may be included. It is intended for clinical use by a healthcare provider to treat stretch marks, acne scarring, hyperpigmentation, wrinkles, and/or hair loss; it is not intended for energy-based skin treatment. This is a reusable device.	IIb
12019	61271	Femoral stem centralizer	Гуяны ишний төвлүүлэгч	A small sterile implantable device intended to be used during the implantation of a cemented femoral stem prosthesis to centralize and stabilize the prosthesis tip within the femoral medullary canal; it is inserted after cement insertion and prior to, or in conjunction with, the femoral stem prosthesis. It is made of a synthetic polymer [e.g., polymethylmethacrylate (PMMA)] and may have a winged structure.	IIb
12020	61354	Peritoneal dialysis catheter introduction set	Хэвлийн диализийн катетер нэвтрүүлэх багц	A collection of sterile devices, which includes at least one invasive device, intended to assist percutaneous placement of a peritoneal dialysis catheter (not included). The kit includes devices intended to assist catheter insertion (e.g., dilators, insertion sheath) and may include additional non-dedicated catheterization support devices (e.g., dressings); it does not contain pharmaceuticals. This is a single-use device.	IIb

12021	61382	Vascular anastomosis coupler, Doppler	Судасны анастомоз холбогч, Доплер	An implantable device intended to be used to permanently join vascular structures (blood vessels) that includes an attached ultrasound (Doppler) probe for measuring blood flow through the anastomosis; it is typically used during microvascular surgery. It consists of two ring-shaped components over which the ends of the vessels are everted and held in place by pins; the rings are approximated using a dedicated device to create the anastomosis. The probe is connected to an external monitor and used to confirm vessel patency during and after the procedure for up to 14 days before it is removed.	IIb
12022	61440	Intracerebral trocar blade	Тархины доторх трокар ир	A sterile, hand-held, manual surgical instrument with a sharp, needle-like point intended to be used in conjunction with an intracerebral catheter (e.g., ventricular catheter) to puncture tissue and create a channel to access the brain (e.g., cerebral ventricles, cystic tumours) typically for cerebrospinal fluid (CSF) drainage or infusion of materials (e.g., chemotherapeutic agents). It is inserted within the lumen of the intracerebral catheter prior to catheter insertion; the catheter is not included. This is a single-use device.	IIb
12023	61484	Partially-implantable abdominal port/catheter	Хэсэгчилсэн суулгацтай хэвлийн порт/катетер	A sterile partially-implantable device intended to provide access to the peritoneal cavity for infusion (e.g., insulin, chemotherapeutic agents). It consists of a percutaneous chamber, having a subcutaneous portion and a part protruding through the skin, with a self-sealing puncturable septum, for insertion of a needle/cannula, attached to a distal catheter which passes into the body cavity. It is made of metal [e.g., titanium (Ti)] and synthetic polymers (e.g., silicone); disposable devices associated with implantation may be included.	IIb

12024	61492	Abdominothoracic port/catheter	Хэвлийн цээжний порт/катетер	A sterile implantable device intended to provide access to the peritoneal and, alternatively, pleural cavities for infusion (e.g., chemotherapeutic agents, gastric prosthesis fillers) and/or drainage (e.g., malignant pleural effusion). It consists of a subcutaneous chamber, with a self-sealing puncturable septum for percutaneous insertion of a hypodermic needle, attached to a distal catheter which passes into the body cavity. It is made of metal [e.g., titanium (Ti)] and synthetic polymers (e.g., silicone); disposable devices associated with implantation may be included.	IIb
12025	61522	Funnel chest remodelling bar	Юүлүүр цээжний засварын бар	A non-sterile implantable device intended to be used to reduce the deformity of pectus excavatum (funnel chest) by applying outward force from a position deep to the sternum to reposition the sternum; it is typically used in paediatric patients and surgically removed when remodelling is evident (after 2-3 years). It is a thin curved bar, with or without serrations, made of metal [e.g., stainless steel, titanium (Ti)] that can be anchored with wires or with stabilizer plates laterally on the rib cage; devices associated with implantation may be included. This is a single-patient device intended to be sterilized prior to use.	IIb
12026	61531	Lumbar decompression interspinous spacer	Бүсэлхий нурууны булчинг сулруулах interspinous spacer	A device intended to be implanted between two adjacent lumbar spinous processes during a minimally-invasive procedure to decompress neural structures, typically to treat a patient with symptomatic degenerative lumbar spinal stenosis (DLSS). It is typically designed as a small spacer, either a single-piece or assembly, made of metal [e.g., titanium (Ti), nickel-titanium alloy (Nitinol)] and/or synthetic polymer [e.g., hydrogel, polyetheretherketone (PEEK)]. Disposable devices associated with implantation (e.g., introducer needles, trocars) may be included with the device.	IIb

12027	61555	Percutaneous radio-frequency ablation probe cannula, reusable	Арьсан доорх радио давтамжийн датчикийн суваг, дахин ашиглах боломжтой	A rigid tube designed to provide percutaneous (through the skin) tissue access through its lumen for an electrosurgical probe during radio-frequency (RF) ablation procedures (typically of peripheral nerves to treat chronic pain) and for the injection/aspiration of fluids (e.g., local anaesthetic agents). It is made of metal (e.g., stainless steel), covered in insulation except for its distal tip, and includes a plastic hub; it is available in a variety of diameters and distal tip lengths/configurations. This is a reusable device.	IIb
12028	61556	Sleeve femoral/tibial extension, coated	Ханцуйны гуя / шилбэний сунгалт, бүрсэн	A sterile implantable device typically designed to be attached to a revision femoral stem, knee femur prosthesis, femur/tibia shaft prosthesis, or body femoral/tibial extension stem to extend length to make up for bone loss during revision arthroplasty or bone resection. The device is a hollow sleeve made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included.	IIb
12029	61560	Sleeve femoral/tibial extension, uncoated	Ханцуйны гуя/шилбэний сунгалт, бүрээсгүй	A sterile implantable device typically designed to be attached to a revision femoral stem prosthesis, knee femur prosthesis, femur/tibia shaft prosthesis, or body femoral/tibial extension stem to extend length to compensate for bone loss during revision arthroplasty or bone resection. The device is a hollow sleeve made of uncoated metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. Fixation devices for implantation (e.g., screws and bolts) may be included.	IIb
12030	61561	Body femoral/tibial extension stem, uncoated	Биеийн гуя/шилбэний суналтын иш, бүрээсгүй	A sterile implantable device intended to provide an extension of, or coupling with, other components of a modular femoral/tibial prosthesis in the medullary canal to compensate for bone loss during revision arthroplasty or bone resection. The device is a solid/dense body made of uncoated metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. Fixation devices for implantation (e.g., screws and bolts) may be included.	IIb

12031	61562	Body femoral/tibial extension stem, coated	Биеийн гуя/шилбэний сунгалтын иш, бүрсэн	A sterile implantable device intended to provide an extension of, or coupling with, other components of a modular femoral/tibial prosthesis in the medullary canal to compensate for bone loss during revision arthroplasty or bone resection. The device is a solid/dense body made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included.	IIb
12032	61618	Blood component separator, automated	Цусны бүрэлдэхүүн хэсгүүдийн ялгагч, автоматжуулсан	A mains electricity (AC-powered) device designed for the automated separation of whole blood or previously centrifuged blood into components [e.g., red blood cells (RBCs), platelets, leukocytes] for further processing or storage. It is a programmable device with a user interface that uses a mechanical separation method (e.g., pressure plates, microfluidics) to transfer the blood component(s) from the donor bag into a removable disposable receptacle. It may have additional features such as sensors, scales, and an automatic mechanism for opening the valve(s) on the donor bag. It is typically used in a blood bank or transfusion centre, and is not donor or patient connected.	IIb
12033	61629	Triple-lumen haemodialysis catheter	Гурвалсан люмен гемодиализийн катетер	A sterile, flexible, triple-lumen tube intended to be used for short-term (< 30 days) central venous (jugular, subclavian vein) and/or femoral vein access to: 1) conduct blood from a patient and return it after extracorporeal circulation, primarily during haemodialysis, but may also be intended for haemoperfusion and/or apheresis; and 2) enable central venous access for intravenous (IV) administration and/or invasive venous blood pressure monitoring. It includes three lumens, two dedicated to coaxial flow of blood for dialysis, and the third intended for independent IV access. Devices dedicated to catheter introduction/function may be included. This is a single-use device.	IIb

12034	61630	Haemodialysis/central venous catheterization kit	Гемодиализ/төв венийн катетержуулалтын иж бүрдэл	A collection of sterile devices and materials intended to be used for short-term (< 30 days) venous access during haemodialysis, by: 1) conducting blood from a patient and returning it after extracorporeal circulation, primarily during haemodialysis, but may also be intended for haemoperfusion and/or apheresis; and 2) enabling central venous access for intravenous (IV) administration and/or invasive venous blood pressure monitoring. It includes a nonimplantable triple-lumen haemodialysis catheter, devices dedicated to catheter introduction/function (e.g., introducer needle, guidewire), and non-dedicated supportive devices (e.g., drape, dressings, scalpel). This is a single-use device.	IIb
12035	61667	Central venous catheter navigation system, electrocardiographic/magnetic	Төв венийн катетерийн навигацийн систем, электрокардиограф/соронзон	An assembly of devices intended to use electrocardiographic (ECG) and magnetic data to assist guidance and positioning of a central venous catheter [e.g., peripherally-inserted central catheter (PICC)]. It includes a mains electricity (AC-powered) control unit [with internal rechargeable batteries] and visual display, ECG skin electrodes, lead(s) and cable(s), a magnetic sensor to be placed on the patient's chest, and a remote control. The system is designed to be used with a dedicated catheter/stylet (not included) which functions as an intravascular ECG electrode and magnet whose position is detected by the sensor.	IIb
12036	61669	Orthopaedic bone staple, non-adjustable	Ортопедийн ясны үдээс, тохируулах боломжгүй	A non-bioabsorbable, implantable device designed to be inserted into fractured bone to achieve fixation and repair; the device may also be used to attach/secure structures (e.g., ligaments/tendons) to bone, or to reduce/cease bone growth in skeletal deformities (e.g., by being implanted across epiphysial cartilage). It is typically a curved or U-shaped device made of metal alloy material, and is not adjustable after it has been applied. Guides for drilling integrated into the handle of the staple and disposable devices associated with implantation may be included.	IIb

12037	61688	Internal orthopaedic fixation system, plate/screw, non-bioabsorbable, sterile	Дотор ортопедийн бэхэлгээний систем, хавтан/шураг, био шингэдэггүй, ариутгасан	A sterile assembly of implantable devices designed for the stabilization of fractured/surgically-cut bones of the limbs (long bones), their appendages (hands, feet), pelvis, craniomaxillofacial bones, and/or for limb-joint fusion. It typically consists of a set of bone fixation plates, screws, wires, and pins made of materials that cannot be chemically degraded or absorbed via natural body processes (e.g., implant grade metal, surgical steel, titanium alloy, or carbon fibre). It may also include instruments for the attachment of the implants such as screwdrivers or drills.	IIb
12038	61689	Internal orthopaedic fixation system, plate/screw, non-bioabsorbable, non-sterile	Дотор ортопедийн бэхэлгээний систем, хавтан/шураг, био шингэдэггүй, ариутгагддаггүй	A non-sterile assembly of implantable devices designed for the stabilization of fractured/surgically-cut bones of the limbs (long bones), their appendages (hands, feet), pelvis, craniomaxillofacial bones, and/or for limb-joint fusion. It typically consists of a set of bone fixation plates, screws, wires, and pins made of materials that cannot be chemically degraded or absorbed via natural body processes (e.g., implant grade metal, surgical steel, titanium alloy, or carbon fibre). It may also include instruments for the attachment of the implants such as screwdrivers or drills. This device is intended to be sterilized prior to use.	IIb
12039	61729	Central venous catheter navigation system support kit	Төв венийн катетер навигацийн системийг дэмжих хэрэгсэл	A collection of sterile, noninvasive devices intended to assist use of a central venous catheter navigation system during electrocardiographic (ECG) supported guidance and positioning of a central venous catheter. The kit is dedicated to ECG-supported catheter navigation and typically includes system components (e.g., ECG leads, connectors) and other supportive devices (e.g., cable cover). The kit is intended to support the procedure which involves the catheter used as an intravascular electrode whereby intravascular ECG changes indicate catheter position typically in conjunction with skin surface ECG data. This is a single-use device.	IIb
12040	61770	Acetabular liner locking ring	Ацетабуляр доторлогооны түгжээний цагираг	A sterile implantable metallic ring-shaped device intended to retain an acetabular liner component within an acetabular shell component of a total hip prosthesis.	IIb

12041	61780	Acetabular augmentation implant	Acetabular augmentation implant	A sterile implantable device intended to help prevent dislocation of a total hip replacement by augmenting the posterior lip of the acetabulum around a retained acetabular prosthesis, or to help fill bone defects not covered by the acetabular prosthesis. It is designed to help constrain the femoral head and/or provide additional support for the acetabular prosthesis. It is available in various shapes, is typically made of metal [e.g. Titanium alloy] and/or polymer, and may be fixed with screws and/or cement.	IIb
12042	61829	Soft-tissue ultrasonic surgical system holder	Зөөлөн эдийн хэт авианы мэс заслын систем эзэмшигч	A sterile hand-held component of an ultrasonic surgical system intended to act as a holder for an ultrasonic surgical system transducer/tip to enable the operator to grip and manipulate the transducer/tip and to protect the patient; it may have control switches. It may be in form of a simple sleeve, or pistol-like in design with a grasping mechanism at the distal end. This is a single-use device.	IIb
12043	61844	Soft-tissue ultrasonic surgical system holder/tip, single-use	Зөөлөн эдийн хэт авианы хагалгааны систем эзэмшигч / үзүүр, нэг удаагийн	A hand-held component of an ultrasonic surgical system which includes a holder with controls and a surgical endpiece (tip) intended to be connected to a system transducer (not included) whereby the tip oscillates (vibrates) at high frequency in order to fragment soft-tissue cells for cutting and/or coagulating soft tissue during surgery. It may be referred to as a handpiece but does not include a transducer; the tip is available in a variety of forms and sizes, and is typically made of metal. This device is utilized in a variety of surgical disciplines. This is a single-use device.	IIb

12044	61845	Soft-tissue ultrasonic surgical system holder/tip, reprocessed	Зөөлөн эдийн хэт авианы хагалгааны систем эзэмшигч / үзүүр, дахин боловсруулсан	A hand-held component of an ultrasonic surgical system which includes a holder with controls and a surgical endpiece (tip) intended to be connected to a system transducer (not included) whereby the tip oscillates (vibrates) at high frequency in order to fragment soft-tissue cells for cutting and/or coagulating tissue during surgery. It may be referred to as a handpiece but does not include a transducer; the tip is available in a variety of forms and sizes, and is typically made of metal. This device is utilized in a variety of surgical disciplines. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIb
12045	61846	Ultrasonic surgical system transducer	Хэт авианы мэс заслын системийн хувиргагч	A hand-held component of an ultrasonic surgical system intended to be connected to a system holder/tip or combined holder/tip, whereby it is designed to convert high frequency electrical current from a generator into an ultrasonic oscillation, to fragment hard and/or soft tissue cells for cutting and/or coagulating tissue during surgery (e.g., arthroscopic); it is not dedicated to dental applications. It may be referred to as a handpiece however it does not include controls and cannot be directly connected to the tip. This is a reusable device.	IIb
12046	61869	Open-surgery electrosurgical handpiece/electrode, monopolar, single-use	Нээлттэй мэс заслын цахилгаан мэс заслын гар утас/электрод, монополяр, нэг удаагийн	A rigid device consisting of combined electrosurgical handpiece and monopolar electrode intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation during an open surgical procedure. It is available in a variety of forms (e.g., pen, pistol-shaped forceps, pincer-shaped forceps, scissors) and may also include irrigation, aspiration, lavage and/or surgical plume (smoke) evacuation features to support its primary electrosurgical function. This is a single-use device intended to be used in a sterile condition.	IIb

12047	61870	Open-surgery electrosurgical handpiece/electrode, monopolar, reusable	Нээлттэй мэс заслын цахилгаан мэс заслын гар утас/электрод, монополяр, дахин ашиглах боломжтой	A rigid device consisting of combined electrosurgical handpiece and monopolar electrode intended to deliver electrosurgical current from a system generator directly to tissues for cutting/coagulation during an open surgical procedure. It is available in a variety of forms (e.g., pen, pistol-shaped forceps, pincer-shaped forceps, scissors) and may also include irrigation, aspiration, lavage and/or surgical plume (smoke) evacuation features to support its primary electrosurgical function. This is a reusable device.	IIb
12048	61940	Femoral stem end-cap, non-bioabsorbable	Гуяны ишний төгсгөлийн таг, био шингэдэггүй	An implantable device intended to be used during the implantation of a cemented femoral stem prosthesis to cushion the prosthesis tip against the cement within the femoral medullary canal. It is placed on the distal tip of the femoral stem and, following the insertion of a cement restrictor and cement, is inserted typically in conjunction with a femoral stem centraliser. It is made of a synthetic polymer [e.g., polymethylmethacrylate (PMMA)].	IIb
12049	61941	Femoral stem end-cap, bioabsorbable	Гуяны ишний төгсгөлийн таг, био шингэдэг	A bioabsorbable, implantable device intended to be used during the implantation of a cemented femoral stem prosthesis to cushion the prosthesis tip against the cement within the femoral medullary canal. It is placed on the distal tip of the femoral stem and, following the insertion of a cement restrictor and cement, is inserted typically in conjunction with a femoral stem centraliser. It is made of bioabsorbable animal-derived gelatin.	IIb
12050	61959	Hyperbaric chamber, portable	Гипербарик камер, зөөврийн	A non-powered, portable device consisting of a large bag intended to contain a patient and to be inflated above ambient atmospheric pressure for the treatment of acute mountain sickness. The bag is inflated using a foot pump or air compressor, the internal pressure being controlled by an inlet/deflation valve; it is not intended to be used with enriched oxygen. The device is typically used by mountain climbers and athletes who train at high elevation. This is a reusable device.	IIb

12051	61961	Vitreous body prosthesis	Шилэн биений протез	A sterile bag/capsule intended to be implanted in the eye and filled with a fluid (not included) to replace the vitreous body and provide omnidirectional support of the retina for the treatment of severe retinal detachment. It is made of synthetic polymer, includes a drain/fill valve to enable filling and pressure adjustments, and may be used as an alternative to direct introduction of a retinal tamponade medium.	IIb
12052	62139	Wound therapy ultrasound system generator	Шархны эмчилгээний хэт авианы системийн генератор	A mains electricity (AC-powered) component of a wound therapy ultrasound (US) system intended to generate radio-frequency (RF) electrical energy, subsequently transduced into US energy in the system handpiece, and to pump a fluid solution for the production of an ultrasound-conductive mist used to promote wound healing through cleansing and debridement. It is intended to be used in conjunction with a system handpiece/tip, and fluid source (e.g., saline).	IIb
12053	62140	Wound therapy ultrasound system handpiece	Шархыг эмчлэх хэт авиан аппарат	A hand-held mains electricity (DC-powered) electronic component of a wound therapy ultrasound (US) system intended to convert (transduce) electrical energy into low frequency US energy for application to a wound site, via a fluid mist, to promote wound healing. It is a non-patient-contact device, which may include a display/controls, intended to connect proximally to the system generator and distally to a handpiece tip. It is used in conjunction with a fluid source (e.g., saline), whereby an ultrasound-conductive mist is directed at the wound site for removal of fibrin, yellow slough, tissue exudates, and bacteria. This is a reusable device.	IIb
12054	62161	Ophthalmic diode laser system	Нүдний диодын лазер систем	An electrically-powered device assembly in which input energy is used to excite a diode to emit a low-power and/or high-power therapeutic laser beam intended for ophthalmic surgery (e.g., ocular incisions, ocular photocoagulation, iridectomy, vitrectomy). Some types may also include an air pump to disperse subretinal fluid in certain procedures (e.g. retinal detachment repair). The laser utilizes a diode/semiconductor chip (as the active medium); it does not include femtosecond pulsing, or fundus imaging technology.	IIb

12055	62179	Capnography oxygen mask	Капнографийн хүчилтөрөгчийн маск	A non-sterile, flexible, form-shaped device designed to be placed over the nose and mouth to deliver oxygen (O2) to a patient's airway, and to sample exhaled respiratory gases for monitoring the patient's ventilatory status. It includes exhaled air sampling tubing for connection to a carbon dioxide monitor (capnograph), or physiology-monitoring sedation/anaesthesia system, for the measurement of end-tidal carbon dioxide (EtCO2) in expiratory gases; it is typically used during anaesthesia/sedation or bedside monitoring. This is a single-use device.	IIb
12056	62183	Intestinal/urinary stoma button	Гэдэс/шээсний стома товч	A plug-like device intended to be placed in an intestinal and/or urinary stoma to prevent leakage and narrowing (stenosis), typically during intermittent use of an enema catheter/tube. It is in the form of a flanged cylinder and is made of flexible synthetic polymer materials (e.g., silicone). This is a single-patient reusable device after appropriate cleaning/disinfection.	IIb
12057	62197	Ophthalmic solid-state laser system	Нүдний хатуу төлөвт лазерын систем	An electrically-powered device assembly with a solid-state laser (exited glass/crystal rod), that might be designed to optionally utilize the diode pump laser as a direct therapeutic laser, intended for ophthalmic surgery (e.g., photocoagulation, photodisruption) and/or photostimulation of retinal pigment epithelium (RPE) cells to reverse macular degeneration. It might include a built-in slit lamp, a dosimetry sensor, and/or frequency doubling technology, however it does not include femtosecond pulsing or fundus imaging technology.	IIb
12058	62232	Peripheral vascular radio-frequency ablation catheter	Захын судасны радио давтамжийн катетер	A sterile, rigid, hand-held luminal device intended to be percutaneously introduced into the peripheral vasculature as the distal component of a radio-frequency ablation system, to deliver radio-frequency current, in a bipolar configuration, for ablation of venous tissue to treat venous reflux disease (varicose veins). It typically includes an inner trocar/stylet to assist introduction and is maneuvered under external image guidance [e.g., ultrasound (US)]. This is a single-use device.	IIb

12059	62233	Peripheral vascular electrocautery catheter, single-use	Захын судасны цахилгаан катетер, нэг удаагийн хэрэглээ	A flexible catheter with a distal heating element/electrode intended to be connected to an electrical generator and introduced into the peripheral vasculature to ablate venous tissues, through direct application of heat, as a treatment for venous reflux disease (varicose veins); it is not intended to introduce electrical current into the body. It is a luminal device with a proximal handle with controls (e.g., on/off switch) that is introduced via an introducer assembly (which may be included), and is typically maneuvered under external image guidance [e.g., ultrasound (US)]. This is a single-use device.	IIb
12060	62271	Long bone distraction plate, mechanical	Урт ясны анхаарал сарниулах хавтан, механик	An implantable, mechanical (non-electric, non-magnetic), multiple component plate-like device intended to be attached to a long bone with screws to bridge and stabilize a gap; it has a rack-pinion mechanism enabling lengthening/shortening of the total length of the plate. The adjustments allow a gap to be closed, or overriding of bone ends to be reduced, and it facilitates the healing of traumatic or pathological orthopaedic fractures, or surgically excised sections. It is made of metal (e.g., titanium alloy).	IIb
12061	62319	Faecal-incontinence vaginal insert	Баас-шээсгүй үтрээний оруулга	A non-sterile inflatable device intended to be inserted into the vagina and inflated/deflated to assist bowel evacuation regulation, as a treatment for faecal incontinence. It consists of a semi-rigid base, an inflatable balloon, valve, and optional external tubing. The balloon is inflated to occlude the adjacent rectal lumen to prevent stool leakage, and deflated to allow normal passage of stool. The device is used therapeutically for over a long-term period (typically less than 1 year), and may be removed/replaced by the patient. This is a single-patient reusable device after appropriate cleaning/disinfection.	IIb

12062	62347	Wound therapy oxygenator, reusable	Шархыг эмчлэх хүчилтөрөгч, дахин ашиглах боломжтой	A wearable, battery-powered device designed to actively promote continuous diffusion of oxygen (CDO) in a wound to help heal various types of wounds (e.g., arterial, venous, diabetic or pressure ulcers, skin grafts, burns, postoperative or traumatic wounds). It has oxygen (O2) delivery controls with sensors and displays for flow and pressure, and concentrates O2 from ambient air and delivers it through tubing to the wound bed, typically using a wound therapy oxygenator dressing. A battery charger, carrying case, and disposable humidification pack may be included. This is a reusable device.	IIb
12063	62348	Wound therapy oxygenator dressing	Шархыг эмчлэх хүчилтөрөгчийн боолт	A sterile wound cover designed to be used in conjunction with a wound therapy oxygenator to actively promote continuous diffusion of oxygen (CDO) in a wound bed to heal various types of wounds (e.g., arterial, venous, diabetic or pressure ulcers, skin grafts, burns, and/or postoperative or traumatic wounds). It is made of synthetic polymer materials and consists of an absorbent open-cell foam layer, an oxygen (O2) distribution foam layer, an occlusive layer to create an O2 rich environment, and integrated O2 tubing/connector. It may have an adhesive border and may be cut to conform to the wound. O2 delivery extension tubing may be included. This is a single-use device.	IIb
12064	62349	Wound therapy oxygenator tubing	Шархыг эмчлэх хүчилтөрөгчийн хоолой	A sterile length of flexible tubing extension with connectors at both ends intended to connect an ambulatory wound therapy oxygenator to a wound therapy oxygenator dressing to deliver oxygen (O2) to a wound bed during continuous diffusion of oxygen (CDO) therapy. It may be secured to the skin using medical tape. This is a single-use device.	IIb
12065	62350	Wound therapy oxygenator humidification pack	Шарх эмчилгээний хүчилтөрөгчийн чийгшүүлэгч багц	A non-sterile packet, containing an absorbent polymeric gel saturated with water, intended to be used with an ambulatory wound therapy oxygenator to help provide optimal humidity for the oxygenator during continuous diffusion of oxygen (CDO) therapy. It is carried in close proximity to the oxygenator during operation and is used when the ambient relative humidity is low. This is a single-use device.	IIb

12066	62436	Ultrasonic skin contouring system	Хэт авианы арьс хэлбэржүүлэх систем	A mobile assembly of electrically-powered devices intended to temporarily minimize the manifestation of cellulite, loose or wrinkled skin, and/or facial lines through the extracorporeal application of high-intensity/frequency ultrasound [e.g., high intensity focused ultrasound (HIFU)]. It is typically used on the head and neck where it generates low levels of heat in the targeted tissue to stimulate the cells for elastin/collagen production and tissue rejuvenation. It typically consists of a high-intensity/frequency generator/control unit, handpiece, transducer cartridge and connection cable.	IIb
12067	62465	Retinal prosthesis implant guide	Торлог бүрхэвчийн протез суулгах чиглүүлэгч	A sterile, hand-held manual surgical instrument designed to be inserted through the sclera to assist the delicate positioning of an implantable retinal prosthesis (e.g., subretinal chip). It is a slender tool used to create an access route between the choroid and the retina to direct the implant to the posterior region of the eye. This is a single-use device.	IIb
12068	62481	Pliable-polymer dental regeneration membrane, non-bioabsorbable	Шүдний нөхөн төлжих уян хатан полимер мембран, био шингэдэггүй	A sterile non-bioabsorbable material intended to be used to aid in the regeneration of tooth support, lost due to periodontal disease or trauma, by acting as a barrier to prevent the down-growth of soft tissue (connective tissue and epithelial cells) into the underlying bone during the healing period. It is a pliable synthetic polymer material that is held in place between soft tissue and bone [e.g., with ligatures, sutures, or pins (may be attached/included)] and applied during periodontal flap surgery and other guided bone regeneration (GBR) and guided tissue regeneration (GTR) surgical procedures. A plasticizer to soften the membrane may be included. This is a single-use device.	IIb
12069	62497	Arteriovenous fistula extraluminal mesh-sleeve	Артериовенийн фистул гаднах торон ханцуй	A non-bioabsorbable, implantable device intended to be used for the extraluminal (external) support of an arteriovenous fistula (AVF) to facilitate viable maturation and patency of the AVF for haemodialysis. It is a metal mesh structure intended to improve the characteristics of the AVF (e.g., luminal uniformity, flow capability, luminal strength/stability) to reduce the risk of failure from adverse events such as thrombosis, intimal hyperplasia, and stenosis.	IIb

12070	62601	Cochlear implant implantable magnet	Чихний дунгийн суулгац суулгадаг соронз	A small, sterile, magnetic device intended to be implanted subcutaneously within the implantable component of a cochlear implant system (CIS) and to couple with a magnet in the CIS external component, to hold implantable and external components in place. It is typically a magnetized metal disc contained within a non-reactive metal (e.g., titanium) case.	IIb
12071	62626	Glaucoma therapy ultrasound system generator	Глаукомын эмчилгээний хэт авианы системийн генератор	A mains electricity (AC-powered) component of a glaucoma therapy ultrasound system designed to generate radio-frequency (RF) electrical energy for the extracorporeal application of high intensity focused ultrasound (HIFU) to the eye, to decrease aqueous humour production and reduce intraocular pressure (IOP). It is an electronic unit with controls/display intended to be connected to a handpiece (not included) that transduces RF energy into ultrasound energy.	IIb
12072	62627	Glaucoma therapy ultrasound system handpiece	Глаукомын эмчилгээний хэт авиан аппарат	A hand-held electronic component of a glaucoma therapy ultrasound system designed to transduce radio-frequency (RF) electrical energy from a generator into ultrasound energy, for the extracorporeal application of high intensity focused ultrasound (HIFU) to the eye, to decrease aqueous humour production and reduce intraocular pressure (IOP). It is a probe-like device with piezoelectric transducers designed to be gently positioned on the eye during treatment; accessory devices to assist optimal positioning (e.g., positioning cone) may be included. This is a single-use device.	IIb
12073	62648	Blood component separator, manual	Цусны бүрэлдэхүүн хэсгүүдийн тусгаарлагч, гарын ажиллагаатай	A manually-operated device designed for the separation of previously centrifuged blood into components [e.g., red blood cells (RBCs), plasma, platelets] for further processing or storage. It is a compact mechanical unit (non-powered) that uses pressure plates to facilitate the transfer of each component from the donor bag into a respective collection bag. It is typically used in a blood bank or transfusion centre, and is not donor or patient connected.	IIb

12074	62649	Biliary/vascular irrigation catheter	Цөсний/судасны усалгааны катетер	A sterile, flexible, single-lumen tube intended to access the biliary system during open surgery to introduce fluids (e.g., saline) to irrigate the lumen following a procedure to remove debris (e.g., biliary stone removal); it might additionally be intended to access the peripheral vascular system to introduce fluids (e.g., heparinized solution) to remove debris (e.g., thrombectomy). The device is not intended for percutaneous or endoscopic access, and is not intended for drainage/suction or wound irrigation. This is a single-use device.	IIb
12075	62710	Chordae tendinae prosthesis	Chordae tendinae протез	An implantable cord intended to be used as an artificial substitute for the chordae tendinae (heart strings) to restore natural function to a defective (regurgitant, prolapsed) mitral valve. The implantable cord is typically delivered via transapical or transfemoral access. It is a suture-like string made of synthetic polymer materials [e.g., expanded polytetrafluoroethylene (ePTFE) fabric], and is attached between the valve leaflet and either the epicardium or myocardium with a dedicated, disposable, manually-operated delivery tool (included); additional devices used to facilitate implantation may be included with the implant.	IIb
12076	62837	Donor-organ preservation/transport perfusion initiation/termination set	Донор-эрхтэн хадгалах/тээврийн цус сэлбэх эхлэл/тагсгах багц	A collection of sterile devices intended to be used for the initiation and/or termination of perfusion of an organ in an donor-organ preservation/transport system. It includes tubing, tube clamps and may in addition include bags, connectors/adaptors, and filters. This is a single-use device.	IIb
12077	62865	Knee femur stem/sleeve connector	Өвдөгний гуяны иш/ханцуйны холбогч	A sterile implantable device intended to provide a connection between a knee femur prosthesis and a knee stem or sleeve when the knee femur prosthesis does not have a connection point inherent in its design. It takes various forms including a plate and trunnion, or a cylinder, and is made of metal [e.g., cobalt-chrome (Co-Cr)].	IIb

12078	62886	Red blood cell separation reagent	Цусны улаан эсийг ялгах урвалж	A substance or reactant intended to be used for the isolation of red blood cells (RBCs) from a whole blood clinical specimen by promoting aggregation of RBCs. It is primarily used in a blood bank or transfusion centre for blood component separation (e.g., isolation of stem cells from cord blood); it may also be used to facilitate in vitro examination of specimens by way of reducing the availability of cells not relevant to the diagnostic process.	IIb
12079	62901	Cochlear implant/auditory brainstem implant sound processor speaker	Чихний дунгийн суулгац/сонсголын тархины ишний суулгац дууны процессор чанга яригч	A small device designed to be attached to the sound processor of a cochlear implant or auditory brainstem implant system and extended into the external ear canal to function as a speaker providing amplified acoustic low-frequency sound to the eardrum, as a conjunct to the electrical input to the implant. It is intended for patients with improvable low-frequency hearing and is typically made of synthetic polymer materials with metallic components. This is a single-patient, reusable device.	IIb
12080	62944	Hearing implant system external magnet, reusable	Сонсголын суулгацын системийн гадаад соронз, дахин ашиглах боломжтой	A small, magnetic device intended to hold in place the sound processor and/or coil (not included) of a hearing implant system (e.g., cochlear, auditory brainstem, bone-conduction, partially-implantable middle ear implant system), to the outside of the scalp, typically by coupling with an implanted magnet. It is typically a magnetized metal disc that is attached to the processor/coil, but may be supplied separately. This is a reusable device.	IIb
12081	63032	Donor-organ preservation/transport perfusion set vessel tie tool	Хандивлагч-эрхтэн хадгалах/тээвэрлэх сэлбэх багц савны зангиа хэрэгсэл	A sterile hand-held instrument intended to be used with a donor-organ preservation/transport perfusion set to enable connection of the organ to the perfusion set by application of vessel ties to secure an organ vessel to a cannula or other part of the device. It is typically a pistol-like tool into which thin, cord-like, polymer vessel ties are mounted; the ties may be included. This is a single-use device.	IIb

12082	63109	Robotic electrosurgical instrument, bipolar, reusable	Робот цахилгаан мэс заслын хэрэгсэл, хоёр туйлт, дахин ашиглах боломжтой	An electrosurgical device intended to be connected directly to the arm of a robotic surgical system to deliver electrosurgical current in a bipolar configuration (i.e., without a return electrode) from a generator directly to tissues for cutting/coagulation/ablation during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It includes a long thin body with a proximal housing intended to attach to the robotic arm, and may include the distal bipolar electrode in one of a variety of forms (e.g., forceps, hook). This is a reusable device.	IIb
12083	63110	Robotic electrosurgical instrument, bipolar, single-use	Робот цахилгаан мэс заслын хэрэгсэл, хоёр туйлт, нэг удаагийн хэрэглээ	A electrosurgical device intended to be connected directly to the arm of a robotic surgical system to deliver electrosurgical current in a bipolar configuration (i.e., without a return electrode) from a generator directly to tissues for cutting/coagulation/ablation during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It includes a long thin body with a proximal housing intended to attach to the robotic arm, and may include the distal bipolar electrode in one of a variety of forms (e.g., forceps, hook). This is a single-use device.	IIb
12084	63111	Robotic electrosurgical instrument, monopolar, reusable	Робот цахилгаан мэс заслын хэрэгсэл, монополяр, дахин ашиглах боломжтой	An electrosurgical device intended to be connected directly to the arm of a robotic surgical system to deliver electrosurgical current in a monopolar configuration (i.e., in conjunction with a separate return electrode) from a generator directly to tissues for cutting/coagulation/ablation during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It includes a long thin body with a proximal housing intended to attach to the robotic arm, and may include the distal monopolar electrode in one of a variety of forms (e.g., forceps, hook). This is a reusable device.	IIb

12085	63120	Soft-tissue ultrasonic robotic surgical instrument, single-use	Зөөлөн эдийн хэт авианы робот мэс заслын хэрэгсэл, нэг удаагийн хэрэглээ	A sterile component of an ultrasonic surgical assembly intended to be connected directly to the arm of a robotic surgical system, and convert high frequency electrical current from a generator into an ultrasonic oscillation for a tip placed at its end to mechanically fragment soft-tissue cells upon contact during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It is typically in the form of an elongated probe with a proximal housing intended to attach to the robotic arm. This is a single-use device.	IIb
12086	63191	Long bone distraction nail, motorized	Урт ясны анхаарлыг сарниулах хадаас, мотортой	An implantable, electrically-powered device in the form of a rod, capable of extending in length, designed to be inserted into the medullary cavity of a long bone to hold the ends of a fractured bone in position to promote healing, or to correct limb length discrepancies. A rod (nail) is specific to a particular long bone (e.g., femur, humerus, tibia) and is used for traumatic repair or reconstructive procedures (e.g., leg lengthening). It consists of telescoping rods connected to the bone by locking screws, and a small motor to provide lengthening force which is controlled/powered by a remote controller device operating through an implanted receiver.	IIb
12087	63225	Implantable vascular closure clip	Суулгах боломжтой судас хаах клип	A non-bioabsorbable metallic clip intended to be implanted following a percutaneous catheterization procedure to close the punctured access site on an artery (typically femoral) and improve haemostasis. It is typically a small circular clip with grasping blades intended to close inwardly upon deployment; dedicated disposable devices (e.g., applicator) intended for implantation may be included with the device.	IIb
12088	63228	Circumcision stapler/staple	Хөвч хөндөх үдэгч/үдээс	A sterile, hand-held, manual surgical instrument preloaded with non-bioabsorbable skin staples intended to be used to perform a circumcision. It is designed to cut the foreskin and apply a circular row(s) of staples proximal to the cut line. The stapler portion typically consists of a dome intended to be inserted under the foreskin over the glans penis, and a circular cutting stapler mechanism with a manual lever intended to connect over the outside of the foreskin. This is a single-use device.	IIb

12089	63367	Long bone distraction nail, magnetic	Урт ясны анхаарлыг сарниулах хадаас, соронзон	An implantable device in the form of a rod, capable of adjusting in length, designed to be inserted into the medullary cavity of a long bone to hold the ends of a fractured bone in position to promote healing, or to support the bone in the presence of a pathological condition, or for limb lengthening procedures (not related to arthrodesis); each rod (nail) is specific to a particular long bone (e.g., femur, humerus, tibia). It consists of telescoping rods connected to the bone by locking screws, which have one or more integrated magnets that move in response to a noninvasive magnetic control device to adjust length.	IIb
12090	63440	Haemodialysis tubing valve-connector	Гемодиализийн хоолойн хавхлаг-холбогч	A small, sterile, stand-alone, Luer-activated plastic valve intended to be connected to a haemodialysis catheter to allow external tubing to be connected to the catheter in a secure, sealed, locked position until disconnection of the tubing, whereupon it is designed to seal the catheter (i.e., between haemodialysis therapies). This is a single-use device.	IIb
12091	63582	Resective skin contouring/liposuction system needle/cannula kit	Арьсны хэлбэр засах/өөх соруулах системийн зүү/суваг иж бүрдэл	A collection of devices intended to be used to tighten loose or wrinkled skin and, optionally, cosmetically remove fat, through rotational force and suction provided by a dedicated console. It consists of a multiple coring needle array used to create a matrix of small circular holes in the skin which subsequently heal with contraction, a lipectomy cannula to be inserted subcutaneously into the fat layer for the aspiration of adipose tissue (fat), and a single coring needle for creating an opening in the skin for insertion of the lipectomy cannula. This is a single-use device.	IIb

12092	63601	Gelatin orthopaedic cement restrictor	Желатин ортопед цемент хязгаарлагч	A sterile, implantable device that is chemically degraded and absorbed via natural body processes designed to be inserted into the medullary canal of a bone (e.g., femur, tibia, or humerus) during orthopaedic surgery to prevent cement progression in the diaphysis and therefore facilitate cement pressurization during the introduction of an implant. It is made of animal-derived gelatin and is available in a variety of designs, e.g., straight or tapered, hollow with a fenestrated surface, and it may have a toothed surface to prevent its migration from the desired location. It may incorporate a metal orientation marker for radiographs and is not intended for spinal indication.	IIb
12093	63638	Cochlear implant implantable magnet MRI shield	Чихний дунгийн суулгацын соронзон MRI бамбай	A non-sterile device intended to secure the implantable magnet in the cochlear implant system in the presence of the magnetic field produced by a magnetic resonance imaging (MRI) system, to prevent displacement of the magnet during an MRI procedure. It is intended to be placed externally on the head of the patient directly over the implant, typically using a bandage(s) and/or tape(s); it is made of synthetic polymer materials (e.g., polycarbonate, polyester). This is a single-use device.	IIb
12094	63715	Hard-tissue ultrasonic surgical system holder/tip	Хатуу эдийн хэт авианы мэс заслын систем эзэмшигч / үзүүр	A hand-held component of an ultrasonic surgical system which includes a holder with controls and a surgical endpiece (tip) intended to be connected to a system transducer (not included) whereby the tip oscillates (vibrates) at high frequency in order to fragment hard tissue for cutting bone during surgery. It may be referred to as a handpiece but does not include a transducer; the tip is available in a variety of forms and sizes, and is typically made of metal. It may be used in open-surgery or minimally-invasive procedures in a variety of surgical disciplines (e.g., arthroscopic). This is a single-use device.	IIb

12095	63716	Hard/soft-tissue ultrasonic surgical system holder/tip	Хатуу / зөөлөн эдийн хэт авианы мэс заслын системийн эзэмшигч / үзүүр	A hand-held component of an ultrasonic surgical system which includes a holder with controls and a surgical endpiece (tip) intended to be connected to a system transducer (not included) whereby the tip oscillates (vibrates) at high frequency in order to fragment both hard and soft tissues (e.g., bone, cartilage) during surgery. It may be referred to as a handpiece but does not include a transducer; the tip is available in a variety of forms and sizes, and is typically made of metal. It may be used in open-surgery or minimally-invasive procedures in a variety of surgical disciplines (e.g., arthroscopic). This is a single-use device.	IIb
12096	63863	Haemodialysis dialysate tubing, reusable	Гемодиализийн диализатын хоолой, дахин ашиглах боломжтой	A length of tube made of metal and/or synthetic polymer materials intended to deliver haemodialysis dialysate and/or haemodialysis dialysate components (water, haemodialysis concentrate) to and/or from a haemodialysis machine/system. This is a reusable device.	IIb
12097	63998	Implantable orthopaedic fixation device connection screw	Суулгацын ортопедийн бэхэлгээний төхөөрөмжийн холболтын шураг	A small implantable surgical device designed to join (connect) two components of an implanted orthopaedic fixation device (e.g. osteotomy wedge to plate, femoral neck screw and plate); it is not intended to be screwed into the bone. It is typically made of metal and in the form of a short rod with machine threads at one end and a connecting slot (e.g., sunken Hex head) or thumbscrew at the other end.	IIb
12098	64058	Implantable gastric clip	Суулгах боломжтой ходоодны хавчаар	An implantable device designed to isolate the lesser curvature segment of the stomach (magenstrasse) to reduce stomach volume and facilitate weight loss in overweight/obese patients through a reduction in food consumption based on an increased sense of satiety (fullness). It is designed to clamp the length of the stomach such that the fundus and greater curvature segment is bypassed; the inferior portion of the clamp has an aperture to allow gastric juices created by the fundus and the body to empty into the antrum. It is intended to be introduced during a laparoscopic procedure as an alternative to surgical stapling of the stomach.	IIb

12099	64117	CT system generator	CT системийн генератор	A component of a computed tomography (CT) system intended to generate, regulate, and stabilize the voltage and current supplied to the x-ray tube, for controlled generation of x-rays and patient exposure time. The device typically includes a group of transformers and is built into the CT system’s gantry. It may control the speed of the rotating anode in the x-ray tube and may also employ the high-frequency inverter method for increased performance.	IIb
12100	64151	Knee tibia prosthesis plug	Өвдөгний шилбэний протезийн залгуур	A small, implantable threaded or non-threaded plug intended to fill the hole in the tibial baseplate of a modular knee tibia prosthesis when the knee tibial stem prosthesis is not used. It is made of metallic and/or synthetic polymer materials, and is screwed or pushed into place.	IIb
12101	64152	Knee tibia stem prosthesis	Өвдөгний шилбэний ишний протез	An implantable uncoated shaft-like device intended to be attached to the tibial baseplate of a modular knee tibia prosthesis to provide anchorage within the tibia. It has a threaded proximal end and is shaped to provide a tight fit with the internal tibial cortex; it is made of metallic materials.	IIb
12102	64163	Peripheral vascular electrocautery catheter, reprocessed	Захын судасны цахилгаан катетер, дахин боловсруулсан	A flexible catheter with a distal heating element/electrode intended to be connected to an electrical generator and introduced into the peripheral vasculature to ablate venous tissues, through direct application of heat, as a treatment for venous reflux disease (varicose veins); it is not intended to introduce electrical current into the body. It is a luminal device with a proximal handle with controls (e.g., on/off switch) that is introduced via an introducer assembly (which may be included), and is typically maneuvered under external image guidance [e.g., ultrasound (US)]. This is a previously used single-use device that has been processed for an additional single-use patient application.	IIb

12103	64199	Tissue morcellation system handpiece, battery-powered	Батарейгаар ажилладаг эдийг шингээх системийн гар утас	A battery-powered, hand-held device intended to be used to mechanically cut (slice), core (cut a hole into), peel (remove surface), and extract selected tissue from the body during surgery (e.g., prostate tissue morcellation during laparoscopy). It consists of a cordless instrument with a high-speed rotating blade in a holder. Resected tissue may be removed through suction or manually with a grasping instrument. This is a single-use device.	IIb
12104	64208	Aperture reduction intraocular implant	Апертурыг багасгах нүдний дотоод суулгац	A small aperture diaphragm intended to be implanted alongside (in parallel with) an intraocular lens (not included) for the treatment of irregular corneal astigmatism in the pseudophakic eye, by reduction of incoming peripheral light rays using the pin-hole effect. It has no refractive power and is made of polymer materials.	IIb
12105	64209	Tumour-therapy nanoparticle suspension, magnetic hyperthermia/thermoablation	Хавдрын эмчилгээний нано бөөмийн суспенз, соронзон гипертерми/термоабляци	An implantable nanomaterial designed to be locally administered into a tumour or tumour bed (e.g., brain tumour) and to be subsequently heated by an external alternating magnetic field whereby the heat released by the material is intended to destroy surrounding tumour cells (thermoablation), or alternatively sensitize tumour cells [hyperthermia] to enhance the efficacy of concomitant radiotherapy or chemotherapy. It is in the form of an aqueous suspension containing superparamagnetic iron oxide nanoparticles.	IIb
12106	64210	Tumour-therapy nanoparticle thermo-magnetic activation system	Хавдрын эмчилгээний нано бөөмсийн термо-соронзон идэвхжүүлэлтийн систем	A stationary assembly of therapeutic devices intended to generate a focussed alternating magnetic field whereby magnetic nanoparticle material implanted in a tumour is heated in order to produce its intended therapeutic effect (thermoablation or hyperthermia for tumour therapy). It consists of a mains-powered floor-standing gantry, a control/display panel, and a patient table on which the patient is positioned so that the tumour is at the centre of the magnetic field (using pre-acquired patient images); noninvasive devices for monitoring the temperature of the target tissues during treatment (software, computer, thermostat) are typically supplied with the system.	IIb

12107	64211	Tumour-therapy nanoparticle hyperthermia/thermoablation software	Хавдрын эмчилгээний нано бөөмийн гипертерми/термоабляцийн программ хангамж	A software program intended to be used during the post-implantation planning stage of nanoparticle tumour therapy (hyperthermia or thermoablation treatment), to simulate the application of magnetic field energy to an implanted magnetic nanomaterial in order to calculate the optimal temperature distribution that will be produced by the magnetically-heated implant in the target tissue structures. It generates a 3-D model based on parameters such as patient imaging data (e.g., CT scan) showing nanomaterial density distribution, known power absorption of the nanomaterial, and mean perfusion of the treatment area.	IIb
12108	64253	Spinal distraction rod, magnetic	Нурууны анхаарлыг сарниулах саваа, соронзон	An implantable, magnetic rod, capable of adjusting in length, designed to be fixed alongside the spinal column enabling periodic lengthening to distract the spine and provide adequate bracing during growth to minimize the progression of scoliosis. It consists of a telescoping rod (nail) connected to the vertebrae with standard fixation devices (i.e., pedicle screws, hooks and/or connectors) [not included], with one or more integrated magnets which control/provide the lengthening force, using a noninvasive magnetic control device.	IIb
12109	64256	Surgical staple loading unit, cutting	Мэс заслын үдээс ачаалах нэгж, зүсэх	A unit containing non-bioabsorbable surgical staples (implantable and typically U-shaped lengths of wire made of implant grade metal) and an internal cutting blade designed to be used with a surgical stapler (not included) during endoscopic or open-surgery (e.g., bowel resection to create anastomoses). The unit is designed to deploy the staples (e.g., in a straight or circular row) while the blade cuts the adjacent tissue. This is a single-use device.	IIb

12110	64278	Tumour-therapy nanoparticle thermo-magnetic activation thermometry catheter	Хавдрын эмчилгээний нано хэсгүүдийн термо-соронзон идэвхжүүлэх термометрийн катетер	A thin, flexible tube intended to be placed short-term (<= 30 days) into/close to a solid tumour (e.g., brain) and used as a conduit for passing a temperature sensor (not included) into/close to the tumour during a tumour-therapy magnetic nanoparticle hyperthermia/thermoablation procedure. It is typically made of synthetic polymer materials and may be available in a variety of sizes, lengths, and distal tip designs. Devices used to assist introduction/removal (e.g., stylet, obturator) may be included with the catheter. This is a single-use device.	IIb
12111	64311	In vivo tissue capsule formation rod	In vivo эдийн капсул үүсэх саваа	A device in the shape of a small rod intended to be surgically placed short-term in subcutaneous tissue to induce formation of fibro-collagenous tissue around it, resulting from foreign body response and tissue healing, to subsequently form upon device removal a hollow cavity/capsule similar to a blood vessel. The resultant hollow tissue structure is surgically connected to adjacent vasculature, typically to create an arteriovenous fistula (AVF) for haemodialysis. The rod is made of synthetic polymer materials and has a microporous surface to facilitate tissue growth. This is a single-use device.	IIb
12112	64347	Peripheral anaesthesia catheter set, medicated	Захын мэдээ алдуулалтын катетерийн багц, эмтэй	A collection of devices intended for the continuous-administration of an anaesthetic agent to function as a peripheral nerve-block. It includes a pharmaceutical anaesthetic agent, an anaesthesia catheter, and an anaesthesia needle usually with additional devices utilized for the procedure (e.g., connectors, catheter holder). This is a single-use device.	IIb
12113	64368	Peritoneal dialysis manifold, reusable	Хэвлийн диализийн олон талт, дахин ашиглах боломжтой	A noninvasive device designed to provide multiple connections for the various tubes used during peritoneal dialysis (patient, dialysate, waste) so that the patient or healthcare provider can conveniently switch the connection between different tubes during the sequence of the procedure. It consists of multiple channels for fixing tubes in place and a tap, or other switching component, to isolate the connection between the various tubes. It may have components for holding the device in place on surfaces (e.g., suction cups). This is a reusable device.	IIb

12114	64369	Peritoneal dialysis manifold, single-use	Хэвлийн диализийн олон талт, нэг удаагийн	A noninvasive device designed to provide multiple connections for the various tubes used during peritoneal dialysis (patient, dialysate, waste) so that the patient or healthcare provider can conveniently switch the connection between different tubes during the sequence of the procedure. It consists of multiple channels for fixing tubes in place and a tap, or other switching component, to isolate the connection between the various tubes. It may have components for holding the device in place on surfaces (e.g., suction cups). This is a single-use device.	IIb
12115	64417	Soft-tissue ultrasonic surgical system holder/tip, reusable	Зөөлөн эдийн хэт авианы хагалгааны систем эзэмшигч, дахин ашиглах боломжтой	A hand-held component of an ultrasonic surgical system which includes a holder with controls and a surgical endpiece (tip) intended to be connected to a system transducer (not included) whereby the tip oscillates (vibrates) at high frequency in order to fragment soft-tissue cells for cutting and/or coagulating soft tissue during surgery. It may be referred to as a handpiece but does not include a transducer; the tip is available in a variety of forms and sizes, is typically made of metal, and may include a disposable tube to cover the shaft of the tip. This device is utilized in a variety of surgical disciplines. This is a reusable device.	IIb
12116	64426	Robotic surgical irrigation/aspiration cannula, single-use	Робот мэс заслын усалгаа/сорох суваг, нэг удаагийн	An atraumatic, invasive tube intended to be connected directly to the arm of a robotic surgical system and designed as a conduit to allow irrigation and aspiration (i.e., capable of both functions) of body cavities/wounds during a robotic surgical (e.g., laparoscopic) procedure, typically to facilitate observation; it may additionally be used for tissue manipulation. It is typically a long, slim, rigid tube with a proximal housing that connects to an arm of the robotic surgical system; it may include connection tubing and additional tubing set components (e.g., clamps, filters, connectors). It is not designed to administer parenteral fluids or drugs. This is a single-use device.	IIb

12117	64434	Intravascular near-infrared spectroscopy imaging system catheter	Судас доторх хэт улаан туяаны спектроскопийн дүрслэлийн системийн катетер	A fibreoptic flexible tube intended to be percutaneously introduced into the vasculature (e.g., peripheral vessels, coronary arteries) to perform near-infrared spectroscopy [NIRS] for intravascular examination, especially for detection and image-based quantification of lipid core plaques. Its proximal end connects to a parent spectroscopy system for the transmission of light signals for viewing and analysis. This is a single-use device.	IIb
12118	64444	Indwelling urethral/percutaneous urinary drainage catheter	Шээсний суваг / арьсан доорх шээс ялгаруулах катетер	A flexible tube intended to function as an indwelling therapeutic device for urinary drainage that can be inserted by a healthcare professional using both urethral and percutaneous (typically suprapubic or nephrostomy) approaches and is retained in the urinary bladder or renal pelvis with a balloon or wings. It may be designed to allow infusion of fluids (irrigation) or provided with a pre-connected urine collection bag; it does not include an antimicrobial agent(s). This is a single-use device.	IIb
12119	64448	Laser osteotome robot	Лазер остеотомын робот	An electrically-powered autonomous robot intended to cut bone, cartilage and/or tendons using a solid-state laser (e.g., midfacial osteotomy) directed by clinician/technician input reference points defined on the patient tissue and corresponding CT scans. Operator input is limited to applying reference points, initial robot positioning, and robot activation; the device’s subsequent actions are then autonomously controlled. It consists of an operative console with an electromechanical arm for laser delivery, and a camera console with a screen for displaying the operative field and/or CT scan.	IIb

12120	64482	Implantable intraocular medication reservoir	Суулгах боломжтой нүдний доторх эмийн сан	A device intended to be surgically implanted in the posterior segment of the eye to contain a therapeutic solution and provide its continuous passive delivery into the vitreous. It consists of a synthetic polymer tubular chamber designed to be periodically refilled with the therapeutic solution through its septum port at the scleral surface, and includes a porous distal end for passive diffusion of the solution into the vitreous; devices associated with implantation are typically provided with the implant. It is typically used to deliver a pharmaceutical agent for treating retinal diseases [e.g., neovascular age-related macular degeneration (nAMD), diabetic retinopathy].	IIb
12121	64573	Peripheral intravenous catheterization kit	Захын судсаар катетержуулах хэрэгсэл	A collection of devices intended for the introduction of an included peripheral vein cannula, often referred to as a catheter, to enable short-term (≤ 30 days) intravenous (IV) access for administration of fluids/medication and blood sampling. In addition to the cannula, it includes non-dedicated devices intended to support the procedure [e.g., tourniquet, swabs, dressings, disinfectants (e.g., alcohol), tape, gloves]. This is a single-use device.	IIb
12122	64574	Peripheral intravenous cannula	Захын судсаар хийх суваг	A short, thin tube intended to be inserted into a peripheral vein (typically on the hand/arm) to enable short-term (< 30 days) intravenous (IV) access for administration of fluids/medication and blood sampling. Also referred to as a peripheral IV catheter, it is typically assembled with a dedicated introduction needle, and usually includes connectors, injection ports, and wings for fixation. It is not intended to be advanced to the central vasculature. This is a single-use device.	IIb

12123	64589	In-exsufflation/lung-oscillation airway secretion-clearing system	Амьсгалын замын шүүрлийг цэвэрлэх систем	An assembly of powered devices intended for use in healthcare and homecare settings to help clear airway secretions using one of two pre-configured programs: 1) mechanical insufflation-exsufflation for simulating a cough in a patient with an ineffective cough [e.g., due to neuromuscular deficits, COPD]; and 2) lung oscillation by pressurized air pulses, and lung expansion therapy by positive expiratory pressure (e.g., for prevention of pulmonary atelectasis). The system includes an electropneumatic generator/interface unit and breathing circuit elements (e.g., face mask, mouthpiece); it is also capable of delivering medicated aerosol and supplemental oxygen during therapy.	IIb
12124	64594	Brain activity oximetry analysis system	Тархины үйл ажиллагааны оксиметрийн шинжилгээний систем	An assembly of electrically-powered devices intended to estimate and display changes in patient brain activity by noninvasive photometric [near-infrared spectroscopy (NIRS)] detection of changes in cerebral cortex tissue blood oxygen saturation. It consists of a head-worn cap with an array of multiple transcutaneous sensors, and a portable (e.g., carry-on) analysis unit with dedicated software which translates the NIRS measurements into brain activity data (e.g., functional neuroimages) for display on a monitor/screen. The device is typically used in investigational studies to obtain neurofeedback data during performance of mobile tasks.	IIb
12125	64595	Cerebral oximeter sensor, reusable	Тархины оксиметрийн мэдрэгч, дахин ашиглах боломжтой	A photoelectric device designed to be applied externally to the scalp/head of a patient for transcutaneous measurement [e.g., using near-infrared spectroscopy (NIRS)] of brain tissue blood oxygen saturation and/or venous oxygen saturation in the brain. It connects to a parent device (e.g., cerebral oximeter, brain activity oximetry analyser) and may be in the form of a single/dual adhesive sensing strip, individual light sources and photodiode detectors (which together constitute a sensor) intended to be attached to a head-worn cap, or a head-worn cap preconfigured with an array of light sources and photodiode detectors. This is a reusable device.	IIb

12126	64616	Oesophageal atresia irrigation/aspiration tube	Улаан хоолойн атрези усалгаа/сорох хоолой	A flexible, double-lumen, hollow cylinder intended to be non-surgically inserted into the oesophagus for short-term (≤ 30 days) irrigation and aspiration (i.e., capable of both functions) to wash and evacuate debris/secretions from the oesophagus for the preoperative treatment of oesophageal atresia in neonates/infants. The two proximal ends of the device are typically connected to a saline bag, an irrigation/aspiration pump, and/or left open to allow for air access/circulation. This is a single-use device.	IIb
12127	64654	ERCP catheter, balloon, electrosurgical, sphincter-dilation	ERCP катетер, бөмбөлөг, цахилгаан мэс засал, сфинктерийн тэлэгдэл	A flexible, multi-purpose, tubular device designed to be inserted into the duodenum via the oral cavity (cannulation) using a flexible endoscope to: 1) infuse contrast media; 2) deliver electrosurgical current in a monopolar configuration to cut the major duodenal papilla (papillotomy); and 3) balloon dilate the opening to the biliary tract, during endoscopic retrograde cholangiopancreatography (ERCP). It includes proximal controls, a distal monopolar electrosurgical cutting wire, an inflatable balloon and an inner lumen(s). It is intended to be used alongside separate devices designed for the removal of biliary stones. This is a single-use device.	IIb
12128	64657	Fully-implantable middle ear implant system sound processor	Бүрэн суулгах боломжтой дунд чихний суулгацын системийн дууны процессор	A battery-powered implantable component of a fully-implantable middle ear implant system intended to convert sound into electrical signals and to transmit these signals to a vibrator assembly (not included) that is commonly coupled with an ossicle (middle ear bone). It includes a battery, microphone, and a sound processor and is typically implanted subcutaneously adjacent to the ear; the battery is typically recharged by induction.	IIb
12129	64669	Ultrasonic skin contouring system applicator	Хэт авианы арьс өнгөлөгч систем түрхэгч	An electrically-powered, hand-held component of an ultrasonic skin contouring system intended to be used for the extracorporeal application of high-intensity/frequency ultrasound [e.g., high intensity focused ultrasound (HIFU)] to the skin to temporarily minimize the manifestation of cellulite, loose or wrinkled skin, and/or facial lines. It is intended to be connected to the system generator/control unit (not included) and includes a head portion applied to the surface of the treatment area. This is a reusable device.	IIb

12130	64784	Vascular catheter/cannula flush solution, anticoagulant, antimicrobial	Судасны катетер/суваг угаах уусмал, антикоагулянт, нянгийн эсрэг үйлчилгээтэй	A solution which contains an antimicrobial agent(s) (e.g., citrate and/or taurolidine) intended to flush the lumen of an in situ intravenous access device, typically a peripheral intravenous cannula or central venous catheter, to maintain patency; it contains a low dose (e.g., 10 i.u.) of an anticoagulant agent(s), either additionally or the antimicrobial has anticoagulant properties. Also known as lock solution, the device is available in a small container (e.g., bottle) or prefilled syringe. This is a single-use device.	IIb
12131	64785	Vascular catheter/cannula flush solution, non-anticoagulant, antimicrobial	Судасны катетер/суваг угаах уусмал, антикоагулянтгүй, нянгийн эсрэг үйлчилгээтэй	A solution (e.g., saline, sterile water) with an antimicrobial agent intended to flush the lumen of an in situ intravenous access device, typically a peripheral intravenous cannula or central venous catheter, to maintain patency; it does not include an anticoagulant agent. Also known as lock solution, the device is available in a small container (e.g., bottle) or prefilled syringe. This is a single-use device.	IIb
12132	64869	Plant polysaccharide/inorganic composite haemostatic agent	Ургамлын полисахарид/органик бус нийлмэл цус тогтоогч бодис	A bioabsorbable device consisting of a combination of both: 1) plant polysaccharide-based; and 2) inorganic (i.e., not derived from living matter) synthetic polymer-based [e.g., polyethylene glycol (PEG)] haemostatic agents, intended to be used to achieve haemostasis during an open and/or endoscopic surgical procedure. It is available in various forms (e.g., powder, gel, impregnated gauze); it does not contain an antimicrobial agent. Disposable devices to assist application may also be included. This is a single-use device.	IIb
12133	64906	Knee femur prosthesis attachment peg	Өвдөгний гуяны протезийн хавсралт	A small, implantable, threaded device intended to be attached to the femoral (inner) surface a knee femur prosthesis to provide additional stability for the prosthesis by intrusive attachment to the resected surface of the femur. It is typically made of metal [e.g., cobalt-chrome (Co-Cr)] and is typically a component of a modular knee femur prosthesis.	IIb

12134	65054	Electromagnetic endoscope tracking system reference transmitter, external, bedside	Цахилгаан соронзон дурангийн хяналтын системийн лавлагаа дамжуулагч, гадаад, орны дэргэд	An external component of an electromagnetic (EM) endoscope tracking system designed to emit EM pulses for spatial referencing of an appropriate EM pulse-receiving endoscope in situ. It is typically a flat panel designed to be mounted next to the patient; the system sensor (not included) and the endoscope simultaneously receive signals from the reference transmitter for spatial referencing. This is a reusable device.	IIb
12135	65088	Bone-conduction hearing implant system partially-implantable abutment	Ясны дамжуулагч сонсголын суулгацын систем хэсэгчлэн суулгаж болох тулгуур	A non-powered, implantable device intended to be connected between an external sound processor/vibrator and implantable vibration transmitter (neither component included), to hold the sound processor/vibrator in place and assist with the transmission of the vibrations to the inner ear via the temporal bone. It is typically in the form of a metallic screw with a post which protrudes through the skin.	IIb
12136	65093	Bone-conduction hearing implant system sound processor	Яс дамжуулагч сонсголын суулгацын системийн дууны процессор	An electrically-powered, external device intended to compensate for impaired hearing by receiving sound waves from the environment and converting them into electrical signals sent to an implantable vibrator assembly (not included) which transmits vibrations to the inner ear via the temporal bone; it does not generate vibrations. It typically incorporates a microphone and transmitter/receiver, and is magnetically coupled to the vibrator assembly; it may include activation, positioning and/or protection devices.	IIb
12137	65185	ERCP catheter, non-balloon, electrosurgical	ERCP катетер, бөмбөлөг бус, цахилгаан мэс засал	A flexible, tubular device designed to be inserted into the duodenum via the oral cavity (cannulation) using a flexible endoscope to: 1) infuse contrast media; and 2) deliver electrosurgical current in a monopolar configuration to cut the major duodenal papilla (papillotomy) and approximate tissues, during endoscopic retrograde cholangiopancreatography (ERCP). It includes proximal controls, a distal monopolar electrosurgical cutting wire and an inner lumen(s); it does not incorporate a balloon. This is a single-use device.	IIb

12138	65186	ERCP catheter, balloon, electrosurgical, stone-retrieval	ERCP катетер, бөмбөлөг, цахилгаан мэс засал, чулуу авах	A flexible, multi-purpose, tubular device designed to be inserted into the duodenum via the oral cavity (cannulation) using a flexible endoscope to: 1) infuse contrast media; 2) deliver electrosurgical current in a monopolar configuration to cut the major duodenal papilla (papillotomy); and 3) remove stones (calculi) from the biliary tract via a balloon, during endoscopic retrograde cholangiopancreatography (ERCP). It includes proximal controls, a distal monopolar electrosurgical cutting wire, an inflatable balloon and an inner lumen(s). This is a single-use device.	IIb
12139	65365	Multi-modality diagnostic x-ray system, mobile	Олон төрлийн оношлогооны рентген систем, хөдөлгөөнт	A mobile assembly of diagnostic x-ray devices intended to acquire, display and process images from any part of the body (full-body) incorporating the techniques of more than one x-ray imaging modality, typically including real-time fluoroscopy, two-dimensional (2D) radiography, and computed tomography (CT); it is not a single-modality system. It typically consists of a gantry with x-ray tubes and opposing detectors that rotate rapidly, console, monitor and patient bed.	IIb
12140	65440	Haematological concentrate anticoagulation solution	Гематологийн баяжмалын антикоагуляцийн уусмал	A solution formulation (e.g., a citric acid/citrate/dextrose) intended to inhibit the coagulation of blood during the collection and extracorporeal processing of autologous blood for the preparation of platelet rich plasma (PRP) in a healthcare facility. It is supplied in a suitable container (e.g., a polypropylene bag, glass vial, etc.) and is not intended for direct intravenous infusion. This is single-use device.	IIb
12141	65490	Neonatal high-flow respiratory unit	Нярайн өндөр урсгалтай амьсгалын аппарат	An electrically-powered device designed to deliver high-flow (exceeding peak inspiratory flow) heated and humidified ambient air or air/oxygen to a neonatal patient as part of noninvasive ventilation (NIV); it may additionally be used with a water tank to produce bubble continuous positive airway pressure (bubble CPAP). It consists of a gas flow generator that entrains room air, an oxygen input, a heating element, and humidification chamber; it does not include CPAP controlling pressure sensors (i.e., not a full CPAP unit). It is intended for use by a healthcare provider on a spontaneously breathing patient.	IIb

12142	65491	Professional BPAP/high-flow respiratory unit	Мэргэжлийн BPAP/өндөр урсгалтай амьсгалын аппарат	An electrically-powered device designed to deliver heated and humidified ambient air or air/oxygen to a patient during both: 1) high-flow (exceeding peak inspiratory flow) respiratory therapy; and 2) bi-level positive airway pressure (BPAP). It consists of a gas flow generator that entrains room air, an oxygen input, a heating element, humidification chamber, and both pressure and flow sensors. It is intended for use by a healthcare provider on a spontaneously breathing patient.	IIb
12143	65510	Thrombectomy tubing set, electronic	Тромбектомийн гуурсан хоолойн багц, электрон	A collection of noninvasive tubing and associated devices, which includes an electrically-powered component(s), designed to conduct fluids from a thrombectomy catheter (not included) to an electric suction pump (not included) to assist with the intravascular disruption and removal of clotted blood (i.e., a thrombus or thromboembolus). It includes flow sensors and solenoid valves designed to automatically manage suction to restrict flow and reduce blood loss; it does not include invasive devices. This is a single-use device.	IIb
12144	65517	Atomizer, ventilatory	Атомизатор, агааржуулалт	A non-powered device intended to accept a medication canister and to be integrated within a mechanical or manual ventilation assembly (e.g., ventilator breathing circuit/endotracheal tube, pulmonary resuscitator) to provide liquid medication in aerosolized form for the patient to breathe during ventilation. It typically includes a medicine chamber spacer; unlike a nebulizer it lacks a baffle. This is a reusable device.	IIb
12145	65576	Bone cleaning gas-jet tubing set	Яс цэвэрлэх хийн тийрэлтэт хоолойн иж бүрдэл	A dedicated collection of flexible tubing intended to be used as a conduit to deliver carbon dioxide (CO2) from its source to a bone cleaning gas-jet handpiece, during a procedure to clean bone as part of an open surgical orthopaedic procedure. The set includes tubing, connectors, and a filter(s). This is a single-use device.	IIb

12146	65830	Respiration rate signal processor/transmitter	Амьсгалын давтамжийн дохионы процессор/дамжуулагч	An electrically-powered device designed to be connected to a thorax-placed electrode array (not included) to collect, process, and wirelessly transmit respiration rate signal data for subsequent display on a separate monitor. It is a small unit with an electrical connection, internal processing functionality, and a transmitter.	IIb
12147	65832	Wireless patient monitor/sensor reporting software, professional-only	Өвчтөний утасгүй монитор/мэдрэгч тайлагнах программ хангамж, зөвхөн мэргэжлийн	A software program intended to be installed on an off-the-shelf, computerized device (e.g., desktop computer, tablet) and used by a healthcare professional in a clinical/care setting to receive data from a noninvasive, patient-worn, wireless monitor/sensor. It is not dedicated to bedside monitoring.	IIb
12148	65859	Capillary blood collection kit, professional	Капилляр цус цуглуулах хэрэгсэл, мэргэжлийн	A collection of devices intended to be used by a healthcare professional at the point-of-care to collect a capillary blood sample from a patient for subsequent diagnostic testing or screening purposes. It typically includes a lancet and a blood collection device (consisting of a capillary tube and blood collection tube) and may also include gloves, gauze pads, alcohol pads and dressings. This is a single-use device.	IIb
12149	65882	Robotic electrosurgical instrument, bipolar/monopolar	Робот цахилгаан мэс заслын багаж, биполяр/монополяр	An electrosurgical device intended to be connected directly to the arm of a robotic surgical system to deliver electrosurgical current in both a bipolar and monopolar configuration from a generator directly to tissues for cutting/coagulation/ablation during robotic endoscopic (e.g., laparoscopic, arthroscopic) surgery. It includes a long thin body with a proximal housing intended to attach to the robotic arm, and includes the distal bipolar/monopolar electrodes in a variety of forms (e.g., forceps, hook, tip). This is a single-use device.	IIb
12150	65923	Lung donor-organ preservation/evaluation system chamber	Уушигны донор-эрхтэн хадгалах/үнэлгээний системийн танхим	A closable, transparent receptacle designed to be used as a component of a lung donor-organ preservation/evaluation system and intended to temporarily contain the lung(s) during preservation prior to transplantation. It incorporates a port(s) for connection to the parent device. This is a single-use device.	IIb

12151	66216	Pulmonary artery flow reduction implant	Уушигны артерийн урсгалыг багасгах суулгац	An hour-glass shaped (waisted) mesh device designed to be implanted in the pulmonary artery to restrict outflow from, and therefore increase pressure in, the right ventricle, to reduce left ventricular volume for the management of unresponsive heart failure. It is made of a metallic framework with a polymer covering. Dedicated disposable implantation devices (e.g., transvenous balloon catheter, guidewire) may be included with the implant.	IIb
12152	66265	Total wrist radial stem prosthesis	Бугуйн радиаль ишний нийт протез	An implantable device designed to replace the radial stem as part of a total wrist replacement, typically to treat severe bone fracture or degenerative disease (e.g., arthritis). The device is intended to function with a radial articulation surface prosthesis (not included) attached to its distal end and is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel]. Fixation devices for implantation (e.g., screws) may be included with the prosthesis and implantation may be performed with or without bone cement.	IIb
12153	66266	Total wrist radial articulation prosthesis	Нийт бугуйны радиаль үений протез	An implantable device designed to replace the articulating surface of the distal radius as part of a total wrist replacement, typically to treat severe bone fracture or degenerative disease (e.g., arthritis). The device is intended to be attached to a radial stem prosthesis at its proximal end, and in contact with a carpal prosthesis at its distal end (neither included); it is made of polymer materials. Fixation devices for implantation (e.g., screws) may be included with the prosthesis and implantation may be performed with or without bone cement.	IIb
12154	66286	Intradermal radio-frequency ablation system needle electrode	Арьсны доторх радио давтамжийн абляцийн системийн зүү электрод	An electrical conductor intended to be introduced into the dermal layer of the skin (intradermal) to deliver radio-frequency (RF) current in a monopolar configuration for coagulation/ablation, to treat skin conditions [typically superficial skin lesions (e.g., telangiectasia, cherry angioma, venous lake, skin tags) and/or acne]. It is intended to be used in conjunction with an appropriate RF generator and attached to a probe handle (not included). This is a single-use device.	IIb

12155	66376	Perineural stand-alone catheter	Периневралын бие даасан катетер	A flexible tube intended for percutaneous short-term (<= 30 days) introduction adjacent to a peripheral nerve or at a wound site to deliver an anaesthetic/analgesic agent for nerve-block/pain management; it is not intended for epidural or spinal anaesthesia. It is typically fenestrated and may be supplied with appropriate connectors, however it does not include a needle or infusion pump components (i.e., not a kit or set). This is a single-use device.	IIb
12156	66515	Neurovascular sensor guidewire signal display unit	Мэдрэлийн судасны мэдрэгчийн чиглүүлэгч утас дохионы дэлгэцийн нэгж	An electronic display screen/monitor intended to communicate with an in situ neurovascular sensor guidewire during an intervention to collect and display a graphical representation of sensor-emitted electrical signals (e.g., clot/vascular tissue electrical impedance data from an ischemic stroke patient). It is used during diagnostic or interventional procedures to help guide a microcatheter through vasculature and to measure electrophysiological parameters.	IIb
12157	66527	Ventilator breathing circuit/mask	Агааржуулагчийн амьсгалын хэлхээ/маск	An assembly of devices that includes a breathing circuit and a respiratory mask designed to conduct air or oxygen (O2) enriched gases and additional gases [e.g., nitrous oxide (N2O), halogenated gases] from a ventilator to a patient during noninvasive ventilation. It includes breathing tubes, a Y-piece connector, and typically provides connections for devices that humidify, deliver medication, and monitor gas concentration or pressure within the breathing circuit. This is a single-use device.	IIb
12158	66544	Foetal/maternal prenatal monitoring system transceiver	Ургийн/эхийн пренатал хяналтын системийн дамжуулагч	An electrically-powered component of a foetal/maternal prenatal monitoring system intended to be connected to the system transducer (tocodynamometer) to receive measurements (e.g., typically uterine contractions and foetal heart rate) acquired from the transducer and transmit them to the system monitor for further processing and/or display (transducer and monitor not included). The device might in addition be used to supply electrical energy to the transducer (charging). It typically has the form of a stationary one-piece or portable two-component unit (i.e., separate transmitter and receiver). This is a reusable device.	IIb

12159	66547	Bronchial radio-frequency thermoplasty system catheter	Гуурсан хоолойн радио давтамжийн термопластик системийн катетер	A thin, flexible tube with an electrode array at its distal end intended to be used as part of a bronchial radio-frequency thermoplasty system to deliver low-intensity, radio-frequency (RF) energy for heating bronchial smooth muscle to reduce/shrink the tissue for less airway constriction in the treatment of asthma. It is intended to operate in a monopolar configuration in conjunction with an appropriate generator (not included). It typically has a handle and is designed to be advanced through the working channel of a bronchoscope to the treatment site. This is a single-use device.	IIb
12160	66549	Direct current hyperthermia system	Шууд гүйдлийн гипертерми систем	An electrically-powered device assembly designed for controlled heating (i.e., temperatures around 43° Celsius) of the body using direct current to treat malignant or benign tumours, or other disease conditions; it is not intended for direct tissue ablation. It includes a main console/generator, controls, software, and energy applicator heaters, and typically ultrasound imaging components to assist invasive therapy applications. It is intended for whole-body and/or localized heating of tissues/organs through either noninvasive body surface applicators or needle-type applicators inserted topically, endoscopically, or surgically.	IIb
12161	66680	Gastro-oesophageal antireflux intraluminal fundoplication clip	Ходоод-улаан хоолойн рефлюкс доторх фундаментопликацийн хавчаар	An implantable device designed to be transorally inserted during an endoscopic procedure to secure the stomach fundus to the oesophagus above the gastro-oesophageal junction to create a partial intraluminal fundoplication for the prevention of gastro-oesophageal reflux. It is made of non-bioabsorbable synthetic polymer materials and is typically supplied in a cartridge containing multiple clips/fasteners; a dedicated endoscopic implantation tool may be included with the device.	IIb

12162	66710	Metacarpophalangeal/metatarsophalangeal interpositional spacer	Metacarpophalangeal/metatarsophalangeal interpositional spacer	A non-bioabsorbable device designed to be implanted into the metacarpophalangeal or metatarsophalangeal joint for joint resurfacing to treat pain, instability, and/or motion disabilities caused by arthritis or trauma. It may involve resection of one or both joint surfaces but is not anchored to bone. It may be spherical, oval or discoid and made of pyrocarbon and/or ceramic material.	IIb
12163	66739	Erectile dysfunction collagen-remodelling radio-frequency hyperthermia device	Бэлгийн сулрал, коллагеныг сэргээдэг радио давтамжийн гипертерми төхөөрөмж	A noninvasive, electrically-powered, hand-held device designed to generate and deliver controlled, low-level, radio-frequency (RF) energy to treat erectile dysfunction (ED) through hyperthermia-based collagen remodelling. The device includes bipolar electrodes intended to be placed around the penis and/or perineum. It is intended to be used by a patient in the home to improve penile blood flow and vasodilation through modification of collagen within the tunica albuginea.	IIb
12164	66756	Nerve transcutaneous ultrasound ablation system	Мэдрэлийн арьсан доорх хэт авиан арилгах систем	An assembly of devices intended to use high intensity focused ultrasound (HIFU) energy to create heat at controlled temperatures for noninvasive (transcutaneous) thermal ablation of neural tissue to treat chronic pain, typically through ablation of medial branch nerves at the bone/neural tissue interface. It is used together with a radiological image-guidance system (e.g., fluoroscopy system) and operating table, and consists of a software-based generator/control unit, imaging workstation, positioning and aiming elements (e.g., mechanical arm, cradle), and an ultrasound transducer/probe intended to be placed on the skin for transcutaneous delivery of focal heat to the target nerve.	IIb
12165	66811	Drug-delivery urethral catheter	Эмийн бэлдмэлийн шээсний сувгийн катетер	A flexible tube intended to be inserted, by a healthcare professional, through the urethra and into the urinary bladder to deliver a pharmaceutical (not included) [e.g., a chemotherapeutic agent]. It may include devices intended to assist introduction (e.g., stylet). This is a single-use device.	IIb

12166	66932	Orthopaedic bone cerclage cable	Ортопедийн ясны цооролт кабель	An implantable braided metallic cord intended to be tightened with a crimp-like component to form a loop or ring around a fractured bone and/or fixation plate as part of an orthopaedic treatment. It is not rigid (i.e., not a pin/K-wire) and not intended to be used in spinal bones. This is a single-use device.	IIb
12167	66933	Orthopaedic bone cerclage wire	Ортопедийн ясны хагалгааны утас	An implantable thin metallic cord intended to be tightened with a knot to form a loop or ring around a fractured orthopaedic bone and/or stabilize an implant (typically a fixation plate) for treatment. It is not rigid (i.e., not a pin/K-wire) and not intended to be used in spinal bones. This is a single-use device.	IIb
12168	66971	Thrombectomy suction catheterization kit	Тромбектомийн сорох катетержуулалтын хэрэгсэл	A collection of devices intended to be used during a percutaneous transluminal thrombectomy suction procedure (in conjunction with a syringe or dedicated suction pump system) and which includes a thrombectomy suction catheter and additional devices intended to support catheter introduction and function (e.g., dilator, clot buster, haemostasis valve, aspiration tubing). This is a single-use device.	IIb
12169	66973	Dental reparative/restorative device coating	Шүд засах/нөхөн сэргээх төхөөрөмжийн бүрээс	A metallic substance (typically titanium or zirconium nitride) intended to be used in a dental laboratory to apply a coating to a dental reparative/restorative device (e.g., crown, clasp, denture) [not included] as part of an ion-plasma sputtering process. The coating is intended to improve the properties of the reparative/restorative device (e.g., resistance to corrosion, appearance). After application, this device cannot be reused.	IIb
12170	66997	Active implantable device longevity estimation software	Идэвхтэй суулгацын урт наслалтыг тооцоолох програм хангамж	An application software program intended to be used on a non-medical computerized device (e.g., tablet, laptop) to estimate the longevity of an active implantable device based on elements such as model type, implantation date, and data extracted from external implant readers/programmers. It is intended to be used by a clinician to assist clinicians in ongoing patient care.	IIb

12171	67191	Suprapubic catheterization kit	Супрапубик катетержуулалтын иж бүрдэл	A collection of devices intended for the percutaneous introduction of an included catheter into the bladder through a suprapubic (above the pubic arch) incision, for the drainage of urine. In addition to the suprapubic catheter, it includes an introducer (typically a cannula/sheath with trocar), and one or more non-dedicated procedural supportive devices (e.g., scalpel, dressing, gauze, drape, disinfectant); it does not include a pharmaceutical. This is a single-use device.	IIb
12172	67285	Mechanical spinal distraction rod extender	Механик нугасны анхаарлыг сарниулах саваа сунгагч	An implantable, metallic device in the form of a short, fixed length rod intended to be optionally connected to the upper end of a mechanical spinal distraction rod (not included) to increase its length to provide greater load distribution (e.g., when the patient has small pedicles) as part of scoliosis treatment. It is not intended to be implanted without the parent rod. It has a U-shaped end, which may be straight or angled, to allow connection to the parent rod; it is designed to be fixed to the parent rod and vertebrae using bone screws.	IIb
12173	67286	Spinal distraction rod, mechanical	Нурууны анхаарлыг сарниулах саваа, механик	An implantable, mechanical (non-electric, non-magnetic), metallic rod, capable of adjusting in length, designed to be fixed alongside the spinal column enabling periodic lengthening to distract the spine and provide adequate bracing during growth to minimize the progression of scoliosis. It incorporates a rachet-based mechanism that allows noninvasive, post-implantation lengthening during patient growth and/or correction of scoliosis (i.e., self-lengthens in situ). It is fixed to the vertebrae using two pedicle bone screws at its ends, which may be included with the rod.	IIb
12174	30219	Multiple urine analyte IVD, control	Олон тооны шээсний шинжилгээний IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or semi-quantitative screening of urine for multiple analytes.	C
12175	30725	Hepatitis B virus surface total antibody kit	Гепатит В вирусын гадаргуугийн нийт эсрэгбиеийн иж бүрдэл	A device, which is a group of reagents used together to determine the presence of Hepatitis B virus surface total antibody in patient serum samples. (Infectious immunology, hepatitis viruses, Hepatitis B virus, kit for Hepatitis B surface total antibody).	C

12176	30731	Hepatitis B virus core total antibody kit	Гепатит В вирусын үндсэн эсрэгбиеийн иж бүрдэл	A test system consisting of one or more reagent(s), and other items intended to measure total antibody to Hepatitis B virus core antigen in human serum and plasma. The measurement is used as an aid in the diagnosis of ongoing or previous Hepatitis B viral infection. (Infectious immunology, hepatitis viruses, Hepatitis B virus, kit for Hepatitis B core total antibody).	C
12177	38184	Human placental alkaline phosphatase (hPLAP) IVD, control	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of human placental alkaline phosphatase (hPLAP) in a clinical specimen.	C
12178	38185	Human placental alkaline phosphatase (hPLAP) IVD, calibrator	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of human placental alkaline phosphatase (hPLAP) in a clinical specimen.	C
12179	38196	Prostatic acid phosphatase (PAP) IVD, control	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen.	C
12180	38197	Prostatic acid phosphatase (PAP) IVD, calibrator	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen.	C
12181	38218	Faecal occult blood IVD, control	Өтгөн далд цус IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin and/or transferrin).	C
12182	41657	Alkaline phosphatase (ALP) isoenzyme IVD, calibrator	Шүлтлэг фосфатаза (ALP) изоэнзим IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the quantitative measurement of one or multiple alkaline phosphatase (ALP) isoenzymes in a clinical specimen.	C
12183	41686	Alkaline phosphatase (ALP) isoenzyme IVD, control	Шүлтлэг фосфатаза (ALP) изоэнзим IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the quantitative measurement of one or multiple alkaline phosphatase (ALP) isoenzymes in a clinical specimen.	C
12184	41726	Total lactate dehydrogenase (LDH) IVD, control	Нийт лактат дегидрогеназа (LDH) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total lactate dehydrogenase (LDH) in a clinical specimen.	C

12185	41727	Total lactate dehydrogenase (LDH) IVD, calibrator	Нийт лактат дегидрогеназа (LDH) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total lactate dehydrogenase (LDH) in a clinical specimen.	C
12186	41968	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, calibrator	Гепатит С вирусын иммуноглобулин G (IgG) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen.	C
12187	41969	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, control	Гепатит С вирусын иммуноглобулин G (IgG) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen.	C
12188	41970	Hepatitis C virus immunoglobulin M (IgM) antibody IVD, calibrator	Гепатит С вирусын иммуноглобулин M (IgM) эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen.	C
12189	41971	Hepatitis C virus immunoglobulin M (IgM) antibody IVD, control	Гепатит С вирусын иммуноглобулин M (IgM) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen.	C
12190	41974	Hepatitis C virus antigen IVD, calibrator	Гепатит С вирусын эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens in a clinical specimen.	C
12191	41975	Hepatitis C virus antigen IVD, control	Гепатит С вирусын эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens in a clinical specimen.	C
12192	41979	Hepatitis C virus nucleic acid IVD, calibrator	Гепатит С вирусын нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus nucleic acid in a clinical specimen.	C
12193	41980	Hepatitis C virus nucleic acid IVD, control	Гепатит С вирусын нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus nucleic acid in a clinical specimen.	C

12194	42064	Urine sediment IVD, calibrator	Шээсний тунадас IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or semi-quantitative screening of urine sediment.	C
12195	42065	Urine sediment IVD, control	Шээсний тунадас IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or semi-quantitative screening of urine sediment.	C
12196	42082	Neonatal trypsin IVD, calibrator	Нярайн трипсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of neonatal trypsin in a clinical specimen.	C
12197	42083	Neonatal trypsin IVD, control	Нярайн трипсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of neonatal trypsin in a clinical specimen.	C
12198	43539	Urine catalase IVD, kit, rapid colorimetric, clinical	Шээсний каталазын IVD, иж бүрдэл, түргэн колориметр, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for catalase within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12199	44693	Creatine kinase myocardial isoenzyme (CKMB) IVD, control	Креатин киназ миокардийн изоэнзим (CKMB) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen.	C
12200	44694	Creatine kinase myocardial isoenzyme (CKMB) IVD, calibrator	Креатин киназ миокардийн изоэнзим (CKMB) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen.	C
12201	45782	Total acid phosphatase (TAP) IVD, control	Нийт хүчиллэг фосфатаз (TAP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total acid phosphatase (TAP) in a clinical specimen.	C
12202	45783	Total acid phosphatase (TAP) IVD, calibrator	Нийт хүчиллэг фосфатаза (TAP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total acid phosphatase (TAP) in a clinical specimen.	C

12203	45784	Acid phosphatase isoenzyme IVD, calibrator	Хүчил фосфатазын изоэнзим IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of one or multiple acid phosphatase isoenzymes in a clinical specimen.	C
12204	45785	Acid phosphatase isoenzyme IVD, control	Хүчил фосфатазын изоэнзим IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of one or multiple acid phosphatase isoenzymes in a clinical specimen.	C
12205	45830	Leukocyte alkaline phosphatase IVD, calibrator	Лейкоцитийн шүлтлэг фосфатазын IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme leukocyte alkaline phosphatase in a clinical specimen.	C
12206	45831	Leukocyte alkaline phosphatase IVD, control	Лейкоцитийн шүлтлэг фосфатазын IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme leukocyte alkaline phosphatase in a clinical specimen.	C
12207	45835	Bone alkaline phosphatase (BALP) IVD, calibrator	Ясны шүлтлэг фосфатаза (BALP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen.	C
12208	45836	Bone alkaline phosphatase (BALP) IVD, control	Ясны шүлтлэг фосфатаза (BALP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen.	C
12209	45839	Total alkaline phosphatase (ALP) IVD, calibrator	Нийт шүлтлэг фосфатаза (ALP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total alkaline phosphatase (ALP) in a clinical specimen.	C
12210	45840	Total alkaline phosphatase (ALP) IVD, control	Нийт шүлтлэг фосфатаза (ALP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total alkaline phosphatase (ALP) in a clinical specimen.	C
12211	45997	Total amylase IVD, calibrator	Нийт амилаза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of total amylase in a clinical specimen.	C
12212	45998	Total amylase IVD, control	Нийт амилаза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of total amylase in a clinical specimen.	C

12213	45999	Amylase isoenzyme IVD, calibrator	Амилаза изоэнзим IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen.	C
12214	46000	Amylase isoenzyme IVD, control	Амилаза изоэнзим IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen.	C
12215	47016	Multiple cardiac marker IVD, control	Олон зүрхний маркер IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of a combination of different types of cardiac markers in a clinical specimen. The cardiac markers may include B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), C-reactive protein (CRP), troponin I and/or troponin T.	C
12216	47384	Multiple cardiac marker IVD, kit, fluorescent immunoassay	Зүрхний олон маркер IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a combination of different types of cardiac markers in a clinical specimen, using a fluorescent immunoassay method. Cardiac markers to be assayed may include B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I and/or troponin T.	C
12217	47385	Multiple cardiac marker IVD, kit, enzyme immunoassay (EIA)	Зүрхний олон маркер IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of a combination of different types of cardiac markers in a clinical specimen, using an enzyme immunoassay (EIA) method. Cardiac markers to be assayed may include B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I and/or troponin T.	C

12218	47397	Multiple cardiac marker IVD, calibrator	Зүрхний олон маркер IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of a combination of different types of cardiac markers in a clinical specimen. These cardiac markers may include B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I and/or troponin T.	C
12219	47399	Multiple cardiac marker IVD, reagent	Зүрхний олон маркер IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of a combination of different types of cardiac markers in a clinical specimen. These cardiac markers may include B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I and/or troponin T.	C
12220	47639	Alpha-glutathione S-transferase (alpha-GST) IVD, antibody	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative measurement of alpha-glutathione S-transferase (alphaGST) in a clinical specimen.	C
12221	47640	Alpha-glutathione S-transferase (alpha-GST) IVD, calibrator	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative measurement of alpha-glutathione S-transferase (alpha-GST) in a clinical specimen.	C
12222	47641	Alpha-glutathione S-transferase (alpha-GST) IVD, control	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of alpha-glutathione S-transferase (alpha-GST)in a clinical specimen.	C
12223	47642	Alpha-glutathione S-transferase (alpha-GST) IVD, kit, enzyme immunoassay (EIA)	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of alpha-glutathione S-transferase (alpha-GST) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C

12224	47643	Alpha-glutathione S-transferase (alpha-GST) IVD, kit, enzyme immunohistochemistry	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of alpha-glutathione S-transferase (alpha-GST) in a clinical specimen, using an enzyme immunohistochemistry method.	C
12225	47644	Alpha-glutathione S-transferase (alpha-GST) IVD, reagent	Альфа-глутатион S-трансфераза (альфа-ГСТ) IVD, урвалж	A substance or reactant which is intended to be used with a parent IVD to perform a specific function in an assay used for the qualitative and/or quantitative detection of alpha-glutathione S-transferase (alpha-GST) in a clinical specimen.	C
12226	47645	Pi-glutathione S-transferase (pi-GST) IVD, antibody	Pi-glutathione S-transferase (pi-GST) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (piGST) in a clinical specimen.	C
12227	47646	Pi-glutathione S-transferase (pi-GST) IVD, calibrator	Pi-glutathione S-transferase (pi-GST) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (pi-GST) in a clinical specimen.	C
12228	47647	Pi-glutathione S-transferase (pi-GST) IVD, control	Pi-glutathione S-transferase (pi-GST) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (pi-GST) in a clinical specimen.	C
12229	47648	Pi-glutathione S-transferase (pi-GST) IVD, kit, enzyme immunoassay (EIA)	Pi-glutathione S-transferase (pi-GST) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (pi-GST) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12230	47649	Pi-glutathione S-transferase (pi-GST) IVD, kit, enzyme immunohistochemistry	Пи-глутатион S-трансфераза (pi-GST) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (pi-GST) in a clinical specimen, using an enzyme immunohistochemistry method.	C
12231	47650	Pi-glutathione S-transferase (pi-GST) IVD, reagent	Pi-glutathione S-transferase (pi-GST) IVD, урвалж	A substance or reactant which is intended to be used with a parent IVD to perform a specific function in an assay used for the qualitative and/or quantitative measurement of pi-glutathione S-transferase (pi-GST) in a clinical specimen.	C

12232	48212	HIV1/Hepatitis C virus nucleic acid IVD, kit, nucleic acid technique (NAT)	ХДХВ1/гепатит С вирусын нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid and Hepatitis C virus nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	C
12233	48213	HIV1/Hepatitis C virus nucleic acid IVD, calibrator	ХДХВ1/гепатит С вирусын нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid and Hepatitis C virus nucleic acid in a clinical specimen.	C
12234	48214	HIV1/Hepatitis C virus nucleic acid IVD, control	ХДХВ1/гепатит С вирусын нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid and Hepatitis C virus nucleic acid in a clinical specimen.	C
12235	48215	HIV1/Hepatitis C virus nucleic acid IVD, reagent	ХДХВ1/гепатит С вирусын нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid and Hepatitis C virus nucleic acid in a clinical specimen.	C
12236	48216	HIV1/Hepatitis C virus/Hepatitis B virus nucleic acid IVD, kit, nucleic acid technique (NAT)	ХДХВ1/гепатит С вирус/гепатит В вирус нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	C
12237	48217	HIV1/Hepatitis C virus/Hepatitis B virus nucleic acid IVD, calibrator	ХДХВ1/Гепатит С вирус/Гепатит В вирусын нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen.	C
12238	48218	HIV1/Hepatitis C virus/Hepatitis B virus nucleic acid IVD, control	ХДХВ1/Гепатит С вирус/Гепатит В вирус нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen.	C

12239	48219	HIV1/Hepatitis C virus/Hepatitis B virus nucleic acid IVD, reagent	ХДХВ1/Гепатит С вирус/Гепатит В вирүсийн нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen.	C
12240	48351	Hepatitis C virus antigen IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирусын эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12241	48352	Hepatitis C virus antigen IVD, kit, chemiluminescent immunoassay	Гепатит С вирусын эсрэгтөрөгчийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens in a clinical specimen, using a chemiluminescent immunoassay method.	C
12242	48353	Hepatitis C virus antigen IVD, reagent	Гепатит С вирусын эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Hepatitis C virus antigens in a clinical specimen.	C
12243	48354	Hepatitis C virus core antigen IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирүсийн үндсэн антиген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus core antigen, also known as Hepatitis C virus core protein, in a clinical specimen using an enzyme immunoassay (EIA) method.	C
12244	48355	Hepatitis C virus core antigen IVD, kit, chemiluminescent immunoassay	Гепатит С вирүсийн үндсэн антиген IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus core antigen, also known as Hepatitis C virus core protein, in a clinical specimen using a chemiluminescent immunoassay method.	C
12245	48356	Hepatitis C virus core antigen IVD, calibrator	Гепатит С вирусын үндсэн антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus core antigen, also known as Hepatitis C virus core protein, in a clinical specimen.	C

12246	48357	Hepatitis C virus core antigen IVD, control	Гепатит С вирусын үндсэн эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus core antigen, also known as Hepatitis C virus core protein, in a clinical specimen.	C
12247	48358	Hepatitis C virus core antigen IVD, reagent	Гепатит С вирусын үндсэн эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Hepatitis C virus core antigen, also known as Hepatitis C virus core protein, in a clinical specimen.	C
12248	48359	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирүсийн иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, иммуноферментийн шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12249	48361	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, reagent	Гепатит С вирусын иммуноглобулин G (IgG) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen.	C
12250	48362	Hepatitis C virus immunoglobulin M (IgM) antibody IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирүсийн иммуноглобулин M (IgM) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12251	48363	Hepatitis C virus immunoglobulin M (IgM) antibody IVD, kit, chemiluminescent immunoassay	Гепатит С вирүсийн иммуноглобулин M (IgM) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen, using a chemiluminescent immunoassay method.	C

12252	48364	Hepatitis C virus immunoglobulin M (IgM) antibody IVD, reagent	Гепатит С вирусын иммуноглобулин М (IgM) эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen.	C
12253	48365	Hepatitis C virus total antibody IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирусын нийт эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12254	48366	Hepatitis C virus total antibody IVD, kit, chemiluminescent assay	Гепатит С вирусын нийт эсрэгбие IVD, иж бүрдэл, химилюминесцент шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen, using a chemiluminescent immunoassay method.	C
12255	48367	Hepatitis C virus total antibody IVD, kit, immunoblot	Гепатит С вирусын нийт эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen, using an immunoblot method.	C
12256	48368	Hepatitis C virus total antibody IVD, reagent	Гепатит С вирусын нийт эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen.	C
12257	48369	Hepatitis C virus GOR protein antibody IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирус GOR уургийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to GOR protein in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12258	48370	Hepatitis C virus GOR protein antibody IVD, kit, immunoblot	Гепатит С вирус GOR уургийн эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to GOR protein in a clinical specimen, using an immunblot assay method.	C
12259	48371	Hepatitis C virus GOR protein antibody IVD, calibrator	Гепатит С вирус GOR уургийн эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to GOR protein in a clinical specimen.	C

12260	48372	Hepatitis C virus GOR protein antibody IVD, control	Гепатит С вирус GOR уургийн эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to GOR protein in a clinical specimen.	C
12261	48373	Hepatitis C virus GOR protein antibody IVD, reagent	Гепатит С вирус GOR уургийн эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to GOR protein in a clinical specimen.	C
12262	48375	Hepatitis C virus nucleic acid IVD, reagent	Гепатит С вирусын нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Hepatitis C virus nucleic acid in a clinical specimen.	C
12263	48376	Hepatitis C virus serotyping IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирүсийн серотипийн IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used to determine the serotype of Hepatitis C virus infection in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12264	48377	Hepatitis C virus serotyping IVD, kit, chemiluminescent immunoassay	Гепатит С вирусын серотипийн IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used to determine the serotype of Hepatitis C virus infection in a clinical specimen, using an chemiluminescent immunoassay method.	C
12265	48378	Hepatitis C virus serotyping IVD, calibrator	Гепатит С вирусын серотипийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used to determine the serotype of Hepatitis C virus infection in a clinical specimen.	C
12266	48379	Hepatitis C virus serotyping IVD, control	Гепатит С вирүсийн серотипийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used to determine the serotype of Hepatitis C virus infection in a clinical specimen.	C
12267	48380	Hepatitis C virus serotyping IVD, reagent	Гепатит С вирусын серотипийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used to determine the serotype of Hepatitis C virus infection in a clinical specimen.	C

12268	48381	Hepatitis C virus antibody/antigen IVD, kit, enzyme immunoassay (EIA)	Гепатит С вирусын эсрэгбие/эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens and antibodies to Hepatitis C virus antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12269	48383	Hepatitis C virus antibody/antigen IVD, calibrator	Гепатит С вирусын эсрэгбие/эсрэгтөрөгч IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens and antibodies to Hepatitis C virus antigens in a clinical specimen.	C
12270	48384	Hepatitis C virus antibody/antigen IVD, control	Гепатит С вирусын эсрэгбие/эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens and antibodies to Hepatitis C virus antigens in a clinical specimen.	C
12271	48385	Hepatitis C virus antibody/antigen IVD, reagent	Гепатит С вирусын эсрэгбие/эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of Hepatitis C virus antigens and antibodies to Hepatitis C virus antigens in a clinical specimen.	C
12272	48458	HIV1 antigen IVD, kit, enzyme immunoassay (EIA)	ХДХВ1-ийн эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12273	48459	HIV1 antigen IVD, kit, enzyme immunohistochemistry	ХДХВ1 антиген IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen, using an enzyme immunohistochemistry method.	C
12274	48460	HIV1 antigen IVD, kit, chemiluminescent immunoassay	ХДХВ1 антиген IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens to human immunodeficiency virus 1 (HIV1) in a clinical specimen, using a chemiluminescent immunoassay method.	C

12275	48461	HIV1 antigen IVD, reagent	ХДХВ1 антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen.	C
12276	48462	HIV1 antigen neutralization IVD, kit, enzyme immunoassay (EIA)	ХДХВ1 эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) in a clinical specimen, using HIV1 antibodies of known specificity and an enzyme immunoassay (EIA) method.	C
12277	48463	HIV1 antigen neutralization IVD, kit, chemiluminescent immunoassay	ХДХВ1-ийн эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) in a clinical specimen, using HIV1 antibodies of known specificity and a chemiluminescent immunoassay method.	C
12278	48464	HIV1 antigen neutralization IVD, reagent	ХДХВ1-ийн эсрэгтөрөгчийг саармагжуулах IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) in a clinical specimen, using HIV1 antibodies of known specificity.	C
12279	48465	HIV1 nucleic acid IVD, calibrator	HIV1 нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid in a clinical specimen.	C
12280	48466	HIV1 nucleic acid IVD, control	ХДХВ1 нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid in a clinical specimen.	C
12281	48467	HIV1 nucleic acid IVD, reagent	HIV1 нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid in a clinical specimen.	C

12282	48468	HIV1 genotyping IVD, kit, nucleic acid technique (NAT)	ХДХВ1 генотип тогтоох IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used to determine the genotype of human immunodeficiency virus 1 (HIV1) in a clinical specimen, using a nucleic acid technique (NAT). The genotyping is typically performed to help determine viral resistance to specific antiretroviral drugs (AVRs) during patient treatment planning.	C
12283	48469	HIV1 genotyping IVD, calibrator	ХДХВ1 генотип тогтоох IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the genotype determination of human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12284	48470	HIV1 genotyping IVD, control	ХДХВ1 генотипийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the genotype determination of human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12285	48471	HIV1 genotyping IVD, reagent	ХДХВ1 генотипийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the genotype determination of human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12286	48472	HIV1 antigen/antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ1 антиген/эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens and antibodies to human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12287	48473	HIV1 antigen/antibody IVD, kit, chemiluminescent immunoassay	ХДХВ1 антиген/эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens and antibodies to human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen, using an chemiluminescent immunoassay method.	C
12288	48474	HIV1 antigen/antibody IVD, calibrator	ХДХВ1 эсрэгтөрөгч/эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens and antibodies to human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen.	C

12289	48475	HIV1 antigen/antibody IVD, control	ХДХВ1 эсрэгтөрөгч/эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens and antibodies to human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen.	C
12290	48476	HIV1 antigen/antibody IVD, reagent	ХДХВ1 антиген/эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) antigens and antibodies to human immunodeficiency virus 1 (HIV1) antigens in a clinical specimen.	C
12291	48477	HIV1 immunoglobulin G (IgG) avidity IVD, kit, enzyme immunoassay (EIA)	ХДХВ1 иммуноглобулин G (IgG) avidity IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of the avidity of human immunodeficiency virus 1 (HIV1) immunoglobulin G (IgG) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12292	48478	HIV1 immunoglobulin G (IgG) avidity IVD, kit, chemiluminescent immunoassay	ХДХВ1 иммуноглобулин G (IgG) avidity IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of the avidity of human immunodeficiency virus 1 (HIV1) immunoglobulin G (IgG) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12293	48479	HIV1 immunoglobulin G (IgG) avidity IVD, reagent	ХДХВ1 иммуноглобулин G (IgG) avidity IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative determination of the avidity of human immunodeficiency virus 1 (HIV1) immunoglobulin G (IgG) in a clinical specimen.	C
12294	48480	HIV1 antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ1-ийн эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C

12295	48481	HIV1 antibody IVD, kit, chemiluminescent immunoassay	ХДХВ1 эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12296	48482	HIV1 antibody IVD, kit, immunoblot	ХДХВ1 эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen, using an immunoblot assay method.	C
12297	48483	HIV1 antibody IVD, kit, rapid ICT, clinical	ХДХВ1 эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12298	48484	HIV1 antibody IVD, calibrator	ХДХВ1 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12299	48485	HIV1 antibody IVD, control	ХДХВ1 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12300	48486	HIV1 antibody IVD, reagent	ХДХВ1 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 1 (HIV1) in a clinical specimen.	C
12301	48487	HIV2 antigen IVD, kit, enzyme immunoassay (EIA)	ХДХВ2-ын эсрэгтөрөгч IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens to the human immunodeficiency virus 2 (HIV2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C

12302	48488	HIV2 antigen IVD, kit, chemiluminescent immunoassay	ХДХВ2 антиген IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens to the human immunodeficiency virus 2 (HIV2) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12303	48489	HIV2 antigen IVD, calibrator	ХДХВ2 антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12304	48490	HIV2 antigen IVD, control	ХДХВ2 антиген IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12305	48491	HIV2 antigen IVD, reagent	ХДХВ2 антиген IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12306	48492	HIV2 antigen neutralization IVD, kit, enzyme immunoassay (EIA)	ХДХВ-ийн эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV2 antibodies of known specificity and an enzyme immunoassay (EIA) method.	C
12307	48493	HIV2 antigen neutralization IVD, kit, chemiluminescent immunoassay	ХДХВ2-ын эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV2 antibodies of known specificity and a chemiluminescent immunoassay method.	C
12308	48494	HIV2 antigen neutralization IVD, calibrator	ХДХВ2 эсрэгтөрөгчийг саармагжуулах IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV2 antibodies of known specificity.	C

12309	48495	HIV2 antigen neutralization IVD, control	ХДХВ2 эсрэгтөрөгчийг саармагжуулах IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV2 antibodies of known specificity.	C
12310	48496	HIV2 antigen neutralization IVD, reagent	ХДХВ2 эсрэгтөрөгчийг саармагжуулах IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV2 antibodies of known specificity.	C
12311	48497	HIV2 nucleic acid IVD, kit, nucleic acid technique (NAT)	HIV2 нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	C
12312	48498	HIV2 nucleic acid IVD, calibrator	HIV2 нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) nucleic acid in a clinical specimen.	C
12313	48499	HIV2 nucleic acid IVD, control	ХДХВ2 нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) nucleic acid in a clinical specimen.	C
12314	48500	HIV2 nucleic acid IVD, reagent	HIV2 нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) nucleic acid in a clinical specimen.	C
12315	48501	HIV2 antigen/antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ-ийн эсрэгтөрөгч/эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (БОНБУ)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens and antibodies to human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen, using an enzyme immunoassay (EIA) method.	C

12316	48502	HIV2 antigen/antibody IVD, kit, chemiluminescent immunoassay	ХДХВ2 антиген/эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens and antibodies to human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen, using an chemiluminescent immunoassay method.	C
12317	48503	HIV2 antigen/antibody IVD, calibrator	ХДХВ2 антиген/эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens and antibodies to human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12318	48504	HIV2 antigen/antibody IVD, control	ХДХВ2 эсрэгтөрөгч/эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens and antibodies to human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12319	48505	HIV2 antigen/antibody IVD, reagent	ХДХВ2 антиген/эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of human immunodeficiency virus 2 (HIV2) antigens and antibodies to human immunodeficiency virus 2 (HIV2) antigens in a clinical specimen.	C
12320	48506	HIV2 antigen/antibody avidity index IVD, kit, enzyme immunoassay (EIA)	ХДХВ-ийн эсрэгтөрөгч/эсрэгбиеийн авидитын индекс IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the determination of the avidity index of human immunodeficiency virus 2 (HIV2) antigens and antibodies in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12321	48507	HIV2 antigen/antibody avidity index IVD, kit, chemiluminescent immunoassay	ХДХВ-ийн эсрэгтөрөгч/эсрэгбиеийн авидитын индекс IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the determination of the avidity index of human immunodeficiency virus 2 (HIV2) antigens and antibodies in a clinical specimen, using a chemiluminescent immunoassay method.	C

12322	48508	HIV2 antigen/antibody avidity index IVD, calibrator	ХДХВ-ийн эсрэгтөрөгч/эсрэгбиеийн авидитын индекс IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the determination of the avidity index of human immunodeficiency virus 2 (HIV2) antigens and antibodies in a clinical specimen.	C
12323	48509	HIV2 antigen/antibody avidity index IVD, control	ХДХВ-ийн эсрэгтөрөгч/эсрэгбиеийн авидитын индекс IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the determination of the avidity index of human immunodeficiency virus 2 (HIV2) antigens and antibodies in a clinical specimen.	C
12324	48510	HIV2 antigen/antibody avidity index IVD, reagent	ХДХВ-ийн эсрэгтөрөгч/эсрэгбиеийн авидитын индекс IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the determination of the avidity index of human immunodeficiency virus 2 (HIV2) antigens and antibodies in a clinical specimen.	C
12325	48511	HIV2 antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ2 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12326	48512	HIV2 antibody IVD, kit, chemiluminescent immunoassay	ХДХВ2-ын эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12327	48513	HIV2 antibody IVD, kit, immunoblot	ХДХВ2 эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen, using an immunoblot assay method.	C
12328	48514	HIV2 antibody IVD, kit, rapid ICT, clinical	ХДХВ2-ын эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C

12329	48515	HIV2 antibody IVD, calibrator	ХДХВ2 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen.	C
12330	48516	HIV2 antibody IVD, control	ХДХВ2 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen.	C
12331	48517	HIV2 antibody IVD, reagent	ХДХВ2 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to the human immunodeficiency virus 2 (HIV2) in a clinical specimen.	C
12332	52854	Glucose/haemoglobin (Hb) IVD, kit, spectrophotometry	Глюкоз/гемоглобины (Hb) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of glucose and haemoglobin (Hb) in a clinical specimen, using a spectrophotometry method.	C
12333	52855	Glucose/haemoglobin (Hb) IVD, calibrator	Глюкоз/гемоглобины (Hb) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of glucose and haemoglobin (Hb) in a clinical specimen.	C
12334	52856	Glucose/haemoglobin (Hb) IVD, control	Глюкоз/гемоглобины (Hb) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of glucose and haemoglobin (Hb) in a clinical specimen.	C
12335	52857	Glucose/haemoglobin (Hb) IVD, reagent	Глюкоз/гемоглобин (Hb) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of glucose and haemoglobin (Hb) in a clinical specimen.	C

12336	52858	Multiple blood gas/haemoximetry/electrolyte analyte IVD, kit, multiple technologies	Олон тооны цусны хий/гемоксиметри/электролитийн аналит IVD, иж бүрдэл, олон технологи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of multiple blood gas, haemoximetry and/or electrolyte analytes in a clinical sample, using multiple technologies such as ion-selective electrode (ISE) and haemoximetry in a single analyser. Analytes detected may include partial pressure of oxygen (pO2), partial pressure of carbon dioxide (pCO2), pH, sodium, potassium, ionized calcium, chloride, glucose, lactate, total haemoglobin (totHb), haematocrit, and haemoglobin derivatives such as reduced haemoglobin (RHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb).	C
12337	52859	Multiple blood gas/haemoximetry/electrolyte analyte IVD, calibrator	Олон тооны цусны хий/гемоксиметри/электролитийн анализатор IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of multiple blood gas, haemoximetry and/or electrolyte analytes in a clinical sample. Analytes detected may include partial pressure of oxygen (pO2), partial pressure of carbon dioxide (pCO2), pH, sodium, potassium, ionized calcium, chloride, glucose, lactate, total haemoglobin (totHb), haematocrit, and haemoglobin derivatives such as reduced haemoglobin (RHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb).	C
12338	52860	Multiple blood gas/haemoximetry/electrolyte analyte IVD, control	Олон тооны цусны хий/гемоксиметри/электролитийн аналит IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of multiple blood gas, haemoximetry and/or electrolyte analytes in a clinical sample. Analytes detected may include partial pressure of oxygen (pO2), partial pressure of carbon dioxide (pCO2), pH, sodium, potassium, ionized calcium, chloride, glucose, lactate, total haemoglobin (totHb), haematocrit, and haemoglobin derivatives such as reduced haemoglobin (RHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb).	C

12339	52861	Multiple blood gas/haemoximetry/electrolyte analyte IVD, reagent	Олон тооны цусны хий/гемоксиметри/электролитийн аналит IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of multiple blood gas, haemoximetry and/or electrolyte analytes in a clinical sample. Analytes detected may include partial pressure of oxygen (pO2), partial pressure of carbon dioxide (pCO2), pH, sodium, potassium, ionized calcium, chloride, glucose, lactate, total haemoglobin (totHb), haematocrit, and haemoglobin derivatives such as reduced haemoglobin (RHb), methaemoglobin (MetHb), sulfhaemoglobin (SHb).	C
12340	52872	Bicarbonate (HCO3-) IVD, control	Бикарбонат (HCO3-) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of bicarbonate (HCO3-) in a clinical specimen.	C
12341	52874	Calcium (Ca2+) IVD, kit, ion-selective electrode (ISE)	Кальци (Ca2+) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of calcium (Ca2+) in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12342	52875	Calcium (Ca2+) IVD, reagent	Кальци (Ca2+) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of calcium (Ca2+) in a clinical specimen.	C
12343	52876	Chloride (Cl-) IVD, kit, ion-selective electrode (ISE)	Хлорид (Cl-) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of chloride (Cl-) in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12344	52877	Chloride (Cl-) IVD, calibrator	Хлорид (Cl-) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of chloride (Cl-) in a clinical specimen.	C
12345	52878	Chloride (Cl-) IVD, control	Хлорид (Cl-) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of chloride (Cl-) in a clinical specimen.	C
12346	52879	Chloride (Cl-) IVD, reagent	Хлорид (Cl-) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of chloride (Cl-) in a clinical specimen.	C

12347	52880	Magnesium (Mg2+) IVD, kit, ion-selective electrode (ISE)	Магни (Mg2+) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of magnesium (Mg2+) in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12348	52881	Magnesium (Mg2+) IVD, calibrator	Магни (Mg2+) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of magnesium (Mg2+) in a clinical specimen.	C
12349	52882	Magnesium (Mg2+) IVD, control	Магни (Mg2+) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of magnesium (Mg2+) in a clinical specimen.	C
12350	52883	Magnesium (Mg2+) IVD, reagent	Магни (Mg2+) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of magnesium (Mg2+) in a clinical specimen.	C
12351	52884	Osmolality IVD, kit, freezing point	Osmolality IVD, иж бүрдэл, хөлдөх цэг	A collection of reagents and other associated materials intended to be used for the quantitative measurement of osmolality of a clinical specimen, using a freezing point method.	C
12352	52885	Osmolality IVD, calibrator	Osmolality IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of osmolality of a clinical specimen.	C
12353	52886	Osmolality IVD, control	Osmolality IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of osmolality of a clinical specimen.	C
12354	52887	Osmolality IVD, reagent	Osmolality IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of osmolality of a clinical specimen.	C
12355	52888	Inorganic phosphate (PO43-) IVD, kit, ion-selective electrode (ISE)	Органик бус фосфат (PO43-) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of inorganic phosphate (PO43-) [phosphorus] in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12356	52889	Inorganic phosphate (PO43-) IVD, calibrator	Органик бус фосфат (PO43-) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of inorganic phosphate (PO43-) [phosphorus] in a clinical specimen.	C

12357	52890	Inorganic phosphate (PO43-) IVD, control	Органик бус фосфат (PO43-) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of inorganic phosphate (PO43-) [phosphorus] in a clinical specimen.	C
12358	52891	Inorganic phosphate (PO43-) IVD, reagent	Органик бус фосфат (PO43-) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of inorganic phosphate (PO43-) [phosphorus] in a clinical specimen.	C
12359	52892	Potassium (K+) IVD, kit, ion-selective electrode (ISE)	Кали (K+) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of potassium (K+) in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12360	52893	Potassium (K+) IVD, calibrator	Кали (K+) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of potassium (K+) in a clinical specimen.	C
12361	52894	Potassium (K+) IVD, control	Кали (K+) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of potassium (K+) in a clinical specimen.	C
12362	52895	Potassium (K+) IVD, reagent	Кали (K+) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of potassium (K+) in a clinical specimen.	C
12363	52896	Sodium (Na+) IVD, kit, ion-selective electrode (ISE)	Натри (Na+) IVD, иж бүрдэл, ион сонгомол электрод (ISE)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of sodium (Na+) in a clinical specimen, using an ion-selective electrode (ISE) method.	C
12364	52897	Sodium (Na+) IVD, calibrator	Натри (Na+) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of sodium (Na+) in a clinical specimen.	C
12365	52898	Sodium (Na+) IVD, control	Натри (Na+) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of sodium (Na+) in a clinical specimen.	C
12366	52899	Sodium (Na+) IVD, reagent	Натри (Na+) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of sodium (Na+) in a clinical specimen.	C

12367	52900	Multiple clinical chemistry enzyme IVD, kit, spectrophotometry	Олон эмнэлзүйн химийн фермент IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes, using a spectrophotometry method. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	C
12368	52901	Multiple clinical chemistry enzyme IVD, kit, enzyme chemiluminescence	Олон эмнэлзүйн химийн фермент IVD, иж бүрдэл, фермент химилюминесценц	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes, using an enzyme chemiluminescence method. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	C
12369	52902	Multiple clinical chemistry enzyme IVD, kit, enzyme fluorescence	Олон эмнэлзүйн химийн фермент IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes, using an enzyme fluorescence method. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	C
12370	52903	Multiple clinical chemistry enzyme IVD, calibrator	Олон тооны эмнэлзүйн химийн фермент IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	C
12371	52904	Multiple clinical chemistry enzyme IVD, reagent	Олон тооны эмнэлзүйн химийн фермент IVD, урвалж	A substance or reactant intended to be used together with other IVDs to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of multiple clinical chemistry enzymes. Analytes detected may include alanine aminotransferase (ALT), aspartate aminotransferase (AST), and alkaline phosphatase (ALP).	C
12372	52905	Acid phosphatase isoenzyme IVD, kit, electrophoresis	Хүчил фосфатазын изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple acid phosphatase isoenzymes in a clinical specimen, using an electrophoresis method.	C

12373	52906	Acid phosphatase isoenzyme IVD, reagent	Хүчил фосфатазын изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple acid phosphatase isoenzymes in a clinical specimen.	C
12374	52907	Prostatic acid phosphatase (PAP) IVD, kit, chemiluminescent immunoassay	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12375	52908	Prostatic acid phosphatase (PAP) IVD, kit, enzyme immunoassay (EIA)	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12376	52909	Prostatic acid phosphatase (PAP) IVD, reagent	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen.	C
12377	52910	Tartrate resistant acid phosphatase (TRAP) IVD, kit, enzyme immunoassay (EIA)	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12378	52911	Tartrate resistant acid phosphatase (TRAP) IVD, kit, chemiluminescent immunoassay	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12379	52912	Tartrate resistant acid phosphatase (TRAP) IVD, calibrator	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen.	C

12380	52913	Tartrate resistant acid phosphatase (TRAP) IVD, control	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen.	C
12381	52914	Tartrate resistant acid phosphatase (TRAP) IVD, reagent	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen.	C
12382	52915	Total acid phosphatase (TAP) IVD, kit, spectrophotometry	Нийт хүчиллэг фосфатаз (TAP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total acid phosphatase (TAP) in a clinical specimen, using a spectrophotometry method.	C
12383	52916	Total acid phosphatase (TAP) IVD, reagent	Нийт хүчиллэг фосфатаза (TAP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total acid phosphatase (TAP) in a clinical specimen.	C
12384	52917	Total/prostatic acid phosphatase (TcP) IVD, kit, spectrophotometry	Нийт/түрүү булчирхайн хүчлийн фосфатаза (TcP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total and prostatic acid phosphatase (TcP) in a clinical specimen, using a spectrophotometry method.	C
12385	52918	Total/prostatic acid phosphatase (TcP) IVD, calibrator	Нийт/түрүү булчирхайн хүчлийн фосфатаза (TcP) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total and prostatic acid phosphatase (TcP) in a clinical specimen.	C
12386	52919	Total/prostatic acid phosphatase (TcP) IVD, control	Нийт/түрүү булчирхайн хүчлийн фосфатаза (TcP) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total and prostatic acid phosphatase (TcP) in a clinical specimen.	C
12387	52920	Total/prostatic acid phosphatase (TcP) IVD, reagent	Нийт/түрүү булчирхайн хүчлийн фосфатаза (TcP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total and prostatic acid phosphatase (TcP) in a clinical specimen.	C
12388	52928	Total alkaline phosphatase (ALP) IVD, kit, spectrophotometry	Нийт шүлтлэг фосфатаза (ALP) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total alkaline phosphatase (ALP) in a clinical specimen, using a spectrophotometry method.	C

12389	52929	Total alkaline phosphatase (ALP) IVD, reagent	Нийт шүлтлэг фосфатаза (ALP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total alkaline phosphatase (ALP) in a clinical specimen.	C
12390	52930	Alkaline phosphatase (ALP) isoenzyme IVD, kit, spectrophotometry	Шүлтлэг фосфатаза (ALP) изоэнзим IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple alkaline phosphatase (ALP) isoenzymes in a clinical specimen, using a spectrophotometry method.	C
12391	52931	Alkaline phosphatase (ALP) isoenzyme IVD, reagent	Шүлтлэг фосфатаза (ALP) изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of one or multiple alkaline phosphatase (ALP) isoenzymes in a clinical specimen.	C
12392	52932	Bone alkaline phosphatase (BALP) IVD, kit, chemiluminescent immunoassay	Ясны шүлтлэг фосфатаза (BALP) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen, using a chemiluminescent immunoassay method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget’s disease).	C
12393	52933	Bone alkaline phosphatase (BALP) IVD, reagent	Ясны шүлтлэг фосфатаза (BALP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen.	C
12394	52934	Human placental alkaline phosphatase (hPLAP) IVD, kit, enzyme immunoassay (EIA)	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of human placental alkaline phosphatase (hPLAP) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12395	52935	Human placental alkaline phosphatase (hPLAP) IVD, reagent	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of human placental alkaline phosphatase (hPLAP) in a clinical specimen.	C

12396	52940	Total amylase IVD, kit, spectrophotometry	Нийт амилаза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total amylase in a clinical specimen, using a spectrophotometry method.	C
12397	52941	Total amylase IVD, reagent	Нийт амилаза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total amylase in a clinical specimen.	C
12398	52942	Amylase isoenzyme IVD, kit, electrophoresis	Амилаза изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen, using an electrophoresis method. This test is typically used to detect salivary or pancreatic alpha-amylase to aid the diagnosis and monitoring of various conditions including pancreatic disease, salivary disease, and conditions associated with the overproduction of alpha-amylase (e.g., mental and physical stress, stress-related psychosomatic disorders, fibromyalgia).	C
12399	52943	Amylase isoenzyme IVD, reagent	Амилаза изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen.	C
12400	52964	Acetylcholinesterase IVD, kit, spectrophotometry	Ацетилхолинэстераза IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme acetylcholinesterase in a clinical specimen, using a spectrophotometry method.	C
12401	52965	Acetylcholinesterase IVD, kit, electrometry	Ацетилхолинэстераза IVD, иж бүрдэл, цахилгаан хэмжигдэхүүн	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme acetylcholinesterase in a clinical specimen, using an electrometry method.	C
12402	52966	Acetylcholinesterase IVD, kit, gas chromatography	Ацетилхолинэстераза IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme acetylcholinesterase in a clinical specimen, using a gas chromatography method.	C

12403	52967	Acetylcholinesterase IVD, kit, rapid ICT, clinical	Ацетилхолинэстераза IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the enzyme acetylcholinesterase in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12404	52968	Acetylcholinesterase IVD, calibrator	Ацетилхолинэстераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme acetylcholinesterase in a clinical specimen.	C
12405	52969	Acetylcholinesterase IVD, control	Ацетилхолинэстераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme acetylcholinesterase in a clinical specimen.	C
12406	52970	Acetylcholinesterase IVD, reagent	Ацетилхолинэстераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme acetylcholinesterase in a clinical specimen.	C
12407	52971	Pseudocholinesterase IVD, kit, spectrophotometry	Pseudocholinesterase IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the enzyme pseudocholinesterase in a clinical specimen, using a spectrophotometry method.	C
12408	52972	Pseudocholinesterase IVD, kit, electrometry	Pseudocholinesterase IVD, иж бүрдэл, цахилгаан хэмжигдэхүүн	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme pseudocholinesterase in a clinical specimen, using an electrometry method.	C
12409	52973	Pseudocholinesterase IVD, kit, gas chromatography	Pseudocholinesterase IVD, иж бүрдэл, хийн хроматографи	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme pseudocholinesterase in a clinical specimen, using a gas chromatography method.	C

12410	52974	Pseudocholinesterase IVD, kit, rapid ICT, clinical	Pseudocholinesterase IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of the enzyme pseudocholinesterase in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12411	52975	Pseudocholinesterase IVD, calibrator	Псевдохолинестераза IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the enzyme pseudocholinesterase in a clinical specimen.	C
12412	52976	Pseudocholinesterase IVD, control	Псевдохолинестераза IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the enzyme pseudocholinesterase in a clinical specimen.	C
12413	52977	Pseudocholinesterase IVD, reagent	Псевдохолинестераза IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme pseudocholinesterase in a clinical specimen.	C
12414	52978	Cholinesterase dibucaine number (percentage inhibition) IVD, kit, spectrophotometry	Холинестеразын дибукаины тоо (дарангуйлах хувь) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of the dibucaine number or percentage inhibition of cholinesterase activity by dibucaine in a clinical specimen, using a spectrophotometry method.	C
12415	52979	Cholinesterase dibucaine number (percentage inhibition) IVD, calibrator	Холинестеразын дибукайны тоо (дарангуйлах хувь) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of the dibucaine number or percentage inhibition of cholinesterase activity by dibucaine in a clinical specimen.	C
12416	52980	Cholinesterase dibucaine number (percentage inhibition) IVD, control	Холинестеразын дибукаины тоо (дарангуйлах хувь) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of the dibucaine number or percentage inhibition of cholinesterase activity by dibucaine in a clinical specimen.	C

12417	52981	Cholinesterase dibucaine number (percentage inhibition) IVD, reagent	Холинестеразын дибукаины тоо (дарангуйлах хувь) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the dibucaine number or percentage inhibition of cholinesterase activity by dibucaine in a clinical specimen.	C
12418	52982	Chymotrypsin IVD, kit, spectrophotometry	Химотрипсин IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of chymotrypsin in a clinical specimen, using a spectrophotometry method.	C
12419	52983	Chymotrypsin IVD, calibrator	Химотрипсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of chymotrypsin in a clinical specimen.	C
12420	52984	Chymotrypsin IVD, control	Химотрипсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of chymotrypsin in a clinical specimen.	C
12421	52985	Chymotrypsin IVD, reagent	Химотрипсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of chymotrypsin in a clinical specimen.	C
12422	52986	Creatine kinase (CK) multiple isoenzyme IVD, kit, gas chromatography	Креатин киназа (CK) олон изоэнзим IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple creatine kinase (CK) isoenzymes in a clinical specimen, using a gas chromatography method.	C
12423	52987	Creatine kinase (CK) multiple isoenzyme IVD, calibrator	Креатин киназа (CK) олон изоэнзим IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple creatine kinase (CK) isoenzymes in a clinical specimen.	C
12424	52988	Creatine kinase (CK) multiple isoenzyme IVD, control	Креатин киназа (CK) олон изоэнзим IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple creatine kinase (CK) isoenzymes in a clinical specimen.	C
12425	52989	Creatine kinase (CK) multiple isoenzyme IVD, reagent	Креатин киназа (CK) олон изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple creatine kinase (CK) isoenzymes in a clinical specimen.	C

12426	52990	Creatine kinase brain isoenzyme (CKBB) IVD, kit, spectrophotometry	Креатин киназын тархины изоэнзим (CKBB) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase brain isoenzyme (CKBB) in a clinical specimen, using a spectrophotometry method.	C
12427	52991	Creatine kinase brain isoenzyme (CKBB) IVD, calibrator	Креатин киназын тархины изоэнзим (CKBB) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase brain isoenzyme (CKBB) in a clinical specimen.	C
12428	52992	Creatine kinase brain isoenzyme (CKBB) IVD, control	Креатин киназын тархины изоэнзим (CKBB) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase brain isoenzyme (CKBB) in a clinical specimen.	C
12429	52993	Creatine kinase brain isoenzyme (CKBB) IVD, reagent	Креатин киназын тархины изоэнзим (CKBB) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of creatine kinase brain isoenzyme (CKBB) in a clinical specimen.	C
12430	52994	Creatine kinase myocardial isoenzyme (CKMB) IVD, kit, spectrophotometry	Креатин киназ миокардийн изоэнзим (CKMB) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen, using a spectrophotometry method.	C
12431	52995	Creatine kinase myocardial isoenzyme (CKMB) IVD, kit, rapid ICT, clinical	Креатин киназ миокардийн изоэнзим (CKMB) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12432	52996	Creatine kinase myocardial isoenzyme (CKMB) IVD, reagent	Креатин киназ миокардийн изоэнзим (CKMB) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen.	C

12433	52997	Creatine kinase skeletal muscle isoenzyme (CKMM) IVD, kit, spectrophotometry	Креатин киназын араг ясны булчингийн изоэнзим (CKMM) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase skeletal muscle isoenzyme (CKMM) in a clinical specimen, using a spectrophotometry method.	C
12434	52998	Creatine kinase skeletal muscle isoenzyme (CKMM) IVD, calibrator	Креатин киназын араг ясны булчингийн изоэнзим (CKMM) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase skeletal muscle isoenzyme (CKMM) in a clinical specimen.	C
12435	52999	Creatine kinase skeletal muscle isoenzyme (CKMM) IVD, control	Креатин киназын араг ясны булчингийн изоэнзим (CKMM) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of creatine kinase skeletal muscle isoenzyme (CKMM) in a clinical specimen.	C
12436	53000	Creatine kinase skeletal muscle isoenzyme (CKMM) IVD, reagent	Креатин киназын араг ясны булчингийн изоэнзим (CKMM) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of creatine kinase skeletal muscle isoenzyme (CKMM) in a clinical specimen.	C
12437	53002	Total creatine kinase (CK) IVD, kit, enzyme fluorescence	Нийт креатин киназа (CK) IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total creatine kinase (CK) in a clinical specimen, using an enzyme fluorescence method.	C
12438	53003	Total creatine kinase (CK) IVD, kit, spectrophotometry	Нийт креатин киназа (CK) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total creatine kinase (CK) in a clinical specimen, using a spectrophotometry method.	C
12439	53004	Total creatine kinase (CK) IVD, calibrator	Нийт креатин киназа (CK) IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the quantitative measurement of total creatine kinase (CK) in a clinical specimen.	C
12440	53005	Total creatine kinase (CK) IVD, control	Нийт креатин киназа (CK) IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for the quantitative measurement of total creatine kinase (CK) in a clinical specimen.	C
12441	53006	Total creatine kinase (CK) IVD, reagent	Нийт креатин киназа (CK) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total creatine kinase (CK) in a clinical specimen.	C

12442	53072	Total lactate dehydrogenase (LDH) IVD, kit, spectrophotometry	Нийт лактат дегидрогеназа (LDH) IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total lactate dehydrogenase (LDH) in a clinical specimen, using a spectrophotometry method.	C
12443	53073	Total lactate dehydrogenase (LDH) IVD, kit, enzyme fluorescence	Нийт лактат дегидрогеназа (LDH) IVD, иж бүрдэл, ферментийн флюресцент	A collection of reagents and other associated materials intended to be used for the quantitative measurement of total lactate dehydrogenase (LDH) in a clinical specimen, using an enzyme fluorescence method.	C
12444	53074	Total lactate dehydrogenase (LDH) IVD, reagent	Нийт лактат дегидрогеназа (LDH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of total lactate dehydrogenase (LDH) in a clinical specimen.	C
12445	53075	Lactate dehydrogenase (LDH) multiple isoenzyme IVD, kit, electrophoresis	Лактат дегидрогеназа (LDH) олон изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple lactate dehydrogenase isoenzymes in a clinical specimen, using an electrophoresis method.	C
12446	53076	Lactate dehydrogenase (LDH) multiple isoenzyme IVD, kit, gas chromatography	Лактатдегидрогеназа (LDH) олон изоэнзим IVD, иж бүрдэл, хийн хроматограф	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of one or multiple lactate dehydrogenase isoenzymes in a clinical specimen, using a gas chromatography method.	C
12447	53077	Lactate dehydrogenase (LDH) multiple isoenzyme IVD, calibrator	Лактат дегидрогеназа (LDH) олон изоэнзим IVD, калибратор	A material which is used to establish known points of reference for a number of assays intended to be used for the qualitative and/or quantitative detection of one or multiple lactate dehydrogenase isoenzymes in a clinical specimen.	C
12448	53078	Lactate dehydrogenase (LDH) multiple isoenzyme IVD, control	Лактатдегидрогеназа (LDH) олон изоэнзим IVD, хяналт	A material which is used to verify the performance of a number of assays intended to be used for qualitative and/or quantitative detection of one or multiple lactate dehydrogenase isoenzymes in a clinical specimen.	C
12449	53079	Lactate dehydrogenase (LDH) multiple isoenzyme IVD, reagent	Лактатдегидрогеназа (LDH) олон изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of one or multiple lactate dehydrogenase isoenzymes in a clinical specimen.	C

12450	53089	Lactate dehydrogenase 5 (LDH-5) isoenzyme IVD, reagent	Лактатдегидрогеназа 5 (LDH-5) изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lactate dehydrogenase 5 (LDH-5) isoenzyme in a clinical specimen.	C
12451	53090	Lactate dehydrogenase 4 (LDH-4) isoenzyme IVD, kit, electrophoresis	Лактатдегидрогеназа 4 (LDH-4) изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 4 (LDH-4) isoenzyme in a clinical specimen, using an electrophoresis method.	C
12452	53094	Lactate dehydrogenase 4 (LDH-4) isoenzyme IVD, reagent	Лактатдегидрогеназа 4 (LDH-4) изоэнзим IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of lactate dehydrogenase 4 (LDH-4) isoenzyme in a clinical specimen.	C
12453	53095	Lactate dehydrogenase 2 (LDH-2) isoenzyme IVD, kit, electrophoresis	Лактатдегидрогеназа 2 (LDH-2) изоэнзим IVD, иж бүрдэл, электрофорез	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 2 (LDH-2) isoenzyme in a clinical specimen, using an electrophoresis method.	C
12454	53097	Lactate dehydrogenase 2 (LDH-2) isoenzyme IVD, calibrator	Лактатдегидрогеназа 2 (LDH-2) изоэнзим IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 2 (LDH-2) isoenzyme in a clinical specimen.	C
12455	53102	Lactate dehydrogenase 4 (LDH-4) isoenzyme IVD, calibrator	Лактатдегидрогеназа 4 (LDH-4) изоэнзим IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 4 (LDH-4) isoenzyme in a clinical specimen.	C
12456	53103	Lactate dehydrogenase 4 (LDH-4) isoenzyme IVD, control	Лактатдегидрогеназа 4 (LDH-4) изоэнзим IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 4 (LDH-4) isoenzyme in a clinical specimen.	C
12457	53175	Neonatal trypsin IVD, kit, radioimmunoassay	Нярайн трипсин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal trypsin in a clinical specimen, using a radioimmunoassay method.	C
12458	53176	Neonatal trypsin IVD, kit, chromogenic	Нярайн трипсин IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal trypsin in a clinical specimen, using a chromogenic method.	C

12459	53177	Neonatal trypsin IVD, reagent	Нярайн трипсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of neonatal trypsin in a clinical specimen.	C
12460	53178	Trypsin IVD, kit, radioimmunoassay	Трипсин IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of trypsin in a clinical specimen, using a radioimmunoassay method.	C
12461	53179	Trypsin IVD, kit, enzyme immunoassay (EIA)	Трипсин IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of trypsin in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12462	53180	Trypsin IVD, calibrator	Трипсин IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of trypsin in a clinical specimen.	C
12463	53181	Trypsin IVD, control	Трипсин IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of trypsin in a clinical specimen.	C
12464	53182	Trypsin IVD, reagent	Трипсин IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of trypsin in a clinical specimen.	C
12465	53183	Trypsin-alpha-1-antitrypsin complex (elastase) IVD, kit, enzyme immunoassay (EIA)	Трипсин-альфа-1-антитрипсиний цогцолбор (эластаза) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of trypsin-alpha-1-antitrypsin complex (elastase) in a clinical specimen, using an enzyme immunoassay (EIA) method.	C
12466	53184	Trypsin-alpha-1-antitrypsin complex (elastase) IVD, calibrator	Трипсин-альфа-1-антитрипсин комплекс (эластаза) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of trypsin-alpha-1-antitrypsin complex (elastase) in a clinical specimen.	C
12467	53185	Trypsin-alpha-1-antitrypsin complex (elastase) IVD, control	Трипсин-альфа-1-антитрипсин цогцолбор (эластаза) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the quantitative measurement of trypsin-alpha-1-antitrypsin complex (elastase) in a clinical specimen.	C

12468	53186	Trypsin-alpha-1-antitrypsin complex (elastase) IVD, reagent	Трипсин-альфа-1-антитрипсин комплекс (эластаза) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of trypsin-alpha-1-antitrypsin complex (elastase) in a clinical specimen.	C
12469	54514	Multiple urine analyte IVD, kit, rapid colorimetric, clinical	Олон тооны шээсний шинжилгээний IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of urine for multiple analytes within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to screen for non-microbial markers associated with a urinary tract infection (UTI) [e.g., leukocytes, blood, nitrites, proteins]. It is not intended to be used for self-testing.	C
12470	54515	Urine blood IVD, kit, rapid colorimetric, clinical	Шээсний цус IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for blood within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12471	54516	Urine bilirubin IVD, kit, rapid colorimetric, clinical	Шээсний билирубин IVD, иж бүрдэл, хурдан колориметр, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for bilirubin within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12472	54517	Urine creatinine IVD, kit, rapid colorimetric, clinical	Шээсний креатинин IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for creatinine within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C

12473	54518	Urine glucose IVD, kit, rapid colorimetric, clinical	Шээсний глюкозын IVD, иж бүрдэл, хурдан колориметр, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for glucose within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses to aid clinicians in the diagnosis and monitoring of diabetes. It is not intended to be used for self-testing.	C
12474	54519	Urine ketone IVD, kit, rapid colorimetric, clinical	Шээсний кетон IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for ketones within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12475	54520	Urine leukocyte IVD, kit, rapid colorimetric, clinical	Шээсний лейкоцитын IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for leukocytes within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12476	54521	Urine nitrite IVD, kit, rapid colorimetric, clinical	Шээсний нитрит IVD, иж бүрдэл, хурдан колориметр, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for nitrites within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12477	54522	Urine pH IVD, kit, rapid colorimetric, clinical	Шээсний pH IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine to determine pH within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C

12478	54523	Urine protein IVD, kit, rapid colorimetric, clinical	Шээсний уураг IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for protein within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12479	54524	Urine specific gravity IVD, kit, rapid colorimetric, clinical	Шээсний өвөрмөц жин IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine to determine specific gravity within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12480	54525	Urine sediment IVD, kit, spectrophotometry	Шээсний тунадас IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or semi-quantitative screening of urine sediment using a spectrophotometry method.	C
12481	54526	Urine sediment IVD, reagent	Шээсний тунадас IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or semi-quantitative screening of urine sediment.	C
12482	54527	Urine urobilinogen IVD, kit, rapid colorimetric, clinical	Шээсний urobilinogen IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for urobilinogen within a short period relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12483	54529	Faecal occult blood IVD, kit, agglutination	Өтгөний далд цус IVD, иж бүрдэл, наалдуулах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin) using an agglutination method.	C

12484	54530	Faecal occult blood IVD, kit, nephelometry/turbidimetry	Өтгөний далд цус IVD, иж бүрдэл, нефелометр/турбидиметри	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin) using a nephelometry/turbidimetry method.	C
12485	54531	Faecal occult blood IVD, kit, rapid colorimetric, clinical	Өтгөний далд цус IVD, иж бүрдэл, түргэн колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of stool (faeces) for occult blood (haemoglobin) within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12486	54532	Faecal occult blood IVD, kit, rapid ICT, clinical	Өтгөний далд цус IVD, иж бүрдэл, шуурхай ICT, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of stool (faeces) for occult blood (haemoglobin and/or transferrin) within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12487	54533	Faecal occult blood IVD, reagent	Өтгөн далд цус IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative screening of stool (faeces) for occult blood (haemoglobin).	C
12488	54535	Faecal reducing substance IVD, kit, chromogenic	Баас бууруулах бодис IVD, иж бүрдэл, хромоген	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of faecal reducing substances in a clinical specimen, using a chromogenic method.	C
12489	54536	Faecal reducing substance IVD, calibrator	Баас бууруулах бодис IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of faecal reducing substances in a clinical specimen.	C
12490	54537	Faecal reducing substance IVD, control	Баас бууруулах бодис IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of faecal reducing substances in a clinical specimen.	C

12491	54538	Faecal reducing substance IVD, reagent	Баас бууруулах бодис IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of faecal reducing substances in a clinical specimen.	C
12492	55961	Leukocyte alkaline phosphatase IVD, kit, fluorescent activated cell sorting/flow cytometry (FACS/Flow)	Лейкоцит шүлтлэг фосфатазын IVD, иж бүрдэл, флюресцент идэвхжүүлсэн эсийн ангилах/урсгалын цитометр (FACS/Flow)	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the enzyme leukocyte alkaline phosphatase in a clinical specimen, using a fluorescent activated cell sorting/flow cytometry (FACS/Flow) method.	C
12493	55962	Leukocyte alkaline phosphatase IVD, reagent	Лейкоцит шүлтлэг фосфатазын IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative measurement of the enzyme leukocyte alkaline phosphatase in a clinical specimen.	C
12494	56226	Total haemoglobin (totHb) IVD, kit, cell count	Нийт гемоглобины (totHb) IVD, иж бүрдэл, эсийн тоо	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of total haemoglobin (totHb) in a clinical specimen using a manual, semi-automated or automated cell count method.	C
12495	56227	Total haemoglobin (totHb) IVD, calibrator	Нийт гемоглобины (totHb) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative determination of total haemoglobin (totHb) in a clinical specimen.	C
12496	56228	Haemoglobin B2 (HbB2) IVD, reagent	Гемоглобин B2 (HbB2) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative determination of haemoglobin subtype B2 (HbB2) in a clinical specimen.	C
12497	56229	Haemoglobin C (HbC) IVD, control	Гемоглобин C (HbC) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative determination of haemoglobin subtype C (HbC) in a clinical specimen.	C
12498	56230	Haemoglobin D (HbD) IVD, calibrator	Гемоглобин D (HbD) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative determination of haemoglobin subtype D (HbD) in a clinical specimen.	C

12499	56231	Haemoglobin H (HbH) IVD, reagent	Гемоглобины H (HbH) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative determination of haemoglobin subtype H (HbH) in a clinical specimen.	C
12500	56232	Haemoglobin S (HbS) IVD, control	Гемоглобин S (HbS) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative determination of haemoglobin subtype S (HbS), also known as sickle cell haemoglobin, in a clinical specimen.	C
12501	56233	Reticulocyte haemoglobin content (CHr) IVD, calibrator	Ретикулоцитын гемоглобины агууламж (CHr) IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the quantitative measurement of reticulocyte haemoglobin content (CHr) of a clinical specimen.	C
12502	56753	Prostatic acid phosphatase (PAP) IVD, kit, enzyme immunohistochemistry	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen, using an enzyme immunohistochemistry method.	C
12503	56754	Prostatic acid phosphatase (PAP) IVD, antibody	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen.	C
12504	56755	Tartrate resistant acid phosphatase (TRAP) IVD, kit, enzyme immunohistochemistry	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen, using an enzyme immunohistochemistry method.	C
12505	56757	Tartrate resistant acid phosphatase (TRAP) IVD, antibody	Тартратын тэсвэртэй хүчил фосфатаза (TRAP) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of tartrate resistant acid phosphatase (TRAP) in a clinical specimen.	C
12506	56758	Human placental alkaline phosphatase (hPLAP) IVD, kit, enzyme immunohistochemistry	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human placental alkaline phosphatase (hPLAP) in a clinical specimen, using an enzyme immunohistochemistry method.	C

12507	56759	Human placental alkaline phosphatase (hPLAP) IVD, antibody	Хүний ихэсийн шүлтлэг фосфатаза (hPLAP) IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of human placental alkaline phosphatase (hPLAP) in a clinical specimen.	C
12508	57269	Free plasma haemoglobin IVD, kit, enzyme immunohistochemistry	Чөлөөт плазмын гемоглобины IVD, иж бүрдэл, ферментийн иммуногистохими	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free plasma haemoglobin in a clinical specimen, using an enzyme immunohistochemistry method. Free haemoglobin in plasma is indicative of red blood cell damage, and its detection is used as an aid in the diagnosis of haemolytic conditions (e.g., intravascular haemolysis, sickle cell anaemia, malaria) or to identify incompatible blood transfusions.	C
12509	57270	Haemoglobin detection IVD, antibody	Гемоглобин илрүүлэх IVD, эсрэгбие	One or multiple immunoglobulins capable of binding to specific antigenic determinants and intended to be used for the qualitative and/or quantitative detection of haemoglobin in a clinical specimen.	C
12510	57271	Haemoglobin detection IVD, calibrator	Гемоглобин илрүүлэх IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of haemoglobin in a clinical specimen.	C
12511	57272	Haemoglobin detection IVD, control	Гемоглобин илрүүлэх IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of haemoglobin in a clinical specimen.	C
12512	57273	Haemoglobin detection IVD, reagent	Гемоглобин илрүүлэх IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of haemoglobin in a clinical specimen.	C
12513	58350	Bone alkaline phosphatase (BALP) IVD, kit, radioimmunoassay	Ясны шүлтлэг фосфатаза (BALP) IVD, иж бүрдэл, радиоиммун шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen, using a radioimmunoassay method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget’s disease).	C

12514	58766	Prostatic acid phosphatase (PAP) IVD, kit, fluorescent immunoassay	Түрүү булчирхайн хүчлийн фосфатаза (PAP) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of prostatic acid phosphatase (PAP) in a clinical specimen, using a fluorescent immunoassay method.	C
12515	59073	Amylase isoenzyme IVD, kit, spectrophotometry	Амилаза изоэнзим IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen, using a spectrophotometry method. This test is typically used to detect salivary or pancreatic alpha-amylase to aid the diagnosis and monitoring of various conditions including pancreatic disease, salivary disease, and conditions associated with the overproduction of alpha-amylase (e.g., mental and physical stress, stress-related psychosomatic disorders, fibromyalgia).	C
12516	59864	Hepatitis C virus genotyping IVD, calibrator	Гепатит С вирусын генотипийн IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the genotype determination of Hepatitis C virus in a clinical specimen.	C
12517	59865	Hepatitis C virus genotyping IVD, control	Гепатит С вирусын генотипийн IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the genotype determination of Hepatitis C virus in a clinical specimen.	C
12518	59866	Hepatitis C virus genotyping IVD, kit, nucleic acid technique (NAT)	Гепатит С вирусын генотипийн IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the genotype determination of Hepatitis C virus in a clinical specimen, using a nucleic acid technique (NAT).	C
12519	59867	Hepatitis C virus genotyping IVD, reagent	Гепатит С вирусын генотипийн IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the genotype determination of Hepatitis C virus in a clinical specimen.	C
12520	60713	Neonatal trypsin IVD, kit, fluorescent immunoassay	Нярайн трипсин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of neonatal trypsin in a clinical specimen, using a fluorescent immunoassay method.	C
12521	60739	Multiple haemoglobin subtype IVD, kit, fluorescent immunoassay	Олон гемоглобины дэд төрөл IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative determination of multiple subtypes of haemoglobin in a clinical specimen, using a fluorescent immunoassay.	C

12522	60868	HIV1/Hepatitis C virus/Hepatitis B virus nucleic acid extraction/isolation and control kit IVD	ХДХВ1/Гепатит С вирус/Гепатит В вирусын нуклейн хүчлийн олборлолт/тусгаарлах, хянах хэрэгсэл IVD	A collection of reagents and controls intended to be used for the extraction and/or isolation of nucleic acid in preparation for subsequent analysis, and to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen.	C
12523	61000	Creatine kinase myocardial isoenzyme (CKMB) IVD, kit, chemiluminescent immunoassay	Креатин киназ миокардийн изоэнзим (CKMB) IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen, using a chemiluminescent immunoassay method.	C
12524	61165	Blood cell lysis reagent IVD	Цусны эсийн задралын урвалж IVD	A substance or reactant intended to be used alone or in combination with other IVDs to disrupt the cell membrane of blood cells [red blood cells (RBCs), white blood cells (WBCs) and/or platelets] to release cytoplasmic contents in preparation for further analysis.	C
12525	61295	Multiple cardiac marker IVD, kit, rapid ICT, clinical	Зүрхний олон маркер IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of multiple combinations of cardiac markers [e.g., B-type natriuretic protein, D-dimer, creatine kinase myocardial isoenzyme (CKMB), myoglobin, myeloperoxidase (MPO), fatty acid binding protein (FABP), glycogen phosphorylase isoenzyme BB (GPBB), troponin I, troponin T] in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12526	61385	Creatine kinase myocardial isoenzyme (CKMB) IVD, kit, fluorescent immunoassay	Креатин киназ миокардийн изоэнзим (CKMB) IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen, using a fluorescent immunoassay method.	C

12527	61599	Glutamate IVD, reagent	Глутамат IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the quantitative detection of glutamate in a clinical specimen.	C
12528	62052	HIV1/HIV2/Hepatitis C virus/Hepatitis B virus nucleic acid IVD, kit, nucleic acid technique (NAT)	ХДХВ1/ХДХВ2/Гепатит С вирус/Гепатит В вирус нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid, human immunodeficiency virus 2 (HIV2) nucleic acid, Hepatitis C virus nucleic acid, and Hepatitis B virus nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	C
12529	62740	Albumin/creatinine ratio (ACR) IVD, control	Альбумин/креатинины харьцаа (ACR) IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative measurement of albumin and creatinine for the determination of the albumin/creatinine ratio (ACR) in a clinical specimen.	C
12530	62741	Albumin/creatinine ratio (ACR) IVD, reagent	Альбумин/креатинины харьцаа (ACR) IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative measurement of albumin and creatinine for the determination of the albumin/creatinine ratio (ACR) in a clinical specimen.	C
12531	62751	Albumin/creatinine ratio (ACR) IVD, kit, nephelometry/turbidimetry	Альбумин/креатинины харьцаа (ACR) IVD, иж бүрдэл, нефелометр/турбидиметр	A collection of reagents and other associated materials intended to be used for the quantitative measurement of the albumin/creatinine ratio (ACR) in a clinical specimen, using a nephelometry/turbidimetry method. It is used to monitor renal function in patients with chronic conditions (e.g., diabetes and hypertension), who are at risk of developing kidney disease.	C
12532	63089	Haemoglobin/hematocrit IVD, kit, electrometry	Гемоглобин/гематокрит IVD, иж бүрдэл, цахилгаан хэмжигдэхүүн	A collection of reagents and other associated materials intended to be used for the quantitative measurement of haemoglobin and hematocrit in a clinical specimen, using an electrometry method.	C

12533	63159	Paediatric urine collection/analysis kit IVD	Хүүхдийн шээс цуглуулах/шинжилгээний иж бүрдэл IVD	A collection of devices intended to be used to collect and analyse a paediatric urine specimen for multiple clinical chemistry analytes (e.g., ketones, glucose and pH). It consists of a specimen collection undergarment (nappy or diaper) worn by the patient, and quantitative test strips for various clinical chemistry analytes. Results are analysed visually or with dedicated interpretive software (not included). It can be used at home by a caregiver and at the point-of-care by a healthcare professional. This is a single-use device.	C
12534	63728	Albumin IVD, kit, fluorescent immunoassay	Альбумин IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the quantitative measurement of albumin in a clinical specimen, using a fluorescent immunoassay method. It is typically used for the detection of small amounts of albumin in urine as an indicator of a kidney disease known as moderately increased albuminuria or microalbuminuria.	C
12535	63729	Creatine kinase myocardial isoenzyme (CKMB) IVD, kit, enzyme immunoassay (EIA)	Креатин киназ миокардийн изоэнзим (CKMB) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of creatine kinase myocardial isoenzyme (CKMB) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as an aid in the diagnosis of myocardial infarction.	C
12536	63769	Hepatitis C virus total antibody IVD, kit, fluorescent immunoassay	Гепатит С вирусын нийт эсрэгбие IVD, иж бүрдэл, флюресцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen, using a fluorescent immunoassay method.	C
12537	63837	Theta-glutathione S-transferase (theta-GST) genotyping IVD, kit, nucleic acid technique (NAT)	Тета-глутатион S-трансфераза (тета-GST) генотипийн IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used to determine the genotype of the theta-glutathione S-transferase (theta-GST) gene [e.g., glutathione S-transferase T1 (GSTT1)] in a clinical specimen, using a nucleic acid technique (NAT). It is typically used to predict the response to, and/or aid in the diagnosis of complications after, liver or kidney transplantation (e.g., graft rejection, autoimmune hepatitis).	C

12538	63839	Theta-glutathione S-transferase (theta-GST) antibody IVD, kit, enzyme immunoassay (EIA)	Тета-глутатион S-трансфераза (тета-GST) эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to theta-glutathione S-transferase (theta-GST) [e.g., glutathione S-transferase T1 (GSTT1)], in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used to predict the response to, and/or aid in the diagnosis of complications after, liver or kidney transplantation (e.g., graft rejection, autoimmune hepatitis).	C
12539	64805	Urine albumin IVD, kit, rapid colorimetric, clinical	Шээсний альбумин IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for albumin within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12540	64807	Urine haemoglobin IVD, kit, rapid colorimetric, clinical	Шээсний гемоглобины IVD, иж бүрдэл, хурдан колориметр, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of urine for haemoglobin within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test commonly used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12541	65561	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, kit, rapid ICT, self-testing	Гепатит С вирүсийн иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, шуурхай ICT, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	C

12542	65665	Faecal occult blood IVD, kit, rapid ICT, self-testing	Өтгөний далд цус IVD, иж бүрдэл, шуурхай МХТ, өөрөө шинжилгээ хийх	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of stool (faeces) for occult blood (haemoglobin and/or transferrin) within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	C
12543	65931	Multiple urine analyte IVD, kit, rapid colorimetric, self-testing	Олон тооны шээсний шинжилгээний IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of urine for multiple analytes within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This test is intended to be used for self-testing by a layperson in the home or similar environment to screen for non-microbial markers associated with a urinary tract infection (UTI) [e.g., leukocytes, blood, nitrites, proteins].	C
12544	65969	Amylase isoenzyme IVD, kit, enzyme immunoassay (EIA)	Амилаза изоэнзим IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of an amylase isoenzyme in a clinical specimen, using an enzyme immunoassay (EIA) method. This test is typically used to detect salivary or pancreatic alpha-amylase to aid the diagnosis and monitoring of various conditions including pancreatic disease, salivary disease, and conditions associated with the overproduction of alpha-amylase (e.g., mental and physical stress, stress-related psychosomatic disorders, fibromyalgia).	C
12545	66084	Free plasma haemoglobin IVD, kit, spectrophotometry	Үнэгүй плазмын гемоглобины IVD, иж бүрдэл, спектрофотометр	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of free plasma haemoglobin in a clinical specimen, using a spectrophotometry method. Free haemoglobin in plasma is indicative of red blood cell damage, and its detection is used as an aid in the diagnosis of haemolytic conditions (e.g., intravascular haemolysis, sickle cell anaemia, malaria) or to identify incompatible blood transfusions.	C

12546	66123	Total haemoglobin (totHb) IVD, kit, rapid ICT, clinical	Нийт гемоглобин (totHb) IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total haemoglobin (totHb) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	C
12547	66164	Bone alkaline phosphatase (BALP) IVD, kit, enzyme immunoassay (EIA)	Ясны шүлтлэг фосфатаза (BALP) IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of bone alkaline phosphatase (BALP) in a clinical specimen, using an enzyme immunoassay (EIA) method. It is typically used as a marker for osteoblastic activity to aid in the diagnosis and/or management of metabolic bone diseases (e.g., osteoporosis, Paget’s disease).	C
12548	66830	Faecal occult blood IVD, kit, rapid colorimetric, self-testing	Өтгөний далд цус IVD, иж бүрдэл, хурдан колориметр, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative screening of stool (faeces) for occult blood (haemoglobin) within a short period, relative to standard laboratory testing procedures, using a rapid colorimetric method. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	C
12549	66904	Hepatitis C virus immunoglobulin G (IgG)/IgM antibody IVD, kit, rapid ICT, self-testing	Гепатит С вирүсийн иммуноглобулин G (IgG)/IgM эсрэгбие IVD, иж бүрдэл, шуурхай ICT, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies to the Hepatitis C virus in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	C

12550	66905	Herpes simplex virus 2 (HSV2) immunoglobulin G (IgG)/IgM antibody IVD, kit, rapid ICT, self-testing	Энгийн герпес вирус 2 (HSV2) иммуноглобулин G (IgG)/IgM эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies to herpes simplex virus 2 (HSV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	C
12551	66906	Treponema pallidum immunoglobulin G (IgG)/IgM antibody IVD, kit, rapid ICT, self-testing	Treponema pallidum immunoglobulin G (IgG)/IgM эсрэгбие IVD, иж бүрдэл, шуурхай ICT, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies to Treponema pallidum in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment to detect infection with Treponema pallidum, the bacteria associated with syphilis.	C
12552	67134	Lactate dehydrogenase 1 (LDH-1) isoenzyme IVD, calibrator	Лактатдегидрогеназа 1 (LDH-1) изоэнзим IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 1 (LDH-1) isoenzyme in a clinical specimen.	C
12553	67135	Lactate dehydrogenase 1 (LDH-1) isoenzyme IVD, control	Лактатдегидрогеназа 1 (LDH-1) изоэнзим IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of lactate dehydrogenase 1 (LDH-1) isoenzyme in a clinical specimen.	C
12554	67136	Hepcidin IVD, kit, liquid chromatography/mass spectrometry (LC/MS)	Hepcidin IVD, иж бүрдэл, шингэн хроматографи/масс спектрометр (LC/MS)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of hepcidin in a clinical specimen, using a using a liquid chromatography/mass spectrometry (LC/MS) method. It is used as an aid in the diagnosis of conditions associated with the regulation of iron homeostasis (e.g., hemochromatosis, anaemia, chronic kidney disease, liver cirrhosis).	C
Өндөр эрсдэлтэй эмнэлгийн хэрэгсэл					

12555	10688	Angiographic catheter, single-use	Ангиографийн катетер, нэг удаагийн хэрэглээ	A thin, flexible tube designed to inject a contrast medium into select blood vessels of the cerebral, visceral, or peripheral vasculature during an angiographic procedure in order to facilitate the clear visualization of the vascular system of a targeted organ or area of the body. It is introduced percutaneously, has a radiopaque marker(s) for positioning, and may include disposable devices dedicated to catheter introduction/function [e.g., sheath(s)]. It may also be used for simultaneous pressure measurements to determine the transvalvular, intravascular, and intraventricular pressure gradients. This is a single-use device.	III
12556	10691	Vascular microcatheter	Судасны микрокатетер	A sterile, small-diameter, single-lumen, flexible tube designed for the controlled infusion of fluids (e.g., thrombolytics, diagnostic contrast media) into superselective small vessels (including intracranial, peripheral, or occluded coronary vasculature) for angiography/treatment, and typically also for the delivery of devices (e.g., embolization implants, guidewires) into tortuous vessels or across tight lesions. It may include an ultrasound transducer, a thermal sensor, and a hole for guidewire placement located at the distal tip. It is not a guide-catheter (i.e., is not intended to deliver other catheters or therapeutic leads directly through its lumen). This is a single-use device.	III
12557	10704	Catheter, cerebrospinal	Катетер, тархи нугасны	A flexible tube intended to remove or transfer cerebrospinal fluid from the central nervous system (CNS). This is a single-use device.	III
12558	10714	Embolectomy/thrombectomy catheter	Эмболэктоми/тромбэктоми катетер	A sterile, flexible tube, usually dual-lumen, designed for the disruption and removal of clotted blood (i.e., a thrombus or thromboemboli) or other formed elements that cause vascular obstruction, typically through the expansion of an attached balloon at the site of obstruction, or through aspiration of the obstruction (e.g., with a syringe, integral jets, or an external suction pump). It may be used for the removal of obstructions in native vessels as well as in artery and haemodialysis access grafts. This is a single-use device.	III

12559	10729	Centrally-inserted central venous catheter	Төвлөрсөн венийн катетер	A flexible tube intended to be introduced into a neck or thoracic vein and often advanced into the superior vena cava for various infusion/aspiration procedures (i.e., non-dedicated) including the intravenous administration of nutrients, fluids, chemotherapeutic agents or other drugs, and blood sampling or delivery; it may also be used to monitor venous pressure. The proximal end of this central venous catheter (CVC) is typically fixed to the patient for long-term use. It may include supportive devices associated with introduction (e.g., guidewire, introducer); it is not primarily intended for extracorporeal blood therapies such as haemodialysis. This is a single-use device.	III
12560	10739	Vascular perfusion catheter	Судасны сэлбэх катетер	A flexible tube designed for the passage of blood through a vascular bed. The device is used mostly for organ protection, e.g., cerebrum or abdominal organs during total or partial circulatory arrest or during some surgical or catheterization procedures, e.g., aortic surgery or carotid angioplasty. This is a single-use device.	III
12561	10747	Cardiac septostomy catheter, balloon	Зүрхний септостомийн катетер, бөмбөлөг	A flexible tube with an inflatable balloon designed to create or enlarge the atrial septal defect found in the hearts of infants with congenital cardiac malformations. This allows interatrial blood mixing in infants with transposition of the great vessels. This is a single-use device.	III
12562	10760	Cardiac occluder delivery catheter	Зүрхний бөглөрөлтийг хүргэх катетер	A flexible tube or sheath used to place a cardiac occluder (device used to fill a hole in the wall between the chambers of the heart or a persistent duct), typically in the treatment of cardiac disorders that may include an atrial septal defect (ASD), a ventricular septal defect (VSD), patent foramen ovale (PFO), or patent ductus arteriosus (PDA). This is a single-use device.	III

12563	10847	External ventricular circulatory assist system	Гадны ховдолын цусны эргэлтийг дэмжих систем	An assembly of devices intended to assist a damaged or weakened heart (e.g., one affected by cardiogenic shock) to pump blood. It includes a electrically-powered external pump, an atrial or ventricular cannula to draw blood outside the body, a cannula to deliver the blood back to the aorta or pulmonary artery (depending on left or right ventricular assistance), and a unit that controls pump operation. It is typically intended to be used as a bridge to heart transplantation; it is not intended for cardiopulmonary bypass.	III
12564	10849	Venous-return circulatory assist system	Цусны эргэлтийг сэргээхэд туслах систем	An assembly of devices primarily designed to apply and release pressure on a patient's limbs (arms or legs) to facilitate the return of blood through the veins to a weak or failing heart. It typically consists of an electric air-compression pump, a pressure control mechanism, a timing mechanism, cuffs or pneumatic stockings, and tubing that conducts air from the pump to the cuffs or pneumatic stockings. The device can also be used to minimize venous stasis during and following surgery, as well as during long periods of immobility (e.g., used at home to treat chronic oedema).	III
12565	11434	Intracardiac catheter-tip electrode	Зүрхний доторх катетер үзүүртэй электрод	An electrical conductor located at one end of an appropriate flexible catheter (not included) which is inserted into the chambers of the heart in order for the electrode to detect the presence of certain indicators to measure cardiac output. The relayed signals from the electrode can help the operator determine the presence of left-to-right heart shunt. The electrical conductor may also be used to characterize the electrical activity of the heart. This is a single-use device.	III
12566	12913	Pacemaker, implantable	Зүрхний аппарат, суулгац хийх боломжтой	A battery-powered device consisting of a hermetically-sealed pulse generator implanted beneath the skin in a surgically-created pocket with electrodes in or on the heart. The device monitors the electrical impulses in the heart and, when needed, delivers electrical stimuli to make the heartbeat (contract) in a more normal rhythm. It is used when the heart beats too slowly (bradycardia) or has other abnormal rhythms (arrhythmias), or in some cases to treat the symptoms of heart failure. Also called a permanent pacemaker.	III

12567	13586	Arteriovenous shunt	Артериовенийн шунт	An implanted device designed to provide a passage for blood to flow between an artery typically located in an arm, and a peripheral vein, central vein or right atrium, creating a graft fistula that provides blood access for external procedures, especially haemodialysis. It is a synthetic vascular graft/graft assembly with a thin wall and appropriate size (commonly 6 mm diameter) and configuration to facilitate vessel puncturing. It is typically used when it is not possible or convenient to create a direct arteriovenous fistula or for patients who have exhausted peripheral venous access. Disposable devices associated with implantation may be included.	III
12568	13898	Catgut suture, plain	Катгутын оёдол, энгийн	A single-strand (monofilament), natural, bioabsorbable thread composed mostly of collagen fibres derived from mammals (e.g., sheep or bovine intestines) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by enzymatic degradation. This is a single-use device.	III
12569	15023	Femoral artery/vein access catheter	Гуяны артери/венийн катетер	A thin, flexible tube intended to be surgically inserted into the femoral artery or the femoral vein to provide an alternative access to a patient's vasculature, typically when other access routes are not viable or are exhausted. It may be used for continuous arteriovenous (AV) haemofiltration, the delivery of chemotherapeutic agents, or for other chronic applications to avoid repetitive injections. This is a single-use device.	III

12570	15071	Catheter-tip transducer, pressure	Катетер үзүүрийн хувиргагч, даралт	A device intended to be incorporated into the distal end of a catheter (not included) to measure pressure. It typically consists of a pressure sensor (e.g., a flexible membrane or diaphragm) and a means to convert the detected pressure into electronic signals or possibly ultrasonic signals which are transmitted via a cable or wireless to an external parent device (e.g., a manometer) that processes the signals and displays the results. It is used for invasive measurement of pressure in places such as the central and/or peripheral vasculature, cranium, uterus (typically during labour), pleura, and also in the urinary bladder/urethra (e.g., during urodynamic tests). This is a single-use device.	III
12571	15270	Sump drain	Ус зайлуулах хоолой	A sterile, tube-like device that has a double lumen which is designed to establish a channel for the removal of fluids from a cavity by allowing air to enter the cavity through the smaller lumen which displaces fluid into the larger lumen. This is a single-use device.	III
12572	15688	Cerebrospinal fluid shunt filter	Тархи нугасны шингэний шунт шүүлтүүр	A sterile implantable device intended to be used with a cerebrospinal fluid (CSF) shunt assembly (e.g., ventriculoperitoneal shunt, lumboperitoneal shunt) for in-line shunt placement to filter particles by size to prevent transmission of cells when draining CSF from the brain. It typically includes a cellulose membrane supported in a stainless steel mesh encased in, e.g., silicone, and has ports for connection to the shunt. It is used when neoplasms are present or suspected in patients who need treatment using a CSF shunt. It may be implanted behind the mastoid air cells to expose its content to radiation when applied.	III
12573	15749	Cranial bur hole cover	Гавлын ясны нүхний таг	A sterile device used to cover or to plug holes drilled into the skull during surgery and to reattach cranial bone removed during the intervention. This is a single-use device.	III

12574	15993	Pacemaker programmer	Зүрхний аппаратын программист	An external device that enables a user to interrogate, test, analyse and program, noninvasively, one or more of the operating parameters (the programs) of an implanted cardiac pacemaker. It is able to read stored parameters in the pacemaker, providing historic and/or current information regarding performance, and may be used to upload new software into the pacemaker. It is a dedicated device, typically with an electronic wand with a communication antenna, connected to a port of a personal computer (PC) using dedicated software to drive the electronics of the wand to communicate with the implanted pacemaker.	III
12575	16133	Cerebrospinal fluid catheter	Тархи нугасны шингэний катетер	A sterile, flexible tube intended to be used to drain cerebrospinal fluid (CSF) from within the skull, especially in the treatment of hydrocephalus. This is a single-use device.	III
12576	16163	Cardioplegia solution administration kit	Кардиоплегийн уусмалын удирдлагын хэрэгсэл	A collection of devices intended to be used to infuse cardioplegia solution into the heart to interrupt its contractions during cardiopulmonary bypass surgery. It typically consists of tubing/adaptor, a filter, and a heat exchanger. This is single-use device.	III
12577	16167	Oxytocin syringe pump	Окситоцин тариурын шахуурга	A mains electricity (AC-powered) device designed to precisely drive the plunger of a syringe down its barrel only the for delivery of the medication oxytocin; it is calibrated in units specifically for this use. It will typically have internal batteries that allow the device to operate for a short period of time when no line power is available (e.g., during transport or a power outage).	III
12578	16545	Angiography kit	Ангиографийн хэрэгсэл	A collection of sterile devices and equipment used to prepare a patient for the radiographic visualization of the arteries of a particular organ system or body part through the vascular injection of contrast media. It typically includes a combination of fluid/contrast media administration devices (e.g., tubing, manifold, stopcocks, and syringes) and/or dedicated angiography supportive devices (e.g., angiography drapes, covers, dressings); the angiography catheter is not included. This is a single-use device.	III

12579	16615	Central venous catheterization kit	Төвийн венийн катетержуулалтын иж бүрдэл	A collection of sterile devices designed for inserting a central venous catheter which is usually introduced into a neck or thoracic vein and often advanced into the superior vena cava for various infusion/aspiration procedures including the intravenous administration of nutrients, fluids, chemotherapeutic agents or other drugs, and blood sampling or delivery; it may also be used to monitor venous pressure. This device typically consists of a central venous catheter (CVC), a catheter guidewire and an introducer. This is a single-use device.	III
12580	16966	Synthetic bone graft	Синтетик ясны шилжүүлэн суулгах	An artificial bone substitute used for structural bone replacement typically when bone is lost due to disease (e.g., osteoporosis) or injury. It consists mainly of porous and mesh ceramic materials that provide a framework for bone growth, or harvested sea coral that serves as an additive, extender, or provides a framework for bone growth. This is a single-use device.	III
12581	16995	Intracardiac electrode	Зүрхний дотоод электрод	An electrical conductor designed for measuring the electrical activity of and/or to provide pacing signals to the interior of the heart; some electrodes are used to provide electric (e.g., radio-frequency) energy to ablate cardiac tissue. It is usually a very small electrode capable of detecting weak bioelectrical signals and/or to provide high electrical energy; it is typically located at or near the tip of cardiac [e.g., electrophysiology (EP), pacing, ablation] catheters. This is a single-use device.	III
12582	17184	Peripheral angioplasty balloon catheter, basic	Захын ангиопластик бөмбөлөг катетер, үндсэн	A sterile, non-drug-eluting, flexible tube designed for percutaneous transluminal angioplasty (PTA) to dilate a stenotic peripheral (i.e., non-cerebral, non-coronary) artery by controlled inflation of a distensible balloon(s) at its distal tip; it may also be intended for positioning and expansion of a stent/stent-graft. It is available as an over-the-wire (OTW) type with multiple lumens, or a rapid exchange (RX) type with a single lumen. Some types may include cutting/scoring elements (e.g., microsurgical blades, dual wire configurations) to score/modify the plaque. This is a single-use device.	III

12583	17185	Atherectomy laser system beam guide-catheter, coronary	Атерэктоми лазерын системийн цацрагийн чиглүүлэгч-катетер, титэм судас	A sterile, flexible tube intended to be connected to an atherectomy laser system to invasively direct and deliver laser energy into the coronary arteries for the ablation of atherosclerotic plaques in completely occluded vessels. It typically consists of fibreoptic materials with a laser-firing distal end and allows the treatment to be made without significant thermal effect. This is a single-use device.	III
12584	17245	Polyester suture, non-bioabsorbable, monofilament	Полиэфир мэс заслын утас, био шингэдэггүй, монофиламент	A single-strand (monofilament), synthetic thread made from a non-bioabsorbable polyester (e.g., polybutester) intended to join (i.e., approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. The thread provides temporary wound support until the wound sufficiently. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	III
12585	17246	Polyglyconate suture	Полигликонатын мэс заслын утас	A sterile, single-strand (monofilament), synthetic, bioabsorbable thread made from polyglyconate (prepared from a copolymer of glycolic acid and trimethylene carbonate) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues (especially in paediatric cardiovascular surgeries). It may include an attached needle intended to be disposed of after single use. The thread provides extended temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis. This is a single-use device.	III

12586	17453	Cardiac valvuloplasty catheter	Зүрхний хавхлагын катетер	A sterile flexible tube with an inflatable balloon designed to perform plastic or restorative surgery on a cardiac valve, i.e., for the dilatation of atrioventricular, aortic, and pulmonary trunk valves. It is typically used for the percutaneous dilatation of commissural fusion in stenotic mitral valves and for annular, cuspal, and calcific nodular fractures, to improve cuspal mobility in adult calcific aortic stenosis, and for leaflet tearing in pulmonic valve stenosis. It may also be used for percutaneous balloon pericardiotomy. This is a single-use device.	III
12587	17470	Intravascular catheter cuff	Судас доторх катетер ханцуйвч	A sterile device intended to be applied to an intravascular catheter at its site of insertion to function as a focus for subcutaneous tissue in-growth and to help prevent infection. This is a single-use device.	III
12588	17471	Polyester suture, bioabsorbable, multifilament, non-antimicrobial	Полиэфир оёдол, био шингээх чадвартай, олон утастай, нянгийн эсрэг үйлчилгээтэй	A multiple-strand (multifilament), synthetic, bioabsorbable thread made from a polyester [e.g., polyglycolic acid, polyglactin] intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues. The thread provides extended temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It is not a barbed suture and does not include antimicrobial agents/materials. This is a single-use device.	III
12589	17519	Mechanical atherectomy system, coronary, battery-powered	Механик атероэктомийн систем, титэм судас, батерейгаар ажилладаг	An assembly of devices intended to mechanically disrupt/remove atheroma plaque from the walls of coronary arteries. It typically includes a battery-powered energy-producing generator with monitoring functions, a remote control or foot-switch, a handpiece (to which the catheter connects) and a dedicated disposable catheter with a cutting or abrasive head that transmits the mechanical energy to the atheroma. The system may include an integrated irrigation/suction system and includes/requires accessory devices for its function (e.g., saline/lubricant, pump, guidewire).	III

12590	17521	Coronary angioplasty balloon catheter, perfusing	Титэм судасны ангиопластик бөмбөлөг катетер, perfusing	A sterile, flexible tube designed for use in percutaneous transluminal coronary angioplasty (PTCA) to dilate a stenotic coronary artery by controlled inflation of a distensible balloon. The tube contains holes proximal and distal to the balloon that permit blood flow to the distal coronary arteries during balloon dilatation to protect the myocardium from haemodynamic compromise. This is a single-use device.	III
12591	17541	Catheter/overtube balloon inflator, single-use	Катетер/гуурсан хоолойн баллон хийлэгч, нэг удаагийн	A device designed to inflate and regulate the pressure of the balloon of a catheter, endoscopic overtube, or other invasive device (e.g., tamp, endomicroscopy probe), typically by injecting and aspirating fluid or air within the balloon, and to deflate the balloon during a medical procedure. It typically consists of a dedicated manual syringe/plunger or electronic mechanism for inflation/deflation, an analogue or digital gauge/screen for monitoring pressure, a locking mechanism, and a connecting tube. This is a single-use device.	III
12592	17581	Cardiopulmonary bypass system valve, unidirectional flow/pressure control	Зүрхний уушигны эргэлтийн системийн хавхлага, нэг чиглэлтэй урсгал/даралтын хяналт	A sterile, mechanical regulator used in a cardiopulmonary bypass system, particularly systems employing centrifugal pumps during open-heart surgery. It typically provides unidirectional flow to prevent inadvertent backflow of blood and air into the heart, and/or controls the pressure within the system (e.g., maintains gentle suction to prevent line collapse during left ventricular venting, or controls the vacuum from suctioning of the heart or the surgical field). This is a single-use device.	III
12593	17613	Cardiac ventriculography catheter	Зүрхний вентрикулографийн катетер	A flexible tube with specific tip configurations designed to enter the left or right ventricle to perform diagnostic haemodynamic/angiographic procedures with contrast media. The distal tip may have an end hole and/or several side holes. The tube is introduced into a peripheral blood vessel and its distal tip is placed in the left or right ventricle according to the desired ventriculography. Left ventriculography is used to assess impairment of the left ventricle, the presence of ventricular aneurysms or septal defects, or to assess the mitral valve. Right ventriculography is used mostly to asses congenital heart disease. This is a single-use device.	III

12594	17652	Epithelial-resurfacing corneal shield	Эпителийн гадаргууг нөхөн сэргээх эвэрлэг бүрхэвч	A mechanical eye shield made of an animal-derived biodegradable material (e.g., collagen) intended to be placed on the eye to protect the cornea and permit clinical observation and partial patient vision during postsurgical epithelial resurfacing of the cornea. This is a single-use device.	III
12595	17703	Heart valve prosthesis sizer	Зүрхний хавхлагын протезийн хэмжээс	A hand-held manual surgical instrument intended to be used during heart valve repair or replacement for evaluation of the valve opening (patient annulus) into which the appropriate sized annuloplasty ring or replacement valve will be implanted. The device may be one-piece or attached to a separate handle and is available in a range of sizes for the aortic, mitral, or tricuspid heart valve. The sizing part of the device is typically made of polymers (e.g., polysulphone). This is a reusable device.	III
12596	17751	Bone matrix implant, synthetic, non-antimicrobial	Ясны матриц суулгац, синтетик, нянгийн эсрэг үйлчилгээтэй	A bioabsorbable device made of synthetic material intended to be implanted into the body to provide osteoconductive bone-tissue scaffolds, and sometimes osteovascularization, to replace bone lost through trauma, surgery, or pathological conditions (e.g., osteoporosis); it does not include an antimicrobial agent(s). It may be made of ceramics (e.g., tricalcium phosphate or hydroxyapatite), bioactive glasses/minerals/metals (e.g., strontium), or bioabsorbable polymers. It is used to fill cystic defects, repair fractures, and/or extend autogenous bone grafts and is typically provided as cancellous blocks, chips, or granules of varying sizes, or mouldable/fluid materials.	III
12597	17756	Bone implant material, human-derived	Хүний гарал үүсэлтэй ясны суулгац материал	A device of allogeneic material that is implanted into the body to replace bone lost through trauma, osteoporosis, or other pathological conditions. It may be used for skeletal reconstruction or augmentation.	III
12598	17811	Pulmonary artery shunt	Уушигны артерийн шунт	A vascular graft made of synthetic materials intended to be implanted to bypass a stenosed pulmonary artery.	III

12599	17846	Vascular guide-catheter, single-use	Судасны чиглүүлэгч-катетер, нэг удаагийн хэрэглээ	A flexible tube intended to be used for the percutaneous transluminal passage and placement of a diagnostic/interventional catheter, lead (e.g., pacing lead, balloon dilatation catheter), needle or guidewire through its lumen(s), within the vascular system. It may be rigid or flexible, non-steerable or steerable, single or multiple lumen(s), and the distal section can have a variety of preformed shapes (e.g., straight, hockey stick). It is not intended solely for infusion, is not intended to access superselective small vessels, and does not include a transseptal needle. It may include a disposable percutaneous introduction set or shaft visualization electrodes. This is a single-use device.	III
12600	17876	Synthetic-fluid tissue reconstructive material	Синтетик-шингэн эдийг нөхөн сэргээх материал	A sterile synthetic liquid/gel substance [e.g., stabilized hyaluronic acid (HA), hydroxyapatite] that is injected or instilled for cosmetic or tissue reconstructive/augmentation purposes. It is typically used as a space-occupying supplement for the intercellular matrix of connective tissue to correct cutaneous contour deformities of the skin (e.g., wrinkles, folds, scars), particularly in cases of aging or degenerative lesions, or as a submucosal implant in the urinary tract for urinary incontinence or vesicoureteral reflux. It may also be injected into the vocal cords to treat the effects of paralysis, atrophy, or scarring. After application, this device cannot be reused.	III
12601	17913	Antiseizure brain electrical stimulation system	Тархины уналтын эсрэг тархины цахилгаан өдөөх систем	An assembly of implantable sterile devices designed to apply electrical stimuli to specific areas of a patient's brain (e.g., the cerebrum or cerebellum) to prevent or alleviate epileptic seizures. It is a totally self-contained generator and lead/electrode system that carries its own energy source so that it has no inherent dependence upon external devices, except for activation or change of stimulation settings which is typically done through magnetism from an appropriate external programmer. It is used in the treatment of epilepsy and/or convulsive and movement disorders (e.g., cerebral palsy).	III

12602	17927	Intravascular extraction catheter-snare	Судасны судсаар авах катетер-урхи	A flexible, end- and/or side-hole tube with a long snaring device (e.g., a wire loop or noose) inserted through its lumen, designed to be introduced into a blood vessel or similar structure to manually retrieve or manipulate a foreign body. It is typically available in two forms: 1) the loop emerges from the distal tip of the catheter while both free ends of the wire emerge from the proximal end; and 2) the end of the wire is attached to the distal end of the catheter while the free end is passed through the lumen to emerge at the proximal end. The wire is usually made of a high-strength, stiff metal [e.g., nickel-titanium alloy (Nitinol)].	III
12603	18111	Pacing lead extraction kit, reusable	Pacing хар тугалга олборлох иж бүрдэл, дахин ашиглах боломжтой	A collection of devices designed to remove the electrically-conducting leads of an implantable pacemaker or an implantable cardioverter-defibrillator (ICD), typically in cases where infection has developed or a device malfunction has occurred. It typically includes stylets, dilating sheaths, snares, and retrieval baskets. This is a reusable device.	III
12604	18137	Vascular anastomosis coupler, basic	Судасны анастомоз холбогч, үндсэн	An implantable device intended to be used to permanently join vascular structures (blood vessels) through the coupling of two ring-shaped components that are inserted into the ends of the vessels to be attached. It is also used in microvascular surgery. This device is made of a substance or material that cannot be chemically degraded or absorbed via natural body processes (e.g., stainless steel).	III
12605	18673	Blood flowmeter catheter, Doppler	Цусны урсгал хэмжигч катетер, доплер	A flexible tube intended to be inserted into the lumen of a blood vessel to determine blood-flow velocity by measuring the ultrasonic frequency shift between transmitted and reflected signals (Doppler principle). It typically has a ceramic crystal attached at or near its distal tip that is capable of transmitting and receiving ultrasound signals [20 megahertz (MHz) frequency is typical]. The proximal end is connected to a Doppler blood flowmeter unit where the measurements are displayed. It is typically used to measure coronary artery haemodynamics (e.g., blood mean and peak velocity) during coronary artery procedures. This is a single-use device.	III

12606	20233	Cardiac endotherapy needle	Зүрхний эндотерапийн зүү	An endotherapy device that is designed to make punctures in cardiac tissue (heart) through the venous system. It typically consist of a thin, flexible outer cannula [e.g., 56 centimetres (cm) to 71 cm in length] and an inner sharp, curved needle (e.g., 18 or 19 gauge) that protrudes several millimetres (mm) from the tip of the cannula. A cardiac needle is typically used to allow left atrial access from the right atrium through the atrial septum during a fluoroscopic-guided catheterization procedure. This is a single-use device.	III
12607	20654	Class-III biological safety cabinet	III зэрэглэлийн биологийн аюулгүй байдлын кабинет	A furniture-like device designed as an optional partial or total enclosure to provide a class III biosafety level (BSL) to the operator, the product, and the environment during the manipulation of microorganisms and other biological hazardous materials (usually up to category 4). It typically utilizes laminar airflow (LAF), a high-efficiency particulate air (HEPA) filter, and/or a carbon filter and a hydrogen peroxide (H2O2) gas connection as some of the protective mechanisms. It is used for handling extremely biohazardous materials and human pathogens (e.g., bacteria, viruses, parasites), and extremely toxic agents, providing maximum protection to the operator.	III
12608	30084	Partially-implantable middle ear implant system	Дунд чихний суулгацыг хэсэгчлэн суулгах боломжтой	A battery-powered assembly of devices intended to compensate for impaired hearing by transmitting vibrations, from transduced sound waves, to the middle ear. It primarily consists of an external microphone and a vibrator implanted in the middle ear that is coupled with an ossicle (middle ear bone) or the oval window. The microphone receives sound waves and converts them into electrical signals (radio waves) which are sent to the vibrator for the transmission of vibrations to the middle ear bones to activate the auditory pathway. A middle ear implant (MEI) is typically used to treat sensorineural hearing loss (SNHL) or hearing impairment due to middle and/or outer ear obstructive pathologies.	III

12609	30882	Assisted reproduction transfer catheter trial	Тусламжтай нөхөн үржихүйн шилжүүлгийн катетерийн туршилт	A flexible polymer tube intended to be used to simulate the transvaginal insertion of an assisted reproduction catheter set for embryo transfer, to assess advancement through the cervical canal and the position of the uterus. It typically consists of an inner and outer catheter (or catheter sheath) identical to the devices used for the transfer procedure, except that the inner catheter has a rounded blind/closed distal end. This device cannot be used for the introduction of embryos or other reproductive materials into the cervical canal or uterine cavity. This is a single-use device.	III
12610	31245	Anaesthesia conduction filter	Мэдээ алдуулах дамжуулагч шүүлтүүр	A sterile microporous membrane used to minimize particulate (foreign material) contamination of a local anaesthetic during administration to a patient (e.g., through an anaesthesia conduction catheter). This is a single-use device.	III
12611	31715	Cardiopulmonary bypass system blood gas sensor	Зүрхний уушигны эргэлтийн системийн цусны хийн мэдрэгч	A sterile transducer used with a cardiopulmonary bypass system to detect and measure the partial pressure of gases in the blood being circulated by the system. This is a single-use device.	III
12612	31744	Cardiovascular patch, synthetic	Зүрх судасны нөхөөс, синтетик	An implantable material designed to reinforce suture lines and/or increase the strength of weak or injured cardiac and/or peripheral vascular tissues during cardiovascular repair/reconstruction procedures (e.g., annulus or septal defect repair, endarterectomy, profundaplasty). It is a non-bioabsorbable perforated patch made of synthetic polymer material [e.g., polypropylene, polytetrafluoroethylene (PTFE) or Teflon, felt], without biological materials, that is typically implanted with sutures. It is typically implanted during cardiovascular procedures but may also be used in other open and/or laparoscopic soft-tissue surgical procedures (e.g., hernia repair).	III

12613	32325	Peripheral vascular ultrasound catheter	Захын судасны хэт авианы катетер	A flexible tube with an ultrasonic imaging transducer at its distal tip that is used for intraluminal visualization and examination of the peripheral vasculature only, typically for patients intended for a transluminal interventional procedure. It is introduced percutaneously and the distal portion may be steerable for directional change; this is controlled by the operator using a push/pull mechanism with a rotating knob at the proximal end of the device, or over-the-wire (OTW) guided. It is connected to a compatible ultrasound system for transmission and display of the images. This is a single-use device.	III
12614	32545	Cortical electrode	Кортикаль электрод	A sterile, invasive, electrical conductor that is temporarily placed (< 30 days) on the surface of the brain to stimulate the brain or to record the brain's electrical activity (with more precise localization than a scalp electrode). It is typically a series of discs mounted in thin plastic strips, or in a square/rectangular grid to cover larger surface areas. The introduced device, also known as a subdural electrode, is connected to recording, monitoring, or stimulation/response devices [e.g., electroencephalograph (EEG), evoked-potential recorder, stimulator]. This is a single-use device.	III
12615	32556	Depth electrode	Гүн электрод	An electrical conductor intended to be temporarily placed (< 30 days) beneath the surface of the brain to stimulate the brain or to record the brain's electrical activity (with more precise localization than a scalp electrode). It is typically a fine, flexible plastic device attached to wires that carry currents from deep and superficial brain structures. The wires are connected to recording, monitoring, or stimulation/response devices [e.g., electroencephalograph (EEG), evoked-potential recorder, stimulator]. The implant is particularly helpful in determining site of origin in temporal and frontal lobe epilepsy. This is a single-use device.	III

12616	32584	Intravascular occluding balloon catheter, image-guided	Судас дотор бөглөрөх бөмбөлөг катетер, дүрсээр удирдуулсан	A non-powered flexible tube with an inflatable balloon(s) at the distal end intended to be introduced short-term under image guidance to temporarily block a blood vessel. It may be used for arteriography, selective angiography, preoperative occlusion, peripheral and intracranial vasculature occlusion, emergency control of haemorrhage, to treat aneurysms, chemotherapeutic drug infusion, and renal opacification procedures. It may have a dual- or multi-lumen design for balloon inflation, introduction over a guidewire, infusion of contrast medium, or delivery of a smaller catheter or embolic agents; some types have graduated markings to assist insertion. This is a single-use device.	III
12617	32585	Intracranial ventricle catheter	Интракраниаль ховдолын катетер	A sterile flexible tube designed to be surgically inserted through the skull to access the cerebrospinal fluid (CSF) filled cavities of the brain (ventricles). It is typically used for external drainage, pressure measurements, and radiographic procedures (ventriculography); some types allow drainage of CSF from the ventricle or injection of fluid into the ventricle while intracranial pressure (ICP) is simultaneously measured. The device may also be used to treat hydrocephalus. This is a single-use device.	III
12618	32831	Uncoated knee femur prosthesis, metallic	Өвдөгний гуяны бүрээсгүй протез, металл	An implantable device designed to replace the femoral condyles (femoral component) during primary bicondylar replacement of the knee joint, femoral bone resection, or to replace a dysfunctional knee prosthesis (revision); it is made of metal [e.g., cobalt-chrome (Co-Cr), cobalt-chrome-molybdenum (Co-Cr-Mo), titanium (Ti)] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with tibial and, if required, patellar prosthetic components of the knee joint and its implantation is intended to be performed with bone cement.	III

12619	32832	Uncoated knee tibia prosthesis, metallic	Өвдөгний шилбэний бүрээсгүй протез, металл	An implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint, femoral bone resection, or to replace a dysfunctional knee prosthesis (revision); it is made of metal [e.g., cobalt-chrome (Co-Cr), cobalt-chrome-molybdenum (Co-Cr-Mo), titanium (Ti)] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with an insert and/or the femoral prosthetic component of the knee joint and its implantation is intended to be performed with bone cement.	III
12620	32833	Knee prosthesis, internal, unicondylar	Өвдөгний протез, дотоод, нэг кондиляр	An implantable artificial substitute for the bearing surfaces of only one femoral condyle and corresponding tibial condyle of the knee. Such a device is used in unicompartmental disease and/or damage to the bearing surfaces of the knee.	III
12621	32835	Prosthesis, shoulder, internal, humeral component	Протез, мөр, дотоод, humeral бүрэлдэхүүн хэсэг	An implantable component of a shoulder joint prosthesis that is affixed to the proximal humerus bone to replace or repair the articulating surface. The device may be made of metal, ceramic, carbon, polymer or a combination of these. The device may be used with or without bone cement.	III
12622	33473	PTFE/carbon-fibre craniofacial tissue reconstructive material	PTFE/нүүрстөрөгчийн шилэн гавлын нүүрний эдийг нөхөн сэргээх материал	A sterile device that is made up of polytetrafluoroethylene (PTFE), commonly known as Teflon, reinforced with carbon fibres to make a porous implant material. Such a device may be used in cosmetic surgery to restore the shape of the chin, jaw, nose, or bones and tissue near the eye. The device serves as a space-occupying substance and is shaped and formed by the surgeon. It can also be used for the coating of prosthetic devices.	III
12623	33503	Intra-aortic filter	Аортын дотоод шүүлтүүр	A sterile, porous device intended to be surgically placed in the aorta, via a previously placed cannula, to capture and remove particulate emboli from the heart and ascending aorta during a non-emergent cardiac surgery procedure (e.g., following cross clamp removal in an adult patient). It is available in various sizes to conform to patient anatomy, and will expand when released in the aorta where it temporarily remains in situ (e.g., 6 hours). This is a single-use device.	III

12624	33515	Cosmetic silicone-liquid tissue reconstructive material	Гоо сайхны силикон шингэн эдийг нөхөн сэргээх материал	A sterile, high-grade, medical silicone fluid intended to be used in cosmetic surgery. It is typically injected under the skin to remove wrinkles and other imperfections, or to fill cavities.	III
12625	33516	Dressing, burn, porcine	Хувцаслах, шатаах, гахайн мах	A wound covering made from pig skin that is intended to be used temporarily on burned skin.	III
12626	33525	Biological tissue reconstructive material	Биологийн эдийг нөхөн сэргээх материал	A sterile natural substance used in the repair, reinforcement, or occlusion of skin and other soft tissue typically by serving as a space-occupying supplement for the intercellular matrix of connective tissue. It may be applied to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) of the skin, particularly in cases of aging or degenerative lesions, and/or to treat skin and soft-tissue wounds, including surgical wounds and fistulas. It may be an injectable substance or a flexible material applied using simple surgical techniques. The device may be made from collagen, hyaluronic acid (HA) and its polymeric derivatives, or a natural bioabsorbable gelatin material.	III
12627	33580	Uncoated knee tibia prosthesis, polyethylene	Өвдөгний шилбэний бүрхүүлгүй протез, полиэтилен	An implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision); it is made entirely of polyethylene (PE) and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with an insert and the femoral prosthetic component of the knee joint and its implantation is intended to be performed with bone cement.	III
12628	33663	Cardiopulmonary bypass system centrifugal pump backup drive unit	Зүрхний уушигны эргэлтийн системийн төвөөс зугтах насосны нөөц хөтчийн нэгж	A mains electricity (AC-powered) device, with an internal battery, that substitutes as the drive unit for a cardiopulmonary bypass system centrifugal pump to circulate blood through the extracorporeal circuit in the event of the loss of mains electricity. It typically includes monitoring and alarm functions.	III

12629	33704	Hip prosthesis, internal, hemi	Хип протез, дотоод, хагас	An implantable artificial substitute for part of the femoral stem, head, and neck used in cases of proximal hip fractures or arthritic conditions. The device articulates with the natural acetabulum. It may be a one-piece device (head, neck and stem) or consist of a separate stem with a trunnion and a head. The head (ball) component may itself be made up of an outer shell and an inner liner. The materials may be metal, carbon, polymer and/or ceramic. The device may be designed to be used with or without bone cement.	III
12630	33705	Total wrist prosthesis	Нийт бугуйны протез	A sterile implantable artificial substitute for a wrist joint designed to replace both articulating surfaces of the damaged (e.g., fractured) and/or degenerative (e.g., arthritic) joint. It includes radial and carpal components, usually with an intervening ball/spacer, with parts made of metal and polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12631	33706	Carpal lunate prosthesis	Carpal lunate протез	A sterile implantable device designed to replace the lunate bone in the proximal carpal row of the wrist typically in the presence of avascular necrosis, localized osteoarthritic changes, or longstanding dislocations. It is typically a one-piece device, made of one or several materials (e.g., carbon, graphite, metal), that may reflect the shape of the native bone. Short-term fixation is typically performed with sutures.	III
12632	33707	Carpal scaphoid prosthesis	Бугуйн скафоид протез	A sterile implantable device designed to replace the scaphoid bone in the proximal carpal row of the wrist typically in the presence of avascular necrosis, localized osteoarthritic changes, or longstanding dislocations. It is typically a one-piece device, made of one or several materials (e.g., carbon, graphite, metal), that may reflect the shape of the native bone. Short-term fixation is typically performed with sutures.	III

12633	33710	Partial shoulder prosthesis	Хэсэгчилсэн мөрний протез	A sterile implantable artificial substitute for the humeral component of a shoulder joint typically replaced due to injury (e.g., fracture). It includes humeral head and stem components with parts made of metal and can articulate with the natural glenoid fossa, a glenoid fossa prosthesis, or a humeral head bipolar component. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12634	33711	Total reverse shoulder prosthesis	Нийт урвуу мөрний протез	A sterile implantable artificial substitute for a shoulder joint designed to replace both articulating surfaces of the joint particularly in patients with chronic, longstanding rotator cuff muscle tears, arthritis, and/or humeral fractures unsuccessfully treated by previous surgery. The device reverses normal anatomy so that the head portion of the joint is attached to the scapula and the socket portion is attached to the humerus. It typically includes a humeral stem and glenosphere (head) with body and cup components. The device may include screws for implantation and may be implanted with or without bone cement.	III
12635	33712	Bipolar partial shoulder prosthesis	Хоёр туйлт хэсэгчилсэн мөрний протез	A sterile implantable artificial substitute for the humeral component of a shoulder joint typically replaced due to injury (e.g., fracture). It includes humeral head and stem components and a humeral head bipolar component (device that articulates with the humeral head prosthesis on one surface and the natural glenoid fossa on the other), typically with parts made of metal and polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12636	33715	Ceramic-on-polyethylene total hip prosthesis	Полиэтилен дээр хийсэн керамик гуяны нийт протез	A sterile implantable artificial substitute for a diseased (e.g., arthritic) or injured hip joint consisting of matching femoral (head/shaft) and acetabular components articulated at a ceramic-on-polyethylene or cross-linked polyethylene (PE) interface. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III

12637	33717	Resurfacing metallic hip prosthesis	Металл гуяны протезийг нөхөн сэргээх	An implantable partial substitute for a disease-damaged hip joint intended to replace the articulating surfaces of the hip while preserving the natural femoral head and neck. It consists of a metallic femoral cap component, that is placed over (resurfaces) a surgically-prepared femoral head, and a metallic acetabular component; that is, both components are supplied together. Fixation devices for implantation (e.g., screws/bolts) may be included and implantation may be performed with or without bone cement. This device is commonly used for younger/active patients to avoid total hip replacements/revisions.	III
12638	33718	Fixed-bearing total ankle prosthesis	Тогтмол даацтай нийлмэл шагайны протез	A sterile implantable artificial substitute for an ankle joint designed to replace the main articulating surfaces of the damaged (e.g., fractured) and/or degenerative (e.g., arthritic) joint. It includes tibial and talar components typically with parts made of metal and polyethylene (PE); the PE bearing that articulates the two components is attached or moulded to one of the components. Fixation devices (e.g., screws) for implantation may be included and implantation may be performed with or without bone cement.	III
12639	33719	Ceramic-on-metal total hip prosthesis	Металл дээр хийсэн керамик гуяны нийт протез	A sterile implantable artificial substitute for a diseased (e.g., arthritic) or injured hip joint consisting of matching femoral (head/shaft) and acetabular components articulated at a ceramic-on-metal interface. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III
12640	33720	Wrist ulna-head prosthesis	Бугуйны ulna-толгойн протез	A sterile implantable device designed to replace the distal ulnar head of the radio-ulnar joint following ulnar head resection typically due to arthritis, post-traumatic disabilities (pain, weakness, instability), or failed alternative treatment. It may be a one-piece or modular device made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and/or polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III

12641	33743	Carpal trapezium prosthesis	Carpal trapezium протез	A sterile implantable device designed to replace a partly-resected trapezium bone of the wrist typically to treat thumb instability/motion disabilities caused by arthritis or fracture. It is typically a one-piece device made of silicone elastomer. Short-term fixation is typically performed with sutures.	III
12642	33745	Coated knee femur prosthesis	Өвдөгний гуяны бүрээстэй протез	A sterile implantable device designed to replace the femoral condyles (femoral component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision); it is made of metal [e.g., cobalt-chrome (Co-Cr)] and is coated with a material (e.g., beads, hydroxyapatite, mesh) intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with tibial and, if required, patellar prosthetic components of the knee joint and its implantation may be performed with or without bone cement.	III
12643	33747	Total wrist prosthesis spacer	Нийт бугуйны протезийн зай	A sterile implantable device made of polyethylene (PE) designed to articulate the carpal and radial components of a total wrist prosthesis.	III
12644	33863	Trabeculated bicondylar knee femur prosthesis	Хоёр кондиляр өвдөгний гуяны протез	An implantable device designed to replace the femoral condyles (femoral component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision); it is made of metal (e.g., tantalum alloy) and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with tibial and, if required, patellar prosthetic components of the knee joint and its implantation is typically intended to be performed without bone cement.	III
12645	33923	Infusion/injection port/catheter, implantable	Судсаар хийх/тарилгын порт/катетер, суулгах боломжтой	A sterile short- or long-term implantable device composed of a metal or plastic portal with septum, connected to a catheter, intended to be used for the delivery of drugs or other fluids to various anatomical regions or vessels. The device is implanted subcutaneously (under the skin), and delivery of drugs and fluids can be accomplished using a medical (drug/fluid) delivery pump or bolus injection. This is a single-use device.	III

12646	33961	General surgical procedure kit, non-medicated, single-use	Мэс заслын ерөнхий иж бүрдэл, эмийн бус, нэг удаагийн хэрэглээ	A typically non-dedicated collection of various surgical instruments, sometimes with dressings and/or other materials, but that does not contain pharmaceuticals, intended to be used during: 1) open abdominal surgery; 2) a range of open surgical procedures across multiple clinical specialties (non-dedicated); 3) non-orthopaedic trauma surgery; 4) minor dermatological surgery; or 5) cosmetic surgery below the head. As a kit that includes procedural devices, it is neither dedicated to surgical scrubbing, surgical patient preparation, nor anaesthesia, and is not a dedicated biopsy kit. This is a single-use device.	III
12647	33982	Orthopaedic cement spacer	Ортопедийн цемент зайлагч	A prefabricated device made of orthopaedic bone cement [e.g., polymethylmethacrylate (PMMA)], with an appropriate antibiotic, that is temporarily placed into a joint space to function as a carrier for the local delivery of antibiotic drugs and to prevent bone-on-bone contact and contraction of soft-tissue during surgical treatment of an infected joint. The shape and size of the device is modified to fit the joint space. This non-weight-bearing spacer remains in place until the infection clears; it is then removed and replaced with a conventional joint prosthesis. This is a single-use device.	III
12648	33989	Uncoated femoral stem prosthesis, one-piece	Гуяны ишний бүрээсгүй протез, нэг хэсэг	A sterile implantable device designed to replace the proximal femoral neck as part of a total hip arthroplasty (THA). The device is one-piece, is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel], and is not coated with materials intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation is intended to be performed with bone cement.	III

12649	34032	Revision coated hip femur prosthesis	Хувилбараар бүрсэн гуяны протез	A sterile device designed to replace the entire femoral component of a total hip prosthesis implanted during replacement of the total hip prosthesis typically due to wear. The revision device is composed of two or more separate segments (e.g., femoral head, neck, stem, and extensions) designed to be joined (modular) and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. The device may be made of metal and/or ceramic materials. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III
12650	34038	Revision uncoated femoral stem prosthesis	Хувилбаргүй гуяны ишний протез	A sterile implantable device designed to replace the proximal femoral neck during replacement of a total hip prosthesis involving proximal femoral bone loss and/or to replace resection bone loss. The device may be a single piece or composed of two or more segments designed to be joined (modular), is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel], and is not coated with materials intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included; implantation is intended to be performed with bone cement and may involve use of a femoral extension.	III
12651	34076	Polyethylene acetabulum prosthesis	Полиэтилен ацетабулум протез	A sterile implantable principal component of a total hip prosthesis (acetabular component) designed to replace or repair the acetabulum. The component is of a one-piece construction and is made entirely of polyethylene (polyethylene cup); it may include fixation devices (e.g., screws) for attachment to the body.	III
12652	34109	Coronary angioplasty balloon catheter, thermal	Титэм судасны ангиопластик бөмбөлөг катетер, дулааны	A sterile, specialized, flexible tube designed for use in percutaneous transluminal coronary angioplasty (PTCA) with an inflatable balloon at its distal tip intended to deliver thermal energy (typically radio-frequency or microwave) to an atherosclerotic lesion in the coronary arteries to dilate the site and improve blood flow. This is a single-use device.	III

12653	34170	Vertebral body prosthesis	Нугаламын биеийн протез	An implantable device designed to replace one or more vertebral body(s) that has collapsed or been surgically removed due to trauma, tumour or degenerative disease. Also known as a corpectomy or vertebrectomy spacer, it is in the form of a one-piece or modular hollow cylinder made of inorganic materials (e.g., metal, polymer). It is typically used with supplemental spinal fixation and/or bone graft, and some types are adjustable for in situ adjustment of prosthesis height to allow intraoperative distraction of adjacent vertebrae.	III
12654	34179	Coronary artery stent	Титэм артерийн стент	An expandable tubular device implanted in a coronary artery or saphenous vein graft of the heart to maintain its patency and improve its luminal diameter typically in patients with symptomatic atherosclerotic disease. It may be inserted and advanced to the site of implantation with a balloon catheter which will cause the device to expand upon balloon inflation, or it may be delivered by a dedicated instrument where it self-expands upon release. It is typically made of high-grade stainless steel or a polymer. It may be a continuous tube of a certain length, a scaffold structure, or have a bifurcation design (e.g., shaped as a Y in a tube form).	III
12655	34190	Uncoated hip femur prosthesis, modular	Гуяны гуяны бүрээсгүй протез, модульчлагдсан	A sterile implantable principal component of a total hip prosthesis (femoral component) typically designed to replace the femoral head and neck; the device is composed of two or more separate pieces (e.g., head, neck, and stem) designed to be joined and is not coated with materials intended to improve fixation and stability by promoting bone ingrowth. The device may be made of metal and/or ceramic materials. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation is intended to be performed with bone cement.	III

12656	34191	Coated femoral stem prosthesis, modular	Бүрсэн гуяны ишний протез, модульчлагдсан	A sterile implantable device designed to replace the proximal femoral neck as part of a total hip arthroplasty (THA). The device is composed of two or more separate segments designed to be joined, typically made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel], and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III
12657	34192	Metal-backed patella prosthesis	Металл тулгууртай пателла протез	An implantable device covered with metal on its outer surface intended to fully or partially replace the patella (kneecap) as part of a bicondylar knee joint replacement (primary or revision). It is designed to articulate with a prosthetic distal femoral component by attachment to the back of the natural patella with or without bone cement.	III
12658	34195	Unicondylar knee prosthesis	Unicondylar өвдөгний протез	A sterile artificial substitute for the bearing surface of only one femoral condyle and corresponding tibial condyle of the knee (medial or lateral condyle) implanted during primary or revision knee replacement. It typically consists of femoral and tibial components and a knee insert which are made of metal or polyethylene (PE); fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement. The device is indicated in unicompartmental disease and/or damage (e.g., from arthritis) to the bearing surfaces of the knee.	III
12659	34197	Uncoated shoulder humeral stem prosthesis	Бүрээсгүй мөрний ясны протез	A sterile implantable device designed to provide fixation within the proximal humerus and a site of attachment for a humeral head or humeral body prosthesis as part of a shoulder joint replacement. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is intended to be performed with bone cement.	III

12660	34198	Coated knee tibia prosthesis	Өвдөгний шилбэний бүрээстэй протез	A sterile implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision); it is made of metal [e.g., cobalt-chrome (Co-Cr)] and is coated with a material (e.g., beads, hydroxyapatite, mesh) intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with an insert and the femoral prosthetic component of the knee joint and its implantation may be performed with or without bone cement.	III
12661	34199	Polyethylene patella prosthesis	Полиэтилен пателла протез	An implantable device made of polyethylene (PE) intended to fully or partially replace the patella (kneecap) as part of a bicondylar knee joint replacement (primary or revision). It is designed to articulate with a prosthetic distal femoral component by attachment to the back of the natural patella with or without bone cement.	III
12662	34202	Uncoated ankle tibia prosthesis	Шагайны шилбэний бүрээсгүй протез	A sterile implantable device designed to replace the distal tibia (tibial component) as part of a primary ankle joint replacement or prosthesis revision. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is intended to be performed with bone cement.	III
12663	34203	Uncoated femoral stem prosthesis, modular	Бүрээсгүй гуяны ишний протез, модульчлагдсан	A sterile implantable device designed to replace the proximal femoral neck as part of a total hip arthroplasty (THA). The device is composed of two or more separate segments designed to be joined, is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel], and is not coated with materials intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation is intended to be performed with bone cement.	III

12664	34204	Ceramic-on-ceramic total hip prosthesis	Керамик-керамик нийт түнхний протез	A sterile implantable artificial substitute for a diseased (e.g., arthritic) or injured hip joint consisting of matching femoral (head/shaft) and acetabular components articulated at a ceramic-on-ceramic interface. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III
12665	34209	Coated unicondylar knee femur prosthesis	Өвдөгний гуяны нэг кондиляр бүрсэн протез	A sterile implantable device designed to replace the bearing surface of one femoral condyle (femoral component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is coated with a material (e.g., beads, hydroxyapatite, mesh) intended to improve fixation and stability by promoting bone ingrowth. The device articulates with a tibial component and an insert, and its implantation may be performed with or without bone cement.	III
12666	34210	Antiseizure/psychiatric-therapy vagus nerve implantable electrical stimulation system	Уналтын эсрэг/сэтгэцийн эмчилгээний вагус мэдрэлийг суулгаж болох цахилгаан өдөөх систем	An assembly of battery-powered devices intended to apply periodic electrical stimuli to the vagus nerve to help control seizures and/or to help treat psychiatric disorder symptoms (e.g., depression). The vagus nerve stimulation (VNS) is provided through an implantable pulse generator, typically placed in the anterior chest wall, and leads that run subcutaneously to where their electrodes are implanted around the left vagus nerve. The system may be programmed externally following implantation.	III
12667	34212	Surgical anti-adhesion material, implantable, bioabsorbable, non-medicated	Хагалгааны наалдацаас хамгаалах материал, суулгац, био шингээх, эмийн бус	A bioabsorbable, surgically-implanted device intended to prevent the abnormal fibrous union (adhesion) between one internal body part/tissue and another following a surgical procedure; neither antimicrobials nor pharmaceuticals are included. It may be supplied as a barrier membrane, hydratable gel, or fluid dressing and is made of appropriate material (e.g., collagen- or hyaluronic acid-based) to reduce adhesion between adjacent anatomical structures.	III

12668	34223	Uncoated hip femur prosthesis, one-piece	Гуяны гуяны бүрээсгүй протез, нэг хэсэг	A sterile implantable principal component of a total hip prosthesis (femoral component) designed to replace the femoral head and neck; the device is one-piece and is not coated with materials intended to improve fixation and stability. The device may be made of metal and/or ceramic materials. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation is intended to be performed with bone cement.	III
12669	34234	Cuff, internal, vascular	Ханцуйвч, дотоод, судас	An implantable tubular sheath typically used to encase a varicosed vein for treatment. It is usually made of a polymer material.	III
12670	34586	Cerebrospinal drain	Тархи нугасны урсац	A sterile tube-like device designed to establish a channel for the removal of cerebrospinal fluid from the central nervous system (CNS) to the cardiovascular system or peritoneal cavity to control intracranial volume and intracranial pressure (ICP). This is a single-use device.	III
12671	34672	Air-conduction hearing aid, in-the-ear	Агаар дамжуулагч сонсголын аппарат, чихэнд	A battery-powered acoustic device intended to compensate for impaired hearing by transmitting amplified sound waves to the eardrum through air. It typically consists of a miniature microphone, amplifier, and speaker (receiver) contained in a case that fits completely inside the outer ear (concha) [in-the-ear (ITE)]. The microphone receives sound waves and converts them into electrical signals which are increased by the amplifier and sent as sound waves, by the speaker, to the eardrum. The device is used for mild to severe hearing loss; most types are programmable to enable computerized adjustments for a patient's hearing loss and related factors.	III
12672	34769	Denture reliner, elastic, short-term	Шүдний араг яс, уян хатан, богино хугацаатай	A denture relining material intended to be applied by a dentist or dental laboratory technician as a temporary coating or lining on the base or tissue-contact surface of a denture and which has elastic properties after setting. Denture relining is defined as a process of providing a new fitting surface to a denture. After application, this device cannot be reused.	III

12673	34770	Denture reliner, elastic, long-term	Шүдний араг яс, уян хатан, удаан эдэлгээтэй	A denture relining material intended to be applied by a dentist or dental laboratory technician as a permanent coating or lining on the base or tissue-contact surface of a denture and which has elastic properties after setting. Denture relining is defined as a process of providing a new fitting surface to a denture. After application, this device cannot be reused.	III
12674	34863	Red blood cell-recovery autotransfusion system	Цусны улаан эсийг нөхөн сэргээх автомат сэлбэх систем	An assembly of devices designed to collect and process blood lost by a patient to obtain red blood cells for subsequent reinfusion into the same patient (i.e., autotransfusion). It typically includes a disposable suction system to collect blood from the surgical field, a reservoir to store the blood, a spinning processing chamber (e.g., a centrifuge) to separate waste (e.g., clotting factors, debris) and wash the red blood cells with saline, particulate microfilters, and a reinfusion bag that stores the red blood cells in saline. The system is used mainly during surgical procedures to minimize allogeneic blood use, but may be used postoperatively and in emergency or intensive care units.	III
12675	34893	Cardiopulmonary bypass/extracorporeal membrane oxygenation cannula, return	Зүрхний уушигны эргэлт/биеийн гаднах мембраны хүчилтөрөгчийн суваг, буцах	A semi-rigid or rigid tube intended to be surgically inserted into an artery or vein to serve as a channel for the extracorporeal transport of oxygenated blood to a patient during cardiopulmonary bypass and/or extracorporeal membrane oxygenation; in some settings it may be referred to as an arterial cannula. It is typically inserted using a compatible trocar blade which may be included. This is a single-use device.	III
12676	34894	Arterial flushing cannula	Артерийн улайх суваг	A semi-rigid tube that is attached to a manometer and inserted into a blood vessel so that the connection between the artery and the manometer can be washed out during long observations. This is a single-use device.	III

12677	34895	Intracranial cannula	Интракраниаль суваг	A sterile, rigid or semi-rigid, tube that is inserted into the cranium, providing access to the brain. It is usually made of plastic or less frequently metal and is typically connected directly or through an external tube or catheter to an irrigation and/or suction system for irrigation, infusion, or withdrawal of substances; typically to drain fluid and thereby reduce intracranial pressure (ICP). It may also be used as a port through which instruments and/or probes can be passed to perform a variety of diagnostic, treatment, or surgical procedures. This is a single-use device.	III
12678	34896	Vascular irrigation cannula, coronary artery, single-use	Судасны усалгааны суваг, титэм артери, нэг удаагийн хэрэглээ	A sterile, rigid or semi-rigid tube designed to be surgically inserted, temporarily, into a coronary artery to serve as a channel for the transport of fluid during a surgical intervention. It is typically intended for the infusion and/or perfusion of fluids in diagnostic and/or surgical procedures, such as cardiopulmonary bypass, and to help avoid ischemia. Insertion is achieved with the use of a removable stylet or trocar blade. This is a single-use device.	III
12679	34902	Femoral artery cannula	Гуяны артерийн суваг	A semi-rigid or rigid tube that is inserted into the femoral artery for the introduction of a heart catheter. This is a single-use device.	III
12680	34904	Vena cava cannula	Вена кава суваг	A sterile, rigid or semi-rigid tube designed to be surgically inserted into the vena cava, typically through the femoral veins and advanced until its distal tip is inside the vena cava, to serve as a channel for the transport of fluid. It may be used for a variety of purposes including the injection or withdrawal of substances and/or blood. Insertion is achieved with the use of a removable stylet or trocar. This is a single-use device.	III
12681	34914	Coronary artery perfusion catheter	Титэм артерийн сэлбэх катетер	A sterile, flexible tube designed to perfuse the coronary arteries with shunted blood (e.g., from a femoral artery) to prevent ischemia typically during off-pump coronary artery bypass grafting or during minimally-invasive cardiac surgical procedures. This is a single-use device.	III

12682	34919	Intra-aortic balloon catheter	Аортын доторх бөмбөлөг катетер	A flexible, balloon-tipped, tube that is placed in the aorta distal to the aortic valve to augment the heart's pumping capability. It is typically introduced percutaneously via one of the femoral arteries and advanced to the descending thoracic aorta using fluoroscopic imaging guidance. Once positioned, an external pump alternately inflates and deflates the balloon in a cycle counter to the cardiac cycle (counter pulsation), facilitating ejection during systole and limits regurgitation during diastole. It is used to treat several cardiovascular conditions, e.g., after open-heart surgery, cardiogenic shock, intractable angina, or to reduce myocardial conditions. This is a single-use device.	III
12683	34920	Peripheral-vascular infusion catheter	Захын-судасны дусаах катетер	A sterile, flexible tube designed for insertion into percutaneously accessible blood vessels of the extremities (i.e., the peripheral vasculature) and that is short in length to keep its distal tip near the insertion site. It typically includes a two to eight cm (one to three inches) plastic tube with a metal stylet inside its lumen (over-the-needle catheters). It is most commonly used with infusion devices for short dwell time (typically seven days or less), for the administration of non-irritating fluids, electrolytes, vitamins, medication, and for the injection of certain anaesthetics into the peripheral vasculature of patients with good venous access. This is a single-use device.	III
12684	34925	Pulmonary artery balloon catheter, electrical	Уушигны артерийн бөмбөлөг катетер, цахилгаан	A flexible tube with an inflatable balloon(s) and electrical component(s) [e.g., thermistor, fibreoptic bundle] at its distal tip designed to be introduced percutaneously into the venous system via a central vein, and advanced to the pulmonary artery, to measure/monitor haematological parameters [e.g., pulmonary arterial pressures (e.g., wedge), cardiac output, cardiac index, mixed venous oxygen saturation (SvO2)]; it might use thermal dilution techniques and in addition be intended for venous blood sampling. Also referred to as a Swan-Ganz catheter, it is typically used in conjunction with a parent device (e.g., blood pressure transducer) [not included]. This is a single-use device.	III

12685	34941	Artificial heart, permanent	Хиймэл зүрх, байнгын	A sterile prosthetic device designed for complete substitution of the biological heart to provide blood circulation for patients with debilitated or failed hearts. The device typically consists of a mechanism that includes one or more pumps, valves, and a power source. The implanted pumping mechanism can be powered with an external power supply unit but is usually powered with an integrated implantable power source.	III
12686	34958	Aneurysm clip	Аневризмын клип	A metallic device intended to be permanently implanted around the neck of an aneurysm (a balloon-like sac formed on a blood vessel) for occlusion, to prevent it from bleeding or bursting and to isolate it from the rest of the vessel. The device is typically an alpha-shaped coil spring, with blades that open like jaws, that comes with a dedicated applier for application to the aneurysm. The device is available in a variety of sizes and its blades may be straight or curved. It is typically used to treat intracranial aneurysms; it may also be used to prevent bleeding from small blood vessels.	III
12687	34962	Vena cava clip	Вена кава клип	An implanted extravascular device used to partially occlude the vena cava to prevent the passage of thromboemboli without stopping the flow of blood.	III
12688	35039	Epicardial pacing lead	Эпикардийн зүрхний хэмнэл	An implantable flexible wire with an electrode, insulated with non-conductive material except at its ends, which serves as an electrical conductor to transmit pacing impulses from an implanted pacemaker to the heart. It may also transmit electrical responses from the heart back to the pacemaker; it is not intended to conduct defibrillation impulses. The electrode end is normally implanted in the outer surface of the heart (epicardium) in close contact to the wall of one of the chambers of the heart (endocardium), and the other end is connected to the pacemaker. It may be impregnated with a steroid (e.g., dexamethasone) intended to elute into the tissues to reduce inflammation.	III
12689	35093	Vascular graft	Судасны шилжүүлэн суулгах	A device that is manufactured from processed biological tissue, and is intended to repair or replace a portion of a vein, artery, or other vessel. For synthetic vessels see the appropriate generic device group.	III

12690	35094	Cardiac/peripheral vascular guidewire, single-use	Зүрхний/захын судасны чиглүүлэгч утас, нэг удаагийн хэрэглээ	A long, thin, sterile wire intended to be percutaneously placed into the cardiac vasculature (ventricles or coronary vessels) to function as a guide for the introduction, positioning, and/or operation of a device (e.g., catheter, pacing lead); it may also be used in the peripheral vasculature. It may be made of metal (e.g., stainless steel, Nitinol), or polymer and/or glass materials to provide MRI-compatibility, with or without coating, and is available in a variety of distal tip designs. It is used for various diagnostic and interventional procedures, and may include devices used to facilitate manipulation (e.g., torque device). This is a single-use device.	III
12691	35125	Contraceptive, intrauterine device	Жирэмслэлтээс хамгаалах хэрэгсэл, умайн доторх хэрэгсэл	A device placed high in the uterine fundus, with a string for extraction extending from the device through the cervical os and into the vagina, used to prevent conception. It is typically made of a plastic material that is ergonomically formed to safely sit in situ for the period of time recommended by the manufacturer, and to this is attached a medium (e.g., a copper wire or a hormone saturated thread) that creates an environment that is adverse for conception. An introducer is also typically included. After application, this device cannot be reused.	III
12692	35212	Spinal needle, single-use	Нурууны зүү, нэг удаагийн	A sharp bevel-edged, hollow tubular instrument designed for short-term use to withdraw a sample of cerebrospinal fluid (CSF), assist introduction of a spinal guidewire or catheter (e.g., lumboperitoneal shunt, intrathecal catheter), and/or deliver contrast media and/or anaesthetic or analgesic agents intrathecally (subarachnoid) or into a vertebral disc, either directly or using the needle-through-needle technique. It is typically fenestrated, spring-tipped, and made of metal and/or plastic materials; some types may be semi-rigid and include a stylet for support during handling. This is a single-use device.	III

12693	35223	Endocardial/interventricular septal pacing lead	Endocardial/interventricular septal pacing lead	An implantable wire with an electrode, insulated with non-conductive material except at its ends, which serves as an electrical conductor to transmit pacing impulses from an implanted pulse generator to the heart; it is not intended to conduct defibrillation impulses. It may transmit intrinsic electrical activity from the heart back to the pulse generator. The electrode end is normally placed through a vein to contact the endocardium where it is fixed, or to penetrate the myocardium of the interventricular septum adjacent to the HIS-Purkinje system; the other end is connected to the pulse generator. It may be impregnated with a steroid intended to reduce inflammation.	III
12694	35224	External pacemaker, epicardial pacing	Гадны зүрхний аппарат, эпикардийн зүрхний аппарат	An external pulse generator (EPG) designed to generate periodic electrical cardiac pacing impulses and transmits them to the heart via invasive (percutaneous) leads to stimulate the heart when the sino-atrial (SA) node is not functioning properly or when the heart has a conductive disorder. It is commonly used: 1) in an emergency; 2) during surgery; or 3) following open-heart surgery until the heart recovers. It is not intended for defibrillation or cardioversion. The leads (not included) are inserted into the heart through a major vein (e.g., subclavian) or attached directly to the heart wall.	III
12695	35244	Pneumograph	Пневмограф	A device designed to graphically display chest movement during the respiratory cycle. It uses a sensor, e.g. Electrical impedance, to detect and transduce respiratory chest movement and may display both the rate and waveform of the movement.	III
12696	35266	Circulatory assist system heart pump	Цусны эргэлтийг дэмжих системийн зүрхний насос	An implanted device designed as an artificial heart pump that assists the left or right ventricle in maintaining circulatory blood flow. The device is implanted in the chest and is typically used for patient's requiring circulatory assistance, because of a weakened heart condition, whilst they await a heart transplant. It is supplied with energy from an external supply unit. See also: Circulatory assist system external power supply unit.	III

12697	35273	Cardiovascular patch, animal-derived	Зүрх судасны нөхөөс, амьтны гаралтай	An implantable material designed to reinforce suture lines and/or increase the strength of weak or injured cardiac and/or peripheral vascular tissues during cardiovascular repair/reconstruction procedures (e.g., annulus or septal defect repair, endarterectomy, profundaplasty). It is a patch made of, or coated/impregnated with, materials of animal origin (e.g., porcine, bovine, or equine pericardium/collagen), that is typically implanted with sutures.	III
12698	35281	Synthetic vascular graft	Синтетик судасны залгаас	An implantable artificial substitute for a blood vessel intended to replace or bypass the diseased or injured vessel. It is typically made of woven or knitted polyethylene terephthalate (Dacron) or polytetrafluoroethylene (PTFE) fabrics and is best suited for large (more than 10 mm) diameter, high-flow vessel replacement (e.g., aortic or aorto-iliac artery reconstruction) and also for haemodialysis access and extra-anatomic bypass grafting. The device is used in many vascular bypass procedures (e.g., aorto-iliac, femoral-popliteal, axillo-axillary artery) except those involving the coronary arteries.	III
12699	35312	Brain retractor	Тархи татагч	A hand-held manual surgical instrument designed for the temporary atraumatic separation and/or drawing aside of the margins of a sulcus or fissure of the brain, or margin of an incision of the brain, during neurosurgical procedures. It is typically made of high-grade stainless steel and is available in a variety of shapes and sizes including flat uniform section instruments (e.g., straight, S-shaped) and also instruments with a loop handle attached to straight or curved distal blade. This is a reusable device.	III
12700	35313	Cardiac retractor	Зүрхний аппарат	A hand-held manual surgical instrument designed to separate or draw aside the edges of an incision in the heart, various anatomical structures of the heart (e.g., an atrium or aortic valve), or the entire organ. It consists of a handle proximally and a wire frame-like blade, with no sharp edges, that can have various shapes and angles at the distal tip. It is made of high-grade stainless steel and may have a synthetic material for the handle (e.g., Tufnol). This is a reusable device.	III

12701	35404	Tracheostomy tube, non-reinforced, non-customized, single-use	Трахеостомийн хоолой, хүчитгээгүй, захиалгаар хийгдээгүй, нэг удаагийн хэрэглээ	A hollow cylinder designed to be inserted into an artificial opening made in the trachea (windpipe) during a tracheotomy to provide a patent airway; it is not custom-made for a specific patient and is not reinforced with a wire. It is typically constructed of plastic and may include an inner cannula. It is available in cuffed, uncuffed, and/or fenestrated versions, and in a variety of shapes and sizes. It is typically secured in position by a tracheostomy tube holder fastened around the patient's neck. This is a single-use device.	III
12702	35449	Neurovascular embolization implant	Мэдрэлийн судасны эмболизацийн суулгац	A sterile, non-bioabsorbable, preformed device, typically expandable, intended to be implanted in a neurovascular blood vessel to permanently occlude blood flow to a cerebral aneurysm and/or acerebral arteriovenous malformation (AVM).	III
12703	35458	Trachea prosthesis	Гуурсан хоолойн протез	An implantable artificial substitute for the natural trachea used in airway reconstructive surgery. It is typically a semi-rigid, flexible, or expandable tubular device made of a silicone, metal, or polymeric material that is intended to be implanted to restore the structure and/or function of the trachea or trachealbronchial tree. It may be unbranched or contain one or two branches. The metal trachea prosthesis may be uncovered or covered with a polymeric material.	III
12704	35511	Vascular catheter flush valve, continuous	Судасны катетер угаах хавхлага, тасралтгүй	A specialized, sterile, Y-piece device intended to be connected in an infusion line to an indwelling catheter and provide for the connection of a second infusion source. The second source usually serves to maintain a low keep vein open (KVO) flow in the catheter to prevent clotting. This device (the flush valve) may be equipped with a manually-operated mechanism to permit flushing of the line at a free-flow rate. This is a single-use device.	III
12705	35512	Eustachian tube prosthesis	Eustachian хоолойн протез	An implantable device that is designed to replace or restore the auditory tube that connects the middle ear to the pharynx.	III

12706	35565	Aorta cannula	Аорта суваг	A sterile, rigid or semi-rigid tube that is surgically inserted into the aorta, typically through the femoral artery and advanced until its distal tip is inside the abdominal aorta, to serve as a channel for the transport of fluid. It may be used for a variety of purposes, e. g, the injection or withdrawal of substances and/or blood, and commonly for external blood circulation during cardiopulmonary bypass procedures or as an outflow for ventricular assist systems. Insertion is achieved with the use of a removable stylet or trocar. This is a single-use device.	III
12707	35590	Cardiac valve prosthesis	Зүрхний хавхлагын протез	An implantable synthetic substitute for the natural heart valve. This device is typically used to treat acquired or congenital valvular diseases; various configurations exist, e.g., caged ball, tilting disk, or bileaflet. The device may be constructed from various materials, e.g., silicone rubber, Stellite, Teflon, polypropylene, Dacron or pyrolitic carbon. For biological heart valves see the appropriate generic device group.	III
12708	35614	Meningeal prosthesis	Менингаль протез	An implantable device made of synthetic material designed to repair the meningeal membrane (meninges).	III
12709	35643	Cochlear implant system	Чихний дунгийн суулгацын систем	A battery-powered assembly of devices [cochlear implant (CI)] intended for the partial restoration of auditory sensation to a severely/profoundly deaf person. It consists of an inner electrode array implanted in one cochlea and connected to a receiver-stimulator implanted near the ear; and an externally worn microphone-sound processor, battery pack, coil cable, and coil (transmitter). Sound waves are converted into electrical signals by the sound processor (transducer) and sent to the coil (transmitter) via the coil cable. The coil transmits the signals to the receiver-stimulator and ultimately to the cochlea via the electrode array. Dedicated implantation instruments may be included.	III
12710	35644	Cardiac annuloplasty ring	Зүрхний аннулопластик цагираг	A sterile, rigid or flexible, circular band implanted around the mitral or tricuspid heart valve for reconstructive treatment of valvular insufficiency.	III

12711	35651	Cranioplasty sheet	Краниопластик хуудас	A flat piece of implantable metal (typically tantalum) designed to repair small cranial bone defects (i.e., cranioplasty). It is usually perforated and can be shaped to a desired contour using a mallet and a wood block and cut with shears to an appropriate dimension, intraoperatively. Prefabricated metallic plates, which may be manufactured from metallic sheets, are frequently used to repair larger cranial bone defects.	III
12712	35653	Analgesic brain electrical stimulation system	Өвдөлт намдаах тархины цахилгаан өдөөх систем	An assembly of implantable sterile devices designed to apply electrical stimuli to subsurface areas of a patient's brain (intracerebral/subcortical) for pain relief. It is a self-contained unit typically consisting of a transmitter, receiver, and electrodes, that carries its own energy source and has no inherent dependence upon external devices. It is used to treat chronic, severe, intractable pain, where the use of drug therapy is undesirable or no longer effective.	III
12713	35663	Total wrist carpal articulation prosthesis	Бугуйн бугуйны үе мөчний протез	An implantable device designed to replace some of the carpal bone articulating surfaces as part of a total wrist replacement, typically to treat severe bone fracture or degenerative disease (e.g., arthritis). It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is implanted into hand bone distally; it may interface with a spacer. Fixation devices for implantation (e.g., screws) may be included with the prosthesis and implantation may be performed with or without bone cement.	III
12714	35670	Total shoulder prosthesis	Нийт мөрний протез	A sterile implantable artificial substitute for a shoulder joint designed to replace both articulating surfaces of the damaged (e.g., fractured) and/or degenerative (e.g., arthritic) joint. It includes glenoid and humeral (head and stem) components typically with parts made of metal and polyethylene (PE). Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12715	35671	Tendon spacer	Шөрмөс холбогч	An implantable device intended to be used to physically isolate a tendon so that it can function without adhering to adjacent tissue.	III

12716	35687	General-purpose implantable infusion pump, programmable	Ерөнхий зориулалтын суулгац дусаах насос, програмчлагдсан	A battery-powered, sterile device designed to be implanted in a patient for the long-term or intermittent infusion of narcotics, short-acting anaesthetic agents, antineoplastic drugs, and other agents. This implantable infusion pump (IIP) delivers drug doses from its implanted reservoir which is controlled by drug concentration and/or by radio-frequency (RF) signals from an external programming device. A catheter connected to the reservoir is inserted into the epidural or subarachnoid (intrathecal) space of the spinal canal or into a blood vessel.	III
12717	35722	Block-monitoring peripheral nerve electrical stimulation system	Захын мэдрэлийн цахилгаан өдөөлтийг блоклох хяналтын систем	An assembly of battery-powered devices designed to apply electrical stimuli to a peripheral nerve (e.g., the ulnar or lower extremity nerve) to assess the adequacy of neuromuscular block during surgery, and its reversal during the recovery period. The system typically uses four kinds of stimulation: twitch, train-of-four, tetanic, and double burst. It typically includes conventional electrocardiographic electrodes and/or bipolar surface electrodes (ball electrodes), and a pulse generator.	III
12718	35729	Diagnostic peripheral nerve electrical stimulation system	Оношлогооны захын мэдрэлийн цахилгаан өдөөх систем	An assembly of devices designed to apply electrical stimuli in one peripheral region of the body while the response is monitored in another peripheral region. It typically consists of external electrodes (e.g., hand-held bipolar or ring electrodes) or needle electrodes and a pulse generator. It is used for the stimulation of a peripheral nerve or muscle in motor-nerve conduction studies (e.g., the posterior tibial nerve), and/or in sensory-nerve conduction studies (e.g., the ulnar nerve) performed during clinical electrophysiology (EP) assessments.	III

12719	35852	Single-chamber implantable defibrillator	Нэг хөндийд суулгадаг дефибриллятор	An implantable pulse generator (IPG) with a cardiac rhythm recognition system, to analyse an electrocardiogram (ECG), intended to deliver an electrical impulse(s) to defibrillate the heart (restore normal rhythm) or slow a rapid heart rate, and typically to pace a slow heart rate. It is implanted in a pouch beneath the skin of the patient's chest or abdomen and has connected a lead(s) that are positioned inside or on one heart chamber (typically right ventricle) to monitor the ECG and to automatically deliver the electrical impulse. It has internal batteries that provide the energy for the discharges; it is commonly known as an automatic implantable cardioverter-defibrillator (AICD).	III
12720	35853	Endocardial defibrillation lead	Эндокардийн дефибрилляцийн хар тугалга	An implantable flexible wire with an electrode, insulated with non-conductive material except at its ends, intended to function as an electrical conductor to transmit defibrillation impulses from an implanted cardioverter-defibrillator (ICD) [automatic implantable cardioverter-defibrillator (AICD)] to the endocardium of the right ventricle. It may also be intended to transmit pacing impulses from a cardiac resynchronization therapy (CRT) pulse generator, AICD, or other pacing device. It is typically impregnated with a steroid (e.g., dexamethasone) intended to elute into the tissues to reduce inflammation.	III
12721	35854	Temporary cardiac pacing balloon catheter	Зүрхний цохилтын түр зуурын бөмбөлөг катетер	A sterile, flexible, balloon-tipped, tube designed to deliver temporary pacing stimuli to the heart; it may detect bioelectric signals from the heart. It is used in the atria and/or ventricles and has electrodes which are usually applied to the ventricles and connect to an external pacemaker that generates the electrical pacing impulses. It may be unipolar or bipolar and facilitate the display of electrocardiographic signals. It is used: 1) in an emergency during bradycardia or asystole until a pacemaker can be implanted to control the heart rate; 2) during and/or after surgery; or 3) during cardiac catheterization [e.g., electrophysiological (EP) examinations]. This is a single-use device.	III

12722	35855	Endocarium-ablative cardiac catheter	Endocarium-ablative зүрхний катетер	A flexible tube intended to surgically remove (ablate) or otherwise alter areas of endocardial tissue that give rise to or support cardiac arrhythmias (arrhythmogenic myocardium) via advancement through the peripheral vasculature. It is available in a variety of designs including multi-electrode catheters for radio-frequency ablation that apply several hundred kilohertz (kHz), multi-electrode catheters for direct current (DC) ablation that typically apply 200 to 400 Joules discharged from a defibrillator, or microwave ablation catheters that use helical antennas, thermocouples and special electrodes; it is not intended for cryosurgery. This is a single-use device.	III
12723	35882	Drug-eluting renal artery stent	Мансууруулах бодис агуулсан бөөрний артерийн стент	A non-bioabsorbable tubular device intended to be implanted in a renal artery to maintain arterial patency and improve luminal diameter in patients with symptomatic atherosclerotic disease. It is made of metal [e.g., stainless steel, cobalt-chrome (Co-Cr), nickel-titanium alloy (Nitinol)] typically in a tubular mesh structure, sometimes bifurcation (Y-shaped) design, and includes a drug coating that is slowly released and intended to inhibit restenosis. It is typically delivered to the site of implantation with a balloon catheter which will expand the device upon balloon inflation. It is available in a variety of lengths and diameters. Disposable implantation devices may be included.	III
12724	35891	Heart ventricle cannula	Зүрхний ховдолын суваг	A sterile, rigid or semi-rigid tube designed to be surgically inserted into a cardiac ventricle. This is typically done directly during a surgical procedure and advanced until its distal tip is inside the cardiac ventricle. This device will serve as a channel intended for connection to an external device, such as left or right ventricular assist system. Some types may be used for temporary decompression of the left ventricle. Insertion is achieved with the use of a removable stylet or trocar. This is a single-use device.	III
12725	35895	Haemostatic sponges	Гемостатик хөвөн	A sterile device made of material absorbable by the body that is applied to a surgical incision, other skin wound, or an internal structure to stop bleeding. This is a single-use device.	III

12726	35943	Mandibular condyle prosthesis	Эрүүний кондилийн протез	A sterile implantable device designed to replace the natural mandibular condylar head, providing an articulation with the mandibular fossa and a partial substitution of the temporomandibular joint articulation. It is typically made of a combination of a metal frame and plastic (e.g., polymethylmethacrylate) or a combination of metal and polymeric materials. The device is almost always used in combination with mandibular fossa components in total temporomandibular joint (TMJ) prostheses.	III
12727	35965	Cerebrospinal fluid shunt valve	Тархи нугасны шингэний шунт хавхлаг	An implantable device intended to function as part of a lumboperitoneal, ventriculoperitoneal or ventriculoatrial shunt to regulate the pressure and flow level of cerebrospinal fluid (CSF) from the lumbar spine or brain to the peritoneum/heart right atrium in the management of increased intracranial pressure (e.g., caused by hydrocephalus). It consists of a mechanical valve with catheter connections and is made of synthetic polymer and/or metallic materials; it does not incorporate a port or reservoir. It typically opens at a pre-set pressure and may be non-invasively adjusted using a dedicated programmer.	III
12728	36035	Stent, vascular	Стент, судас	A device support structure that expands and stays in place inside a blood carrying vessel to maintain its patency. For example, a stent may be delivered to the site of a blockage by dilatation, or balloon, catheter. The balloon catheter is inflated, the stent is expanded to provide support for the vessel. When the balloon catheter is deflated and withdrawn, the stent remains in place as a permanent implant. The device may be of stainless steel, a polymer or other material. It may be a continuous tube of a certain length or a scaffold structure in a tube form.	III

12729	36036	Dura mater graft, cadaveric	Dura mater graft, cadaveric	An allograft made from cadaveric dura mater, usually processed and sterilized, used for the repair or replacement of the dura mater in recipients. Restoration of the dura mater maintains the integrity of the brain and spinal cord, and helps prevent leakage of the cerebrospinal fluid (CSF). It is important that the spinal cord is protected from any damage or undue pressure at all times.	III
12730	36042	Total temporomandibular joint prosthesis	Нийт эрүүний үений протез	A sterile artificial substitute for the temporomandibular joint (TMJ) implanted to treat patients with osteoarthritis, rheumatoid arthritis, congenital malformations, or neoplasms of the joint, as well as after trauma (e.g., fracture). It consists of mandibular condyle and mandibular fossa components implanted to functionally reconstruct the TMJ in the jaw. It is typically made of metal and/or polymeric materials. Fixation devices for implantation (e.g., screws) may be included.	III
12731	36073	Mechanical atherectomy system catheter, coronary	Механик атерэктомийн системийн катетер, титэм судас	A sterile, flexible tube (catheter) intended to be percutaneously introduced for the intraluminal mechanical disruption of atheroma plaque from the walls of coronary arteries (or vein grafts). It has a power-driven cutting or abrasive head for slicing/grinding the atheroma into fragments small enough to be aspirated or absorbed. This is a single-use device.	III
12732	36079	Haemostasis valve	Гемостазын хавхлага	A noninvasive device designed as a conduit through which a small-diameter diagnostic/interventional device(s) can be introduced into or withdrawn from a patient's vasculature while preventing backflow of blood; it might in addition be intended for urinary applications. It is intended to be attached, typically via Luer-lock, to an invasively-placed catheter introducer (not included) and typically has a self-sealing lumen(s) [e.g., Touhy-Borst valve] and sideport for the introduction of solutions. It may include noninvasive guidewire accessories (e.g., guidewire introducer). It is not designed to be connected between tubing (i.e., not an in-line valve). This is a single-use device.	III

12733	36102	Pacing/defibrillation lead electrical adaptor	Пасинг/дефибрилляцийн хар тугалгатай цахилгаан адаптер	An implantable device designed to adapt the electrical connectors of an implanted pacemaker and/or defibrillator pacing lead to a non-compatible pacemaker or defibrillator (i.e., when they do not meet connection design). This device is implanted with the pacemaker or defibrillator system.	III
12734	36104	Implantable pacemaker analyser	Суулгах боломжтой зүрхний аппаратын анализатор	An electronic instrument designed for the noninvasive testing of an implanted cardiac pacemaker to ensure compliance with performance specifications. It consists of a unit with testing and recording capabilities that can interact with the implanted pacemaker to interrogate the pulse generator, read information previously stored, perform diagnostic tests, and generate printed reports; some devices can reprogramme the pacemaker. The instrument is typically used to test and/or change the pacing conditions of implanted cardiac pacemakers during patient checkups.	III
12735	36106	Implantable pacemaker analyser, intraoperative	Суулгах зүрхний аппаратын анализатор, мэс заслын үед	An electronic instrument designed to test an implanted cardiac pacemaker, including the lead/tissue interface at the time of implantation, for invasive pacemaker evaluation and/or during electrophysiology (EP) diagnostic procedures. It has testing and recording capabilities to measure the minimum electrical stimulus needed to elicit ventricular contraction and the minimum intracardiac signal amplitude needed to inhibit the pacemaker (i.e., stimulation and sensing thresholds respectively). It typically includes measuring devices for the bioelectrical signals, a pulse generator, controllers, and the capability to test the characteristics and performance of the implanted pacemaker.	III

12736	36109	Coronary sinus cannula	Титэм судасны синусын суваг	A sterile, rigid or semi-rigid tube designed to be surgically inserted, temporarily, into the ostium of the coronary sinus to provide retrograde coronary perfusion/cardioplegia during cardiopulmonary bypass or minimally invasive surgery. It may be equipped with a self-inflating low pressure balloon that is typically used for back flushing the coronary vessel in the event of inadvertent coronary air embolization. Insertion is achieved with the use of a removable stylet or trocar blade. This is a single-use device.	III
12737	36182	Pericardium prosthesis	Перикардийн протез	An implantable synthetic material intended to be used in the repair of the pericardium (the double membranous, cone-shaped fibroserous sac enclosing the heart and the roots of the great blood vessels).	III
12738	36205	Coronary artery infusion catheter	Титэм артерийн дусаах катетер	A sterile flexible tube, typically with a double-lumen, designed to access the coronary artery vasculature for local infusion of diagnostic or therapeutic solutions (e.g., angiographic contrast medium, heparin solution, saline), and often to function as a passage for a guidewire to assist its placement in the coronary artery. This is a single-use device.	III
12739	36257	Peripherally-inserted central venous catheter	Захын суулгасан төв венийн катетер	A thin, flexible tube intended to be introduced into a peripheral vein and advanced to a central vein for short- to long-term intravascular access to administer medications (antibiotics), chemotherapeutic agents, nutrients, parenteral solutions, pain management fluids, and sometimes for blood sampling, monitoring of blood pressure and temperature, and for power injection of contrast media; it is not primarily intended for extracorporeal blood therapies such as haemodialysis. Also known as a peripherally inserted central catheter (PICC), it typically includes dedicated accessories to facilitate catheter introduction/function (e.g., Luer hubs, stylet). This is a single-use device.	III
12740	36260	Temporomandibular joint disc	Temporomandibular хамтарсан диск	A sterile interpositional implant or interarticular disc, intended to permanently interface between the natural mandibular condyle and natural glenoid fossa (mandibular fossa) in the temporomandibular joint (TMJ). It is typically made of metal or synthetic material.	III

12741	37265	Dual-chamber implantable defibrillator	Хоёр камертай суулгац дефибриллятор	A battery-powered, hermetically-sealed pulse generator with a cardiac rhythm recognition system intended to collect and analyse electrocardiogram (ECG) data and deliver appropriate electrical impulses to defibrillate the heart (restore normal rhythm) or slow a rapid heart rate, and to pace the heart (to treat bradycardia). It is implanted in a pouch beneath the skin of the patient's chest or abdomen and intended to be used with leads that are positioned inside the right atrium and right ventricle to monitor the ECG and to automatically deliver the electrical impulse; it is commonly known as an automatic implantable cardioverter-defibrillator (AICD).	III
12742	37278	Double-lumen haemodialysis catheter, implantable	Давхар люмен гемодиализийн катетер, суулгах боломжтой	An implantable, flexible, double-lumen tube intended to be used for chronic or long-term (> 30 days) vascular access, primarily during haemodialysis, to conduct blood from a patient and returning it after extracorporeal circulation; it may also be used during haemoperfusion and/or apheresis. It is intended for coaxial flow of blood, may be radiopaque, coated with heparin to prevent thrombus formation, and/or include a silver-coated sleeve to retard bacterial growth; devices dedicated to catheter introduction/function (e.g., introducer needle) may be included.	III
12743	37307	Deep brain electrical stimulation system	Гүн тархины цахилгаан өдөөх систем	An assembly of sterile implantable devices designed to apply electrical stimuli to specific areas of the deep brain for the treatment of movement disorders (e.g. essential tremor, symptoms of Parkinson’s disease, epilepsy, dystonia), psychiatric disorders (e.g. obsessive-compulsive disorder, depression, anxiety disorder), and/or to treat chronic, severe, intractable pain. It typically consists of leads implanted in the brain, lead extensions, and a pulse generator that is typically implanted near the sternum.	III
12744	37315	Implantable ventricular circulatory assist system control unit	Суулгацын ховдолын цусны эргэлтийг дэмжих системийн хяналтын нэгж	An electrically-powered external component of an implantable ventricular circulatory assist system intended to supply power to the implanted system pump via a percutaneous lead (not included). It is typically a belt worn device used as a bridge to transplantation.	III

12745	37696	Cerebral perfusion catheter	Тархины сэлбэх катетер	A sterile, flexible tube designed for retrograde cerebral perfusion with oxygenated cold blood. It is a two-lumen tube with several side holes and a balloon attached at its tip. The device is inserted into the internal jugular vein via a puncture in such a way that the holes remain in the vein so they can be used for cerebral perfusion even in the case of competent venous valves at the jugular-subclavian junction. It is then advanced until the inflation of the balloon at its tip occludes the drainage veins (superior vena cava and azygos vein). It is used for brain protection during profound hypothermic circulatory arrest during aortic surgery. This is a single-use device.	III
12746	37881	Intravascular catheter endoluminal brush kit	Судасны катетерийн эндолумын сойз хэрэгсэл	A collection of sterile devices designed to obtain a biofilm or fibrin sample, suitable for microbiological analysis, from the inner lumen surface of an indwelling central venous catheter (CVC). It typically consists of an endoluminal sampling brush, surgical gloves, an alcohol cleaning agent, a small syringe, a surgical drape, and an over wrap. The brush has a series of nylon bristles for harvesting the sample and is available in various lengths and diameters of brush bristles. This is a single-use device.	III
12747	37895	Intravascular ultrasound imaging catheter, reusable	Судасны хэт авиан дүрслэлийн катетер, дахин ашиглах боломжтой	A flexible, non-steerable tube with an ultrasound imaging transducer enclosed in a fluid-resistant or waterproof acoustically- and electrically-insulated housing, designed for insertion into the vascular system (i.e., peripheral vascular system, coronary artery) by an operator; it is not intended for intracardial insertion/imaging. Also known as a vascular ultrasound transducer, it includes either a single or an array of transducer element(s) (piezoelectric, active, or crystal); it cannot be manoeuvred via controls (i.e., non-steerable). This is a reusable device.	III

12748	38155	Press-fit femoral stem prosthesis	Гуяны ишний протезийг шахаж хийнэ	A sterile implantable device designed to replace the proximal femoral neck as part of a total hip arthroplasty (THA). The device is contoured to enable fixation by pressing the distal end into the cortex of the remaining natural femur to achieve a mechanical interlock without the use of bone cement. The device is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel].	III
12749	38156	Ceramic femoral head prosthesis	Гуяны толгойн керамик протез	An implantable artificial substitute for a diseased or injured femoral head that has an outer surface made of ceramic (e.g., alumina, zirconia). It is designed to be attached to the trunnion of a prosthetic femoral stem/shaft or a head/stem adaptor, and to articulate with an acetabulum prosthesis as part of a total hip arthroplasty (THA) or with a bipolar component as part of a partial hip replacement. The device ranges in form from partially to fully spherical (ball-shaped) and is available in various sizes.	III
12750	38563	Brain biopsy procedure kit	Тархины биопсийн процедурын багц	A packaged collection of sterile equipment that includes a disposable brain biopsy needle and other supplies used to perform a stereotaxic sampling of brain tissue. This is a single-use device.	III
12751	39702	Coated shoulder humeral stem prosthesis	Бүрсэн мөрний ясны протез	A sterile implantable device designed to provide fixation within the proximal humerus and a site of attachment for a humeral head or humeral body prosthesis as part of a shoulder joint replacement. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III

12752	39704	Coated ankle tibia prosthesis	Шагайны шилбэний бүрээстэй протез	A sterile implantable device designed to replace the distal tibia (tibial component) as part of a primary ankle joint replacement or prosthesis revision. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12753	40124	Hinged total elbow prosthesis	Нугастай нийт тохойн протез	A sterile implantable artificial substitute for an elbow joint designed to replace the articulating surfaces of the damaged (e.g., fractured) and/or degenerative (e.g., arthritic) joint. It includes humeral and ulnar components, typically with parts made of metal and polyethylene (PE), that form a hinge at articulation. The device may include fixation devices (e.g., screws) for implantation and may be implanted with or without bone cement.	III
12754	40125	Revision coated femoral stem prosthesis	Ревизийн бүрээстэй гуяны ишний протез	A sterile implantable device designed to replace the proximal femoral neck during replacement of a total hip prosthesis typically due to wear. The device is composed of two or more separate segments designed to be joined (modular), is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel], and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws and bolts) may be included; implantation may be performed with or without bone cement and may involve use of a femoral extension.	III
12755	40126	Metacarpal prosthesis	Метакарпийн протез	A sterile implantable device designed to replace the proximal end (base) of the first metacarpal of the thumb carpometacarpal (CMC) joint (articulation with the trapezium) typically to treat thumb instability/motion disabilities caused by arthritis or fracture. It is typically a one-piece device, made of one or several materials (e.g., carbon, graphite, metal); implantation may be performed with or without bone cement.	III

12756	40352	Subtalar implant, non-bioabsorbable	Биологийн шингэдэггүй субталар суулгац	A device designed to be implanted into the calcaneus bone or sinus tarsi of the foot to stabilize the subtalar/talotarsal joint to treat a hyperpronated foot (inward rotation during gait) and sequelae (e.g., flat foot) or other heel/arch abnormalities. It is a non-bioabsorbable device typically made of a metal (e.g., titanium alloy) or polyethylene (PE).	III
12757	40763	Cardiovascular ultrasound imaging system	Зүрх судасны хэт авиан шинжилгээний систем	An assembly of mains electricity (AC-powered) devices designed for extracorporeal and/or intracorporeal (endosonography or endoscopic) imaging procedures involving the heart and blood vessels. Included are operator’s console and software packages that support a variety of static or real-time cardiac specific imaging applications used to diagnose anatomical defects of the heart, determine blood flow characteristics and functional/anatomical problems associated with myocardial infarction. It is used to generate ultrasound pulses, direct them to a target area, detect the echoes, and process the resulting information to produce and display static or dynamic two or three-dimensional (3-D) images.	III
12758	41578	Circulatory assist system application software	Цусны эргэлтийг дэмжих системийн хэрэглээний программ хангамж	An application data program designed for use in, or together with a circulatory assist system, so that this may function according to its intended purpose. This software program may be permanently installed or exchanged as an upgrade.	III
12759	41581	External defibrillator application software	Гадны дефибрилляторын хэрэглээний программ хангамж	An individual software application program or group of programs, routines or algorithms that add specific computer assisted display, processing and/or analysis capabilities to a defibrillator intended for external use on the thorax so that it may function according to its intended purpose. A basic set of applications programs and routines may be included and can be upgraded to correct programming errors or to add new system capabilities. Applications program packages are typically identified by a proprietary name and "version" or "upgrade" number.	III

12760	42283	Intracardiac ultrasound imaging catheter, non-steerable	Зүрхний доторх хэт авиан дүрслэлийн катетер, удирдах боломжгүй	A non-steerable, flexible tube with an ultrasonic-phased-array imaging transducer at its distal tip designed for intracardiac echocardiography to enable intracardiac and possibly great vessel (e.g., superior vena cava, pulmonary artery) visualization for the assessment of cardiac anatomy and physiology, as well as visualization of other devices in the heart; it is not intended for peripheral vascular or coronary artery insertion/imaging. It is introduced percutaneously, is typically over-the-wire (OTW) guided, and cannot be manoeuvred via controls (non-steerable). It is connected to a compatible ultrasound system for transmission and display of the images. This is a single-use device.	III
12761	42341	Fluoride gel	Фторын гель	A preparation in the form of a gel, containing fluorine, in a chemical form and sufficient concentration to permit the treatment of tooth tissues by topical application. After application, this device cannot be reused.	III
12762	42417	Cardiac sizing catheter	Зүрхний хэмжээг тодорхойлох катетер	A sterile flexible tube with an inflatable balloon at the distal end designed for use in a patient with a cardiovascular defect wherein accurate measurement of the defect is important to select the appropriately sized occlusion device. It is typically designed to pass over a guidewire and it will have radiopaque marker bands along it distal end to assist in placement using fluoroscopy. It is made of plastic materials and metal [e, g, platinum (Pt) for the bands] and is available in a variety of designs and sizes. This is a single-use device.	III
12763	42584	Intracardiac ultrasound imaging catheter, steerable, single-use	Зүрхний доторх хэт авиан дүрслэлийн катетер, удирдах боломжтой, нэг удаагийн	A steerable, flexible tube with an ultrasonic phased-array imaging transducer at its distal tip designed for intracardiac echocardiography to enable intracardiac and possibly great vessel (e.g., pulmonary artery) visualization for the assessment of cardiac anatomy and physiology, and visualization of other devices in the heart; it is not intended for peripheral vascular or coronary artery insertion/imaging. It is introduced percutaneously, and includes controls to allow it to be manoeuvred (steerable). It is connected to a compatible ultrasound system for transmission and display of the images. This is a single-use device.	III

12764	42655	Transcatheter heart valve bioprosthesis, stent-like framework	Транскатетер зүрхний хавхлагын биопротез, стенттэй төстэй хүрээ	A sterile implantable xenograft (e.g., bovine) intended to be used to repair/replace a stenosed or regurgitant heart valve (e.g., aortic, pulmonary), or previously-implanted heart valve prosthesis, and which is designed to be implanted with a catheter via transarterial access (e.g., femoral, subclavian, aortic) while the heart is beating. It is comprised of the xenograft, processed to render the tissue non-viable, attached to an expandable metal framework, which is implanted with an included catheter, and when in situ, may be expanded with a balloon or self-expand. Typically devices associated with implantation (e.g., catheter, introducer) are included.	III
12765	43077	Coronary sinus venogram catheter	Титэм судасны синусын венограмм катетер	A flexible tube designed for use within the coronary sinus to infuse contrast medium solution into the coronary vasculature for venogram imaging procedures. It typically consists of a double-lumen tube, one lumen for the inflation of a balloon at the distal tip and the other for the infusion of the contrast solution. It has a Luer-lock connector to connect to the solution injection device, and a stopcock to close the infusion lumen to prevent backflow. This is a single-use device.	III
12766	43167	Acetabular shell	Ацетабуляр бүрхүүл	An implantable component of a two-piece acetabulum prosthesis that forms the outer portion of the prosthesis, fixed to the pelvis to provide a base for the inner portion (acetabular liner). It is made of metal, and is fixed with bone cement and/or fixation devices.	III
12767	43168	Non-constrained polyethylene acetabular liner	Хязгаарлагдмал бус полиэтилен ацетабуляр доторлогоо	A sterile, implantable component of a two-piece acetabulum prosthesis that is inserted into an acetabular shell prosthesis to provide the articulating surface with a femoral head prosthesis as part of a total hip arthroplasty (THA). It is made of polyethylene (includes hylamer, cross-linked polyethylene), and does not include a stabilizing component to limit the range of motion of the hip.	III
12768	43553	Caged-ball heart valve prosthesis	Бөмбөлөгт зүрхний хавхлагын протез	An artificial substitute for a natural heart valve (typically aortic valve) intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of a metal cage that houses a synthetic polymer (e.g., silicone elastomer) ball, which acts as a ball valve.	III

12769	43715	Tilting-disk heart valve prosthesis	Хазайлттай зүрхний хавхлагын протез	A artificial substitute for a natural heart valve (typically aortic or mitral) intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of a single circular leaflet that rotates about a metal strut; they are made of a metal ring covered by synthetic polymer fabric into which sutures are stitched to secure the valve in place. The metal ring holds, by means of two metal supports, a hard disc (e.g., pyrolytic carbon) which opens and closes as the heart pumps blood through the valve. The device is also known as a single-leaflet or monoleaflet valve.	III
12770	44044	Cardiac myoplasty electrical stimulation system lead	Зүрхний миопластик цахилгаан өдөөх системийн хар тугалга	An implantable wire, insulated with non-conductive material except at its electrode(s), intended to be attached to the heart and/or the muscle wrapped around the heart (during myoplasty) to make an electrical connection between the system pulse generator and the muscle(s) to assist the heart in its pumping function.	III
12771	44057	General surgical procedure kit, medicated	Мэс заслын ерөнхий иж бүрдэл, эмийн	A typically non-dedicated collection of various surgical instruments, sometimes with dressings and/or other materials, and that includes a pharmaceutical component, intended to be used during: 1) open abdominal surgery; 2) a range of open surgical procedures across multiple clinical specialties (non-dedicated); 3) non-orthopaedic trauma surgery; 4) minor dermatological surgery; or 5) cosmetic surgery below the head. As a kit that includes procedural devices, it is neither dedicated to surgical scrubbing, surgical patient preparation, nor anaesthesia, and is not a dedicated biopsy kit. This is a single-use device.	III
12772	44063	Neurosurgical procedure kit, non-medicated, single-use	Мэдрэлийн мэс заслын эмчилгээний хэрэгсэл, эмийн бус, нэг удаагийн хэрэглээ	A collection of various sterile neurosurgical instruments, dressings and the necessary materials used to perform a neurosurgical procedure. It does not contain pharmaceuticals. This is a single-use device.	III

12773	44088	Coronary angioplasty balloon catheter, cutting/scoring	Титэм судасны ангиопластик бөмбөлөг катетер, зүсэх / оноо	A sterile, flexible tube designed for use in percutaneous transluminal coronary angioplasty (PTCA) to dilate a stenotic coronary artery and increase myocardial perfusion, by controlled inflation of a distensible balloon at its distal tip with peripheral cutting/scoring elements (e.g., microsurgical atherotomes) intended to remove stenotic material. The device is typically placed using a guidewire and guiding catheter, and its balloon is inflated by the infusion of liquid through its tubular body. The tube and balloon are typically made of polymer materials and the cutting/scoring elements are typically made of metal [e.g., nickel-titanium alloy (Nitinol)]. This is a single-use device.	III
12774	44098	Cardiology information system application software	Зүрх судасны мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute data, within or between healthcare facilities, to support the administrative and clinical activities associated with the provision and utilization of cardiology services and facilities. It is typically supplied for installation into a dedicated information system for cardiology or existing mainframe or decentralized computers/networks.	III
12775	44100	Blood bank information system application software	Цусны банкны мэдээллийн системийн хэрэглээний программ хангамж	An application software program, routines, and/or algorithms intended to be used as or in an information system to electronically receive, collect, store, manage, assist in analysis of, display, output, and distribute administrative and clinical data within blood-bank centres. It accumulates data on blood-donor status and may include algorithms to process blood-bank information. It may perform additional tasks such as autologous and direct unit tracking, cross-match result determination, and/or management of barcode information and patient history reports. It is typically supplied for installation into a blood bank information system, or mainframe or decentralized computers/networks.	III

12776	44119	Intravascular catheter stylet magnet detector	Судасны катетер стилет соронз илрүүлэгч	An electrically-powered device designed to rapidly detect and confirm the location and orientation of the tip of a compatible, peripherally-inserted central catheter (PICC) or central venous catheter (CVC) stylet containing one or more small, specially-oriented magnets encapsulated at the distal end. It provides rapid feedback to healthcare personnel on the positioning of the catheter/stylet during initial placement.	III
12777	44141	Intravascular ultrasound imaging catheter, single-use	Судасны хэт авиан дүрслэлийн катетер, нэг удаагийн хэрэглээ	A flexible, non-steerable tube with an ultrasound imaging transducer enclosed in a fluid-resistant or waterproof acoustically- and electrically-insulated housing, designed for insertion into the vascular system (i.e., peripheral vascular system, coronary artery) by an operator; it is not intended for intracardial insertion/imaging. Also known as a vascular ultrasound transducer, it includes either a single or an array of transducer element(s) (piezoelectric, active, or crystal); it cannot be manoeuvred via controls (i.e., non-steerable). This is a single-use device.	III
12778	44362	Constrained polyethylene acetabular liner	Хязгаарлагдмал полиэтилен ацетабуляр доторлогоо	A sterile, implantable component of a two-piece acetabulum prosthesis that is inserted into an acetabular shell prosthesis to provide the articulating surface with a femoral head prosthesis as part of a total hip arthroplasty (THA). It is made of polyethylene (includes hylamer, cross-linked polyethylene) and may include a stabilizing component (e.g., a ring) to limit the range of motion of the hip to help prevent dislocation.	III
12779	44493	Vascular-grafting anastomosis system	Судас залгах анастомозын систем	An assembly of sterile devices designed to create an opening between a blood vessel and a vascular graft (native or synthetic) during a vascular surgical procedure [e.g., coronary artery bypass grafting (CABG), or arteriovenous grafting]. It typically includes a delivery tool loaded with metallic clips/connectors/couplers (e.g., surgical stainless steel). A blood vessel graft is loaded into the delivery tool, and upon manual actuation of the tool, the fastening devices are deployed through the graft and into the target vessel, and the tool creates an opening in the target vessel (e.g., aortotomy, arteriotomy). This is a single-use device.	III

12780	44688	Extra-gynaecological surgical mesh, synthetic polymer, bioabsorbable	Эмэгтэйчүүдийн мэс заслын нэмэлт тор, синтетик полимер, биошингээх чадвартай	An implantable material (e.g., flat sheet) made from a bioabsorbable synthetic polymer(s) [e.g., polyglycolic acid (PGA), polycarbonate (PC), polyglycolide or carbon fibres] intended for extra-gynaecological, non-dental tissue repair/reinforcement application(s) [e.g., pericardial reinforcement, plastic surgery, abdominal hernia repair]. It may also be intended as a short-term scaffold for tissue regeneration. Disposable devices associated with implantation may be supplied with the mesh.	III
12781	44708	Intravascular core temperature regulation system catheter	Судас доторх үндсэн температурыг зохицуулах системийн катетер	A flexible tube with an attached membrane (e.g., a balloon) intended to be inserted into the central venous system (CVS) to circulate through the membrane a temperature-controlled fluid (e.g., saline solution), in order to both heat and alternatively cool a patient's blood through the transfer of heat across the membrane. It may have built-in sensors to monitor the patient's body temperature for feedback to a connected control unit. It may be used for body temperature regulation during surgery, intensive care, or for fever management. This is a single-use device.	III
12782	44710	Intravascular core temperature regulation system	Судас доторх үндсэн температурыг зохицуулах систем	An assembly of devices intended to regulate a patient's body temperature by circulating a temperature-controlled fluid (e.g., saline solution) through a dedicated, closed-circuit catheter placed in the central venous system (CVS), to both heat and alternatively cool the patient's blood through the transfer of heat as it moves past the catheter. It typically consists of a powered unit that controls fluid temperature and circulation, a catheter with a membrane for heat transfer, temperature probes, and a start kit. It may be used for body temperature regulation during surgery (e.g., cardiac surgery or neurosurgery), intensive care, or for fever management.	III

12783	44889	Intravascular morphology catheter	Судас доторх морфологийн катетер	A thin, flexible tube with an inflatable balloon at its distal end used to obtain intravascular measurements, typically arterial morphology adjacent to a vascular lesion, or within a stented section, for the purpose of clinical assessment. It is inserted into the vessel of interest during a clinical procedure and connected to a dedicated pump that inflates the balloon with fluid (e.g., saline, radiopaque). The pressures registered by the pump are used to accurately calculate parameters such as vessel diameter, cross-sectional area, or wall elasticity, assisting the optimal selection of a stent or percutaneous transluminal coronary angioplasty (PTCA) balloon size. This is a single-use device.	III
12784	44890	Intravascular morphology inflator	Судас доторх морфологийн шахагч	An electrically-powered device intended to be used to inflate the balloon of a dedicated catheter which is inserted into a blood vessel of interest to provide intravascular measurements, typically arterial morphology adjacent to a vascular lesion or within a stented section. Also referred to as a pump, it inflates the balloon with fluid (e.g., saline, radiopaque) and measures intraluminal pressures to accurately calculate morphological parameters (e.g., vessel diameter, cross-sectional area, wall elasticity). This allows the mapping of sites of interest for determinations such as the optimal selection of a stent or percutaneous transluminal coronary angioplasty (PTCA) balloon size.	III
12785	45230	Silicone-block tissue reconstructive material	Силикон блокны эдийг нөхөн сэргээх материал	A non-sterile, solid chunk of silicone elastomer typically modified to suit the patient anatomy and implanted, after sterilization, for tissue reconstruction during a surgical procedure. The device is typically available as a cube with a rectangular cross-section or with curved surfaces. It may be carved or trimmed into different sizes and shapes for various reconstructive or cosmetic plastic surgery procedures that involve soft-tissue or bone augmentation, or the formation of prosthetic implants (e.g., chin or malar).	III

12786	45417	Silicone gel/saline-filled breast implant	Силикон гель/давсны уусмалаар дүүргэсэн хөхний суулгац	A sterile implantable device composed of two shells designed to reconstruct or augment the breast. The inflatable inner shell is filled with saline. The silicone elastomer [polysiloxane(s)] outer shell has an inflatable double lumen, the outer lumen containing a fixed amount of silicone gel and an inner lumen designed with a valve for filling the inner shell with saline during the implantation procedure. The expandable device functions as both a long-term breast implant and a tissue expander, potentially eliminating the need for skin expander exchange surgery.	III
12787	45418	Cardiac defect occluder	Зүрхний дутагдлын бөглөрөл	An implantable disk-like device intended to be used for the minimally-invasive closure of cardiac defects and deployed using a dedicated delivery catheter/sheath. It is made of wire mesh [e.g., nickel-titanium alloy (Nitinol)], and possibly additional materials (e.g., polyester), and is typically self-expandable. The device is used to treat cardiac disorders that may include (but not limited to) atrial septal defect (ASD), ventricular septal defect (VSD), patent foramen ovale (PFO), or patent ductus arteriosus (PDA). Disposable devices dedicated to implantation may be included with the implant.	III
12788	45419	Cardiac occluder delivery kit	Зүрхний түгжрэлийг арилгах иж бүрдэл	A collection of devices designed to implant a cardiac occluder (not included) for the non-surgical closure of cardiac defects. The collection may include a delivery catheter/sheath, dilator, loading device, delivery cable, and additional items for the intravascular delivery and deployment of a cardiac occluder. The devices are used in the treatment of cardiac disorders that may include atrial septal defects (ASD), ventricular septal defects (VSD), patent foramen ovale (PFO), or patent ductus arteriosus (PDA). This is a single-use device.	III

12789	45453	Cardiac high intensity focused ultrasound ablation system catheter	Зүрхний өндөр эрчимтэй төвлөрсөн хэт авиан абляцийн системийн катетер	A sterile, flexible, electrically-powered device intended to be used with a cardiac tissue ultrasound ablation system to deliver high intensity focused ultrasound (HIFU) energy to the epicardium of a beating heart to create thermal and cavitation ablative lesions in the cardiac tissue during a surgical procedure, typically in the treatment of atrial arrhythmias. It is inserted percutaneously (e.g., via the femoral vein) and delivers acoustic energy through its ultrasonic transducers. It may also be referred to as a cardiac ablation catheter and typically includes connectors (e.g., for delivery of cooling saline) and electromagnetic position tracking sensors. This is a single-use device.	III
12790	45577	Mitral annuloplasty ring	Митрал анулопластикийн бөгж	A circular band intended to be implanted in the heart to support a mitral valve annulus for the reconstruction and/or remodelling of an insufficient and/or stenotic mitral valve. It is typically mounted on a disposable holder assembly or preloaded in a disposable delivery system to enable it to maintain its shape and aid in its implantation with sutures or anchors. The device may be semi-rigid or flexible and may include metallic, polymeric, and/or textile materials; it is available in various sizes.	III
12791	45829	Dura mater graft, bovine	Dura mater залгаас, үхэр	A xenograft made from bovine dura mater or bovine pericardium used for the repair or replacement of the dura mater in a recipient during a neurosurgical procedure. Restoration of the dura mater maintains the integrity of the brain and spinal cord, and helps prevent leakage of the cerebrospinal fluid (CSF). This dural graft is typically overlaid on the patient's dura and resorbs within 9 to 12 months after surgery. It may be supplied in strips of various sizes and shapes (e.g., square or rectangular) and in a sterile, dry state with treated surfaces.	III

12792	45966	Transthoracic pacing lead	Цээжний хөндийн зүрхний хэмнэл	A flexible wire with an electrode, insulated with non-conductive material except at its ends, that serves as an electrical conductor between the heart and an external temporary pacing/defibrillation device used to treat postoperative cardiac arrhythmias/cardiac arrests. The electrode end is attached to the myocardium. The other end initially is typically attached to a removable needle used to perforate the chest wall from the inside out, after which it is connected to a pulse generator, typically via an adaptor. This device is only used for temporary pacing of the heart and is removed once the patient is stable. This is a single-use device.	III
12793	46059	Orthopaedic cement, antimicrobial	Ортопедийн цемент, нянгийн эсрэг үйлчилгээтэй	A substance designed to be used in arthroplastic and/or osteosynthetic procedures for the fixation of polymer or metallic prosthetic implants to the living bone and/or to fill voids in the case of bone pathologies, and to treat infected joint prostheses or osteomyelitis; it may also be used prophylactically in primary or uninfected revision total joint arthroplasty. It is typically made from methylmethacrylate, polymethylmethacrylate (PMMA), esters of methacrylic acid or copolymers containing polymethylmethacrylate and polystyrene, and contains an antimicrobial agent. After application, this device cannot be reused.	III
12794	46221	Pacing/defibrillation lead cap	Пасинг/дефибрилляцийн хар тугалга	An implantable device designed to cover and protect the lead terminals of an implantable pacing device (e.g., an implanted pacemaker or defibrillator) during the implantation procedure, or to isolate (cap) any lead terminals that are not used. This device is implanted with the pacemaker or defibrillator system.	III
12795	46222	Pacing/defibrillation lead cap kit	Пасинг/дефибрилляцийн хар тугалгатай малгайны иж бүрдэл	A collection of various implantable pacing lead caps designed to cover and protect the lead terminals of an implantable pacing device (e.g., an implanted pacemaker or defibrillator) during the implantation procedure, or to isolate (cap) any lead terminals that are not used. This device provides the surgeon with a selection of various size lead caps.	III

12796	46308	Epidural/intrathecal anaesthesia set, non-medicated	Эпидураль/интратекаль мэдээ алдуулалтын иж бүрдэл, эмийн бус	A dual-purpose collection of devices intended for the administration of an analgesic or anaesthetic agent (not included) to the intrathecal space and to the epidural space for the management of pain. It includes both a spinal needle and an epidural needle with additional devices utilized for the procedure (e.g., dressings, syringe) and may include an epidural catheter for continuous-administration. This is a single-use device.	III
12797	46352	Bare-metal intracranial vascular stent	Нүцгэн металл гавлын дотоод судасны стент	A non-bioabsorbable tubular device typically intended to be implanted into the base or parent artery of an intracranial aneurysm (e.g., wide-neck aneurysm situated at the base of a bifurcation) to facilitate the delivery of embolics to fill the aneurysm, facilitate clotting within the aneurysm by slowing blood flow into it, and/or to provide support for a neurovascular embolization coil placed inside the aneurysm. It is made of uncoated metal [e.g., nickel-titanium alloy (Nitinol)] and self-expands after it is delivered to the site of implantation and released (e.g., from a dedicated delivery instrument). Disposable devices associated with implantation may be included.	III
12798	46353	Angiographic catheter, reprocessed	Ангиографийн катетер, дахин боловсруулсан	A thin, flexible tube designed to inject a contrast medium into the blood vessels of the cerebral, visceral, or peripheral vasculature during an angiographic procedure in order to facilitate the clear visualization of the arterial system of a targeted organ or an area of the body. This is a single-use device that has previously been used on a patient and has been subjected to additional processing and manufacturing for an additional single-use patient application.	III

12799	46355	Cardiac mapping catheter, percutaneous, single-use	Зүрхний зураглалын катетер, арьсаар, нэг удаагийн хэрэглээ	A sterile, steerable, flexible tube containing multiple electrodes that is introduced percutaneously into the heart chambers in order to transmit electrical impulses for electrophysiological diagnostic examinations, e.g., intracardiac sensing, endocardial recording, stimulation, temporary pacing for evaluation of cardiac arrhythmias, cardioversion (CV) of electrical arrhythmias or electrophysiology (EP) mapping of cardiac structures. It is typically made of plastic with embedded electrodes often of platinum (Pt), iridium, or a composite. This is a single-use device.	III
12800	46362	Fluid/device delivery cardiac catheter	Шингэн/төхөөрөмж хүргэх зүрхний катетер	A sterile, steerable, flexible tube containing electrodes intended to be introduced percutaneously into the heart chambers in order to provide a pathway for the controlled delivery and support of a selective infusion of fluids or transvenous devices to the heart (e.g., the coronary sinus) and coronary vasculature. It may also be used in the evaluation of cardiac arrhythmias from endocardial and intravascular sites. It is typically made of plastic with embedded electrodes often of platinum (Pt), iridium, or a composite and have an actuator mechanism located at the proximal end used to steer the tip in the desired direction. This is a single-use device.	III
12801	46363	Chamber-decompression cardiac catheter	Камер-декомпрессион зүрхний катетер	A thick plastic tube designed to decompress a heart chamber during a surgical procedure. It is typically used to decompress the left heart during cardiopulmonary bypass surgery, especially the left ventricle during aortic cross-clamping. It may include a pressure monitoring line to continuously measure the pressure of a chamber. This is a single-use device.	III

12802	46425	Bone matrix implant, animal-derived, bioabsorbable	Ясны матриц суулгац, амьтны гаралтай, био шингээх чадвартай	A sterile bioabsorbable device made primarily of animal-derived bone matrix (e.g., bovine) implanted into the body to provide osteoconductive bone-tissue scaffolds to replace bone lost through trauma, surgery, or pathological conditions (e.g., osteoporosis). It is used to fill bone cavities, defects, and fractures, and contains pores that promote the ingrowth of endogenous bone for skeletal reconstruction or augmentation. It is typically provided as cancellous blocks, chips, or granules of varying sizes, or mouldable materials.	III
12803	46426	Cartilage repair membrane	Мөгөөрсний эдийг засах мембран	A sterile implantable sheet of tissue intended to be used in the repair/regeneration of damaged articular cartilage in an orthopaedic joint, typically a knee, when using autologous chondrocyte transplantation (ACT) or bone marrow stimulating techniques [e.g., autologous matrix induced chondrogenesis (AMIC)]. It is made of animal-derived collagenous material (e.g., porcine) and is fixed (sutured/glued) to the site of cartilage damage, where it retains and protects regenerative cells injected under it.	III
12804	46585	Tibial insert	Тибиа оруулга	An implantable device designed to articulate the femoral and tibial components of a knee joint prosthesis during primary or revision bicondylar knee joint replacement. It is typically a one-piece contoured polyethylene (PE) insert, or a more complex device (e.g., a guide arm with a stem that is inserted into the tibial tray and a polymer glide) which will better reproduce the flexion of the knee joint due to its capacity for lateral rotation and anterior/posterior movement. This device is typically made of metal and/or a polymer.	III

12805	46717	Pacing/defibrillation lead stylet	Пасинг/дефибрилляцийн хар тугалга стилет	A sterile wire, intended to be percutaneously inserted into the coronary venous vasculature to aid in the transvenous placement and/or removal of implantable pacemaker/defibrillator leads; it may in addition be intended to extract an indwelling catheter or other foreign object. It is manipulated proximally with a handle, and its working end is typically made of extremely thin stainless steel wire (e.g., 0.4 mm to 0.81 mm in diameter), and may be available in various wire lengths and degrees of rigidity. This is a single-use device.	III
12806	46719	Atheroma crossing microdissection catheter, coronary	Атерома хөндлөн огтлолцох микродиссекцийн катетер, титэм судас	A manually-powered (non-electronic) instrument intended to be used to create a pathway through an occluded coronary artery to facilitate the intraluminal placement of a conventional guidewire beyond a stenotic lesion [chronic total occlusion (CTO)], prior to further percutaneous intervention to remove the lesion. It typically consists of a long, thin, flexible segment, introduced into the vasculature, that is equipped to mechanically disrupt the lesion (e.g., by blunt microdissection) through manipulation of hand controls at the proximal end. This is a single-use device.	III
12807	46849	Circulatory assist transseptal cannula	Цусны эргэлтийг дэмжих транссептал суваг	A sterile tubular device designed for cannulation of the left atrium through the atrial septum, via the femoral vein, to drain the atrium and provide a means for temporary (less than six hours) left ventricular bypass [percutaneous transseptal ventricular assist (PTVA)]. It is a semi-rigid device (also known as a transseptal catheter) which may have a curved distal tip to better conform to the anatomy. Once in situ it is connected to an extracorporeal blood pump which returns blood to the patient. Disposable device dedicated to catheter introduction/function (e.g., obturator, dilator) may be included. This is a single-use device.	III

12808	46850	Mechanical atherectomy system, coronary/peripheral	Механик атероэктомийн систем, титэм / захын	An assembly of devices intended to mechanically disrupt/remove atheroma plaque from the walls of both coronary and peripheral arteries. It typically includes a mains electricity (AC-powered) energy-producing generator with monitoring functions, a remote control or foot-switch, a handpiece (to which the catheter connects) and a dedicated disposable catheter with a cutting or abrasive head that transmits the mechanical energy to the atheroma. The system may include an integrated irrigation/suction system includes/requires accessory devices for its function (e.g., saline/lubricant, pump, guidewire).	III
12809	47030	Ligament graft, synthetic polymer	Шөрмөсний залгаас, синтетик полимер	An implantable, non-bioabsorbable device made of synthetic polymer materials (e.g., polyester) intended to be used to replace a missing or damaged ligament to restore natural function. Some types may in addition include a metal anchoring component (e.g., staple, screw) for fixation onto bone; disposable devices associated with implantation may be included. Also referred to as a ligament prosthesis, it is commonly used for ligament reconstruction in the knee [e.g., patellofemoral ligament, anterior cruciate ligament (ACL)] or shoulder (e.g., glenohumeral ligament) joints.	III
12810	47031	Ligament prosthesis, bioabsorbable	Шөрмөсний протез, био шингэдэг	A sterile, implantable, bioabsorbable device intended to be used to replace or repair a missing or damaged ligament to restore natural function. It is made from synthetic polymer materials. This is a single-use device that is chemically degraded and absorbed via natural body processes.	III
12811	47101	Cardiac septostomy catheter, blade	Зүрхний септостомийн катетер, ир	A flexible tube with a collapsible blade at the distal end that, once in situ, can be raised to an acute angle by the surgeon operating an actuation lever at the proximal end for a blade atrial septostomy (BAS) procedure. It is used to enlarge the interatrial opening in cases of mitral atresia (a septal defect found in the hearts of infants) or unsuccessful or insufficient balloon atrial septostomy. This procedure allows interatrial blood mixing in infants with congenital cardiac malformations. It is typically made of plastic and high-grade stainless steel materials. This is a single-use device.	III

12812	47126	Cervical dilatation catheter	Умайн хүзүүг тэлэх катетер	A flexible, tube-like device, typically with two or more inflatable balloons at the distal working end, designed to dilate (stretch open) the cervical canal after insertion through the cervical os and expansion of the balloons to assist in obstetrical or gynaecological procedures. It may be used for labour induction, spontaneously occurring labour, non-progressive labour, cervical dystocia, undesirable prolonged uterine contractions, and intrauterine foetal death (IUFD) where delivery of the foetus is difficult. Such procedures may be performed at or prior to full-term pregnancy. This is a single-use device.	III
12813	47157	Neural-tissue balloon catheter	Мэдрэлийн эд эсийн бөмбөлөг катетер	A sterile, flexible tube with a balloon at the distal tip used for the compression or dilation of neural tissue under direct endoscopic or fluoroscopic vision. It is inserted percutaneously over a metal stylet and typically has a small (mini) diameter with an elongated or a double (figure of 8) balloon; it is made of plastic/silicone materials and may be supplied with the stylet. It is typically used to treat trigeminal neuralgia (controlled balloon compression of the trigeminal ganglion causes selected injury to the insulation on nerve fibres which relieves pain). This is a single-use device.	III
12814	47193	Poly(L-lactide-co-caprolactone) suture	Поли(L-лактид-ко-капролактон) оёдлын утас	A sterile, single-strand (monofilament), synthetic, bioabsorbable thread made from poly(L-lactide-co-caprolactone) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching, or to ligate soft tissues; it may include an attached needle intended to be disposed of after single use. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis. This is a single-use device.	III

12815	47194	Polyeter polyurethane suture	Полиэтер полиуретан оёдол	A sterile, single-strand (monofilament), synthetic, non-bioabsorbable thread made from polyeter polyurethane intended to join (approximate) the edges of a soft-tissue wound or incision by stitching, or to ligate soft tissues; it may include an attached needle intended to be disposed of after single use. The thread provides temporary wound support until the wound sufficiently heals to withstand normal stress; it can be removed from the tissue once wound healing occurs or remain in the tissue where it is gradually encapsulated by fibrous connective tissue. This is a single-use device.	III
12816	47195	Titanium suture, monofilament	Титан оёдол, монофиламент	A sterile, single-strand (monofilament), natural, non-bioabsorbable wire made of titanium (Ti) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching, or for transosseous (through bone) stitching; it may include an attached needle intended to be disposed of after single use. The wire provides wound support until the wound sufficiently heals to withstand normal stress; it may be retained for permanent support. This is a single-use device.	III
12817	47196	Titanium suture, multifilament	Титан оёдол, олон утастай	A sterile, multiple-strand (multifilament), natural, non-bioabsorbable wire made of titanium (Ti) intended to join (approximate) the edges of a soft-tissue wound or incision by stitching, or for transosseous (through bone) stitching; it may include an attached needle intended to be disposed of after single use. The wire provides wound support until the wound sufficiently heals to withstand normal stress; it may be retained for permanent support. This is a single-use device.	III

12818	47200	Pneumothorax catheter insertion set	Пневмоторакс катетер оруулах багц	A collection of devices used to puncture the chest wall to enable insertion of a dedicated catheter for the aspiration of a simple pneumothorax or decompression of a tension pneumothorax. It typically consists of a scalpel to make a stab incision and a needle to assist the entry of the catheter with obturator assembly (to protect the internal organs upon entry). Once the catheter is in place, the needle is retracted to allow the flow of air/fluid from within the chest cavity. The set may contain suture for the attachment of the catheter to the skin. It is typically used for accident and emergency (A&E) situations (immediate care or chest crush injury). This is a single-use device.	III
12819	47201	Collagen haemostatic agent, non-antimicrobial	Коллаген цус тогтоогч, нянгийн эсрэг үйлчилгээтэй	A bioabsorbable device derived from animal collagen (e.g., bovine or porcine collagen) designed to produce a rapid haemostasis through platelet activation/aggregation (which initiates the haemostatic cascade leading to a fibrin clot) during a surgical procedure. It is applied directly to the wound where it remains to be absorbed by the body; it is not dedicated to a specific anatomy/application and does not contain an antimicrobial agent. It may be supplied as a fibrillar or soft, pliable pad/sponge or loose fibres; it may be applied in combination with fibrin adhesives. This is a single-use device.	III
12820	47205	Cardiac pulse generator programmer	Зүрхний импульсийн генераторын программист	An external device intended to enable a healthcare professional in a clinical setting to noninvasively change the settings of, and extract data from, an implanted cardiac pulse generator (e.g., pacemaker, pacemaker/defibrillator). It includes a radio-frequency transmitter/receiver and may be intended to operate independently or in conjunction with a personal computer (PC)/tablet using dedicated software.	III

12821	47247	Cardiac transseptal access set	Зүрхний транссептал хандалтын багц	A collection of nonimplantable, invasive devices intended to be used to puncture the interatrial septum during a transseptal catheterization procedure, and to create a conduit for the introduction of various cardiovascular catheters into the left side of the heart. It includes a vascular guide-catheter (which may be referred to as a steerable introducer) with a transseptal needle to create the puncture, and typically includes additional introduction assistive devices necessary for the procedure (e.g., stylet, guidewire, dilator). This is a single-use device.	III
12822	47248	Cardiac transseptal needle, single-use	Зүрхний транссептал зүү, нэг удаагийн хэрэглээ	A device designed to puncture the interatrial septum during a transseptal catheterization procedure to gain left heart access typically to facilitate fluid aspiration and injection/infusion, blood sampling, and pressure monitoring. It is typically a long, thin stainless steel tube that is curved and pointed at the distal end, usually having a hub with a stopcock and orientation indicators at the proximal end. It may include a stylet for support during handling. This is a single-use device.	III
12823	47263	Cardiac resynchronization therapy implantable pacemaker	Зүрхний дахин синхрончлолын эмчилгээний суулгацын зүрхний аппарат	A battery-powered, hermetically-sealed pulse generator, intended to be implanted beneath the skin of the chest in a surgically-created pocket, and used with pacing leads placed in the right ventricle, in a coronary vein over the left ventricle, and often in the right atrium (triple chamber) to stimulate the heart to beat at a faster rate when it senses bradycardia and provides cardiac resynchronization therapy (CRT) through biventricular electrical stimulation to synchronize right and left ventricular contractions to treat symptoms of heart failure (e.g., easy fatigue) and serious heart-rhythm problems [CRT pacemaker (CRT-P)]; it is not intended for defibrillation therapy.	III

12824	47264	Dual-chamber implantable pacemaker, demand	Хоёр камерт суулгадаг зүрхний аппарат, эрэлт хэрэгцээ	A battery-powered device consisting of a hermetically-sealed pulse generator, implanted beneath the skin of the chest in a surgically-created pocket, with pacing leads in or on two chambers of the heart (right atrium and ventricle). It is intended to stimulate the two chambers to beat in their natural sequence, to mimic the normal heart's activity, by generating and conducting electrical impulses to the heart when it senses the electrical activity in the chambers are abnormal [e.g., when the heart beats too slowly (bradycardia) or has other abnormal rhythms (arrhythmias)]; it is not intended to provide defibrillation therapy.	III
12825	47265	Dual-chamber implantable pacemaker, rate-responsive	Хос камерт суулгадаг зүрхний аппарат, хурдад хариу үйлдэл үзүүлдэг	A battery-powered, hermetically-sealed pulse generator, implanted beneath the skin of the chest in a surgically-created pocket, with pacing leads in or on two chambers of the heart (right atrium and ventricle). It is intended to stimulate the chambers of an abnormal heart, through electrical impulses, to beat in their natural sequence, and to adjust the rate of contraction to meet the body's increased need for blood flow due to activity. It contains one or more sensors to detect changes in the body (e.g., motion, breathing frequency) to indicate more oxygen is needed, and subsequently increases the pacing rate; it is not intended for defibrillation therapy.	III
12826	47266	Single-chamber implantable pacemaker, fixed-rate/demand	Нэг камерт суулгадаг зүрхний аппарат, тогтмол хурдтай/эрэлттэй	A battery-powered device consisting of a hermetically-sealed pulse generator, implanted beneath the skin of the chest in a surgically-created pocket, with a pacing lead in or on one chamber of the heart (right atrium or ventricle). It is intended to generate and conduct electrical impulses to the heart typically when the heart beats too slowly (bradycardia) or has other abnormal rhythms (arrhythmias). It may provide constant electrical stimuli to normalize the heartbeat (fixed-rate) and/or provide a stimulus only when electrical activity within the heart is sensed to be abnormal (demand); it is not intended to provide defibrillation therapy.	III

12827	47267	Single-chamber implantable pacemaker, rate-responsive	Нэг камерт суулгадаг зүрхний аппарат, хурдад хариу үйлдэл үзүүлдэг	A battery-powered device consisting of a hermetically-sealed pulse generator, implanted beneath the skin of the chest in a surgically-created pocket, with a pacing lead in or on one chamber of the heart (right atrium or ventricle). It is intended to generate and conduct electrical impulses to an abnormal heart to adjust its rate of contraction to meet the body's increased need for blood flow due to activity. It contains one or more sensors to detect changes in the body (e.g., motion, breathing frequency) to indicate more oxygen is needed, and subsequently increases the pacing rate; it is not intended to provide defibrillation therapy.	III
12828	47269	Transtelephonic implantable pacemaker analysis system	Транстелефон суулгацын зүрхний аппаратын шинжилгээний систем	An assembly of devices designed to analyse the performance of an implanted pacemaker based on electrocardiographic measurements that can be monitored transtelephonically. It typically includes a computer-based pacemaker analyser, a 12-lead electrocardiograph (ECG), and a transtelephonic receiver and/or transmitter. It provides data taken directly from the patient (e.g., ECG electrodes are applied to the patient and a test magnet is placed over the pacemaker to activate it) or a pacemaker programmer. Signals are sent to the receiver where pacemaker function information is displayed. This system may also include a database that collects and stores patient data.	III
12829	47362	Polyester suture, bioabsorbable, monofilament, antimicrobial	Полиэфир оёдол, био шингээх чадвартай, нэг утастай, нянгийн эсрэг үйлчилгээтэй	A single-strand (monofilament), synthetic, bioabsorbable thread made from a polyester and containing an agent to locally inhibit bacterial growth, intended to join (approximate) the edges of a soft-tissue wound or incision by stitching or to ligate soft tissues. The thread provides extended temporary wound support, until the wound sufficiently heals to withstand normal stress, and is subsequently absorbed by hydrolysis; it may include an attached disposable device(s) [e.g., needle, passer] intended to facilitate suture application. It is not a barbed suture. This is a single-use device.	III

12830	47369	Partially-implantable middle ear implant system sound processor	Дунд чихний суулгацын системийн дууны процессорыг хэсэгчлэн суулгах боломжтой	The non-sterile external portion of a partially-implantable middle ear implant system that typically consists of a battery-powered microphone, signal analysis and filtering unit, radio-frequency (RF) modulator and amplifier, and an RF transmitter and antenna. These components receive sound waves from the environment, convert them into electrical signals (radio waves), and transmit the signals to the implantable portion of the system which activates the auditory pathway by vibrating the ossicles (middle ear bones).	III
12831	47373	Cochlear implant system electrode array assembly	Чихний дунгийн суулгацын системийн электродын массивын угсралт	The implantable portion of a cochlear implant system [cochlear implant (CI)] that typically consists of an electrically-powered electrode array surgically implanted in one cochlea, and a receiver-stimulator implanted in the skull near the ear and connected to the electrode array; it does not elute a drug. Electrical signals are transmitted from the external portion of the device to the receiver-stimulator and ultimately to the cochlea, via the electrode array, for the partial restoration of auditory sensation in a severely/profoundly deaf person. Dedicated implantation instruments may be included.	III
12832	47469	Heart valve prosthesis tester, single-use	Зүрхний хавхлагын протез шалгагч, нэг удаагийн	A sterile, pen-like device intended to be used to manually manipulate a heart valve prosthesis to perform an assessment of the valvular prosthesis (e.g., its ability to open and close) prior to implantation and/or when in situ. It typically has a handle made of plastic and a soft tip (e.g., made of rubber) to prevent damage of the valvular prosthesis. This is a single-use device.	III
12833	47470	Cadaveric heart valve prosthesis, decellularized	Кадаврын зүрхний хавхлагын протез, эсгүйжүүлсэн	An implantable allograft heart valve obtained from a human cadaver intended to be implanted during open heart surgery to repair or replace a dysfunctional natural heart valve in a patient. It is processed to render the tissue in the valve tissue sterile and decellularized; it may be tissue only, or tissue attached to a metal or synthetic polymer framework. The device is typically used to treat acquired or congenital valvular disease.	III

12834	47471	Heart valve bioprosthesis, animal-derived	Зүрхний хавхлагын биопротез, амьтны гаралтай	A sterile implantable xenograft (e.g., porcine or bovine heart valve) intended to be used to repair or replace a dysfunctional natural heart valve in a patient. It is processed to render the tissue in the valve non-viable; it may be tissue only, or tissue attached to a metal framework. The device is typically used to treat acquired or congenital valvular disease.	III
12835	47472	Heart valve bioprosthesis/synthetic blood vessel, animal-derived	Зүрхний хавхлагын биопротез/синтетик цусны судас, амьтны гаралтай	A sterile implantable xenograft (e.g., porcine or bovine heart valve) intended to be used to repair or replace a dysfunctional natural heart valve in a patient, which is fitted with a length of synthetic blood vessel (vascular) prosthesis. The device is typically intended to treat acquired or congenital valvular diseases coupled with great vessel malformations or pathology.	III
12836	47473	Heart valve bioprosthesis/synthetic blood vessel, human-derived	Зүрхний хавхлагын биопротез/нийлэг цусны судас, хүний гарал үүсэлтэй	A sterile, implantable, allograft heart valve obtained from a human cadaver intended to be used to repair or replace a dysfunctional natural heart valve in a patient, which is fitted with a length of synthetic blood vessel (vascular) prosthesis. The device is typically intended to treat acquired or congenital valvular diseases coupled with great vessel malformations or pathology.	III
12837	47491	Coronary optical coherence tomography system catheter	Титэм судасны оптик когерент томографийн системийн катетер	A sterile flexible tube with an extremely fine working end that houses an optical fibre and imaging lens intended to be transcutaneously introduced into the coronary vasculature to perform coronary optical coherence tomography (OCT). The proximal end of the device connects to a coronary OCT console for the transmission of high-resolution images (e.g., 5 to 40 micron) of the coronary intravasculature. It is typically made of stainless steel, plastic, and optical materials. This is a single-use device.	III
12838	47533	Implantable ventricular circulatory assist system	Суулгацын ховдолын цусны эргэлтийг дэмжих систем	A portable assembly of devices intended to provide mechanical assistance to a heart ventricle(s), typically by pumping blood from the left ventricle to the aorta through an extra-cardiac circuit. It includes an implantable pump(s), connecting cannula/graft(s), a percutaneous lead, and external components (e.g., battery pack, controller). It is typically intended to be used as a bridge to heart transplantation.	III

12839	47566	Venous valve external support	Венийн хавхлагын гадна талын дэмжлэг	A device intended to be surgically implanted on the outside of a vein around an incompetent venous valve providing rigidity to promote improved valvular function. It is typically in the form of a tubular, spiralled cage made of thin, flexible metal [e.g., nickel-titanium alloy (Nitinol)] in two halves to assist placement; the halves are locked together and fixed (sutured) to the vein for implantation.	III
12840	47668	Cardiac support wrap	Зүрхний үйл ажиллагааг дэмжих боолт	A device intended to be implanted around the heart during open surgery to encompass both ventricles of the heart and limit the cardiac dilation associated with progressive heart failure. It is typically a polyester mesh that has the appearance of a loosely-knitted cap; it is tailored by the surgeon to fit around the heart from the atrioventricular groove to the apex. The device is intended to treat dilated cardiomyopathy by providing end-diastolic ventricular support to reduce wall stress and myocardial stretch for the preservation or improvement of cardiac function.	III
12841	47680	Heart valve prosthesis holder, single-use	Зүрхний хавхлагын протез эзэмшигч, нэг удаагийн	A hand-held, non-powered, invasive surgical instrument designed to hold a cardiac (heart) valve prosthesis or a cardiac annuloplasty ring at, or in proximity to, its site of implantation during surgery. It includes an implant mounting/containing feature and a handle; implantable devices are not included. This is a single-use device.	III
12842	47683	Heart valve prosthesis sizer handle	Зүрхний хавхлагын протезийн хэмжээс бариул	A hand-held manual surgical instrument intended to be used during cardiac valve repair or replacement as a handle to which an interchangeable valve sizer is attached to allow the surgeon to evaluate the valve opening (patient annulus) into which the appropriate sized annuloplasty ring or replacement valve will be implanted. The device is typically made of metal and/or plastic (e.g., polysulphone) and is straight and/or curved, rigid and/or flexible in design; this handle may also be connected to the valve or ring holder to assist implantation. This is a reusable device.	III

12843	47684	Heart valve annulus sizer, reusable	Зүрхний хавхлагын цагираг хэмжигч, дахин ашиглах боломжтой	A hand-held manual surgical instrument intended to be used during heart valve repair or replacement that enables evaluation of the valve opening (patent annulus) into which the appropriately sized annuloplasty ring or replacement valve will be implanted. It is typically available as a set of round tapered sizers in a range for the aortic, mitral, or tricuspid valve; it may include an attachable handle which may also be used to assist implantation. This is a reusable device.	III
12844	47733	Cardiopulmonary bypass cannula, femoral	Зүрхний уушигны сувгийн суваг, гуяны	A sterile, rigid or semi-rigid tube designed to be inserted into a femoral artery or vein during cardiopulmonary bypass procedures. It is typically a 9 to 24 Fr tube with an end hole (some may include side holes); it is short enough to keep the distal tip inside the femoral vessel. The tube is used in set-ups/systems intended to divert the patient's blood to and from external tubing and an arterial pump, bypassing the heart and lungs completely. This is a single-use device.	III
12845	47798	Vascular irrigation cannula, cardiac vessel graft	Судасны усалгааны суваг, зүрхний судасны залгаас	A sterile, single-lumen, tubular device designed to be used during cardiac surgery to flush an autologous graft, typically a section of explanted saphenous vein, to test its integrity and the closure of lateral vessels, as well as to remove debris and clots after resection. It is typically made of plastic material (e.g., polypropylene) and typically designed with a connector at the proximal end (e.g., is attached to a syringe with a Luer connector) and a ribbed flange at the distal end for a secure connection to the vessel. It may also be used to perfuse the heart through the graft after having done the anastomosis on the coronary artery. This is a single-use device.	III

12846	47799	Cardioplegia cannula	Кардиоплегийн суваг	A sterile, single lumen, tubular device designed to deliver cardioplegic solution to the aortic root to stop the beating of the heart and maintain it dormant; it may also be used to vent the aorta and the left heart during a cardiopulmonary bypass procedure. It is typically made of plastic [e.g., polypropylene, polyvinyl chloride (PVC)] with a soft insertion tip and a suture flange for its anchoring; it may have one or more tubes (a second for aspiration, if needed), and typically Luer connector(s) for connection to the infusion syringe and aspiration line(s). It may include a manual tubing clamp and insertion is typically achieved with a removable stylet. This is a single-use device.	III
12847	47804	Implantable cardiac monitor	Суулгах боломжтой зүрхний монитор	A hermetically-sealed, electrically-powered device [an implantable cardiac monitor (ICM)] intended to be implanted to monitor, record, and store electrocardiographic signals to help diagnose and monitor cardiac arrhythmias and/or acute coronary syndrome (ACS) changes; it may have a vibratory alarm function and the data can be telemetrically transmitted to an external device for alarming the patient and/or remote data transmission. It is used for a patient who experiences unexplained cardiac-related symptoms and/or is at risk for cardiac arrhythmias and/or ACS events.	III
12848	47818	Staple line-reinforcement strip	Үдээсийн шугам-арматурын тууз	A sterile bioabsorbable device made of material derived from animal tissue intended to buttress staple lines and control leaks of blood, fluids, and air from around staple lines typically during cardiothoracic and abdominal surgeries. It is typically available as strips of material provided with an adhesive hydrogel to facilitate rehydration of the strips and their temporary adherence to the stapler loader unit before application of the staples with the strips to the tissue. This is a single-use device.	III

12849	47846	Intravascular probe, single-use	Судас доторх датчик, нэг удаагийн хэрэглээ	A slender, rod-like, hand-held manual surgical instrument intended to facilitate vessel stenting, retraction, and occlusion. It is inserted into the vessel lumen via a small incision to locate occlusions, explore the proximal/distal artery for size, patency and location of stenosis, and to arrest blood flow (proximally, distally, or both) to enable operative field visualization during coronary or peripheral vascular bypass grafting and vessel repair surgery. It may be single- or double-ended with a blunt bulbous tip (an olive) at the working end(s); It is typically made of polyester/silicone materials and is available in various sizes. This is a single-use device.	III
12850	47852	Temporary cardiac pacing catheter	Зүрхний цохилтын түр зуурын катетер	A sterile, flexible tube designed to deliver temporary pacing stimuli to the heart; it may detect bioelectric signals from the heart. It is used in the atria and/or ventricles and has electrodes which are usually applied to the ventricles and connect to an external pacemaker which generates the electrical pacing impulses. It may be unipolar or bipolar and facilitates the display of the electrocardiographic signal. It is used: 1) in an emergency during bradycardia or asystole until a pacemaker can be implanted to control the heart rate; 2) during and/or after surgery; or 3) during cardiac catheterization [e.g., electrophysiological (EP) examinations]. This is a single-use device.	III
12851	47854	Intravascular ultrasound imaging catheter extractor, single-use	Судсан дотуурх хэт авиан дүрслэлийн катетерын экстрактор, нэг удаагийн хэрэглээ	A sterile, battery-powered, electronic device intended to slowly retract (pull back) an intravascular ultrasound imaging catheter from a coronary or peripheral artery at a controlled rate using a motor combined with an extraction mechanism. This device is used in the catheterization laboratory during intravascular assessment, e.g., for the reconstruction of a two dimensional, sagittal ultrasonic diagnostic image as the catheter is slowly extracted. Pullback lengths are around 13 cm. This is a single-use device.	III

12852	47887	Dermal tissue reconstructive material, microbe-derived, anaesthetic	Арьсны эдийг нөхөн сэргээх материал, бичил биетнээс гаралтай, мэдээ алдуулагч	A sterile, bioabsorbable, bacteria-derived substance intended to be injected into the dermis/hypodermis of the skin, lip submucosa, and/or for supraperiosteal administration to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), typically to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) associated with aging, injury, or degenerative lesions; it includes a local anaesthetic agent (e.g., lidocaine). It typically includes bacterial hyaluronic acid (HA) as the principal constituent and is typically preloaded in a disposable syringe; disposable needle(s)/cannula(e) dedicated to injection may be included.	III
12853	47931	Aortic annuloplasty ring	Aortic annuloplasty цагираг	A circular band intended to be implanted in the heart during open heart surgery to support an aortic valve annulus for the reconstruction and/or remodelling of an insufficient aortic valve. It is typically mounted on a disposable holder assembly to enable it to maintain its shape and aid in its implantation, which may involve a specialized handle, with sutures. The device may be semi-rigid or flexible and may include metallic, polymeric, and/or textile materials; it is available in various sizes.	III
12854	47968	Dental bone matrix implant, animal-derived	Шүдний ясны матриц суулгац, амьтны гаралтай	A sterile bioabsorbable device made primarily of animal-derived bone or dentin matrix (e.g., bovine, porcine) implanted into the body to provide osteoconductive bone-tissue scaffolds to replace maxillofacial and/or mandibular bone lost through trauma or dental surgery. It is used to fill bone cavities and defects and contains pores that promote the ingrowth of endogenous bone for skeletal reconstruction and/or augmentation. It is typically provided as sterile cancellous blocks, chips, or granules of varying sizes, or mouldable materials.	III

12855	47997	Bone grafting cannula	Яс залгах суваг	A rigid tube intended to be used surgically to introduce a bone void filler (e.g., a bone matrix implant/bone substitute) in voids or gaps of the skeletal system (i.e., extremities, craniofacial bone, spine, and pelvis) to fill defects in the bone structure created surgically or traumatically. It is typically made of metal materials (e.g., high-grade stainless steel) with or without a plastic hub at the distal end to connect to a syringe or other device that propels the filler. The device may also be used for the delivery of orthopaedic cement. This is a single-use device.	III
12856	48015	Cardiac mapping/endocardial-injection catheter	Зүрхний зураглал / эндокардийн тарилгын катетер	A sterile, steerable, thin, flexible tube containing multiple electrodes that is introduced percutaneously into the heart chambers in order to relay information to an external cardiac mapping system to create a three-dimensional (3-D) electromechanical reconstruction map of the heart chamber. The device also incorporates a small hollow needle intended for targeted delivery of diagnostic and therapeutic agents into the myocardium. The device is typically made of plastic with embedded electrodes often of platinum (Pt), iridium, or a composite. This is a single-use device.	III
12857	48055	Ceramic acetabular liner	Керамик ацетабуляр доторлогоо	A sterile implantable inner component of a two-piece acetabulum prosthesis that is inserted into an acetabular shell prosthesis to provide the articulating surface with a femoral head prosthesis as part of a total hip arthroplasty (THA). It is made of ceramic material (e.g., alumina).	III
12858	48056	Metallic acetabular liner	Металл ацетабуляр доторлогоо	An implantable inner component of a two-piece acetabulum prosthesis that is inserted into an acetabular shell prosthesis to provide the articulating surface with a femoral head prosthesis as part of a total hip arthroplasty (THA). It is made of metal [e.g., cobalt-chrome (Co-Cr)].	III
12859	48066	Knee femur stem prosthesis	Өвдөгний гуяны ясны протез	A sterile device designed to provide additional stability for an implanted knee femur prosthesis by extending the attachment of the prosthesis from the distal femur into the midshaft of the bone. It is typically a shaft-like device made of metal [e.g., cobalt-chrome (Co-Cr)] and is often used in prosthesis revision to compensate for bone loss.	III

12860	48068	Uncoated unicondylar knee tibia prosthesis, metallic	Өвдөгний шилбэний өнгөлгөөгүй нэг кондиляр протез, металл	A sterile implantable device designed to replace the bearing surface of one tibial condyle (tibial component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr)] and is not coated with a material intended to improve fixation and stability. The device articulates with a femoral component and an insert, and its implantation is intended to be performed with bone cement.	III
12861	48069	Uncoated unicondylar knee tibia prosthesis, polyethylene	Өвдөгний шилбэний шилбэний бүрээсгүй нэг кондиляр протез, полиэтилен	A sterile implantable device designed to replace the bearing surface of one tibial condyle (tibial component) during primary or revision unicompartmental replacement of the knee joint. It is made of polyethylene (PE) and is not coated with a material intended to improve fixation and stability. The device articulates with a femoral component, and its implantation is intended to be performed with bone cement.	III
12862	48088	Stem-fixed humeral head prosthesis	Шүдний ясны толгойн протез	A sterile implantable artificial substitute for a diseased or injured humeral head. It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and designed to be attached to a humeral stem prosthesis and to articulate with the natural glenoid fossa, a glenoid fossa prosthesis, or a humeral head bipolar component as part of a shoulder replacement.	III
12863	48089	Resurfacing humeral head prosthesis	Хумерын толгойн протезийг нөхөн сэргээх	A sterile implantable device designed to treat a disease-damaged (e.g., arthritic) shoulder joint by replacing the humeral articulating surface of the joint while preserving the natural humerus. It consists of a metallic humeral cap [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] that is placed over (resurfaces) a surgically-prepared humeral head, and may be used with a cementless stem.	III
12864	48090	Press-fit shoulder humeral stem prosthesis	Мөрний ясны ишний протез	A sterile implantable device designed to provide fixation within the proximal humerus and a site of attachment for a humeral head or humeral body prosthesis as part of a shoulder joint replacement. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is contoured to enable fixation by pressing the distal end into the cortex of the remaining natural humerus to achieve a mechanical interlock without the use of bone cement.	III

12865	48091	Reverse shoulder prosthesis base plate	Урвуу мөрний протезийн суурь хавтан	A sterile implantable component of a reverse shoulder prosthesis that consists of a metal plate [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] intended to be firmly attached to the scapula with screws. It is intended to serve as the foundation for the reverse shoulder prosthesis head (glenosphere).	III
12866	48092	Polyethylene reverse shoulder prosthesis cup	Полиэтилен урвуу мөрний протезийн аяга	A sterile implantable component of a reverse shoulder prosthesis that consists of a polyethylene (PE) cup intended to be attached to a humeral stem prosthesis, or humeral body component, and to articulate with the reverse shoulder head.	III
12867	48093	Reverse shoulder prosthesis head	Урвуу мөрний протезийн толгой	A sterile implantable component of a reverse shoulder prosthesis that consists of a hemisphere-shaped metal or combined metal/polyethylene piece (glenosphere) intended to be attached to the reverse shoulder base plate, or directly to the glenoid fossa of the scapula, to articulate with the reverse shoulder cup.	III
12868	48094	Shoulder prosthesis screw	Мөрний протезийн шураг	A sterile screw or set of screws intended for implantable shoulder prosthesis assembly and/or fixation.	III
12869	48095	Trabeculated shoulder humeral stem prosthesis	Трабекултай мөрний ясны протез	A sterile implantable device designed to provide fixation within the proximal humerus and a site of attachment for a humeral head or humeral body prosthesis as part of a shoulder joint replacement. It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is typically intended to be performed without bone cement.	III
12870	48096	Polyethylene elbow ulna prosthesis	Полиэтилен тохойн ясны протез	A sterile implantable device designed to replace the proximal ulna as part of an elbow joint replacement. The device is made entirely of polyethylene (PE) and its stem is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is intended to be performed with bone cement.	III

12871	48097	Bone matrix implant, animal-derived, non-bioabsorbable	Ясны матриц суулгац, амьтны гаралтай, био шингэдэггүй	A sterile non-bioabsorbable device made primarily of animal-derived bone matrix (e.g., heat-treated hydroxyapatite ceramic from animal cancellous bone) implanted into the body to provide osteoconductive bone-tissue scaffolds to replace bone lost through trauma, surgery, or pathological conditions (e.g., osteoporosis). It is used to fill bone cavities, defects, and fractures, and contains pores that promote the ingrowths of endogenous bone for skeletal reconstruction or augmentation. It is typically provided as cancellous blocks, cylinders, or granules.	III
12872	48117	Carpometacarpal interpositional spacer, bioabsorbable	Carpometacarpal interpositional spacer, био шингээх чадвартай	A bioabsorbable device designed to be implanted into the first carpometacarpal (CMC) joint (i.e., between the trapezium and the first metacarpal bone) to treat pain, instability, and/or motion disabilities of the thumb caused by arthritis. The device is intended to resurface the joint and is typically made of degradable polymer fibres.	III
12873	48118	Scaphotrapeziotrapezoidal interpositional spacer	Scaphotrapeziotrapezoidal interpositional spacer	A bioabsorbable device designed to be implanted into the schaphotrapeziotrapezoidal (STT) joint (i.e., between the scaphoid and trapezium-trapezoid bones) to treat pain, instability, and/or motion disabilities of the thumb caused by arthritis. The device is intended to resurface the joint and is typically made of degradable polymer fibres.	III
12874	48137	Coronary artery guidewire extension	Титэм артерийн чиглүүлэгч утасны өргөтгөл	A long, thin, sterile wire designed to provide the necessary length to allow the exchange of one coronary artery dilatation catheter for another, while maintaining the position of the cardiac catheter guidewire in the coronary artery, during angiography or percutaneous transluminal coronary angioplasty (PTCA). It is typically made of polymer-coated [e.g., polytetrafluoroethylene (PTFE)] stainless steel and supplied with a guidewire extension insertion device to facilitate its joining to the proximal end of the in situ guidewire. After the catheter exchange, the guidewire extension can be detached and the guidewire used as intended. This is a single-use device.	III

12875	48155	Dura mater biomatrix implant	Dura mater biomatrix суулгац	A bioabsorbable device made of animal-derived collagen (e.g., equine, porcine) designed to temporarily substitute for dura mater during surgical repair or replacement of dura, and to function as a matrix for the regeneration of living dura. Restoration of the dura mater maintains the integrity of the brain and spinal cord, and helps prevent leakage of the cerebrospinal fluid (CSF). The device is typically in the form of a transparent foil that usually requires no suturing and may be used with fibrin sealant.	III
12876	48156	Collagen haemostatic agent, antimicrobial	Коллаген цус тогтоогч, нянгийн эсрэг үйлчилгээтэй	A bioabsorbable, implantable device derived from animal collagen (e.g., equine collagen), and containing an antimicrobial agent, that is intended to be applied directly to a wound during surgery to facilitate local haemostasis primarily in body cavities at high-risk of infection (e.g., sacral cavity after rectum amputation). It produces haemostasis primarily through activation of platelets. The device is typically available in the form of a pad/sponge intended to remain in the wound to be absorbed by the body; it may be applied in combination with fibrin adhesives. This is a single-use device.	III
12877	48163	Pectoral implant	Цээжний суулгац	An implantable device designed for cosmetic augmentation (submuscular implantation) or reconstruction (e.g., to correct injuries/congenital absence) of the pectoral muscle(s). It is a preshaped (e.g., convex/concave oval-shaped) device typically composed of silicone elastomer.	III
12878	48165	Lumbar total intervertebral disc prosthesis	Бүсэлхий нурууны нийт нугалам хоорондын протез	An implantable device designed to replace a dysfunctional intervertebral disc in the lumbar spine. It most commonly has a two-plate design, one plate attaching to the vertebra above and the other to the vertebra below and may have a compressible core component between. It may facilitate some degree of motion and is typically made of metal and/or synthetic polymer materials. This is the complete prosthesis assembly, not individual components.	III
12879	48180	Ankle prosthesis bearing	Шагайны протезийн холхивч	A sterile implantable device made of polyethylene (PE) designed to articulate the tibial and talar components of a total ankle prosthesis.	III

12880	48181	Coated ankle talus prosthesis	Шагайны талст бүрхүүлтэй протез	A sterile implantable device designed to replace the proximal talus (talar component) as part of a primary ankle joint replacement or prosthesis revision. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is coated with a material (e.g., porous materials, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation may be performed with or without bone cement.	III
12881	48182	Subtalar implant, bioabsorbable	Субталяр суулгац, био шингэдэг	A sterile implantable device designed to be inserted into the subtalar joint as a temporary, supplemental support to primary surgical interventions in the treatment of flat foot. The device is made of materials absorbed by the body [e.g., poly-L-lactide (PLLA)] typically over a few months after implantation.	III
12882	48183	Uncoated ankle talus prosthesis	Шагайны талст бүрхүүлгүй протез	A sterile implantable device designed to replace the proximal talus (talar component) as part of a primary ankle joint replacement or prosthesis revision. The device is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. Fixation devices for implantation (e.g., screws) may be included and implantation is intended to be performed with bone cement.	III
12883	55825	Mandibular fossa prosthesis	Эрүүний фосса протез	A sterile implantable component of a total temporomandibular joint (TMJ) prosthesis designed to replace or repair the articulating surface of the joint comprised of the glenoid fossa and the articulating eminence of the temporal bone. It is cup-like in shape and typically made of polyethylene (PE); it may include screws for attachment to temporal bone.	III

12884	55834	Press-fit hip femur prosthesis, one-piece	Гуяны гуяны протез, нэг хэсэг	A sterile implantable principal component of a total hip prosthesis (femoral component) designed to replace the femoral head and neck. The device is one-piece and is contoured to enable fixation by pressing the distal end into the cortex of the remaining natural femur to achieve a mechanical interlock without the use of bone cement. The device may be made of metal and/or ceramic materials; supplemental fixation devices for implantation (e.g., screws and bolts) may be included.	III
12885	56280	Mitral valve tissue repair system	Митрал хавхлагын эдийг засах систем	A system of devices intended for the percutaneous reconstruction of an insufficient mitral valve through tissue approximation using transvenous/transseptal techniques. It consists of a sterile clip delivery system (CDS), implantable metal clips, steerable delivery and guide catheters with a dilator (acts a conduit), and other devices to be sterilized prior to use. The steerable guide and CDS are typically steered and actuated through the use of control knobs, levers and torque translation techniques and guided by echocardiographic and fluoroscopic imaging. The clip is positioned and the mitral valve leaflets are coapted to reduce mitral regurgitation (MR). This is a single-use device.	III
12886	56297	Joint cartilage biomatrix implant	Үе мөчний мөгөөрсний биоматрикс суулгац	A bioabsorbable animal-derived material intended to be implanted in the void of a cartilage defect of a joint (e.g., knee, ankle, shoulder), typically up to a diameter of 34 mm, during an orthopaedic or traumatologic intervention, to promote the ingrowth of autologous cells (e.g., with bone marrow stimulation techniques) for cartilage reconstruction or augmentation. It consists primarily of an animal-derived matrix structure (e.g., made of animal-derived type 1 collagen, chitosan) that provides a scaffold for cell growth. It is available in various dimensions or may be an injectable fluid, and can be applied arthroscopically, or with miniarthrotomy for larger defects.	III

12887	56730	Cranial bone flap fixation clip	Гавлын ясны хавчаар бэхэлгээний хавчаар	A sterile, non-metallic, non-bioabsorbable device designed to be partially implanted around the perimeter of a replaced cranial bone flap after a craniotomy to ensure structural stability during the healing period. It is typically made of biocompatible plastic materials [e.g., polyoxymethylene (POM), commonly known as Delrin] and is typically designed with internal and external flanges that are tensioned together over the bone of both the flap and skull and locked via a central stem. It may also be used for craniofacial bone fracture fixation. Its non-metallic design makes it more compatible with radiological imaging than metallic clips.	III
12888	56732	Intracardiac circulatory assist axial-pump catheter	Зүрхний доторх цусны эргэлтийн туслах тэнхлэгийн шахуургын катетер	A sterile tubular device with a built-in electrically-powered axial flow pump (e.g., a micro motor with an impeller) at the distal end, designed to provide circulatory assistance to the heart by pumping blood during heart failure. It is inserted through the lumen of the aorta and into the left ventricle, surgically or percutaneously via an artery, and connected to an external control unit; it moves blood from the left ventricle to the aorta across the aortic valve. It is typically used emergently post acute myocardial infarction (AMI), electively for high-risk cardiac catheterization, for open chest surgery, and during transport between hospitals. This is a single-use device.	III
12889	57788	Mesh-sleeve coronary artery stent	Торон ханцуйтай титэм артерийн стент	A non-bioabsorbable tubular device wrapped in a flexible fine mesh and intended to be implanted in a coronary artery or saphenous vein graft of the heart to improve its luminal diameter and block embolic debris, typically in a patient with symptomatic atherosclerotic heart disease. The device is inserted and advanced to the site of implantation with a balloon catheter which will cause the device to expand upon balloon inflation. It is made of metal (e.g., high-grade stainless steel) and polymer materials. Disposable devices associated with implantation may be included.	III

12890	57790	Heart valve clip	Зүрхний хавхлагын хавчаар	An implantable device intended for the reconstruction of an insufficient mitral and/or tricuspid heart valve and reduction of valve regurgitation through the fixed approximation of the valve leaflets. It is typically implanted using a percutaneous clip delivery system (CDS) guided by echocardiographic and fluoroscopic imaging. It is typically made of implant grade metal alloys with a polyester fabric cover. Disposable devices associated with implantation (e.g., CDS and accessories) may be included.	III
12891	57885	Hearing aid/implant system remote control	Сонсголын аппарат/суулгацын системийн алсын удирдлага	A battery-powered device designed to be operated by the wearer of a hearing aid or a hearing implant system to enable discreet wireless (remote) adjustments to the device (e.g., volume and program changes). It is designed to be conveniently portable (e.g., carried in a pocket, handbag, or attached to a key ring).	III
12892	57889	Bioengineered vascular graft, animal-derived	Био-инженерийн судас залгаас, амьтны гаралтай	An implantable blood vessel manufactured from biological engineering techniques involving animal tissues (e.g., placing a polyester mesh template inside a live animal to stimulate fibrocollagenous tissue deposition around the mesh) and intended to indefinitely replace, bypass, or shunt a patient's diseased or injured blood vessel, typically those from 3 to 30 mm in diameter, excluding the coronary arteries.	III
12893	57912	Podiatric silicone-liquid tissue reconstructive material	Хүүхдийн силикон-шингэн эдийг нөхөн сэргээх материал	A sterile, high-grade, medical silicone fluid intended to be used in podiatric surgery. It is typically injected under the skin in the plantar region of the foot to provide a cushion, in combination with fatty tissue and through induction of the formation of fibrous tissue, to prevent or repair ulcers of the foot at pressure points.	III

12894	57988	Pressure-controlled intermittent coronary sinus occlusion system	Даралтаар хянагддаг титэм судасны синусын үе үе бөглөрөх систем	An assembly of devices designed to intermittently occlude the coronary sinus, via intermittent inflation of a balloon catheter, to intermittently increase the pressure in the coronary venous system to cause redistribution of blood flow to the damaged heart and help improve myocardial perfusion/cardiac function during percutaneous coronary intervention (PCI) such as coronary revascularization or stent placement. It typically consists of a pressure-controlled intermittent coronary sinus occlusion (PISCO) system control unit with operator controls and display functions, dedicated catheters, helium (He) gas supply for balloon inflation, and software. It is typically mounted on a trolley (cart).	III
12895	58044	Dura mater graft, synthetic	Dura mater залгаас, синтетик	A sterile implantable device made from synthetic polymers [e.g., expanded polytetrafluoroethylene (ePTFE), ePTFE/elastic fluoropolymer] intended to be used for the temporary or permanent repair or replacement of the dura mater in a recipient during a neurosurgical procedure. Restoration of the dura mater maintains the integrity of the brain and spinal cord, and helps prevent leakage of the cerebrospinal fluid (CSF). This dural graft is typically overlaid on the patient's dura; it is typically supplied in the form of a patch and may be sutured into place.	III
12896	58085	Knee arthrodesis prosthesis	Өвдөгний үе мөчний протез	A fused (non-articulating) replacement for the knee joint intended to be implanted after failed primary knee arthroplasty and which functions as a bridge between the resected metaphyses of the femur and tibia. It is a modular device that typically includes resection elements (spacers), intramedullary nails (inserted into the intramedullary canal), screws, and connectors all made of metal [e.g., titanium (Ti)]; components are both sterile and non-sterile. Instruments for implantation are typically included and implantation may be performed with or without bone cement.	III

12897	58103	Coronary angioplasty balloon catheter, imaging	Титэм судасны ангиопластик бөмбөлөг катетер, дүрслэл	A flexible tube designed for percutaneous transluminal coronary angioplasty (PTCA) to dilate a stenotic coronary artery/bypass graft, or an implanted coronary artery stent (not included), by controlled inflation of a distensible balloon at its distal tip, and to evaluate coronary vasculature morphology via an intraluminal image transmitted by its intravascular ultrasound (IVUS) transducer which creates images of the anatomy, facilitates more precise dilatation sites, and helps to view outcomes. The device is powered via attachment to a dedicated system; it is made of metal and synthetic polymer materials and is available in various lengths and diameters. This is a single-use device.	III
12898	58112	Carotid artery embolic protection system	Каротид артерийн эмболиос хамгаалах систем	An assembly of devices intended to provide cerebrovascular embolic protection during carotid artery angioplasty and stenting procedures. It is available in various configurations and typically includes a sheath/catheter(s), intravascular balloon(s), guidewire, and extracorporeal valves/filters. The assembly is introduced into an artery percutaneously and used to produce blockage of blood through balloon inflation, typically at the carotid bifurcation and internal carotid artery to prevent distal embolization by particulate debris/thrombus and allow removal of debris/thrombus by blood filtration or aspiration. This is a single-use device.	III
12899	58115	Peripheral vascular guidewire, manual	Захын судасны чиглүүлэгч утас, гарын авлага	A long, thin wire intended to be percutaneously placed into the peripheral vasculature (not heart or central nervous system) to function as a guide for the introduction of devices (e.g., catheters). It is made of metal (e.g., stainless steel, Nitinol), with or without coating, and is available in a variety of distal tip designs. It is intended to be used for percutaneous angiography, angioplasty, rotational atherectomy and thrombectomy, drainage, and other diagnostic and interventional procedures. It may include devices used to facilitate manipulation (e.g., torque device). This is a single-use device.	III

12900	58227	Patellofemoral joint prosthesis	Пателлофемораль хамтарсан протез	A sterile implantable device designed to replace the patellofemoral articulating surface of the knee to treat isolated patellofemoral disease, typically osteoarthritis. The device is made of metal (e.g., oxidized zirconium alloy) and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth; it may include fixation devices (e.g., pegs) for implantation which is intended to be performed with bone cement.	III
12901	58228	Bicompartmental knee prosthesis	Хоёр тасалгааны өвдөгний протез	A sterile implantable device designed to replace the patellofemoral and medial tibiofemoral articulating surfaces of a damaged/degenerative (e.g., arthritic) knee during primary or revision bicompartmental replacement of the joint; it is intended to permit retention of the lateral tibiofemoral compartment and both cruciate ligaments. The device is made of metal [e.g., oxidized zirconium alloy, cobalt-chrome (Co-Cr)] and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth; implantation is intended to be performed with bone cement.	III
12902	58414	Cation-active surfactant dressing	Катионы идэвхит гадаргуугийн боодол	A material intended to be applied to skin for microbial decolonization and/or applied to acute or chronic skin wounds (e.g., sores, ulcers, burns) for microbial decolonization and to facilitate healing primarily through the antiseptic properties of its cation-active surfactant compounds [e.g., octenidine hydrochloride (octenidine HCl)]. It is typically in the form of a spray or gel and intended for use in healthcare settings and in the home. After application, this device cannot be reused.	III

12903	58417	Autologous skin cell grafting kit	Автолог арьсны эс залгах иж бүрдэл	A collection of sterile devices designed to disaggregate cells from a split-thickness skin biopsy for immediate application to a prepared wound bed in the donor patient (skin cell autograft) to promote healing and skin cover. It typically includes a processing unit with battery-powered heater, a disassociation enzyme, a buffer solution, a spray delivery applicator, and various syringes and needles. The donor skin is prepared with heated enzyme and then scraped to create a suspension of mixed skin cell types in the buffer solution which is typically applied to the recipient site by spray or droplet. This is a single-use device.	III
12904	58526	Haemodynamic-modulation vessel repair implant, aortic	Гемодинамик-модуляцын судас засах суулгац, аорт	A tubular, self-expanding implant designed for the endovascular haemodynamic treatment of thoracoabdominal aortic deformations, typically aneurysms. Using multilayer flow modulating (MFM) technology, it typically consists of a stent-like multilayer mesh made of metal implanted at the site of the aneurysm to exclude the aneurysm and induce haemodynamic changes (e.g., reduction of vortex velocity in the aneurysm, flow channelling to branches) and endothelialisation. It typically has a dedicated radiopaque delivery system (catheter and pusher) included, and is introduced percutaneously and advanced under radiological control.	III
12905	58527	Haemodynamic-modulation vessel repair implant, peripheral artery	Гемодинамик-модуляцийн судас засах суулгац, захын артери	A tubular, self-expanding implant designed for the endovascular haemodynamic treatment of peripheral artery (e.g., lower limb, visceral, subclavian) deformations, typically aneurysms. Using multilayer flow modulating (MFM) technology, it typically consists of a stent-like multilayer mesh made of metal implanted at the site of the aneurysm to exclude the aneurysm and induce haemodynamic changes (e.g., reduction of vortex velocity in the aneurysm, flow channelling to branches) and endothelialisation. It typically has a dedicated radiopaque delivery system (catheter and pusher) included, and is introduced percutaneously and advanced under radiological control.	III

12906	58707	Self-expandable heart valve prosthesis post-dilation balloon catheter	Өөрөө тэлэх боломжтой зүрхний хавхлагын протезийн дараах бөмбөлөг катетер	A shaft with an inflatable balloon at its distal end intended to be used during open cardiovascular surgery to dilate the inflow ring of a sutureless cardiac (heart) valve prosthesis, after its implantation and self expansion, to facilitate valve sealing and anchoring. It typically includes a Luer connector at the proximal end and is available in a variety of sizes to fit with the valve sizes. This is a single-use device.	III
12907	58708	Varicose vein adhesive-treatment kit	Варикозын венийн наалдамхай эмчилгээний иж бүрдэл	A collection of sterile devices intended to be used for the endovascular closure of the great saphenous vein (GSV) and associated varicosities as a treatment for varicose veins. It typically includes a surgical adhesive (e.g., cyanoacrylate), syringe, delivery catheter, dilator, introducer and a dispensing gun. The adhesive is typically delivered under ultrasonic control at prescribed intervals throughout the length of the affected vein to adhere the vessel walls together, resulting in the complete and permanent closure of the lumen. This is a single-use device.	III
12908	58709	Collagen dental regeneration membrane	Шүдний нөхөн сэргээх коллаген мембран	A sterile, bioabsorbable, animal-derived collagen (e.g., porcine) intended to be used to aid in the regeneration of tooth support, lost due to periodontal disease or trauma, and/or to regenerate bone or bone defects around dental implants and at sites intended for implant placement, by acting as a barrier to prevent the down-growth of soft tissue into the underlying bone during the healing period. It is a pliable material which may be fixed with sutures; it is applied between soft tissue and bone, and/or to bone defects [e.g., during periodontal flap surgery, guided bone regeneration (GBR), and/or guided tissue regeneration (GTR) procedures]. This is a single-use device.	III

12909	58712	Intracranial endovascular implant post-dilation balloon catheter	Өсөн нэмэгдэж буй бөмбөлөг катетерын дараа гавлын дотоод судсан суулгац	A device designed for balloon dilatation of a previously deployed revascularization device (e.g., stent-graft, flow diverter) [not included] to improve intracranial arterial perfusion. It is a thin flexible tube typically introduced percutaneously over a metal guidewire and advanced under fluoroscopic control to the implant, where the distensible balloon at the distal end is inflated in a controlled manner to increase the diameter of the implant lumen. Also known as a post dilation balloon (PDB), it can be an over-the-wire (OTW) or a rapid-exchange design. This is a single-use device.	III
12910	58771	Drug-eluting coronary artery stent, bioabsorbable-polymer-coated	Эм шингээх титэм артерийн стент, био шингээх полимерээр бүрсэн	A non-bioabsorbable metal tubular mesh structure covered with a bioabsorbable polymer that contains a drug, designed to be implanted via a delivery catheter into a coronary artery (or saphenous vein graft) to maintain its patency typically in a patient with symptomatic atherosclerotic heart disease. The drug is slowly released as the polymer degrades and is intended to inhibit restenosis by reducing vessel smooth muscle cell proliferation. Some types may be dedicated to implantation across a coronary artery bifurcation. Disposable devices associated with implantation may be included.	III
12911	58824	Cardioplegia solution administration adaptor	Кардиоплегийн уусмалын удирдлагын адаптер	A sterile device designed to facilitate/regulate the delivery of cardioplegic solution to the heart during a cardiopulmonary bypass procedure by connecting an administration line to a cardioplegia cannula. Also known as a cardioplegia delivery set, it basically consists of tubing [e.g., polyvinyl chloride (PVC)] with connectors. It may have a single lumen or branched multiple-lumen design and include various types of connectors, clamps, and valves, depending on additional intended uses (e.g., venting, recirculation, and/or simultaneous perfusion of vein grafts). This is a single-use device.	III

12912	58950	Humeral metaphyseal anchor	Humeral metaphyseal зангуу	A sterile implantable device designed to provide fixation within the humeral metaphysis for the attachment of a dedicated humeral head prosthesis. It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and is in the form of a small framework to achieve a mechanical interlock with bone without the use of bone cement.	III
12913	58951	Metaphyseal anchor-fixed humeral head prosthesis	Метафизийн зангуугаар бэхлэгдсэн гумерын толгойн протез	A sterile implantable artificial substitute for a diseased or injured humeral head. It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] and designed to be attached to a humeral metaphyseal anchor (a small metal framework that fills the metaphyseal vault) which provides cementless fixation to the proximal humerus. It is designed to articulate with the natural glenoid fossa, a glenoid fossa prosthesis, or a humeral head bipolar component as part of a shoulder replacement.	III
12914	58992	Partial-resurfacing knee femur prosthesis	Өвдөгний гуяны ясыг хэсэгчлэн нөхөн сэргээх протез	A sterile implantable device, in the form of a small plug and stem, designed to treat focal lesions of the articular surface of the distal femur by excision of the lesion and uncemented fixation of the device in the surgically-prepared defect, with retention of the surrounding healthy articular cartilage. It is made of metal, may have a synthetic polymer articulating surface, and may be coated with a material intended to improve fixation and stability by promoting bone ingrowth. It is available in a range of sizes for treatment of different size lesions. Disposable devices associated with implantation may be included.	III
12915	59099	Meniscus biomatrix implant, animal-derived	Meniscus biomatrix суулгац, амьтны гаралтай	A bioabsorbable animal-derived material intended to be implanted to fill a defect in a damaged meniscus for the reinforcement of the remaining meniscus, and to provide a porous scaffold (matrix) intended to be replaced by natural tissue. It is made of an animal-derived material (e.g., bovine or porcine collagen) and is implanted during a minimally-invasive arthroscopic surgical procedure after trimming to fit the measured defect; it is available in a variety of sizes. This device is not intended to replace the entire meniscus.	III

12916	59101	Coronary venous system mitral annuloplasty wire brace	Титэм судасны венийн системийн митрал анулопластик утас бэхэлгээ	A device intended to be implanted in the coronary venous system [coronary sinus and great cardiac vein (GCV)] to mechanically reshape the mitral valve annulus thereby reducing mitral valve dilation and functional mitral regurgitation. It consists of a curved metal wire [e.g., nickel-titanium alloy (Nitinol) and/or titanium(Ti)] with crimping tubes and anchors at each end, and is intended to be implanted via a peripheral vein using cardiac catheterization technique. The implant is typically preloaded in a disposable delivery system which facilitates deployment, locking, decoupling, and recapture of the implant. The implant is not intended for explantation.	III
12917	59127	Musculoskeletal tissue reconstructive material	Яс-булчингийн эдийг нөхөн сэргээх материал	A sterile viscous material intended to treat acute or chronic soft tissue injuries of the musculoskeletal system (i.e., tendons and ligaments) via periarticular injection into the surrounding extracellular matrix. It is derived from a bacterial source [e.g., bacterial hyaluronic acid (HA)] and is intended to expedite the healing of tendons and ligaments by cushioning, lubrication, and hydration. It may be available in a prefilled syringe whereby it must be administered by a healthcare professional.	III
12918	59130	Dermal tissue reconstructive material, animal-derived	Арьсны эдийг нөхөн сэргээх материал, амьтны гаралтай	A sterile, bioabsorbable, animal-derived substance intended to be injected into the dermis/hypodermis of the skin, lip submucosa, and/or for supraperiosteal administration to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), to correct cutaneous contour deformities (e.g., scars) associated with aging, injury, or degenerative lesions; it may in addition be used as a bulking material for incontinence treatment (e.g., in the urinary tract). It does not include a local anaesthetic agent. It includes animal-derived collagen or hyaluronic acid (HA) [e.g., porcine, bovine]. It is typically preloaded in a disposable syringe.	III

12919	59131	Dermal tissue reconstructive material, microbe-derived	Арьсны эдийг нөхөн сэргээх материал, бичил биетнээс гаралтай	A sterile, bioabsorbable, bacteria-derived substance intended to be injected into the dermis/hypodermis of the skin, lip submucosa, and/or for supraperiosteal administration to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), typically to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) associated with aging, injury, or degenerative lesions; it does not include a local anaesthetic agent. It typically includes bacterial hyaluronic acid (HA) as the principal constituent and is typically preloaded in a disposable syringe; disposable needle(s)/cannula(e) dedicated to injection may be included.	III
12920	59133	Dermal tissue reconstructive material, synthetic mineral	Арьсны эдийг нөхөн сэргээх материал, синтетик эрдэс	A sterile, bioabsorbable, inorganic chemically synthesized mineral (e.g., synthesized calcium hydroxyapatite) intended to be injected into the dermis/hypodermis of the skin, lip submucosa, and/or for supraperiosteal administration to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), typically to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) associated with aging, injury, or degenerative lesions; it does not include a local anaesthetic agent. The material is typically preloaded in a disposable syringe.	III
12921	59439	Aortic transcatheter heart valve bioprosthesis, fluid-filled framework	Aortic transcatheter зүрхний хавхлагын биопротез, шингэнээр дүүрсэн хүрээ	An implantable xenograft (e.g., bovine) intended to be used to repair/replace a stenosed or regurgitant aortic heart valve, or previously-implanted aortic heart valve prosthesis, and which is designed to be implanted with a catheter via transarterial access (e.g., femoral, iliac) while the heart is beating. It is comprised of a xenograft, processed to render the tissue non-viable, attached to an inflatable framework (e.g., polymer skin), which is implanted with an included catheter and when in situ erected with a radiopaque solution. Typically devices associated with implantation (e.g., introducer, catheter, fluid inflation system, retrieval system) are included.	III

12922	59523	Antimicrobial wound irrigation solution	Нянгийн эсрэг шархны усалгааны уусмал	A solution that includes an antimicrobial agent (e.g., sodium hypochlorite) intended to be used to irrigate and clean acute or chronic wounds, including first or second degree burns, to aid in autolytic debridement and to moisten a wound dressing(s), and to support natural healing. It is intended to be used in the home or healthcare facility. After application, this device cannot be reused.	III
12923	59681	Intraoperative/postoperative therapeutic x-ray system spherical applicator	Хагалгааны дотор/хагалгааны дараах эмчилгээний рентген системийн бөмбөрцөг түрхэгч	A non-sterile component of an intraoperative/postoperative therapeutic x-ray system designed to be attached to and cover the x-ray source for direct patient contact when the system is used in the treatment of certain clinical conditions (e.g., breast cancer). It has a ball-shaped distal end that is typically inserted into a resected tumour bed for the irradiation of the tumour bed and/or margins during an operation. It may be supplied as a set of graduated sizes with a sterilization tray. This is a reusable device intended to be sterilized prior to use.	III
12924	59688	Femoral head/stem prosthesis adaptor	Гуяны толгой/ишний протезийн адаптер	A sterile implantable tubular device designed to connect a femoral head prosthesis to the trunnion of a femoral stem prosthesis. It is typically intended to be used as part of a total hip arthroplasty (THA) revision to correct offset, neck length, lateralization, and anteversion/retroversion where there is a good fitting stem; it may also be used as part of a primary procedure. It is made of metal [e.g., titanium (Ti) alloy] and is available in various sizes and shapes; it is intended to be used with a dedicated femoral head prosthesis.	III

12925	59874	Endoscopic manual linear stapler	Дурангийн гарын авлагын шугаман үдэгч	A sterile, hand-held, manual surgical instrument intended to be used during endoscopic surgery for the application of surgical staples to approximate internal soft tissues (e.g., two ends of bowel) or for fixation of a surgical mesh to tissue during a laparoscopic procedure; it has no cutting function and may be used during open surgery. The device operates by a manual mechanism (e.g., trigger mechanism) whereby it applies single or multiple linear rows of surgical staples to a portion of tissue. The staples may be housed in a single-use loading unit (SULU) which may be included. This is a single-use device.	III
12926	60240	Aortic bi-leaflet mechanical heart valve prosthesis	Aortic bi-leaflet механик зүрхний хавхлагын протез	An artificial substitute for a natural aortic heart valve intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of two flat, semicircular, pyrolytic carbon-coated or polymer leaflets that pivot about pyrolytic carbon or metal struts attached to the valve housing by hinges; the hinge points intersect the valve lumen resulting in a total of three openings. When pressurized blood hits the valve, the two halves of the circle fold away from the valve ring and allow blood to flow into the three openings before the valve flaps close again.	III
12927	60241	Mitral bi-leaflet mechanical heart valve prosthesis	Митрал хоёр хуудастай механик зүрхний хавхлагын протез	An artificial substitute for a natural mitral heart valve intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of two flat, semicircular, pyrolytic carbon-coated or polymer leaflets that pivot about pyrolytic carbon or metal struts attached to the valve housing by hinges; the hinge points intersect the valve lumen resulting in a total of three openings. When pressurized blood hits the valve, the two halves of the circle fold away from the valve ring and allow blood to flow into the three openings before the valve flaps close again.	III

12928	60242	Aortic heart valve bioprosthesis	Аортын зүрхний хавхлагын биопротез	A xenograft (e.g., porcine or bovine heart valve) intended to be implanted in a patient during open heart surgery to repair or replace a dysfunctional aortic heart valve. It is processed to render the tissue in the valve non-viable; it may be tissue only, or tissue attached to a metal or synthetic polymer framework. The device is typically used to treat acquired or congenital valvular disease.	III
12929	60243	Magnetic cell separation system reagent	Соронзон эсийг ялгах системийн урвалж	A sterile device that is a component of a magnetic cell separation system intended to selectively bind one or more specific epitopes expressed by cells in heterogeneous human cell preparations for the subsequent magnetic separation of a target cell population. The device is an epitope-specific ligand (e.g., monoclonal antibody sourced from a biologically derived cell line, antibody fragment, or recombinant peptide) coupled directly or indirectly to magnetic beads; the bound cells are retained in a magnetic column and separated from the initial cell preparation. This is a single-use device.	III
12930	60244	Mitral heart valve bioprosthesis	Зүрхний митрал хавхлагын биопротез	A xenograft (e.g., porcine or bovine heart valve) intended to be implanted in a patient during open heart surgery to repair or replace a dysfunctional mitral heart valve. It is processed to render the tissue in the valve non-viable; it may be tissue only, or tissue attached to a metal or synthetic polymer framework. The device is typically used to treat acquired or congenital valvular disease.	III
12931	60245	Aortic transcatheter heart valve bioprosthesis, stent-like framework	Aortic transcatheter зүрхний хавхлагын биопротез, стент хэлбэрийн хүрээ	An implantable xenograft (e.g., bovine, porcine) intended to be used to repair/replace a stenosed and/or regurgitant aortic heart valve, or previously-implanted aortic heart valve prosthesis, and which is designed to be implanted with a catheter via transarterial access (e.g., femoral, subclavian, aortic) or transapical access while the heart is beating. It is comprised of the xenograft, processed to render the tissue non-viable, attached to an expandable metal framework, which is implanted with an included catheter, and when in situ, may be expanded with a balloon or self-expand. Typically devices associated with implantation (e.g., catheter, introducer) are included.	III

12932	60246	Mitral transcatheter heart valve bioprosthesis	Митрал транскатетер зүрхний хавхлагын биопротез	An implantable xenograft (e.g., bovine) intended to be used to repair/replace a stenosed or regurgitant mitral heart valve, or previously-implanted mitral heart valve prosthesis, and which is implanted with a catheter via percutaneous access (e.g., transfemoral, transapical) while the heart is beating. It is comprised of the xenograft, processed to render the tissue non-viable, attached to a metal framework (which may be covered with a synthetic polymer material) that is expandable in situ; it may also include a synthetic polymer subannular valve anchoring component. Devices to assist implantation (e.g., catheter, introducer) are typically included.	III
12933	60247	Pulmonary transcatheter heart valve bioprosthesis	Уушигны транскатетер зүрхний хавхлагын биопротез	An implantable xenograft (e.g., bovine, porcine) intended to be used to repair/replace a stenosed or regurgitant pulmonary heart valve prosthesis (previously implanted), or native pulmonary valve anatomy that may have been surgically repaired, and which is designed to be implanted with a catheter via vascular access. It may be attached to an expandable metal framework which may be expanded with a balloon or self-expand, and may include other material types (e.g., synthetic polymer). Devices associated with implantation (e.g., catheter, introducer) may be included.	III
12934	60337	Pulmonary heart valve bioprosthesis	Уушигны зүрхний хавхлагын биопротез	A xenograft (e.g., porcine or bovine heart valve) intended to be implanted in a patient during open heart surgery to repair/replace a dysfunctional pulmonary heart valve, or to replace a pulmonary valve in patients undergoing a pulmonary autograft (Ross) procedure. It is processed to render the tissue in the valve non-viable; it may be tissue only, or tissue attached to a metal or synthetic polymer framework. The device is typically used to treat acquired or congenital valvular disease.	III

12935	60350	Aortic heart valve bioprosthesis/synthetic polymer aorta graft	Аортын зүрхний хавхлагын биопротез/ синтетик полимер аорт шилжүүлэн суулгах	An implantable xenograft (e.g., porcine or bovine heart valve) fitted with a length of synthetic polymer blood vessel (vascular graft) intended to be implanted in the heart during open heart surgery to simultaneously replace a dysfunctional aortic heart valve and repair/replace a damaged or diseased ascending aorta (e.g., in cases of aneurysm, dissection or dilatation). It is processed to render the tissue in the valve non-viable while the attached synthetic blood vessel is designed to conform to the aortic root anatomy.	III
12936	60361	Implantable sleep apnoea treatment system pulse generator	Суулгах боломжтой нойрны апноэ эмчилгээний системийн импульсийн генератор	A battery-powered, implantable component of an implantable sleep apnoea treatment system intended to deliver electrical stimulation to the hypoglossal nerve [targeted hypoglossal nerve stimulation (THN)] for the home management of obstructive sleep apnoea (OSA). The electrical stimulation may be autonomous at a fixed rate, or regulated by a respiration motion sensor. It consists of a pulse generator typically implanted in or near the anterior triangle of the neck, an insulated connecting wire, and an electrode cuff which is placed in contact with the hypoglossal nerve. The device is controlled and charged telemetrically by an external device.	III
12937	60363	Implantable electrical stimulation device management software	Суулгах боломжтой цахилгаан өдөөх төхөөрөмжийн удирдлагын программ хангамж	A software program intended to assist with the management of an implantable electrical stimulator associated with stimulation of the spinal cord, non-auditory peripheral nerves, brain, and/or muscles; it is not intended to manage hearing assistive implants. It may be intended for use in one or more areas of functionality including: 1) configuration of a variety of electrical pulse parameters (e.g., amplitude, frequency, width) for the provision of periodic electrical stimulation; 2) post-implantation visualization; 3) assessment of programming parameters; 4) collection of patient clinical data.	III

12938	60373	Implantable knee unloader	Суулгах боломжтой өвдөг буулгагч	A sterile, implantable metallic device intended to reduce the load on the medial compartment of the knee for the treatment of degenerative articular cartilage (e.g., osteoarthritis) without any other alteration to the joint (i.e., no other arthroplasty or prosthesis implant). It typically consists of bases fixed to the medial side of the femoral and tibial condyles, which hold in place a spring-like absorber designed to absorb, redistribute or shift loads on the medial knee compartment. The implant is subcutaneous and extracapsular, and is typically introduced through small skin incisions. It is typically supplied with the required screws and surgical instruments necessary for implantation.	III
12939	60421	Breast brachytherapy system applicator, remote-afterloading	Хөхний брахи эмчилгээний систем түрхэгч, алсын зайнаас ачаалах	A sterile, remote-afterloading brachytherapy applicator specifically designed for use in radiation therapy treatments of the breast. It is typically designed for temporary implantation within the breast and serves as a guide for computer-controlled placement and removal of single or multiple radioactive sources. Included are various types of applicators such as hollow needles, tubes, or catheters, and their associated components. This is a single-use device.	III
12940	60423	Aortic bi-leaflet mechanical heart valve prosthesis/biologic-polymer aorta graft	Аортын хоёр хуудас механик зүрхний хавхлагын протез/биологийн-полимер аорт шилжүүлэн суулгах	An artificial substitute for a natural aortic heart valve fitted with a length of biologic-polymer blood vessel (vascular graft) intended to be implanted during open heart surgery to simultaneously replace a dysfunctional aortic heart valve and repair/replace a damaged or diseased ascending aorta (e.g., in cases of aneurysm, dissection or dilatation). The valve component consists of two flat, semicircular, pyrolytic carbon-coated or polymer leaflets that pivot about struts attached to the valve housing by hinges; the synthetic polymer blood vessel is designed to conform to the aortic root anatomy and is impregnated with a bioabsorbable animal-derived gelatin.	III

12941	60424	Radiotherapy protection spacer	Цацраг эмчилгээнээс хамгаалах зай	A sterile, bioabsorbable material (e.g., liquid or gel) intended to be injected between the prostate and the rectum prior to radiotherapy of the prostate, to increase the distance between the prostate and the anterior rectal wall, thereby reducing exposure of the rectum to radiation. It is typically comprised of hyaluronic acid (HA) and may be available in a prefilled syringe. This is a single-use device.	III
12942	60467	Biologic-polymer aorta graft	Биологийн-полимер аорт шилжүүлэн суулгах	A biologic-polymer device intended to be implanted as a substitute for the ascending aorta when intraoperatively coupled with an aortic heart valve bioprosthesis for simultaneous replacement of the ascending aorta and the aortic valve, typically to treat aneurysm, dissection, or other disease conditions of the aorta combined with disease or degeneration of the aortic valve. It is typically made of woven polyester impregnated with absorbable purified animal-derived gelatin or collagen, and may contain metal (e.g., titanium) components at the point of attachment to the valve prosthesis. Disposable devices associated with implantation may be included.	III
12943	60503	Vertebral bone filler, partially-bioabsorbable	Нурууны яс дүүргэгч, хэсэгчлэн био шингэдэг	A sterile substance intended to be used to replace cortical/cancellous bone in a vertebral body to stabilize vertebral compression fractures (VCFs) caused by cancer, osteoporosis, or trauma. The device is typically a resin made of polymethylmethacrylate (PMMA) mixed with hydroxyapatite, and designed to be implanted during a balloon kyphoplasty or vertebroplasty procedure. This device does not contain an antibiotic agent. After application, this device cannot be reused.	III

12944	60504	Vertebral bone filler, bioabsorbable	Нугаламын яс дүүргэгч, био шингэдэг	A sterile substance intended to be used to replace cortical/cancellous bone in a vertebral body to stabilize vertebral compression fractures (VCFs) caused by cancer, osteoporosis, or trauma. The device is typically a sterile powder made of a calcium compound (e.g., calcium phosphate, calcium carbonate, hydroxyapatite), that is mixed with its sterile diluent prior to implantation, and designed to be implanted during a balloon kyphoplasty or vertebroplasty procedure. This device does not contain an antibiotic agent. After application, this device cannot be reused.	III
12945	60511	Reverse shoulder prosthesis body	Урвуу мөрний хиймэл бие	A sterile implantable component of a reverse shoulder prosthesis that consists of a metallic piece [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo)], which may be coated [e.g., with hydroxyapatite (HA)], intended to form a connection between a humeral stem prosthesis and a reverse shoulder prosthesis cup.	III
12946	60512	Shoulder humeral body prosthesis	Мөрний ясны протез	A sterile implantable component of a total shoulder prosthesis intended to form a connection between a humeral stem prosthesis and a humeral head prosthesis. It is made of metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo)] or titanium (Ti)] and is used in a modular shoulder replacement system.	III
12947	60513	Ceramic reverse shoulder prosthesis cup	Керамик урвуу мөрний протезийн аяга	A sterile implantable component of a reverse shoulder prosthesis that consists of a ceramic cup intended to be attached to either a humeral stem prosthesis or humeral body component, and to articulate with the reverse shoulder head.	III
12948	60514	Metallic reverse shoulder prosthesis cup	Урвуу мөрний протезийн металл аяга	A sterile implantable component of a reverse shoulder prosthesis that consists of a metal cup intended to be attached to either a humeral stem prosthesis or humeral body component, and to articulate with the reverse shoulder head.	III
12949	60518	Resurfacing humeral head prosthesis fixation peg	Хумерын толгойн протезийн бэхэлгээний хавчаарыг сэргээх	An implantable device intended to be used as an attachment for a resurfacing humeral head prosthesis joint to treat a disease-damaged (e.g., arthritic) shoulder joint. It consists of a metallic peg [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel] inserted into the humeral head so that the prosthesis on the humeral articulating surface can be attached.	III

12950	60623	Transfemoral amputation tissue-reinforcement implant	Трансфемораль ампутацын эдийг бэхжүүлэх суулгац	A device designed to be implanted into the intramedullary canal of the residual femur after transfemoral (above-the-knee) amputation to shape/reinforce the subcutaneous tissues of the distal end of the thigh to improve support for an external transfemoral prosthesis. It consists of a metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] rod designed to project beyond the femur, but not through the skin, with an attached subcutaneous bulb-shaped synthetic polymer (e.g., ultrahigh molecular weight polyethylene (UHMWPE)]) component. It is available in a range of diameters and lengths.	III
12951	60701	Anal tissue reconstructive material	Шулуун гэдсээр эдийг нөхөн сэргээх материал	A sterile, bioabsorbable, microbe-derived substance intended for submucosal injection in the anal canal to add volume by serving as a space-occupying supplement (bulking agent) to the intercellular matrix of connective tissue in the treatment of faecal incontinence; it does not include a local anaesthetic agent. It is in the form of a gel of biosynthesized dextranomer microspheres and hyaluronic acid (HA) derived from bacteria. The material is typically preloaded in a disposable syringe.	III
12952	60704	Urinary tract reconstructive material, synthetic polymer, non-bioabsorbable	Шээсний замын нөхөн сэргээх материал, синтетик полимер, био шингэдэггүй	A sterile, implantable, non-bioabsorbable synthetic material (e.g., hydrophilic polyacrylamide gel) intended for submucosal injection in the urinary tract (urethra, urinary bladder, and/or distal ureter) to add volume by serving as a space-occupying supplement (bulking agent) to the intercellular matrix of connective tissue in the treatment of stress urinary incontinence (SUI) and/or vesicoureteral reflux (VUR). It is in the form of a gel material typically preloaded in a disposable syringe and is implanted using an endoscope and/or other dedicated instruments.	III

12953	60710	Femoral artery closure plug/patch, collagen	Гуяны артерийн бөглөө/наалт, коллаген	An implantable, bioabsorbable device designed for haemostasis/closure of a puncture site, through pressure/compression, on a patient having undergone femoral artery catheterization; it is intended as an alternative to manual compression or surgical techniques to reduce the time to haemostasis. It consists of an animal-derived collagen plug that is implanted using an included delivery device (e.g., guidewire, hand-held delivery unit) onto the extravascular surface of the femoral artery access site (top of arteriotomy site), and may be held in place with an included synthetic, bioabsorbable patch/anchor/suture to achieve haemostasis.	III
12954	60789	Intracardiac pacemaker	Зүрхний зүрхний аппарат	A battery-powered, hermetically-sealed pulse generator impregnated with a steroid (e.g., dexamethasone) intended to be implanted with a catheter, via transvenous access, into the right ventricle (i.e., single-chamber pacing) of an arrhythmic heart to generate/conduct electrical impulses to improve cardiac output. It contains sensors to detect changes in the body (e.g., motion, breathing frequency) and to adjust the pacing rate accordingly (rate-responsive). Wireless telemetry with external devices enables programming adjustments and may allow on-going heart monitoring; it does not provide defibrillation therapy. Disposable devices associated with implantation may be included.	III
12955	60792	Facet joint prosthesis	Нүүрний үений протез	A sterile implantable device intended to resurface and/or replace a degenerative or otherwise diseased vertebral facet (apophyseal, zygapophyseal) joint. It typically consists of small plate-like metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr)] device intended to be fixed to the superior and inferior articulating surfaces of the joint. Fixation may be by means of a trans-laminar or trans-facet screw or bolt.	III

12956	60794	Heart ventricle partitioning implant	Зүрхний ховдол хуваах суулгац	A device intended to be implanted in an ischemic-compromised left ventricle to isolate the malfunctioning portion of the ventricle to improve heart function and help manage congestive heart failure; it is designed to improve diastolic compliance and reduce end-diastolic pressure by changing ventricular geometry. It typically consists of a metal and polymer umbrella-shaped device with anchors around the rim to attach to the endocardium, and is designed to be implanted percutaneously (transarterial) using a dedicated catheter. Typically disposable devices associated with implantation (e.g., catheter, introducer) are included.	III
12957	60846	Heart ventricle approximation implant	Зүрхний ховдолын ойролцоо суулгац	An implantable device intended to reconfigure abnormal geometry of the left ventricle of the heart to improve heart function by isolating scar tissue resulting from an anteroseptal myocardial infarction. It is in the form of two orthogonal tags, held together by a suture, implanted outside of the left ventricle so that one tag is on the right side of the ventricular septum and the other is on the epicardium adjacent to the left ventricle. Approximation of the tags creates a fold which isolates the scarred tissue. The device is implanted using dedicated, single-use delivery devices, during an open surgical or minimally-invasive thoracoscopic procedure.	III
12958	60881	Intracardiac pacemaker extraction catheter	Зүрхний зүрхний аппарат олборлох катетер	A sterile, steerable flexible tube with a distal snaring mechanism intended to be introduced into the right ventricle of the heart, via transcutaneous peripheral venous access (e.g., femoral vein), to remove an implanted intracardiac pacemaker; it may also be used to remove an intracardiac pacemaker that has migrated to the peripheral vasculature. It typically has control handle with flush ports, and a single- or multi-looped snare which emerges from the distal tip of the catheter; it may include devices dedicated to catheter introduction (e.g., introducer, guidewire). This is a single-use device.	III

12959	60887	Intracardiac pacemaker programming interface unit	Зүрхний зүрхний аппаратын програмчлалын интерфейсийн нэгж	An external, electronic device intended to interface a dedicated patient lead (cable with skin surface electrodes) with a pacemaker programmer (from which it draws its power), to enable noninvasive interrogation and programming of an implanted intracardiac pacemaker using high frequency electrical pulses (as an alternative to wireless communication); it is also intended to collect electrocardiogram (ECG) data for observation of pacemaker function. Pacemaker communication and ECG data collection is achieved via the patient cable/electrodes which are typically included. The device is intended to be used by a healthcare professional in a clinical setting.	III
12960	60906	Periodontal tissue reconstructive material	Periodontal эдийг нөхөн сэргээх материал	A sterile viscous material intended to be injected into the buccal mucosa to treat deficiencies of the gingiva (e.g., interdental papillae), through augmentation, during the treatment of intermediate stage periodontal disease. It is in the form of a gel and contains materials derived from a bacterial source [e.g., bacterial hyaluronic acid (HA)]. It is typically available in a prefilled syringe and must be administered by a healthcare professional.	III
12961	60910	Coronary venous pacing lead	Титэм судасны венийн хэмнэлтийн хар тугалга	An implantable flexible wire with an electrode, insulated with non-conductive material except at its ends, which serves as an electrical conductor to transmit pacing impulses from an implanted cardiac resynchronization therapy (CRT) pulse generator to the left ventricle of the heart. It may also transmit electrical responses from the heart back to the pacemaker; it is not intended to conduct defibrillation impulses. The electrode end is introduced into a cardiac vein through transvenous approach via the coronary sinus. It is typically impregnated with a steroid (e.g., dexamethasone) intended to elute into the tissues to reduce inflammation.	III

12962	60923	Dura mater graft, biologic-polymer composite	Dura mater graft, биологи-полимер нийлмэл	A sterile implantable device comprised of both an animal-derived biologic (e.g., bovine/porcine collagen) and a bioabsorbable synthetic polymer intended to be used for the temporary or permanent repair or replacement of the dura mater during a neurosurgical procedure. Restoration of the dura mater maintains the integrity of the brain and spinal cord, and helps prevent leakage of the cerebrospinal fluid (CSF). It is typically supplied in the form of a patch available in various sizes and shapes (e.g., square or rectangular) intended to be overlaid on the patient's dura; it may be held in place with sutures or sealant.	III
12963	60956	Pacing/defibrillation lead tunneller	Pacing/defibrillation lead tunneller	A sterile hand-held manual surgical instrument designed to create a tunnel (an artificial passageway) through subcutaneous tissue for the placement of an implantable extracardiac lead/electrode. It is a long, thin, semi-flexible rod with a rounded distal tip and a handle at the proximal end to allow the surgeon to push through body tissues; it may include an integrated sheath (e.g., split sheath) intended to assist lead placement. This is a single-use device.	III
12964	60957	Vascular graft extraluminal mesh-sleeve, coronary	Судасны шилжүүлэн суулгах гаднах торон ханцуй, титэм судас	A non-bioabsorbable implantable device intended to be used for the extraluminal (external) support of a coronary artery bypass graft (CABG) [e.g., saphenous vein graft]. It is a tubular, metal [e.g., cobalt-chrome (Co-Cr)] mesh intended to improve the characteristics of the vascular graft (e.g., luminal uniformity, flow capability, luminal strength/stability, diameter matching) and reduce the risk of graft failure.	III
12965	61006	Humeral stem extension prosthesis	Хумерын ишний сунгалтын протез	A sterile implantable component of a total shoulder prosthesis intended to be fixed to the proximal end of a humeral stem when there has been a large resection of the humerus (e.g., due to trauma or tumour) to achieve the additional length required for connection to a humeral body. It is a modular arrangement of interlocking parts so the length can be configured intraoperatively. It is made of metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo), or titanium (Ti)] and is used in a modular shoulder replacement system.	III

12966	61008	Humeral stem extension locking ring	Хумерын ишний өргөтгөлийн түгжих цагираг	A sterile implantable component of a total shoulder prosthesis designed to be used with a humeral stem extension prosthesis to lock the final set of modular segments in place. It is a threaded ring made of metal [e.g., cobalt-chrome-molybdenum (Co-Cr-Mo), or titanium (Ti)].	III
12967	61057	Implantable-device infection control barrier	Суулгах төхөөрөмж-халдвараас хамгаалах саад	A sterile, bioabsorbable, implantable substance intended to be applied as a protective barrier over the surface of an implantable device (e.g., orthopaedic prosthesis) prior to implantation to prevent bacterial adhesion, colonization, and biofilm formation through physical means only; it may be used in conjunction with a separate antimicrobial agent. It contains microbe-derived materials [e.g., hyaluronic acid (HA)] and may be supplied in dry form (e.g., powder) intended to be hydrated prior to use; disposable devices associated with application/preparation (e.g., syringes, adaptors, application nozzle) may be included. This is a single-use device.	III
12968	61118	Cerebrospinal fluid catheter tubing set	Тархи нугасны шингэний катетер хоолойн багц	A two-way tubing with a stopcock designed to connect the proximal end of a cerebrospinal fluid (CSF) drainage catheter directly to a drainage bag or an intracranial pressure monitor via a Luer connection. It is typically made of polymer materials [e.g., polyvinyl chloride (PVC)] and profiled at both ends to create leak-proof connections. It may also feature a tap-like valve to isolate the line when injecting, flushing, or replacing the drainage bag. This is a single-use device.	III
12969	61126	Implantable pulse generator mesh bag, bioabsorbable	Суулгах импульс үүсгэгч торон уут, био шингэдэг	An implantable woven/knitted or porous bag made from a bioabsorbable synthetic polymer(s) intended to envelop an implantable pulse generator (IPG) (e.g., cardiac pacemaker/defibrillator, neurostimulator) to stabilize the implant in the subcutaneous pocket in which it is implanted. The device includes an antimicrobial coating intended to reduce the risk of infection.	III

12970	61158	Atrial cerebrospinal fluid catheter	Тосгуурын тархи нугасны шингэний катетер	A flexible tube intended to be implanted as the distal component of a ventriculoatrial shunt to channel cerebrospinal fluid (CSF) to the right atrium where it can be absorbed into the body. It is intended to be part of a therapeutic measure for situations where increased CSF causes elevated intracranial pressure (hydrocephalus). Disposable devices associated with implantation may be included.	III
12971	61159	Peritoneal/atrial cerebrospinal fluid catheter	Хэвлийн/тосгуурын тархи нугасны шингэний катетер	A flexible tube intended to be implanted as the distal component of a ventriculo-peritoneal/atrial shunt, to channel cerebrospinal fluid (CSF) to either the peritoneal cavity or the right atrium (i.e., dual-capability) where it can be absorbed into the body. It is intended to be part of a therapeutic measure for situations where excess CSF causes elevated intracranial pressure (hydrocephalus). Disposable devices associated with implantation may be included.	III
12972	61176	Implantable vibrator bone-conduction hearing implant system	Суулгах боломжтой чичиргээт яс дамжуулагч сонсголын суулгацын систем	A battery-powered, electromechanical device assembly intended to compensate for impaired hearing by transmitting vibrations, from transduced sound waves, through the skull to the inner ear via an implanted vibrator. It typically consists of an externally worn microphone/sound processor, and a sterile vibrator assembly which is implanted in the skull (e.g., mastoid or temporal bone). The microphone receives sound waves and converts them into electrical signals (radio waves) which are sent to the vibrator wirelessly through the skin (transcutaneously) for the transmission of vibrations to the inner ear via bone conduction. It is used to treat conductive and mixed hearing loss.	III

12973	61198	Posterior lumbar spine prosthesis	Бүсэлхий нурууны арын протез	A sterile implantable device designed to replace anatomical structures removed from the posterior aspect of lumbar vertebrae (i.e., the lamina, facet joint, and bony elements) during spinal decompression surgery to provide stability to, and enable normal range of motion of, the lumbar spine. It consists of a two-plate unit positioned in the posterior midline, which connects horizontal rods that are attached laterally to adjacent vertebrae with pedicle screws; the plates include interlocking trunnions for rotational/angular motion. The device may be a single unit or modular assembled during implantation. Dedicated tools for implantation are included.	III
12974	61201	Atherectomy system lubricant	Атерэктомийн системийн тосолгооны материал	A sterile substance intended to reduce friction between components of a mechanical atherectomy system (e.g., guidewire and rotating drive shaft) during operation. It is typically a lipid-based emulsion that is pumped through a catheter during the procedure, by a dedicated pump, to provide lubrication and sometimes cooling with added saline. This is a single-use device.	III
12975	61205	Mechanical atherectomy system, coronary, line-powered	Механик атерэктомийн систем, титэм судас, шугамаар ажилладаг	An assembly of devices intended to mechanically disrupt/remove atheroma plaque from the walls of coronary arteries. It typically includes a mains electricity (AC-powered) energy-producing generator with monitoring functions, a remote control or foot-switch, a handpiece (to which the catheter connects) and a dedicated disposable catheter with a cutting or abrasive head that transmits the mechanical energy to the atheroma. The system may include an integrated irrigation/suction system and includes/requires accessory devices for its function (e.g., saline/lubricant, pump, guidewire).	III

12976	61219	Dermal tissue reconstructive material, synthetic polymer, bioabsorbable	Арьсны эдийг нөхөн сэргээх материал, синтетик полимер, био шингэдэг	A sterile, bioabsorbable, aqueous solution containing a chemically synthesized polymer (e.g., copolyamide) intended to be injected into the dermis/hypodermis of the skin to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), typically to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) associated with aging, injury, or degenerative lesions; it does not include a local anaesthetic agent. The material is typically preloaded in a disposable syringe.	III
12977	61281	Peripheral vascular guidewire extension	Захын судасны чиглүүлэгч утасны өргөтгөл	A long, thin, sterile wire designed to provide the necessary length to allow the exchange of a catheter, or other interventional device, while maintaining the intravascular position of the catheter guidewire during an interventional procedure in the peripheral vasculature. It is typically made of polymer-coated [e.g., polytetrafluoroethylene (PTFE)] stainless steel and is supplied with a connector (e.g., self-locking taper) to facilitate its joining to the proximal end of the in situ guidewire to create the extension (e.g., 150 mm). After the catheter exchange, the guidewire extension can be detached and the guidewire used as intended. This is a single-use device.	III
12978	61301	Partial wrist radius prosthesis	Бугуйн радиусын хэсэгчилсэн протез	An implantable device designed to replace the distal end of the radius during a hemiarthroplasty of the wrist, typically to treat a complex distal radial fracture. It is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] and/or polyethylene (PE) and may be coated [(e.g., hydroxyapatite (HA)]. Fixation devices for implantation (e.g., screws) may be included with the prosthesis and implantation may be performed with or without bone cement.	III

12979	61376	Intracerebral infusion/drainage catheter, long-term	Тархины дотор дусаах/ус зайлуулах катетер, урт хугацааны	A sterile, flexible tube intended to be surgically inserted through the skull for long-term (> 30 days) subdural access to the brain (e.g., cerebral ventricles, cystic tumours) for cerebrospinal fluid (CSF) drainage and/or infusion of materials (e.g., chemotherapeutic agents); it is typically used for measurement of intracranial pressure (ICP) and as part of a shunt system. It may include an attached port/reservoir at its proximal end that is placed subcutaneously to facilitate material infusion/collection, and/or accessory devices intended to facilitate catheter introduction and/or stabilization (e.g., stylet, catheter holder); it does not include a sensor. This is a single-use device.	III
12980	61384	Heart ventricle restorative material	Зүрхний ховдолыг нөхөн сэргээх материал	An implantable material intended to be injected into the wall of the left ventricle of the heart to treat heart failure in dilated cardiomyopathy by increasing the thickness of the ventricular wall and restoring ventricle geometry, therefore improving cardiac function by reducing wall stress. It consists of a natural hydrogel that can be injected during an open or minimally-invasive procedure and that is encapsulated in the cardiac tissue so that it is not absorbed. Disposable devices associated with implantation may be included.	III
12981	61393	Multiple active implantable device programmer	Олон идэвхтэй суулгацын төхөөрөмж програмист	An external, portable, non-dedicated, electrically-powered device intended to change, noninvasively (i.e., wirelessly), the operating parameters (programs) of multiple types of implanted electronic devices (e.g., multiple types of pulse generators); it may in addition program the external trial device used prior to the implanted one. It includes controls (e.g., graphical user interface), integrated software, and a wireless communication transmitter and receiver. It typically also provides historic and/or current information regarding the performance of the implant.	III

12982	61398	Intracerebral sensor catheter, short-term	Тархины дотоод мэдрэгч катетер, богино хугацааны	A flexible tube with a sensor at the distal end intended to be surgically inserted through the skull for short-term (≤ 30 days) access to the ventricular and/or parenchymal areas of the brain to measure intracranial parameters [e.g., intracranial pressure (ICP), temperature, partial pressure of oxygen (pO2)]; it may in addition be intended for cerebrospinal fluid (CSF) drainage and/or infusion of materials (e.g., chemotherapeutic agents, radioisotopes). It may include accessory devices intended to facilitate catheter introduction, stabilization, and/or fluid collection/infusion (e.g., stylet, bolts, drills, drainage/infusion port/reservoir). This is a single-use device.	III
12983	61399	Intracerebral infusion/drainage catheter, short-term	Тархины дотор дусаах/ус зайлуулах катетер, богино хугацааны	A flexible tube intended to be surgically inserted through the skull for short-term (≤ 30 days) subdural access to the brain (e.g., cerebral ventricles, cystic tumours) for cerebrospinal fluid (CSF) drainage and/or infusion of materials (e.g., chemotherapeutic agents); it may also be intended for measurement of intracranial pressure (ICP). It may include an attached port/reservoir at its proximal end that is placed subcutaneously to facilitate material infusion/collection, and/or accessory devices intended to facilitate catheter introduction and/or stabilization (e.g., stylet, bolts, drills, catheter holder); it does not include a sensor. This is a single-use device.	III
12984	61400	Epidural sensor catheter	Эпидураль мэдрэгч катетер	A flexible tube with a sensor at the distal end intended to be surgically inserted through the skull for short-term (≤ 30 days) access to the cranial epidural space to measure intracranial parameters [e.g., intracranial pressure (ICP), temperature]. It may include accessory devices intended to facilitate catheter introduction and stabilization (e.g., bolts, drills, catheter holder). This is a single-use device.	III
12985	61401	Intracerebral catheter cranial-fixation kit	Тархины доторх катетер гавлын ясны бэхэлгээний хэрэгсэл	A collection of sterile devices intended to be used to affix an intracerebral sensor/infusion/drainage catheter on the skull of a patient. It includes cranial screws and screwing tools; it does not include the intracerebral catheter, and does not include devices intended for long-term implantation (> 30 days). This is a single-use device.	III

12986	61402	Intracerebral catheterization drill bit	Тархины доторх катетержуулалтын өрмийн хошуу	A sterile drilling endpiece intended to be used for drilling the skull of a patient to facilitate the introduction and fixation of an intracerebral sensor/infusion/drainage catheter. It is intended to be attached to a manual or electric drilling device. This is a single-use device.	III
12987	61493	Spinal port/catheter	Нурууны порт/катетер	A sterile implantable device intended to provide access to the subarachnoid (intrathecal) space of the spinal column for infusion (e.g., chemotherapeutic agents, pain relieving drugs) and/or drainage [e.g., cerebrospinal fluid (CSF)]. It consists of a subcutaneous chamber, with a self-sealing puncturable septum for percutaneous insertion of a hypodermic needle, attached to a distal catheter which passes into the target site. It is made of metal [e.g., titanium (Ti)] and synthetic polymers (e.g., silicone); disposable devices associated with implantation may be included.	III
12988	61494	Vascular port/catheter	Судасны порт/катетер	A fully-implantable device assembly intended to provide access to arteries/veins (excludes coronary and intracerebral circulation) for infusion (e.g., chemotherapeutic agents, blood transfusions) and/or drainage (e.g., blood). It consists of: 1) a subcutaneous chamber, with a self-sealing puncturable septum for percutaneous insertion of a hypodermic needle; and 2) an attached catheter which passes into the arteries/veins. It may consist of two chambers attached to a dual-lumen catheter for simultaneous infusion. It is made of metal [e.g., titanium (Ti)] and/or synthetic polymers (e.g., silicone); disposable devices associated with implantation may be included.	III
12989	61500	Epicardial guide-catheter	Эпикардийн чиглүүлэгч-катетер	A sterile, steerable, invasive, flexible tubular device intended to provide percutaneous sub-xiphoid access to enable introduction of a diagnostic catheter (not included) to the epicardial surface of the heart. It includes a haemostatic valve, and typically an inner dilator, and a guidewire. This is a single-use device.	III

12990	61501	Pacing/defibrillation lead delivery catheter	Пасинг/дефибрилляцийн хар тугалга хүргэх катетер	A sterile, non-steerable, thin flexible tube intended to be introduced percutaneously into the cardiac anatomy (e.g., coronary sinus) to provide a conduit for the delivery of a cardiac pacing and/or defibrillation lead (not included). It may include additional synergistic catheters and is intended to be introduced through a separate catheter introducer sheath, which may be included along with additional devices dedicated to catheter introduction/function. It does not contain electrodes.	III
12991	61552	Deep brain electrical stimulation system lead	Гүн тархины цахилгаан өдөөх системийн хар тугалга	A sterile wire with a distal electrode, insulated with non-conductive material along its length, intended to be implanted in specific areas of the deep brain (e.g. basal ganglia) to conduct electrical pulses for the treatment of movement disorders (e.g. essential tremor, symptoms of Parkinson's disease, epilepsy, dystonia) psychiatric disorders (e.g. obsessive-compulsive disorder, depression, anxiety disorder), and/or to treat chronic, severe, intractable pain. It is intended to conduct electrical pulses from a separate deep brain electrical stimulation system pulse generator.	III
12992	61557	Silicone-sheet tissue reconstructive material	Силикон хуудас эдийг нөхөн сэргээх материал	A flat stretch of silicone elastomer typically modified to suit the patient anatomy and intended to be implanted for tissue reconstruction during a surgical procedure. The device may be reinforced (e.g., with polyester textile), and may be cut into different sizes and shapes for various reconstructive surgery applications (e.g., repair of nasal septum or orbital floor, perforated eardrum, or hernia/fissure of abdominal wall).	III
12993	61559	Femur/tibia shaft prosthesis	Гуяны яс/шилбэний гол протез	A sterile implantable device designed to replace the shaft (body) of the femur/tibia following resection of the femur/tibia (e.g., due to tumour). It typically connects proximally to a femoral stem prosthesis or knee tibia prosthesis and distally to a sleeve femoral/tibial extension, knee femur prosthesis, or body femoral/tibial extension stem; it is made of metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel]. Disposable devices associated with implantation may be included.	III

12994	61588	Implantable spinal cord electrical stimulation system programmer	Суулгах боломжтой нугасны цахилгаан өдөөх системийн программист	A battery-powered external device designed to change, telemetrically, one or more of the operating parameters (the programs) of an implanted spinal cord electrical stimulation system pulse generator (EPG). It includes controls (e.g., graphical user interface), integrated software, and a wireless communication transmitter and receiver. It will typically also provide historic and/or current information regarding the performance of the implant.	III
12995	61594	Central venous catheterization kit, short-term	Төвийн венийн катетержуулалтын хэрэгсэл, богино хугацааны	A collection of devices and materials intended for the short-term (<= 30 days) introduction of a central venous catheter (CVC) for various infusion/aspiration procedures (i.e., non-dedicated). Often referred to as tray, it includes a nonimplantable central venous catheter with devices dedicated to catheter introduction/function (e.g., introducer, guidewire), and non-dedicated supportive devices (e.g., drape, dressings, scalpel). This is a single-use device.	III
12996	61625	Cadaveric pulmonary artery bioprosthesis	Кадаврын уушигны артерийн биопротез	An implantable heart tissue allograft obtained from a human cadaver intended to be implanted in the heart during open heart surgery, to be used for repair or reconstruction of a dysfunctional right ventricular outflow tract. It is aseptically processed, and treated to render the tissue decellularized. It may be supplied in various configurations including pulmonary hemi-artery, pulmonary trunk and pulmonary branch.	III
12997	61680	Implantable cardiac device management application software	Суулгах зүрхний аппаратын удирдлагын программ хангамж	An application software program intended to be used in the management of an implantable cardiac device (e.g., monitor, pulse generator, pacemaker, defibrillator) by enabling computer-assisted functionality typically in one or more of the following areas: device programming; device function analysis; data extraction, storage, analysis and/or transfer; and clinical consultation/intervention planning. Depending on the functionality, it can run on dedicated hardware, an off-the-shelf computer (e.g., tablet, smartphone), or web-based servers.	III

12998	61707	Coronary artery brachytherapy system applicator, manual-afterloading	Титэм артерийн брахитерапийн системийн түрхэгч, гар ажиллагаа -ачаалал	A sterile flexible tube intended to deliver/remove radiation therapy sources into a coronary artery, typically into the lumen of an implanted stent, as part of a manual-afterloading brachytherapy system. It is introduced into the patient and subsequently connected to the brachytherapy system source transfer device; it includes radiopaque markers to monitor the position of the radiation source. Disposable devices associated with the procedure may be included (e.g., syringe, connectors). This is a single-use device.	III
12999	61727	Paediatric cardiopulmonary bypass cannula	Хүүхдийн зүрх, уушигны сувгийн суваг	A sterile tube intended to be used during open heart surgery on a paediatric patient (e.g., neonatal, infant) to access the arterial or venous vasculature surrounding the heart (i.e., intended for both venous and arterial access), to serve as a channel intended to be connected to an extracorporeal circuit for the transport of blood to or from a cardiopulmonary bypass system (heart-lung machine) circuit where the blood is pumped and oxygenated. It is typically a reinforced polymer tube which may include accessories/devices dedicated to introduction/function (e.g., introducer/connector). This is a single-use device.	III
13000	61747	Implantable ventricular circulatory assist system outflow cannula, animal-derived	Амьтны гаралтай ховдолын цусны эргэлтийг дэмжих системийн гадагшлуулах суваг	An implantable tube which includes animal-derived materials (e.g., synthetic polymer sealed with mammalian gelatin), intended to function as an outflow for an implantable ventricular circulatory assist system, to channel blood pumped from the left ventricle into the aorta via a surgically-created anastomosis.	III
13001	61748	Implantable ventricular circulatory assist system outflow cannula, synthetic polymer	Суулгах боломжтой ховдолын цусны эргэлтийг дэмжих системийн гадагшлах суваг, синтетик полимер	An implantable tube intended to function as an outflow for an implantable ventricular circulatory assist system, to channel blood pumped from the left ventricle into the aorta via a surgically-created anastomosis. It is made of a synthetic polymer(s) and does not include biologically-derived materials.	III
13002	61749	Implantable ventricular circulatory assist system inflow cannula, animal-derived	Суулгах боломжтой ховдолын цусны эргэлтийг дэмжих системийн дотогшлох суваг, амьтны гаралтай	An implantable tube which includes animal-derived materials (e.g., synthetic polymer sealed with mammalian gelatin), intended to function as an inflow for an implantable ventricular circulatory assist system, to channel blood from the left ventricle to the implanted system pump.	III

13003	61750	Implantable ventricular circulatory assist system inflow cannula, synthetic polymer	Суулгацын ховдолын цусны эргэлтийг дэмжих системийн дотогшлох суваг, синтетик полимер	An implantable tube intended to function as an inflow for an implantable ventricular circulatory assist system, to channel blood from the left ventricle to the implanted system pump. It is made of a synthetic polymer(s) and does not include biologically-derived materials.	III
13004	61778	Mitral annuloplasty transvalvular bridge	Митрал аннулопластик дамжих гүүр	A device intended to be implanted onto the annulus of the mitral valve to reduce mitral regurgitation by reducing annular diameter. It typically consists of anchoring portions which are fixed to the posterior and anterior mitral annulus, and a bridge which crosses the diameter of the valve and restrains the valve leaflets below the intra-annular plane. The device is semi-rigid and may include metallic, polymeric, and/or textile materials; it is available in various sizes. It is intended to be is implanted during an open or minimally-invasive surgical procedure. Disposable devices associated with implantation may be included.	III
13005	61785	Cardiac radio-frequency ablation system catheter	Зүрхний радио давтамжийн абляцийн системийн катетер	A sterile, flexible, steerable catheter intended to be used as part of a radio-frequency cardiac ablation system to apply radio-frequency alternating current to ablate areas of the endocardium of a beating heart in the treatment of cardiac arrhythmias; it is typically also intended to transmit electrical pacing stimuli to, and electrical responses from, the heart for electrophysiological (EP) mapping. It is intended to be introduced into the heart via venous access (e.g., femoral vein) and may contain monopolar and/or bipolar ablation electrodes. This is a single-use device.	III
13006	61786	Hip hemiarthroplasty femur prosthesis	Гуяны ясны үений протез	A sterile implantable device designed to replace the femoral neck and head during a hemiarthroplasty of the hip (replacing the femoral component only), typically to treat fractures of the femoral neck. It is a one-piece device made of uncoated metal [e.g., cobalt-chrome (Co-Cr), titanium (Ti), stainless steel] which articulates with the natural acetabulum. Fixation devices for implantation (e.g., screws and bolts) may be included and implantation may be performed with or without bone cement.	III

13007	61808	Vascular guide-catheter, reprocessed	Судасны чиглүүлэгч-катетер, дахин боловсруулсан	A sterile, flexible, single-lumen tube intended to be used for the percutaneous transluminal passage and placement of a diagnostic/interventional catheter or lead (e.g., pacing lead, balloon dilatation catheter) through its lumen, within the vascular system. It may be rigid or flexible, non-steerable or steerable, and the distal section of the tube can have a variety of preformed shapes (e.g., straight, hockey stick). It is not intended for infusion, and is not a microcatheter (i.e., not intended to access superselective small vessels). It may include a disposable percutaneous introduction set. This is a previously used single-use device that has been processed for an additional single-use.	III
13008	61811	Intracardiac ultrasound imaging catheter, steerable, reprocessed	Зүрхний доторх хэт авиан дүрслэлийн катетер, удирдах боломжтой, дахин боловсруулсан	A steerable, flexible tube with an ultrasonic phased-array imaging transducer at its distal tip designed for intracardiac echocardiography to enable intracardiac and possibly great vessel (e.g., pulmonary artery) visualization for the assessment of cardiac anatomy and physiology, and visualization of other devices in the heart; it is not intended for peripheral vascular or coronary artery insertion/imaging. It is introduced percutaneously, and includes controls to allow it to be manoeuvred (steerable). It is connected to an ultrasound system for image transmission/display. This is a previously used single-use device that has been processed for an additional single-use patient application.	III
13009	61841	Partial-resurfacing patella prosthesis	Хэсэгчилсэн гадаргуутай пателла протез	An implantable device designed to treat focal cartilage defects in the posterior surface of the patella by excision of the lesion and cemented fixation of the device in the surgically-prepared defect, with retention of the surrounding healthy articular cartilage. It typically consists of a disc-shaped device with a fixation stem, and is made of synthetic polymer [e.g., ultrahigh molecular weight polyethylene (UHMWPE)] mixed with a microbe-derived (biosynthetic) material [e.g., hyaluronic acid (HA)]. It is available in a range of sizes for treatment of different size lesions.	III

13010	61842	Partial-resurfacing humeral head prosthesis	Хумерын толгойн хэсгийг хэсэгчлэн нөхөн сэргээх протез	A sterile implantable device designed to treat focal cartilage defects in the humeral head by excision of the lesion and uncemented fixation of the device in the surgically-prepared defect, with retention of the surrounding healthy articular cartilage. It typically consists of a plug-like device and is made of synthetic polymer [e.g., ultrahigh molecular weight polyethylene (UHMWPE)] mixed with a microbe-derived (biosynthetic) material [e.g., hyaluronic acid (HA)], attached to a fixation stem made of metal [e.g., titanium (Ti)]. It is available in a range of sizes for treatment of different size lesions.	III
13011	61854	Intracerebral cannula, nonimplantable, reusable	Тархины доторх суваг, суулгацгүй, дахин ашиглах боломжтой	A nonimplantable, rigid tube intended to be surgically inserted through the skull to access the brain (e.g., cerebral ventricles) for cerebrospinal fluid (CSF) drainage, infusion of materials, and/or for use as a port through which instruments, leads and/or probes can be passed to perform a variety of diagnostic, treatment, or surgical procedures. It is usually made of metal (e.g., stainless steel) and may include a stylet/trocar blade. This is a reusable device intended to be sterilized prior to use.	III
13012	61970	Vascular balloon catheter fill-media	Судасны бөмбөлөг катетер дүүргэх хэрэгсэл	A dedicated sterile solution (e.g., deuterium oxide) intended to be pumped into an appropriate vascular balloon catheter (e.g., cardiac laser system beam guide-catheter with balloon tip) to inflate the distal balloon during a vascular procedure. This is a single-use device.	III
13013	62000	Acromioclavicular joint stabilization implant	Акромиоклавикуляр үеийг тогтворжуулах суулгац	A sterile implantable device intended to be used to approximate/stabilize the acromioclavicular joint to facilitate healing of a disrupted coracoclavicular ligament (i.e., the device is not intended to replace the damaged ligament). It is in the form of a cord with a loop for attachment to the coracoid process at one end, with a component for fixation to the clavicle (e.g., screw) at the other end. It may be implanted arthroscopically or during open surgery, and disposable devices associated with implantation may be included.	III

13014	62045	Central venous catheter inside-out introduction set	Төв венийн катетер дотор-гадаа нэвтрүүлэх иж бүрдэл	A collection of sterile, invasive devices intended to enable introduction of a central venous catheter (CVC) into an occluded vein (e.g., subclavian) by creating a puncture site from the inside of the vein under fluoroscopic guidance. It typically includes: an introducer sheath, for initial vascular access via a secondary vein (e.g., femoral); a semi-rigid, noncoring, endovascular guide sheath assembly with a distal side-hole, intended to navigate into, and be stabilized by, the vascular occlusion; a percutaneous needle-wire, intended to puncture the vein/tissue to exit at the skin surface; and a sheath for introduction of a CVC; the catheter is not included. This is a single-use device.	III
13015	62150	Mitral annuloplasty perivalvular cord	Митрал аннулопластик первалвуляр утас	A device intended to be implanted onto the annulus of the mitral valve to reduce mitral regurgitation by reducing annular circumference. It is in the form of two or more implants consisting of synthetic polymer (e.g., polyester) pledgets strung together by a suture. The implant is anchored through the annulus, with one pledget on the ventricular side of the annulus and another on the atrial side. Plication (pulling together) of the pledgets creates a fold, thus decreasing annular circumference; the implants are secured with metal (e.g., stainless steel) lock. The device is implanted using a dedicated single-use delivery catheter assembly during a percutaneous, transfemoral procedure.	III
13016	62218	Coronary angioplasty balloon catheter, drug-coated	Титэм судасны ангиопластик бөмбөлөг катетер, эмээр бүрсэн	A flexible tube with a drug coating at its distal end designed for percutaneous transluminal coronary angioplasty (PTCA) to dilate an atherosclerotic stenotic coronary artery by controlled inflation of a distal distensible balloon, and to simultaneously release a drug intended to inhibit restenosis. It may also be intended for pre- or post-dilatation of a balloon-expandable stent (not included) in the coronary arteries. It may be available as an over-the-wire (OTW) or a rapid exchange (RX) type, and devices to assist catheterization may be included. This is a single-use device.	III

13017	62249	Custom-made organ/bone anatomy model/surgical guide kit	Захиалгат эрхтэн/ясны анатомийн загвар/мэс заслын гарын авлагын хэрэгсэл	A collection of custom-made devices intended to be used to assist anatomical visualization, surgical treatment planning, and intraoperative surgical procedures (e.g., orientation of implant components, guiding of surgical instruments). It consists of an anatomy model(s) of an organ/bone and an orthopaedic/craniomaxillofacial surgical guide(s) [e.g., for osteotomy, arthroplasty]; it is made of synthetic polymer materials and is manufactured by 3-D printing and CAD/CAM techniques to match the patient-specific contours of the target anatomical site. This is a single-use device intended to be sterilized prior to use.	III
13018	62266	Haemodynamic-modulation vessel repair implant, intracranial/carotid, bare-metal	Гемодинамик-модуляцын судас засах суулгац, гавлын дотор/каротид, нүцгэн металл	A tubular, self-expanding implant designed to be implanted in an intracranial and/or carotid artery (e.g., external carotid artery) for the haemodynamic repair of endovascular deformations (e.g., aneurysm, vessel perforation/dissection). Using multilayer flow modulating (MFM) technology, it consists of a stent-like metal (e.g., Nitinol) mesh designed to induce haemodynamic changes (e.g., reduction of vortex velocity in the aneurysm, flow channelling to branches) and endothelialisation; some types may be referred to as a flow diverter. It typically has a dedicated delivery system (catheter, pusher) included, and is introduced percutaneously and advanced under radiological control.	III
13019	62317	Vascular irrigation cannula, coronary artery, reusable	Судасны усалгааны суваг, титэм артери, дахин ашиглах боломжтой	A rigid or semi-rigid tube designed to be surgically inserted, temporarily, into a coronary artery to serve as a channel for the transport of fluid during a surgical intervention. It is typically intended for the infusion and/or perfusion of fluids in diagnostic and/or surgical procedures, such as cardiopulmonary bypass, and to help avoid ischemia. Insertion is typically achieved with the use of a removable stylet or trocar blade. This is a reusable device intended to be sterilized prior to use.	III

13020	62455	Portosystemic needle set	Портосистемийн зүү иж бүрдэл	A collection of devices which includes a portosystemic needle intended to create an artificial passage between the hepatic and portal veins (through the liver parenchyma) as part of a transjugular intrahepatic portosystemic shunt (TIPS) procedure. It includes a rigid/semi-rigid metal portosystemic needle, a vascular guide catheter, and might include the initial percutaneous vascular introduction devices (e.g., sheath, dilator); neither a balloon catheter nor a shunt is included. This is a single-use device.	III
13021	62513	Endoscopic needleless submucosal lift catheter	Дурангийн дурангийн зүүгүй салстын доорхи өргөгч катетер	A sterile, flexible tube intended to deliver a submucosal lifting solution into the submucosa of the gastrointestinal tract through a flexible endoscope during an endoscopic procedure (e.g., gastroscopy, colonoscopy) to lift a lesion, typically for subsequent excision. It is attached proximally to a dedicated pump and the distal end incorporates a mechanism for producing a very small laminar stream for needleless injection. This is a single-use device.	III
13022	62545	Cardiac mapping/ultrasound imaging catheter	Зүрхний зураглал / хэт авиан дүрслэлийн катетер	A sterile, flexible, dual-purpose tube containing an arrangement of electrodes and ultrasonic imaging transducers at its distal tip, designed for: 1) electrophysiological diagnostic examinations such as electrophysiology (EP) mapping, sensing, and recording of cardiac structures; and 2) intracardiac ultrasound for visualization of the cardiac anatomy (inner surface), primarily to support the EP functions. It is introduced percutaneously through a compatible steerable guide catheter (not included) to enable manoeuvring within the cardiac anatomy. This is a single-use device.	III
13023	62551	Peripheral angioplasty balloon catheter, drug-coated	Захын ангиопластик бөмбөлөг катетер, эмээр бүрсэн	A sterile, flexible tube designed for percutaneous transluminal angioplasty (PTA) to dilate a stenotic peripheral (i.e., non-cerebral, non-coronary) artery by controlled inflation of a distensible balloon(s) at its distal tip, and to simultaneously release a drug intended to inhibit restenosis; it may also be intended for positioning and expansion of a stent/stent-graft. It is available as an over-the-wire (OTW) type with multiple lumens, or a rapid exchange (RX) type with a single-lumen. This is a single-use device.	III

13024	62574	Dermal tissue reconstructive material, synthetic mineral, anaesthetic	Арьсны эдийг нөхөн сэргээх материал, синтетик эрдэс, мэдээ алдуулагч	A sterile, bioabsorbable, inorganic chemically synthesized mineral (e.g., synthesized calcium hydroxyapatite) intended to be injected into the dermis/hypodermis of the skin, lip submucosa, and/or for supraperiosteal administration to add volume by serving as a space-occupying supplement to the intercellular matrix of connective tissue (dermal filler), typically to correct cutaneous contour deformities (e.g., wrinkles, folds, scars) associated with aging, injury, or degenerative lesions; it includes a local anaesthetic agent. The material is typically preloaded in a disposable syringe.	III
13025	62618	Vaginal tissue reconstructive material	Үтрээний эдийг нөхөн сэргээх материал	A sterile, bioabsorbable, microbe-derived substance intended for intradermal, subcutaneous, or intramucosal injection in gynaecological tissues to add volume by serving as a space-occupying supplement (bulking agent) to the intercellular matrix of connective tissue, typically to correct hypotrophy or atrophy of the vulvar labia majora and the pubis, and/or to re-hydrate vaginal and vestibular mucosa to correct vaginal dryness; it does not include a local anaesthetic agent. It includes bacterial hyaluronic acid (HA) as the principal constituent. The material is typically preloaded in a disposable syringe.	III
13026	62651	Hypodermal tissue reconstructive material, synthetic polymer, non-bioabsorbable	Гиподермисийн эдийг нөхөн сэргээх материал, синтетик полимер, био шингэдэггүй	A sterile, non-bioabsorbable, fluid substance containing a chemically synthesized polymer (e.g., polyacrylamide gel) intended to be injected into subcutaneous and/or lip submucosal tissues to add volume, by serving as a space-occupying supplement to the intercellular matrix of connective tissue, for aesthetic/reconstructive purposes [e.g., to correct facial lipoatrophy or cutaneous contour deformities (e.g., wrinkles) associated with aging, injury, or degenerative lesions]; it may additionally be injected into the vocal cords to treat glottal insufficiency caused by vocal cord paralysis; it does not include a local anaesthetic agent. It is typically preloaded in a disposable syringe.	III

13027	62684	Heart valve prosthesis tester, reusable	Зүрхний хавхлагын протез шалгагч, дахин ашиглах боломжтой	A pen-like device intended to be used to manually manipulate a heart valve prosthesis to perform an assessment of the valvular prosthesis (e.g., its ability to open and close) prior to implantation and/or when in situ. It typically has a handle made of plastic and a soft tip (e.g., made of rubber) to prevent damage of the valvular prosthesis. This is a reusable device intended to be sterilized prior to use.	III
13028	62687	Heart valve repair/prosthesis implantation kit	Зүрхний хавхлагын засвар/протез суулгах иж бүрдэл	A collection of dedicated instruments intended to be used during heart valve repair and/or implantation of a heart valve prosthesis during an open surgical procedure. The kit typically includes two or more of the following: annulus sizers, rulers (e.g., aortic valve cusp ruler), a handle, repositioning tool, and a valve tester, which may be arranged in a sterilizable instrument tray. Implantable devices (e.g., heart valve prosthesis) are not included in the kit. This is a reusable device.	III
13029	62753	Intracerebral cannula, nonimplantable, single-use	Тархины доторх суваг, суулгацгүй, нэг удаагийн	A sterile, nonimplantable, rigid tube intended to be surgically inserted through the skull to access the brain (e.g., cerebral ventricles) for cerebrospinal fluid (CSF) drainage, infusion of materials, and/or for use as a port through which instruments, leads and/or probes can be passed to perform a variety of diagnostic, treatment, or surgical procedures. It is usually made of metal (e.g., stainless steel) and may include a stylet/trocar blade. This is a single-use device.	III
13030	62769	Epicardial catheter introduction set	Эпикардийн катетер нэвтрүүлэх багц	A collection of sterile, invasive, non-steerable devices intended to provide percutaneous sub-xiphoid access to enable introduction of a diagnostic catheter (not included) to the epicardial surface of the heart. It primarily includes: 1) a percutaneous introducer sleeve/tunneller with obturator, intended for initial introduction; 2) a retracting mechanism, intended to grab and separate the pericardium from the epicardial surface; 3) a needle, intended to puncture the pericardium; and 4) a haemostatic valve. This is a single-use device.	III

13031	62887	Aortic bi-cusp mechanical heart valve prosthesis	Aortic bi-cusp механик зүрхний хавхлагын протез	An artificial substitute for a natural aortic heart valve intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of two curved, semicircular, pyrolytic carbon-coated or polymer cusps, each with a marginal hinge mechanism; when pressurized blood impacts the valve the two cusps fold open and position flush to the valve ring, and when closed the edges of the cusps meet along the centre of the lumen. It may be referred to as a full-flow valve as the lumen is not intersected by a hinge-point(s).	III
13032	62888	Aortic tri-cusp mechanical heart valve prosthesis	Aortic tri-cusp механик зүрхний хавхлагын протез	An artificial substitute for a natural aortic heart valve intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of three curved, pyrolytic carbon-coated or polymer cusps, each with a marginal hinge mechanism; when pressurized blood impacts the valve the three cusps fold open and position flush to the valve ring, and when closed the edges of the three cusps meet. It may be referred to as a full-flow valve as the lumen is not intersected by a hinge-point(s).	III
13033	62889	Mitral bi-cusp mechanical heart valve prosthesis	Митрал хоёр салаа механик зүрхний хавхлагын протез	An artificial substitute for a natural mitral heart valve intended to be implanted during open heart surgery typically to treat acquired or congenital valvular disease. It consists of two curved, semicircular, pyrolytic carbon-coated or polymer cusps, each with a marginal hinge mechanism; when pressurized blood impacts the valve the two cusps fold open and position flush to the valve ring, and when closed the edges of the cusps meet along the centre of the lumen. It may be referred to as a full-flow valve as the lumen is not intersected by a hinge-point(s).	III

13034	62897	Intravascular occluding balloon catheter, navigational-sensing	Судсанд бөглөрөх бөмбөлөг катетер, навигацийн мэдрэгч	A flexible tube with a distal inflatable balloon and sensors intended to be introduced percutaneously in an emergency setting to occlude the descending aorta thereby prioritising blood flow to the upper body (i.e., heart, brain) during cardiac compressions; it may additionally be intended to occlude a blood vessel to control haemorrhage. It includes distal navigation-assistive pressure sensors, a controller, and typically a catheter introduction set. Introduction is intended to be possible without image guidance, whereby unexpected blood pressures at the catheter tip, associated with deviation from the intended course, alert the user via the controller. This is a single-use device.	III
13035	62939	Haemodynamic-modulation vessel repair implant, intracranial/carotid, polymer-metal	Гемодинамик-модуляцын судас засах суулгац, гавлын дотор/каротид, полимер металл	A non-bioabsorbable, tubular, expandable device designed to be implanted in an intracranial and/or carotid artery to facilitate controlled thrombosis within an endovascular malformation (i.e., aneurysm or fistula) by reducing lateral blood flow into the malformation (haemodynamic repair). It consists of a stent-like metal frame encased in a porous polymer membrane, and may be referred to as a flow diverter. In cases where implantation across a malformation also covers a nearby side vessel, the membrane is intended to be porous enough to maintain blood flow to that side vessel. Disposable devices associated with implantation (e.g., balloon catheter) may be included.	III
13036	63007	Vascular graft extraluminal mesh-sleeve, peripheral	Судасны шилжүүлэн суулгах гадна талын торон ханцуй, захын	A non-bioabsorbable implantable device intended to be used for the extraluminal (external) support of an autologous peripheral artery bypass/reconstruction graft (e.g., saphenous vein graft). It is a tubular, metal [e.g., cobalt-chrome (Co-Cr)] mesh intended to improve the characteristics of the vascular graft (e.g., luminal uniformity, flow capability, luminal strength/stability, diameter matching) and reduce the risk of graft failure.	III

13037	63107	Femoral artery medicated closure set	Гуяны артерийн эмээр хаах багц	A collection of hand-operated instruments, which includes a pharmaceutical agent, intended for the percutaneous closure of a femoral artery or vein puncture site, following a catheterization procedure, in patients using an anticoagulant medication (e.g., heparin). The collection typically consists of a catheter/sheath which elutes the pharmaceutical agent, intended to locally reverse the effect of the anticoagulant, and a haemostatic plug intended to be temporarily placed within the artery; implantable devices are not included. This is a single-use device.	III
13038	63140	Atrial approximation implant	Тосгуурын ойролцоо суулгац	A device intended to be implanted in the heart to reshape the left atrium and shorten the minor axis of the mitral valve to treat a regurgitant mitral valve, improving leaflet coaptation. It consists of two anchors connected by a cord; one anchor is deployed external to the heart in a cardiac vein (via transvenous approach through the coronary sinus) and the other anchored to the atrial septum. The device is deployed under echocardiography guidance whereby adjustments can be made in situ to facilitate optimal positioning; disposable delivery devices (transseptal catheter, guidewires) may be included.	III
13039	63173	Aortic root extraluminal mesh-sleeve	Aortic root extraluminal mesh-sleeve	A custom-made, non-bioabsorbable device intended to be implanted during an open surgical procedure for the extraluminal (external) support of the aortic root for the management of aortic root dilatation in patients with congenital disorders (e.g., Marfan syndrome). It is a polymer mesh that is designed and constructed with specific characteristics (e.g., size, shape, material) as prescribed by a healthcare provider for a specified patient.	III

13040	63187	Left-ventricular wireless pacing system transducer/electrode	Зүүн ховдолын утасгүй хэмнэлтийн системийн хувиргагч/электрод	A device consisting of an endocardial electrode with an ultrasound transducer intended to be implanted within the left ventricle of the heart to receive ultrasound (US) pulses from a parent transmitter and convert these into electrical pacing impulses to pace the left ventricle for cardiac resynchronization therapy (CRT) with a separate co-implanted pacemaker. It consists of a small electrode with a transducer intended to be attached to the endocardium. It is intended as an alternative to left-ventricular pacing using a coronary venous pacing lead. Disposable devices dedicated to implantation (e.g., delivery catheter) may be included.	III
13041	63188	Left-ventricular wireless pacing system sensor/transmitter	Зүүн ховдолын утасгүй хэмнэлтийн системийн мэдрэгч/дамжуулагч	A hermetically-sealed device intended to be implanted beneath the skin of the chest in a surgically-created pocket to: 1) sense signals from a separate co-implanted pacemaker; and 2) generate and transmit synchronized ultrasound (US) pulses to a left-ventricular endocardial transducer/electrode (not included). The US pulses will be converted into electrical pacing impulses and synchronized with the co-implanted pacemaker to achieve cardiac resynchronization therapy (CRT). It consists of a small unit with sensing electrodes and an ultrasound generator/transmitter. Disposable devices dedicated to implantation may be included.	III
13042	63213	Urethral dilatation catheter, drug-eluting	Шээсний сувийг тэлэх катетер, эм ялгаруулах	A sterile, flexible tube intended to be inserted into the urethra to open or increase the diameter of a constricted or irregular urethral passage; it includes a drug (e.g., chemotherapy drug) intended to be eluted in situ. The device is typically designed with an inflatable dilation balloon. This is a single-use device.	III
13043	63283	Transcatheter heart valve bioprosthesis implantation catheter	Transcatheter зүрхний хавхлагын биопротез суулгах катетер	A flexible tube intended to be used to deploy and implant a heart valve bioprosthesis (not included) during a minimally invasive transcatheter procedure via transarterial access (e.g., femoral, subclavian, aortic) under fluoroscopic guidance. It typically consists of a proximal handpiece with controls for positioning and deployment of the valve, and may be designed for deployment of a self-expanding bioprosthesis or include a balloon for dilation of an expandable bioprosthesis. This is a single-use device.	III

13044	63344	Spinal needle electrical impedance navigation unit	Нурууны зүү цахилгаан эсэргүүцэл навигацийн нэгж	An electrically-powered unit designed to transmit and receive electrical signals to/from a dedicated spinal needle (which doubles as a bipolar electrode) and to analyse bioimpedance data in real-time, to predict needle tip location [including confirmation of contact with cerebrospinal fluid (CSF)]. It is typically a tabletop unit with controls and a display; the needle is not included. Location is based on predetermined and expected bioimpedance spectra.	III
13045	63345	Electrical impedance navigation spinal needle	Цахилгаан эсэргүүцэлтэй навигацийн нугасны зүү	A sharp bevel-edged, hollow tubular metal instrument designed to be used: 1) as a bipolar electrode for real-time bioimpedance-based prediction of the needle tip location; and 2) for lumbar puncture/intrathecal injection. The needle and an included insulated stylet are intended to function as a bipolar electrode whereby tissue at the tip bridges the circuit; electrical signals and subsequent impedance values are interpreted by a navigational unit (not included) to identify tip location, and to confirm contact with cerebrospinal fluid (CSF). This is a single-use device.	III
13046	63497	Urinary tract reconstructive material, synthetic polymer, bioabsorbable	Шээсний замын нөхөн сэргээх материал, синтетик полимер, био шингэдэг	A sterile, bioabsorbable material intended for submucosal injection in the urinary tract (urethra, urinary bladder, and/or distal ureter) to add volume by serving as a space-occupying supplement (bulking agent) to the intercellular matrix of connective tissue in the treatment of stress urinary incontinence (SUI) and/or vesicoureteral reflux (VUR); it does not include a local anaesthetic agent. It is in the form of a gel containing a chemically synthesized polymer [e.g., polycaprolactone (PCL)]. The material is typically preloaded in a disposable syringe.	III
13047	63549	Cadaveric heart valve prosthesis, cellular	Кадаврын зүрхний хавхлагын протез, эсийн	An implantable allograft heart valve obtained from a human cadaver intended to be implanted in the heart during open heart surgery to repair or replace a dysfunctional native or prosthetic heart valve in a patient. It is typically used to treat acquired or congenital valvular disease.	III

13048	63551	Saline-filled breast implant, internally-structured	Давсны уусмалаар дүүргэсэн хөхний суулгац, дотоод бүтэцтэй	A sterile implantable device designed to reconstruct or augment the breast that is composed of a smooth silicone outer shell containing a nested silicone-shell support structure, creating multiple nested lumens inflated with sterile isotonic saline to the desired size. Movement of saline between the lumens is possible through slits and tempered by baffles; the implant has separate fill valves for each lumen and is typically filled with saline before or during the implant procedure.	III
13049	63570	Intracranial catheter navigation transmitter stylet	Гавлын доторх катетер навигацийн дамжуулагч стилет	A sterile, invasive, flexible wire with an electromagnetic (EM) coil transmitter at the distal end designed to be inserted into an intracranial catheter to help guide the surgical insertion of the catheter through the skull for placement in the brain. It is proximally connected to a line-powered EM neurosurgical navigation system which tracks and displays the position of the stylet for precise navigation during the procedure. This is a single-use device.	III
13050	63571	Intracranial catheter navigation optical stylet	Гавлын доторх катетер навигацийн оптик стилет	A sterile, invasive, flexible wire designed to be inserted into an intracranial catheter to help guide the manual surgical insertion of the catheter through the skull for placement in the brain. It includes proximal reflective spheres and is used in conjunction with an optical neurosurgical navigation system which tracks and displays the position of the stylet for precise navigation during the procedure. This is a single-use device.	III
13051	63608	Neurovascular sensor guidewire assembly	Мэдрэлийн судасны мэдрэгчийн чиглүүлэгч утасны угсралт	A long, thin, sterile assembly with a wire intended to be percutaneously introduced into the cerebral vasculature of an ischemic stroke patient to: 1) collect electrical impedance data regarding the clot/vascular tissue to assist clot/disease assessment; and 2) function as a guide for the subsequent introduction, positioning, and/or operation of a vascular device (e.g., microcatheter). It includes an electrically-powered transmitter/receiver designed to send/receive electrical pulses to/from a distal electrode array, and process/transmit the data to a computerized device; an introducer needle may be included. This is a single-use device.	III

13052	63620	Femoral artery catheter introduction/wound closure set	Гуяны артерийн катетерын танилцуулга/шархыг хаах багц	A collection of invasive devices intended to: 1) provide percutaneous femoral artery access to enable introduction of a catheter (not included) into the vascular system; and 2) plug the femoral artery puncture site following catheterization to provide haemostasis. It includes a non-steerable introducer sheath assembly (introducer sheath with e.g., obturator/dilator, guidewire) with an integrated bioabsorbable, animal-derived, implantable, femoral artery compression plug, typically with a synthetic deployment suture/cord. Prior to removal of the introducer assembly the plug is deployed. This is a single-use device.	III
13053	63640	Ventricular prosthesis system, pneumatically-powered	Ховдолын протезийн систем, пневматик хөдөлгүүртэй	An assembly of devices intended to function as an artificial replacement for failing heart ventricles (end-stage biventricular failure), typically temporarily prior to heart transplantation. It consists of two implanted pneumatically-powered pumping units, with built-in mechanical heart valves, which replace the excised natural heart ventricles and are connected to the heart atria, aorta, and pulmonary arteries; the prosthesis is driven by an external pneumatic pump connected via percutaneous pneumatic drive-lines entering the patient's chest.	III
13054	63723	Central venous catheterization kit, long-term	Төв венийн катетержуулалтын хэрэгсэл, урт хугацааны	A collection of devices and materials intended for the long-term (>30 days) introduction of a central venous catheter (CVC) for various infusion/aspiration procedures (i.e., non-dedicated). Often referred to as tray, it includes an implantable central venous catheter with devices dedicated to catheter introduction/function (e.g., introducer, guidewire), and non-dedicated supportive devices (e.g., drape, dressings, scalpel). This is a single-use device.	III
13055	63949	Implantable vascular infusion pump catheter	Суулгах боломжтой судас дусаах насосны катетер	An implantable, flexible tube intended to be connected to an implantable vascular infusion pump in situ and inserted into a blood vessel to deliver pharmaceuticals from the pump to the cardiovascular system. It typically includes connectors and catheter retention components.	III

13056	64081	Silicone gel-filled breast implant, smooth-surface	Силикон гелээр дүүргэсэн хөхний суулгац, гөлгөр гадаргуутай	An implantable device designed to reconstruct or augment the breast that is composed of a silicone rubber shell, made of polysiloxane(s), with a single lumen filled with a fixed amount of silicone gel; the shell surface is smooth. The implant may vary in shape, profile, volume and shell thickness.	III
13057	64082	Silicone gel-filled breast implant, textured-surface	Силикон гелээр дүүргэсэн хөхний суулгац, бүтэцтэй гадаргуутай	An implantable device designed to reconstruct or augment the breast that is composed of a silicone rubber shell, made of polysiloxane(s), with a single lumen filled with a fixed amount of silicone gel; the shell surface is textured. The implant may vary in shape, profile, volume and shell thickness.	III
13058	64083	Saline-filled breast implant, unstructured, smooth-surface	Давсны уусмалаар дүүргэсэн хөхний суулгац, бүтэцгүй, гөлгөр гадаргуутай	An implantable device designed to reconstruct or augment the breast that is composed of a silicone rubber outer shell, made of polysiloxane(s), with a single lumen inflated with sterile isotonic saline to the desired size; the shell surface is smooth. The implant may be of fixed or adjustable volume and may be prefilled, partially filled, or empty and filled during the implantation procedure; the volume of saline solution in adjustable volume implants may be adjusted after implantation. The device may vary in shape, profile, volume and shell thickness.	III
13059	64084	Saline-filled breast implant, unstructured, textured-surface	Давсны уусмалаар дүүргэсэн хөхний суулгац, бүтэцгүй, бүтэцтэй гадаргуутай	An implantable device designed to reconstruct or augment the breast that is composed of a silicone rubber outer shell, made of polysiloxane(s), with a single lumen inflated with sterile isotonic saline to the desired size; the shell surface is textured. The implant may be of fixed or adjustable volume and may be prefilled, partially filled, or empty and filled during the implantation procedure; the volume of saline solution in adjustable volume implants may be adjusted after implantation. The device may vary in shape, profile, volume and shell thickness.	III

13060	64116	Gastrointestinal endoscopic clip, long-term, partially-bioabsorbable	Ходоод гэдэсний дурангийн хавчаар, урт хугацааны, хэсэгчлэн био шингэдэг	A clip with bioabsorbable and non-bioabsorbable parts intended to be implanted long-term (>30 days) within the gastrointestinal (GI) tract during an endoscopic procedure for endoscopic marking, haemostasis, tissue approximation, closure of luminal perforations, and/or for treating mucosal/submucosal defects. It consists of a metallic clip with bioabsorbable clasping teeth made of a synthetic polymer, whereby once the teeth are degraded the metallic portion is excreted from the gut; a disposable clip applicator may be included.	III
13061	64194	Intervertebral disc prolapse repair implant	Нурууны завсрын дискний пролапсыг засах суулгац	An implantable device intended to treat a prolapsed lumbar intervertebral disc by repairing the defect in the annulus fibrosus for the prevention of recurrent herniation of the nucleus pulposus. It consists of a mesh plug used to replace the disrupted segment of the annulus, and an attached anchor used to stabilize the plug by fixation to the adjacent vertebral body. It is made of polymer and metallic materials and implanted during a posterior approach procedure. Disposable devices associated with deployment (e.g., pusher, sheath) may be included.	III
13062	64196	Intravascular occluding funnel catheter	Судас доторх юүлүүр катетер	A flexible tube with an expandable funnel/basket at the distal end intended to be introduced under image guidance to temporarily block or restrict blood vessel flow. It may be used in the carotid artery or tortuous intracranial vasculature during a thrombectomy procedure whereby the expanded funnel enables vascular occlusion and aspiration retrieval of thrombi (e.g., via connection to a suction system). It has a single or coaxial dual-catheter design for passing a catheter or other devices (e.g., microcatheter, stent retriever, wire-net) and may also be used for angiography, renal opacification, to treat aneurysms, or for infusion (e.g., of embolic agents). This is a single-use device.	III

13063	64374	Epidural anaesthesia stand-alone catheter	Эпидураль мэдээ алдуулалтын бие даасан катетер	A flexible tube, supplied in isolation of other devices, intended to be percutaneously introduced into the epidural space for the delivery of an anaesthetic/analgesic agent; it is not coated with an antimicrobial agent. It is intended to be introduced using an epidural needle, however neither the needle nor other procedural assistive devices are included (i.e., the catheter is sold alone and this is not an epidural set). This is a single-use device.	III
13064	64393	Coronary artery blood sampling catheter	Титэм артерийн цусны дээж авах катетер	A flexible tube designed for percutaneous access of the coronary artery vasculature to obtain multiple specimens of blood from a specific site (typically adjacent to and downstream of atheromatous plaque). It has a mechanical arrangement which mixes blood at the site of disease so that specific biomarkers (e.g., cytokines, signalling proteins) released at the site are sampled, via multiple ports, for in vitro diagnostic analysis. The catheter is typically associated with a dedicated collection unit (not included). Data from specimen analysis may be used to facilitate decision regarding coronary artery disease treatment options. This is a single-use device.	III
13065	64394	Coronary artery blood sampling collection set	Титэм артерийн цусны дээж авах багц	A dedicated set of tubes, syringes and connectors designed to be used with a coronary artery blood sampling catheter (not included) for aspiration collection of multiple specimens of blood from a specific site in the coronary vasculature. The set of tubes is matched to the ports of the sampling catheter. In vitro diagnostic analysis data may be used to facilitate decision regarding coronary artery disease treatment options. This is a single-use device.	III

13066	64442	Ventricular circulatory assist valved catheter	Ховдолын цусны эргэлтийг дэмжих хавхлагатай катетер	A flexible tube percutaneously introduced across the aortic valve intended to provide left ventricular circulatory assistance during a high-risk percutaneous coronary intervention (PCI) or early-stage cardiogenic shock. It has two ports near the distal end of the catheter, one sited in the left ventricle to intake blood during systole and one sited in the ascending aorta, outputting the blood during diastole to achieve circulatory assistance. The port function is coordinated by a two-way valve in the catheter and controlled by a membrane pump at the catheter's proximal (extracorporeal) end, which is driven by an external pump (e.g. pump for intra-aortic balloon). This is a single-use device.	III
13067	64450	Silicone gel-filled breast implant, polyurethane-foam-surface	Силикон гелээр дүүргэсэн хөхний суулгац, полиуретан-хөөс-гадаргуу	An implantable device designed to reconstruct or augment the breast that is composed of a silicone rubber shell made of polysiloxane(s) covered with a layer of polyurethane foam, with a single lumen filled with a fixed amount of silicone gel. The implant may vary in shape, profile, volume and shell thickness.	III
13068	64460	Metacarpophalangeal/proximal interphalangeal joint prosthesis	Metacarphalangeal/proximal phalangeal үений протез	An implantable device designed as a joint artificial substitute that may be used for both the metacarpophalangeal (MCP) and the proximal interphalangeal (PIP) joints of the hand (finger) [i.e. it is not dedicated to either joint], typically to treat cases of joint damage caused by rheumatoid, degenerative, or traumatic arthritis. It consists of a single flexible across-the-joint component (one-piece) made from synthetic polymer materials [e.g., a silicone elastomer].	III
13069	64587	Uncoated knee femur prosthesis, ceramic	Өвдөгний гуяны бүрээсгүй протез, керамик	An implantable device designed to replace the femoral condyles (femoral component) during primary bicondylar replacement of the knee joint, femoral bone resection, or to replace a dysfunctional knee prosthesis (revision); it is made of ceramic material (e.g., alumina) and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with tibial and, if required, patellar prosthetic components of the knee joint and its implantation is intended to be performed with bone cement.	III

13070	64588	Uncoated knee tibia prosthesis, ceramic	Өвдөгний шилбэний бүрээсгүй протез, керамик	An implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint, femoral bone resection, or to replace a dysfunctional knee prosthesis (revision); it is made of ceramic material (e.g., alumina) and is not coated with a material intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with an insert and/or the femoral prosthetic component of the knee joint and its implantation is intended to be performed with bone cement.	III
13071	64613	Shoulder glenoid fossa prosthesis, custom-made	Мөрний гленоид фосса протез, захиалгаар хийдэг	An implantable, custom-made component of a total shoulder prosthesis (glenoid component) designed to replace or repair the glenoid fossa. It is cup-like in shape and typically made of polyethylene (PE), metal, or a combination of PE and metal; it is designed and constructed with specific characteristics (e.g., size, shape) as prescribed by a healthcare provider for a specified patient (e.g., using 3-D printing based on patient images). Fixation devices (e.g., screws) for attachment to the scapula, and/or devices to assist implantation (e.g., surgical guides, implant trial, anatomical models) may be included with the device.	III
13072	64653	Coronary sinus flow reduction implant	Титэм судасны синусын урсгалыг багасгах суулгац	An hour-glass shaped (waisted) mesh device intended to be implanted in the coronary sinus to create a permanent and controlled narrowing to increase venous pressure and improve upstream perfusion of ischemic myocardium, typically in a patient with refractory angina considered unsuitable for other coronary revascularization procedures. It is made of high-grade stainless steel. Dedicated disposable implantation devices (e.g., balloon catheter, haemostatic valve) may be included with the implant.	III

13073	64686	Resurfacing ceramic acetabulum prosthesis	Керамик ацетабулум протезийг нөхөн сэргээх	An implantable, ceramic, partial substitute for a disease-damaged hip joint intended to replace the articulating surface of the acetabulum. Fixation devices for implantation (e.g., screws/bolts) may be included and implantation may be performed with or without bone cement. This device is commonly used for younger/active patients to avoid total hip replacements/revisions.	III
13074	64803	Auditory brainstem implant intraoperative test electrode	Сонсголын тархины ишний суулгацын мэс заслын электрод	A hand-held instrument (probe) with a distal electrode intended for intraoperative delivery of electrical stimulation to the brainstem to help determine the optimal stimulation site prior to implantation of the active electrode of an auditory brainstem implant (ABI). It conducts electrical current via connection to an external electrical pulse generator and is used in conjunction with an evoked auditory brainstem response (eABR) recording system. This is a single-use device.	III
13075	64885	Vascular guide-catheter extension	Судасны чиглүүлэгч-катетерийн өргөтгөл	A flexible tube designed to extend the length of a vascular guide-catheter during percutaneous transluminal passage and placement of a diagnostic/interventional device (e.g., pacing lead, balloon dilatation catheter) within either the coronary or peripheral vasculature. It is intended to be inserted through the lumen of the guide-catheter, and includes a proximal handle and delivery shaft connected to a distal catheter-extending tube. This is a single-use device.	III
13076	64924	Cardiac arrest hypothermia kit	Зүрх зогсох гипотерми иж бүрдэл	A collection of devices intended to lower the core body temperature of a patient in the short term following a cardiac arrest event to induce and sustain mild hypothermia for improvement of neurological and cognitive prognoses. It typically includes blankets, caps, axilla pads and groin pads, which are filled with a thermally-retentive material (e.g., non-toxic polymer gel) that can be cooled in a freezer. This is a single-patient device that may be reapplied to the patient over a short term (single-use) before being discarded.	III

13077	64970	Spinal cord/peripheral nerve implantable analgesic electrical stimulation system pulse generator, implantable	Нуруу/захын мэдрэл суулгаж болох өвдөлт намдаах цахилгаан өдөөгч системийн импульс үүсгэгч, суулгац	An electrically-powered, implantable component of a spinal cord/peripheral nerve implantable analgesic electrical stimulation system intended to deliver electrical impulses to the epidural space of the spinal cord and/or in/near a peripheral nerve (e.g., lumbar, truncal, in a limb) via percutaneously implanted electrodes (not included) to relieve acute and/or chronic intractable pain (analgesia). The device is programmed, controlled, and charged telemetrically by external devices.	III
13078	64984	Cochlear implant intraoperative electrophysiological transceiver	Чихний дунгийн суулгацыг мэс заслын доторх электрофизиологийн дамжуулагч	A noninvasive, electrically-powered device designed to wirelessly receive electrophysiological data (e.g., impedance, neural response) from the electrode array assembly of a cochlear implant system during implantation, and wirelessly transmit the data in real-time to an off-the-shelf computer/tablet with appropriate software installed. The data is intended for intraoperative analysis of the placement and in situ function of the implanted electrode array.	III
13079	64985	Cochlear implant intraoperative electrophysiological analysis software	Чихний дунгийн суулгац мэс заслын явцад электрофизиологийн шинжилгээний программ хангамж	A software program intended to be used with an off-the-shelf computer/tablet for the intraoperative analysis of electrophysiological data (e.g., impedance, neural response) collected from the electrode array assembly of a cochlear implant system during implantation. It is intended to assist the surgeon with regards to the placement and in situ function of the implanted electrode array.	III
13080	64989	Bone-conduction hearing implant system vibrator assembly	Яс дамжуулагч сонсголын суулгацын системийн чичиргээний угсралт	An electrically-powered, implantable device that typically consists of a radio-frequency (RF) antenna typically in the form of a coil, decoder, or vibrator coupled to the temporal bone, and a magnet. The antenna and decoder receive radio waves from the system’s external component and convert the signals back to audio frequencies, which are sent to the vibrator for the transmission of vibrations to the bone to activate the auditory pathway. The magnet is intended to couple with the system’s external component for positioning/stabilization of the system.	III

13081	65028	Peripheral artery catheterization kit, medicated	Захын артерийн катетержуулалтын хэрэгсэл, эмтэй	A collection of devices intended for the percutaneous introduction of an included peripheral artery cannula (often referred to as a catheter) to enable short-term (≤ 30 days) access to a peripheral artery for administration of fluids/medication and blood sampling. In addition to the cannula, it includes the pharmaceutical anaesthetic agent, devices dedicated to catheter introduction/function (e.g., introducer, guidewire, syringe), and non-dedicated devices intended to support the procedure [e.g., disinfectant (e.g., alcohol), drape, gauze, scalpel, suture, swabs]. This is a single-use device.	III
13082	65047	Aortic arch perfusion cannula vented cap	Aortic arch perfusion cannula vented cap	A noninvasive, air-permeable cover intended to be placed over the proximal end (extracorporeal end) of an aortic arch perfusion cannula to allow air to exit the cannula prior to its connection to an extracorporeal circulation circuit during a surgical procedure. It is made of a porous semi-permeable material (i.e., impermeable to fluids, permeable to gases) designed to prevent the escape of blood. This is a single-use device.	III
13083	65063	Bipolar femoral head outer component, total arthroplasty	Хоёр туйлт гуяны толгойн гадна талын бүрэлдэхүүн хэсэг, нийт үе мөчний мэс засал	An implantable hemisphere-shaped device used as part of a total hip arthroplasty (THA) and designed to interface with the acetabular liner on its outer surface where it freely rotates, and encompass/interface with a femoral head prosthesis on its inner surface where it allows free rotation of the head; it is not a femoral head prosthesis. It is a one-piece device made of polyethylene (PE).	III
13084	65066	Cardiac irreversible electroporation system catheter	Зүрхний эргэлт буцалтгүй электропорацийн системийн катетер	A flexible tube with an electrode array its distal end designed to be used as part of a cardiac irreversible electroporation system to apply a series of microsecond electrical pulses to ablate endocardial tissues through irreversible electroporation, to treat cardiac arrhythmia. It is typically also intended to transmit electrical pacing stimuli to, and electrical responses from, the heart for electrophysiological (EP) mapping. It is designed to be introduced into the heart via venous access (e.g., femoral vein). This is a single-use device.	III

13085	65068	Cardiac transseptal access electrosurgical catheter, single-use	Зүрхний транссептал нэвтрэх цахилгаан мэс заслын катетер, нэг удаагийн хэрэглээ	A flexible tube intended to be used during a transseptal catheterization procedure to: 1) apply radio-frequency alternating current in a monopolar configuration, to puncture the interatrial septum and gain access to the left atrium; and 2) provide a fluid path to facilitate aspiration, injection/infusion, blood sampling, and/or pressure monitoring; it is not intended for cardiac ablation or to accommodate a needle in its lumen. It has a distal monopolar electrode. This is a single-use device.	III
13086	65069	Cardiac transseptal access electrosurgical catheter, reprocessed	Зүрхний транссептал нэвтрэх цахилгаан мэс заслын катетер, дахин боловсруулсан	A flexible tube intended to be used during a transseptal catheterization procedure to: 1) apply radio-frequency alternating current in a monopolar configuration, to puncture the interatrial septum and gain access to the left atrium; and 2) provide a fluid path to facilitate aspiration, injection/infusion, blood sampling, and/or pressure monitoring; it is not intended for cardiac ablation or to accommodate a needle in its lumen. It has a distal monopolar electrode. This is a previously used single-use device that has been processed for an additional single-use patient application.	III
13087	65100	Vascular catheterization support/maintenance kit, medicated	Судасны катетержуулалтын дэмжлэг/засвар үйлчилгээний хэрэгсэл, эмтэй	A collection of non-dedicated devices which includes a pharmaceutical agent intended for catheterization support and/or catheter maintenance (e.g., dressing change, catheter flushing) associated with peripheral venous, central venous, and/or arterial catheterization. Primarily intended to be used at the patient’s bedside, the kit includes [in addition to the pharmaceutical agent(s)] devices such as: personal protective equipment (PPE), drapes, disinfectant wipes, dressings, needles, syringes, tourniquets, ultrasound transducer cover, coupling gel, sharps container, and saline solution. Neither the catheter nor catheter introduction device are included. This is a single-use device.	III

13088	65121	Tricuspid transcatheter heart valve bioprosthesis	Tricuspid transcatheter зүрхний хавхлагын биопротез	An implantable xenograft (e.g., bovine) intended to be used to repair/replace a stenosed or regurgitant tricuspid heart valve, or previously-implanted tricuspid heart valve prosthesis, and which is implanted using a catheter via percutaneous access (e.g., transfemoral, transapical) while the heart is beating. It is comprised of the xenograft, processed to render the tissue non-viable, attached to a metal framework (which may be covered with a synthetic polymer material) that is expandable in situ; it may also include a synthetic polymer subannular valve anchoring component. Devices to assist implantation (e.g., catheter, introducer) are typically included with the device.	III
13089	65160	Intervertebral disc nucleus prosthesis	Нугалам хоорондын дискний бөөмийн протез	An implantable device in the form of a small silicone balloon intended to be surgically placed into an enucleated lumbar spine disc cavity to function as a replacement for the nucleus pulposus of the disc in the treatment of degenerative disc disease (DDD). It is intended to be filled intraoperatively with liquid silicone to dimensions that provide sufficient pressure, and may have radiopaque markers to enable verification of its anatomical position. Disposable devices associated with implantation (e.g., introducer needles, fill cannula) may be included with the prosthesis.	III
13090	65308	Spinal cord/peripheral nerve implantable analgesic electrical stimulation system lead extension	Нуруу нугас/захын мэдрэлийг суулгаж болох өвдөлт намдаах цахилгаан өдөөх системийн хар тугалга өргөтгөл	An implantable device intended to extend the electrical connection between a spinal cord/peripheral nerve implantable analgesic electrical stimulation system pulse generator and a lead(s). It typically includes small connectors to enable attachment to the lead(s) and pulse generator, and a length of insulated wire; the lead(s) and pulse generator are not included.	III

13091	65417	Dental/maxillofacial soft-tissue biomatrix implant, human-derived	Шүд/эрүү нүүрний зөөлөн эдийн биоматрикс суулгац, хүний гарал үүсэлтэй	A bioabsorbable, human-derived membrane intended to be used to aid in the regeneration of oral soft tissue, lost due to periodontal disease or trauma, through promotion of new blood vessels and/or by providing a temporary scaffold for tissue ingrowth; it is indicated for various oral soft tissue augmentation procedures (e.g., alveolar ridge reconstruction, localized gingival augmentation, covering of recession defects and extraction sockets). It is a pliable material which may be fixed to soft tissues with sutures; it is applied to soft tissue during periodontal flap surgery and guided tissue regeneration (GTR) surgical procedures. This is a single-use device.	III
13092	65424	Cervical total intervertebral disc prosthesis, one-piece	Умайн хүзүүний нийт нугалам хоорондын протез, нэг хэсэг	An implantable device intended to replace a dysfunctional intervertebral disc in the cervical spine that is comprised of a single-component, compressible U-shaped device attached to adjacent vertebrae above and below. It may allow small movements of the adjacent vertebrae and is typically made of metal.	III
13093	65425	Cervical intervertebral disc prosthesis core	Умайн хүзүүний нугалам хоорондын протезийн гол хэсэг	An implantable, compressible, disc-like component of a modular cervical total intervertebral disc prosthesis designed to be placed between the upper and lower endplate components (not included) of the prosthesis to replace a dysfunctional intervertebral disc in the cervical spine; it is not the complete prosthesis assembly. It may allow small movements of the endplates and is typically made of ceramic or synthetic polymer materials.	III
13094	65426	Cervical intervertebral disc prosthesis endplate	Умайн хүзүүний нугалам хоорондын протезийн төгсгөлийн хавтан	An implantable, disc-like component of a modular cervical total intervertebral disc prosthesis designed to be used in pairs for attachment to the prepared vertebrae above and below the excised natural disc, and within which is positioned the core component (not included) of the prosthesis, to replace a dysfunctional intervertebral disc in the cervical spine; it is not the complete prosthesis assembly. It typically has a serrated surface, or flange, to facilitate attachment to the vertebrae and is made of metallic materials.	III

13095	65427	Lumbar intervertebral disc prosthesis core	Бүсэлхий нурууны завсрын дискний протезийн гол	An implantable disc-like, flexible component of a lumbar total intervertebral disc prosthesis designed to be placed between the upper and lower endplate components (not included) of the prosthesis to replace the dysfunctional intervertebral disc in the lumbar spine; it is not the complete prosthesis assembly. Also referred to as an inlay, it may allow small movements of the endplates and is typically made of synthetic polymer materials.	III
13096	65428	Lumbar intervertebral disc prosthesis endplate	Бүсэлхий нурууны завсрын дискний протезийн төгсгөлийн хавтан	An implantable disc-like component of a lumbar total intervertebral disc prosthesis designed to be used in pairs for attachment to the prepared vertebrae above and below the excised natural disc, and within which is positioned the core component (not included) of the prosthesis, to replace a dysfunctional intervertebral disc in the lumbar spine; it is not the complete prosthesis assembly. It typically has a serrated surface and/or flange to facilitate attachment to the vertebrae and is made of metal and/or synthetic polymer materials.	III
13097	65466	Trabeculated bicondylar knee tibia prosthesis	Хоёр кондиляр өвдөгний шилбэний протез	An implantable device designed to replace the tibial condyles (tibial component) during primary bicondylar replacement of the knee joint or to replace a dysfunctional knee prosthesis (revision); it is made of metal (e.g., tantalum alloy) and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth. The device is designed to articulate with an insert and the femoral prosthetic component of the knee joint, and its implantation may be performed without bone cement.	III
13098	65467	Trabeculated unicondylar knee femur prosthesis	Trabeculated unicondylar өвдөгний гуяны протез	An implantable device designed to replace the bearing surface of one femoral condyle (femoral component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr)] and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth. The device articulates with a tibial prosthetic component and an insert, and its implantation may be performed without bone cement.	III

13099	65468	Trabeculated unicondylar knee tibia prosthesis	Trabeculated unicondylar өвдөгний шилбэний протез	An implantable device designed to replace the bearing surface of one tibial condyle (tibial component) during primary or revision unicompartmental replacement of the knee joint. It is made of metal [e.g., cobalt-chrome (Co-Cr) or titanium alloy] and has a convoluted/perforated surface intended to improve fixation and stability by promoting bone ingrowth. The device articulates with a femoral prosthetic component and an insert, and its implantation may be performed without bone cement.	III
13100	65484	Endovascular stent-graft fenestration catheter	Эндоваскуляр стент-суулгасан фенестратын катетер	A flexible tube intended to be used to puncture the portion of an in situ endovascular stent-graft that obstructs an aortic arch branch vessel, during implantation of the stent-graft within the aortic arch, to facilitate branch vessel blood flow. It is introduced to the surgical site from the branch vessel (e.g., left subclavian artery) and includes a distal needle and a stabilization balloon (non-dilating); a separate device (not included) is used to dilate the obstructing stent-graft framework. This is a single-use device.	III
13101	65706	Abdominal aorta aneurysm endoleak filler	Хэвлийн гол судасны аневризмын нэвчилт дүүргэгч	An implantable liquid substance intended to fill the void between an abdominal aorta aneurysm and an abdominal aorta endovascular stent-graft therapeutically implanted across the aneurysm, to prevent leakage of blood around the stent-graft (endoleak). It is a polymer material implanted by translumbar or transfemoral injection and typically mixed from two constituents during the implantation procedure. Dedicated disposable implantation devices are included with the implant.	III
13102	65884	Meniscus biomatrix implant, human-derived	Meniscus biomatrix суулгац, хүний гаралтай	A bioabsorbable material derived from human meniscal tissue (e.g., from a cadaveric donor) intended to be surgically implanted to serve as a temporary fibrous scaffold for autologous meniscus tissue cell growth, for the repair of an injured or missing meniscus. It consists primarily of a human-derived matrix structure which is gradually absorbed and replaced by host tissue.	III

13103	66209	Valve-non-specific transcatheter heart valve bioprosthesis	Хавхлага-өвөрмөц бус транскатетер зүрхний хавхлагын биопротез	An implantable xenograft (e.g., bovine) intended to be used to repair/replace a stenosed or regurgitant heart valve or a previously-implanted heart valve prosthesis, via percutaneous transcatheter access, and that is not dedicated to replacement of any one of the four heart valves (valve-non-specific). It is comprised of the processed xenograft attached to a metal framework (which may be covered with a synthetic polymer material) that is expandable in situ; it may also include a synthetic polymer subannular valve anchoring component. Devices used to facilitate implantation (e.g., catheter) at the chosen valve location are typically included.	III
13104	66267	Total wrist carpal articulation prosthesis base plate	Нийт бугуйн бугуйны үений протезийн суурь хавтан	A thin implantable device intended to be attached with screws to the carpal bones at its distal end and connected to a carpal articulation prosthesis (not included) at its proximal end to hold/stabilize the carpal articulation prosthesis as part of a total wrist replacement, typically to treat severe bone fracture or degenerative disease (e.g., arthritis). It is made of metal [e.g., titanium (Ti), cobalt-chrome (Co-Cr), stainless steel]. Implantation may be performed with or without bone cement.	III
13105	66269	Implantable intravenous occluder	Суулгах боломжтой судсаар бөглөрөх	An implantable device designed to permanently occlude an insufficient vein [commonly the greater saphenous vein (GSV)] as part of an invasive treatment for venous reflux disease (varicose veins). It is an expandable device intended for percutaneous implantation within the vein during a catheterization procedure. Disposable devices dedicated to implantation may be provided with the occluder. This is a single-use device.	III
13106	66297	Custom-made hand/foot bone prosthesis	Захиалгат гар хөлийн ясны протез	An implantable device designed and created for a specific patient to replace the whole or part of a bone in the hand or foot, including the wrist or ankle (e.g., carpal, metacarpal, tarsal or metatarsal bones), typically to treat avascular necrosis or other osteolytic conditions. It is made of metal [e.g., titanium (Ti) alloy]. Devices intended to assist implantation (e.g., trial prosthesis, surgical guide) may be included with the prosthesis.	III

13107	66338	Mitral/tricuspid annuloplasty ring, open-surgery	Митрал/трикуспид аннулопластик цагираг, нээлттэй мэс засал	A circular band intended to be implanted in the heart during open heart surgery to support a mitral or tricuspid valve annulus for the reconstruction and/or remodelling of insufficient and/or stenotic mitral or tricuspid valves. It is typically mounted on a disposable holder assembly or preloaded in a disposable delivery system to enable it to maintain its shape and aid in its implantation with sutures or anchors. The device may be semi-rigid or flexible and may include metallic, polymeric, and/or textile materials; it is available in various sizes.	III
13108	66339	Mitral/tricuspid annuloplasty ring, transcatheter	Митрал/трикуспид аннулопластикийн бөгж, транскатетер	A device intended to be implanted in the heart using a transcatheter approach to support a mitral or tricuspid valve annulus for the reconstruction and/or remodelling of an insufficient and/or stenotic mitral or tricuspid valve. It is in the form of a circular or semi-circular ring, or a flexible band, and is introduced and secured in place with sutures, anchors, or staples using a transvenous or transarterial catheter with dedicated controls. It may include metallic, polymeric, and/or textile materials and is available in different sizes. Devices to assist implantation (e.g., catheter, introducer) are included with the ring.	III
13109	66383	Intravascular occluding/stent-graft post-dilation balloon catheter	Судас доторх бөглөрөл/стент-суулгасны дараах бөмбөлөг катетер	A dual-purpose flexible tube or shaft with an inflatable balloon at its distal end intended for short-term (<= 30 days) percutaneous introduction, under image guidance, to: 1) temporarily block a large blood vessel (e.g., aorta, iliac artery), typically for emergency control of haemorrhage; and 2) dilate a previously deployed stent-graft (not included) for stabilization in the vessel. Disposable devices intended for catheter introduction may be included with the catheter. This is a single-use device.	III
13110	66384	Aortic endovascular implant post-dilation balloon catheter	Аортын судаснуудын суулгацын дараах бөмбөлөг катетер	A flexible tube or shaft with an inflatable balloon(s) at its distal end intended for percutaneous introduction to dilate and stabilize within the aorta a previously deployed aortic endovascular implant (e.g., stent-graft) [not included]; it is not intended for vessel occlusion. It typically includes a guidewire, inflation port, and haemostasis valve. This is a single-use device.	III

13111	66581	Cardiotomy reservoir fluid/vacuum pressure regulation tubing set	Кардиотомийн нөөцийн шингэн/вакуум даралтыг зохицуулах хоолойн иж бүрдэл	A collection of disposable devices that typically includes dual tubing, connectors, a valve, and moisture trap, intended to be used during a cardiopulmonary bypass procedure to interface a pressure monitor/gas management system with a cardiotomy reservoir, forming a feedback loop to enable fluid or vacuum pressure in the cardiotomy reservoir to be continuously measured and automatically adjusted. This is a single-use device.	III
13112	66673	Shoulder arthroplasty wedge	Мөрний үений мэс заслын шаантаг	An implantable device designed to augment the implantation of a shoulder prosthesis base plate (glenoid base plate) by serving as a space-filler within the prosthesis, typically to replace lost bone and increase bone contact area and aid stability. It is typically made of metal [e.g., cobalt-chrome (Co-Cr), cobalt-chrome-molybdenum (Co-Cr-Mo) or titanium (Ti)].	III
13113	66712	Wrist interpositional prosthesis	Бугуйн завсрын протез	An implantable device intended to be placed between the distal row of the carpal bones and the radius following proximal carpal row resection, typically to treat osteoarthritis, fracture and/or dislocation. It is a one-piece device of oval/ellipsoid shape made of carbon material that is not anchored to bone. Devices dedicated to implantation/fixation may be included with the prosthesis.	III
13114	66713	Resurfacing capitate prosthesis	Капитат протезийг нөхөн сэргээх	An implantable device designed to replace the proximal articulating surface of the capitate bone of the wrist after removal of the scaphoid, lunate and triquetrum bones (proximal row carpectomy), typically in the case of osteoarthritis. It is a one-piece device made of carbon material with a radius articulating head and a wrist anchoring stem. Devices dedicated to implantation/fixation may be included with the prosthesis and implantation may be performed with or without bone cement.	III

13115	66715	Bioabsorbable-metal dental regeneration membrane	Био шингэдэг металл-шүд нөхөн сэргээх мембран	A bioabsorbable metal material intended to be used to aid in the regeneration of oral bone, lost due to periodontal disease or trauma, and/or to regenerate bone or bone defects around dental implants and at sites intended for implant placement, by acting as a barrier to prevent the down-growth of soft tissue into the underlying bone during the healing period. It is a pliable material which may be fixed with screws; it is applied between soft tissue and bone [e.g., during periodontal flap surgery, guided bone regeneration (GBR), and/or guided tissue regeneration (GTR) procedures]. This is a single-use device.	III
13116	66740	Resurfacing polyethylene acetabulum prosthesis	Полиэтилен ацетабулум протезийг нөхөн сэргээх	An implantable device made of polyethylene designed as a partial substitute for a disease-damaged hip joint intended to replace the articulating surface of the acetabulum. Fixation devices for implantation (e.g., screws/bolts) may be included with the prosthesis and implantation may be performed with or without bone cement. This device is commonly used for younger/active patients to avoid total hip replacements/revisions.	III
13117	66865	Ventricular prosthesis system, electrically-powered	Ховдолын протезийн систем, цахилгаанаар ажилладаг	An assembly of devices intended to function as an artificial replacement for failing heart ventricles (end-stage biventricular failure), typically temporarily prior to heart transplantation. It consists of two implanted electrically-powered pumping units, with built-in bioprosthetic heart valves, which replace the excised natural heart ventricles and are connected to the heart atria, aorta, and pulmonary arteries; the prosthesis is driven by an external, electrically-powered, portable (ambulatory) unit connected via percutaneous electrical drive-lines entering the patient's abdomen.	III

13118	67007	Custom-made resurfacing long-bone prosthesis	Урт ясны гадаргууг нөхөн сэргээх протезийг захиалгаар хийнэ	An implantable device designed and created for a specific patient to replace the whole or part of the articulating surface of a long bone (typically the proximal or distal ulna, radius, humerus, femur or tibia), typically to treat avascular necrosis or other osteolytic conditions. It is made of metal [e.g., titanium (Ti) alloy] and is coated with a material (e.g., porous material, hydroxyapatite) intended to improve fixation and stability by promoting bone ingrowth. Devices intended to assist implantation (e.g., trial prosthesis, surgical guide) may be included with the prosthesis.	III
13119	67036	Heart valve prosthesis attachment cuff	Зүрхний хавхлагын протезийн хавсралт ханцуйвч	An implantable synthetic polymer ring intended to be sutured within a diseased heart valve during open heart surgery for attachment of an implantable heart valve prosthesis [not included] within its perimeter. It is intended to allow for future heart valve prosthesis replacement while remaining in situ to help avoid myocardial trauma.	III
13120	67293	Atheroma crossing microdissection catheter, peripheral	Атерома хөндлөн огтлолцох микродиссекцийн катетер, захын	A manually-powered (non-electronic instrument intended to be used to create a pathway through an occluded peripheral artery (or vein) to facilitate the intraluminal placement of a conventional guidewire beyond a stenotic lesion [chronic total occlusion (CTO)], prior to further percutaneous intervention to remove the lesion. It typically consists of a long, thin, flexible segment, introduced into the vasculature, that is equipped to mechanically disrupt the lesion (e.g., by blunt microdissection) through manipulation of hand controls at the proximal end. This is a single-use device.	III
13121	30768	HIV1 nucleic acid IVD, kit, nucleic acid technique (NAT)	HIV1 нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 (HIV1) nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	D

13122	30829	Hepatitis C virus total antibody IVD, kit, rapid ICT, clinical	Гепатит С вирусын нийт эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, эмнэлзүйн	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	D
13123	41972	Hepatitis C virus total antibody IVD, calibrator	Гепатит С вирусын нийт эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen.	D
13124	41973	Hepatitis C virus total antibody IVD, control	Гепатит С вирусын нийт эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis C virus in a clinical specimen.	D
13125	41998	Hepatitis B virus surface total antibody IVD, control	Гепатит В вирусын гадаргуугийн нийт эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis B virus surface in a clinical specimen.	D
13126	42008	Hepatitis B virus e-antigen IVD, control	Гепатит В вирусын и-эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of Hepatitis B virus e-antigen in a clinical specimen.	D
13127	42108	Human T-cell lymphotrophic virus 1 & 2 (HTLV1 & HTLV2) antibody IVD, control	Хүний Т эсийн лимфотроф вирус 1 ба 2 (HTLV1 & HTLV2) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay that is used for the qualitative and/or quantitative detection of antibodies to human T-cell lymphotrophic virus 1 and 2 (HTLV1 and HTLV2) in a clinical specimen.	D
13128	48298	Hepatitis B virus core immunoglobulin M (IgM) antibody IVD, kit, chemiluminescent immunoassay	Гепатит В вирүсийн үндсэн иммуноглобулин М (IgM) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin M (IgM) antibodies to the Hepatitis B virus core antigen in a clinical specimen, using a chemiluminescent immunoassay method.	D

13129	48304	Hepatitis B virus core total antibody IVD, kit, chemiluminescent immunoassay	Гепатит В вирүсийн үндсэн нийт эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis B virus core antigen in a clinical specimen, using a chemiluminescent immunoassay method.	D
13130	48316	Hepatitis B virus surface total antibody IVD, kit, chemiluminescent immunoassay	Гепатит В вирүсийн гадаргуугийн нийт эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis B virus surface in a clinical specimen, using a chemiluminescent immunoassay method.	D
13131	48321	Hepatitis B virus surface antigen IVD, kit, chemiluminescent immunoassay	Гепатит В вирүсийн гадаргуугийн антиген IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis B virus surface antigen in a clinical specimen, using a chemiluminescent immunoassay method.	D
13132	48331	Hepatitis B virus e-antigen IVD, kit, chemiluminescent immunoassay	Гепатит В вирүсийн и-эсрэгтөрөгч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis B virus e-antigen in a clinical specimen, using a chemiluminescent immunoassay method.	D
13133	48348	Hepatitis B virus e-antigen total antibody IVD, kit, chemiluminescent immunoassay	Гепатит В вирусын е-эсрэгтөрөгчийн нийт эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis B virus e-antigen in a clinical specimen, using a chemiluminescent immunoassay method.	D
13134	48349	Hepatitis B virus e-antigen total antibody IVD, kit, rapid ICT, clinical	Гепатит В вирүсийн е-эсрэгтөрөгчийн нийт эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended for the qualitative and/or (semi-)quantitative detection of total antibodies to the Hepatitis B virus e-antigen in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	D

13135	48350	Hepatitis B virus e-antigen total antibody IVD, reagent	Гепатит В вирусын е-эсрэгтөрөгчийн нийт эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of total antibodies to the Hepatitis B virus e-antigen in a clinical specimen.	D
13136	48360	Hepatitis C virus immunoglobulin G (IgG) antibody IVD, kit, chemiluminescent immunoassay	Гепатит С вирусын иммуноглобулин G (IgG) эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to the Hepatitis C virus in a clinical specimen, using a chemiluminescent immunoassay method.	D
13137	48374	Hepatitis C virus nucleic acid IVD, kit, nucleic acid technique (NAT)	Гепатит С вирусын нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus nucleic acid in a clinical specimen, using a nucleic acid technique (NAT).	D
13138	48382	Hepatitis C virus antibody/antigen IVD, kit, chemiluminescent immunoassay	Гепатит С вирусын эсрэгбие/эсрэгтөрөгч IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of Hepatitis C virus antigens and antibodies to Hepatitis C virus antigens in a clinical specimen, using a chemiluminescent immunoassay method.	D
13139	48430	HIV1/HIV2 antigen IVD, kit, enzyme immunoassay (EIA)	ХДХВ1/ХДХВ2 антиген IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	D
13140	48431	HIV1/HIV2 antigen IVD, kit, chemiluminescent immunoassay	ХДХВ1/ХДХВ2 антиген IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using a chemiluminescent immunoassay method.	D

13141	48432	HIV1/HIV2 antigen IVD, kit, rapid ICT, clinical	ХДХВ1/ХДХВ2 антиген IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antigens from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	D
13142	48433	HIV1/HIV2 antigen IVD, calibrator	HIV1/HIV2 антиген IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 and 2 (HIV1/HIV2) antigens in a clinical specimen.	D
13143	48434	HIV1/HIV2 antigen IVD, control	ХДХВ1/ХДХВ2 эсрэгтөрөгч IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of human immunodeficiency virus 1 and 2 (HIV1/HIV2) antigens in a clinical specimen.	D
13144	48435	HIV1/HIV2 antigen IVD, reagent	HIV1/HIV2 эсрэгтөрөгч IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antigens from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13145	48436	HIV1/HIV2 antigen neutralization IVD, kit, enzyme immunoassay (EIA)	ХДХВ1/ХДХВ2-ын эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) and/or human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV1 antibodies and HIV2 antibodies of known specificity and an enzyme immunoassay (EIA) method.	D
13146	48437	HIV1/HIV2 antigen neutralization IVD, kit, chemiluminescent immunoassay	ХДХВ1/ХДХВ2 эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) and/or human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV1 antibodies and HIV2 antibodies of known specificity and a chemiluminescent immunoassay method.	D

13147	48438	HIV1/HIV2 antigen neutralization IVD, calibrator	HIV1/HIV2 эсрэгтөрөгчийг саармагжуулах IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) and/or human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV1 antibodies and HIV2 antibodies of known specificity.	D
13148	48439	HIV1/HIV2 antigen neutralization IVD, control	ХДХВ1/ХДХВ2 эсрэгтөрөгчийг саармагжуулах IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) and/or human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV1 antibodies and HIV2 antibodies of known specificity.	D
13149	48440	HIV1/HIV2 antigen neutralization IVD, reagent	HIV1/HIV2 эсрэгтөрөгчийг саармагжуулах IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative neutralization of antigens from human immunodeficiency virus 1 (HIV1) and/or human immunodeficiency virus 2 (HIV2) in a clinical specimen, using HIV1 antibodies and HIV2 antibodies of known specificity.	D
13150	48441	HIV1/HIV2 nucleic acid IVD, kit, nucleic acid technique (NAT)	HIV1/HIV2 нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nucleic acid from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using a nucleic acid technique (NAT).	D
13151	48442	HIV1/HIV2 nucleic acid IVD, calibrator	HIV1/HIV2 нуклейн хүчил IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of nucleic acid from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13152	48443	HIV1/HIV2 nucleic acid IVD, control	HIV1/HIV2 нуклейн хүчил IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of nucleic acid from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D

13153	48444	HIV1/HIV2 nucleic acid IVD, reagent	HIV1/HIV2 нуклейн хүчил IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of nucleic acid from human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13154	48445	HIV1/HIV2 antigen/antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ1/ХДХВ2 антиген/эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	D
13155	48446	HIV1/HIV2 antigen/antibody IVD, kit, chemiluminescent immunoassay	ХДХВ1/ХДХВ2 эсрэгтөрөгч/эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using an chemiluminescent immunoassay method.	D
13156	48447	HIV1/HIV2 antigen/antibody IVD, kit, rapid ICT, clinical	ХДХВ1/ХДХВ2-ын эсрэгтөрөгч/эсрэгбие IVD, иж бүрдэл, хурдан МХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	D
13157	48448	HIV1/HIV2 antigen/antibody IVD, calibrator	HIV1/HIV2 эсрэгтөрөгч/эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay intended to be used for the qualitative and/or quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13158	48449	HIV1/HIV2 antigen/antibody IVD, control	ХДХВ1/ХДХВ2 эсрэгтөрөгч/эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D

13159	48450	HIV1/HIV2 antigen/antibody IVD, reagent	ХДХВ1/ХДХВ2 эсрэгтөрөгч/эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antigens from and antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13160	48451	HIV1/HIV2 antibody IVD, kit, enzyme immunoassay (EIA)	ХДХВ1/ХДХВ2 эсрэгбие IVD, иж бүрдэл, ферментийн дархлааны шинжилгээ (EIA)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using an enzyme immunoassay (EIA) method.	D
13161	48452	HIV1/HIV2 antibody IVD, kit, chemiluminescent immunoassay	ХДХВ1/ХДХВ2-ын эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using a chemiluminescent immunoassay method.	D
13162	48453	HIV1/HIV2 antibody IVD, kit, immunoblot	HIV1/HIV2 эсрэгбие IVD, иж бүрдэл, иммуноблот	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen, using an immunoblot method.	D
13163	48454	HIV1/HIV2 antibody IVD, kit, immunochromatographic test (ICT), rapid, professional/self-test	ХДХВ1/ХДХВ2 эсрэгбие IVD, иж бүрдэл, иммунохроматографийн шинжилгээ (ICT), хурдан, мэргэжлийн/өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method. This test is commonly used in the laboratory or in point-of-care analyses and may be available [non-prescription] over-the-counter (OTC) for self-testing by a layperson in the home or similar environment.	D
13164	48455	HIV1/HIV2 antibody IVD, calibrator	HIV1/HIV2 эсрэгбие IVD, калибратор	A material which is used to establish known points of reference for an assay that is used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D

13165	48456	HIV1/HIV2 antibody IVD, control	HIV1/HIV2 эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13166	48457	HIV1/HIV2 antibody IVD, reagent	HIV1/HIV2 эсрэгбие IVD, урвалж	A substance or reactant intended to be used together with a parent IVD to perform a specific function in an assay that is used for the qualitative and/or quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen.	D
13167	49717	Cytomegalovirus (CMV) immunoglobulin G (IgG) antibody IVD, control	Цитомегаловирус (CMV) иммуноглобулин G (IgG) эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) antibodies to cytomegalovirus (CMV) in a clinical specimen.	D
13168	51817	Treponema pallidum immunoglobulin G (IgG)/IgM antibody IVD, control	Treponema pallidum immunoglobulin G (IgG)/IgM эсрэгбие IVD, хяналт	A material which is used to verify the performance of an assay intended to be used for the qualitative and/or quantitative detection of immunoglobulin G (IgG) and immunoglobulin M (IgM) antibodies to Treponema pallidum in a clinical specimen.	D
13169	59863	Treponema pallidum total antibody IVD, kit, chemiluminescent immunoassay	Treponema pallidum нийт эсрэгбие IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of total antibodies to Treponema pallidum in a clinical specimen using a chemiluminescent immunoassay method. The assay is designed to detect infection with Treponema pallidum, the bacteria associated with syphilis.	D
13170	60103	Foetal blood group genotyping IVD, kit, nucleic acid technique (NAT)	Ургийн цусны бүлгийн генотип IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used diagnose, monitor or predict haemolytic disease of the newborn based on one or multiple blood group genotypes, using a nucleic acid technique (NAT). The blood group genotypes to be assayed may include Rhesus, Kell, Duffy and/or Kidd blood groups.	D

13171	60812	Hepatitis B virus surface antigen neutralization IVD, kit, chemiluminescent immunoassay	Гепатит В вирусын гадаргуугийн эсрэгтөрөгчийг саармагжуулах IVD, иж бүрдэл, химилюминесцент дархлааны шинжилгээ	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative neutralization of Hepatitis B virus surface antigens in a clinical specimen, using Hepatitis B virus antibodies of known specificity and a chemiluminescent immunoassay method.	D
13172	61304	PCR/NAT negative control IVD	ПГУ/NAT сөрөг хяналтын IVD	A material or solution, known to give a negative result, intended to be used to verify the performance and/or identify contamination, or non-specific amplification in a qualitative and/or quantitative assay performed on a clinical specimen using a nucleic acid technique (NAT) or polymerase chain reaction (PCR).	D
13173	62941	Hepatitis A/Parvovirus B19 virus nucleic acid IVD, kit, nucleic acid technique (NAT)	Гепатит А/Парвовирус В19 вирусын нуклейн хүчил IVD, иж бүрдэл, нуклейн хүчлийн техник (NAT)	A collection of reagents and other associated materials intended to be used for the qualitative and/or quantitative detection of nucleic acid from Hepatitis A virus and Parvovirus B19 in a clinical specimen, using a nucleic acid technique (NAT).	D
13174	65847	HIV1/HIV2 antibody IVD, kit, rapid ICT, clinical	ХДХВ1/ХДХВ2-ын эсрэгбие IVD, иж бүрдэл, шуурхай МХХТ, клиник	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test used in the laboratory or in point-of-care analyses. It is not intended to be used for self-testing.	D
13175	65848	HIV1/HIV2 antibody IVD, kit, rapid ICT, self-testing	ХДХВ1/ХДХВ2-ын эсрэгбие IVD, иж бүрдэл, шуурхай МХТ, өөрийгөө шалгах	A collection of reagents and other associated materials intended to be used for the qualitative and/or (semi-)quantitative detection of antibodies to human immunodeficiency virus 1 and 2 (HIV1/HIV2) in a clinical specimen within a short period, relative to standard laboratory testing procedures, using an immunochromatographic test (ICT) method [lateral flow test]. This is a rapid test intended to be used for self-testing by a layperson in the home or similar environment.	D
